LIST OF ACRONYMS

Acronym	Definition
AOC	Area of Concern
CAMP	Community Air Monitoring Plan
COC	Contaminant of Concern
CPP	Citizen Participation Plan
CSM	Conceptual Site Model
DER-10	New York State Department of Environmental Conservation Technical Guide 10
FID	Flame Ionization Detector
GPS	Global Positioning System
HASP	Health and Safety Plan
HAZWOPER	Hazardous Waste Operations and Emergency Response
IRM	Interim Remedial Measure
NAPL	Non-aqueous Phase Liquid
NYC VCP	New York City Voluntary Cleanup Program
NYC DOHMH	New York City Department of Health and Mental Hygiene
NYC OER	New York City Office of Environmental Remediation
NYS DOH ELAP	New York State Department of Health Environmental Laboratory Accreditation Program
OSHA	Occupational Safety and Health Administration
PID	Photoionization Detector
QEP	Qualified Environmental Professional
RI	Remedial Investigation
RIR	Remedial Investigation Report
SCO	Soil Cleanup Objective
SPEED	Searchable Property Environmental Electronic Database

CERTIFICATION

I, Kristen DiScenza, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Redevelopment Project located at 85-89 4th Avenue, Brooklyn, NY, (NYC VCP Site No. 13CVCP133K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Kristen DiScenza 5/14/13 

Qualified Environmental Professional Date Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 85-89 4th Avenue in the Park Slope section of Brooklyn, New York, and is identified as Block 934 and Lots 5, 6, 7, 10 and 12 on the New York City Tax Map. Figure 1 shows the Site location. The Site is a combined total of 13,859-square feet and is bounded by mixed residential and commercial properties to the north, residential buildings to the south, and mixed residential, commercial and industrial buildings to the east and west. A map of the Site boundary is shown in Figure 2. The four adjacent lots comprising the subject site are located on the southeast corner of the intersection of 4th Avenue and St. Marks Place.

- 79 4th Avenue (Block 934, Lot 10) - the lot consists of 20 feet of frontage on 4th Avenue and is approximately 82.17 feet deep for a total of approximately 1,643 square feet (0.037 acres). The lot is developed with a 4-story brick mixed commercial and residential building.
- 85 4th Avenue (Block 934, Lot 7) - The lot consists of 60 feet of frontage on 4th Avenue and is approximately 82.17 feet deep for a total of approximately 4,930.2 square feet (0.11 acres). The lot is developed with a 2-story brick building utilized for a window, door and lumber business.
- 87 4th Avenue (Block 934, lot 6) - The lot has 20 feet of frontage on 4th Avenue, and is approximately 82.17 feet deep for a total of approximately 1,643 square feet (0.037 acres). The lot is developed with a 4-story brick mixed commercial and residential use building.
- 89 4th Avenue (Block 934, Lot 5) - The lot has approximately 20 feet of frontage on 4th Avenue and is approximately 82.17 feet deep for a total of approximately 1,643 square

feet (0.037 acres). The lot is developed with a 4-story brick mixed use (commercial and residential) building.

- 80 St. Marks Place (Block 934, lot 12) - The lot has 40 feet of frontage on St. Marks Place and is approximately 100 feet deep for a total of approximately 4,000 square feet (0.091 acres). The lot is developed with a 1-story brick building utilized for a commercial lumber and building supply business.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of a new 12-story mixed use building with a cellar. Layout of the proposed site development is presented in Figure 3. The current zoning designation is R-8A residential with a C2-4 commercial overlay. The proposed use is consistent with existing zoning for the property.

The 12-story mixed use building and cellar will occupy the entire combined lot. The cellar will be used for parking, utility rooms and storage areas. Access to the basement is provided via stairwell and elevator on the north portion of the property and a vehicle access ramp on the southern portion of the property. The first floor will be used for retail space, the residential lobby, community facility and additional parking. The second through twelfth floors will all be residential units, a total of 104 apartments.

The top of the cellar floor will be approximately 9 ft below sidewalk level, requiring excavation of the entire footprint of the combined lots to approximately 10 feet below grade, with additional excavation of an area 5 ft by 10ft for the elevator pit.

Summary of Past Uses of Site and Areas of Concern

Prior to 1887, the property was developed with multiple three-story residential row houses (with basements) that occupied the front half of the lot. A rear empty yard was located behind each of the row houses. According to Sanborn maps and DOB records, the residential row houses at 81 and 83 4th Avenues were demolished in 1943. Building permits were issued for a new building in 1953 and a Certificate of Occupancy was issued for the new building in 1958. The 1965 Sanborn Map shows the two vacant lots, as well as 85 4th Avenue, as redeveloped with a 2-story

concrete block building, utilized for lumber storage. City directory listings available from the 1960's through current state the property was utilized primarily by Modern Way Lumber Co.

In 1971, the two residential row houses on St. Marks Place (80 and 82 St Marks Place) were torn down and the property was redeveloped with the 2-story concrete block warehouse that currently occupies the site. Lots 12 and 13 were joined at that time to form the current lot 12.

The two residential buildings located at 87 and 89 4th Avenue were built prior to the 1880's, and historic use of the buildings has been primarily residential. However, City Directory listings for the two properties have notes several real estate companies and attorneys offices. The first floor of 87 4th Avenue has also been used as a tire repair facility.

The AOCs identified for this Site include:

- Historic fill layer is present at the Site from grade to depths as great as 10 feet below grade; and
- An E-designation for Hazmat on Lot 6

Summary of the Work Performed under the Remedial Investigation

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed seven soil borings across the entire project Site, and collected eleven soil samples and two duplicate soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed two groundwater monitoring wells throughout the Site to establish groundwater flow and collected three groundwater samples plus one duplicate groundwater sample from one existing monitoring well and the two temporary monitoring wells for chemical analysis to evaluate groundwater quality; and
4. Installed two soil vapor probes and three sub-slab vapor points throughout the Site and collected four soil gas samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property ranges from approximately 65 feet to 70 feet.

2. Depth to groundwater is approximately 10 feet at the Site.
3. Regional groundwater flow is generally from southeast to northwest.
4. Depth to bedrock is at the Site is greater than 100 feet.
5. The stratigraphy of the Site, from the surface down, consists of historic fill to depths as great as 6 feet below grade underlain by a native brown sandy clay.
6. Soil/fill samples collected during the RI showed no PCBs or VOCs at detectable concentrations, with the exception of naphthalene which was detected at a concentration well below Unrestricted Use SCOs in one of the six shallow soil samples. No SVOCs were detected in any of the deep soil samples obtained. Several SVOCs were detected in shallow soil samples above Restricted Residential SCOs. These SVOCs included benzo(a)anthracene (maximum of 53,000 µg/kg), benzo(a)pyrene (maximum of 43,000 µg/kg), benzo(b)-fluoranthene (maximum of 56,000 µg/kg), benzo(k)fluoranthene (maximum of 11,000 µg/kg), chrysene (maximum of 56,000 µg/kg), dibenz(a,h)anthracene (maximum of 2,200 µg/kg), fluoranthene (maximum of 130,000 µg/kg), indeno(1,2,3-cd)pyrene (maximum of 20,000 µg/kg), phenanthrene (maximum of 160,000 µg/kg), and pyrene (maximum of 110,000 µg/kg). Metals including barium, copper, lead, mercury, nickel and zinc exceeded Unrestricted Use SCOs in both the shallow and deep soil samples, and of these metals, barium (maximum of 2,450 mg/kg), lead (maximum of 5,300 mg/kg), and zinc (maximum of 2,290 mg/kg), were detected above Restricted Residential SCOs one of the six of the shallow soil samples (B9). The pesticides 4,4'-DDT and dieldrin were detected in one of the six shallow soil samples, but only 4,4'-DDT was detected above Unrestricted Use SCOs at a concentration of 4.7 µg/kg. Overall, the findings were consistent with observations for other historical fill sites except for a SVOC and metal hotspot area around soil boring location B9.
7. Groundwater samples collected during the RI showed no pesticides at detectable concentrations. One PCB, PCB-1254, was detected above GQS in one well at a concentration of 11ppb. No other PCBs were detected within the three groundwater samples. The VOC, naphthalene (1.1 ppb) was detected in one of the three groundwater samples submitted for VOC analysis, but the concentration was below GQS. No other VOCs were detected within the three groundwater samples. SVOCs including benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and

indeno(1,2,3-cd)pyrene were detected in groundwater samples above GQS. The dissolved concentration of the metals beryllium, iron, magnesium, manganese and sodium were detected above their respective GQS in all three samples obtained.

8. Soil vapor samples collected during the RI showed petroleum and chlorinated VOCs at generally low concentrations. BTEX concentrations were generally low at a maximum of 32.48 $\mu\text{g}/\text{m}^3$. Carbon tetrachloride was identified in three of the four soil vapor samples at a maximum concentration of 0.503 $\mu\text{g}/\text{m}^3$. PCE was identified in two of the four soil vapor samples at a maximum concentration of 17.5 $\mu\text{g}/\text{m}^3$, and TCE was detected in only one soil vapor sample at a concentration of 0.43 $\mu\text{g}/\text{m}^3$. The carbon tetrachloride, PCE and TCE concentrations detected within the soil gas samples are below the monitoring level ranges established within the State DOH soil vapor guidance matrix.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Hershko Construction has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.272-acre multi-lot Site located at 85-89 4th Avenue in Park Slope section of Brooklyn, New York. Mixed use is being contemplated for this property. The RI work was performed between February 19, 2013, and March 3, 2013. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 85-89 4th Avenue in the Park Slope section of Brooklyn, New York, and is identified as Block 934 and Lots 5, 6, 7, and 12, on the New York City Tax Map. Figure 1 shows the Site location. The Site is a combined total of 13,859-square feet and is bounded by mixed residential and commercial properties to the north, residential buildings to the south, and mixed residential, commercial and industrial buildings to the east and west. A map of the Site boundary is shown in Figure 2. The four adjacent lots comprising the Site are located on the southeast corner of the intersection of 4th Avenue and St. Marks Place.

- 79 4th Avenue (Block 934, Lot 10) - The lot consists of 20 feet of frontage on 4th Avenue and is approximately 82.17 feet deep for a total of approximately 1,643 square feet (0.037 acres). The lot is developed with a 4-story brick mixed use (commercial and residential) building.
- 85 4th Avenue (Block 934, Lot 7) - The lot consists of 60 feet of frontage on 4th Avenue and is approximately 82.17 feet deep for a total of approximately 4,930.2 square feet (0.11 acres). The lot is developed with a 2-story brick building utilized for a window, door and lumber business.
- 87 4th Avenue (Block 934, lot 6) - The lot has 20 feet of frontage on 4th Avenue, and is approximately 82.17 feet deep for a total of approximately 1,643 square feet (0.037 acres). The lot is developed with a 4-story brick mixed commercial and residential use.

- 89 4th Avenue (Block 934, Lot 5) - The lot has approximately 20 feet of frontage on 4th Avenue and is approximately 82.17 feet deep for a total of approximately 1,643 square feet (0.037 acres). The lot is developed with a 4-story brick mixed commercial and residential use.
- 80 St. Marks Place (Block 934, lot 12) - The lot has 40 feet of frontage on St. Marks Place and is approximately 100 feet deep for a total of approximately 4,000 square feet (0.091 acres). The lot is developed with a 1-story brick building utilized for a commercial lumber and building supply business.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of a new 12-story mixed use building with a cellar. Layout of the proposed site development is presented in Figure 3. The current zoning designation is R-8A residential with a C2-4 commercial overlay. The proposed use is consistent with existing zoning for the property.

The 12-story mixed use building and cellar will occupy the entire Site. The cellar will be used for parking, utility rooms and storage areas. Access to the basement is provided via stairwell and elevator on the north portion of the property and a vehicle access ramp on the southern portion of the property. The first floor will be used for retail space, the residential lobby, community facility and additional parking. The second through twelfth floors will all be residential units, a total of 104 apartments..

The top of the cellar floor will be approximately 9 ft below sidewalk level, requiring excavation of the entire footprint of the combined lots to approximately 10 feet below grade, with additional excavation of an area 5 ft by 10 ft for the elevator pit.

1.3 Description of Surrounding Property

The area surrounding the Site consists of a mix of residential and commercial properties. Figure 4 shows the surrounding land usage of the adjacent properties listed below as well as additional properties located up to 500 feet away from the Site. No hospitals, schools or daycare facilities are located within a 250 ft radius of the Site.

