CERTIFICATION

I, Ronald Boyer, am currently a registered professional engineer licensed by the State of New York. I had primary direct responsibility for implementation of the remedial program for the 400 Park Avenue South Site 12CBCP042M.

I, Steven Ciambuschini, am a qualified Environmental Professional. I had primary direct responsibility for implementation remedial program for the 400 Park Avenue South Site 12CBCP042M.

I certify that the OER-approved Remedial Action Work Plan dated February 15, 2012 and Stipulations in a letter dated March 16, 2012; if any were implemented and that all requirements in those documents have been substantively complied with. I certify that contaminated soil, fill, liquids or other material from the property were taken to facilities licensed to accept this material in full compliance with applicable laws and regulations.

EXECUTIVE SUMMARY

Site Location and Prior Usage

The site is located at 390 and 400 Park Avenue South in the Gramercy section in Manhattan, New York and is identified as Block 857 and Lots 40 and 46 on the New York City Tax Map. Figure 1 shows the Site location. The site is 19,275-square feet (sf) and is bounded to the north and south by East 28th and East 27th Streets, respectively, followed by commercial and residential dwellings to the north and a commercial building to the south. The property to the west of Lot 40 is also a commercial building. Park Avenue South is located east of the subject property followed by commercial and residential buildings. A map of the site boundary is shown in Figure 2. The site was most recently occupied by an at-grade parking lot and an eight-story office building.

Summary of Proposed Redevelopment Plan

The proposed future use of the site will consist of a 475-foot tall, 40-story mixed use commercial and residential building with one cellar and one sub-cellar level. The proposed site development will consist of commercial space on the first floor and residential dwellings on floors two through forty. The cellar and sub-cellar level will occupy approximately 19,000 sf (or the approximate area of the site footprint). The first floor commercial retail space will occupy approximately 5,897 sf. The residential portion of the building will occupy approximately 407,436 sf and contain 362 residential units. The sub-cellar level will be occupied by mechanical rooms and the cellar by mechanical rooms, a pool, and amenities for building occupants. The cellar level of the building, construction of which required removal of soil from the entire footprint of the site to a depth of 17-feet below ground surface (bgs), will be built out to the extents of the subject property. The sub-cellar will occupy approximately 13,250 sf of the 19,275 sf site and has been excavated to an approximate depth of 36 feet below grade. An area of soil will remain in the portion of the building that will not contain a sub-cellar level (along the southern and eastern lot lines). The ground floor of the building will not occupy the entire lot; however, as the required courtyard area will be located above the cellar level and will be paved with an impervious layer a site-wide cap will be maintained. Architectural plans are presented in Appendix A.

In the area of the site occupied by the sub-cellar, site excavation activities were completed to the bedrock interface, encountered between 22 and 30-feet bgs. For the portion of the site occupied by only the single cellar level, site excavation activities were completed to a depth of approximately 17-feet below sidewalk grade. During site excavation activities, approximately 25,774 tons of soil was removed from the site.

Groundwater was encountered at 17 to 19-feet bgs during remedial investigation activities; however; this water was determined to be perched water, as groundwater was not encountered during site development activities. Dewatering was not necessary during construction.

The current zoning designation is C5-3, which is a central commercial district with continuous retail frontage intended for offices and retail establishments. Specifically, C5-3 designation indicates that the site is zoned for retail and service uses and may be developed with a tower. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Environmental Findings

Based on a review of Sanborn maps and other historic documentation conducted during the Phase I ESA, historical use of the site was for commercial and residential purposes. On-site Lot 40 was developed in 1911 with a former 8-story office building. Prior to the construction of the office building, Lot 40 contained four lots that were occupied with two, four-story, mixed-use commercial and residential buildings with basements along the southern portion and two, four-story, commercial buildings with basements used for a delivery service along the northern portion of the lot.

Lot 46 was developed as an at grade parking lot, and based on Sanborn maps dated 1890 and 1899, was previously occupied by eight lots that were used for mixed use commercial and residential purposes. Past uses included a hotel and other mixed use commercial/residential buildings. The hotel contained two horizontal steam boilers on the southeastern corner of the building.

Based on information maintained online by the New York City Department of Finance (NYCDOF) the following summary of past ownership information, as identified in Langan's 12 September 2011 Phase I ESA, is provided:

Block 857 Lot 40

Title records were reviewed from 2002 until present. The current owner is identified as ET 400 PAS, LLC. The subject property was previously owned by The New York Life Insurance Company until June 2002 when it was sold to 390 Park Avenue South, LLC, which owned the property until February 2005 when it was sold to 400 Park Avenue South LLC. The property was purchased by the current owner in December 2011.

Block 857 Lot 46

Title records were reviewed from 2002 until present. The current owner is identified as ET 400 PAS, LLC. The subject property was previously owned by The New York Life Insurance

Company until June 2002, when it was sold to 400 Park Avenue South LLC, which owned the property until December 2011 when it was sold to the current owner.

The following is a list of the AOCs investigated as part of the Remedial Investigation of the site:

1. Horizontal Steam Boilers associated with Lot 46;
2. On-site Historic Fill; and,
3. Surrounding Sites – Potential onsite migration of offsite contaminants.

Summary of the Work Performed under the Remedial Investigation

The following scope of work was completed as part of the 2011 Remedial Investigation of the site:

1. Conducted a site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Completed a geophysical survey of the former parking lot area to determine if any sub-surface anomalies existed;
3. Installed nine soil borings across the entire project site, and collected twenty-three soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed three groundwater monitoring wells throughout the site to establish groundwater flow and collected three groundwater samples for chemical analysis to evaluate groundwater quality;
5. Installed four soil vapor probes around site perimeter and collected four samples for chemical analysis.

Based on an evaluation of the data obtained during the Remedial Investigation and the proposed redevelopment activities, disposal of significant amounts of hazardous waste were not anticipated at this site.

Summary of Environmental Findings

1. Elevation of the property ranges from approximately 34.25 to 34.75-feet above mean sea level (amsl).
2. Depth to groundwater ranges from 17.23 to 21.09-feet bgs at the Site.

3. Groundwater flow direction is generally from west to east.
4. Depth to bedrock is approximately 22 to 30-feet bgs (12.5 to 4.5-feet amsl) at the site.
5. The stratigraphy of Lot 46 consists of approximately 5 to 13-feet of fill material underlain by 14 to 23-feet of native silt followed by mica schist bedrock. The stratigraphy of Lot 40 consisted of demolition debris above the former 8-story office building slab (which was present to approximately 12-feet below current site grade). The previous building slab was underlain by a thin layer (less than 4-feet) of fill material, which is underlain by approximately 8-feet of native silt, which is underlain by a significant layer of dense decomposed bedrock, followed by mica schist bedrock. The soil analytical results of the Remedial Investigation showed no volatile organic compounds (VOCs) above Track 1 Unrestricted Use Soil Cleanup Objectives (SCOs). Seven semi-volatile organic compounds (SVOCs) were found to exceed Track 2 Restricted Residential SCOs in three samples collected within the historic fill material. All of the SVOC exceedances were polyaromatic hydrocarbons (PAH) with concentrations consistent with the presence of historic fill. Three pesticides were detected above Track 1 SCOs in three samples but did not exceed Track 2 Restricted Residential SCOs. Similarly, polychlorinated biphenyls (PCBs) were detected in two samples above Track 1 SCOs but did not exceed Track 2 Restricted Residential SCOs. Nickel, mercury, and zinc exceeded Track 1 SCOs in one, three, and six samples respectively, but did not exceed Track 2 Restricted Residential SCOs. Barium, cadmium, and copper exceeded Track 2 Restricted Residential SCOs in one sample each. Lead exceeded Track 2 Restricted Residential SCOs in two soil samples. Overall, these impacts did not indicate any evidence of an onsite contaminant source. The low levels of contamination are attributed to the presence of historic fill, observed throughout Lot 46 from approximately 5 to 13-feet bgs and contained varying quantities of sand, brick, concrete, gravel, and silt underlain by a native silt layer.
6. The groundwater analytical results showed no exceedances to NYSDEC Part 703 Groundwater Quality Standards (GWQS) for SVOCs, pesticides, or PCBs. VOCs were detected in exceedance of the NYSDEC Part 703 GWQS in the upgradient well MW-1 for 1,2-cis dichloroethene (DCE), tetrachloroethene (PCE), and trichloroethene (TCE). This is likely due to an upgradient source as these were not detected in the down gradient monitoring wells. Acetone and chloroform were detected at low level exceedances in the MW-2 sample. The presence of acetone and chloroform in the sample from MW-2 are likely due to a laboratory artifact and are not considered to be related to the site. No other VOC exceedances were reported. Dissolved metals in groundwater included sodium, manganese, and silver in excess of Part 703 GWQS. Sodium and manganese concentrations are attributed to background water quality influences and silver was only marginally above the standard in

one sample. No other metals exceedances of the NYSDEC Part 703 GWQS were reported for dissolved groundwater samples collected at the site.

7. The soil vapor analytical results for the Remedial Investigation identified low levels of PCE which were well below the New York State Department of Health sub-slab guidance values identified in the Final Vapor Intrusion Guidance document that requires monitoring, (all results were below 8 $\mu\text{g}/\text{m}^3$ compared to the guidance value of 100 $\mu\text{g}/\text{m}^3$). TCE was not detected in any of the four soil vapor samples. Low levels of xylenes and acetone were detected in most soil vapor samples. One very low detection of chloroform (less than 7 $\mu\text{g}/\text{m}^3$) was detected in one of four samples. No VOCs were detected in soil vapor samples from the site above Track 1 SCOs.

As several chlorinated VOCs were detected in an upgradient groundwater sample and no onsite source of chlorinated VOCs was identified in soil samples collected at the site, the detection of groundwater and soil gas impacts was attributed to an offsite source to the west of the property.

Summary of the Remedial Action

The factors considered during the selection of the remedial action included protection of human health and the environment, compliance with standards, criteria, and guidelines (SCGs), short-term effectiveness and impacts, long-term effectiveness and permanence, reduction of toxicity, mobility, or volume of contaminated material, implement ability, cost effectiveness, community acceptance, land use, and sustainability of the remedial action. The site was remediated in accordance with the scope of work presented in an OER-approved RAWP dated February 15, 2012. No deviations of the RAWP were encountered during this remedial action.

The selected remedial action was excavation of impacted fill material on the site to the Track 1 Alternative. The remedial action achieved protection of public health and the environment for the intended use of the property. The remedial action achieved all of the remedial action objectives established for the project and addressed applicable SCGs. The remedial action was effective in the short-term and long-term and reduced mobility, toxicity and volume of contaminants. The remedial action was cost effective and implementable and uses standard methods that are well established in the industry.

A Pre-Application Meeting was held on 24 January 2012. A Remedial Investigation (RI) was performed in October 2011 and a RI Report and RAWP dated 15 February 2012 was prepared to evaluate data and information necessary to develop a Remedial Action Work Plan (RAWP). A Site Contact List was established and a RAWP dated 15 February 2012 was prepared and released with a Fact Sheet on 15 February 2012 for a 30-day public comment period. The RAWP and Stipulation List dated 19 March 2012 was approved by the New York City Office of

Environmental Remediation (OER) on 19 March 2012. A Pre-Construction Meeting was held on 2 July 2012. The remedial action was begun in July 2012 and completed in September 2012.

The remedial action consisted of:

1. Preparation of a Community Protection Statement and implementation of a Citizen Participation Plan.
2. Performance a Community Air Monitoring Program for particulates and VOCs.
3. Establishment of Track 1 SCOs with excavation and removal of all soils that exceeded these objectives. Excavation was performed to a depth of at least 17-feet over the entire footprint of the site and approximately 36-feet over 70% of the site.
4. Installation of a vapor barrier system along all subgrade foundation walls and slab as part of construction of the building to prevent future migration of vapors from offsite into the building.
5. Transportation and off-site disposal of all soil and fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal. Sampling and analysis of excavated media as required by disposal facilities and appropriate segregation of excavated media onsite prior to offsite disposal.
6. Screening of excavated soil and fill with a PID during intrusive work for indications of contamination by visual means, odor, and monitoring.
7. Site mobilization involving site security setup, equipment mobilization, utility mark outs and marking and staking excavation areas.
8. Implementation of storm water pollution prevention measures in compliance with applicable laws and regulations.
9. Performance of all activities required for the remedial action, including permitting requirements and pretreatment requirements, in compliance with applicable laws and regulations.
10. Submission of this RAR that describes the remedial activities certifies that the remedial requirements have been achieved, and defines the Site boundaries.

REMEDIAL ACTION REPORT

1.0 SITE BACKGROUND

ET 400 PAS, LLC has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a property located at 390 and 400 Park Avenue South in the Gramercy section of Manhattan, New York. The boundary of the property subject to this Remedial Action is shown in Figure 1 and include, in their entirety, Manhattan Block 857 and Lots 40 and 46.

The Remedial Action was performed pursuant to the OER-approved RAWP in a manner that has rendered the property protective of public health and the environment consistent with its intended use. This RAR describes the remedial action performed under the RAWP. The remedial action described in this document provides for the protection of public health and the environment, complies with applicable environmental standards, criteria and guidance and applicable laws and regulations.

1.1 SITE LOCATION AND PRIOR USAGE

The site is located at 390 and 400 Park Avenue South in the Gramercy section in Manhattan, New York and is identified as Block 857 and Lots 40 and 46 on the New York City Tax Map. Figure 1 shows the Site location. The site is 19,275 sf and is bounded to the north and south by East 28th and East 27th Streets, respectively, followed by commercial and residential dwellings to the north and a commercial building to the south. The property to the west of Lot 40 is also a commercial building. Park Avenue South is located east of the subject property followed by commercial and residential buildings. A map of the site boundaries is shown in Figure 2. Currently, the site is under construction.

Based on Sanborn map review and review of historical site information conducted as part of the Phase I ESA, historic use of the site consisted of commercial and residential development. Lot 40 of the site was developed in 1911 with a former 8-story office building. Prior to the construction of the office building, Lot 40 contained four lots that were occupied with two four-story, mixed-use commercial and residential buildings with basements along the southern portion and two four-story, commercial buildings with basements that are identified as being used for a delivery service along the northern portion of the lot.

Lot 46 was shown as developed as an at grade parking lot on the 1968 Sanborn map. The 1890 and 1899 Sanborn maps show Lot 46 as being occupied by eight lots that were used for mixed use commercial and residential purposes. Lot 46 is subsequently shown as four lots, one of which is occupied by a hotel and the remaining lots are occupied by mixed use commercial/residential

buildings. The hotel is identified as containing two horizontal steam boilers on the southeastern corner of the building.

Based on information maintained online by the NYCDOF, the following provides past ownership information as previously summarized in Langan's 12 September 2011 Phase I ESA:

Block 857 Lot 40

Title records were reviewed from 2002 until present. The current owner is identified as ET 400 PAS, LLC. The subject property was previously owned by The New York Life Insurance Company until June 2002 when it was sold to 390 Park Avenue South, LLC which owned the property until February 2005 when it was sold to 400 Park Avenue South LLC. The property was purchased by the current owner in December 2011.

Block 857 Lot 46

Title records were reviewed from 2002 until present. The current owner is identified as ET 400 PAS, LLC. The subject property was previously owned by The New York Life Insurance Company until June 2002 when it was sold to 400 Park Avenue South LLC, which owned the property until December 2011 when it was sold to the current owner.

The following is a list of the AOCs investigated as part of the Remedial Investigation:

1. Horizontal Steam Boilers associated with Lot 46;
2. On-site Historic Fill; and,
3. Surrounding Sites – Potential onsite migration of offsite contaminants.

Summary of the Work Performed under the Remedial Investigation

The following scope of work was completed as part of the 2011 Remedial Investigation of the site:

1. Conducted a site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Completed a geophysical survey of the former parking lot area to determine if any sub-surface anomalies existed;
3. Installed nine soil borings across the entire project site, and collected twenty-three soil samples for chemical analysis from the soil borings to evaluate soil quality.
4. Installed three groundwater monitoring wells throughout the site to establish groundwater flow direction and collected three groundwater samples for chemical analysis to evaluate groundwater quality.
5. Installed four soil vapor probes around site perimeter and collected four samples for chemical analysis,

Based on an evaluation of the data obtained during the RI and the proposed redevelopment activities, disposal of significant amounts of hazardous waste were not anticipated at this site.

