CERTIFICATION

I, Mark E. Robbins, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 767 Bergen Street Site, (NYC VCP Site No. 14CVCP185K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 767 Bergen Street in the Crown Heights section in Brooklyn, New York and is identified as Block 1140 and Lot 48 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 5,500-square feet and is bounded by multi-story residential building to the north, Bergen Street to the south, Masjid-Islamic Center to the east, and multi-story residential building to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is undeveloped, vacant.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of two separate 4- story residential condominiums with full cellars and a rear yard. The buildings will consist of 16 condo units in total and shall not include any parking, commercial or recreational facilities. The buildings shall be identical, mirror images. The combined total gross square footage of the new buildings will be approximately 16,500 square feet and the lot is size is 50 feet by 110 feet. The foundation will be 12-inch concrete walls over spread footings. The rear yard will be excavated 5 feet below grade. The total estimated amount of soil to be removed is 480 cubic yard, including the cellar, window well and sunken yard. The cellars will be utilized as mechanical rooms, meter rooms and accessory use of 1st floor units. The size of each cellar will be 60 feet by 25 feet. Layout of the proposed site development is presented in Figure 3. The current zoning designation is R6-B residential district. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

Based upon the review of the Fire Insurance Maps and Regulatory Agency documents from the Phase I Environmental Site Assessment (ESA) Report prepared by Hydro Tech in March 2013, a Site history was established. The Site was historically developed prior to 1888 with multiple multi-story and single story buildings. These buildings appear to be demolished prior to early

1950s. The Subject Property is listed as an auto repair shop, auto wrecking and storage in 1965. The Subject Property is then utilized as auto wrecking between 1978 and 2007. Operations involving auto service repairs utilize petroleum and/or hazardous materials, the discharge of which may have adversely impacted upon the environmental quality of the Subject Property. Therefore the historical use of the Subject Property as an auto repair shop represents a REC. Historical on-site operations also include auto wrecking and during this operation, automobiles are physically broken down to their individual parts, which are then stored throughout the property for later resale. These types of operations involve significant interaction with petroleum products, including but not limited to waste oil, transmission oil, antifreeze and other liquids. These types of operations may result in unauthorized and/or unreported releases to the subsurface, which may impact upon the environmental quality of the Subject Property. Therefore, the site operation as an auto wrecking represents a REC.

The AOCs identified for this site include:

1. The Site in general due to the historical use as an auto repair and auto wrecking shop

Summary of the Work Performed under the Remedial Investigation

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed five (5) soil borings across the entire project Site, and collected ten (10) soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed one (1) groundwater probe throughout the Site to establish groundwater flow and collected one (1) groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed three (3) soil vapor probes around Site perimeter and collected three (3) samples for chemical analysis;
5. Collected one (1) ambient air sample for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property ranges from 101 to 104 feet.
2. Depth to groundwater was encountered approximately at 28.65 feet below grade at the Site. It appears that a shallow or perched source of groundwater was encountered as

National Groundwater Depth database lists the groundwater depth for the area as 95 feet bgs and wells installed to a depth over 50 feet at other locations at the Site were dry.

3. Regional groundwater flow is generally towards northwest beneath the Site.
4. Bedrock was not encountered during the RI.
5. The stratigraphy of the site, from the surface down, consists of 4 feet of fine coarse sand and pebbles underlain by 2 feet of silt and sand. The silty sand is underlain by 2 feet of compact sand and compact sand is underlain by silty sand and pebbles.
6. Soil/fill samples collected during the RI showed no PCBs above 6 NYCRR Part 375-6.8 Track 1 Unrestricted Soil Cleanup Objectives (SCOs). Three (3) pesticides were identified exceeding Track 1 SCOs including 4,4'-DDD (maximum of 0.0138 ppm), 4,4'-DDE (maximum of 0.00372 ppm), and 4,4'-DDT (maximum of 0.0174 ppm). One (1) VOC, specifically; Acetone was identified in one of the deep soil samples above Track 1 SCOs. Acetone is a common laboratory contaminant and it was identified below Track 2 Residential SCOs. Chlorinated hydrocarbons 111-TCA, carbon tetrachloride, TCE and PCE were not detected in soil. Six (6) Polycyclic Aromatic Hydrocarbon (PAH) SVOCs were identified above their Track 1 SCOs in three of the soil samples. Six SVOCS – all PAH related compounds including benzo(a)anthracene (max. of 3.76 ppm), benzo(a)pyrene (max. of 1.72 ppm), benzo(b)fluoranthene (max. of 1.77 ppm), benzo(k)fluoranthene (max. of 2.12 ppm), chrysene (max. of 2.45 ppm), and indeno(1,2,3-cd)pyrene (max. of 0.85 ppm) were detected slightly above their respective Restricted Residential Use SCOs in one deep soil samples. Seven (7) metals were identified in both shallow and deep soil samples above their respective Track 1 Unrestricted Use SCOs, and included barium (max. of 650 ppm), cadmium (max. of 5.18 ppm), chromium (max. of 56 ppm), copper (max. of 160 ppm), lead (max. of 1320 ppm), nickel (max. of 120 ppm) and zinc (max. of 844 ppm). Of these metals, barium, cadmium and lead also exceeded Restricted Residential SCOs in one shallow soil.
7. Groundwater samples collected during the RI showed no PCBs, Pesticides or SVOCs at concentrations exceeding their method detection limits (MDLs). Gasoline compounds were not identified in the groundwater beneath any portions of the site. One VOC, specifically; Acetone was detected at a concentration of 70 ppb in GP-1 which exceeds its GQS of 50 ppb. Acetone is known as a common laboratory contaminant. No other VOCs

were detected above their method detection limits (MDLs) in the groundwater samples. Chlorinated hydrocarbons 111-TCA, carbon tetrachloride, TCE and PCE were not detected in groundwater. Several metals were identified, but only one (1) dissolved metal, specifically; selenium was detected in GP-1 at a concentration above its respective GQS in all the groundwater samples.

8. Soil vapor samples collected during the RI showed twenty one (21) VOCs were detected and consisted principally of petroleum related compounds. BTEX were detected at concentrations below 200 ug/m³. Acetone and Methylene chloride were detected in all soil vapor samples at maximum concentrations of 240 ug/m³ and 41 ug/m³, respectively. Chlorinated VOCs including Tetrachloroethylene (PCE) was detected in one of the soil vapor samples at a concentration of 7.4 ug/m³. Trichloroethylene was not detected in any of the samples. Carbon tetrachloride was detected in one sample at a concentration of 8.4 ug/m³, exceeding it's NYSDOH Soil Vapor Intrusion Guidance concentration. Overall, soil vapor does not suggest a significant onsite source but does indicate influence of gasoline compounds in the vicinity of the property.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

765 Bergen, LLC has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.126-acre site located at 767 Bergen Street in Crown Heights section of Brooklyn, New York. Residential use is proposed for the property. The RI work was performed between May 28 and May 29, 2013. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 767 Bergen Street in the Crown Heights section in Brooklyn, New York and is identified as Block 1140 and Lot 48 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 5,500-square feet and is bounded by multi-story residential building to the north, Bergen Street to the south, Masjid-Islamic Center to the east, and multi-story residential building to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is undeveloped and vacant.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of two separate 4- story residential condominiums with full cellars and a rear yard. The buildings will consist of 16 condo units in total and shall not include any parking, commercial or recreational facilities. The buildings shall be identical, mirror images. The combined total gross square footage of the new buildings will be approximately 16,500 square feet and the lot is size is 50 feet by 110 feet. The foundation will be 12-inch concrete walls over spread footings. The rear yard will be excavated 5 feet below grade. The total estimated amount of soil to be removed is 480 cubic yard, including the cellar, window well and sunken yard. The cellars will be utilized as mechanical rooms, meter rooms and accessory use of 1st floor units. The size of each cellar will be 60 feet by 25 feet. Layout of the proposed site development is presented in Figure 3. The current zoning designation is R6-B residential district. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The area surrounding the Site consists of a mix of residential and commercial properties. An evaluation of the United States Geological Survey (USGS) 7-½ Minute Topographic Map containing the properties indicate there are three (3) sensitive receptors present within a 0.125-mile radius of the Subject Property. These sensitive receptors are Hart Mart Medical Services, Acorn Community High School and Griffith, Ronda.

Previous Figure 2 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Based upon the review of the Fire Insurance Maps and Regulatory Agency documents from the Phase I Environmental Site Assessment (ESA) Report prepared by Hydro Tech in March 2013, a Site history was established. The Site was historically developed prior to 1888 with multiple multi-story and single story buildings. These buildings appear to be demolished prior to early 1950s. The Subject Property is listed as an auto repair shop, auto wrecking and storage in 1965. The Subject Property is then utilized as auto wrecking between 1978 and 2007. Operations involving auto service repairs utilize petroleum and/or hazardous materials, the discharge of which may have adversely impacted upon the environmental quality of the Subject Property. Therefore the historical use of the Subject Property as an auto repair shop represents a REC. Historical on-site operations also include auto wrecking and during this operation, automobiles are physically broken down to their individual parts, which are then stored throughout the property for later resale. These types of operations involve significant interaction with petroleum products, including but not limited to waste oil, transmission oil, antifreeze and other liquids. These types of operations may result in unauthorized and/or unreported releases to the subsurface, which may impact upon the environmental quality of the Subject Property. Therefore, the site operation as an auto wrecking represents a REC. Table below provides a list of historical owners of the Site:

YEAR	NAME OF PREVIOUS OWNER
1971	Tasso Anthony and Loiseau Ferrer
1977	Parker Associates Inc.
1983	Commissioner/Finance/NYC
1984	Vacate Order
2003	Bergen Brooklyn Realty Corp.
2007	Richard Escobar and Old Car Realty Inc.
2013	765 Bergen LLC

2.2 Previous Investigations

Previous investigations performed at the Site include the following:

- Focused Subsurface Investigation, January 2013, Hydro Tech Environmental, Corp.
- Ground Penetrating Radar Survey, January 2013, Hydro Tech Environmental, Corp.
- Phase I Environmental Site Assessment, March 2013, Hydro Tech Environmental, Corp.
- Remedial Investigation, May 2013, Hydro Tech Environmental, Corp.

2.3 Site Inspection

Ms. Ezgi Karayel of Hydro Tech performed the site inspection on March 11, 2013. The reconnaissance included a visual inspection of the Site. At the time of the inspection, the Site consisted of an undeveloped/vacant lot. A metal fence was present along the perimeter of the property on Bergen Street. The ground surfaces consisted of bare soil and concrete.

2.4 Areas of Concern

The AOCs identified for this site include:

1. The Site in general due to the historical use as an auto repair and auto wrecking shop

Phase 1 Report is presented in Appendix A.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Mark E. Robbins.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

The scope of work implemented by Hydro Tech included:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed five (5) soil borings across the entire project Site, and collected ten (10) soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed one (1) groundwater probe throughout the Site to establish groundwater flow and collected one (1) groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed three (3) soil vapor probes around Site perimeter and collected three (3) samples for chemical analysis;
5. Collected one (1) ambient air sample for chemical analysis.

Fieldwork was photo documented. Appendix B provides the investigation photographs.

4.1 Geophysical Investigation

A geophysical survey consisting of GPR survey was performed at the Site during January 2013. The purpose of the GPR was to determine if any anomalies were present at the Site and to clear all sampling locations of any potential subsurface obstructions.

The survey was performed in all accessible portions of the Site over a grid pattern that was determined immediately prior to the survey. The GPR operator wheeled the antenna over the predetermined grid. The GPR takes one “scan” per set unit. The number of scans per unit is based upon the estimated size of targets.

As each scan is performed, the antenna emits specific radar amplitude into the subsurface. The amplitude of the radar reflected back to the antenna is based upon the differences in the dielectric constants of the subsurface materials. The differences in amplitude obtained during each scan are graphically displayed on the Control Unit, which are then interpreted by the GPR operator. Additional interpretations are then conducted in the office using computer software.