Surrounding Property Usage

Direction	Property Description
<p>North – Adjacent properties</p>	<p><u>Block 932, Lot 1 (77 4th Avenue)</u> - Developed with a 4-story mixed residential and commercial building.</p> <p><u>Block 932, Lot 78 (77 St. Marks Place)</u> - Developed with a 3-story residential multi-family walk-up building.</p> <p><u>Block 932, Lot 77 (79 St. Marks Place)</u> - Developed with a 3-story residential multi-family walk-up building.</p> <p><u>Block 932, Lot 7503 (81 St. Marks Place)</u> - Developed with a 4-story residential multi-family walk-up building.</p>
<p>South – Adjacent properties</p>	<p><u>Block 934, Lot 4 (91 4th Avenue)</u> – Developed with a 4-story brick residential walk-up building.</p> <p><u>Block 934, Lot 73 (609 Warren Street)</u> - Developed with a 3-story brick residential multi-family walk-up building.</p>
<p>East – Adjacent properties</p>	<p><u>Block 934, Lot 14 (84 St. Marks Place)</u> – Developed with a 1-story industrial/manufacturing building currently utilized for lumber and building materials.</p> <p><u>Block 934, Lot 74 (607 Warren St)</u> - Developed with a 3-story brick residential multi-family walk-up building.</p>
<p>West – Adjacent properties</p>	<p><u>Block 395, Lot 32 (86 4th Avenue and 60-66 St. Marks Place)</u> – Developed with a 4-story mixed residential and commercial building.</p> <p><u>Block 395, Lot 33 (88 4th Avenue)</u> - Developed with a 3-story mixed residential and commercial building.</p> <p><u>Block 395 Lot 35 (90 4th Avenue)</u> - Undeveloped 1,573 square foot parking lot.</p>

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Prior to 1887, the property was developed with multiple three-story residential row houses (with basements) that occupied the front half of the lot. A rear empty yard was located behind each of the row houses. According to Sanborn maps and DOB records, the residential row houses at 81 and 83 4th Avenues were demolished in 1943. Building permits were issued for a new building in 1953 and a Certificate of Occupancy was issued for the new building in 1958. The 1965 Sanborn Map shows the two vacant lots, as well as 85 4th Avenue, as redeveloped with a 2-story concrete block building, utilized for lumber storage. City Directory listings available from the 1960's through current, state the property was utilized primarily by Modern Way Lumber Co.

In 1971, the two residential row houses on St. Marks Place (80 and 82 St Marks Place) were torn down and the property was redeveloped with the 2-story concrete block warehouse that currently occupies the Site. Lots 12 and 13 were joined at that time to form the current Lot 12.

The two residential buildings located at 87 and 89 4th Avenue were built prior to the 1880's, and historic use of the buildings has been primarily residential. However, City Directory listings for the two properties have noted several real estate companies and attorneys offices. The first floor of 87 4th Avenue has also been used as a tire repair facility.

2.2 Previous Investigations

The following environmental reports were developed for the Site:

- Phase I Environmental Site Assessment Report, (EBC, April, 2011)
- Phase II Subsurface Investigation Report, (EBC, July, 2011)

Digital (PDF) copies of the above referenced reports were previously submitted to OER and are available in the project file.

2.3 Site Inspection

Mr. Kevin Brussee of EBC performed the site inspection in April 2011, beginning at approximately 8:00 am. The reconnaissance included a visual inspection of the Site, the sidewalk immediately in front of the Site, and the exterior of adjacent properties. At the time of the

inspection, the Site consisted of a four separate lots, each developed with one building. A description of each building is provided below.

- 85 4th Avenue - Developed with a 2-story brick building, Entrance to the building is provided from 4th Avenue via a steel roll up gate and 3 steel doors. Signage on the building indicated that the property is used for a window and door business and lumber business.
- 87 4th Avenue - Developed with a 4-story brick building. Entrance to the building is provided from 4th Avenue by a wood door. Signage on the front of the building indicates that the first floor of the building was recently utilized as a tire repair shop. The second, third and fourth floors of the building are utilized as apartments.
- 89 4th Avenue - Developed with a 4-story brick building. Entrance to the building is provided from 4th Avenue via a steel roll up gate and 3 steel doors. Signage on the building indicates that the second floor is or was recently used as office space by an attorney. The third and fourth floors of the building are utilized as apartments.
- 80 St Marks Place - Developed with a 1-story brick building. Entrance to the building is provided from St Marks Place via 4 steel roll up gates and 3 steel doors. Signage on the building indicates that the property was recently used by a lumber and building supply company.

2.4 Areas of Concern

The AOCs identified for this Site include:

1. Historic fill layer is present at the Site from grade to depths as great as 10 feet below grade.
2. An E-designation for Hazmat on Lot 6

A copy of the Phase 1 Report is presented in Attachment A.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Kristen DiScenza.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Hersko Construction performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed seven soil borings across the entire project Site, and collected eleven soil samples and two duplicate soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed two groundwater monitoring wells throughout the Site to establish groundwater flow and collected three groundwater samples plus one duplicate groundwater sample from one existing monitoring well and the two temporary monitoring wells for chemical analysis to evaluate groundwater quality; and
4. Installed two soil vapor probes and three sub-slab vapor points throughout the Site and collected four soil gas samples for chemical analysis.

4.1 Geophysical Investigation

A geophysical investigation was not performed as a part of this assessment.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

On February 19, 2013, a total of four soil borings (B7 and B9 through B11) were performed across the Site. The four soil boring locations were chosen to gain representative soil and groundwater quality information across the areas of the Site accessible with a drill rig. Soil samples were collected continuously from grade to a final depth of 11 feet below grade, using a four-foot steel macro-core sampler with acetate liners and Geoprobe direct-push equipment. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination. No PID readings above background concentrations were obtained from any of the soil borings.

One soil sample was retained from each soil boring representing the interval 0 to 2 feet below grade, with the exception of boring B10 which was sampled from 2 to 4 feet below grade due to the presence of a two foot thick layer of concrete at grade, and one soil sample was retained from

each soil boring representing the interval 9 to 11 feet below grade. Soil boring details are provided in Table 1.

On February 28, 2013, three additional soil borings (B6, B8, and B12) were performed within the basement slab of three on-Site buildings. Each of the three soil borings were performed utilizing a 2-foot long AMS Dual-Purpose Soil Recovery Probe with disposable plastic liners and a slap hammer. At each sampling location, the soil recovery probe was driven to a depth of approximately 2 feet below grade and a sample was retained representing the interval 0 to 2 feet below grade. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination. No PID readings above background concentrations were obtained from any of the soil borings.

Boring logs were prepared by a Qualified Environmental Professional and are attached in Attachment B. A map showing the location of the soil borings and monitoring wells is shown in Figure 5.

Groundwater Monitoring Well Construction

A temporary 1-inch diameter PVC monitoring well with 10 feet of 0.010 slot screen was installed at boring locations B9 and B10 (labeled as monitoring wells MW2 and MW3), set to intersect the water table. Since groundwater was encountered at approximately 10 feet below grade, monitoring wells were installed to a depth of 17 feet. Monitoring well sampling details are provided in Table 1. Monitoring well locations are shown in Figure 5.

Water Level Measurement

Approximate groundwater level measurements were collected using a Solinst oil/water interface meter to ensure the surface of the water table was within the screened section of the monitoring well. No free product was observed within the three monitoring wells. Water level data is included in Table 1. A monitoring well survey could not be completed due to the destruction of MW2.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Eleven soil samples and two duplicate soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 2 through 5. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

The thirteen soil samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted for analysis to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and target analyte list (TAL) metals.

Groundwater Sampling

Three groundwater samples and one duplicate groundwater sample were collected for chemical analysis during this RI. Groundwater samples were collected by installing a one-inch diameter PVC well, approximately 7-feet below the water table interface (set at approximately 17 feet below grade). A groundwater sample was then collected from the two temporary monitoring wells and the one existing monitoring well utilizing dedicated polyethylene tubing and a peristaltic pump. Groundwater samples were collected in pre-cleaned, laboratory supplied

glassware, stored in a cooler with ice and submitted to Phoenix for analysis of VOCs by EPA Method 8260, SVOCs by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and TAL metals. Groundwater sample collection data is reported in Tables 6 through 10. Sampling logs with information on purging and sampling of groundwater monitor wells is included in Attachment C. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

Two soil vapor probes, SG2 and SG3, and three sub-slab soil vapor implants, SG1, SG4, and SG5, were installed and a total of four soil vapor samples were collected for chemical analysis during this RI. A sample from soil gas probe SG3 could not be obtained due to a faulty regulator. Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 10. Soil vapor sampling logs are included in Attachment D. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

The two soil vapor implants, SG2 and SG3, were installed using Geoprobe™ equipment and tooling. The approximate location of each of the soil vapor implants is shown on Figure 5. The vapor implants that were installed were the Geoprobe™ Model AT86 series, which are constructed of a 6-inch length of double woven stainless steel wire. The implants were installed to a depth of eleven feet below grade at both locations. Each implant was attached to ¼ inch polyethylene tubing which extended approximately 18 inches beyond that needed to reach the surface. The tubing was capped with a ¼ inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the vapor implant to a height of approximately 1 foot above the bottom of the implant. The remainder of the borehole was sealed with a bentonite slurry to the surface.

The three sub-slab soil vapor implants were installed by drilling a 1/2 inch hole through the basement concrete slab with a handheld drill and then inserting 1/4 inch polyethylene tubing to no more than 2 inches below the base of the slab. The tubing was then sealed at the surface with hydrated granular bentonite.

Soil vapor sampling for all implants was conducted on March 3, 2013. Prior to sampling, each sampling location was tested to ensure a proper surface seal had been obtained. In accordance with NYSDOH guidance (NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2005), a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. Prior to testing and collecting samples, the surface immediately surrounding the polyethylene tubing of the vapor implant was sealed using a 1 foot by 1 foot square sheet of 2 mil HDPE plastic firmly adhered to a wetted layer of granular bentonite. The seal was then tested by enriching the air space above the seal with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model MGD-2002, Multi-Gas Detector) for a minimum of 15 minutes. The tracer gas test procedure was employed at all five soil vapor sampling locations. No surface seal leaks were observed at any of the locations.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 6-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the five vapor implants. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a bound field note book. Sampling then proceeded by fully opening the flow control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approx 2 hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The soil gas sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet (Attachment E). Samples were submitted to Phoenix for laboratory analysis of VOCs EPA Method TO-15.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Phoenix Environmental Laboratories
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Phoenix Environmental Laboratories
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters..

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2 through 11, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Attachment E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

Subsurface soil at the Site consisted of historic fill, which was primarily comprised of brick, concrete, wood and other debris in a brown silty-sand matrix. The layer of historic fill extended to a depths as great as 6 feet below grade. Native soil consisting of a brown sandy clay is present below the historic fill layer.

Hydrogeology

A table of water level data for all monitoring wells is included in Table 1. The average depth to groundwater is 10 feet. Regional groundwater flow is from southeast to northwest.

5.2 Soil Chemistry

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 2 through 5. Results were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs) as presented in 6NYCRR Part 375-6.8 and CP51. A copy of the laboratory report is provided in Attachment E. Figure 6 shows the location and posts the values for soil/fill that exceeds UUSCOs and RRSCOs.

Soil/fill samples collected during the RI showed no PCBs or VOCs at detectable concentrations, with the exception of naphthalene which was detected at a concentration well below Unrestricted Use SCOs in one of the six shallow soil samples. No SVOCs were detected in any of the deep soil samples obtained. Several SVOCs were detected in shallow soil samples above Restricted Residential SCOs. These SVOCs included benzo(a)anthracene (maximum of 53,000 µg/kg), benzo(a)pyrene (maximum of 43,000 µg/kg), benzo(b)-fluoranthene (maximum of 56,000 µg/kg), benzo(k)fluoranthene (maximum of 11,000 µg/kg), chrysene (maximum of 56,000 µg/kg), dibenz-(a,h)anthracene (maximum of 2,200 µg/kg), fluoranthene (maximum of 130,000 µg/kg), indeno(1,2,3-cd)pyrene (maximum of 20,000 µg/kg), phenanthrene (maximum of 160,000 µg/kg), and pyrene (maximum of 110,000 µg/kg). Metals including barium, copper, lead, mercury, nickel and zinc exceeded Unrestricted Use SCOs in both the shallow and deep

soil samples, and of these metals, barium (maximum of 2,450 mg/kg), lead (maximum of 5,300 mg/kg), and zinc (maximum of 2,290 mg/kg), were detected above Restricted Residential SCOs one of the six of the shallow soil samples (B9). The pesticides 4,4'-DDT and dieldrin were detected in one of the six shallow soil samples, but only 4,4'-DDT was detected above Unrestricted Use SCOs at a concentration of 4.7 µg/kg. Overall, the findings were consistent with observations for other historical fill sites except for a SVOC and metal hotspot area around soil boring location B9.

5.3 Groundwater Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 6 through 10. Figure 7 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

No pesticides were reported at detectable concentrations at the Site. One PCB, PCB-1254, was detected above GQS in one well at a concentration of 11ppb. No other PCBs were detected within the three groundwater samples. The VOC, naphthalene (1.1 ppb) was detected in one of the three groundwater samples submitted for VOC analysis, but the concentration was below GQS. No other VOCs were detected within the three groundwater samples. SVOCs including benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene were detected in groundwater samples above GQS. The dissolved concentration of the metals beryllium, iron, magnesium, manganese and sodium were detected above their respective GQS in all three samples obtained.

5.4 Soil Vapor Chemistry

Soil vapor samples collected during the RI showed petroleum and chlorinated VOCs at generally low concentrations. BTEX concentrations were generally low at a maximum of 32.48 µg/m³. Carbon tetrachloride was identified in three of the four soil vapor samples at a maximum concentration of 0.503 µg/m³. PCE was identified in two of the four soil vapor samples at a maximum concentration of 17.5 µg/m³, and TCE was detected in only one soil vapor sample at a concentration of 0.43 µg/m³. The carbon tetrachloride, PCE and TCE concentrations detected

within the soil gas samples are below the monitoring level ranges established within the State DOH soil vapor guidance matrix.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 11.

Figure 8 shows the location and posts the values for soil vapor samples with detected concentrations.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this Site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

Notes:

NA No guidance value or standard available

(a) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006, New York State Department of Health.