1.2 PROPOSED REDEVELOPMENT PLAN

The proposed future use of the site will consist of a 475-foot tall, 40-story mixed use commercial and residential building with one cellar and one sub-cellar level. The proposed site development will consist of commercial space on the first floor and residential dwellings on floors two through forty. The cellar and sub-cellar level will occupy approximately 35,525 sf. The first floor commercial retail space will occupy approximately 5,897 sf. The residential portion of the building will occupy approximately 407,436 sf and contain 362 residential units. The sub-cellar level will be occupied by mechanical rooms. The cellar will be occupied by mechanical rooms, a pool, and amenities for building occupants. The cellar level of the building, which required

removal of soil from the entire footprint of the site to a depth of 17-feet bgs, will be built out to the extents of the subject property. The sub-cellar will occupy approximately 13,250 sf of the 19,275 sf site. An area of soil will remain in the portion of the building that will not contain a sub-cellar level (along the southern and eastern lot lines). The ground floor of the building will not occupy the entire lot; however, the required courtyard area will be located above the cellar level and will be paved with an impervious layer. Architectural plans are presented in Appendix B.

In the area of the site occupied by the sub-cellar, site excavation activities were completed to the bedrock interface, encountered between 22 and 30-feet bgs. For the portion of the site occupied by only the single cellar level, site excavation activities were completed to a depth of approximately 17-feet below sidewalk grade. Site excavation activities removed approximately 25,774-tons of soil from the site.

Groundwater was encountered at 17 to 19-feet bgs during remedial investigation activities; however, this water was determined to result from a perched water condition, as groundwater was not encountered during foundation construction activities.

The current zoning designation is C5-3, which is a central commercial district with continuous retail frontage intended for offices and retail establishments. Specifically, C5-3 designation indicates that the site is zoned for retail and service uses and may be developed with a tower. The proposed use is consistent with existing zoning for the property.

1.3 DESCRIPTION OF SURROUNDING PROPERTY

The site is located within an area of dense mixed use commercial and residential development in the Gramercy neighborhood of Manhattan. Figure 3 shows the surrounding property usage which includes a day care facility within 500-feet of the site. According to New York City Planning Commission Zoning Map 8D dated 21 September 2011, the subject property and adjoining property to the south and west are zoned C5-3, the adjoining properties to the northwest are zoned C5-2, the adjoining properties to the northeast and east are zoned C6-4A. The observed use of the surrounding properties is consistent with the current zoning designations. According to the information maintained online by the NYCOER Searchable Property Environmental E-Database (SPEED) a daycare center identified as The Children's Center of N.Y. Life, at 51 Madison Avenue, located approximately 105-feet to the south of the site. The second nearest child care facility is located approximately 800-feet to the northeast of the site. The nearest school is identified as the School for the Physical City, at 55 East 25th Street, located approximately 475-feet to the south of the site. Bellevue Hospital Center at 462 First Avenue is the nearest hospital located approximately 0.5-miles to the east of the site.

1.4 REMEDIAL INVESTIGATION

A remedial investigation was performed and the results are documented in the “*Remedial Investigation Report, 400 and 390 Park Avenue South,*” dated February 2012.

The following AOCs were investigated as part of the Remedial Investigation:

1. Horizontal Steam Boilers associated with Lot 46;
2. On-site Historic Fill; and,
3. Surrounding Sites – Potential onsite migration of offsite contaminants.

Summary of the Work Performed under the Remedial Investigation

ET 400 PAS, LLC performed the following scope of work:

1. Conducted a site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Completed a geophysical survey of the former parking lot area to determine if any sub-surface anomalies existed;
3. Installed nine soil borings across the site, and collected twenty-three soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed three groundwater monitoring wells throughout the site to establish groundwater flow and collected three groundwater samples for chemical analysis to evaluate groundwater quality;
5. Installed four soil vapor probes around the site perimeter and collected four samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property ranges from approximately 34.25 to 34.75-feet amsl.
2. Depth to groundwater ranges from 17.23 to 21.09-feet bgs at the Site.
3. Groundwater flow direction is generally from west to east.
4. Depth to bedrock is approximately 22 to 30-feet bgs (12.5 to 4.5-feet amsl) at the site.

5. The stratigraphy of Lot 46 consists of approximately 5 to 13-feet of fill material underlain by 14 to 23-feet of native silt followed by mica schist bedrock. The stratigraphy of Lot 40 consists of demolition debris above the former 8-story office building slab (which was present to approximately 12-feet below current site grade). The previous building slab was underlain by a thin layer (less than 4-feet) of fill material, which is underlain by approximately 8-feet of native silt, which is underlain by a significant layer of dense decomposed bedrock, followed by mica schist bedrock. The soil analytical results of the Remedial Investigation showed no volatile organic compounds (VOCs) above Track 1 Unrestricted Use Soil Cleanup Objectives (SCOs. Seven semi-volatile organic compounds (SVOCs) were found to exceed Track 2 Restricted Residential SCOs in three samples. All of the SVOC exceedances were polyaromatic hydrocarbons (PAH) with concentrations consistent with the presence of historic fill. Three pesticides were detected above Track 1 SCOs in three samples but did not exceed Track 2 Restricted Residential SCOs. Similarly, polychlorinated biphenyls (PCBs) were detected in two samples above Track 1 SCOs but did not exceed Track 2 Restricted Residential SCOs. Nickel, mercury, and zinc exceeded Track 1 SCOs in one, three, and six samples respectively, but did not exceed Track 2 Restricted Residential SCOs. Barium, cadmium, and copper exceeded Track 2 Restricted Residential SCOs in one sample each. Lead exceeded Track 2 Restricted Residential SCOs in two soil samples. Overall, did not indicate any evidence of an onsite contaminant source. The low levels of contamination are attributed to the presence of historic fill, observed throughout Lot 46 from approximately 5 to 13-feet bgs and contained varying quantities of sand, brick, concrete, gravel, and silt underlain by a native silt layer.

6. The groundwater analytical results showed no exceedances to NYSDEC Part 703 Groundwater Quality Standards (GWQS) for SVOCs, pesticides, or PCBs. VOCs were detected in exceedance of the NYSDEC Part 703 GWQS in the upgradient well MW-1 for 1,2-cis dichloroethene (DCE), tetrachloroethene (PCE), and trichloroethene (TCE). This is likely due to an upgradient source as these VOCs were not detected in the down gradient monitoring wells. Acetone and chloroform were detected at low level exceedances in the MW-2 sample. The presence of acetone and chloroform in the sample from MW-2 are likely due to a laboratory artifact and are not considered to be related to the site. No other VOC exceedances were reported. Dissolved metals in groundwater included sodium, manganese, and silver in excess of Part 703 GWQS. Sodium and manganese concentrations are attributed to background water quality influences and silver was only marginally above the standard in one sample. No other metals exceedances of the NYSDEC Part 703 GWQS were reported for dissolved groundwater samples collected at the site.

7. The soil vapor analytical results for the Remedial Investigation identified low levels of PCE which were well below the New York State Department of Health sub-slab guidance values identified in the Final Vapor Intrusion Guidance document that requires monitoring, (all results were below 8 $\mu\text{g}/\text{m}^3$ compared to the guidance value of 100 $\mu\text{g}/\text{m}^3$). TCE was not detected in any of the four soil vapor samples. Low levels of xylenes and acetone were detected in most soil vapor samples. One very low detection of chloroform (less than 7 $\mu\text{g}/\text{m}^3$) was detected in one of four samples. No VOCs were detected in soil vapor samples from the site above Track 1 SCOs.

As several chlorinated VOCs were detected in an upgradient groundwater sample and no onsite source of chlorinated VOCs was identified in soil samples collected at the site, the detection of groundwater and soil gas impacts was attributed to an offsite source to the west of the property.

2.0 DESCRIPTION OF REMEDIAL ACTIONS

The Remedial Action was performed pursuant to the OER-approved RAWP in a manner that has rendered the property protective of public health and the environment consistent with its intended use. This RAR describes the remedial action performed under the RAWP. The remedial action described in this document provides for the protection of public health and the environment, complies with applicable environmental standards, criteria and guidance and applicable laws and regulations.

The remedial action was evaluated in an alternatives analysis and was determined to be protective of human health and the environment, compliant with standards, criteria, and guidelines (SCGs), effective in the short-term, effective in the long-term, capable of attaining appropriate levels of reduction of toxicity, mobility, or volume of contaminated material, implementable, cost effective, acceptable to the community, consistent with land uses, and sustainable.

A general summary of the Remedial Action is as follows:

- A Pre-Application Meeting was held (24 January 2012).
- A Remedial Investigation (RI) was performed and a Remedial Investigation Report was prepared (dated 15 February 2012).
- A Remedial Action Work Plan (RAWP) was prepared (dated 15 February 2012).
- An Application Fact Sheet was released announcing a 30-day public comment period on the RAWP (dated 15 February 2012).
- The RAWP and Stipulation List dated (16 March 2012) was approved by the New York City Office of Environmental Remediation (16 March 2012).
- A Pre-Construction Meeting was held (2 July 2012).
- Remedial Action was begun in July 2012 and completed in September 2012.

The following Remedial Actions were completed in this program:

1. Prepared a Community Protection Statement and implemented a Citizen Participation Plan.
2. Established Track 1 Site Specific Soil Cleanup Objectives (SCO's).
3. Mobilized on site in July 2012 and established Site security, equipment mobilization, utility mark outs and marking & staking excavation areas.

4. Soil/fill was excavated to a depth of 17 feet over the entire footprint of the site and approximately 37 feet over 70% of the site. A total of 25,774 tons of soil/fill was excavated and removed from the property. Soil/fill was disposed at the following facilities:
 - a. 6,073 tons (contaminated, non-hazardous soil/fill) to Impact Environmental Class B Recycling Facility of 1000 Page Avenue, Lyndhurst, New Jersey (NJDEP Permit: CBG070002).
 - b. 724 tons (native, clean soil) to Impact Environmental Class B Recycling Facility of 1000 Page Avenue, Lyndhurst, New Jersey (NJDEP Permit: CBG070002).
 - c. 18,977 tons (native, clean soil) to Impact Environmental General Motors – Linden Site in Linden, New Jersey (NJDEP Site No. 014755)
5. Collected and analyzed end-point samples. Achieved Track 1 Site Specific SCOs for Site.
6. Performed a Community Air Monitoring Program for particulates and volatile organic carbon compounds.
7. All excavated soil/fill material was screened during intrusive work for indications of contamination by visual means, odor, and monitoring with PID.
8. Sampled and analyzed excavated media as required by disposal facilities. Appropriately segregated excavated media onsite prior to disposal.
9. Transported and disposed all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and the RAWP.
10. As part of development, an engineered Composite Cover System consisting of between 6-inches of concrete slab and up to 5-feet of concrete foundation underlain by 6-inches of clean sub-base material was installed throughout the property footprint, to prevent human exposure to residual soil/fill remaining under the Site.
11. As part of development, installed a Vapor Barrier System that consisted of the 46 mil Grace Preprufe 300R, the 32 mil Preprufe 160R, and Bituthene 4000 (59-mil composite) below grade system foundation damp-proofing material in conjunction with sealing of joints with Preprufe LT tape and Bituthene EdgeGuard tape. For sub-slab installation, the Contractor rolled out sheets of the horizontal waterproofing membrane (Preprufe 300R) over the crushed stone layer. All seams in the Preprufe 300R membrane and any connections to the vertical waterproofing membranes (Bituthene 3000 or Preprufe 160R) were sealed with Preprufe Tape. The Contractor sealed all connections with the top of

concrete footings and concrete walls using Bituthene and Preprufe Tape. After the Preprufe 300R membrane was placed and all seams and connections were properly sealed, the Contractor placed reinforcing steel for the slab-on-grade and poured concrete for the slab-on-grade directly on top of the Preprufe 300R membrane.

Two waterproofing installation methods were used along the vertical walls, depending on the wall type. The Contractor installed Grace Hydroduct 220 drainage mat and Grace Bituthene 3000 waterproofing membrane against the foundation wall adjacent to Park Avenue South in the southern portion of the site. The Contractor applied Grace B2 LVC Bituthene Adhesive Primer to the foundation wall prior to waterproofing membrane installation. Along the northern east-west aligned foundation wall of the 386 Park Avenue South building and along the exposed portion of the 63 Madison foundation wall, the Contractor installed Grace Hydroduct 220 drainage mat and Grace Preprufe 160R waterproofing. The Contractor removed any sharp fragments protruding from the existing 386 Park Avenue South foundation wall to create a smoother surface prior to waterproofing installation. The Contractor used compressed air to remove any debris on the sealer slabs at the base of the existing foundation walls prior to waterproofing installation. The contractor for construction of the Vapor Barrier System was Starbright Waterproofing Company, Inc. of Harriman, New York.

12. Imported 48 cubic yards of clean material for backfill in compliance with this plan and in accordance with applicable laws and regulations.
13. Implemented storm-water pollution prevention measures in compliance with applicable laws and regulations.
14. Performed all activities required for the Remedial Action, including permitting requirements and pretreatment requirements, in compliance with applicable laws and regulations.
15. Submitted an RAR that describes the Remedial Action; certifies that the remedial requirements defined in the RAWP have been achieved; defines the Site boundaries; and lists any changes from this RAWP.

3.0 COMPLIANCE WITH REMEDIAL ACTION WORK PLAN

3.1 HEALTH & SAFETY PLAN (HASP)

The remedial construction activities performed under this program were in compliance with the Health and Safety Plan and applicable laws and regulations. The Site Safety Coordinator was Chris McMahon.

3.2 COMMUNITY AIR MONITORING PLAN

The Community Air Monitoring Plan provided for the collection and analysis of air samples during remedial construction activities to ensure proper protections were employed to protect workers and the neighboring community. Monitoring was performed in compliance with the Community Air Monitoring Plan in the approved RAWP. The results of Community Air monitoring are shown in Appendix B.

3.3 SOIL/MATERIALS MANAGEMENT PLAN

The Soil/Materials Management Plan provided detailed plans for managing all soil/materials that were disturbed at the Site, including excavation, handling, storage, transport and disposal. It also included a series of controls to assure effective, nuisance free remedial activity in compliance with applicable laws and regulations. Remedial construction activities performed under this program were in compliance with the SMMP in the approved RAWP. The Soil/Materials Management Plan is provided in Appendix C.

3.4 STORM-WATER POLLUTION PREVENTION

Storm water pollution prevention included physical methods and processes to control and/or divert surface water flows and to limit the potential for erosion and migration of Site soils, via wind or water. Remedial construction activities performed under this program were in full compliance with methods and processes defined in the RAWP for storm water prevention and applicable laws and regulations.

3.5 DEVIATIONS FROM THE REMEDIAL ACTION WORK PLAN

No deviations from the Remedial Action Work Plan were encountered during this remedial action.

4.0 REMEDIAL PROGRAM

4.1 PROJECT ORGANIZATION

Principal personnel who participated in the remedial action included Chris McMahon who was the Project Manager and Site Safety Coordinator. The Professional Engineer (PE) and Qualified Environmental Professionals (QEP) for this project were Ron Boyer and Steven Ciambuschini, respectively.

4.2 SITE CONTROLS

Site Preparation

An OER Project Notice was erected at the project entrance and was in place during all phases of the Remedial Action.

Pre-Construction Meeting

OER was invited to attend the pre-construction meeting at the Site on 24 January 2012 with all parties involved in the remedial process prior to the start of remedial construction activities.

Mobilization

Mobilization was conducted as necessary for each phase of work at the site. Mobilization included field personnel orientation, equipment mobilization (including securing all sampling equipment needed for the field investigation), marking/staking sampling locations, and utility mark-outs. Each field team member attended an orientation meeting to become familiar with the general operation of the Site, health and safety requirements, and field procedures.

Utility Marker Layouts, Easement Layouts

The presence of utilities and easements on the site were fully investigated prior to the performance of invasive work such as excavation by using, at a minimum, the One-Call System (811). All invasive activities were performed in compliance with applicable laws and regulations to assure safety. Utility companies and other responsible authorities were contacted to locate and mark the locations, and a copy of the Markout Ticket was retained by the contractor prior to the start of drilling, excavation, or other invasive subsurface operations.

Proper safety and protective measures pertaining to utilities and easements, and compliance with all laws and regulations were employed during invasive and other work conducted under the

RAWP. The integrity and safety of off-Site structures were maintained during all remedial activities performed under the RAWP.

Equipment and Material Staging

Equipment and materials were stored and staged in a manner that complied with applicable laws and regulations.

Stabilized Construction Entrance

Steps were taken to ensure that trucks departing the site would not track soil, fill or debris off-Site. Such actions included use of cleaned asphalt or concrete roads or use of stone or other aggregate-based egress paths between the truck inspection station and the property exit. Measures were taken to ensure that adjacent roadways would be kept clean of project related soils, fill and debris.

Truck Inspection Station

An outbound-truck inspection station was set up close to the site exit. Before exiting the site, trucks were required to stop at the truck inspection station and were examined for evidence of contaminated soil on the undercarriage, body, and wheels. Soil and debris were removed. Brooms, shovels, and potable water were utilized for the removal of soil from vehicles and equipment, as necessary.

Site Security

Site access was controlled by gated entrances to the fenced property.