The results of the GPR survey did not identify any anomalies at the Site. The full GPR report is included as Appendix C.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

A total of five (5) on-Site soil borings were installed in the approximate locations shown in Figure 5 during the remedial investigation. One of the soil borings was installed to 6 feet below grounds surface (bgs), one was installed to 14 feet bgs and the remaining three borings were installed to 12 feet bgs. The soil borings were installed utilizing Hydro Tech's track-mounted Geoprobe® 6620DT, a remotely operated probe hydraulic unit. This unit installs soil probes utilizing direct-push technology.

Soil samples were collected in all soil borings at 2-foot intervals utilizing a 4-foot long Macro Core sampler fitted with dedicated acetate liners. The Macro sampler allows for the collection of both continuous and discrete soil samples. Each sampler was installed with 1½-inch diameter drill rods. Groundwater was not encountered during the installation of the soil borings.

The sample collection initially involved the installation of a Macro Core sampler to the desired sampling depth. A piston stop-pin was then removed from the top of the Macro Core sampler and then installed the length of the sampling interval. The sampler was then removed from the ground with the sample intact in the acetate liner. Continuous soil samples were collected during soil probe installation. A total of ten (10) soil samples were collected for laboratory analysis. A total of four (4) shallow sample from zero to 2 feet bgs, one (1) shallow sample from 2 to 4 feet bgs, one (1) deep sample from 4 to 6 feet bgs, one (1) deep sample from 12 to 14 bgs, one (1) deep soil sample from 8 to 10 feet bgs, one (1) deep sample from 6 to 8 feet bgs and one (1) deep sample from 10 to 12 feet bgs were collected.

Separate aliquots of each soil sample were placed into airtight zip-lock bags. The Hydro Tech geologist then characterized each soil sample in the field. The soil characterization consisted of determining the soil classification utilizing the Unified Soil Classification System and screening each sample for organic vapors utilizing a Photoionization Detector (PID).

A PID makes use of the principle of photoionization for the detection and qualitative measurement of organic vapors. A PID does not respond to all compounds similarly, rather, each compound has its own response factor relative to its calibration. For this investigation, the PID was calibrated to the compound isobutylene, as published by the manufacturer. The PID has a minimum detection limit of 0.1 parts per million (ppm). This meter measures the hydrocarbon concentrations in isolated portions of the secured samples.

Headspace analyses were conducted on each soil sample by partially filling a zip-loc bag and sealing it, thereby creating a void. This void is referred to as the sample headspace. To facilitate the detection of any hydrocarbons contained within the headspace, the container was agitated for a period of 30 seconds. The probe of the PID was placed within the headspace to measure the organic vapors present.

Boring logs were prepared by a geologist are attached in Appendix D. A map showing the location of soil borings and monitor wells is shown in Figure 5.

Groundwater Monitoring Well Construction

One (1) groundwater monitoring well was installed to determine water quality beneath the Site. The monitoring well was installed utilizing Hydro Tech's track-mounted Geoprobe® 6620DT. The monitoring well was constructed of 1-inch diameter PVC. The total depth of the monitoring wells is 35 feet below grade. The screened interval of the well consists of 15 feet 0.020-inch slot screen. It appears that a shallow or perched source of groundwater was encountered as National Groundwater Depth database lists the groundwater depth for the area as 95 feet bgs and wells installed to a depth over 50 feet at other locations at the Site were identified to be dry. Four attempts were made to install monitoring wells at different locations at the Site. Monitoring well locations are shown in Figure 5.

Laboratories and analytical methods are shown below.

Survey

A land survey was used to identify the location of all soil borings and monitor wells.

Water Level Measurement

Groundwater head measurements were collected utilizing a Solinst® 122 Oil/Water Interface Probe (Interface Probe). The Interface Probe can measure depths to water to 0.01 inch. The depth to water was measured in the well from the northern portion of the casing top. The groundwater was encountered at 28.65 feet bgs.

Water level data is included in Table 1.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Ten (10) soil samples were collected for chemical analysis during this RI. One (1) shallow and one (1) deep soil samples from each soil probe were collected utilizing a 4-foot long Macro Core sampler fitted with dedicated acetate liners.

The soil was screened and characterized at two foot intervals. Two soil samples from probes were containerized and analyzed at a New York State Department of Health ELAP-certified laboratory. All soil samples were analyzed for volatile organic compounds (VOCs) via EPA Method 8260, semi-volatile compounds (SVOCs) via EPA Method 8270, pesticides/PCBs via EPA Method 8081/8082, TAL metals and chromium trivalent, chromium hexavalent.

Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 2 through 5. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

Groundwater Sampling

One (1) groundwater sample was collected for chemical analysis during this RI. Groundwater sample collection data is reported in Tables 6 through 9. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Each groundwater sample was placed into 2 pre-cleaned 40 milliliter (mL) vials, 2 pre-cleaned 500 mL plastic containers and 2 pre-cleaned 1,000 mL jars and appropriately labeled. The groundwater sample from the monitoring well was analyzed for volatile organic compounds (VOCs) via EPA Method 8260, semi-volatile organic compounds (SVOCs) via EPA Method

8270, Pesticides/PCBs via EPA Method 8081/8082, TAL Metals (filtered and non-filtered), Chromium Trivalent and Chromium Hexavalent.

Soil Vapor Sampling

Three (3) soil vapor probes were installed and three (3) soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 10. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

A soil vapor sample from each soil vapor probe was collected utilizing 6-liter pre-cleaned, passivated, evacuated whole air Summa[®] Canister. A 12-inch by 12-inch piece of plastic sheeting was sealed with beeswax around the edges over the sampling probe in order to keep the tracer gas in contact with the probe and the ambient air from entering the probe during testing.

The Summa Canisters were calibrated for 6 hours and the soil vapor sampling was run on each canister for a time period of 6 hours. The initial vacuum (inches of mercury) and start time was recorded immediately after opening each Summa Canister. After the sampling was complete, the final vacuum and top time was recorded.

After the soil vapor sampling, each Summa was labeled and sent to a laboratory certified to perform air analysis in New York State and analyzed for VOCs via EPA TO-15.

Additionally, one (1) outdoor ambient air sample was collected during this RI.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by York Analytical Laboratories.
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was York Analytical Laboratories.

<p>Chemical Analytical Methods</p>	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Soil vapor and air analytical methods:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.
------------------------------------	--

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2 through 10, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix F, G and H.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the site, from the surface down, consists of 4 feet of fine coarse sand and pebbles underlain by 2 feet of silt and sand. The silty sand is underlain by 2 feet of compact sand and compact sand is underlain by silty sand and pebbles.

Hydrogeology

Since only one well was installed at the Site during the investigation, assessment of groundwater flow direction could not be performed. The depth to groundwater was measured as 28.65 feet bgs. A table of water level data for all monitor wells is included in Table 1.

5.2 Soil Chemistry

Soil/fill samples collected during the RI showed no PCBs or pesticides above 6 NYCRR Part 375-6.8 Track 1 Unrestricted Soil Cleanup Objectives (SCOs). Three (3) pesticides were identified exceeding Track 1 SCOs including 4,4'-DDD (maximum of 0.0138 ppm), 4,4'-DDE (maximum of 0.00372 ppm), and 4,4'-DDT (maximum of 0.0174 ppm). One (1) VOC, specifically; Acetone was identified in one of the deep soil samples above Track 1 SCOs. Acetone is a common laboratory contaminant and it was identified below Track 2 Residential SCOs. Chlorinated hydrocarbons 111-TCA, carbon tetrachloride, TCE and PCE were not detected in soil. Six (6) Polycyclic Aromatic Hydrocarbon (PAH) SVOCs were identified above their Track 1 SCOs in three of the soil samples. Six SVOCS – all PAH related compounds including benzo(a)anthracene (max. of 3.76 ppm), benzo(a)pyrene (max. of 1.72 ppm), benzo(b)fluoranthene (max. of 1.77 ppm), benzo(k)fluoranthene (max. of 2.12 ppm), chrysene (max. of 2.45 ppm), and indeno(1,2,3-cd)pyrene (max. of 0.85 ppm) were detected slightly above their respective Restricted Residential Use SCOs in one deep soil samples. Seven (7) metals were identified in both shallow and deep soil samples above their respective Track 1 Unrestricted Use SCOs and included barium (max. of 650 ppm), cadmium (max. of 5.18 ppm), chromium (max. of 56 ppm), copper (max. of 160 ppm), lead (max. of 1320 ppm), nickel (max. of 120 ppm) and zinc (max. of 844 ppm). Of these metals, barium, cadmium and lead also exceeded Restricted Residential SCOs in one shallow soil. Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A

summary table of data for chemical analyses performed on soil samples is included in Tables 2 through 5. Figures 6 and 7 show the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Track 1 and Track 2 Soil Cleanup Objectives.

5.3 Groundwater Chemistry

Groundwater samples collected during the RI showed no PCBs, Pesticides or SVOCs at concentrations exceeding their method detection limits (MDLs). Gasoline compounds were not identified in the groundwater beneath any portions of the site. One VOC, specifically; Acetone was detected at a concentration of 70 ppb in GP-1 which exceeds its GQS of 50 ppb. Acetone is known as a common laboratory contaminant. No other VOCs were detected above their method detection limits (MDLs) in the groundwater samples. Chlorinated hydrocarbons 111-TCA, carbon tetrachloride, TCE and PCE were not detected in groundwater. Several metals were identified, but only one (1) dissolved metal, selenium was detected in GP-1 at a concentration above its respective GQS..

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 6 through 9. Exceedance of applicable groundwater standards are shown. Figures 8 and 9 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

5.4 Soil Vapor Chemistry

Soil vapor samples collected during the RI showed twenty one (21) VOCs were detected and consisted principally of petroleum related compounds. BTEX were detected at concentrations below 200 ug/m³. Acetone and Methylene chloride were detected in all soil vapor samples at maximum concentrations of 240 ug/m³ and 41 ug/m³, respectively. Chlorinated VOCs including Tetrachloroethylene (PCE) was detected in one of the soil vapor samples at a concentration of 7.4 ug/m³. Trichloroethylene was not detected in any of the samples. Carbon tetrachloride was detected in one sample at a concentration of 8.4 ug/m³, exceeding it's NYSDOH Soil Vapor Intrusion Guidance concentration. Overall, soil vapor does not suggest a significant onsite source but does indicate influence of gasoline compounds in the vicinity of the property.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 10.

Figure 10 shows the location and posts the values for soil vapor samples with detected concentrations.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

B=analyte found in the analysis batch blank
 J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
 NS=this indicates that no regulatory limit has been established for this analyte
 Gray shaded values exceeds the Unrestricted Use Soil Cleanup Objectives

D=result is from an analysis that required a dilution

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

ND=analyte not detected at or above the level indicated

NS=this indicates that no regulatory limit has been established for this analyte

Gray Shaded values exceeds the Unrestricted Use Soil Cleanup Objectives

Orange shaded values exceeds the Track 2 Restricted Residential Use Soil Cleanup Objectives

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

767 Bergen Street
Brooklyn, NY

March 18, 2013

Hydro Tech Environmental, Corp. appreciates the opportunity to work for Urban View Development at the property located at 767 Bergen Street in Brooklyn, New York.

Should you require any additional information or have any comments regarding the contents of this report, please feel free to contact our office at your convenience.

We declare that, to the best of my professional knowledge and belief, HTE personnel meet the definition of an environmental professional as defined in §312.10 of 40 C.F.R. 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Very Truly Yours,
Hydro Tech Environmental, Corp.

X 

Ezgi Karayel
Project Engineer

1.0 EXECUTIVE SUMMARY

Hydro Tech Environmental, Corp. (Hydro Tech) has performed a Phase I Environmental Site Assessment (Phase I ESA) at the Subject Property located at 767 Bergen Street in Brooklyn, New York. The Phase I ESA was performed to meet or surpass the American Standard of Testing Materials Standard for Phase I Environmental Site Assessments E 1527-05. The purpose of the assessment was to characterize the environmental quality of the Subject Property through the identification of Recognized Environmental Conditions. All work was performed under the supervision of a Hydro Tech Project Manager and under the guidance of a Hydro Tech geologist.