(b) NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2005, Summary of Background Levels for Selected Compounds (NYSDOH Database, Outdoor values)

Value detected above NYSDOH Air Guidance Value of 5 µg/m³, which according to Soil Vapor/Indoor Air Matrix 1 would require at a minimum, monitoring.

EXECUTIVE SUMMARY

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following properties on behalf of Hersko Construction: 85 4th Avenue, 87 4th Avenue, 89 4th Avenue, and 80 St. Marks Place, Brooklyn, New York 11217. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the subject site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

The subject site consists of four adjacent properties: 85 4th Avenue, 87 4th Avenue, 89 4th Avenue and 80 St. Marks Place, Brooklyn, New York 11217. The subject site located in the City of New York and Borough of Brooklyn (Kings County) and is identified as Block 934, Lots 5, 6, 7 and 12. The four adjacent lots comprising the subject site are located on the southeast corner of the intersection 4th Avenue and St. Marks Place.

- 85 4th Avenue (Block 934, Lot 7) – The lot consists of 60 feet of frontage on 4th Avenue and is approximately 82.17 feet deep for a total of approximately 4,930.2 square feet (0.11 acres). The property is owned by St. Marks - 4th Avenue Realty. The lot is developed with a 2-story brick building. Entrance to the building is provided from 4th Avenue via a steel rollup gate and 3 steel doors. Signage on the building indicates that the property is used for a window and door business and lumber business. The interior of the building is set up for storage and sales of lumber and building materials. A small area in the front corner of the building is set up as sales office space and an area in the rear of the building is set up for display of tools and smaller items. The remaining portions of the building consist of wooden racks for storage of lumber from ground floor to the ceiling of the building. Doors in the rear of the building provide access

to the other portions of the lumber business which extended into all of Lot 12, the first floor of Lot 5 and a portion of the rear of the first floor of Lot 6.

- 87 4th Avenue (Block 934, Lot 6) – The lot has 20 feet of frontage on 4th Avenue. and is approximately 82.17 feet deep for a total of approximately 1,643 square feet (0.037 acres). The property is owned by St. Marks - 4th Avenue Realty Corp. The lot is developed with a 4-story brick building. Signage on the front of building indicates that first floor of the building is utilized as a tire repair shop. The second, third and fourth floors of the building are utilized as apartments.
- 89 4th Avenue (Block 934, Lot 5) – The lot has approximately 20 feet of frontage on 4th Ave. and is approximately 82.17 feet deep for a total of approximately 1,643 square feet (0.037 acres). The property is owned by St Marks - 4th Avenue Realty. The lot is developed with a 4-story brick building. Entrance to the building is provided from 4th Avenue via a steel rollup gate and 3 steel doors. Signage on the building indicates the second floor is or was recently a as office space for an attorney. The third and fourth floors of the building are utilized as apartments.
- 80 St Marks Place (Block 934, Lot 12) – The lot has 40 feet of frontage on St. Marks Place and is approximately 100 feet deep for a total of approximately 4,000 square feet (0.091 acres). The property is owned by St. Marks - 4th Avenue Realty Corp. Developed with a 1-story brick building. Entrance to the building is provided from St. Marks Place via 2 steel rollup gates and 3 steel doors. Signage on the building indicates that the property was recently used for a lumber and building supply business.

Historical information (DOB records, Sanborn Maps and City Directory listings) reviewed for the subject site identified the subject site as first being developed prior to 1887 with numerous 3 story, residential row houses (with basements) that occupied the front half of the lot. A rear empty yard was located behind each of the row houses.

According to Sanborn maps and DOB records, the residential row houses at 81 and 83 4th Avenue were demolished in 1943. Building permits were issued for a new building in 1953 and a Certificate of

Occupancy was issued for the new building in 1958. The 1965 Sanborn Map shows the two vacant lots, as well as 85 4th Avenue, as redeveloped with a 2 story concrete block building, utilized as for lumber storage. City directory listings available from the 1960's through current state the property was utilized primarily by Modern Way Lumber Co.

In 1971, the two residential row houses on St. Marks Place (80 and 82 St. Marks Place) were torn down and the property was redeveloped with the 2-story concrete block warehouse that currently occupies the site. Lots 12 and 13 were joined at that time to form the current Lot 12.

The two residential buildings located at 87 and 89 4th Avenue were built prior to the 1880s, and historic use of the buildings has been primarily residential. However, City Directory listings for the two properties have noted several real estate companies and attorneys offices. The first floor of 87 4th Avenue has also been used as a tire repair facility.

RECOGNIZED ENVIROMENTAL CONDITIONS

Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, *no recognized environmental conditions were noted for the subject site.*

ENVIRONMENTAL ISSUES

- The subject site has been assigned an E-designation for Hazmat (Underground Gasoline Storage Tanks Testing Protocol) as part of the Park Slope North Rezoning enacted in April of 1993 (CEQR No. 90-254K). An E-designation does not interfere with the present use of the site, however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. Such release may require a full subsurface investigation, remedial and health and safety planning, implementation of a remedial program and documentation that the remedial program was completed during redevelopment of the property. It should be noted that if redevelopment plans for multiple lots include a lot labeled "E" by the Department of Buildings, all other lots part of the redevelopment plan are designated with an "E" and are subject to the same

requirements assigned to an “E” designated site. Therefore, Lots 5, 7 and 12 are subject to the restrictions applied to an “E” site.

Additional information regarding “E” sites can be found on the New York City Office of Environmental Remediation website:

http://www.nyc.gov/html/oer/html/e_designation/e_designation.shtml.

The following de minimis conditions were identified:

- Potential for lead based paint based on the age of the structures.
- Potential for asbestos containing materials based on the age of the structures – Asbestos pipe insulation was observed within several of the buildings.

A de minimis condition is one that generally does not represent a risk of harm to the public health and the environment and that generally would not be subject to an enforcement action if brought to the attention of an appropriate governmental authority.

Based on the quantity of suspected asbestos containing material observed by EBC, it is assumed that this project would be classified as No.3 above. This will require an inspection by a NYC – Certified asbestos inspector and filing of form ACP-5 with the NYCDEP.

1.0 INTRODUCTION

1.1 Purpose

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following properties on behalf of Hersko Construction: 85 4th Avenue, 87 4th Avenue, 89 4th Avenue and 80 St. Marks Place, Brooklyn, New York 11217 (**Figure 1**). The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the subject site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

1.2 Scope of Services

The assessment consisted of a visual inspection of the site and surrounding areas, interviews, a review of historical information and maps, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Southport, Connecticut, provided the following information: a computerized database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, and a historical telephone directory search.

EBC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the subject site or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). EBC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), Freddie Mac requirements and EBC's proposal for services.

1.3 Significant Assumptions

EBC has made the following assumptions in the preparation of this report:

1. Groundwater – The depth to groundwater at the subject site is approximately 15-17 feet below grade and flows towards the northwest or west.
2. Regulatory Records Information – EBC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate and current.
3. Other - EBC assumes that all information provided through interviews is complete and unbiased.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by EBC.
4. EBC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or

regulations, or policies of federal, state, or local government agencies. EBC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
6. This report is based, in part, on information supplied to EBC by third-party sources. While efforts have been made to substantiate this third-party information, EBC cannot attest to the completeness or accuracy of information provided by others.

1.5 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between Hersko Construction.

1.6 User Reliance

This report was prepared for the exclusive use of Hersko Construction; no other party may use the report without the written authority of EBC.

2.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

2.1 Location and Legal Description

The subject site consists of four adjacent properties: 85 4th Avenue, 87 4th Avenue, 89 4th Avenue and 80 St. Marks Place, Brooklyn, New York 11217. The subject site located in the City of New York and Borough of Brooklyn (Kings County) as shown in **Figure 1**. An aerial photo of the subject sites and surrounding properties are provided as **Figure 3**. The subject site is identified as Block 934, Lots 5, 6, 7 and 12 (**Figures 2A** and **2B**). The four adjacent lots comprising the subject site are located on the southeast corner of the intersection 4th Avenue and St. Marks Place.

- 85 4th Avenue (Block 934, Lot 7) – The lot consists of 60 feet of frontage on 4th Avenue and is approximately 82.17 feet deep for a total of approximately 4,930.2 square feet (0.11 acres). The property is owned by St. Marks - 4th Avenue Realty.
- 87 4th Avenue (Block 934, Lot 6) – The lot has 20 feet of frontage on 4th Avenue. and is approximately 82.17 feet deep for a total of approximately 1,643 square feet (0.037 acres). The property is owned by St. Marks - 4th Avenue Realty Corp.
- 89 4th Avenue (Block 934, Lot 5) – The lot has approximately 20 feet of frontage on 4th Ave. and is approximately 82.17 feet deep for a total of approximately 1,643 square feet (0.037 acres). The property is owned by St Marks - 4th Avenue Realty.
- 80 St Marks Place (Block 934, Lot 12) – The lot has 40 feet of frontage on St. Marks Place and is approximately 100 feet deep for a total of approximately 4,000 square feet (0.091 acres). The property is owned by St. Marks - 4th Avenue Realty Corp.

A copy of the deed for each property (if available) is attached in **Appendix B**.

2.2 Site Characteristics

The subject site consists of four separate lots, each developed with one building. A description of each building is provided below.

- 85 4th Avenue – Developed with a 2-story brick building. Entrance to the building is provided from 4th Avenue via a steel rollup gate and 3 steel doors. Signage on the building indicates that the property is used for a window and door business and lumber business.
- 87 4th Avenue – Developed with a 4-story brick building. Entrance to the building is provided from 4th Avenue by a wood door. Signage on the front of building indicates that first floor of the building was recently utilized as a tire repair shop. The second, third and fourth floors of the building are utilized as apartments.
- 89 4th Avenue – Developed with a 4-story brick building. Entrance to the building is provided from 4th Avenue via a steel rollup gate and 3 steel doors. Signage on the building indicates that the second floor is or was recently used as office space by an attorney. The third and fourth floors of the building are utilized as apartments.
- 80 St Marks Place – Developed with a 1-story brick building. Entrance to the building is provided from St. Marks Place via 4 steel rollup gates and 3 steel doors. Signage on the building indicates that the property was recently used by a lumber and building supply company.

Photos of the exterior and interior of the buildings are attached in **Appendix A**.

2.2.1 Utilities

Electric service for each building is provided by Con-Edison, potable water is supplied by the New York City Department of Environmental Protection (NYCDEP) and sanitary wastes for the buildings are discharged to the municipal sewer system. Heat for each of the buildings was provided by gas-fired furnaces and/or ceiling suspended gas-fired space heaters.

2.3 Physical Setting

The elevation of the property is approximately 29 feet above the National Geodetic Vertical Datum (NGVD). The topography in the immediate area of the property generally slopes downward to the north.

2.3.1 Surface Water

The nearest body of water to the subject site is the Gowanus Canal, which is located approximately 0.38 miles to the west.

2.3.2 Groundwater

The depth to groundwater beneath the site as inferred from available groundwater maps and topographic elevation is approximately 15-17 feet below grade. Based on regional groundwater contour maps groundwater flow is expected to be northwest toward the East River. No public water supply well fields are identified in the EDR report within a one-mile radius of the subject property.

2.3.3 Radon Risk Evaluation

Radon is a colorless, radioactive; inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's "Map of Radon Zones for New York State", September 1993 indicates that Kings County is not a radon risk area. The EDR report provides information from the New York State Department of Health radon survey which indicates that 100% of those sites tested in Kings County were below the United States Environmental Protection Agency (USEPA) radon action level of 4 Pico curies per liter (pCi/L) in the living area.

3.0 PROPERTY USAGE

3.1 Current Property Usage

At the time of the inspection, the lumber yard was vacant/abandoned. For Sale and For Lease signs were posted on the front exterior of 85 4th Avenue. The former Modern Way Lumber company consisted of the entire 2-story warehouse building located on Lot 7, the entire 2-story warehouse building located on Lot 12, the entire first floor of the 4-story building located on Lot 5 and a portion of the rear of the first floor of the 4-story building located on Lot 6. Signs on the front of the first floor of Lot 6 (87 4th Avenue) stated the building was recently utilized as a tire repair/flat fix shop, but at the time of the inspection the courtyard and first floor were vacant.

EBC noted tenants entering and exiting the residential units located on the upper floors of Lot 5 (89 4th Avenue) and Lot 6 (87 4th Avenue), but an inspection of the residential units was not conducted.

A review of New York City Department of Buildings (NYCDOB) records and the NYC Department of City Planning Zoning map indicates that each of the four lots comprising the subject site are zoned R8A with a C2-4 commercial overlay (**Figure 4**).

3.2 Current Usage of Adjoining/Surrounding Properties

A summary of the uses of the surrounding/adjacent properties is described below. Photos of the exterior of adjacent properties are attached in **Appendix A**.

Surrounding Property Usage

Direction	Property Description
North	Block 934, Lot 10 (79 4 th Avenue and 68-78 St Marks Place) Developed with a 4-story mixed residential and commercial brick building. Property is on the southeast corner of 4 th Avenue and St Marks Place. Entrance to the property is provided from 4 th Avenue via a glass door and on St Marks Place via a glass door and driveway. Signage on the front indicates the commercial space is used for a Laundromat. Currently developed with first floor commercial use and upper floors residential use. Built in 1920. Owned by St Marks Realty Co.
	Block 932, Lot 78 (77 St. Marks Place) Developed with a 3-story residential multi-family walk-up building. Entrance to property is provided from St Marks Place. Built in 1910. Owned by Sheng Ye.