Nuisance Controls

The presence of VOCs and airborne dust was monitored using a RAE Systems 10.6 volt miniRAE 2000 PID (or equivalent) and a Thermo MIE DataRam-4000 aerosol monitor, respectively, during all intrusive activity.

Reporting

Daily reports providing a general summary of activities for each day of active remedial work were emailed to the OER Project Manager. The reports included:

- Project number and a description of site work and locations.

- Quantities of material imported and exported from the Site;
- Status of on-site soil/fill stockpiles;
- A summary of CAMP exceedances, if any;
- Photograph(s) of notable site conditions and activities.

Daily reports are provided in Appendix D.

Record Keeping and Photo-Documentation

Job-site record keeping for all remedial work was performed. These records were maintained on-site during the project and are available for inspection by OER staff. Representative photographs were taken of the site prior to any remedial activities and during major remedial activities to illustrate remedial program elements and contaminant source areas.

Digital photographs of the remedial action are included in Appendix D.

4.3 MATERIALS EXCAVATION AND REMOVAL

Track 1 SCOs were proposed for this project. The SCOs for this Site are listed in Table 1. Soil and materials management on-site and off-site, including excavation, handling and disposal, were conducted in accordance with the Soil/Materials Management Plan in Appendix C. As part of the remediation effort, 100% of the Site was excavated to a depth of 17-feet b.g.s. to allow for the construction of the cellar level and an additional 20-feet of native soil was removed from approximately 70% of the site to allow for the construction of the sub-cellar level. The excavation extents are shown on Figure 4.

Estimated Soil/Fill Removal Quantities

The total quantity of fill excavated and disposed of off-Site was 6,073 tons. All fill material was disposed of at Impact Recovery and Reuse Center in Lyndhurst, New Jersey. The total quantity of native soil excavated and disposed of off-Site was 19,701 tons. Native material was disposed of at two facilities; Impact Recovery and Reuse Center located in Lyndhurst, New Jersey and the Former General Motors Linden Assembly Plant in Linden, New Jersey. Disposal facilities were reported to OER when they were identified and prior to the start of remedial action. A pre-approval letter from all disposal facilities was provided to OER prior to any soil/fill material removal from the site. Documentation specified in the RAWP - Appendix C - Section 1.6 "Materials Disposal Off-Site" was provided to OER. Disposal documentation is provided in Appendix E.

End-Point Sample Results

Based on the results of the Remedial Investigation Report, the in-situ soil sampling that was completed during the Remedial Investigation documented that the fill material at the site had been impacted with SVOCs, PCBs, pesticides, and metals. As the site re-development activities included the removal of all fill material, no end-point sampling was recommended for the projected site re-development activities. However, based on the requirements of the 19 March 2012 Stipulation List, two end-point soil samples were required upon completion of site excavation activities to document the conditions of the soils that were to be left in place following construction of the building. On 21 November 2012, one end-point sample was collected from 17-foot bgs and another was collected from 36-foot bgs. Figure 6 shows the location of samples collected. Soil samples were submitted to Accutest Laboratories of Dayton, New Jersey, a New York State Department of Health certified laboratory, for the following analyses:

- Volatile organic compounds by EPA Method 8260;
- Semi-volatile organic compounds by EPA Method 8270; and,
- Target Analyte List metals.

A table and map summary of end-point sampling results is included in Table 2 and Figure 6, respectively. A complete copy of the laboratory analytical package is provided in Appendix F. No exceedances of the UUOs or RUSCOs for VOCs or SVOCs were detected in any of the samples. There were no detections of any metals above the UUOs in the post excavation sample PE-2 which was collected at a depth of 17-17.5-feet below sidewalk grade; however, Lead (72 mg/kg) was detected in exceedance of the UUOs in the duplicate sample collected at PE-2. Chromium (51 mg/kg), nickel (39.3 mg/kg), and zinc (111 mg/kg) were detected in exceedance of the UUOs in PE-1, collected from 36 to 36.5-feet bgs. Though exceedances of the UUOs were detected in PE-1, no exceedances of the Protection of Public Health criteria were detected, with exception of chromium; however, as this sample was collected from the weathered bedrock material above the competent bedrock at the site, these impacts are not attributable to any documented impacts at the site within the fill material. As the post-excavation soil sample results from PE-2 did not exceed the NYSDEC UUOs and the remaining portion of the site was excavated to bedrock, these results confirm that the site has achieved a Track 1 cleanup.

Quality assurance (duplicate) and quality control (field blanks) samples were incorporated into the sampling event as required by NYCOER and consisted of one duplicate soil sample and one field blank. Soil field blanks and soil duplicate samples were analyzed for VOCs, SVOCs, and Metals.

Data usability was established for all data generated in this remedial performance evaluation program. The reporting limit (RL) is the lowest concentration that can be qualitatively identified by the method being used for analysis. The RLs in soil for 1,4-dioxane were higher than the NYSDEC UUOs, potentially masking exceedances of the UUOs for these compounds. These RLs are noted in Table 4. The analytical data was reviewed to determine why the RLs of certain compounds exceeded the UUOs. It was determined that the RLs reported for the compounds discussed above are the lowest concentration that the laboratory equipment is capable of detecting.

4.4 MATERIALS DISPOSAL

Between 19 July 2012 and 3 August 2012, 224 truckloads (or 6,073 tons) of historic fill was excavated and transported off-site. The material was transported to the Impact Environmental Recovery and Reuse Center located at 1000 Page Avenue, Lyndhurst, New Jersey (NJDEP Permit No. CBG110002).

On 10 July 2012 a letter was sent to Impact Environmental, LLC located in Lyndhurst, New Jersey requesting soil disposal acceptance documentation for the non-hazardous fill material to be removed from the site. The letter provided soil pre-characterization, waste characterization, and supplemental waste characterization results from previously conducted investigations. On 30 July 2012 Langan received a letter from Impact Environmental, LLC which provided acceptance for disposal of the proposed materials.

Between 7 August 2012 and 22 January 2013, 632 truckloads of native soil was excavated and transported off-site. Of the native material transported off-site, 608 truckloads (or 18,977 tons) were taken to the Former General Motors Linden Assembly Plant located at 1016 West Edgar Road, Linden, New Jersey 07036 (NJDEP SRP PI# 014755). The remaining 24 truckloads (or 724 tons) of native material transported off-site was taken to the Impact Environmental Recovery and Reuse Center located at 1000 Page Avenue, Lyndhurst, New Jersey (NJDEP Permit No. CBG110002).

Waste characterization analytical results and shipping and disposal manifest are provided in Appendix E.

The tonnage and destination of material removed and disposed off-site is presented below:

Destination	Type of Material	Quantity (Tons)
Impact Recovery and Reuse Center 1000 Page Avenue, Lyndhurst, NJ	Non-Hazardous Soil (Fill)	6,073
Impact Recovery and Reuse Center 1000 Page Avenue, Lyndhurst, NJ	Native Soil	724
Former General Motors Linden Assembly Plant 1016 West Edgar Road, Linden , NJ	Native Soil	18,977

Letters from ET 400 PAS, LLC to disposal facility providing materials type, source and data, and acceptance letters from disposal facility stating it is approved to accept above materials are attached in Appendix E. Manifests are also included in Appendix E. The table above shows the total quantities of each class of material removed from the Site and the disposal locations.

5.0 ENGINEERING CONTROLS

A Track 1 Remedial Action was achieved and Engineering Controls are not required. However, as part of construction, several protective systems were installed. These are:

- (1) a Composite Cover System consisting of concrete covered sidewalks, and concrete building slabs; and,
- (2) a Vapor Barrier / Waterproof Barrier System.

As a Track 1 cleanup was proposed for the site, Engineering Controls (EC) were not incorporated in this remedial action. However, as part of construction, a waterproofing/vapor barrier system was built to prevent future migration of off-site soil vapors. The soil vapor analytical results for the Remedial Investigation showed very low levels of PCE, well below the sub-slab guidance value to initiate monitoring (all results were below 8 ug/m³ compared to the monitor level of 100 ug/m³). The vapor barrier system will prevent potential future migration of vapors from offsite into the building.

Vapor Barrier / Waterproof Barrier System

Exposure to soil vapor is prevented by a Vapor Barrier System that has been built on the Site. This Vapor Barrier System consists of a vapor/waterproofing layer that was installed below the building floor slab and along the foundation walls. The vapor barrier consisted of the 46 mil Grace Preprufe 300R, the 32 mil Preprufe 160R, and Bituthene 4000 (59-mil composite) below grade system foundation damp-proofing material in conjunction with sealing of joints with

Preprufe LT tape and Bituthene EdgeGuard tape. For sub-slab installation, the Contractor rolled out sheets of the horizontal waterproofing membrane (Preprufe 300R) over the crushed stone layer. All seams in the Preprufe 300R membrane, and any connections to the vertical waterproofing membranes (Bituthene 3000 or Preprufe 160R) were sealed with Preprufe Tape. The Contractor sealed all connections with the top of concrete footings and concrete walls using Bituthene and Preprufe Tape. After the Preprufe 300R membrane was placed and all seams and connections were properly sealed, the Contractor placed reinforcing steel for the slab-on-grade and poured concrete for the slab-on-grade directly on top of the Preprufe 300R membrane.

Two waterproofing installation methods were used along the vertical walls, depending on the wall type. The Contractor installed Grace Hydroduct 220 drainage mat and Grace Bituthene 3000 waterproofing membrane against the foundation wall adjacent to Park Avenue South in the southern portion of the site. The Contractor applied Grace B2 LVC Bituthene Adhesive Primer to the foundation wall prior to waterproofing membrane installation. Along the northern east-west aligned foundation wall of the 386 Park Avenue South building and along the exposed portion of the 63 Madison foundation wall, the Contractor installed Grace Hydroduct 220 drainage mat and Grace Preprufe 160R waterproofing along. The Contractor removed any sharp fragments protruding from the existing 386 Park Avenue South foundation wall to create a smoother surface prior to waterproofing installation. The Contractor used compressed air to remove any debris on the sealer slabs at the base of the existing foundation walls prior to waterproofing installation.

The vapor barrier layer will provide a barrier to water, moisture, and gas, and is chemically resistant. The vapor barrier will be protective of the building occupants. The contractor for construction of the Vapor Barrier System was Starbright Waterproofing Company, Inc. of Harriman, New York.

Photographs of installation of the Vapor Barrier System are included in Appendix D.

6.0 INSTITUTIONAL CONTROLS

A Track 1 Remedial Action was achieved in the Remedial Action and Engineering Controls and Institutional Controls are not required.

7.0 SITE MANAGEMENT PLAN

A Track 1 Remedial Action was achieved and Site Management is not required.

NOTES:

Any Regulatory Exceedences are color coded by Regulation

Q is the Qualifier Column with definitions as follows:

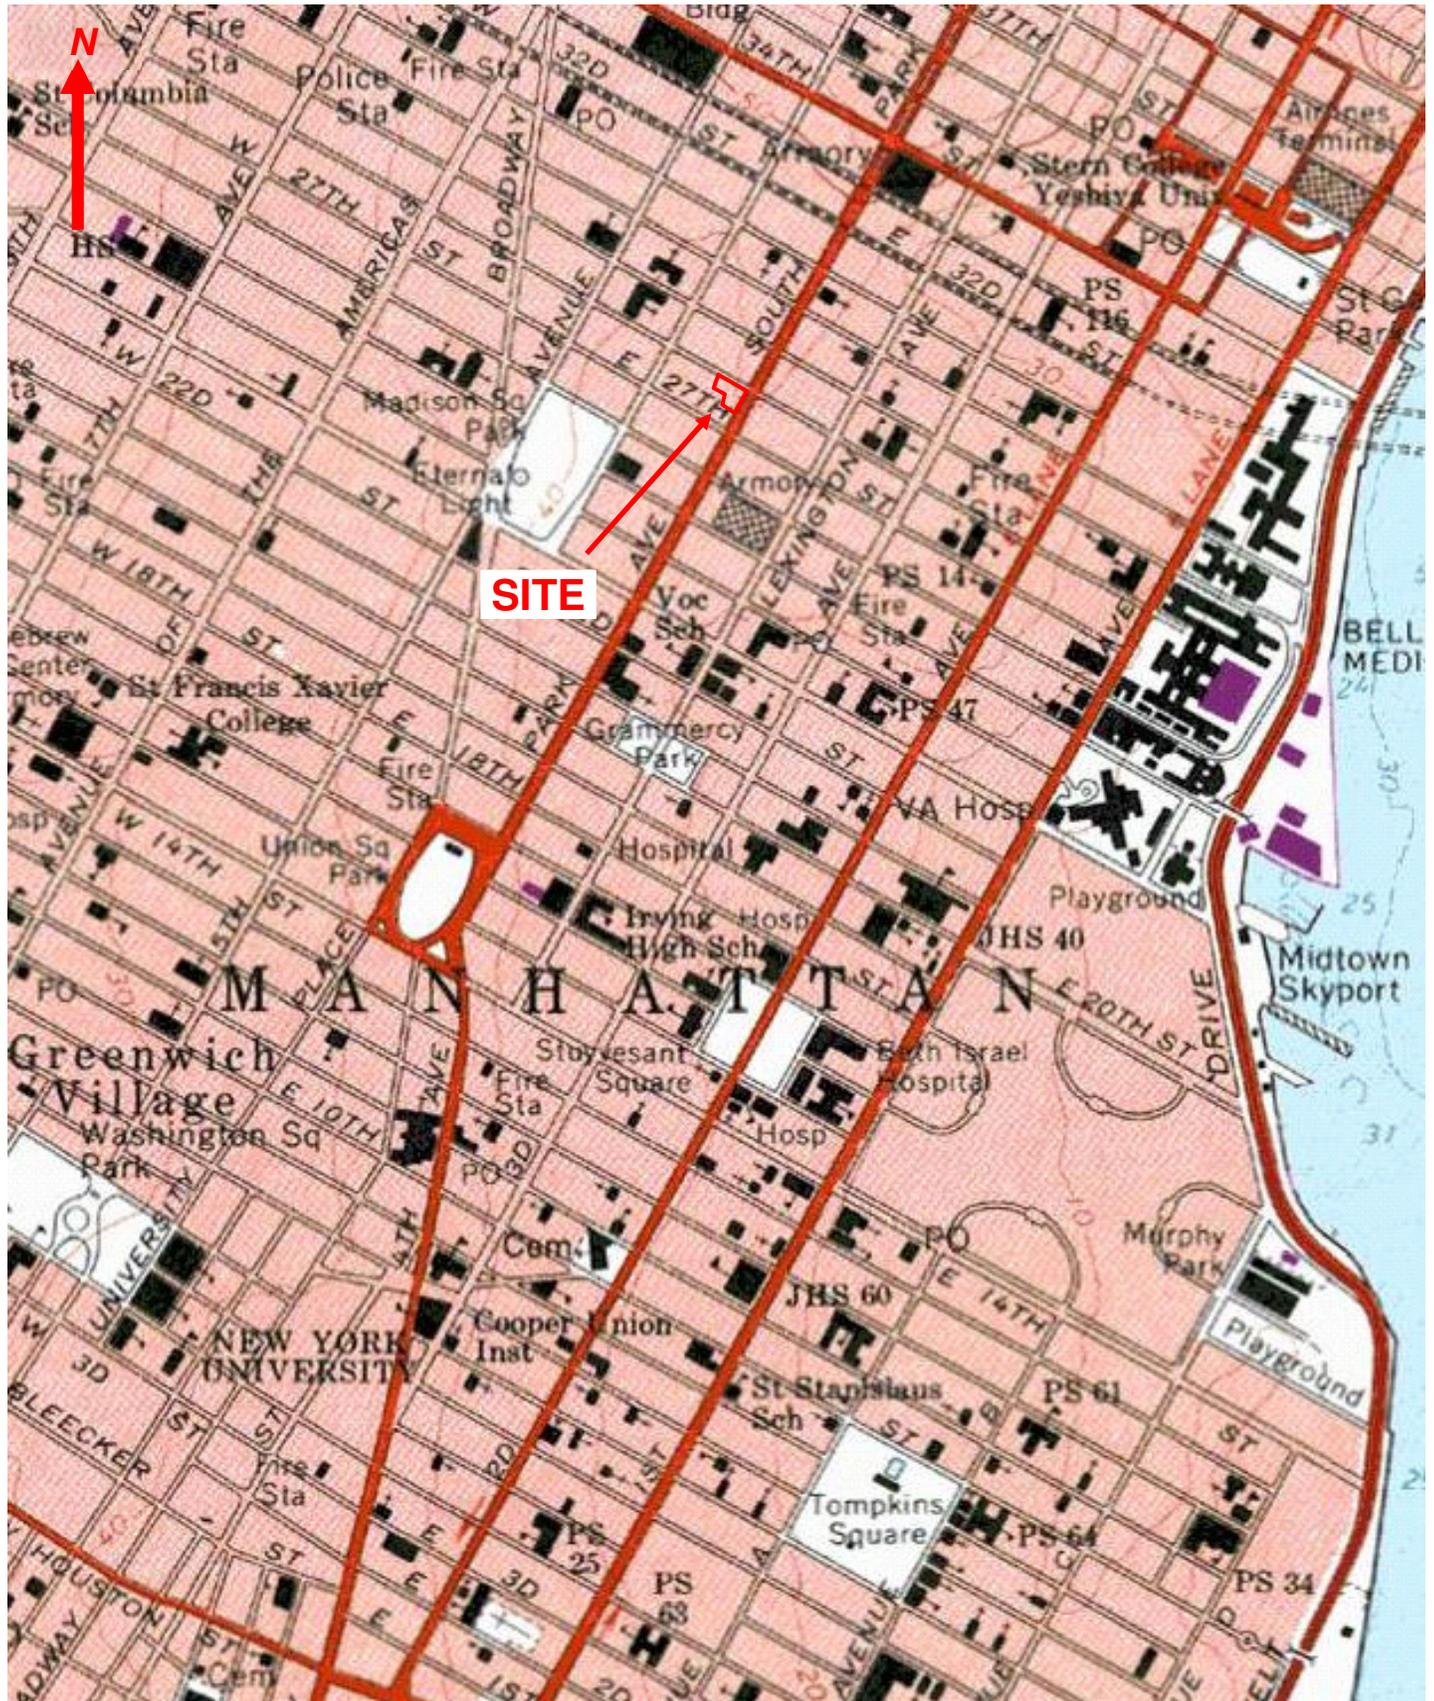

U=analyte not detected at or above the level indicated

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

Italicized values indicate that RL exceeds the regulatory limit.