The results of the Phase I Environmental Site Assessment are contained in this report. The Phase I Environmental Site Assessment has revealed the following Recognized Environmental Condition(s) at the Subject Property:

- The presence of a Little "E" designation listing of the Subject Property as HAZMAT (§ 5.0)
- The historical use of the Subject Property as an auto repair shop (§ 6.0)
- The historical use of the Subject Property as an auto wrecking (§ 6.0)

No effort has been made to perform any investigation beyond what is included in this Report. The observations and conclusions included herein summarize the results of the Phase I Environmental Site Assessment up to the date of the fieldwork and the date of this Report.

The following sections provide the details and specific information pertaining to the various components of the Phase I Environmental Site Assessment.

2.0 INTRODUCTION & SCOPE OF WORK

2.1 Introduction

Hydro Tech Environmental, Corp. (Hydro Tech, the "*Preparer*") has been retained by Urban View Development (the "*User*") to perform a Phase I Environmental Site Assessment at the property located at 767 Bergen Street in Brooklyn, New York. The User is the "*Owner*" of the property. The Phase I was prepared for due diligence purposes towards a purchase transaction of the property. The property will hereafter be referred to as the "*Subject Property*".

The purpose of a Phase I Assessment is to characterize the environmental quality of the Subject Property through the determination of the presence of Recognized Environmental Conditions (RECs). As defined by the American Society of Testing and Materials (ASTM), a REC is, "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater or surface water of the property" (ASTM E 1527-05, §1.1.1).

To this end, Hydro Tech has collected information through a number of sources including, but not limited to: a property and neighborhood inspection by trained environmental personnel, a review of historical and current information collected from various federal, state, county and municipal agencies and personnel interviews with Site representatives. Recommendations are offered where prudent. Firms subcontracted by Hydro Tech and the User may have collected some information used in this report. Some or all of the Assessment has been performed or supervised by environmental professionals as required by 40 CFR Part 310. The procurement of Title and Judicial Records for Environmental Liens and/or Activity and Use Limitations ("AULs") by HTE is beyond the scope of this practice (ASTM E1527-05) and investigation.

2.2 Scope of Work

The general activities of the Phase I Assessment included the performance of the following tasks:

1. A detailed inspection of the Site and its general vicinity.
2. A review of all reasonably ascertainable regulatory agency documents.
3. A neighborhood hazardous waste survey utilizing Federal and State databases.
4. A review and evaluation of reasonably ascertainable geologic and hydrogeologic reference materials.
5. Interviews with representatives of the Site.
6. The preparation of a Phase I Environmental Site Assessment Report.

The Phase I ESA was performed in accordance with ASTM E 1527 except where noted in Section 2.3 and Hydro Tech's Proposal. As required by ASTM, the User has supplied information that has been relied upon by Hydro Tech in the rendering of findings, conclusions and opinions, except where indicated in Section 2.3 or elsewhere in the report.

2.3 Limitations, Deviations and Exceptions

In addition to those items outlined by ASTM E 1527, asbestos, radon, lead-based paint and lead in water were also considered in the scope of work. While this Phase I Assessment provides information with respect to both asbestos and lead-based paint, the presence of these materials can only be confirmed through the collection and analysis of bulk samples.

This report is not intended to serve as a full asbestos survey or lead-based paint survey. These surveys are commonly performed for the purpose of building demolition/renovation or the recognition/identification of any building materials that may contain asbestos or lead-based paint and it is recommended that they be performed prior to any such work.

Business Environmental Risks have not been considered and are not included in the scope of work. This Phase I Assessment is not intended to address the soil/groundwater quality at the Subject Property for general Site characterization or waste disposal purposes. This Phase I Assessment is not intended to evaluate the fair market price of the property if it is not affected by hazardous or petroleum products.

Portions of this report have been prepared utilizing information provided by third party sources or the user. As such, Hydro Tech relies upon these sources and has recorded findings, conclusions and opinions based upon this information. Hydro Tech cannot attest to the accuracy of this information but where possible had attempted to verify the information.

This Phase I ESA Report is not intended to serve or be construed as a regulatory compliance report for the property. No legal opinions are provided with this report.

It should be noted that the USEPA has determined in their final ruling (40 C.F.R. Part 312, Standards and Practices for All Appropriate Inquiries) of November 1, 2005 that "persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule." Therefore, while all appropriate inquiry could be considered satisfied as this ESA was prepared in exceedances(s) of the ASTM E1527-05 standard, persons attempting to utilize this ESA while seeking one of CERCLA's LLPs must note that; a) they will not maintain CERCLA liability protections unless they also comply with all of the continuing obligations established under the statute that are beyond the scope of this practice (ASTM E1527-05) and investigation; and b) in order to qualify for one of the CERCLA LLPs, the person commissioning the Phase I Environmental Site Assessment must have provided site-specific information (if available) to Hydro Tech before the date of this ESA, otherwise a determination could be made that all appropriate inquiry is not complete.

3.0 SUBJECT PROPERTY DESCRIPTION

3.1 Subject Property Vicinity

The Subject Property is located along the north side of Bergen Street, between Washington Avenue to the west and Grand Avenue to the east, in the borough of Brooklyn, New York. The borough of Brooklyn is situated in the southern portion of New York City.

The vicinity of the Subject Property consists of commercial and residential properties. The ground surfaces in the vicinity of the Site consist of asphalt, bare soil and concrete.

3.2 Subject Property Description

The address of the Subject Property is identified as 767 Bergen Street, Brooklyn, NY. The Subject Property is approximately 5,500 square feet in area and is currently vacant. The ground surface of the Subject Property consists of concrete and bare soil.

Access to the Site is via Bergen Street to the north. A concrete sidewalk is located between the Subject Property and Bergen Street. The Site is not connected to municipal water, gas and electric services.

The topography of the Subject Property and its vicinity is generally level. **Figure 1** provides a Site Plan.

3.3 Adjacent Land Use

The Subject Property is located in a residential and commercial area. The following properties were identified immediately adjacent to the Subject Property:

Direction	Adjacent Parcel	Surrounding Parcels
North	Residential	Residential
South	Auto salvage yard, multi-story commercial building	Commercial
East	Masjid-Islamic Center	Residential/Commercial
West	Multi-story residential building	Residential

Hydro Tech does not believe that the present uses of the adjacent properties identified above should impact upon the environmental quality of the Subject Property.

3.4 Proximity to Environmentally Sensitive Areas

The results of the Site inspection and an evaluation of the United States Geological Survey (USGS) 7-1/2 Minute Topographic Map containing the properties indicate there are three (3) sensitive receptors present within a 0.125-mile radius of the Subject Property. These sensitive receptors are Hart Mart Medical Services, Acorn Community High School and Griffith, Ronda.

3.5 Environmental Setting

The Site is located in the western portion of the Borough of Brooklyn, New York. The elevation of the Subject Property is approximately 105 feet above mean sea level (USGS 7 1/2-Minute Brooklyn, New York Quadrangle, 1969, Photorevised 1995).

Brooklyn, New York is located in the western portion of Long Island. Long Island consists of a wedge-shaped mass of unconsolidated deposits that overlies ancient basement rock.

The thickness of these deposits ranges from approximately 100 feet on the Island's north shore to approximately 2,000 feet in some portions of the south shore. These deposits contain ground water that is the sole source of drinking water for the Island's over 3.1 million residents.

The major landforms of Long Island of importance to the hydrologic system are the moraines and outwash plains, which originated from glacial activity. The moraines represent the farthest extent of the glacial advances. The moraines consist of till, which is a poorly sorted mixture of sand, silt, clay, gravel and boulders. The till is poor to moderately permeable in most areas. Outwash plains are located to the south of the moraines. The outwash plains were formed by the action of glacial melt water streams, which eroded the headland material of the moraines and laid down deposits of well-sorted sands, silts and gravels. These outwash deposits have a moderate to high permeability.

The **Upper Glacial Aquifer** is the uppermost hydrogeologic unit. This aquifer encompasses the moraine and outwash deposits, in addition to some localized lacustrine, marine, and reworked materials. A relatively high horizontal hydraulic conductivity and a low vertical hydraulic conductivity characterize the outwash plain portion of this unit. Since the water table is situated in the Upper Glacial Aquifer.

The **Magothy Formation** directly underlies the Upper Glacial Aquifer in the vicinity of the site. This formation is a Cretaceous coastal-shelf deposit, which consists principally of layers of sand and gravel with some interbedded clay. This formation ranges from moderate to highly permeable. A clay layer in some parts of Long Island confines the uppermost portion of the aquifer. The Magothy is Long Island's principal aquifer for public water supply. The United States Environmental Protection Agency (USEPA) has classified the Long Island aquifer system as a sole source aquifer.

The **Raritan Formation** is the deepest unit and rests directly above the bedrock units. This formation is comprised of a sand member (**Lloyd Aquifer**) and a clay member (**Raritan Clay**). The Lloyd sand extends southward from Flushing Bay to the Atlantic Ocean. The thickness of the sand member ranges in depth from 200 to 800 feet below sea level and increases in thickness to the southeast. The clay member acts as an aquitard confining the lower Lloyd aquifer between the clay and the underlying bedrock.

Long Island has a humid, temperate climate that is strongly influenced by the Long Island Sound and the Atlantic Ocean. These bodies of water temper extremes of heat in summer and cold in winters. Climate affects the formation of soil through its influence on chemical, biological and physical processes. The amount and content of rainwater, as it percolates through the soil, chemically alters the composition of the soils. Chemical and biological processes are also affected by temperature changes. The physical weathering of the soil and rocks is affected by freezing.

The soils of Long Island are relatively young, having developed since the last recession of glaciation approximately 25,000 years ago. Over thousands of years, the minerals in the bedrock debris slowly decayed and disintegrated, providing the necessary substrate to support biological activity. Rock-forming minerals such as feldspars and micas, that are rich in potassium and aluminum, release their important elements as they are converted to clays. Soils formed in glacial drift are commonly known as loam, a mixture of sand, silt and clay.

The soils of Long Island formed three distinct soil horizons or zones on glacial deposits. The lowest horizon, designated as the C-horizon, is similar in composition to the transported glacial rock debris. The B-horizon is above the C-horizon and consists of sediments that have been considerably altered from their C-horizon source. Vadose zone water percolates through the B-horizon, carrying compounds of clay, iron, aluminum oxides, carbonates and humic acid. These materials are redeposited within the lower portions of the B-horizon, and form the zone of accumulation. The zone of accumulation may also be the zone of ground water saturation.

The zone of leaching is found in the A-horizon, which is the upper, organic-rich and life sustaining layer with abundant roots and organic matter at the surface. The A-horizon is distinct from the underlying B & C-horizons because it is darker and more friable.

Differentiation in soil horizons are the result of various soils-forming processes such as the physical breakdown of particles, the leaching of salts, the accumulation of organic matter and the chemical weathering of primary minerals. The chemical weathering of primary minerals occurs through processes such as chelation, the formation of silicate clay minerals and the translocation of silicate clay minerals by percolating water from one horizon to another and the accumulation of iron.

The depth to groundwater in the vicinity of the Site is estimated in excess of 75 feet. The groundwater flow direction in the vicinity of the Site is toward the northwest in the direction of East River.

4.0 SITE RECONNAISSANCE

Ms. Ezgi Karayel of Hydro Tech performed the site reconnaissance portion of the Phase I Assessment on March 11, 2013. The weather during the inspection was sunny and approximately 45 degrees Fahrenheit. *Appendix A* provides photographs of the Subject Property.

Hydro Tech inspected all accessible portions of the Subject Property. The following pertinent information was obtained during the Subject Property Reconnaissance:

1. Industrial Processes:

No industrial processes were observed at the Subject Property. No evidence of historical industrial processes was observed at the Subject Property.

2. Suspect Asbestos-Containing Materials:

No visual evidence of suspect asbestos-containing material (ACM) was identified at the Subject Property.

3. Suspect Lead-Based Paint:

No visual evidence of peeling paint was identified at the Subject Property.

4. Drum Storage Areas:

No current or former drum storage areas were observed at the Subject Property.

5. Storage Tanks:

No visual evidence of underground storage tanks (USTs) or aboveground storage tanks (ASTs) was identified at the Subject Property. No evidence of former ASTs or USTs was identified at the Subject Property.