	<p><u>Block 932, Lot 77</u> (79 St. Marks Place) Developed with a 3-story residential multi-family walk-up building. Entrance to property is provided from St Marks Place. Built in 1910. Owned by 81 St Marks Associate.</p> <p><u>Block 932, Lot 7503</u> (81 St. Marks Place) Developed with a 4-story residential multi-family walk-up building. Entrance to property is provided from St Marks Place. Built in 2005.</p>
South	<p><u>Block 934, Lot 4</u> (91 4th Avenue) Developed with a 1,643 square foot, 4-story brick residential multi-family walk-up. Entrance to the property is provided from 4th Avenue. Owned by Zacharil Torres. Built prior to 1888.</p> <p><u>Block 934, Lot 73</u> (609 Warren Street) Developed with a 4,000 square foot, 3-story brick residential multi-family walk-up building. Entrance to the property is provided from Warren Street. Built prior to 1888. Owned by David Gordon.</p>
East	<p><u>Block 934, Lot 14</u> (84 St Marks Place) Developed with a 4,000 square foot, 1-story industrial/manufacturing building. Signage on the property indicates it is used for a lumber and building business. Entrance to the property is provided from St Marks Place. Owned by St Marks - 4th Avenue Realty.</p> <p><u>Block 934 Lot 74</u> (607 Warren St.) Developed with a 4,000 square foot, 3-story brick residential multi-family walk-up building. Entrance to the property is provided from Warren Street. Built prior to 1888. Owned by Charles Quimby.</p>
West	<p><u>Block 395, Lot 32</u> (86 4th Avenue and 60-66 St Marks Place) Developed on the southwest corner of 4th Avenue and St Marks Place, with a 1,600 square feet mixed residential and commercial 4-story building. Signage on the building indicates the commercial space is used by a Laundromat. Entrance to the property is provided from 4th Avenue and St Marks Place. Owned by Montoya Diosmira.</p> <p><u>Block 395, Lot 33</u> (88 4th Avenue) Developed with a 1,600 square feet mixed residential and commercial 3-story brick building. Signage on the building indicates the commercial space is used for a check chasing store. Owned by Victor Santiago.</p> <p><u>Block 395 Lot 34</u> (88A 4th Avenue) Developed with a 1,574 square feet mixed residential commercial 3-story brick building. Signage on the building indicates the commercial space is used by a car and limo business. Owned by Amin Ghassan.</p> <p><u>Block 395 Lot 35</u> (90 4th Avenue) Undeveloped 1,573 square feet parking lot. Owned by 94 4th Avenue Coop C/O P.</p>

3.3 Historical Usage of Subject site and Surrounding Properties

Historical sources researched to determine past usage of the subject site and surrounding properties are as follows:

Sanborn Fire Insurance Maps - Sanborn fire insurance maps for the subject site and surrounding area were reviewed for the years 1887, 1905, 1916, 1942, 1951, 1965, 1978, 1979, 1982, 1983, 1986, 1987, 1988, 1989, 1991, 1992, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006 and 2007. The review is summarized in Section 3.3.1 and 3.3.2. Copies of Sanborn maps are included as **Appendix C**.

City Directory Abstract - A directory of historical telephone listings at the subject site and surrounding properties were reviewed from approximately five year intervals for the years spanning 1928 through 2005. The review is summarized in Sections 3.3.2 below. A copy of the City Directory is included in **Appendix D**.

3.3.1 Sanborn Fire Insurance Maps - Subject site and Adjacent Properties

The historical usage of the subject site and adjacent properties, identified through Sanborn map review, is summarized below.

1888

Subject Site:

- Lot 7 (85 4th Avenue) – Developed with three separate three story residential buildings (row houses). The buildings are labeled as 81 4th Avenue, 83 4th Avenue and 85 4th Avenue. A small rear yard is located behind each of the three buildings.
- Lot 6 (87 4th Avenue) – Developed with one three story residential building (row house) and labeled as 87 4th Avenue. A small rear yard is located behind the row house.
- Lot 5 (89 4th Avenue) – Developed with one three story residential building (row house) and labeled as 89 4th Avenue. A small rear yard is located behind the row house.
- Lot 12 (80 and 82 St. Marks Place) – Developed with two, three story residential buildings (row houses) and labeled as 374 St. Marks Place and 376 St. Marks Place. A small rear yard is located behind the row house.

Adjacent properties:

North

- 79 4th Avenue – Developed with a three story residential building labeled as having a first floor

store. A small rear yard is located behind the residential building.

- 355 St. Marks Place (aka 77 4th Avenue) to 367 St Marks Place (located on opposite side of St. Marks Place) – Developed with multiple 3 or 4-story residential buildings. The corner lot is labeled as having a first floor store. Residential buildings on St. Marks Place have small rear yards behind the row houses.

West

- 86 4th Avenue to 96 4th Avenue (opposite side of 4th Avenue) – Developed with a multiple 3-story residential buildings, some labeled as having a first floor store.

South

- 91 4th Avenue – Developed with a three-story residential building (row house). A small rear yard is located behind the row house.
- 607 and 609 Warren Street – Both properties are developed with a three-story residential building (row house). A small rear yard is located behind each row house.

East

- 84 and 86 St. Marks Place – Both properties are developed with a three-story residential building (row house). A small rear yard is located behind each row house. The house numbers are listed as 378 and 380 St. Marks Place.

1906

No significant changes were noted on the 1906 Sanborn map compared to the 1888 Sanborn map for the subject site or adjacent properties. However, it should be noted that the subject site row houses have been labeled as having a basement.

Subject Site:

- Lot 12 (80 and 82 St. Marks Place) – The properties are each developed with 2 ½ story residential buildings and both have a basement. The house numbers are no longer listed as 374 and 376 St. Marks Place.

Adjacent properties:

East

- 80 and 82 St. Marks Place – The properties are each developed with 2 ½ story residential buildings and both have a basement. The house numbers are no longer listed as 378 and 380 St. Marks Place.

1926

No significant changes were noted on the 1926 Sanborn map compared to the 1906 Sanborn map for the subject site or adjacent properties.

1951

Subject Site:

- Lot 7 (85 4th Avenue) – Formerly consisted of three separate three story residential buildings (row houses). The 1951 Sanborn map depicts 81 4th Avenue and 83 4th Avenue as undeveloped lots. However, the residential building occupying 85 4th Avenue remains unchanged.

No other significant changes were noted on the 1951 Sanborn map when compared to the 1926 Sanborn map for the subject site or adjacent properties.

1965

Subject Site:

- Lot 7 (85 4th Avenue) – All three properties (81 4th Avenue, 83 4th Avenue and 85 4th Avenue) have all been combined and redeveloped with a two story building. The first floor is labeled as being used for lumber storage, and the second floor is labeled as manufacturing.

Adjacent properties:

West

- 86 4th Avenue to 96 4th Avenue (opposite side of 4th Avenue) – 88 4th Street is labeled as a three story dwelling, but the first floor is utilized for tire service. Both properties 90 and 92 4th Street are vacant, and 94 to 102 4th Street have combined to form a gas station.

No other significant changes were noted on the 1965 Sanborn map when compared to the 1951 Sanborn map for the subject site or adjacent properties.

1978-2007

Subject Site:

- Lot 12 (80 to 82 St. Marks Place) – Redeveloped with a 2 story concrete block warehouse building, labeled as being constructed in 1971.

Adjacent properties:

West

- 86 4th Avenue to 96 4th Avenue (opposite side of 4th Avenue) – The 1980 Sanborn map indicates the gas station located at 94 to 102 4th Street is now labeled only as an automotive repair facility.
- 86 4th Avenue to 96 4th Avenue (opposite side of 4th Avenue) – The 2001 Sanborn map indicates the site was redeveloped with a one-story commercial building (currently KFC fast food restaurant).

East

- 80 and 82 St. Marks Place – The 1982 Sanborn map shows the two properties were combined and redeveloped with a one-story concrete block warehouse building labeled as 86 St. Marks Place.

No other significant changes were noted for the subject site or adjacent properties on the 1978, 1979 and 1980 Sanborn maps when compared to the 1965 Sanborn map.

3.3.2 City Directory Listings - Subject site and Adjacent Properties

The historical usage of the subject site and adjacent properties, identified through Sanborn map review, is summarized below.

Subject Site:

- Lot 7
 - 81 4th Avenue – No listings
 - 83 4th Avenue – Residential listing (1928)
Squicciarinni A & Son, Inc. Silk Ornaments (1949)
 - 85 4th Avenue – Residential listings (1934)
Modern Way Lumber Company (1960, 65, 1970, 73, and 76, 1985, 1992, 97, 2005)
Natl Payment Plan Div of Amer Honor Guild Inc. (1970, 1973)
Sun Stop East Inc. (1976)
Jamar Products (1976, 1985)
Imperial Lumber Marts (1976, 1985, 1992)
- Lot 6
 - 87 4th Avenue – Residential Listings (1928, 1960, 1965, 1970, 1997, 2005)
Apple Rent A Car (1985)
Angelos Tire Repair (1985, 1992)
Rodriguez Tire Shop (2005)
- Lot 5
 - 89 4th Avenue – Residential Listings (1928, 1934, 1945, 1949, 1965, 1970, 1973, 1976, 1980, 1985, 1992, 2005).
Unity Real Estate (1997)
Law Offices (2005)

Summary

Historical information (DOB records, Sanborn Maps and City Directory listings) reviewed for the subject site identified the subject site as first being developed prior to 1887 with numerous 3 story, residential row houses (with basements) that occupied the front half of the lot. A rear empty yard was located behind each of the row houses.

According to Sanborn maps and DOB records, the residential row houses at 81 and 83 4th Avenue were demolished in 1943. Building permits were issued for a new building in 1953 and a Certificate of Occupancy was issued for the new building in 1958. The 1965 Sanborn Map shows the two vacant

lots, as well as 85 4th Avenue, as redeveloped with a 2 story concrete block building, utilized as for lumber storage. City directory listings available from the 1960's through current state the property was utilized primarily by Modern Way Lumber Co.

In 1971, the two residential row houses on St. Marks Place (80 and 82 St. Marks Place) were torn down and the property was redeveloped with the 2-story concrete block warehouse that currently occupies the site. Lots 12 and 13 were joined at that time to form the current Lot 12.

The two residential buildings located at 87 and 89 4th Avenue were built prior to the 1880s, and historic use of the buildings has been primarily residential. However, City Directory listings for the two properties have noted several real estate companies and attorneys. The first floor of 87 4th Avenue has also been used as a tire repair facility.

4.0 USER PROVIDED INFORMATION

4.1 Title Records

As of the date of this report the user has not requested that EBC perform a title search.

4.2 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws.

The user has not made EBC aware of any environmental liens against the subject site and has not requested that EBC perform an environmental lien search for the subject site.

4.3 Specialized Knowledge

The user has not made EBC aware of any specialized knowledge regarding the chemicals or processes formerly in use at the subject site or surrounding property.

4.4 Commonly Known or Reasonably Ascertainable Information

The user has not made EBC aware of any commonly known or reasonably ascertainable information regarding the past uses of the subject site, specific chemicals in use at the subject site or any spills, chemical releases or environmental cleanups at the subject site.

4.5 Valuation Reduction for Environmental Issues

The user has not made EBC aware of any valuation reduction regarding the sale price of the property.

4.6 Owner, Property Manager and Occupant Information

According to Office of City Register records, the current owner of each of the properties consisting of the subject site is the following: St. Marks - 4th Avenue Realty Corp.

4.7 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the subject site as part of the building renovations to be conducted at the site.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Environmental Data Resources (EDR) of Southport, Connecticut was retained to provide a computerized database search of the project area within an ASTM-standard radius of the subject site. A list of the databases searched and the search radius is shown on the summary table below. EBC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix E**). A summary of standard environmental record sources researched is as follows:

5.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Federal Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance
USEPA	National Priority List	NPL	1.0 mile
USEPA	National Priority List Deletions	Delisted NPL	0.5 mile
USEPA	Comprehensive Environmental Response Compensation and Liability Act Registry	CERCLIS	0.5 mile
USEPA	CERCLIS No Further Remedial Action Planned	CERCLIS-NFRAP	0.5 mile
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG	Subject site and Adjoining
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Subject site
USEPA	Emergency Response Notification System	ERNS	Subject site
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile
USEPA	Records of Decision	ROD	1.0 mile
USEPA	Mines Master Index	MINES	0.25 mile

Federal NPL List - The National Priority List (NPL) is the United States Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the federal Superfund Program.

Findings: The subject site is not listed as an NPL facility. No NPL sites were identified within a 1-mile radius of the subject site.

Federal Delisted NPL List – NPL Delisted Sites are former NPL sites that have been remediated and removed from the EPA’s priority list. Sites are deleted where the EPA has determined that no further response is appropriate.

Findings: The subject site is not identified as a Delisted NPL facility. There were no Delisted NPL sites identified within a ½ mile radius of the subject site.

Federal CERCLIS List - The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

Findings: The subject site is not listed as a CERCLIS facility. There are no CERCLIS sites identified within a ½ mile radius of the subject site.

Federal CERCLIS-NFRAP List – No Further Remedial Action Planned (NFRAP) sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL).

Findings: The subject site is not listed as a CERCLIS-NFRAP facility. There are no CERCLIS-NFRAP sites identified within a ½ mile radius of the subject site.