—=this indicates that no regulatory limit has been established for this analyte

400 Park Avenue, New York

Viridian Energy & Environmental
 2 February 2012

Viridian Energy & Environmental (Viridian) analyzed the energy use of the proposed design for the residential building at 400 Park Avenue South in New York, NY. The building comprises approximately 480,000 ft² of residential space, offices, commercial space, and associated facilities.

The results and conclusions are based upon the information found in the Construction Document Set Architectural Construction Documents drawings from May 29, 2006, and subsequent discussions with the design team. Viridian modeled the design case and the 2010 New York State Energy Conservation Construction Code (NYSECCC 2010) case, based on the ECB Method of ASHRAE/IESNA Standard 2007.

Table 1. Total Building Energy Usage Results

Designation	Regulated Utility Cost	Savings Compared to NYSECCC Baseline (\$)	Savings Compared to NYSECCC C Baseline (%)	NYSECCC 2010 Compliant?
NYSECCC 2010 Baseline	720,162			
Building as Designed	699,367	20,795	2.89%	Yes

NOTICE
 This report is developed for the purpose of calculating NYSECCC2010 compliance only. Actual energy use and cost will be greater, since the modeling rules do not account for many real-life issues, such as quality of construction, equipment functionality, building operation and other factors. Reasons include, but not limited to the following:

- The LEED and ECB baselines assume perfection, as noted in the bullets below, so the design model also must assume perfection:
 - The HVAC equipment is manufactured as per standards. The design of the HVAC systems is such that the each individual piece of equipment performs optimally. The installation is flawless, and the operation optimum.
 - Lighting and lighting controls are perfectly manufactured/installed, and function as such.
 - The insulation is installed perfectly. There are gaps, and no rips caused by pipes and wiring. The windows are put in place with perfect caulking.
- Certain real-life effects are not included in the baseline calculations, and therefore are not included in the design calculations either. For instance, the three-dimensional heat loss effect that occurs at the roof parapet
- Occupant behavior is idealized
- Other effects, such as uncertainties in equipment (plug load) operation.

Side by side comparison of Proposed Design and ASHRAE 90.1-2007 ECB Baseline

Proposed Design	ASHRAE 90.1-2007 ECB
Above grade walls Exterior walls: - Steel frame construction - Double pane insulating glass - Air space - Sheathing - R15 Insulation between framing (24"O.C.) - Furred-in wall - 5/8 in gypsum board - Total U = 0.08 Btu/h*ft ² *F Roof: - Gravel - EPDM - 4 in extruded polystyrene - 6 in concrete slab - Total U = 0.048 Btu/h*ft ² *F Below grade wall Undergrnd wall: - 12 in concrete or masonry - Total C = 0.119 Btu/h*ft ² *F Vertical fenestration Approximately 74% glazing overall VE-55 #2 with V933 Warm Gray and 12% dot gradient • U _{og} = 0.31 Btu/ft ² -hr-F • U _{fen} = 0.42 Btu/ft ² -hr-F • SHGC = 0.32 VE-55 #2 with V933 Warm Gray and 35% dot gradient • U _{og} = 0.31 Btu/ft ² -hr-F • U _{fen} = 0.42 Btu/ft ² -hr-F • SHGC = 0.27 VE-59 #2 with V933 Warm Gray and 12% dot gradient • U _{og} = 0.30 Btu/ft ² -hr-F • U _{fen} = 0.42 Btu/ft ² -hr-F • SHGC = 0.31 VE-59 #2 with V933 Warm Gray and 35% dot gradient • U _{og} = 0.30 Btu/ft ² -hr-F • U _{fen} = 0.42 Btu/ft ² -hr-F • SHGC = 0.26 Ground floor glazing minimally code compliant: • Metal Framing, curtainwall & storefront • U _{fen} = 0.5 Btu/ft ² -hr-F • SHGC = 0.4 74% ratio of vision glazing to total wall area Space-by-space lighting power densities	Above grade walls Exterior walls: - Steel frame construction - Double pane insulating glass - Air space - Sheathing - Insulation - Furred-in wall - 5/8 in gypsum board - Total U = 0.064 Btu/h*ft ² *F Roof: - Insulation entirely above deck - Gravel - EPDM - 4 in extruded polystyrene - 6 in concrete slab - Total U = 0.048 Btu/h*ft ² *F Below grade wall Undergrnd wall: - 12 in brick - Total C = 0.119 Btu/h*ft ² *F Vertical fenestration 40% glazing overall Metal frame vision glazing (curtain wall) - Assembly U _{in} = 0.50 Btu/h*ft ² *F (100% fixed) - SHGC = 0.40 40% ratio of vision glazing to total wall area Space-by-space lighting power densities

Total Proposed Watts =			492920	

Section 4: Requirements Checklist

Lighting Wattage:

1. Total proposed watts must be less than or equal to total allowed watts.

Allowed Watts	Proposed Watts	Complies
548287	492920	YES

2. Exit signs 5 Watts or less per sign.

Controls, Switching, and Wiring:

3. Independent manual or occupancy sensing controls for each space (remote switch with indicator allowed for safety or security).
 4. Occupant sensing control in class rooms, conference/meeting rooms, and employee lunch and break rooms.

Exceptions:

- Spaces with multi-scene control; shop classrooms, laboratory classrooms, and preschool through 12th grade classrooms.

5. Automatic shutoff control for lighting in >5000 sq.ft buildings by time-of-day device, occupant sensor, or other automatic control.

Exceptions:

- 24 hour operation lighting; patient care areas; where auto shutoff would endanger safety or security.

6. Master switch at entry to hotel/motel guest room.
 7. Separate control device for display/accent lighting, case lighting, task lighting, nonvisual lighting, lighting for sale, and demonstration lighting.

8. Tandem wired one-lamp and three-lamp ballasted luminaires (No single-lamp ballasts).

Exceptions:

- Electronic high-frequency ballasts.
 Luminaire not on same switch.
 Recessed luminaires 10 ft. apart or surface/pendant not continuous.
 Luminaires on emergency circuits.

Voltage Drop:

9. Feeder conductors have been designed for a maximum voltage drop of 2 percent.
 10.Branch circuit conductors have been designed for a maximum voltage drop of 3 percent.

Interior Lighting PASSES: Design 100% below their code.

Section 5: Compliance Statement

Compliance Statement: The proposed lighting design represented in this document is consistent with the building plans, specifications and other calculations submitted with this permit application. The proposed lighting system has been designed to meet the 90.1 (2007) Standard requirements in COMcheck Version 3.8.2 and to comply with the mandatory requirements in the Requirements Checklist.

Name - Title Signature Date

Section 6: Post Construction Compliance Statement

Record Drawings and Operating and Maintenance Manuals:

1. Construction documents with record drawings and operating and maintenance manuals provided to the owner.

Lighting Designer or Contractor Name Signature Date

GENERAL NOTES:

- BASE DRAWING REPRODUCED FROM A 18 NOVEMBER 2011, LAST REVISED 12 JANUARY 2012, ALTA SURVEY PREPARED BY LANGAN ENGINEERING AND ENVIRONMENTAL SERVICES (LANGAN).
- ALL LOCATIONS ARE APPROXIMATE AND ARE SUBJECT TO VERIFICATION IN THE FIELD.
- THESE DRAWINGS SHOULD NOT BE SCALED FOR DIMENSIONAL INFORMATION.
- ACCORDING TO THE NYC DEPARTMENT OF BUILDINGS BUILDING INFORMATION SYSTEM WEBSITE, THERE CURRENTLY ARE NO NYC LANDMARKED BUILDINGS WITHIN 90 FEET OF THE SITE.
- THE BOTTOM OF EXCAVATION ELEVATIONS SHOWN ON THESE DRAWINGS FOR THE PROPOSED 400 PARK AVENUE SOUTH BUILDING WHERE INFERRED FROM THE 18 JANUARY 2012 FOUNDATION AND SUBCELLAR FLOOR PLAN FO-101.00 PREPARED BY DESIMONE.
- PLAN DIMENSIONS AND LOCATIONS FOR THE 386 PARK AVENUE SOUTH BUILDING FOUNDATION WALLS, BUILDING COLUMNS AND CONCRETE PILES WERE OBTAINED FROM AN UNDATED BASEMENT PLAN AND A GRILLAGE PLAN PREPARED BY AJRUMALL AND CUSACKS ARCHITECTS.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR PERFORMING HIS WORK SUCH THAT NO DAMAGE OR ADVERSE IMPACT TO THE ON-SITE AND NEIGHBORING BUILDINGS RESULTS, AND FOR PERFORMING BUILDING MONITORING DURING SOIL AND ROCK EXCAVATION AND UNDERPINNING CONSTRUCTION.
- CONTRACTOR'S PROFESSIONAL ENGINEER LICENSED IN THE STATE OF NEW YORK SHALL PERFORM CONTROLLED INSPECTION OF THE EXCAVATION SUPPORT AND UNDERPINNING WORK IN ACCORDANCE WITH THE REQUIREMENTS OF SECTION 1914 OF THE NYC BLDG CODE.
- THE CONTRACTOR'S PROFESSIONAL ENGINEER REGISTERED IN THE STATE OF NEW YORK SHALL PERFORM THE FOLLOWING SPECIAL INSPECTIONS IN ACCORDANCE WITH THE NYC BUILDING CODE:
 - UNDERPINNING
 - STRUCTURAL SAFETY - STRUCTURAL STABILITY
 - EXCAVATION - SHEETING, SHORING AND BRACING
 - SUBGRADE PREPARATION
 - CONCRETE
 - STRUCTURAL REINFORCEMENT
- THE MOST RECENT PROVISIONS OF THE NEW YORK CITY BUILDING CODE SHALL GOVERN THIS WORK.
- THE CONTRACTOR SHALL PERFORM TEST PITS ALONG THE WESTERN PORTION OF THE NORTH WALL OF THE 386 PARK AVENUE SOUTH BUILDING FROM THE 400 PARK AVENUE SITE TO OBTAIN INFORMATION REGARDING THE FOUNDATION SUPPORT AND THE PLAN DIMENSIONS, LOCATIONS, AND DEPTHS OF THE FOUNDATIONS OF THE 386 PARK AVENUE SOUTH BUILDING PRIOR TO THE START OF THIS WORK.
- IF CONDITIONS ENCOUNTERED DURING THE TEST PIT INVESTIGATION ARE NOT CONSISTENT WITH THOSE SHOWN ON THESE DRAWINGS, UNDERPINNING DESIGN MODIFICATIONS MAY BE NECESSARY.
- CONTRACTOR SHALL NOTIFY NYDCOB AND NEIGHBORING BUILDING OWNERS AT LEAST 48 HOURS PRIOR TO COMMENCEMENT OF EXCAVATION WORK.
- CONTRACTOR SITE SAFETY AND SITE LOGISTICS ARE BEYOND THE SCOPE OF THESE DRAWINGS AND ARE NOT ADDRESSED HEREIN.
- INTERNAL TEMPORARY EXCAVATION SUPPORT AND TEMPORARY EXCAVATION SUPPORT ALONG THE PARK AVENUE SOUTH AND EAST 28TH STREET PROPERTY LINES HAS BEEN DESIGNED BY OTHERS AND IS INCLUDED IN THE SOE-000 SERIES.
- FOR UNDERPINNING AND SUPPORT OF EXCAVATION PLANS, ELEVATIONS, AND DETAILS ASSOCIATED WITH THE ADJACENT BUILDINGS AND STREETS, REFER TO THE FOLLOWING DRAWINGS:

DWG NO.	TITLE
SOE-101.00	EXISTING WALL PLAN
SOE-102.00	UNDERPINNING LOCATION PLAN

SOE-105.00	SOUTH ELEVATION VIEW - WALL #3
SOE-106.00	SECTIONS - WALL #3
SOE-107.00	DETAILS

GENERAL PROCEDURE:

- PROTECTION:**
 - THE CONTRACTOR SHALL CONSULT RECORDS FOR THE REMNANTS OF THE ON-SITE 380 PARK AVENUE SOUTH BUILDING AND THE NEIGHBORING BUILDINGS AND NOTE ALL CONDITIONS AND LIMITATIONS THAT MAY AFFECT THIS WORK.
 - IN PERFORMING THIS WORK, THE CONTRACTOR SHALL TAKE CARE SO AS NOT TO AFFECT THE STABILITY AND INTEGRITY OF THE EXISTING ON-SITE AND NEIGHBORING BUILDINGS AND EXISTING UTILITIES OR INDUCE SETTLEMENTS IN THEM.
 - THE RESPONSIBILITY FOR ANY DAMAGE TO THE EXISTING ON-SITE AND NEIGHBORING BUILDINGS, STRUCTURES, UTILITIES, SIDEWALKS, PAVEMENT, AND OTHER FACILITIES IN THE VICINITY RESULTING FROM THE CONTRACTOR'S OPERATIONS SHALL BE ENTIRELY HIS, AND HE SHALL TAKE NECESSARY MEASURES TO PREVENT THE SAME.
 - EXAMINE DRAWINGS TO DETERMINE THE SEQUENCE OF OPERATIONS, AND RELATION OF WORK TO OTHER TRADES. START OF WORK SHALL SIGNIFY ACCEPTANCE OF FIELD CONDITIONS AND ACKNOWLEDGEMENT OF COORDINATION WITH OTHER TRADES.
- MONITORING:**
 - VIBRATION MONITORING: THE CONTRACTOR SHALL UTILIZE HIS OWN SEISMOGRAPHS TO MEASURE GROUND VIBRATIONS SO AS TO INFORM HIMSELF OF THE LEVEL OF VIBRATIONS BEING GENERATED BY HIS WORK. THE GEOTECHNICAL ENGINEER MAY MONITOR GROUND VIBRATIONS GENERATED DURING CONSTRUCTION OPERATIONS USING SEISMOGRAPHS. THE VIBRATION LEVEL DURING WORK OF THIS SECTION SHALL NOT EXCEED 0.5 INCHES/SECOND AT THE CLOSEST BUILDING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PERFORMING THE WORK OF THIS SECTION SO AS NOT TO CAUSE ANY DAMAGE OR LOSS OF SUPPORT TO ON-SITE AND ADJACENT STRUCTURES.
 - THE CONTRACTOR SHALL ESTABLISH SURVEY CONTROL MONITORING POINTS ON THE EXISTING AND NEIGHBORING STRUCTURES AND SIDEWALKS, SUBJECT TO THE OWNER'S APPROVAL. TO ADEQUATELY MONITOR AND OTHERWISE KEEP HIMSELF INFORMED OF THE CONDITIONS OF ADJACENT STRUCTURES AND SIDEWALKS DURING THE WORK.
 - AS A MINIMUM, MONITORING POINTS SHALL BE ESTABLISHED ON THE ADJACENT BUILDINGS AT THE GROUND LEVEL AT EACH BUILDING CORNER AND AT 20 FT (MAXIMUM) SPACING ALONG THE GROUND SURFACE ALONG SIDEWALKS.
 - ADDITIONAL MONITORING POINTS SHALL BE ESTABLISHED AND MONITORED ON EXISTING COLUMNS TO BE UNDERPINNED AND AT THE BUILDING ROOF LINES.
 - A PLUMB SURVEY OF THE ADJACENT BUILDINGS EXTERIOR FACADES SHALL BE PERFORMED PRIOR TO THE START OF EXCAVATION AND UNDERPINNING WORK.
 - ESTABLISH AND MONITOR ALL SURVEY POINTS TO AN ACCURACY OF 0.005 FT. MEASURE MONITORING POINTS AT LEAST TWICE A WEEK DURING SHEETING, BRACING, AND UNDERPINNING INSTALLATION, AND MORE FREQUENTLY AS NEEDED WHEN INSTALLATION IS IMMEDIATELY ADJACENT TO STRUCTURES. RECORD AND REPORT ELEVATION OF EACH BENCHMARK AT LEAST TWICE PER WEEK WHILE INSTALLATION IS IN PROGRESS.
 - SHOULD MONITORING POINT READINGS INDICATE A DISPLACEMENT EXCEEDING 0.125-INCH BETWEEN TWO CONSECUTIVE READINGS OR INDICATE A CUMULATIVE DISPLACEMENT EXCEEDING 0.25-INCH, HALT EXCAVATION, SHEETING, BRACING, AND UNDERPINNING OPERATIONS UNTIL CORRECTIVE ACTION HAS BEEN PROVIDED BY THE CONTRACTOR AND IS ACCEPTABLE TO THE OWNER AND ENGINEER. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO MONITOR CONDITIONS DURING HIS WORK TO ASSURE THE PROTECTION REQUIREMENTS SPECIFIED HEREIN ARE MAINTAINED.
 - THE ABOVE DESCRIBED MONITORING IS THE MINIMUM REQUIRED. THE CONTRACTOR SHALL ESTABLISH ALL NECESSARY MONITORING MEASURES AS NECESSARY TO DETERMINE THE CONDITIONS AROUND THE SITE AND THAT HIS WORK IS NOT ADVERSELY IMPACTING SURROUNDING STRUCTURES.
 - CONTRACTOR SHALL SUBMIT HIS MONITORING PLAN CONSISTING OF SURVEY POINT LOCATIONS AND METHOD OF MONITORING TO THE CONSTRUCTION MANAGER FOR REVIEW BY THE OWNER'S GEOTECHNICAL ENGINEER.
 - THE OWNER RESERVES THE RIGHT TO PERFORM ANY ADDITIONAL MONITORING OF ADJACENT STRUCTURES, INCLUDING BUT NOT LIMITED TO PHOTOGRAPHIC AND VIDEO DOCUMENTATION, ESTABLISHING AND SURVEYING OF MONITORING POINTS, AND VIBRATION MONITORING. THE CONTRACTOR SHALL ALLOW THE OWNER'S ENGINEER AND/OR SURVEYOR ACCESS TO THE SITE TO PERFORM THE DOCUMENTATION WORK.
- EXCAVATION:**
 - THE CONTRACTOR SHALL PROVIDE, ERECT AND MAINTAIN ALL NECESSARY BRACING, UNDERPINNING, AND EXCAVATION SUPPORT WHEN AND WHERE REQUIRED. LOCATE ALL BRACING, UNDERPINNING, AND EXCAVATION SUPPORT TO CLEAR PERMANENT CONSTRUCTION AND TO PERMIT FORMING AND FINISHING OF CONCRETE SURFACE.
 - BRACING, UNDERPINNING, AND TEMPORARY EXCAVATION SUPPORT SHALL BE ERECTED AND MAINTAINED TO THE ENTIRE SATISFACTION OF ANY NEW YORK CITY, STATE, AND LOCAL AUTHORITIES HAVING JURISDICTION, SYSTEMS ON WHICH THE SUPPORT OR STABILITY OF EXISTING STRUCTURES IS DEPENDENT MUST BE LEFT IN PLACE AT COMPLETION OF WORK. IN OTHER AREAS, MAINTAIN SYSTEM UNTIL STRUCTURAL ELEMENTS ARE REPLACED BY OTHER BRACING OR UNTIL PERMANENT CONSTRUCTION IS ABLE TO RESIST LATERAL EARTH, SURCHARGE, AND HYDROSTATIC PRESSURES, AS DETERMINED BY THE OWNER'S STRUCTURAL ENGINEER.
 - THE CONSTRUCTION AND PERFORMANCE OF THE BRACING, UNDERPINNING, AND EXCAVATION SUPPORT WORK FOR THE PURPOSE OF WHICH IS IT ERECTED SHALL ENTIRELY BE THE RESPONSIBILITY OF THE CONTRACTOR.
 - SHOULD ANY SUBSIDENCE OR ANY OTHER DAMAGE OCCUR DUE TO THE INEFFICIENCY OF THE WORK, THE DAMAGE SHALL BE REPAIRED BY THE CONTRACTOR AT HIS OWN EXPENSE.
 - THE CONTRACTOR SHALL MAKE USE OF SUCH METHODS OF WORK AS ARE BEST ADAPTED TO PRESERVE THE SAFETY AND STABILITY OF FOUNDATIONS, WALLS, AND OTHER PARTS OF AFFECTED BUILDINGS OR STRUCTURES.
 - THE CONTRACTOR SHALL INCLUDE AND PERFORM ANY DEWATERING NECESSARY TO FACILITATE THE WORK OF THIS SECTION. DEWATERING SHALL BE DONE SO AS NOT TO CAUSE LOSS OF SUPPORT, SETTLEMENT, OR ADVERSE IMPACTS TO THE NEIGHBORING BUILDINGS, UTILITIES, SIDEWALKS, AND STRUCTURES. THE CONTRACTOR SHALL BE RESPONSIBLE FOR SECURING ALL PERMITS AND PAYING ALL FEES NECESSARY TO PERFORM DEWATERING AND FOR DISCHARGING OF DEWATERING EFFLUENT.
 - IF ADDITIONAL LOCATIONS REQUIRE SHEETING, BRACING, AND/OR UNDERPINNING BASED ON THE CONTRACTOR'S CONSTRUCTION METHODS AND PROCEDURES, THE CONTRACTOR SHALL PROVIDE SUCH ADDITIONAL SUPPORTS. SUCH ADDITIONAL SUPPORTS SHALL BE DESIGNED AND CONSTRUCTED IN ACCORDANCE WITH THE REQUIREMENTS OF THE NEW YORK CITY BUILDING CODE.
 - SHEETING AND BRACING MAY BE REMOVED, LEFT IN PLACE, OR CUT AS APPROVED BY THE OWNER'S STRUCTURAL AND GEOTECHNICAL ENGINEERS AND AS DIRECTED BY THE CONSTRUCTION MANAGER. ANY MATERIAL THAT AFFECTS OR CONFLICTS WITH FINISHED CONSTRUCTION SHALL BE REMOVED. CAREFULLY REMOVE MATERIALS SUCH THAT NO LOSS OF SUPPORT OCCURS BENEATH AREAS ADJACENT TO THE SHEETING. ANY MATERIAL LEFT IN PLACE MUST BE REMOVED TO NO LESS THAN 4 FT BELOW FINISHED GRADE. SHEETING AND BRACING MATERIAL REMOVED FROM THE EXCAVATION SHALL BE IMMEDIATELY REMOVED FROM THE SITE AND PROPERLY DISPOSED OF IN ACCORDANCE WITH ALL APPLICABLE NEW YORK STATE, CITY, AND FEDERAL CODES.
 - TEMPORARY EXCAVATION SUPPORTS SHALL BE PROVIDED ALONG THE SIDES OF EXCAVATIONS IN SOIL, AND ANY OTHER MATERIAL NOT SELF-SUPPORTING AS DETERMINED BY THE CONTRACTOR'S PROFESSIONAL ENGINEER.

- WALL REMOVAL PROCEDURE:**
- PRIOR TO THE START OF UNDERPINNING, THE CONTRACTOR SHALL REMOVE THE BELOW-GRADE PORTIONS OF THE WEST AND SOUTH WALLS AND ASSOCIATED FOUNDATIONS OF THE 390 PARK AVENUE SOUTH BUILDING THAT ARE SHOWN ON THIS PLAN TO THE DEPTH OF THE EXISTING 386 PARK AVENUE SOUTH BASEMENT FLOOR SLAB ELEVATION.
 - THE ELEVATION OF THE 386 PARK AVENUE SOUTH FLOOR SLAB SHALL BE CONFIRMED BY SURVEY.
 - EXPOSED PORTIONS OF THE 386 PARK AVENUE SOUTH BELOW-GRADE WALLS SHALL BE OBSERVED FOR ANY CRACKS AND/OR DEFECTS. SUCH OBSERVATIONS SHALL BE DOCUMENTED AND PROVIDED TO THE CONSTRUCTION MANAGER.
 - AFTER DOCUMENTATION OF THE EXISTING CONDITIONS OF THE 386 PARK AVENUE SOUTH BELOW-GRADE WALLS, THE WALLS SHALL BE ADEQUATELY PARGED TO PROTECT AGAINST WATER INFILTRATION.

3 FLOOR AREA SCHEDULES

4 DWELLING UNIT SCHEDULE

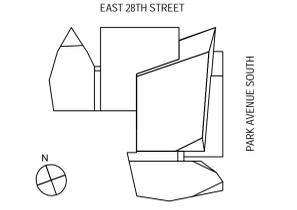

SOUND ATTENUATION NOTE

BUILDING DESIGN WILL INCLUDE DOUBLE-GLAZED WINDOWS WITH GOOD SEALING PROPERTIES, AND CENTRAL AIR CONDITIONING IN ORDER TO CONFORM TO THE SOUND ATTENUATION CRITERIA AS SET FORTH WITHIN THE EAS STATEMENT PREPARED FOR THIS PROJECT.

ACTIONS GRANTED VIA SPECIAL PERMIT

- A. MODIFICATION OF MAP 8d TO LOCATE BLOCK IN A C5-3 ZONE:
GRANTED VIA CALENDAR NO. 23, NOVEMBER 17, 2004 C 0404962 MM. (REF Z1)
- B. MODIFY SECTION 74-721 TO PERMIT MODIFICATION OF BULK REQUIREMENTS FOR A RESIDENTIAL OR MIXED-BUILDING:
GRANTED VIA CALENDAR NO. 24, NOVEMBER 17, 2004. N 040497 ZRY
- C. SPECIAL PERMIT PURSUANT TO SECTION 74-721, AS MODIFIED, TO PERMIT THE FOLLOWING:
(GRANTED VIA CALENDAR NO. 22, NOVEMBER 17, 2004 C 040495 ZSM.)
- MODIFICATION OF SECTION 23-632 TO PERMIT A BUILDING WHICH PENETRATES THE INITIAL SETBACK DISTANCE AND SKY EXPOSURE PLANE ALONG PARK AVENUE SOUTH AND EAST 28TH STREET (REF. Z4 & B25)
 - MODIFICATION OF SECTION 23-663 TO PERMIT A BUILDING WHICH DOES NOT PROVIDE A REAR SETBACK AT A HEIGHT OF +125'-0" ON THE INTERIOR LOT PORTION. (REF Z4 & B25)
 - MODIFICATION OF SECTION 23-711 TO PERMIT A BUILDING WITH LESS THAN THE REQUIRED MINIMUM DISTANCE BETWEEN TWO BUILDINGS ON A SINGLE ZONING LOT. (REF. 1/2-7)
 - MODIFICATION OF SECTION 23-861 TO PERMIT A BUILDING WITH LESS THAN THE MINIMUM REQUIRED DISTANCE FROM A LEGALLY REQUIRED WINDOW TO A WALL OR LOT LINE. (REF. 3/2-7)
 - MODIFICATION OF SECTION 23-84 TO PERMIT A BUILDING WITH AN OUTER COURT WITH LESS THAN THE REQUIRED DIMENSIONS. (REF 2 & 3/2-7)

APPENDIX B

Community Air Monitoring Plan

Community Air Monitoring Plan

Real-time air monitoring for volatile organic compounds (VOCs) and particulate levels at the perimeter of the exclusion zone or work area will be performed during removal of all impacted fill materials. Continuous monitoring will be performed for all ground intrusive activities and during the handling of contaminated or potentially contaminated media. Ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pit excavation or trenching, and the installation of soil borings or monitoring wells.

Periodic monitoring for VOCs will be performed during non-intrusive activities such as the collection of soil and sediment samples or the collection of groundwater samples from existing monitoring wells. Periodic monitoring during sample collection, for instance, will consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or overturning soil, monitoring during well bailing/purging, and taking a reading prior to leaving a sample location. Depending upon the proximity of potentially exposed individuals, continuous monitoring may be performed during sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street, in the midst of a public park, or adjacent to a school or residence. Exceedences of action levels observed during performance of the Community Air Monitoring Plan (CAMP) will be reported to the OER Project Manager and included in the Daily Report.

VOC Monitoring, Response Levels, and Actions

Volatile organic compounds (VOCs) will be monitored at the downwind perimeter of the immediate work area (i.e., the exclusion zone) on a continuous basis during invasive work. Upwind concentrations will be measured at the start of each workday and periodically thereafter to establish background conditions. The monitoring work will be performed using equipment appropriate to measure the types of contaminants known or suspected to be present. The equipment will be calibrated at least daily for the contaminant(s) of concern or for an appropriate surrogate. The equipment will be capable of calculating 15-minute running average concentrations, which will be compared to the levels specified below.

- If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities will be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities will resume with continued monitoring.

- If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities will be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities will resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less - but in no case less than 20 feet, is below 5 ppm over background for the 15-minute average.
- If the organic vapor level is above 25 ppm at the perimeter of the work area, activities will be shutdown.

All 15-minute readings must be recorded and be available for OER personnel to review. Instantaneous readings, if any, used for decision purposes will also be recorded.

Particulate Monitoring, Response Levels, and Actions

Particulate concentrations will be monitored continuously at the upwind and downwind perimeters of the exclusion zone at temporary particulate monitoring stations. The particulate monitoring will be performed using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment will be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

- If the downwind PM-10 particulate level is 100 micrograms per cubic meter (mcg/m^3) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques will be employed. Work will continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed $150 \text{ mcg}/\text{m}^3$ above the upwind level and provided that no visible dust is migrating from the work area.
- If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than $150 \text{ mcg}/\text{m}^3$ above the upwind level, work will be stopped and a re-evaluation of activities initiated. Work will resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within $150 \text{ mcg}/\text{m}^3$ of the upwind level and in preventing visible dust migration.

All readings will be recorded and be available for OER personnel to review.

APPENDIX C

Soil Materials Management Plan

APPENDIX C

SOIL/MATERIALS MANAGEMENT PLAN

1.1 Soil Screening Methods

Visual, olfactory and PID soil screening and assessment will be performed under the supervision of a Qualified Environmental Professional and will be reported in the RAR. Soil screening will be performed during invasive work performed during the remedy and development phases prior to issuance of the Notice of Completion.

1.2 Stockpile Methods

Excavated soil from suspected areas of contamination (e.g., hot spots, USTs, drains, etc.) will be stockpiled separately and will be segregated from clean soil and construction materials. Stockpiles will be used only when necessary and will be removed as soon as practicable. While stockpiles are in place, they will be inspected daily, and before and after every storm event. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by OER. Excavated soils will be stockpiled on, at minimum, double layers of 8-mil minimum sheeting, will be kept covered at all times with appropriately anchored plastic tarps, and will be routinely inspected. Broken or ripped tarps will be promptly replaced.

All stockpile activities will be compliant with applicable laws and regulations. Soil stockpile areas will be appropriately graded to control run-off in accordance with applicable laws and regulations. Stockpiles of excavated soils and other materials shall be located at least of 50 feet from the property boundaries, where possible. Hay bales or equivalent will surround soil stockpiles except for areas where access by equipment is required. Silt fencing and hay bales will be used as needed near catch basins, surface waters and other discharge points.

1.3 Characterization of Excavated Materials

Soil/fill or other excavated media that is transported off-Site for disposal will be sampled in a manner required by the receiving facility, and in compliance with applicable laws and regulations. Soils proposed for reuse on-Site will be managed as defined in this plan.

1.4 Materials Excavation, Load-Out and Departure

The PE/QEP overseeing the remedial action will:

- oversee remedial work and the excavation and load-out of excavated material;
- ensure that there is a party responsible for the safe execution of invasive and other work performed under this work plan;
- ensure that Site development activities and development-related grading cuts will not interfere with, or otherwise impair or compromise the remedial activities proposed in this RAWP;
- ensure that the presence of utilities and easements on the Site has been investigated and that any identified risks from work proposed under this plan are properly addressed by appropriate parties;
- ensure that all loaded outbound trucks are inspected and cleaned if necessary before leaving the Site;
- ensure that all egress points for truck and equipment transport from the Site will be kept clean of Site-derived materials during Site remediation.