6. Subsurface Drainage Structures/Drains:

No subsurface drainage structures, such as leaching pools, cesspools, or drywells were observed at the Subject Property. No floor drains were observed at the Subject Property. No evidence of former subsurface drainage structures was observed at the Subject Property.

No evidence of current or former septic/waste water/storm water discharge systems is identified at the Subject Property. The Subject Property is located in a well-served area in the New York City with a publicly managed combined sewer system.

7. PCB-Containing Equipment:

No PCB-containing equipment was identified at the Subject Property.

8. Monitoring / Potable Water Wells:

No potable water wells were observed at the Subject Property.

The Subject Property does not utilize wells for the generation of potable water.

- No monitoring wells were identified on the adjacent properties.
9. Mold
- No visual evidence of mold was identified at the Subject Property.
10. Pits, Ponds, or Lagoons:
- No waste disposal pits, ponds, or lagoons were observed at the Subject Property. No evidence of former pits, ponds, pools of liquid or lagoons were observed at the Subject Property.
11. Wetlands
- No evidence of wetlands or wetlands growth is identified at the Subject Property. The location of the Subject Property and its vicinity do not appear in the USA National Wetlands Inventory.
12. Distressed Vegetation:
- No distressed vegetation was observed at the Subject Property.
13. Fill / Land Disposal / Solid Waste:
- No visual areas of fill or evidence of land disposal of solid waste material(s) were observed at the Subject Property.
14. Engineering Controls:
- No engineering controls were noted at the Subject Property.
15. Odors/Air Emissions:
- No odors indicative of a petroleum, chemical or hazardous substance spill or release were identified at the Subject Property. No evidence of air emissions or air emission equipment was identified at the Subject Property.
16. Hazardous Substance / Petroleum Containers:
- No evidence of suspect hazardous substance or other petroleum containers were identified at the Subject Property.
17. Radon:
- USEPA's recommended action level is 4 picoCuries/liter and the average radon gas concentrations predicted in the Brooklyn area is 1.3 picoCuries/liter. Since Brooklyn is located in a Low Radon Potential area, radon gas should not be represent a potential environmental concern that would warrant the sampling for radon gas at the Subject Property.

5.0 REGULATORY AGENCY DOCUMENTS

Freedom of Information Act (FOIA) requests were issued to the following regulatory agencies with respect to the Subject Property. All reasonably ascertainable municipal records are provided with this report. *Appendix B* provides copies of the regulatory agency documents.

- New York City Department of City Planning
- New York City Department of Building
- New York City Department of Housing Preservation and Development
- New York City Department of Health
- New York City Bureau of Fire Department
- New York State Department of Environmental Conservation
- New York City Department of Environmental Protection

New York City Department of City Planning

The Department of City Planning indicated the Subject Property is addressed as 767 Bergen Street, Brooklyn, New York. The Tax Map number for the Subject Property is Block 1140, Lot 48. The New York City Zoning Department indicated that the Subject Property is "R6-B". The Little "E" Restriction is listed as "HazMAT".

The Little "E" Restriction is associated with an (E) Designation (**E-51**) as a part of the Prospect Heights Rezoning. This (E) designation was assigned to the Subject Property and its vicinity by the New York City Department of Planning on February 9th, 1994 and is listed under City Environmental Quality Review (CEQR) number #93DCP037K. The E-51 designation assigned to the Subject Property is specifically described as "Hazardous materials" - Underground Gasoline Storage Tanks Testing Protocols with a potential for hazardous material contamination. The Little "E" restriction of the Site is considered a REC since the current redevelopment of the property should be coordinated with the New York City Mayor's office of Environmental Remediation (NYCOER) in accordance to the CEQR regulations.

New York City Department of Building

A FOIA request was submitted to the New York City Department of Building (NYCDOB). The NYCDOB indicates that there are no open complaints, DOB violations or Environmental Control Board (ECB) violations listed for the Subject Property. The Department of Finance Occupancy Code is listed as "C0-Walk-Up Apartment".

There are no Certificate of Occupancy (CO) documents listed in the NYCDOB records for the Subject Property.

Hydro Tech believes that none of the other information provided in the NYCDOB records should represent an environmental concern at the Subject Property other than what has been previously identified.

New York City Department of Housing Preservation and Development

A FOIA request was submitted to the New York City Department of Housing Preservation and Development (NYCHPD). The NYCHPD indicated that they do not maintain a file on the Subject Property.

New York City Department of Health

A FOIA request was submitted to the New York City Department of Health (NYCDOH) on March 12th, 2013. As of the date of this report, the NYCDOH has not provided any information pertaining to our FOIA request. Any information provided by the NYCDOH will be provided as soon as it has been received and evaluated.

New York City Bureau of Fire Prevention

A FOIA request was submitted to the New York City Bureau of Fire Prevention (NYCBFP) on March 12th, 2013. The NYCBFP was contacted via telephone to obtain the status of the FOIA request. As of the date of this report, the NYCBFP has not responded to our initial search request or subsequent follow-up calls. Any information provided by the NYCBFP will be provided as soon as it has been received and evaluated.

New York State Department of Environmental Conservation

A FOIA request was submitted to the New York State Department of Environmental Conservation (NYSDEC) on March 12th, 2013. As the date of this report, the NYSDEC has not provided any information pertaining to our FOIA request. Any information provided by the NYSDEC will be provided as soon as it has been received and evaluated.

The NYSDEC website was also searched for any records associated with the Subject Property. The Subject Property was not identified on the NYSDEC spills database website.

New York City Department of Environmental Protection

A FOIA request was submitted to the New York City Department of Environmental Protection (NYCDEP) on March 7th, 2013. As the date of this report, the NYCDEP has not provided any information pertaining to our FOIA request. Any information provided by the NYCDEP will be provided as soon as it has been received and evaluated.

6.0 SITE HISTORY

6.1 Sanborn Maps

Sanborn Fire Rate Insurance Maps for the Subject Property and its vicinity dated 1888, 1906, 1926, 1951, 1965, 1978, 1979, 1980, 1982, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 2001, 2002, 2003, 2004, 2005, 2006, 2007 were obtained from EDR and evaluated in order to establish the history of the Site. *Appendix C* provides a copy of the Sanborn Fire Rate Insurance Maps.

Date	Subject Property Shown As	Surrounding area
1888	Two 2-story dwellings, one 1-story shed and two 3-story buildings	Residential and commercial buildings
1906	Two 2-story dwellings, two 1-story buildings and two 3-story stores	
1926	Two 2-story dwellings, four 1-story buildings and two 3-story stores	
1951	One 1-story building and auto parking	
1965	One 1-story auto repair shop, auto wrecking and one 1-story building utilized as storage	
1978-2007	Auto wrecking	Residential, commercial and manufacturing buildings

6.2 City Directory Search

In order to further assess the property's history, available City Directory files were obtained from EDR for review. The City Directories document known occupants of specific properties and sorted by individual addresses. *Appendix D* provides a copy of the City Directory Search.

The following provides a listing of all documented usages of the addresses 767 Bergen Street:

Date	Use of Subject Property	Surrounding Property Use
1934	Silverstein Irving	Residential & commercial

6.3 Previous Studies

Hydro Tech conducted a Phase II Environmental Site Assessment (ESA) and a Ground-Penetrating Radar (GPR) survey during December 2012 – January 2013. Both of these investigations were conducted for due diligence purposes. The Phase II Environmental Site Assessment consisted of the installation of soil probes. Based upon the findings of the Phase II investigation, urban fill material is present throughout the property. This urban fill material is characterized by the presence of SVOCs and Pesticides. No anomalies indicative of USTs are identified during the GPR survey. *Appendix E* provides copies of the Phase II ESA and the GPR survey.

6.4 Previous Owners

According to the property listing on Property Shark, the following provides a list of historical owners of the Site.

YEAR	NAME OF PREVIOUS OWNER
1971	Tasso Anthony and Loiseau Ferrer
1977	Parker Associates Inc.
1983	Commissioner/Finance/NYC
1984	Vacate Order
2003	Bergen Brooklyn Realty Corp.
2007	Richard Escobar and Old Car Realty Inc.
2013	765 Bergen LLC

6.5 Historical Use Summary

Based on a review of available information provided and/or obtained for the Subject Property as of the date of this ESA, it appears that the Subject Property was developed prior to 1888 with multiple multi-story and single story buildings. These buildings appear to be demolished prior to early 1950s. The Subject Property is listed as an auto repair shop, auto wrecking and storage in 1965. The Subject Property is then utilized as auto wrecking between 1978 and 2007.

Operations involving auto service repairs utilize petroleum and/or hazardous materials, the discharge of which may have adversely impacted upon the environmental quality of the Subject Property. Therefore the historical use of the Subject Property as an auto repair shop represents a REC. Historical on-site operations also include auto wrecking and during this operation, automobiles are physically broken down to their individual parts, which are then stored throughout the property for later resale. These types of operations involve significant interaction with petroleum products, including but not limited to waste oil, transmission oil, antifreeze and other liquids. These types of operations may result in unauthorized and/or unreported releases to the subsurface, which may impact upon the environmental quality of the Subject Property. Therefore, the site operation as an auto wrecking represents a REC.

Numerous data gaps (maximum 25 years) were noted in the historical map review. Due to other historical information obtained over the course of this investigation, Hydro Tech does not consider this data failure/data gap significant, as it appears unlikely to have affected potential Recognized Environmental Conditions at the subject site.

7.0 NEIGHBORHOOD HAZARDOUS WASTE DATABASES

Federal, State, Local and Tribal hazardous waste databases were reviewed with respect to the Subject Property and surrounding properties. The search areas for each database were specified by both ASTM E 1527 and the AAI rule. In addition, all orphan sites (those without adequate information for mapping purposes) listed in the database search were also reviewed, evaluated and incorporated (as needed).

Appendix F provides a copy of the Database Search Results. The following databases, with the appropriate search radius, were reviewed:

ASTM Standard Environmental Record Source	Approx. ASTM Minimum Search Distance (MSD)	Number of Mapped Sites within MSD	Number of Orphan Sites
1. NPL (Superfund) <i>National Priorities List</i>	1.0 Mile	0	0
2. Delisted NPL Site <i>Delisted National Priorities List Site</i>	0.5 Mile	0	0
3. CERCLIS <i>Comprehensive Environmental Response Compensation & Liability Information System</i>	0.5 Mile	1	2
4. CERCLIS NFRAP <i>CERCLIS No Further Remedial Action Planned Site</i>	0.5 Mile	0	0
5. RCRA-TSD CORRACTS <i>Resource Conservation & Recovery Treatment/Storage/Disposal Facility Subject to Corrective Action</i>	1.0 Mile	0	0
6. RCRA-TSD <i>Resource Conservation & Recovery Treatment/Storage/Disposal Facility (Non-Corrective Action)</i>	0.5 Mile	0	0
7. RCRA-LG <i>Resource Conservation & Recovery Large Quantity Generator</i>	Site & Adjoining	0	0
8. RCRA-SG <i>Resource Conservation & Recovery Small Quantity Generator</i>	Site & Adjoining	0	1
9. ERNS <i>Emergency Response Notification System</i>	Property Only	0	0
10. Local / State / Tribal UST, PBS <i>Registered Storage Tanks</i>	Site & Adjoining	0	0
11. Local / State / Tribal LTANKS <i>Leaking Underground Storage Tanks</i>	0.5 Mile	40	0
12. State Spill Incidents <i>NYSDEC Spill Sites</i>	0.125 Mile	17	4
13. Local / State / Tribal SWF <i>Solid Waste Facility / Landfill</i>	0.5 Mile	4	0
14. Local / State / Tribal CERCLIS <i>Inactive Hazardous Waste Disposal Site</i>	0.5 Mile	0	0
16. Inst. / Engineering Controls <i>Registry of Institutional and/or Engineering Controls</i>	Property Only	0	0
17. Voluntary Cleanup Program Sites <i>Local / State / Tribal VCP Sites</i>	0.5 Mile	0	0
18. Brownfield Sites <i>Local / State / Tribal Brownfield Sites</i>	0.5 Mile	0	0
19. Non-ASTM Record Source(s)	Not Applicable	No MSD has been established by ASTM for these sources	

The review and evaluation of the above Federal and State/Tribal/Local Databases indicates that the Subject Property is not identified in any database.