Federal RCRA CORRACTS List - The RCRA Corrective Actions (CORRACTS) database is the EPA’s list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

Findings: The subject site is not listed as a RCRA CORRACTS facility. One RCRA CORRACTS sites was identified within a 1 mile radius of the subject site.

The Patterson Chemical Company, Inc. (102 3rd Street), is located approximately 3,800 feet west-southwest of the subject site. The facility is also listed within the RCRA Non-Gen, FINDS, and MANIFEST databases. The EPA ID No. for the facility is NYD980592471 and is listed as a General Warehousing and Storage or General Freight Trucking. However, due to the distance and location of the facility, it is not considered a significant concern for this assessment.

Federal RCRA Treatment, Storage and Disposal - The EPA Resource Conservation and Recovery Act (RCRA) program identifies reporting facilities that treat, store or dispose of hazardous waste.

Findings: The subject site is not listed as a RCRA TSD facility and no TSD facilities were identified within a ½ mile radius of the subject site.

Federal RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A Small Quantity Generator (SQG) is a site which generate more than 100 and less than 1000 kg of hazardous waste during any one calendar month and accumulates less than 6000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1000 kg of hazardous waste at any time. Large Quantity Generators (LQG) generate more that 1000 kg of hazardous waste per month. Although a property may be identified as a generator of hazardous waste, it does not mean that this material has been released to the environment. RCRA Generators which have released hazardous materials are identified in the appropriate state or federal listing.

Findings: The subject site is not listed as a RCRA SQG, RCRA-CESQG, RCRA LQG or RCRA-NonGen facility. One RCRA-SQG and eight RCRA CESQG facilities were identified within a ½ mile radius of the subject site.

AY 195 Flatbush, LLC, is listed as a RCRA-SQG. The facility is located at 195 Flatbush Avenue, Brooklyn, New York (approximately 1,100 feet east of the subject site). The

facility is also listed within the FINDS, UST and Hist UST databases. Due to the distance of the facility and absence of inclusion within a database which would indicate a spill or release had occurred at the facility, it is not considered a significant environmental concern for this assessment.

The EDR report for each of the remaining 8 CESQG facilities was reviewed. Due to the distance and/or location of each of the CESQG facilities, none are considered a significant environmental concern for this assessment.

Federal Institutional/Engineering Controls – Federal Institutional/Engineering Controls databases list sites with institutional/engineering controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Findings: No Federal Institutional/Engineering Controls were listed for the subject site and no sites were identified within a ½ mile radius of the subject site.

Federal Emergency Response Notification System - The Emergency Response Notification System (ERNS) is national database used collect information on reported releases of oil or hazardous substances.

Findings: The subject site and adjacent properties were not identified in the ERNS databases.

Federal Superfund Consent Decrees - The Superfund Consent Decrees (CONSENT) list identifies major legal settlements that establish responsibility and standards for cleanup at NPL sites.

Findings: Neither the subject site nor any property within one mile of the subject site is identified in the CONSENT databases.

Federal Records of Decision - Record of Decision (ROD) documents mandate a permanent remedy at

an NPL site containing technical and health information to aid in the cleanup.

Findings: Neither the subject site nor any property within one mile of the subject site is identified a ROD site.

Federal Master Mines Index - The Master Mines Index (MINES) file contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Findings: Neither the subject site nor any property within ¼ mile of the subject site is listed in the MINES database.

5.1.2 New York State Databases

The table below summarizes the State databases that were searched.

New York State Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile
NYSDEC	Hazardous Substance Waste Disposal Site Study	HSWDS	0.5 mile
NYSDEC	Solid Waste Facility Register	SWF	0.5 mile
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Subject site and Adjoining
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Subject site and Adjoining
NYSDEC	Institutional/Engineering Control registries	INST/ENG Controls	Subject site
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile
NYSDEC	Brownfield sites	Brownfields	0.5 mile
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile
NYSDEC	New York State Spills	NYSPILLS	0.125 mile
NYSDEC	Dry Cleaner Site	Drycleaners	0.25 mile

NYS Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance/waste sites.

Findings: The subject site is not listed as a SHW site. No SHW sites were identified within a 1 mile radius of the subject site.

NYS Hazardous Substance Waste Disposal Site Study - The Hazardous Substance Waste Disposal Site Study (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the HSWDS registry and non-registry sites that EPA Preliminary Assessment reports or Site Investigation reports were prepared.

Findings: The subject site is not listed as a HSWD site. No HSWDS sites were identified within a ½ mile radius of the subject site.

NYS Landfill - The NYSDEC Solid Waste Facility Register records contain an inventory of solid waste disposal facilities or landfills in New York State.

Findings: The subject site is not listed as a landfill. However, five SWF/LF facilities were identified within a ½ mile radius of the subject site.

Baltic Recycling Corp. is located at 524-526 Baltic Street, which is approximately 1,200 feet west of the subject site. The facility is an inactive transfer station. The facility is not listed in any other database which would indicate a spill/release or remedial action has occurred at the site.

Rinaldi Recycling Co. is located at 182 4th Street, which is approximately 1,200 south-southwest of the subject site. The facility is an inactive facility that recycled/processes

regulated medical waste. The facility is not listed in any other database which would indicate a spill/release or remedial action has occurred at the site.

Pronto Demolition Corp. is a registered construction and demolition processing facility. The facility is located at 73 Provost Street, which is approximately 2,500 feet east of the subject site. The facility is not listed in any other database which would indicate a spill/release or remedial action has occurred at the site.

Cross Bay Contracting is an inactive transfer station. The facility is located at 242 Nevins Street, which is approximately 1,700 feet west of the subject site. The facility is not listed in any other database which would indicate a spill/release or remedial action has occurred at the site.

Royal Recycling Corp. is also located at 242 Nevins Street. The inactive facility accepted construction and demolition (C&D) debris for processing. The facility is not listed in any other database which would indicate a spill/release or remedial action has occurred at the site.

Basin Haulage Inc. is an inactive C&D processing facility. The facility is located at 462-470 Baltic Street, which is approximately 1,900 feet west-northwest of the subject site. The facility is not listed in any other database which would indicate a spill/release or remedial action has occurred at the site.

None of the facilities are considered a significant concern for this assessment due to their distance, location and/or absence from a database which would indicate a spill/release or need for remedial action.

NYS Registered Recycling Facilities - The Registered Recycling Facilities List (SWRCY) is a NYSDEC list of recycling facilities.

Findings: The subject site is not listed as a SWRCY site. One SWRCY site was identified within a ½ mile radius of the subject site. The Rinaldi Recycling Co. facility is located at 326 Douglas

Street, which is located approximately 1,200 feet southwest of the subject site. The facility separated solid waste recyclables, but is listed as inactive. Due to the distance of the recycling facility from the subject site, it is not considered a significant concern for this assessment.

NYS Registered Waste Tire Storage Facilities - The Registered Recycling Facilities List (SWTIRE) is a NYSDEC list of Registered Waste Tire Storage & Facility List.

Findings: The subject site is not listed as a SWTIRE site. There were no SWTIRE sites identified within a ½ mile radius of the subject site.

NYS Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Findings: The subject site is not identified as a LTANKS site. However, 57 LTANK and 39 Historical LTANK sites were identified within ½ mile of the subject site. All of the LTANK spill numbers have been closed by the NYSDEC. Several Hist LTANK spill numbers were not closed, but upon further review of information provided within the EDR report, none were considered to be a significant concern for this assessment.

Spill Number 0003201 describes a spill that occurred at a former gas station located on the opposite side of 4th Avenue (currently KFC). The Spill Number was closed following soil and groundwater sampling conducted at the site. The closed spill number for the property located at 90 4th Avenue is not considered a significant concern for this assessment.

A second spill of note (9505523) occurred at 124 4th Street, which is approximately 450 feet southwest of the subject site. Numerous groundwater monitoring wells have been installed and gasoline (free phase hydrocarbons) have been found to be greater than a foot in thickness. However, due to the location of the spill (down gradient, assuming groundwater

flow to the northwest, west or southwest) it is not considered a significant concern for this assessment.

NYS Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage - Underground Tanks (UST) database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - Aboveground Tanks (AST) database lists facilities with registered above ground storage tanks.

Findings: The subject site is not listed as a UST, Hist UST, AST or Hist AST site. However, 16 UST sites, 14 HIST UST sites, and 14 AST sites are registered within a ¼ mile radius of the subject site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Most tanks in the area hold home heating oil for on-site boilers and furnaces. Sites with leaking tanks or spills are addressed in the appropriate section.

NYS Chemical Bulk Storage - The Chemical Bulk Storage (CBS) database is a NYSDEC list of facilities that store regulated hazardous substances in aboveground tanks (AST) with capacities of 185 gallons or greater or underground tanks (UST) of any size.

Findings: The subject site is not identified as a CBS facility. No CBS UST or CBS AST facilities were identified with a ¼ mile radius of the subject site.

NYS Institutional/Engineering Controls – NYSDEC list of Environmental Remediation sites with Institutional or Engineering Controls in place.

Findings: Neither the subject site nor any site within a ½ mile of the subject site was identified in the NYSDEC Institutional/Engineering Controls databases.

NYS Voluntary Cleanup Agreements - The NYSDEC Voluntary Cleanup Program (VCP) database identifies hazardous waste sites undergoing private sector cleanup as part of redevelopment.

Findings: The subject property was not identified as a VCP site. No VCP sites were identified within a ½ mile radius of the subject site.

NYS Brownfields - A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

Findings: The subject site was not identified as a Brownfield, however, one property located at 29 Flatbush Avenue was listed within the Brownfields database within ½ mile of the subject site. However, the BCP application was denied by NYSDEC as onsite contamination was limited to low sporadic hits of lead and SVOCs typical of urban fill. Due to the distance of the site, and the limited onsite contamination, the site is not considered a significant concern for this assessment.

NYS Major Oil Storage Facilities - The NYSDEC Major Oil Storage Facilities (MOSF) database lists facilities or vessels with a petroleum storage capacity of more than 400,000 gallons.

Findings: The subject site was not identified as an MOSF. One MOSF UST was identified within ½ mile of the subject site. The Bayside Fuel Oil Depot Corp. (510 Sackett Street) facility is located approximately 2,400 feet west-southwest of the subject site. The facility was administratively closed by the NYSDEC. Based on DEC site closure and the distance and location of the facility from the subject site, it is not considered a significant concern for this assessment.

NYS Spills - The New York State Spills Information Database (NY SPILLS) contains data collected on chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

Findings: The subject site is not listed within either NY SPILLS or NY Hist SPILLS databases. However, 10 spill sites and 6 historical spill sites identified within 1/8 mile of the subject site. Each of the spills has been closed by the NYSDEC. Based on the decision of the NYSDEC to close the spill sites, none are considered to be a significant concern for this assessment. Two spills within close proximity are discussed in further detail above within Section LTANKS.

Drycleaner Sites - The NYSDEC maintains a listing of all registered drycleaners. Drycleaner sites do not necessarily pose a hazard unless a spill occurs. Sites at which spills have been identified are addressed in the appropriate section.

Findings: The subject site is not identified as drycleaner. Three drycleaners were identified within ¼ mile of the site.

Cristallo Drycleaners is located at 64 4th Avenue, which is approximately 350 feet north-northeast of the subject site. No violations were noted within the EDR Report, and the facility is not included within a database which would indicate a release/spill has occurred, and is therefore not considered a significant environmental concern for this assessment.

Economy Cleaners is a listed as a Perc drycleaner, at 123 5th Avenue, which is approximately 1,000 feet south-southeast of the subject site. The facility is also listed within the FINDS, MANIFEST and LTANKS databases. However, the spill associated with the LTANK listing references a leak from a #2 fuel oil tank which has been properly cleaned up. Due to the location and distance of the drycleaner, it is not considered a significant concern for this assessment.

Fashion Cleaners was a former drycleaning operation located at 118 Third Avenue, which is approximately 780 feet west-northwest of the subject site. The drycleaner is also listed within the FINDS and MANIFESTS databases. No violations were listed for the facility. Due to the location and distance of the drycleaner, it is not considered a significant concern for this assessment.

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Findings: The subject property is not listed as a MANIFEST site. However, 38 manifest sites were identified within a ¼ mile radius of the subject site. Since none of the manifest sites are either adjacent to the subject site and/or do not appear in other EDR databases which would indicate a release has occurred, they are not considered to be a significant concern for this

assessment. Facilities that may appear in an EDR Database which would indicate a release has occurred are discussed under the appropriate headings.

NYS Manufactured Gas Plants - Manufactured gas plants (MGP) were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Findings: The subject site is not identified as an MGP site. However, three MGP sites were identified within 1 mile of the subject site.

The Fulton Works MGP is listed twice within the EDR Radius Map Report. The MGP site was located at Degraw Street and Nevins Street, which is approximately 1,800 west-southwest of the subject site. No additional information regarding the Fulton Works MGP site was provided. However, due to the distance and location of the MGP site, it is not considered a significant concern for this assessment.

The former Citizen Gas Works MGP Site was located at Carol, 5th Street and Smith Street, which is approximately 4,800 feet west-northwest of the subject site. No additional information regarding the Fulton Works MGP site was provided. However, due to the distance and location of the MGP site, it is not considered a significant concern for this assessment.