Locations where vehicles exit the Site shall be inspected daily for evidence of soil tracking off premises. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to Site-derived materials.

Open and uncontrolled mechanical processing of historical fill and contaminated soil on-Site will not be performed without prior OER approval.

1.5 Off-Site Materials Transport

Loaded vehicles leaving the Site will comply with all applicable materials transportation requirements (including appropriate covering, manifests, and placards) in accordance with applicable laws and regulations, including use of licensed haulers in accordance with 6 NYCRR Part 364. If loads contain wet material capable of causing leakage from trucks, truck liners will be used. Queuing of trucks will be performed on-Site, when possible in order to minimize off Site disturbance. Off-Site queuing will be minimized.

Outbound truck transport routes are shown on Figure 6. This routing takes into account the following factors: (a) limiting transport through residential areas and past sensitive sites; (b) use of mapped truck routes; (c) minimizing off-Site queuing of trucks entering the facility; (d) limiting total distance to major highways; (e) promoting safety in access to highways; and (f) overall safety in transport. To the extent possible, all trucks loaded with Site materials will travel from the Site using these truck routes. Trucks will not stop or idle in the neighborhood after leaving the project Site.

1.6 Materials Disposal Off-Site

The following documentation will be established and reported by the PE/QEP for each disposal destination used in this project to document that the disposal of regulated material exported from the Site conforms with applicable laws and regulations: (1) a letter from the PE/QEP or Enrollee to each disposal facility describing the material to be disposed and requesting written acceptance of the material. This letter will state that material to be disposed is regulated material generated at an environmental remediation Site in Manhattan, New York under a governmental remediation program. The letter will provide the project identity and the name and phone number of the PE/QEP or Enrollee. The letter will include as an attachment a summary of all chemical data for the material being transported; and (2) a letter from each disposal facility stating it is in receipt of the correspondence (1, above) and is approved to accept the material. These documents will be included in the RAR.

The Remedial Action Report will include an itemized account of the destination of all material removed from the Site during this remedial action. Documentation associated with disposal of all material will include records and approvals for receipt of the material. This information will be presented in the RAR.

All impacted soil/fill or other waste excavated and removed from the Site will be managed as regulated material and will be disposed in accordance with applicable laws and regulations. Historic fill and contaminated soils taken off-Site will be handled as solid waste and will not be disposed at a Part 360-16 Registration Facility (also known as a Soil Recycling Facility).

Waste characterization will be performed for off-Site disposal in a manner required by the receiving facility and in conformance with its applicable permits. Waste characterization sampling and analytical methods, sampling frequency,

analytical results and QA/QC will be reported in the RAR. A manifest system for off-Site transportation of exported materials will be employed. Manifest information will be reported in the RAR. Hazardous wastes derived from on-Site will be stored, transported, and disposed of in compliance with applicable laws and regulations.

If disposal of soil/fill from this Site is proposed for unregulated disposal (i.e., clean soil removed for development purposes), including transport to a Part 360-16 Registration Facility, a formal request will be made for approval by OER with an associated plan compliant with 6NYCRR Part 360-16. This request and plan will include the location, volume and a description of the material to be recycled, including verification that the material is not impacted by site uses and that the material complies with receipt requirements for recycling under 6NYCRR Part 360. This material will be appropriately handled on-Site to prevent mixing with impacted material.

1.7 Materials Reuse On-Site

Soil and fill that is derived from the property that meets the soil cleanup objectives established in this plan may be reused on-Site. The soil cleanup objectives for on-Site reuse are listed in Table 1. 'Reuse on-Site' means material that is excavated during the remedy or development, does not leave the property, and is relocated within the same property and on comparable soil/fill material, and addressed pursuant to the NYC BCP agreement subject to Engineering and Institutional Controls. The PE/QEP will ensure that reused materials are segregated from other materials to be exported from the Site and that procedures defined for material reuse in this RAWP are followed.

Organic matter (wood, roots, stumps, etc.) or other waste derived from clearing and grubbing of the Site will not be buried on-Site. Soil or fill excavated from the site for grading or other purposes will not be reused within a cover soil layer or within landscaping berms.

1.8 Demarcation

After completion of hotspot removal and any other invasive remedial activities, and prior to backfilling, the top of the residual soil/fill will be defined by one of three methods: (1) placement of a demarcation layer. The demarcation layer will consist of geosynthetic fencing or equivalent material to be placed on the

surface of residual soil/fill to provide an observable reference layer. A description or map of the approximate depth of the demarcation layer will be provided in the SMP; or (2) a land survey of the top elevation of residual soil/fill before the placement of cover soils, pavement and associated sub-soils, or other materials or structures or, (3) all materials beneath the approved cover will be considered impacted and subject to site management after the remedy is complete. Demarcation may be established by one or any combination of these three methods. As appropriate, a map showing the method of demarcation for the Site and all associated documentation will be presented in the RAR.

This demarcation will constitute the top of the site management horizon. Materials within this horizon require adherence to special conditions during future invasive activities as defined in the Site Management Plan.

1.9 Import of Backfill Soil from Off-Site Sources

This Section presents the requirements for imported fill materials to be used below the cover layer and within the clean soil cover layer. All imported soils will meet OER-approved backfill and cover soil quality objectives for this Site.

A process will be established to evaluate sources of backfill and cover soil to be imported to the Site, and will include an examination of source location, current and historical use(s), and any applicable documentation. Material from industrial sites, spill sites, environmental remediation sites or other potentially contaminated sites will not be imported to the Site.

The following potential sources may be used pending attainment of backfill and cover soil quality objectives:

- Clean soil from construction projects at non-industrial sites in compliance with applicable laws and regulations;
- Clean soil from roadway or other transportation-related projects in compliance with applicable laws and regulations;
- Clean recycled concrete aggregate (RCA) from facilities permitted or registered by the regulations of NYS DEC.

All materials received for import to the Site will be approved by a PE/QEP and will be in compliance with provisions in this RAWP. The RAR will report the

source of the fill, evidence that an inspection was performed on the source, chemical sampling results, frequency of testing, and a Site map indicating the locations where backfill or soil cover was placed.

Source Screening and Testing

Inspection of imported fill material will include visual, olfactory and PID screening for evidence of contamination. Materials imported to the Site will be subject to inspection, as follows:

- Trucks with imported fill material will be in compliance with applicable laws and regulations and will enter the Site at designated locations;
- The PE/QEP is responsible to ensure that every truck load of imported material is inspected for evidence of contamination; and
- Fill material will be free of solid waste including pavement materials, debris, stumps, roots, and other organic matter, as well as ashes, oil, perishables or foreign matter.

Composite samples of imported material will be taken at a minimum frequency of one sample for every 500 cubic yards of material. Once it is determined that the fill material meets imported backfill or cover soil chemical requirements and is non-hazardous, and lacks petroleum contamination, the material will be loaded onto trucks for delivery to the Site.

Recycled concrete aggregate (RCA) will be imported from facilities permitted or registered by NYSDEC. Facilities will be identified in the RAR. A PE/QEP is responsible to ensure that the facility is compliant with 6NYCRR Part 360 registration and permitting requirements for the period of acquisition of RCA. RCA imported from compliant facilities will not require additional testing, unless required by NYSDEC under its terms for operation of the facility. RCA imported to the Site must be derived from recognizable and uncontaminated concrete. RCA material is not acceptable for, and will not be used as cover material.

1.10 Fluids Management

All liquids to be removed from the Site, including dewatering fluids, will be handled, transported and disposed in accordance with applicable laws and regulations. Liquids discharged into the New York City sewer system will

receive prior approval by New York City Department of Environmental Protection (NYC DEP). The NYC DEP regulates discharges to the New York City sewers under Title 15, Rules of the City of New York Chapter 19. Discharge to the New York City sewer system will require an authorization and sampling data demonstrating that the groundwater meets the City's discharge criteria. The dewatering fluid will be pretreated as necessary to meet the NYC DEP discharge criteria. If discharge to the City sewer system is not appropriate, the dewatering fluids will be managed by transportation and disposal at an off-Site treatment facility.

Discharge of water generated during remedial construction to surface waters (i.e., a stream or river) is prohibited without a SPDES permit issued by New York State Department of Environmental Conservation.

1.11 Storm-water Pollution Prevention

Applicable laws and regulations pertaining to storm-water pollution prevention will be addressed during the remedial program. Erosion and sediment control measures identified in this RAWP (silt fences and barriers, and hay bale checks) will be installed around the entire perimeter of the remedial construction area and inspected once a week and after every storm event to ensure that they are operating appropriately. Discharge locations will be inspected to determine whether erosion control measures are effective in preventing significant impacts to receptors. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by OER. All necessary repairs shall be made immediately. Accumulated sediments will be removed as required to keep the barrier and hay bale check functional. Undercutting or erosion of the silt fence toe anchor will be repaired immediately with appropriate backfill materials. Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering.

1.12 Contingency Plan

This contingency plan is developed for the remedial construction to address the discovery of unknown structures or contaminated media during excavation. Identification of unknown contamination source areas during invasive Site work will be promptly communicated to OER's Project Manager. Petroleum spills will be reported to the NYS DEC Spill Hotline. These findings will be included in the daily report. If previously unidentified contaminant sources are found during on-

Site remedial excavation or development-related excavation, sampling will be performed on contaminated source material and surrounding soils and reported to OER. Chemical analytical testing will be performed for TAL metals, TCL volatiles and semi-volatiles, TCL pesticides and PCBs, as appropriate.

Generic Procedures for Management of Underground Storage Tanks

The following procedure will be implemented if a petroleum containing underground storage tank (UST) is identified during the remedial action or subsequent redevelopment excavation activities. All petroleum spills will be reported to the NYSDEC hotline as required by applicable laws and regulations. This contingency plan is designed for heating oil tanks and other small or moderately sized storage vessels. If larger tanks, such as gasoline storage tanks are identified, OER will be notified before this criterion is utilized.

Prior to Tank removal, the following procedures should be followed:

- Dig down to the top of the tank and expose the upper half.
- Remove all fluid to its lowest draw-off point.
- Drain and flush piping into the tank.
- Vacuum out the "tank bottom" consisting of water product and sludge.
- Remove the fill tube and disconnect the fill, gauge, product, vent lines and pumps. Cap and plug open ends of lines.
- Temporarily plug all tank openings, complete the excavation, remove the tank and place it in a secure location.
- Render the tank safe and check the tank atmosphere to ensure that petroleum vapors have been satisfactorily purged from the tank.
- Clean tank or remove to storage yard for cleaning.
- If the tank is to be moved, it must be transported by licensed waste transporter. Plug and cap all holes prior to transport leaving a 1/8 inch vent hole located at the top of the tank during transport.
- After cleaning, the tank must be made acceptable for disposal at a scrap yard, cleaning the tanks interior with a high pressure rinse and cutting the tank in several pieces.

During the tank and pipe line removal, the following field observations should be made and recorded:

- A description and photographic documentation of the tank and pipe line condition (pitting, holes, staining, leak points, evidence of repairs, etc.).
- Examination of the excavation floor and sidewalls for physical evidence of contamination (odor, staining, sheen, etc.).
- Periodic field screening (through bucket return) of the floor and sidewalls of the excavation, with a calibrated photoionization detector (PID).

Impacted Soil Excavation Methods

The excavation of the impacted soil will be performed following the removal of the existing tanks. Soil excavation will be performed in accordance with the procedures described under Section 5.5 of Draft DER-10 as follows:

- A description and photographic documentation of the excavation.
- Examination of the excavation floor and sidewalls for physical evidence of contamination (odor, staining, sheen, etc.).
- Periodic field screening (through bucket return) of the floor and sidewalls of the excavation, with calibrated photoionization detector (PID).

Final excavation depth, length, and width will be determined in the field, and will depend on the horizontal and vertical extent of contaminated soils as identified through physical examination (PID response, odor, staining, etc.). Collection of verification samples will be performed to evaluate the success of the removal action as specified in this document.

The following procedure will be used for the excavation of impacted soil (as necessary and appropriate):

- Wear appropriate health and safety equipment as outlined in the Health and Safety Plan.
- Prior to excavation, ensure that the area is clear of utility lines or other obstructions. Lay plastic sheeting on the ground next to the area to be excavated.
- Using a rubber-tired backhoe or track mounted excavator, remove overburden soils and stockpile, or dispose of, separate from the impacted soil.

- If additional UST's are discovered, the NYSDEC will be notified and the best course of action to remove the structure should be determined in the field. This may involve the continued trenching around the perimeter to minimize its disturbance.
- If physically contaminated soil is present (e.g., staining, odors, sheen, PID response, etc.) an attempt will be made to remove it, to the extent not limited by the site boundaries or the bedrock surface. If possible, physically impacted soil will be removed using the backhoe or excavator, segregated from clean soils and overburden, and staged on separated dedicated plastic sheeting or live loaded into trucks from the disposal facility. Removal of the impacted soils will continue until visibly clean material is encountered and monitoring instruments indicate that no contaminants are present.
- Excavated soils which are temporarily stockpiled on-site will be covered with tarp material while disposal options are determined. Tarp will be checked on a daily basis and replaced, repaired or adjusted as needed to provide full coverage. The sheeting will be shaped and secured in such a manner as to drain runoff and direct it toward the interior of the property.

Once the site representative and regulatory personnel are satisfied with the removal effort, verification of confirmatory samples will be collected from the excavation in accordance with DER-10 and the following description of End-Point Sampling procedures.

1.13 Odor, Dust and Nuisance Control

Odor Control

All necessary means will be employed to prevent on- and off-Site odor nuisances. At a minimum, procedures will include: (a) limiting the area of open excavations; (b) shrouding open excavations with tarps and other covers; and (c) use of foams to cover exposed odorous soils. If odors develop and cannot otherwise be controlled, additional means to eliminate odor nuisances will include: (d) direct load-out of soils to trucks for off-Site disposal; and (e) use of chemical odorants in spray or misting systems.

This odor control plan is capable of controlling emissions of nuisance odors. If nuisance odors are identified, work will be halted and the source of odors will be identified and corrected. Work will not resume until all nuisance odors have

been abated. OER will be notified of all odor complaint events. Implementation of all odor controls, including halt of work, will be the responsibility of the PE/QEP's certifying the Remedial Action Report.

Dust Control

Dust management during invasive on-Site work will include, at a minimum:

- Use of a dedicated water spray methodology for roads, excavation areas and stockpiles.
- Use of properly anchored tarps to cover stockpiles.
- Exercise extra care during dry and high-wind periods.
- Use of gravel or recycled concrete aggregate on egress and other roadways to provide a clean and dust-free road surface.

This dust control plan is capable of controlling emissions of dust. If nuisance dust emissions are identified, work will be halted and the source of dusts will be identified and corrected. Work will not resume until all nuisance dust emissions have been abated. OER will be notified of all dust complaint events. Implementation of all dust controls, including halt of work, will be the responsibility of the PE/QEP's responsible for certifying the Remedial Action Report.