One site is listed in the CERCLIS database within a ½ mile radius of the Subject Property. The site is located downgradient of the Subject Property. Due to its location and proximity this site should not impact upon the environmental quality of the Subject Property

Forty sites are listed in the Leaking Underground Storage Tanks (LUSTs) database within a ½ mile radius of the Subject Property. Thirty-six of the forty LUSTs have been cleaned up to the satisfaction of the NYSDEC and are considered closed; the remaining LUST sites are active. Two of the active LUST sites are located upgradient of the Subject Property. The records further indicate that corrective actions were taken for all four sites. None of the LUST sites should impact upon the environmental quality of the Subject Property.

Seventeen properties are listed in the NY Spills database within a 0.125-mile radius of the Subject Property. All of the seventeen sites have been cleaned up to the satisfaction of the NYSDEC and are listed as closed. Therefore none of the Spill sites should impact upon the environmental quality of the Subject Property.

The additional information we have obtained from the owner of the property further indicates an open spill for the property located adjacent south to the Subject Property. The open spill will be further discussed in Section 8.0.

Four sites are listed in the Solid Waste Facilities/Landfill (SWF/LF) within a ½-mile radius of the Subject Property. All of the four sites are listed as downgradient to the Subject Property. One of these SWF sites is located adjacent to the south of the Subject Property and the SWF database indicates that this site is active. The type of site activity is listed as vehicle dismantling. No other information is listed in the database. None of the SWF sites may impact upon the environmental quality of the Subject Property.

None of the remaining properties identified in the databases, including Orphan Sites, should impact upon the environmental quality of the Subject Property.

8.0 INTERVIEWS & CLIENT / USER-PROVIDED INFORMATION

During the course of the Phase I Assessment, interviews were conducted with respect to the operation and history of the Site and a Client/User Questionnaire was provided.

1. The client/user provided no records to Hydro Tech's request for information associated with Environmental Liens or Activity and Use Limitations against the property that may have been filed or listed under federal, tribal, state, or local law.
2. The client/user reported no specialized or actual knowledge or experience related to any potential Recognized Environmental Conditions at the Subject Property or nearby properties.
3. The client/user did not respond to Hydro Tech's request for information regarding the relationship of the purchase price of the property to fair market value, specifically if it has been adjusted due to the known or potential presence of on-site contamination.
4. The client/user reported no commonly known information or information within the local community regarding past use(s) of the property (including the storage and/or release of chemicals, hazardous substances, petroleum products, etc.) that could have affected the environmental integrity of the subject site.
5. The client/user could not confirm whether no environmental contamination or cleanups have occurred at the property in the past.
6. Hydro Tech Environmental provided the Questionnaire for the client/user to complete. Hydro Tech Environmental Questionnaire is provided in *Appendix G*.

8.1 Past and Present Site Associates

The following current owner, provided information during the performance of the Phase I Assessment:

- Shai Kolberg (the Owner)

Mr. Kolberg provided us with a Spill letter dated February 12, 2013. The letter was issued by the NYSDEC for the property located south adjacent to the Subject Property. During a Phase II ESA, petroleum contaminated soil was identified at the south adjacent property and the spill #121420 was assigned to the case. Based upon the information provided, the presence of the open spill does not represent a REC.

The interview did not reveal the presence of any other potential Recognized Environmental Conditions in connection with the subject site, and did not provide any additional information with respect to the environmental integrity of the subject property that was not obtained from other sources over the course of this investigation.

9.0 CONCLUSIONS

Hydro Tech has performed a Phase I Environmental Site Assessment at the Subject Property, and has identified the following Recognized Environmental Conditions (RECs):

- The presence of a Little "E" designation listing of the Subject Property as HAZMAT (§ 5.0)
- The historical use of the Subject Property as an auto repair shop (§ 6.0)
- The historical use of the Subject Property as an auto wrecking (§ 6.0)

10.0 CREDENTIALS & DECLARATION

10.1 Credentials

In accordance with ASTM E 1527, the credentials of those personnel directly involved with the production of this report are provided with this report. *Appendix H* provides a copy of the personnel credentials.

10.2 Environmental Professional Declaration

We declare that to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in 40 CFR Part 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Subject Property. Only where indicated we have developed and performed the AAIs in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

12.0 EXCLUSIONS & DISCLAIMER

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, **Hydro Tech Environmental, Corp.** may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to **Hydro Tech Environmental, Corp.** at the time of the subject property assessment. Although there may have been some degree of overlap in the information provided by these various sources, **Hydro Tech Environmental, Corp.** did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this subject property assessment.

Observations were made of the subject property and of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non hazardous or hazardous materials, in that portion of the subject property or structure. In addition, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

Hydro Tech Environmental, Corp. did not perform testing or analyses to determine the presence or concentration of asbestos at the subject property or in the environment of the subject property under the scope of the services performed.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level reading made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the subject property assessment. Where such analyses have been conducted by an outside laboratory, **Hydro Tech Environmental, Corp.** has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

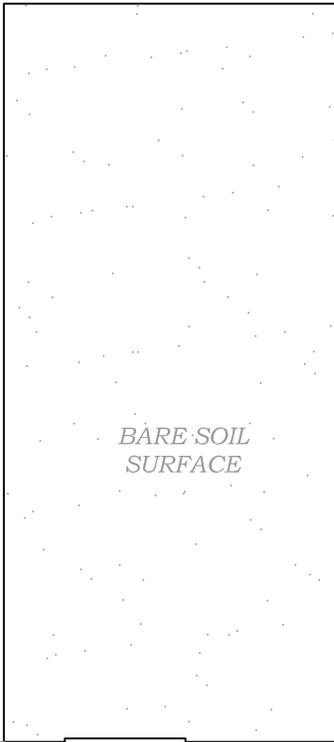

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this subject property assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study may be present in soil and/or groundwater at the subject property.

This report was prepared solely for the use of the Client/User and is not intended for use by third parties. Unauthorized third parties shall indemnify and hold Hydro Tech harmless against any liability for any loss arising out of, or related to, reliance by any third party on any work performed hereunder, or the contents of this report.

1 Valuation Model

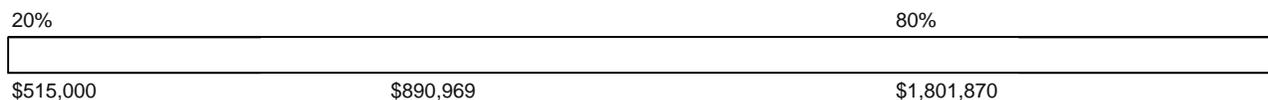

Our database has 84 properties that meet the following criteria:

[Browse more recently sold properties](#)
in the neighborhood!

- Sold within the last 6 months
- In the 11238 zip code
- Property classes similar to Three Families
- Sale price over \$25,000

Price

The median price of these properties is \$890,969 (half of these properties sold for higher prices, half sold for lower prices). 20% of the properties sold for \$515,000 or less, and 20% sold for \$1,801,870 or more.

Subscribe and Get More!

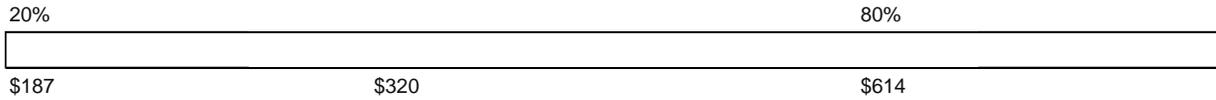

If you subscribe to Comparables you'll get to see:

- The entire list of properties
- Sale date & price, square footage, and price per square foot for each property
- Our quick-and-dirty value calculation

[Click here](#) to learn more and subscribe.

Price per Square Foot

The median price per square foot of these properties is \$320 (half of these properties sold for higher prices, half sold for lower prices). 20% of the properties sold for \$187 or less, and 20% sold for \$614 or more.

At the median price per square foot of \$320, this property (6,993 square feet) would be \$2,241,346.

Here is a sample of the 84 properties following the criteria defined above:

Address	Sale Price	Sale Date	\$ per Sq. Ft.	Total Sq. Ft.
70 Lefferts Pl	\$850,000	2/14/2013	\$291	2,912
254 Gates Ave	\$2,200,000	1/7/2013	\$440	4,996
4 Downing St	\$2,050,000	1/11/2013	\$197	10,400
412 Vanderbilt Ave	\$1,585,000	1/10/2013	\$471	3,360
205 Park Pl, unit 2	\$423,000	1/28/2013	\$604	700
426 Sterling Pl, unit 3C	\$410,000	1/15/2013	\$630	650
436 Sterling Pl, unit 4	\$569,000	1/8/2013	\$632	900
205 Gates Ave	\$1,150,000	6/6/2012	\$320	3,588
54 Irving Pl	\$1,025,000	8/27/2012	\$320	3,200

2 Sales & Values Maps

Sale Price	\$1,325,000
Building Square Foot	6993 SqFt
Price per SqFt	\$189

* Price per SqFt: \$189

1 Property Tax

The following values are from the latest assessment roll and give information about the fiscal years **2012/2013** and **2013/2014**. The City's fiscal year runs from July 1 to June 30.

Market Value

The property tax assessment process starts when the city's assessors estimate a property's market value, based upon the available information. The assessors use three approaches to value the property: sales, cost, and income. The *market value* is generally defined as what the property would sell for in a competitive and open market.

	2012/2013		2013/2014	
Land market value		\$415,000		\$415,000
Building market value	+	\$1,947,000	+	\$2,205,000
Market value	=	\$2,362,000	=	\$2,620,000

Assessed Value

Assessed value is a calculation of the property value for tax purposes. It usually represents a percentage of the market value and is subject to limits on annual increases. Sometimes the city will exempt part of the assessed value from taxation, as an incentive to make improvements to an existing structure or to build on a vacant lot. There are also several [tax reductions programs](#) for residential properties that may apply and may lower the property's tax bill.

	2012/2013		2013/2014	
Land assessed value		\$21,997		\$21,021
Building assessed value	+	\$103,201	+	\$111,688
Assessed value	=	\$125,198	=	\$132,709
Exemptions granted by city	-	\$0	-	\$0
Net assessed value	=	\$125,198	=	\$132,709

Taxable Value

This is the 2012/2013 taxable value used for the calculation of the property tax.

Taxable value	=	\$125,198
---------------	---	-----------

Property Tax

Base tax is an estimate of what an owner **not** benefiting from tax exemptions would pay and is determined by multiplying the assessed value by the [tax rate](#). Current tax is calculated by multiplying the taxable value by the tax rate.

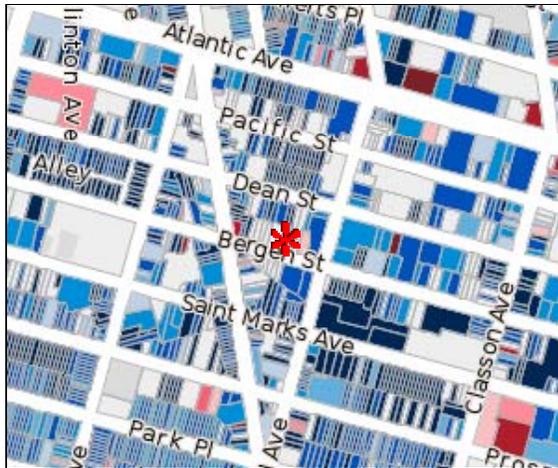

For a very small number of properties owner-related exemptions (for which we currently don't have information) apply, and so the values given below may be slightly different from the official ones. In addition to exemptions, the city also grants *tax abatements* to some properties. An *abatement* is simply a discount which is subtracted directly from the current tax. This results in the *property tax*, the amount the current owner pays.