5.2 Additional Environmental Record Sources

5.2.1 Local Agency Review

A Freedom of Information Act (FOIA) request was sent to the New York City Department of Health (NYCDOH) for information regarding hazardous operations including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the

FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

In addition, a tank request form was submitted to the City of New York Fire Department to obtain certified reports outlining information regarding any listed tank information held in FDNY District Office Folders and computer files. As of the date of this report, a response had not been received. Any pertinent information received will be reviewed and forwarded upon receipt. A copy of the tank request form forwarded to the City of New York Fire Department is included in **Appendix B**.

The NYC OASIS Interactive Maps (<http://www.oasisnyc.net/map.aspx>) were reviewed to obtain a New York City Department of Buildings Property Profile Overview for the four lots comprising the subject site. Information available on the interactive website include historic Certificate of Occupancies, boiler records and DEP Boiler Information, records of complaints and both DOB and ECB violations, site restriction status (such as little “E”, TA, UB, or SRO restrictions), additional DCB addresses, as well as job filings and permits. Information from the website has been attached in **Appendix B**. The information is summarized briefly below.

Lot 12 (80 St. Marks Place) – Zoned R8A with a C2-4 commercial overlay. Currently developed with a 6,000 square foot, one-story building built in 1971. No restrictions are listed. The Department of Finance Building Classification is E9-Warehouse. Three Certificates of Occupancy were provided for the lot. One of the three does not correspond with this property and was likely misfiled by DOB. The oldest CO (1957) describes a three-story, four family dwelling consisting of both a basement and a cellar on Lot 12. Previously, Lot 12 and Lot 13 were two separate lots. However, Lot 12 and Lot 13 have been joined to form one single lot (Lot 12). No CO was available for Lot 13. The CO notes Fire Department approval for fuel oil use. The most recent CO (1972) for Lot 12 (reflects joining of Lot 12 and Lot 13) notes a one-story (25ft high) building with a mezzanine level. Use of the mezzanine was limited to office and display area, and the first floor use was limited to storage of lumber and lumber cutting.

Lot 7 (85 4th Avenue) – Zoned R8A with a C2-4 commercial overlay. Currently developed with a 9,600 square foot, two-story building, listed as being built in 1920. No restrictions are listed. The Department of Finance Building Classification is E9-Warehouse. Two Certificates of Occupancy were provided for the lot. The oldest CO (dated 1957) describes a two-story (28’ 9” high) building constructed in 1954. Use of the first floor (ground level) was limited to storage of building materials, and the second floor was limited to factory space for sewing of wearing apparel. The second CO (dated 1997) for Lot 7 notes the same building, but adds a mezzanine level for use as office space. Actions listed by the DOB include a permit for building demolition in 1943, and new building notifications for 1953 and 1954. Violations include descriptions of sleeping (illegal apartment) and schooling quarters on the second floor of the building in the 1990’s.

Lot 6 (87 4th Avenue) – Zoned R8A with a C2-4 commercial overlay. Currently developed with a 3,500 square foot, four-story building, listed as being built prior to 1899. No restrictions are listed, with the exception of a Hazmat Little “E” Restriction. The Department of Finance Building Classification is S2-Residence-Multi-U. The Certificates of Occupancy provided for the lot (dated 1982) describes a three-story building with both a basement and cellar. The cellar is listed as the boiler room, and the basement is used as a retail store. The first, second and third floors are used as residential space for two families. Complaints and building applications note the basement (ground level) floor space was utilized as a tire repair shop. Inspections performed by DOB noted tires stored floor to ceiling. Complaints noted the repair work was conducted on the sidewalk immediately in front of the building.

Lot 5 (89 4th Avenue) – Zoned R8A with a C2-4 commercial overlay. Currently developed with a 6,300 square foot, four-story building, listed as being built prior to 1899. No restrictions are listed. The Department of Finance Building Classification is S9-Residence-Multi-U. The Certificates of Occupancy provided for the lot (dated 1982) describes a four-story building with both a basement and cellar. The cellar is listed as ordinary, and the basement is used for storage of building materials. The first floor is listed as office space used in conjunction with the basement use. The second and third floors are used as residential space for two families. The CO

notes Fire Department approval for fuel oil use. A complaint investigated by DOB in 1990 noted the first floor of the building was used as a Social Club.

Lot 6 was noted as having a Hazmat little “E” restriction. No other restrictions were listed for the subject site. The subject site has been assigned an E-designation (E-42) for Hazmat (Underground Gasoline Storage Tanks Testing Protocol) as part of the Park Slope North Rezoning enacted in April of 1993 (CEQR No. 90-254K). Additional information regarding “E” sites can be found on the New York City Office of Environmental Remediation website:

http://www.nyc.gov/html/oer/html/e_designation/e_designation.shtml.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Mr. Kevin Brussee of EBC performed the site inspection on Thursday, March 24, 2011, beginning at approximately 1:00 pm. The reconnaissance included a visual inspection of both the interior and exterior of the subject site buildings, the sidewalk immediately in front of the buildings and the exterior of adjacent properties. Access to the interior of the buildings was provided by Mr. Jeb Hollingsworth of Marcus & Millichap, Real Estate Investment Services (seller's broker).

Access to the interior of 87 4th Avenue (former Tire Repair Shop) could not be provided at the time of the inspection. A steel roll-up gate was locked and the property was vacant. Mr. Hollingsworth did not have a key to the building at the time of the inspection. In addition, EBC was not able to access the roof for inspection for any of the four buildings.

Mr. Kevin Waters of EBC conducted a follow-up inspection on Wednesday, March 30, 2011, to inspect the interior of 87 4th Avenue (former Tire Repair Shop). Mr. Hollingsworth provided access to the interior.

6.2 Exterior Observations

Lot 5 (89 4th Avenue) – The entire footprint of the property was developed with a 4-story brick row house. The street front portion of the building consisted of only 2 floors, but the rear portion consisted of four floors.

The first floor of the building consists solely of a large steel roll-up gate which provides access to the interior of the indoor lumberyard that extends through to the rest of the lots. A steel vent pipe was observed on the south side of the roll-up gate, extruding from the front brick wall of the building at approximately 5 feet off the ground. A fill pipe was observed immediately below the vent pipe, immediately behind a small piece of chain link fence that is utilized for storage of garbage cans. The fill pipe was located in the sidewalk, but both the fill and vent pipes are believed to be connected to a 275-gallon steel aboveground storage tank located in the cellar.

The front facing portion of the second floor was finished with a stone exterior, covering the brick wall behind it. The third and fourth floors appeared to be residential units, but access was not provided for inspection. Signage on the front of the building noted the second floor is used by an attorney as office space (Anthony Onua).

Lot 6 (87 4th Avenue) – The property was developed with a 4-story brick row house. The building was not constructed at the front of the property, meaning a portion of the lot immediately in front of the house consisted of an small courtyard capped with concrete. However, a steel rollup gate was constructed at the edge of the sidewalk, creating the small concrete courtyard between the building and the sidewalk. Signage constructed on the steel rollup gate noted the property was previously utilized by Luna’s Tire Shop, which performed flat fixes, installation of used tires and battery charging. The first floor of the building was painted bright red, but the 2nd, 3rd and 4th floors were unpainted brick. The third and fourth floors appeared to be residential units, but access was not provided for inspection.

The first floor of the building consists solely of a large steel roll-up gate which provides access to the interior of the indoor lumberyard that extends through to the rest of the lots. A steel vent pipe was observed on the south side of the roll-up gate, extruding from the front brick wall of the building at approximately 5 feet off the ground. A fill pipe was observed immediately below the vent pipe, immediately behind a small piece of chain link fence that is utilized for storage of garbage cans. The fill pipe was located in the sidewalk, but both the fill and vent pipes are believed to be connected to a 275-gallon steel aboveground storage tank located in the cellar.

Lot 7 (85 4th Avenue) – The entire footprint of the lot was developed with a 2-story warehouse building. The first floor exterior was finished with tan and brown stripe painted brick and the second floor exterior was finished with tan and brown stripe painted corrugated steel. Four steel doors, one glass double doorway and one steel rollup gate provide access to the interior of the building from 4th Avenue.

Signage on the front of the building noted the building was formerly utilized by Modern Way Lumber. Additional signage included Bonneville Windows and Doors, and numerous For Sale and For Lease signs.

Lot 12 (80 St. Marks Place) – The entire footprint of the lot was developed with a concrete block warehouse building. The majority of the building was 2-story but a small portion along the western edge was one-story. The front of the building was finished with tan painted brick on the first floor and unpainted brick on the second floor. Two steel rollup gates and one metal door provided access to the interior of the building.

Signage on the front of the building noted the property was utilized by Lumber & Building Supply, which sold masonry, roofing, beam, flooring, tools, hardware, paint and kitchen supplies.

Photos taken of the exterior of the buildings during the inspections are attached (**Appendix A**).

6.3 Interior Observations

Lot 5 (89 4th Avenue) – The first floor of the building consists solely of a large steel roll-up gate which provides access to the interior of the indoor lumberyard that extends through to the rest of the lots. The interior of the first floor consisted of unfinished concrete floors, walls and ceiling. Woodworking machinery and wood/doors/windows were stored within the space. A small set of stairs provided access to a partial cellar. The cellar consisted of stone foundation walls and concrete floor. A steel 275-gallon aboveground storage tank was located in the southwest corner of the building. No pipes were connected to the tank which would indicate the tank was still in use. However, as previously noted, a fill and vent pipe connected to the tank ran upward through the ceiling, and are suspected to be connected to the fill and vent pipe noted on the front exterior of the building. An active gas-fired furnace and hot water heater were located in the cellar along the south cellar wall. In addition, three gas meters were observed.

The 3rd and 4th floors appeared to be residential units, but access was not provided for inspection.

Lot 6 (87 4th Avenue) – The 2nd, 3rd and 4th floors appeared to be residential units, but access was not provided for inspection. The first floor consisted of a small unfinished room consisting of bare concrete floors and walls. A small set of stairs provided access to a partial cellar. The cellar consisted of stone foundation walls and concrete floor. A steel 275-gallon aboveground storage tank was located in the southwest corner of the building. No pipes were connected to the tank which would indicate the tank was still in use. However, as previously noted, a fill and vent pipe connected to the tank ran upward through the ceiling, and are suspected to be connected to the fill and vent pipe noted on the front exterior of the building. Two active gas-fired furnaces and two hot water heaters were located in the cellar. In addition, two gas meters were observed.

Lot 7 (85 4th Avenue) – The interior of the warehouse building (Modern Way Lumber) consisted of a series of large wooden racks that extended from floor to ceiling of the 2-story building. The wooden racks were used for storage of lumber and wood trim, paneling, etc. and some building material was still left in place.

First and second floor finished office space was constructed in the northeast corner of the building. First floor space seemed to be set up as a sales floor for smaller woodworking tools, paint, brushes, etc., and the second floor appeared to be offices for salesmen/employees. The rear of the first floor was set up as a sales floor. The room was finished with brown vinyl floor tiles and glass display cases. Numerous small containers of paint, stains, spray paint, and other wood treating chemicals were noted within the building. A gas-fired boiler was observed along the northern wall of the building.

A small freight elevator was located against the back wall of the building. The elevator pit was constructed of a concrete floor. No elevator equipment was located in the pit.

A very thin hallway was constructed along the southern wall of the building. At the end of the hallway, a small kitchen area was constructed.

No basement or cellar was observed beneath the building.

Lot 12 (80 St. Marks Place) – The interior front portion of the 2-story building consisted of bare concrete block walls and concrete floor with a wood and metal mezzanine level constructed for storage of building materials. A small thin office space was constructed against the northern wall of the building. Miscellaneous building materials (doors, windows, wood, etc.) were stored on the floor throughout the space. The rear of the building had an additional level that was finished with suspended ceiling tiles, vinyl floor tile and sheet rock walls. The area appeared to be utilized for manufacturing. Several large pieces of machinery were stored within the upper level room. Access to the same elevator located in the rear of the building located at 85 4th Avenue, was also provided on this upper level located in the rear of the building located at 80 St. Marks Place. Ceiling suspended gas-fired space heaters provided heat for this space.

No basement or cellar was observed beneath the building.

Photos taken of the interior of the buildings during the inspections are attached (**Appendix A**).

6.4 Aboveground Storage Tanks (AST)

One 275 gallon #2 fuel AST was observed within the cellar located at 89 4th Avenue. A fill pipe and vent pipe associated with the tank were also observed immediately in front of the building. The AST is no longer in use.

One 275 gallon #2 fuel AST was observed within the cellar located at 87 4th Avenue. A fill pipe and vent pipe associated with the tank were also observed immediately in front of the building. The AST is no longer in use.

No other ASTs or evidence of an AST was identified during the site inspection in any of the other buildings.

6.4 Underground Storage Tanks (UST)

No evidence indicating the presence of an underground storage tank was noted during the site inspection at any of the buildings.

6.5 Hazardous and Non-Hazardous Chemical Storage and Disposal

There was no evidence of bulk hazardous or non-hazardous chemical storage observed at the subject site at the time of the site inspection. However, numerous small containers of paint, naptha, spray paint, stains, etc. were observed within the lumber yard areas comprising 89 4th Avenue, 85 4th Avenue and 80 St. Marks Place.

6.6 Polychlorinated Biphenyls (PCBs)

No evidence of PCBs or PCB containing equipment was observed at the subject site at the time of the site inspection. An elevator was observed in the rear of the building located at 85 4th Avenue, but did not appear to be hydraulic. Elevator equipment is likely located on the roof, which was not accessed during the inspection.