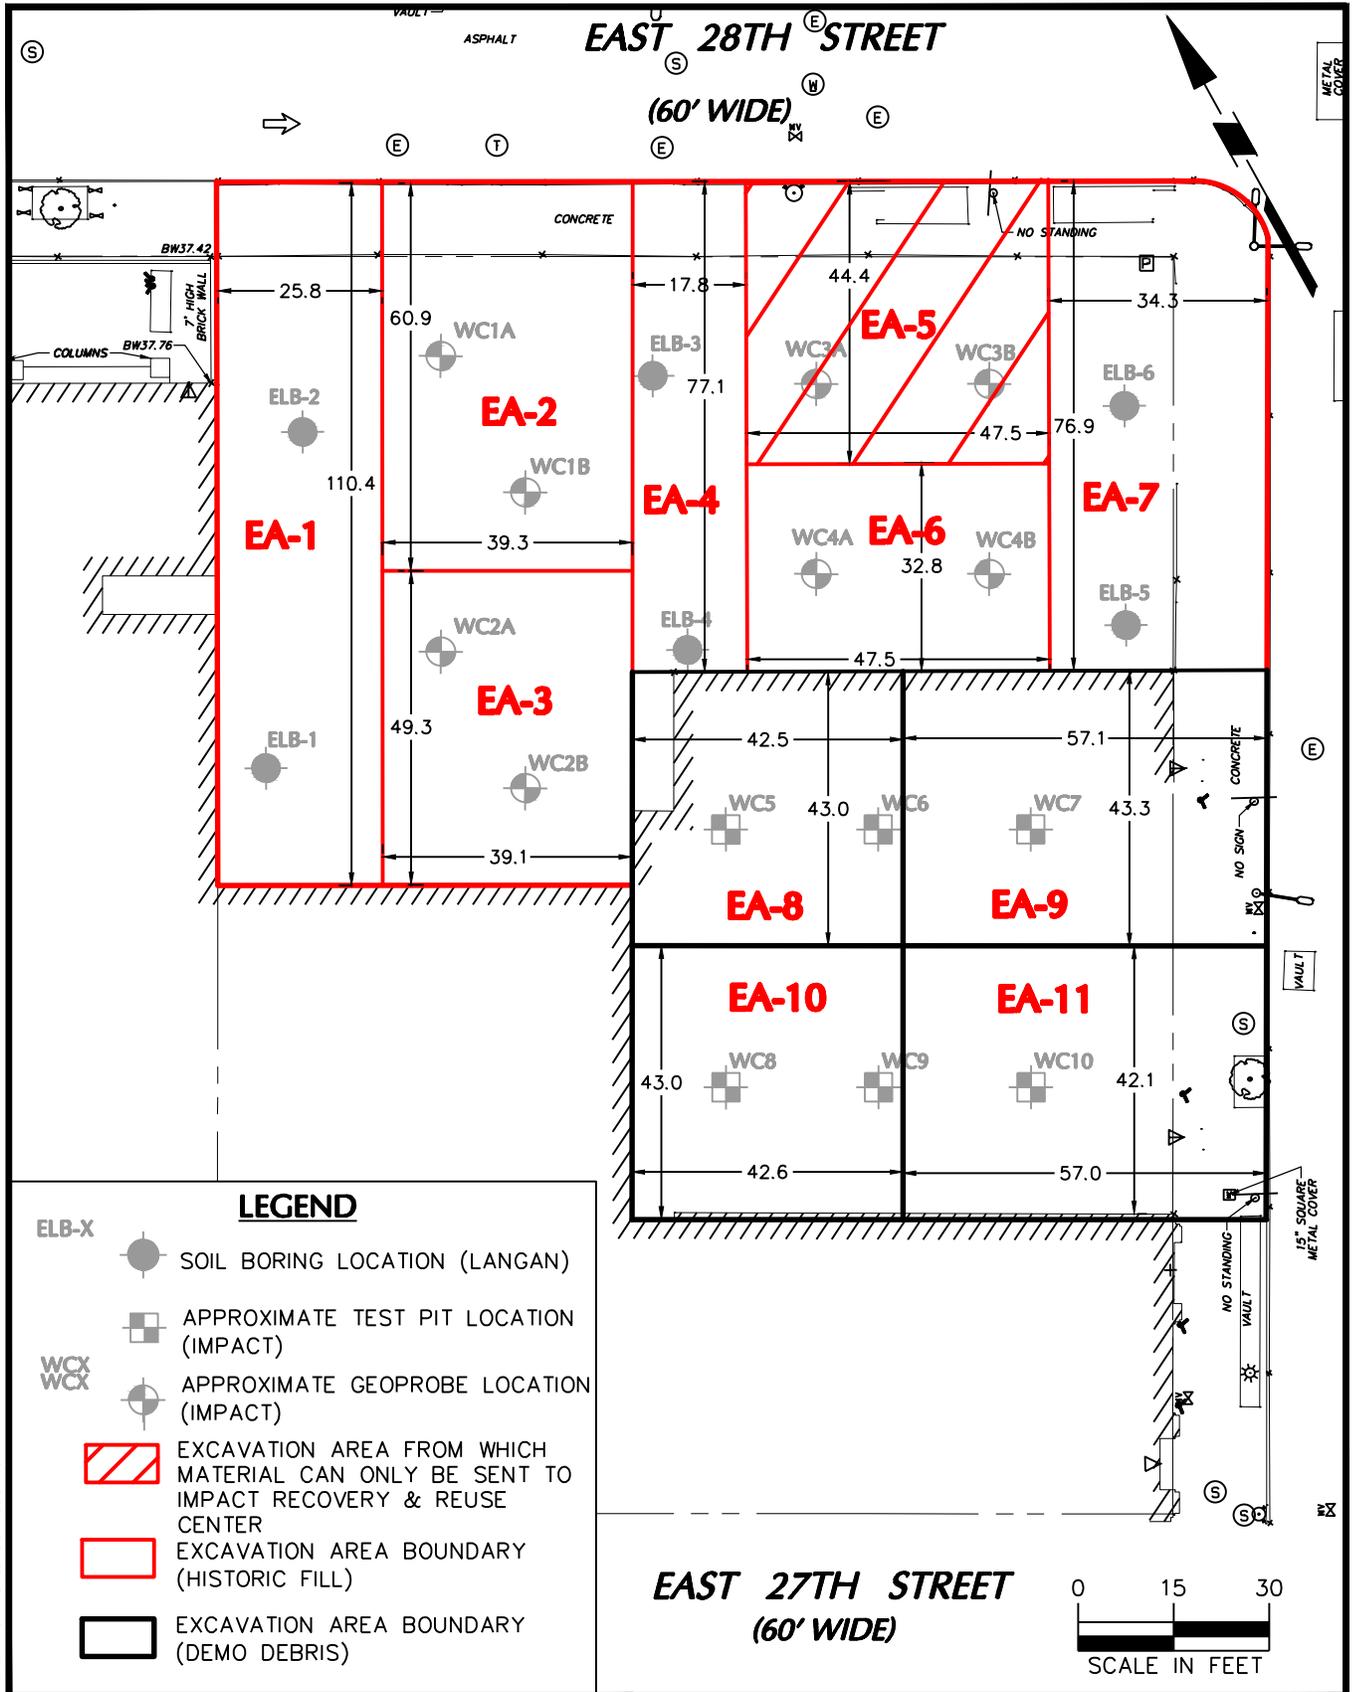

Other Nuisances

Noise control will be exercised during the remedial program. All remedial work will conform, at a minimum, to NYC noise control standards.

Rodent control will be provided, during Site clearing and grubbing, and during the remedial program, as necessary, to prevent nuisances.

APPENDIX E

Disposal Documentation

July 30, 2012

Mr. Steven A. Ciambuschini
Langan Engineering & Environmental Services
619 River Drive Center 1
Elmwood Park, NJ 07407

RE: IMP #4440-01-01-1001
400 Park Ave South, New York, NY

Dear Mr. Ciambuschini:

We have reviewed information regarding the material from the above referenced site ("site") proposed for acceptance at the Former General Motors Linden Assembly Plant located at 1016 West Edgar Road, Linden, NJ. Impact Environmental has reviewed soil analytical data attached to the following reports:

- Langan Remedial Investigation Report, dated February 15, 2012;
- Langan Environmental Soil Pre-Characterization Results Memorandum, dated March 7, 2012;
- Langan Addendum to Environmental Soil Pre-Characterization Results Memorandum, dated March 30, 2012, Revised April 9, 2012; and
- Impact Environmental Supplemental Waste Characterization Sampling Results Letter, dated June 8, 2012.

As requested, we confirm that we have reviewed the provided data and, based on the analytical results, the Former General Motors Linden Assembly Plant (NJDEP SRP PI# 014755) is permitted as suitable disposal facilities for materials from the following sampling locations:

WC-2A, WC-2B, WC-4A, WC-4B, WC-5A, WC-5B, WC-6A, WC-6B, WC-1 COMP/GRAB NATIVE, WC-2 COMP/GRAB FILL, WC-3 COMP/GRAB FILL, WC-3 COMP/GRAB NATIVE, WC-4 COMP/GRAB FILL, WC-4 COMP/GRAB NATIVE, WC-5 COMP/GRAB NATIVE, WC-6 COMP/GRAB NATIVE, WC-7 COMP/GRAB NATIVE

The volume of material represented by these samples is approximately 19,500 cubic yards.

Materials delivered to any of our facilities are subject in all respects to the terms and conditions set forth in the application documents provided for the site, our permits, and applicable regulatory authorizations.

We encourage you to contact us should you have any further questions regarding our acceptance of these materials at our facilities.

Sincerely,
IMPACT ENVIRONMENTAL

Richard Parrish
President

10 July 2012

Douglas Birkmire
Impact Environmental, LLC
170 Keyland Court
Bohemia, New York 11716

**Re: Soil Disposal Acceptance Documentation
Lyndhurst, New Jersey Facility
400 Park Avenue South
New York, New York
NYCOER BCP Site No. 12CBCP042M
Langan Project No.: 100271601**

Dear Mr. Birkmire:

This letter is being provided by Steven A. Ciambuschini of Langan as the Qualified Environmental Professional (QEP) for the above referenced job which is enrolled in the New York City Office of Environmental Remediation (NYCOER) Brownfield Cleanup Program (Site No. 12CBCP042M). Impact Recovery and Reuse Center, located at 1000 Page Avenue, Lyndhurst, NJ (NJDEP Permit No. CBG110002) has been identified as the accepting facility for the non-hazardous impacted fill material that will be removed from the above referenced site. It is our understanding that the material will be transferred from the Lyndhurst facility to be used as beneficial use as mine reclamation material to the New Jersey Zinc Facility in Palmerton, Pennsylvania (PADEP Permit No. WMGO96NE003). The following is a list of the investigation activities that have been conducted and reviewed by your facility, a copy of the results tables from each of these investigations is provided as an attachment to this letter:

- Langan Remedial Investigation Report, dated 15 February 2012;
- Langan Environmental Soil Pre-Characterization Results Memorandum, dated 7 March 2012;
- Langan Addendum to Environmental Soil Pre-Characterization Results Memorandum, dated 30 March 2012, Revised 9 April 2012; and,
- Impact Environmental Supplemental Waste Characterization Sampling Results Letter, dated 8 June 2012

As documented in the above referenced reports, the material is impacted with non-hazardous levels of metals, pesticides and polycyclic aromatic hydrocarbons. We request that you provide us a letter stating that you have reviewed the provided data and that based on the analytical results your facility and the Palmerton facility are licensed and permitted as a suitable disposal

facilities. Additionally, in accordance with the above referenced facility permits, all pertinent documentation supporting the disposal of this material will be provided.

Please call with any questions you have regarding this letter (201.794.6900)

Sincerely,
Langan Engineering and Environmental Services, Inc.

Steven A. Ciambuschini, P.G., L.E.P.
Senior Associate / Vice President

Union City, NJ 07807

RE: Supplemental Waste Characterization Sampling Results
400 Park Ave South, New York, NY

Mr. Zacharias,

This letter serves to summarize the supplemental waste characterization sampling event performed by Impact Environmental Consulting, Inc. ("Impact") at the above referenced site on May 29, 2012 and May 30, 2012 at the request of Grid Logistics, LLC ("Grid"). The site is located at 400 Park Avenue South in Manhattan and is known as Block 857, Lots 40 and 46. The sampling event was conducted in accordance with the Sampling Plan prepared by Grid dated May 22, 2012 and under the supervision of Langan Engineering and Environmental Services, Inc. ("Langan").

A Geoprobe® Model 6610 Direct Push Drill Rig was used to collect samples in lot 46 at the locations shown in the attached Sampling Map prepared by Langan. The soil encountered was represented in two distinct layers: a fill layer of sand, gravel, asphalt, brick & concrete and a native layer of sand with small percentage of rock. PID readings above 0.0 were not registered in any of the soil recovered. Two five-point vertical composite samples were collected from each grid; one in the fill layer and one in the native layer. Each composite sample consists of three discrete samples from one boring location and two discrete samples from the other pre-determined boring location within each grid. Given the lack of staining, odor or PID detections, one discrete VOC sample was collected in each grid using 5-gram Encore sampler near the bottom interval in both the fill and native layers.

Test pit sampling was conducted using an excavator in Lot 40. C&D materials from existing grade to the bottom slab of the former building were excavated through and placed aside. Additional four (4) feet of demolition debris was encountered on-site. When the slab (approximately sixteen feet depth below grade surface) was reached it was penetrated and

samples from the native layer beneath the slab were collected from the locations shown on the Sampling Map. One five-point vertical composite sample was collected from each grid in the native layer under the slab. Each composite has three discrete samples from one test pit location and two discrete samples from the other test pit location within each grid. Given the lack of staining, odor or PID detections, one discrete VOC sample was collected in each grid using 5-gram Encore sampler from a random point within each grid.

Please find the supplemental waste characterization results summarized in Table 1 as compared against NYCRR Part 375 Residential, NYCRR Part 375 Unrestricted Use, and NYCRR Part 375 Restricted Residential limit values.

Please contact us if you have any questions or concerns.

Sincerely,

IMPACT ENVIRONMENTAL

A handwritten signature in black ink, appearing to read "Die Fu", is positioned above a thin horizontal line.

Notes: Shaded values indicate an exceedance of NYCRR 375 Residential, NYCRR 375 Unrestricted Use, NYCRR 375 Restricted Residential values.

Notes ug/kg = micrograms per kilogram (ppb)
 mg/kg = milligrams per kilogram (ppm)

Warning: It is a violation of the NYS Education Law Article 145 for any person, unless he is acting under the direction of a licensed Professional Engineer, to alter this item in any way.

NOTES:

1. ALL PROPOSED GEOPROBE, TEST PIT AND NYCT SUBWAY TUNNEL LOCATIONS ARE APPROXIMATE.
2. BASE DRAWING REPRODUCED FROM "ARCHITECTURAL SURVEY" PREPARED BY TRUE NORTH SURVEYORS, INC., DATED 28 JANUARY 2003.
3. THE NYCT SUBWAY TUNNEL AND STATION STRUCTURE LOCATION AND ALIGNMENT REPRODUCED FROM THE FOLLOWING DRAWINGS:
 - A. "CONTRACT NO1-28TH ST. STATION STRUCTURAL PLANS PASSAGEWAY CONNECTING N.Y. LIFE BUILDING WITH 28TH ST. STATION" DWG NO. 2540, DATED AUGUST 9, 1928.
 - B. "28TH ST. AND 4TH AVE STATION REVISED PLAN OF COLUMNS AND BEAMS AROUND STAIRWELL - PLAN OF S.E. AND N.W. STAIRS, N.E. AND S.W. STAIRS SIMILAR," UNDATED.

LEGEND:

- APPROXIMATE GEOPROBE LOCATION

Lab Number: L1209599
Report Date: 06/06/12

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples free of charge for 30 days from the date the project is completed. After 30 days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	- Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
G	- The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
H	- The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
I	- The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
M	- Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
NJ	- Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

Report Format: DU Report with "J" Qualifiers

Project Name: 400 PAS
Project Number: 4440

Lab Number: L1209599
Report Date: 06/06/12

Data Qualifiers

- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL). This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised May 11, 2012 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. **NELAP Accredited Solid Waste/Soil.**

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP) 504.1, Ethylene Dibromide (EDB) 504.1, 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223 P/A), E. Coli. – Colilert (SM9223 P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D, Fecal Coliform-EC Medium 9221E).

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. Microbiology Parameters: Total Coliform – MF mEndo (SM9222B), Total Coliform – MTF (SM9221B), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform – A-1 Broth (SM9221E), Enterolert, E.Coli 9223.

Solid Waste/Soil (Inorganic Parameters: pH, Sulfide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), SPLP Leach (1312 metals only), Reactivity. Organic Parameters: PCBs, PCBs in Oil, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH, Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Dalapon, Volatile Organics, Acid Extractables (Phenols), Benzidines, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Maine Department of Human Services Certificate/Lab ID: 2009024.

Drinking Water (Inorganic Parameters: SM9215B, 9222D, 9223B, EPA 180.1, 353.2, SM2130B, 2320B, 2540C, 4500CI-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B, 4500NO3-F, EPA 200.7, EPA 200.8, 245.1, EPA 300.0. Organic Parameters: 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 350.1, 351.1, 353.2, 410.4, 420.1, SM2320B, 2510B, 2540C, 2540D, 426C, 4500CI-D, 4500CI-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-B, 4500Norg-C, 4500NH3-B, 4500NH3-G, 4500NO3-F, 4500P-B, 4500P-E, 5210B, 5220D, 5310C, 9010B, 9040B, 9030B, 7470A, 7196A, 2340B, EPA 200.7, 6010B, 200.8, 6020, 245.1, 1311, 1312, 3005A, Enterolert, 9223D, 9222D. Organic Parameters: 608, 624, 625, 8081A, 8082, 8330, 8151A, 8260B, 8270C, 3510C, 3630C, 5030B, ME-DRO, ME-GRO, MA-EPH, MA-VPH.)

Solid Waste/Soil (Inorganic Parameters: 9010B, 9012A, 9014A, 9030B, 9040B, 9045C, 6010B, 7471A, 7196A, 9050A, 1010, 1030, 9065, 1311, 1312, 3005A, 3050B. Organic Parameters: ME-DRO, ME-GRO, MA-EPH, MA-VPH, 8260B, 8270C, 8330, 8151A, 8081A, 8082, 3540C, 3546, 3580A, 3630C, 5030B, 5035.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.

Drinking Water (Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl) (EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Fluoride, Sulfate); (EPA 353.2 for: Nitrate-N, Nitrite-N); (SM4500NO3-F for: Nitrate-N and Nitrite-N); 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, 2320B, SM2540C, SM4500H-B. Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics); (504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), EPA 332. Microbiology Parameters: SM9215B; ENZ. SUB. SM9223; ColilertQT SM9223B; MF-SM9222D.)