Tax description	Assessed/taxable value 12/13	Tax rate 12/13	Tax amount 12/13
Base tax	\$125,198	* 18.2050%	= \$22,792.00
Current tax	\$125,198	* 18.2050%	= \$22,792.00
Total abatements			- \$0.00
Property tax			= \$22,792.30

Tax description	Assessed/taxable value 13/14	Tax rate 13/14	Tax amount 13/14
Base tax	\$132,709	* 18.5690%	= \$24,642.73
Current tax	\$132,709	* 18.5690%	= \$24,642.73
Total abatements			- \$0.00
Property tax			= \$24,642.73

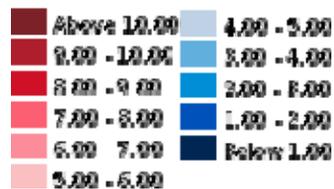

For more information please visit New York City's [property tax section](#). Also, you can view this property's assessment, tax bill and account statements [here](#).

Tax per Square Foot

Click on the map to expand!

On this map, you can see the tax value paid per square foot for this property.

2 Exemptions and Tax Abatements

Both the City and State of New York offer property tax reductions through exemptions and abatements for residential property, commercial constructions, and properties used by governmental, industrial, and not-for-profit organizations. Exemptions provide tax relief by reducing a property's assessed value, and abatements reduce taxes by applying credits to the amount of tax due. The information in this section presents a summary of the granted amounts and other related values of the benefit programs. This data comes from NYC Department of Housing Preservation and Development (HPD) and the Department of Finance, departments which administer the [J-51 Program](#) and the [421a Program](#).

Unfortunately, we have no information about whether any exemptions or abatements currently apply to this property.

3 Tentative Values

Every year in January, the NYC Department of Finance Commissioner publishes the tentative property assessment roll for the current fiscal year. All properties are valued by law according to their condition on the taxable status date of January 5th. Owners who believe that the Department of Finance has used incorrect information to determine their market value may [file forms](#) providing corrections. After Finance verifies the complaints, the agency will make any corrections before the final assessment roll is published on May 25. The final roll will also include changes, based on the decisions made by the New York City Tax Commission, an independent City agency, as well as new information Finance gathers about abatements, exemptions and other adjustments. In June, Finance will use the final roll and new tax rates adopted by the City Council to generate property tax bills for the fiscal year beginning July 1st.

Tentative Transitional Values

Tentative transitional land	\$21,021
Tentative transitional total	\$132,709
Tentative exempt land	\$0

1 Zoning and Building Class

* Land Use: Three Families (C0)

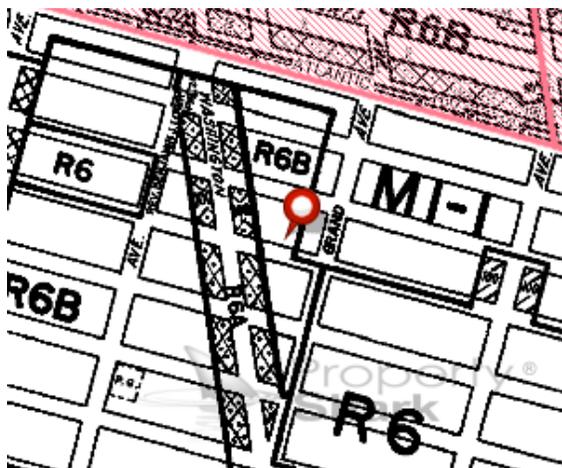

The *building class* specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X.) There are at most 10 different sub-classes within each building class (ranging from 0 to 10.) These building classes cover all property uses from residential and commercial to government buildings and parks.

Building class
Legend

Three Families (C0)

As you can see in our legend, we show many building classes on our maps! Still, we are not showing the entire list. If you have questions or would like to know more about the different types of building classes, [Click Here!](#)

Residential:		Civic Use:	
	Residential, 1 Fam		Places of Public Assembly
	Residential, 2 Fam		Religious And Cultural
	Walkups		Outdoor Recreation
	Condos		Facilities & Cemeteries
	Mobile		Churches
Commercial:			Schools
	Store + Apts, Lofts		City Buildings
	Small Businesses		Health & Social Care
	Theaters & Hotels	Other:	
	Offices		Vacant Lots
	Industrial		Misc
	Transportation		Unknown
	Facilities		

This map is not an official zoning map. The print version of the NYC Zoning Resolution, which includes the zoning maps, together with any amendments adopted by the City Council subsequent to the most recent update to the print version, remains the official version of the Zoning Resolution.

This map was created from the NYC Department of City Planning's online zoning map files. It includes updates found in those files through 12/12/12.

For more information about zoning district regulations, [Click Here!](#)

Rezoning Projects

No Rezoning Projects found.

New York City is divided into three basic zoning districts: residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

Zoning district R6B

Legend

- R - Residential District**
- C - Commercial District**
- M - Manufacturing District**
- Area(s) Rezoned**
- Special Purpose District**
The letter(s) within the shaded area designates the special purpose district as described in the text of the Zoning Resolution.
- Ⓚ Restrictive Declaration**
- ⓔ City Environmental Quality Review Declaration**
- ⓔ3 - Refers to blocks with lots subject to CEQR designation E-175. See Z.R. appendices (CEQR declarations) for list of affected block and lots.**
- ▨ Rezoning Project Area (Proposal-Active)**
- ▩ Rezoning Project Area (Currently Inactive)**
- ▨ Rezoning Project Area (Recently Adopted)**
- ▨ Rezoning Project Area (Earlier Adopted)***

* The Earlier Rezonings are no longer being updated. They are presented for reference purposes.

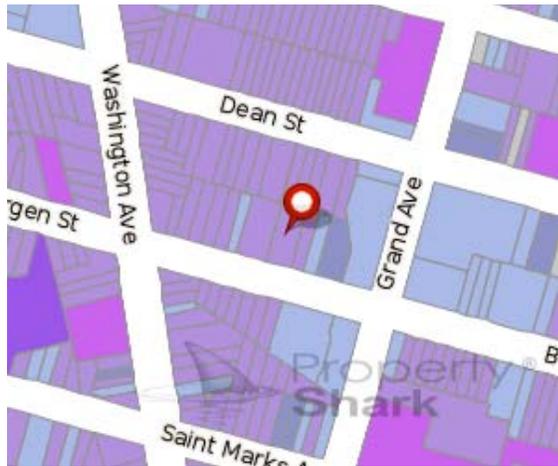

2 Floor Area Ratio & Air Rights

There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then then you can't build a building larger than 8,000 square feet.

Area of lot in square feet		5,500
FAR	x	2
Maximum usable floor area of building	=	11,000

Available Air Rights by Parcel

The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the "air rights" to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)

* Unused buildable square feet: 4,015

Maximum usable floor area		11,000
Usable floor area	-	6,985
Unused buildable square feet ("air rights")	=	4,015

3 Complaints

Complaint number	Address	Date entered	Complaint category	Inspection date	Disposition code	Status
3239574	767 Bergen Street	09/21/2007	31	n/a	n/a	Active
3239573	767 Bergen Street	09/21/2007	5	n/a	n/a	Active

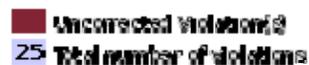

1 Housing Preservation and Development Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.

HPD Violations

On this color-coded map, view all properties with open violations that have been left uncorrected.

Legend

Open A class violations: 0
 Open B class violations: 0
 Open C class violations: 0
 Open I class violations: 0

Number of units: 3

* Sorry, for this property we don't have any information about open violations.

Description of the Classes

Sorry, no records were found!

Please note: the NYC HPD is the only authoritative source for information on housing violations. Please consult the [HPD web site](#) for up-to-date violations.

PropertyShark obtains its records from HPD and updates them monthly.

2 ECB Violations

There are eleven city agencies that administer the City's quality-of-life laws and issue Notices of Violation (NOVs) for alleged violations. The ECB is a separate and independent agency that hears challenges to those NOVs. The agencies that issue the most violations for real estate are:

- Department of Buildings (DOB)
- Department of Environmental Protection (DEP)
- Fire Department
- Landmarks Preservation Commission (LPC)
- Department of Sanitation

PropertyShark obtains its ECB NOV records from the DOB and updates them nightly. Records go back to 1988

No records found.

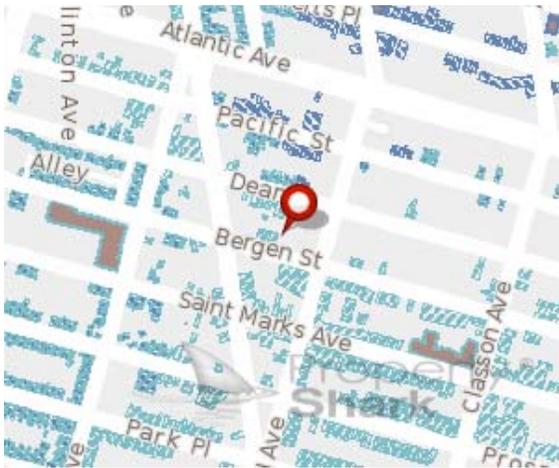

For more information about the ECB and the types of NOVs that it handles, visit its [home page](#).

1 Distance To

Distance to Elementary Schools

Understanding This Map

This screening map, provided to PropertyShark by [Toxics Targeting](#), shows environmental hazards such as toxic dumps, garbage landfills, leaking tanks, hazardous waste sites, and pollution discharges reported by local, state and federal government authorities.

For information about the hazards that can appear on the map, see our [Pollutants Groups Description FAQ](#). For information about Toxics Targeting, see our [About Toxics Targeting FAQ](#).

More Details & Help

Call **800-2-TOXICS** (800-286-9427 NYS only) or **607-273-3391** for more info.

Map Disclaimer: Mapped locations are approximate; identified sites based on current and/or historic information; site symbols can refer to large properties; additional toxic sites are not mapped; contamination problems can impact properties far from toxic sources; sites include known and potential hazards; regulatory status of sites may have changed.

Leaking Tanks & Spills:

- MTBE Spill
- Spill greater than 25 gal/lbs
- Tank Failure
- Gasoline Spill
- Tank Test Failure

Superfund, Brownfields and Solid Waste:

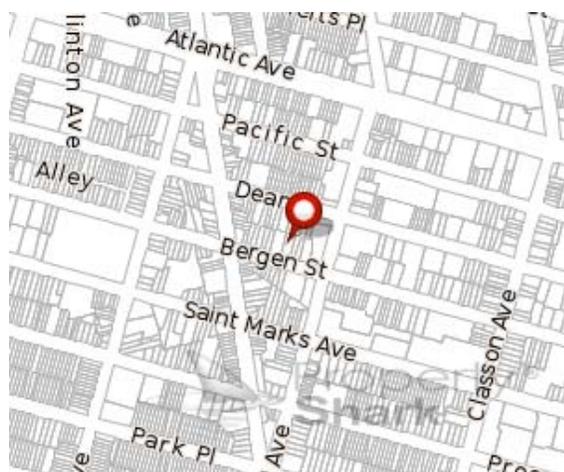

- JS Superfund Priority Site
- Brownfield Site
- NY Superfund Site
- Hazardous Substance Study
- US Superfund CERCLIS Site
- Solid Waste Facility

Other Toxic Sites:

- NY Superfund Qualifying Site
- Toxic Release Inventory Site
- Major Oil Storage Facility
- Hazardous Waste Corrective Act
- Haz Waste Treat/Store/Dispose
- Legal Civil/Admin Docket
- Hazardous Waste Violation
- Air Discharge Facility
- Selected NYC Environmental Quality Review "E" Designation

2 Fema Flood Zones Map

To understand flood zoning within the current neighborhood you can review the full map by clicking on this 'minimap'. Flood zoning codes, Fema map panel, and publication date all can be extracted for this target property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

**Re: GPR Survey - 765 Bergen Street, Brooklyn NY
Hydro Tech Job No. 130021**

Dear Mr. Kolberg:

Hydro Tech Environmental, Corp. has performed a Ground Penetrating Radar (GPR) survey at the above referenced Site. The GPR survey was conducted to investigate all accessible areas of the property which included all accessible areas of the site to identify any anomalies representing the presence of an underground storage tank (UST). No vent pipes or fill pipes were noted on the property.

SITE DETAILS

The Site is approximately 5,500 square feet in area and is currently utilized as a parking lot for automobiles. The ground surface of the Subject Property consists of concrete and bare soil.

Access to the Site is via Bergen Street to the south. A concrete sidewalk is located between the Subject Property and Bergen Street. The Site is not connected to municipal water, gas and electric services.