6.7 Asbestos

Asbestos pipe insulation was observed within several of the buildings. However, as previously noted, the residential units of 87 and 89 4th Avenue were not inspected as part of this investigation. Based on the age of these buildings it is likely that asbestos containing material is present within the buildings in flooring, roofing or other areas.

6.8 Lead-Based Paint (LBP)

Based on the age of the buildings, it is unlikely that lead based paint is present within the building. The painted surfaces appeared to be in good condition, with no evidence of peeling, flaking or cracking. However, as previously noted, the residential units of 87 and 89 4th Avenue were not inspected as part of this investigation.

6.9 Mold

No mold, water damage or sources of mold were observed during the site inspection. However, as previously noted, the residential units of 87 and 89 4th Avenue were not inspected as part of this investigation.

7.0 INTERVIEWS

7.1 Owner

A brief email interview was conducted with Ms. Mary Jane D'Amato. According to Matthew Fotis of Marcus & Millichap, Ms. D'Amato is one of the owners of the property and Modern Way Lumber. A copy of the email response is provided in **Appendix F**. Ms. Amato stated the properties that make up the subject site have been family owned by St. Marks 4th Avenue Realty for 50 years. Ms. Amato stated an aboveground storage tank was located in 87 4th Avenue and in 89 4th Avenue, but stated no underground storage tanks are located at any of the properties that consist of the subject site. Ms. Amato stated all subject site buildings are heated with gas,

7.2 Occupants

At the time of the inspection, the building portion of the buildings formerly occupied by Modern Way Lumber was vacant. No commercial space appeared to be occupied. However, Mr. Brussee did notice several tenants exiting and entering the residential space above 87 and 89 4th Avenue. Mr. Brussee was unable to interview the residential tenants.

7.3 Local Government Officials

A Freedom of Information Act (FOIA) request was sent to the New York City Department of Health (NYCDOH) for information regarding hazardous operations including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

In addition, a tank request form was submitted to the City of New York Fire Department to obtain certified reports outlining information regarding any listed tank information held in FDNY District Office Folders and computer files. As of the date of this report, a response had not been received. Any pertinent information received will be reviewed and forwarded upon receipt. A copy of the tank request form forwarded to the City of New York Fire Department is included in **Appendix B**.

The NYC OASIS Interactive Maps (<http://www.oasisnyc.net/map.aspx>) were reviewed to obtain a New York City Department of Buildings Property Profile Overview for the four lots comprising the subject site. Information available on the interactive website include historic Certificate of Occupancies, boiler records and DEP Boiler Information, records of complaints and both DOB and ECB violations, site restriction status (such as little “E”, TA, UB, or SRO restrictions), additional DCB addresses, as well as job filings and permits. Information from the website has been attached in **Appendix B**. The information is summarized briefly below.

Lot 12 (80 St. Marks Place) – Zoned R8A with a C2-4 commercial overlay. Currently developed with a 6,000 square foot, one-story building built in 1971. No restrictions are listed. The Department of Finance Building Classification is E9-Warehouse. Three Certificates of Occupancy were provided for the lot. One of the three does not correspond with this property and was likely misfiled by DOB. The oldest CO (1957) describes a three-story, four family dwelling consisting of both a basement and a cellar on Lot 12. Previously, Lot 12 and Lot 13 were two separate lots. However, Lot 12 and Lot 13 have been joined to form one single lot (Lot 12). No CO was available for Lot 13. The CO notes Fire Department approval for fuel oil use. The most recent CO (1972) for Lot 12 (reflects joining of Lot 12 and Lot 13) notes a one-story (25ft high) building with a mezzanine level. Use of the mezzanine was limited to office and display area, and the first floor use was limited to storage of lumber and lumber cutting.

Lot 7 (85 4th Avenue) – Zoned R8A with a C2-4 commercial overlay. Currently developed with a 9,600 square foot, two-story building, listed as being built in 1920. No restrictions are listed. The Department of Finance Building Classification is E9-Warehouse. Two Certificates of Occupancy were provided for the lot. The oldest CO (dated 1957) describes a two-story (28’ 9” high) building constructed in 1954. Use of the first floor (ground level) was limited to storage of building materials, and the second floor was limited to factory space for sewing of wearing apparel. The second CO (dated 1997) for Lot 7 notes the same building, but adds a mezzanine level for use as office space. Actions listed by the DOB include a permit for building demolition in 1943, and new building notifications for 1953 and 1954. Violations include descriptions of sleeping (illegal apartment) and schooling quarters on the second floor of the building in the 1990’s.

Lot 6 (87 4th Avenue) – Zoned R8A with a C2-4 commercial overlay. Currently developed with a 3,500 square foot, four-story building, listed as being built prior to 1899. No restrictions are listed, with the exception of a Hazmat Little “E” Restriction. The Department of Finance Building Classification is S2-Residence-Multi-U. The Certificates of Occupancy provided for the lot (dated 1982) describes a three-story building with both a basement and cellar. The cellar is listed as the boiler room, and the basement is used as a retail store. The first, second and third floors are used as residential space for two families. Complaints and building applications note the basement (ground level) floor space was utilized as a tire repair shop. Inspections performed by DOB noted tires stored floor to ceiling. Complaints noted the repair work was conducted on the sidewalk immediately in front of the building.

Lot 5 (89 4th Avenue) – Zoned R8A with a C2-4 commercial overlay. Currently developed with a 6,300 square foot, four-story building, listed as being built prior to 1899. No restrictions are listed. The Department of Finance Building Classification is S9-Residence-Multi-U. The Certificates of Occupancy provided for the lot (dated 1982) describes a four-story building with both a basement and cellar. The cellar is listed as ordinary, and the basement is used for storage of building materials. The first floor is listed as office space used in conjunction with the basement use. The second and third floors are used as residential space for two families. The CO notes Fire Department approval for fuel oil use. A complaint investigated by DOB in 1990 noted the first floor of the building was used as a Social Club.

Lot 6 was noted as having a Hazmat little “E” restriction. No other restrictions were listed for the subject site. The subject site has been assigned an E-designation (E-42) for Hazmat (Underground Gasoline Storage Tanks Testing Protocol) as part of the Park Slope North Rezoning enacted in April of 1993 (CEQR No. 90-254K). Additional information regarding “E” sites can be found on the New York City Office of Environmental Remediation website:

http://www.nyc.gov/html/oer/html/e_designation/e_designation.shtml.

8.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, no recognized environmental conditions have been identified in connection with the subject site. However, Lot 6 (87 4th Avenue) of subject site has been assigned an E-designation (E-42) for Hazmat (Underground Gasoline Storage Tanks Testing Protocol) as part of the Park Slope North Rezoning enacted in April of 1993 (CEQR No. 90-254K). The remaining lots have not been assigned an “E” designation.

9.0 CONCLUSIONS AND RECOMMENDATIONS

EBC performed a Phase I Environmental Site Assessment in conformance with the scope and limitations as described under ASTM Practice E1527-05 for the property identified as Block 934, Lots 5, 6, 7 and 12 in Brooklyn, New York. Any exceptions to, or deletions from, this practice are described in **Section 1.4** of this report. *This assessment has revealed no recognized environmental conditions in connection with the subject site.*

ENVIRONMENTAL ISSUES

- The subject site has been assigned an E-designation for Hazmat (Underground Gasoline Storage Tanks Testing Protocol) as part of the Park Slope North Rezoning enacted in April of 1993 (CEQR No. 90-254K). An E-designation does not interfere with the present use of the site, however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. Such release may require a full subsurface investigation, remedial and health and safety planning, implementation of a remedial program and documentation that the remedial program was completed during redevelopment of the property. It should be noted that if redevelopment plans for multiple lots include a lot labeled “E” by the Department of Buildings, all other lots part of the redevelopment plan are designated with an “E” and are subject to the same requirements assigned to an “E” designated site. Therefore, Lots 5, 7 and 12 are subject to the restrictions applied to an “E” site.

Additional information regarding “E” sites can be found on the New York City Office of Environmental Remediation website:

http://www.nyc.gov/html/oer/html/e_designation/e_designation.shtml.

The following de minimis conditions were identified:

- Potential for lead based paint based on the age of the structures.
- Potential for asbestos containing materials based on the age of the structures – Asbestos pipe insulation was observed within several of the buildings.

A de minimus condition is one that generally does not represent a risk of harm to the public health and the environment and that generally would not be subject to an enforcement action if brought to the attention of an appropriate governmental authority.

Based on the quantity of suspected asbestos containing material observed by EBC, it is assumed that this project would be classified as No.3 above. This will require an inspection by a NYC – Certified asbestos inspector and filing of form ACP-5 with the NYCDEP.

10.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding additional services outlined in Section 11.0, there were no deviations or deletions from this practice.

11.0 ADDITIONAL SERVICES

EBC has included, in addition to those items outlined by ASTM E 1527-05, a general evaluation of radon impact potential based on USEPA maps.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Borough Superintendent

W. J. ...

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL
BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof, from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

HON. ARTHUR M. SCHACK, J.S.C.
SUPREME COURT OF THE STATE OF NEW YORK
COUNTY OF KINGS

-----X
ST MARKS-4TH AVE. REALTY CORP.,

Index No.: 2264/08

Plaintiff,

- against -

MICHAEL WHALEN, as Administrator of the Estate of ANNIE WHALEN, "JOHN DOE #1" through "JOHN DOE #20," the true names of said defendants being unknown to plaintiff, the parties intended being the heirs, being next of kin, distributes, legatees, administrators or assigns of the decedent having or claiming an interest to the real property described in the complaint.

ORDER AND JUDGMENT

Defendants.
-----X

Plaintiff St. Marks 4th Ave. Realty Corp. ("Plaintiff") having commenced this action on January 22, 2008 by filing a Summons with Notice (the "Summons") for a declaratory judgment that plaintiff St. Marks 4th-Ave. Realty Corp. is the owner of the real property known as and located at 89 4th Avenue, Brooklyn, New York (Block 934, Lot 5) and having simultaneously submitted an Order Directing Service by Publication to enable Plaintiff to serve the Summons upon Defendants by publication; and Supreme Court Kings County (Schack. J.) having issued the Order Directing Service by Publication on March 3, 2008 directing Plaintiff to publish the Summons in the Home Reporter and the Brooklyn Daily Eagle & Daily Bulletin for four (4) successive weeks commencing on March 28, 2008 and April 9, 2008 respectively; and Plaintiff having

published the Summons in accordance with the Order Directing Service by Publication; and Defendants having failed to answer, appear or otherwise respond to the Summons; and Plaintiff having filed an Order Directing Inquest on August 28, 2008; and Supreme Court, Kings (Schack. J.) having issued the Order Directing Inquest on September 8, 2008 acknowledging that the Summons was timely served and filed and directing that an inquest be held before a Judicial Hearing Officer; and an inquest having been held on October 31, 2008 before Supreme Court, Kings County (Marano, J.H.O.); and after inquest, the Court having issued a declaratory judgment that St. Marks 4th-Ave. Realty Corp. is the owner of the property known as and located at 89 4th Avenue, Brooklyn, New York by virtue of adverse possession;

NOW, upon the motion of Goldberg Weprin & Ustin LLP, attorneys for plaintiff St. Marks 4th-Ave. Realty Corp., it is hereby

ORDERED and ADJUDGED, that plaintiff St. Marks 4th-Ave. Realty Corp. is the owner of the property known as and located at 89 4th Avenue, Brooklyn, New York (Block 934, Lot 5); and it is further

ORDERED and ADJUDGED, that the Office of the City Register, Kings County is directed to record this Order and Judgment against the property known as and located at 89 4th Avenue, Brooklyn, New York (Block 934, Lot 5).

80 to 82 St. Marks Place, Brooklyn, NY 11217
Block 934, Lots 5, 6, 7, and 12

Dear Sir or Madam:

Environmental Business Consultants (EBC) has been retained to prepare a Phase I Environmental Site Assessment for the properties located at the above referenced addresses (Block 934 Lots 5, 6, 7 and 12 in Brooklyn).

We are requesting available copies of environmental files, records, and memoranda concerning the property. This information should include: 1) past and present underground storage tank registration(s); 2) reported spills or releases of hazardous substances; 3) generation, storage, treatment, or disposal of hazardous substances; 4) past or present groundwater, surface water, and soil investigations; 5) environmental permits/violations.

We will gladly pay copying costs.

Please advise if this request can be accommodated in an expedient manner. We would like to schedule an appointment to copy the file/records if this is not possible. Feel free to call with any questions or if additional information is needed to respond to this request.

Very truly yours,

Kevin R. Brussee
Project Manager

September 14, 1992

Mr. Douglas Brooks
Department of City Planning
Brooklyn Borough Office
16 Court Street
Brooklyn, New York 11241

Re: CEQR No. 90-254K
Park Slope North Rezoning
Brooklyn

Dear Mr. Brooks:

Under City Environmental Quality Review, the lead agencies are required to determine whether a proposed action may or will not have a significant effect on the environment. In accordance with this regulation, the Departments of Environmental Protection and City Planning as CEQR co-lead agencies, have determined that the proposed action will not have significant effect on the environment.