DESCRIPTION OF FIELDWORK

The GPR survey was performed on January 31, 2013 utilizing a GSSI SIR-3000 Control Unit and a 400-megahertz shielded antenna. Prior to the commencement of the survey a visual inspection of the property was performed to identify specific areas where USTs could be present.

The GPR takes one "scan" per set unit. The number of scans per unit is based upon the estimated sizes of targets. Based upon the typical size of a UST, the GPR was set to run at 50 scans per foot. As each scan is performed, the antenna emits specific radar amplitude into the subsurface. The amplitude of the radar reflected back to the antenna is based upon the differences in the dielectric constants of the subsurface materials. The difference in amplitude obtained during each scan is then graphically displayed on the Control Unit, which are then interpreted by the GPR operator the time of the survey. Additional interpretations are then conducted in the office utilizing specialized computer software.

Mr. Kolberg
January 31, 2013
Page 2

GPR RESULTS

No anomalies indicative of USTs were found during the survey.

I hope that this information has proven valuable to this phase of your assessment. Should you have any questions, please feel free to contact our office at your convenience.

Very Truly Yours,
Hydro Tech Environmental, Corp.

Carlos Quinonez
Field Manager

EXCLUSIONS & DISCLAIMER

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

Observations were made of the subject property and/or of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non hazardous or hazardous materials, in that portion of the subject property or structure. In addition, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Any GPR survey described above was performed in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry. **Hydro Tech Environmental, Corp.** does not accept responsibility for survey limitations due to inherent technological limitations or site specific conditions, however, made appropriate effort to identify and notify the client of such limitations and conditions. In particular, please note that the survey described above does not represent a full utility clearance survey, and does not relieve any party of applicable legal obligations to notify a utility one-call service prior to excavating or drilling.

Re: Phase II ESA
765 Bergen Street, Brooklyn, NY
Hydro Tech Job #120256

Dear Mr. Kolberg:

This letter is intended to provide you with the results of the recent Phase II investigation conducted at the above-referenced property. The scope of work for this investigation was based upon your requirements and is intended to assess the overall soil quality in the general accordance with the NYC CEQR requirements. It is understood that the investigation was not intended to assess the soil quality for disposal purposes or to assess the groundwater or soil vapor quality.

The investigation consisted of the installation and sampling of 3 soil probes. According to information you provided, the proposed development of the property would require an excavation to a depth of 12 feet.

Site Description

The Site is approximately 5,500 square feet in area and is currently utilized as a parking lot for automobiles. The ground surface of the Subject Property consists of concrete and bare soil.

Access to the Site is via Bergen Street to the south. A concrete sidewalk is located between the Subject Property and Bergen Street. The Site is not connected to municipal water, gas and electric services. **Figure 1** provides a Site Plan.

Fieldwork

The field portion of the investigation, consisting of the installation and sampling of three (3) soil probes, was conducted on December 13, 2012. Prior to the performance of the fieldwork, a NYC One-Call Public Utility mark-out was requested. Confirmation # **123491201** was issued to the mark-out. Photographs of the fieldwork are provided as **Attachment #1**.

Soil Probes

A total of three (3) soil probes, designated as SP-1 through SP-3, were installed and sampled at the Site on December 13, 2012. Previous **Figure 1** provides a Sampling Plan for SP-1 through SP-3. Soil probe SP-1 was installed in the northern portion of the property. Soil probe SP-2 was installed in the central portion of the property and soil probe SP-3 was installed in the southern portion of the property.

The soil probes were installed utilizing Hydro Tech's Tractor Geoprobe® unit. This unit installs soil probes utilizing direct-push technology. Soil samples were collected utilizing a four-foot long Macro core sampler fitted with dedicated acetate liners. Each sampler was installed with 1½-inch diameter drill rods. Soil probe SP-1 was installed to a depth of 14 feet below grade surface (bgs). Due to refusal, soil probes SP-2 and SP-3 were installed to a depth of 12 feet bgs. No groundwater was encountered during the installation of soil probes.

Soil samples were obtained from each soil probe location on continuous 2-foot intervals. Each soil sample was characterized in the field and screened for organic vapors utilizing a Photoionization Detector (PID). The general soil type beneath the Site consisted of brown fine-grained silty sand with pebbles. Fill material consisting of bricks, charcoal and other fine matter was identified from zero to 2 feet below ground surface (bgs) in SP-1 to SP-3.

No organic vapor readings were noted in any samples from SP-1. Trace organic vapor readings (<5.0 ppm) were noted in the 8 to 10 foot sample from SP-2 and the 6 to 8 foot sample from SP-3. No organic vapor readings were noted in the remaining soil samples from SP-2 and SP-3. Soil probe logs are provided as **Attachment #2**.

Based upon the requirements set forth in the scope of work, two soil samples were collected from each soil probe. Each soil sample was placed into 2-ounce and 4-ounce jars and appropriately labeled. Based upon the in-field screening results, the following soil samples from each soil probe were analyzed for confirmatory analyses at a State-certified laboratory:

Soil Probe (SP)	Depth Interval (Feet)
SP-1	0 to 2
	12 to 14
SP-2	0 to 2
	8 to 10
SP-3	0 to 2
	6 to 8

Laboratory Analyticals

All soil samples were placed in a cooler filled with ice and maintained at 4 degrees Celsius. The samples were transmitted under proper chain of custody procedures to a State-certified laboratory and were analyzed for volatile organic compounds (VOCs) via EPA Method 8260, semi-volatile organic compounds (SVOCs) via EPA Method 8270 BN, Pesticides/PCBs via EPA Method 8081/8082, TAL Metals and Chromium Hexavalent/Chromium Trivalent. **Attachment #3** provides the laboratory reports.

Analytical Results

As **Table 1** indicates, the total VOC concentrations in ranged from non-detect in both SP-1 samples to 0.277 mg/kg detected in the 8-10 foot sample from SP-2. All individual VOCs were non-detect in the 0-2 and 12-14 foot samples from SP-1. Acetone was detected in the 0-2 from SP-2 at a concentration exceeding its method detection limit (MDL) but below its Unrestricted Use SCO. Acetone was also detected in the 8-10 foot sample from SP-2 at a concentration exceeding its Unrestricted Use SCO however acetone was also detected in the batch blank, verifying that it is associated with laboratory contamination. Additional individual VOCs were detected in the 8-10 foot sample from SP-2 at concentrations exceeding their respective MDLs but less than their respective Unrestricted Use SCOs. These VOCs include 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, 2-Butanone, Naphthalene, o-Xylene, p- & m- Xylenes, Toluene, and Total Xylenes. Individual VOCs were detected in the 0-2 and 6-8 foot samples from SP-3 at

concentrations exceeding their respective MDLs but less than their respective Unrestricted Use SCOs. These VOCs include n-Butylbenzene and 1,3,5-Trimethylbenzene.

Table 1 further indicates that individual SVOCs are present at concentrations exceeding their respective Unrestricted Use SCOs in the 8-10 foot sample from SP-2. These SVOCs include Benzo (a) Anthracene, Benzo(a) Pyrene, Benzo(b) Fluoranthene, Benzo(k) Fluoranthene, Chrysene and Indeno (1,2,3-cd) Pyrene. Individual SVOCs were detected in the soil samples from SP-1 and SP-3 at concentrations exceeding their respective MDL but less than their Unrestricted Use SCO. These include Anthracene, Benzo (a) Anthracene, Benzo(a) Pyrene, Benzo (g,h,i) Perylene, Bis (2-ethylhexyl) phthalate, Chrysene, Fluoranthene, Indeno (1,2,3-cd) Pyrene, Naphthalene, Phenanthrene and Pyrene.

Table 1 further indicates that Pesticides/PCBs are present at concentrations exceeding their respective Unrestricted Use SCOs in soil samples from SP-1 to SP-3. The pesticides 4,4'-DDT is present in the 0-2 foot sample from SP-1 at a concentration exceeding its Unrestricted Use SCO. The pesticides 4,4'-DDD and 4,4'-DDT are present in the 8-10 foot sample from SP-2 and the 0-2 foot sample from SP-3 at concentrations exceeding their respective Unrestricted Use SCOs. The pesticides 4,4'-DDD, 4,4'-DDE, and 4,4'-DDT are present in the 6-8 foot sample from SP-3 at concentrations exceeding their respective Unrestricted Use SCOs. Individual Pesticides/PCBs were detected in soil samples from SP-1 to SP-3 at concentrations exceeding their respective MDLs but below their respective Unrestricted Use SCOs. These include Total Chlordane and Heptachlor epoxide.

Table 2 provides the metals results for the soil samples from SP-1 through SP-8. **Table 2** also provides a comparison to each compound's respective Unrestricted Use SCO from Part 375. The concentrations reported in **Table 2** are in milligrams per kilogram (mg/kg).

As **Table 2** indicates, metals were detected in soil samples from SP-1 to SP-3 at concentrations exceeding their respective SCOs. Lead and Nickel were detected in the 0-2 foot soil sample from SP-1 and Nickel was detected in the 12-14 foot sample from SP-1 at concentrations exceeding their respective SCOs. Nickel was detected in the 0-2 foot soil sample from SP-2 at a concentration exceeding its SCO. Cadmium, Copper, Lead, Nickel, Zinc, and Chromium Trivalent were detected in the 0-2 foot soil sample from SP-3 at concentrations exceeding their respective SCOs. No metals were detected in the 8-10 foot soil sample from SP-2 or the 6-8 foot soil sample from SP-3 at concentrations exceeding their respective SCOs.

Discussion of Results

No VOCs are present in the soil at concentrations exceeding their respective Unrestricted Use SCOs, excluding those associated with laboratory contamination. Six (6) SVOCs consisting of PAHs are present in the central portion of the Site at concentrations exceeding their respective Unrestricted Use SCOs. This is evidenced by the analytical results of the 8-10 foot soil sample from SP-2. Three pesticides are present throughout the Site at concentrations exceeding their respective Unrestricted Use SCOs. This is evidenced by the analytical results of the 0-2 foot soil sample from SP-1 and the soil samples from SP-2 and SP-3. These findings indicate that urban fill material is present beneath the site.

Conclusions & Recommendations

Based upon the findings of the investigation, urban fill material is present throughout the property. This urban fill material is characterized by the presence of SVOCs and Pesticides. If site redevelopment takes place, any soil/fill material should be properly screened and handled. Any soil should also be properly disposed of at a licensed disposal facility. Furthermore, additional investigatory efforts would be required in order to meet NYC CEQR requirements.

EXCLUSIONS & DISCLAIMER

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, **Hydro Tech Environmental, Corp.** may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to **Hydro Tech Environmental, Corp.** at the time of the subject property assessment. Although there may have been some degree of overlap in the information provided by these various sources, **Hydro Tech Environmental, Corp.** did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this subject property assessment.

Observations were made of the subject property and of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non hazardous or hazardous materials, in that portion of the subject property or structure. In addition, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

Hydro Tech Environmental, Corp. did not perform testing or analyses to determine the presence or concentration of asbestos at the subject property or in the environment of the subject property under the scope of the services performed.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level reading made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the subject property assessment. Where such analyses have been conducted by an outside laboratory, **Hydro Tech Environmental, Corp.** has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

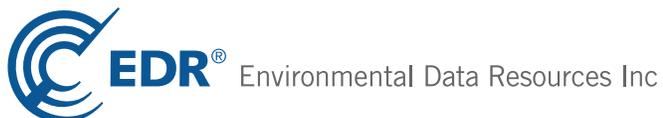

Chemical analyses have been performed for specific constituents during the course of this subject property assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study may be present in soil and/or groundwater at the subject property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 11/02/2012 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 01/07/2013 has revealed that there are 4 SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 11/19/2012 has revealed that there are 40 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 32 HIST LTANKS sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

HIST UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the HIST UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 11 HIST UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/19/2012 has revealed that there are 17 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 8 NY Hist Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 17 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 46 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: 5/11/09 - Austin - Spoke with Mark Salmanack - he indicated that he rec'd acall from and inspected the site in question. Apparently, something dislodged the saddle pipe between two- 275 gal. above ground tanks, causing a spill of oil (Mark was not really sure how much) onto the floor. He didn't see any drains on the floor when he inspected the site. The co-owner, Kajana (618-623-1520, 718-230-9793) elected not to use Mark's company for the repair/cleanup. Will need follow up wit Kajanato determine status and action being taken - end5/11/2009 - Sangesland spoke to "Jamie" at G&B Auto Collision (718-230-9793) He said they had a spill and called "Lorco Oil Company

Remarks: (908-820-8800) to do the cleanup. Sangesland spoke to Gene at Lorco and he said he KNOWS NOTHING about a cleanup. Several calls back and forth - no straight answer if there was or was not a cleanup. - Need a site visit.05/18/09-HRAHMED-Responded to the site. Met with the owner Kijana. Lorco oil put speedy dry and cleaned up the spill on the basement floor. They stopped the leak. This case is closed.
CALLER STATES THAT SOMETHING WAS DROPPED ON THE PIPES THAT JOIN 2 275 GALLON TANK TOGETHER ABOUT 45 GALLONS SPILLED TO THE CONCRETE BASEMENT FLOOR. CLEAN UP STATUS IS UNK.

DEC Memo: 01/10/08 - See eDocs for Con Ed report detailing cleanup and closure.e2mis no 150465Greg St. Clair found about 1 gal of an unknown oil on about 50 gal of water/sludge in MH65355. This manhole contains 138kv transmission feeders 38B02/B04. They did not observe any evidence of a leak from the feeder. A sample was taken for PCBs and oil ID (Chain of Custody No EE035557). No sewers or waterways were affected, nor were the public or any private property impacted. Tag no. 6599 was hung in the manhole.

Remarks: ON 50 GALLONS OF WATER: NO TO 5 QUESTIONS; NO SIGN S OF ACTIVE LEAK:

DEC Remarks: WRONG WAS GIVEN. DEC (SIGONA) performed a follow-up inspection with Mark Salamack of ABC Tank Cleaning, 280 E. 88th Street, Brooklyn, N.Y. 11236 718)272-2800. The inspection took place on 6/2/97 at 3:00 P.M. There was no evidence of any oil contamination on the surface of the affected roadway. ABC provided a copy of cleanup report indicating that speedy dry and vacuum truck performed cleanup on 2/24/97. Therefore, DEC will close the spill case.

APPENDIX H
CREDENTIALS

Mostafa El Sehamy, P.G., C.G.W.P., C.E.M.
President, Senior Hydrogeologist

Mr. El Sehamy has over fifteen (15) years of experience in hydrogeology and environmental engineering, involving such activities as groundwater investigation, water quality modeling, ground and surface water quality analysis, environmental impact assessment, remediation design of replacement of domestic well systems in contaminated areas; aquifer sensitivity studies for hydrocarbons and solvents and soil and groundwater investigations of leaking underground storage tanks and pilot venting studies. Mr. El Sehamy has designed over 50 remediation systems for the New York State Department of Environmental Conservation (Oil Spill Prevention) and private sectors. The remediation system involved several techniques, such as pump and treat, soil venting, air sparging, bio-remediation and bio venting. Mr. El Sehamy has also conducted several remedial investigation/feasibility studies in New York State.

Representative Occupational Experience

- ❑ *Groundwater and Hydrologic Modeling*
Groundwater flow and contaminant transport, modeling utilizing MODFLOW, PLASM, MODPATH and WHPA. Hydrologic modeling utilizing HELP. Assessing model inputs and outputs, boundary and initial conditions, model calibrations, verification and sensitivity analysis and performing analytical checks. Hydrologic studies and water analysis.
- ❑ *Environmental Site Assessments*
Conducted Phase I and II Environmental Site Assessments, analysis of site investigation reports, identifying contamination locations and sources. Gas Chromatograph analysis and water sampling, analyzing laboratory results for QA/QC, magnetometer surveys for locating buried drums and underground storage tanks (USTs), estimating UST and other subsurface leaks, septic tank cleanup inspection, liability assessments and estimating costs to attain compliance.
- ❑ *Expert Witness*
Offered expert witness testimony for the New York State Department of Environmental Conservation (NYSDEC) and several private sector cases.
- ❑ *Environmental Impact Statements*
Conducted and supervised several environmental impact statements for shopping centers in the states of New York and North Carolina.
- ❑ *Solute Transport Modeling*
Conducted groundwater flow and solute transport modeling at Superfund, municipal, industrial and water supply sites impacted by organic/inorganic hydrocarbons, PCBs and metals. Developed strategies to contain and clean-up aquifers, protect water supply wells and prohibit impacts to surface water bodies, including containment of free phase product recovery. Analytical and numerical models, such as PLASM, MODFLOW, Random Walk, Quickflow, Flowpath and Groundwater Path were used.

- ❑ *Risk Assessments*
Delineated dissolved petroleum hydrocarbon plume and implemented a risk assessment regarding a subsurface storage tank release into the Long Island Aquifer.
- ❑ *Engineering Compliance*
Auditing manufacturing plants, assessing plant-wide environmental conditions, identifying present and potential RCRA wastes and other environmental problems and offering solutions, SARA Title III calculations, environmental inventorying, compliance status and potential impact analysis of waste disposal practices, air compliance analysis, insurance claims analysis and preparing work plans and engineering reports.
- ❑ *Remedial Investigation and Feasibility Studies*
Oversight/planning of site investigations; data analysis, including statistical analysis and geostatistical contouring utilizing SURFER and GEOSOFT/KRIGING; performance of feasibility studies, including technology evaluations and screening, alternatives development and evaluation and cost estimations.
- ❑ *Due-Diligence Programs*
Designed and implemented due-diligence programs (ranging from Phase I Assessment to Comprehensive Hydrogeologic Investigations) to assess environmental liabilities for numerous land development clientele.
- ❑ *Delineation of Chlorinated Organic Plumes*
Supervised the delineation of a dissolved chlorinated organic plume from underground tank loss. Developed a remedial action program in accordance with New York State regulatory guidelines to abate soil and groundwater contamination.
- ❑ *Research Projects*
Conducted groundwater studies with Nassau County Department of Public Works to investigate the impact of heating oil and solvents on public supply wells in the Levittown and Glen Cove areas of New York State.
- ❑ *Remedial Action*
Prepared remedial action plans. Designed and implemented hydrocarbon remediation systems for soil and groundwater.
- ❑ *Pump Test Aquifer Analysis*
Conducted several pump test aquifer analysis and field coordination in relation to water supply feasibility studies for the New York City Transit Authority.
- ❑ *OSHA Instructor*
Instructed several courses, such as, OSHA 40 Hours Right to Know, CPR, 8 Hour OSHA Refresher, Fall Protection, Confined Space Entry and Lockout/tag-out. Developed safety programs for confine space and accident investigations.

- ❑ *Hazardous Waste Remediation Sites*
Project Manager - RI/FS, pre design investigation, remedial design, construction oversight of the remedial action, and operations and

maintenance of the soil vapor and groundwater treatment systems. Each RI/FS was performed under the direction of NYSDEC.

Mr. Shai Kolberg
Urban View Development
109 South 5th Street - Suite 400
Brooklyn, NY 11249

**Re: GPR Survey - 765 Bergen Street, Brooklyn NY
Hydro Tech Job No. 130021**

Dear Mr. Kolberg:

Hydro Tech Environmental, Corp. has performed a Ground Penetrating Radar (GPR) survey at the above referenced Site. The GPR survey was conducted to investigate all accessible areas of the property which included all accessible areas of the site to identify any anomalies representing the presence of an underground storage tank (UST). No vent pipes or fill pipes were noted on the property.

SITE DETAILS

The Site is approximately 5,500 square feet in area and is currently utilized as a parking lot for automobiles. The ground surface of the Subject Property consists of concrete and bare soil.

Access to the Site is via Bergen Street to the south. A concrete sidewalk is located between the Subject Property and Bergen Street. The Site is not connected to municipal water, gas and electric services.

DESCRIPTION OF FIELDWORK

The GPR survey was performed on January 31, 2013 utilizing a GSSI SIR-3000 Control Unit and a 400-megahertz shielded antenna. Prior to the commencement of the survey a visual inspection of the property was performed to identify specific areas where USTs could be present.

The GPR takes one "scan" per set unit. The number of scans per unit is based upon the estimated sizes of targets. Based upon the typical size of a UST, the GPR was set to run at 50 scans per foot. As each scan is performed, the antenna emits specific radar amplitude into the subsurface. The amplitude of the radar reflected back to the antenna is based upon the differences in the dielectric constants of the subsurface materials. The difference in amplitude obtained during each scan is then graphically displayed on the Control Unit, which are then interpreted by the GPR operator the time of the survey. Additional interpretations are then conducted in the office utilizing specialized computer software.

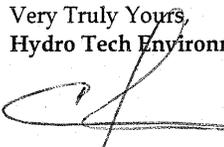

Mr. Kolberg
January 31, 2013
Page 2

GPR RESULTS

No anomalies indicative of USTs were found during the survey.

I hope that this information has proven valuable to this phase of your assessment. Should you have any questions, please feel free to contact our office at your convenience.

Very Truly Yours,
Hydro Tech Environmental, Corp.

Carlos Quinonez
Field Manager

EXCLUSIONS & DISCLAIMER

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

Observations were made of the subject property and/or of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non hazardous or hazardous materials, in that portion of the subject property or structure. In addition, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Any GPR survey described above was performed in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry. **Hydro Tech Environmental, Corp.** does not accept responsibility for survey limitations due to inherent technological limitations or site specific conditions, however, made appropriate effort to identify and notify the client of such limitations and conditions. In particular, please note that the survey described above does not represent a full utility clearance survey, and does not relieve any party of applicable legal obligations to notify a utility one-call service prior to excavating or drilling.

LABORATORY ANALYTICAL REPORT FOR SOIL SAMPLES

YORK

ANALYTICAL LABORATORIES, INC.

Technical Report

prepared for:

Hydro Tech Environmental (Hauppauge)

77 Arkay Drive, Suite G

Hauppauge NY, 11788

Attention: Carlos Quinonez

Report Date: 12/20/2012

Client Project ID: 765 Bergen St. Brooklyn, NY

York Project (SDG) No.: 12L0565

CT License No. PH-0723

New Jersey License No. CT-005

New York License No. 10854

PA License No. 68-04440

Report Date: 12/20/2012
Client Project ID: 765 Bergen St. Brooklyn, NY
York Project (SDG) No.: 12L0565

Hydro Tech Environmental (Hauppauge)
77 Arkay Drive, Suite G
Hauppauge NY, 11788
Attention: Carlos Quinonez

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on December 14, 2012 and listed below. The project was identified as your project: **765 Bergen St. Brooklyn, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 12L0565

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

VOA-CONTNON-COMPLIANT- the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A or NYSDOH ELAP. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A.

- S-06 The recovery of this surrogate is outside control limits due to sample dilution required from high analyte concentration and/or matrix interferences.
- QM-07 The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
- QL-03 This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
- QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
- J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL); therefore, the result is an estimated concentration.
- B Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.

ND Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.

MDL METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

YORK

ANALYTICAL LABORATORIES, INC.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.

Attention: Rupa Magar

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 30, 2013 and listed below. The project was identified as your project: # **130097 767 Bergen St Brooklyn NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13E1028

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-01	The surrogate recovery for this sample may not be available due to sample dilution required from high analyte concentration and/or matrix interferences.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL); therefore, the result is an estimated concentration.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.
ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 30, 2013 and listed below. The project was identified as your project: # **130128 767 Bergen St**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13E1001

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
13E1001-01	GP-1	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Notes and Definitions

S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
HT-02	NON-COMPLIANT-This sample was received outside the EPA recommended holding time.
EXT-D	The sample submitted contained sediment. The aqueous portion was decanted off, the volume measured and used for the extraction. The sediment was not included in the extraction.
ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.

Brooklyn NY, 11225
Attention: Rupa Magar

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 26, 2013 and listed below. The project was identified as your project: **#130097 767 Bergen St Brooklyn NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13F0878

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

M-LSRD Original sample conc <50 X reporting limit.

ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 30, 2013 and listed below. The project was identified as your project: # **130128 767 Bergen St Brooklyn NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13E1008

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two.

For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.