Enclosed is the Negative Declaration for CEQR No. 90-254K, the proposed rezoning of a 54-block area in the Park Slope North section of Brooklyn to Quality Housing multi-family contextual zones. The rezoning area consists of ten subareas that would be rezoned from R6 (with some C1-3 and C2-3 commercial overlays and two blocks fronts zoned M1-2) to R6A, R6B, R7A, R7B and R8A zones. To address potential hazardous materials concerns, the project would include an "E" designation on the zoning map for Block 198 (part of Lot 47 and all of Lot 48), Block 389 (Lot 10), Block 407 (Lot 26), and Block 934 (Lot 6). The rezoning area is generally bounded by Atlantic, Flatbush and Third Avenues, Plaza Street West

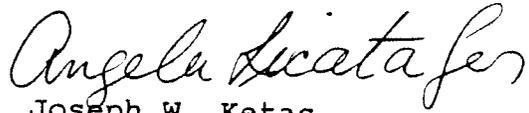

and Union Streets. This declaration also includes statements for the finding that the project will not have a significant effect.

Sincerely,

Annette M. Barbaccia
Director
Environmental Assessment
and Review Division
Department of City Planning

The City of New York

CITY ENVIRONMENTAL QUALITY REVIEW

DEPARTMENT OF ENVIRONMENTAL PROTECTION
59-17 Junction Boulevard, 11th Floor
Elmhurst, NY 11373-5107
(718) 595-4409

DEPARTMENT OF CITY PLANNING
22 Reade Street, Room 4-E
New York, NY 10007-1216
(212) 720-3420

NEGATIVE DECLARATION

Proposal No. 90-254K
Park Slope North Rezoning

Date Sent: 9/14/92

Description: The proposed rezoning of a 54-block area in the Park Slope North section of Brooklyn to Quality Housing multi-family contextual zones. The rezoning area consists of ten sub-areas that would be rezoned from R6 (with some C1-3 and C2-3 commercial overlays and two blockfronts zoned M1-2) to R6A, R6B, R7A, R7B and R8A zones. To address potential hazardous materials concerns, the project would include an "E" designation on the zoning map for Block 198 (part of Lot 47 and all of Lot 48), Block 389 (Lot 10), Block 407 (Lot 26), and Block 934 (Lot 6).

The text of the "E" designation would be as follows:

Due to the presence of underground storage tanks containing petroleum products, or the on-site use of petroleum products, there is the potential for contamination of the soil and groundwater by existing or past leakage from such tanks or from on-site uses of petroleum products. To determine the extent of possible subsurface contamination associated with the underground storage tanks and to determine and perform appropriate remediation, the following tasks must be undertaken by the fee owners of the lots restricted by the "E" designation prior to any demolition or excavation of the site for development.

Task 1

The applicant must submit to the New York City Department of Environmental Protection (DEP) for review and approval, a soil gas, soil and groundwater testing protocol. No sampling program will begin until written approval of the protocol by DEP. The fee owner of the lots restricted by the "E" designation must perform any remediation as determined necessary by DEP.

The number and location of sample sites should be selected to adequately characterize the site, the specific source of suspected contamination and the condition of the remainder of the site. The

ALBERT APPLETON Commissioner Department of Environmental Protection RICHARD L. SCHAFFER Chairman City Planning Commission

characterization should be complete enough to determine what remediation strategy (if any) is necessary after review of sampling data. Guidelines and criteria for choosing sampling sites and performing sampling will be provided by DEP upon request.

Task 2

A written report with findings and a summary of the data must be presented to DEP after completion of the testing phase and laboratory analysis for review and approval. After receiving such test results, a determination will be made by DEP if the results indicate that remediation is necessary.

If DEP determines that no remediation is necessary, written notice shall be given by DEP.

If remediation is necessary according to the test results, a proposed remediation plan must be submitted to DEP for review and approval. The fee owner of the lots must perform such remediation as determined necessary by DEP. After completion of said remediation, the applicant should provide proof that the work has been satisfactorily completed.

Location: The rezoning area is generally bounded by Atlantic, Flatbush and Third Avenues, Plaza Street West and Union Street (see attached list of blocks and lots) in Brooklyn Community Boards 2, 6 and 8.

STATEMENT OF NO SIGNIFICANT EFFECT:

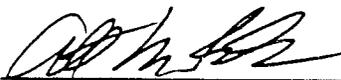

The Departments of City Planning and Environmental Protection, as CEQR Lead Agencies, have determined that the proposed action will have no significant effect on the quality of the environment.

SUPPORTING STATEMENTS:

The above determination is based on an environmental assessment which finds that:

- 1) The above "E" designation is necessary due to the presence of underground storage tanks or the on-site use of petroleum products on five lots within the proposed rezoning area. There is the potential for soil and groundwater contamination from existing or past leaking from such tanks and determination is necessary to conclude if such contamination exists and to perform necessary remediation.

- 2) No other significant effects that would require the preparation of an Environmental Impact Statement are foreseeable.

Annette M. Barbaccia
Director
Environmental Assessment
and Review Division
Department of City Planning

Joseph W. Ketas
Assistant Commissioner
Department of Environmental
Protection

2002	1988	1978	

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Env. Business Consultants (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2005. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

81 4TH AVENUE
BROOKLYN, NY 11217

COORDINATES

Latitude (North): 40.681700 - 40° 40' 54.1"
Longitude (West): 73.980000 - 73° 58' 48.0"
Universal Transverse Mercator: Zone 18
UTM X (Meters): 586197.9
UTM Y (Meters): 4503712.5
Elevation: 29 ft. above sea level

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 05/25/2010 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2010 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 8 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 01/12/2011 has revealed that there are 5 SWF/LF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 11/23/2010 has revealed that there are 57 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 39 HIST LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the UST list, as provided by EDR, and dated 01/04/2011 has revealed that there are 16 UST sites within approximately 0.25 miles of the target property.

MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 MOSF UST site within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/23/2010 has revealed that there are 10 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 6 NY Hist Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 02/17/2010 has revealed that there are 20 RCRA-NonGen sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 3 Manufactured Gas Plants sites within approximately 1 mile of the target property.

On 4/3/2011 8:17 PM, Fotis, Matthew wrote:

Here are the questions for the phase 1:

Phase I Environmental Site Assessment Report. As part of this report (being prepared by Environmental Business Consultants – EBC), an interview is required with the current site occupants/tenant. The following questions have been prepared for the site following review of records available to EBC at the time, and a site inspection performed in March of 2011. If you do not know the answer to a question, you can not provide an answer, or the question does not relate to the site, you may state that. Any question that can be answered can be responded to by replying to the email and typing the answer beneath the question.

1) What is the exact name of the company/person(s) that currently owns the property? How long/since what date, has the current owner owned the property? If different for each of the lots, please provide a description of each. St Marks 4th Avenue Realty - family owned business for approx 50 years

4/5/2011

2) What tenant(s) currently occupies the site, and what type of operations are conducted at the site? If residential, please indicate the number of residential units per floor and the number of floors for each building.

79 4th Avenue - laundramat
 78 St. Marks Place 1st floor 1 apt; 2nd floor 2 apts., 3 floor 2 apts and 4th floor 2 apts
 81 4th Avenue - Guitar School
 87 - ground floor empty
 1st and 2nd floor - 2 duplex apts

 89 garage
 2nd floor - architect firm
 3rd floor 1 apt
 4th floor 1 apt

3) What other tenant(s) have utilized the site under your ownership? Please list all known site occupants... such as Modern Way Lumber Company, Express Tire Shop, etc.

79 - same type of tenant
 78 - same
 81 - 4th Avenue - Delcor Co. (construction management firm)
 85 - Modern Way Lumber
 87 - ground - tire shop
 1st and 2nd floors same

 89 garage
 2nd floor - lawyer's office
 3rd and 4th floors - same

4) What was the name of the company/person(s) that owned the property prior to the current owner and what type of operations were conducted at the site by the previous owner? owned property for approximately 50 years

5) Have any other environmental investigations (soil, gw, air sampling, or Phase I's) been performed at the site? If yes, are the reports available for review? Also include any drinking water sampling, asbestos sampling/investigation, etc. none

6) Are or were there any other underground storage tanks at the site? Please describe any tanks that are still in use, in place but no longer used, removed or abandoned in place. Are any reports/permits/documents/drawings for any tanks available for review? no underground storage tanks

7) Are there or were there any aboveground storage tanks located on site (waste oil, fuel oil, ethylene glycol, motor oil, hydraulic oil, etc.)? 1 aboveground tank in 89 and one in 87

8) Have any spills of oil, automotive fluids, cleaners, etc. occurred at the site during your ownership, and/or are you aware of any spills prior to your ownership? no

9) Do you have a copy of a site survey and/or site diagram/plan that you can forward to EBC via fax or email? no

10) Do you have a copy of a site diagram/plan that you can forward to EBC via fax or email? no

11) How is each building heated? Examples: Forced air, gas fired furnace located on first floor of 85 4th Avenue supplies heat to office space on second floor.

89- central gas
 87 - 2 individual gas
 85 and 81 - gas forced air
 79 no heat
 78 central gas

If you have any questions or concerns, please feel free to call me at the office (631) 504-6000 or my cell phone (631) 338-1749

LABORATORY REPORTS IN DIGITAL
FORMAT

Wednesday, February 27, 2013

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 79-89 4TH AVE BROOKLYN NY
Sample ID#s: BD38697 - BD38705

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

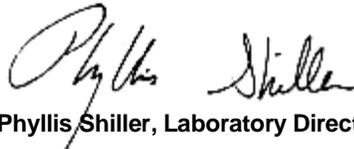

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

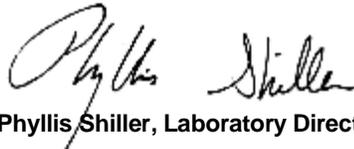

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

Comments:

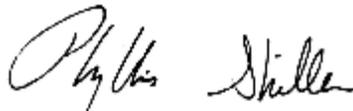

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatle analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

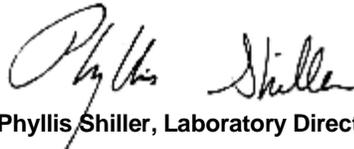

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

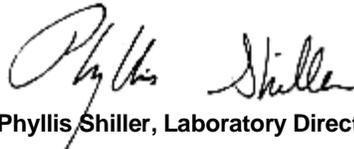

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

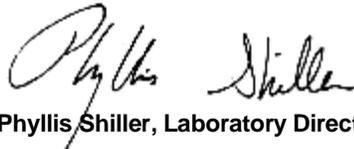

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

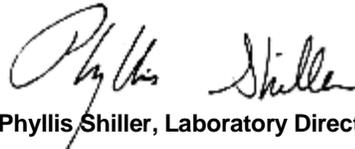

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

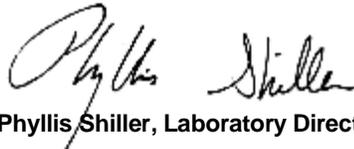

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Project ID: 85-89 4TH AVE., BROOKLYN, NY
Sample ID#s: BD41873 - BD41878

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

3 = This parameter exceeds laboratory specified limits.

B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

* The surrogate failed method criteria due to sample matrix interference for the semivolatile analysis. The other surrogates associated with this sample were within QA/QC criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

3 = This parameter exceeds laboratory specified limits.

B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

Comments:

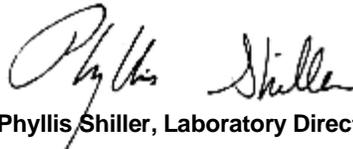

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

* The surrogate failed method criteria due to sample matrix interference for the semivolatile analysis. The other surrogates associated with this sample were within QA/QC criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

1P = This parameter is pending certification by NY NELAC for this matrix.

1O = This parameter is not certified by NY NELAC for this matrix.

B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

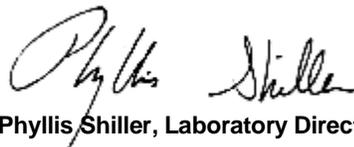

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

Mercury - Soil	BRL	0.09	0.10	NC	105	104	1.0	116	120	3.4	70 - 130	30	
Comment:													
Additional Mercury criteria: LCS acceptance range for waters is 80-120% and for soils is 70-130%.													

m = This parameter is outside laboratory ms/msd specified recovery limits.
 r = This parameter is outside laboratory rpd specified recovery limits.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Ridge NY 11961-2406

Project ID: 85 4TH AVE.
Sample ID#s: BD42112 - BD42116

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

Phyllis Shiller

SDG Comments

March 14, 2013

SDG I.D.: GBD42112

BD42113 - The pH in the preserved vial was greater than 2.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Parameter	Result	RL/ PQL	Units	Date/Time	By	Reference
-----------	--------	------------	-------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level

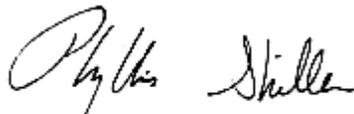

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

* One of the surrogate recovery's was below the lower range, but within the method criteria for semivolatiles. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

* For Pesticides, due to matrix interference caused by the presence of PCB's in the samples an elevated MDL was reported.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Parameter	Result	RL/ PQL	Units	Date/Time	By	Reference
-----------	--------	------------	-------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

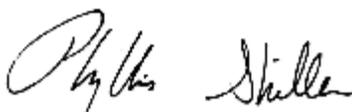

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

* One of the surrogate recovery's was below the lower range, but within the method criteria for semivolatiles. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

BRL=Below Reporting Level

Comments:

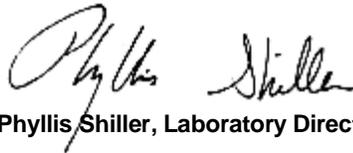

DUPLICATE INCLUDED

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The unfiltered metals container contained significantly less sediment than any of the other samples; a low bias compared to the other samples is suspected.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.