SM2510B, 2540C, 2340B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Ammonia-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.

Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics),(608 for: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs-Water), (EPA 625 for SVOC Acid Extractables and SVOC Base/Neutral Extractables), 600/4-81-045-PCB-Oil. Microbiology Parameters: (ColilertQT SM9223B; Enterolert-QT: SM9222D-MF.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 200307. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM 9222B, 9223B, 9215B, EPA 200.7, 200.8, 245.2, 300.0, SM4500CN-E, 4500H+B, 4500NO3-F, 2320B, 2510B, 2540C, 4500F-C, 5310C, 2120B, EPA 332.0. Organic Parameters: 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM9222D, 9221B, 9222B, 9221E-EC, EPA 3005A, 200.7, 200.8, 245.1, 245.2, SW-846 6010B, 6010C, 6020, 6020A, 7196A, 7470A, SM3500-CR-D, EPA 120.1, 300.0, 350.1, 350.2, 351.1, 353.2, 410.4, 420.1, 426C, 1664A, SW-846 9010B, 9030B, 9040B, SM426C, SM2120B, 2310B, 2320B, 2540B, 2540D, 4500H+B, 4500CL-E, 4500CN-E, 4500NH3-H, 4500NO3-F, 4500NO2-B, 4500P-E, 4500-S2-D, 5210B, 5220D, 2510B, 2540C, 4500F-C, 5310C, 5540C, LACHAT 10-204-00-1-A, LACHAT 10-107-06-2-D. Organic Parameters: SW-846 3510C, 3630C, 5030B, 8260B, 8270C, 8270D, 8330, EPA 624, 625, 608, SW-846 8082, 8081A, 8081B, 8151A.)

Solid & Chemical Materials (Inorganic Parameters: SW-846 6010B, 6010C, 7196A, 7471A, 1010, 1030, 9010, 9012A, 9014, 9030B, 9040B, 9045C, 9050, 9065, 1311, 1312, 3005A, 3050B, 3060A. Organic Parameters: SW-846 3540C, 3546, 3550B, 3580A, 3630C, 5030B, 5035, 8260B, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330, 8151A, 8015B, 8082, 8082A, 8081A, 8081B.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA935. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM9222B, 9221E, 9223B, 9215B, 4500CN-CE, 4500NO3-F, 4500F-C, EPA 300.0, 200.7, 200.8, 245.2, 2540C, SM2120B, 2320B, 2510B, 5310C, SM4500H-B. Organic Parameters: EPA 332, 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM5210B, EPA 410.4, SM5220D, 4500CI-E, EPA 300.0, SM2120B, 2340B, SM4500F-BC, EPA 200.7, 200.8, 351.1, LACHAT 10-107-06-2-D, EPA 353.2, SM4500NO3-F, 4500NO2-B, EPA 1664A, SM5310B, C or D, 4500-PE, EPA 420.1, SM510ABC, SM4500P-B5+E, 2540B, 2540C, 2540D, 2540G, EPA 120.1, SM2510B, SM15 426C, 9222D, 9221B, 9221C, 9221E, 9222B, 9215B, 2310B, 2320B, 4500NH3-H, 4500-S D, EPA 350.1, 350.2, SW-846 1312, 7470A, 5540C, SM4500H-B, 4500SO3-B, SM3500Cr-D, 4500CN-CE, EPA 245.1, 245.2, SW-846 9040B, 3005A, 3015, EPA 6010B, 6010C, 6020, 6020A, 7196A, 3060A, SW-846 9010B, 9030B. Organic Parameters: SW-846 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3510C, EPA 608, 624, 625, SW-846 3630C, 5030B, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 1,4-Dioxane by NJ Modified 8270, 8015B, NJ OQA-QAM-025 Rev.7, NJ EPH.)

Solid & Chemical Materials (Inorganic Parameters: SW-846, 6010B, 6010C, 6020, 6020A, 7196A, 3060A, 9010B, 9030B, 1010, 1030, 1311, 1312, 3005A, 3050B, 7471A, 7471B, 9014, 9012A, 9040B, 9045C, 9050A, 9065. Organic Parameters: SW-846 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3540C, 3546, 3580A, 3630C, 5030B, 5035L, 5035H, NJ OQA-QAM-025 Rev.7, NJ EPH.)

New York Department of Health Certificate/Lab ID: 11148. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM9223B, 9222B, 9215B, EPA 200.8, 200.7, 245.2, SM5310C, EPA 332.0, SM2320B, EPA 300.0, SM2120B, 4500CN-E, 4500F-C, 4500NO3-F, 2540C, SM 2510B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: SM9221E, 9222D, 9221B, 9222B, 9215B, 5210B, 5310C, EPA 410.4, SM5220D, 2310B-4a, 2320B, EPA 200.7, 300.0, SM4500CL-E, 4500F-C, SM15 426C, EPA 350.1, SM4500NH3-BH, EPA 351.1, LACHAT 10-107-06-2, EPA 353.2, SM4500-NO3-F, 4500-NO2-B, 4500P-E, 2540C, 2540B, 2540D, EPA 200.8, EPA 6010B, 6010C, 6020, 6020A, EPA 7196A, SM3500Cr-D, EPA 245.1, 245.2, 7470A, SM2120B, LACHAT 10-204-00-1-A, 4500CN-CE, EPA 1664A, EPA 420.1, SM14 510C, EPA 120.1, SM2510B, SM4500S-D, SM5540C, EPA 3005A, 3015, 9010B, 9030B. Organic Parameters: EPA 624, 8260B, 8270C, 8270D, 625, 608, 8081A, 8081B, 8151A, 8330, 8082, 8082A, EPA 3510C, 5030B.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1010, 1030, EPA 6010B, 6010C, 7196A, 7471A, 7471B, 9012A, 9014, 9065, 9050A, EPA 1311, 1312, 3005A, 3050B, 9010B, 9030B. Organic Parameters: EPA 8260B, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8015B, 8015C, 8081A, 8081B, 8151A, 8330, 8082 8082A, 3540C, 3546, 3580, 3580A, 5030B, 5035.)

North Carolina Department of the Environment and Natural Resources Certificate/Lab ID : 666. Organic Parameters: MA-EPH, MA-VPH.

Drinking Water Program Certificate/Lab ID: 25700. (Inorganic Parameters: Chloride EPA 300.0. Organic Parameters: 524.2)

Pennsylvania Department of Environmental Protection Certificate/Lab ID : 68-03671. **NELAP Accredited.**
Drinking Water (Organic Parameters: EPA 524.2, 504.1)

Non-Potable Water (Inorganic Parameters: EPA 1312, 3005A, 200.7, 410.4, 1664A, SM2540D, 5210B, 5220D, 4500-P, BE. Organic Parameters: EPA 3510C, 3630C, 5030B, 625, 624, 608, 8081A, 8081B, 8082, 8082A, 8151A, 8260B, 8270C, 8270D, 8330)

Solid & Hazardous Waste (Inorganic Parameters: EPA 350.1, 1010, 1030, 1311, 1312, 3050B, 3060A, 6010B, 6010C, 7196A, 7471A, 9010B, 9012A, 9014, 9040B, 9045C, 9050, 9065, SM 4500NH3-H. Organic Parameters: 3540C, 3546, 3580A, 3630C, 5035, 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8260B, 8270C, 8270D, 8330)

Rhode Island Department of Health Certificate/Lab ID: LAO00065. **NELAP Accredited via NY-DOH.**

Refer to MA-DEP Certificate for Potable and Non-Potable Water.

Refer to NJ-DEP Certificate for Potable and Non-Potable Water.

Texas Commission on Environmental Quality Certificate/Lab ID: T104704476-09-1. **NELAP Accredited.**

Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664, 200.7, 200.8, 245.1, 245.2, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1, 6010, 6020, 7196, 7470, 9040, SM 2120B, 2310B, 2320B, 2510B, 2540B, 2540C, 2540D, 426C, 4500CL-E, 4500CN-E, 4500F-C, 4500H+B, 4500NH3-H, 4500NO2B, 4500P-E, 4500 S²⁻ D, 510C, 5210B, 5220D, 5310C, 5540C. Organic Parameters: EPA 608, 624, 625, 8081, 8082, 8151, 8260, 8270, 8330.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1311, 1312, 9012, 9014, 9040, 9045, 9050, 9065.)

Virginia Division of Consolidated Laboratory Services Certificate/Lab ID: 460195. **NELAP Accredited.**

Non-Potable Water (Inorganic Parameters: EPA 3005A, 3015, 1312, 6010B, 6010C, SM4500S-D, SM4500-CN-CE, Lachat 10-204-00-1-X. Organic Parameters: EPA 8260B)

Solid & Hazardous Waste (Inorganic Parameters: EPA 3050B, 1311, 1312, 6010B, 6010C, 9030B, 9010B, 9012A, 9014. Organic Parameters: EPA 5035, 5030B, 8260B, 8015B, 8015C.)

Department of Defense, L-A-B Certificate/Lab ID: L2217.

Drinking Water (Inorganic Parameters: SM 4500H-B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: EPA 200.7, 200.8, 6010B, 6010C, 6020, 6020A, 245.1, 245.2, 7470A, 9040B, 9010B, 180.1, 300.0, 332.0, 6860, 353.2, 410.4, 9060, 1664A, SM 4500CN-E, 4500H-B, 4500NO3-F, 4500CL-D, 5220D, 5310C, 2130B, 2320B, 2540C, 3005A, 3015, 9010B, 9056. Organic Parameters: EPA 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330A, 8082, 8082A, 8081A, 8081B, 3510C, 5030B, MassDEP EPH, MassDEP VPH.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 200.7, 6010B, 6010C, 7471A, 6860, 1311, 1312, 3050B, 7196A, 9010B, 9012A, 9040B, 9045C, 3500-CR-D, 4500CN-CE, 2540G, Organic Parameters: EPA 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330A/B-prep, 8082, 8082A, 8081A, 8081B, 3540C, 3546, 3580A, 5035A, MassDEP EPH, MassDEP VPH.)

The following analytes are not included in our current NELAP/TNI Scope of Accreditation:

EPA 8260B: Freon-113, 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene. **EPA 8330A:** PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT. **EPA 8270C:** Methyl naphthalene, Dimethyl naphthalene, Total Methylnaphthalenes, Total Dimethylnaphthalenes, 1,4-Diphenylhydrazine (Azobenzene). **EPA 625:** 4-Chloroaniline, 4-Methylphenol. Total Phosphorus in a soil matrix, Chloride in a soil matrix, TKN in a soil matrix, NO₂ in a soil matrix, NO₃ in a soil matrix, SO₄ in a soil matrix. **EPA 9071:** Total Petroleum Hydrocarbons, Oil & Grease

Project Name: 400 PAS
Project Number: 4440

Lab Number: L1209613
Report Date: 06/06/12

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples free of charge for 30 days from the date the project is completed. After 30 days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples.

Please contact Client Services at 800-624-9220 with any questions.

Project Number: 4440

Lab Number: L1209613
Report Date: 06/06/12

Case Narrative (continued)

Report Submission

This is a partial report. A final report will be issued as soon as the results of all requested analyses become available.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L1209613-01 was analyzed on dilution due to the presence of non-target analytes.

Pesticides

L1209613-01 and -03 were analyzed on dilutions due to the presence of non-target analytes.

The dual column RPD for L1209613-01 is above the acceptance criteria for 4,4'-DDE; however, obvious column interferences are present. Due to these interferences, the lower of the two results is reported and qualified with a "P".

The surrogate recoveries for L1209613-01 are below the acceptance criteria for 2,4,5,6-Tetrachloro-m-xylene and Decachlorobiphenyl (both 0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

Total Metals

A bracketing CCB associated with L1209613-01 through -07 failed for Iron. The associated sample concentrations are greater than 10x the concentration in the CCB, no further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Elizabeth Simmons

GLOSSARY

Acronyms

EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	- Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
G	- The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
H	- The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
I	- The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
M	- Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
NJ	- Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

Report Format: DU Report with "J" Qualifiers

Project Name: 400 PAS
Project Number: 4440

Lab Number: L1209613
Report Date: 06/06/12

Data Qualifiers

- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL). This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised May 11, 2012 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. **NELAP Accredited Solid Waste/Soil.**

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP) 504.1, Ethylene Dibromide (EDB) 504.1, 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223 P/A), E. Coli. – Colilert (SM9223 P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D, Fecal Coliform-EC Medium 9221E).

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. Microbiology Parameters: Total Coliform – MF mEndo (SM9222B), Total Coliform – MTF (SM9221B), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform – A-1 Broth (SM9221E), Enterolert, E.Coli 9223.

Solid Waste/Soil (Inorganic Parameters: pH, Sulfide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), SPLP Leach (1312 metals only), Reactivity. Organic Parameters: PCBs, PCBs in Oil, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH, Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Dalapon, Volatile Organics, Acid Extractables (Phenols), Benzidines, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Maine Department of Human Services Certificate/Lab ID: 2009024.

Drinking Water (Inorganic Parameters: SM9215B, 9222D, 9223B, EPA 180.1, 353.2, SM2130B, 2320B, 2540C, 4500CI-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B, 4500NO3-F, EPA 200.7, EPA 200.8, 245.1, EPA 300.0. Organic Parameters: 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 350.1, 351.1, 353.2, 410.4, 420.1, SM2320B, 2510B, 2540C, 2540D, 426C, 4500CI-D, 4500CI-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-B, 4500Norg-C, 4500NH3-B, 4500NH3-G, 4500NO3-F, 4500P-B, 4500P-E, 5210B, 5220D, 5310C, 9010B, 9040B, 9030B, 7470A, 7196A, 2340B, EPA 200.7, 6010B, 200.8, 6020, 245.1, 1311, 1312, 3005A, Enterolert, 9223D, 9222D. Organic Parameters: 608, 624, 625, 8081A, 8082, 8330, 8151A, 8260B, 8270C, 3510C, 3630C, 5030B, ME-DRO, ME-GRO, MA-EPH, MA-VPH.)

Solid Waste/Soil (Inorganic Parameters: 9010B, 9012A, 9014A, 9030B, 9040B, 9045C, 6010B, 7471A, 7196A, 9050A, 1010, 1030, 9065, 1311, 1312, 3005A, 3050B. Organic Parameters: ME-DRO, ME-GRO, MA-EPH, MA-VPH, 8260B, 8270C, 8330, 8151A, 8081A, 8082, 3540C, 3546, 3580A, 3630C, 5030B, 5035.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.

Drinking Water (Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl) (EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Fluoride, Sulfate); (EPA 353.2 for: Nitrate-N, Nitrite-N); (SM4500NO3-F for: Nitrate-N and Nitrite-N); 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, 2320B, SM2540C, SM4500H-B. Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics); (504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), EPA 332. Microbiology Parameters: SM9215B; ENZ. SUB. SM9223; ColilertQT SM9223B; MF-SM9222D.)

SM2510B, 2540C, 2340B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Ammonia-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.

Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics),(608 for: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs-Water), (EPA 625 for SVOC Acid Extractables and SVOC Base/Neutral Extractables), 600/4-81-045-PCB-Oil. Microbiology Parameters: (ColilertQT SM9223B; Enterolert-QT: SM9222D-MF.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 200307. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM 9222B, 9223B, 9215B, EPA 200.7, 200.8, 245.2, 300.0, SM4500CN-E, 4500H+B, 4500NO3-F, 2320B, 2510B, 2540C, 4500F-C, 5310C, 2120B, EPA 332.0. Organic Parameters: 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM9222D, 9221B, 9222B, 9221E-EC, EPA 3005A, 200.7, 200.8, 245.1, 245.2, SW-846 6010B, 6010C, 6020, 6020A, 7196A, 7470A, SM3500-CR-D, EPA 120.1, 300.0, 350.1, 350.2, 351.1, 353.2, 410.4, 420.1, 426C, 1664A, SW-846 9010B, 9030B, 9040B, SM426C, SM2120B, 2310B, 2320B, 2540B, 2540D, 4500H+B, 4500CL-E, 4500CN-E, 4500NH3-H, 4500NO3-F, 4500NO2-B, 4500P-E, 4500-S2-D, 5210B, 5220D, 2510B, 2540C, 4500F-C, 5310C, 5540C, LACHAT 10-204-00-1-A, LACHAT 10-107-06-2-D. Organic Parameters: SW-846 3510C, 3630C, 5030B, 8260B, 8270C, 8270D, 8330, EPA 624, 625, 608, SW-846 8082, 8081A, 8081B, 8151A.)

Solid & Chemical Materials (Inorganic Parameters: SW-846 6010B, 6010C, 7196A, 7471A, 1010, 1030, 9010, 9012A, 9014, 9030B, 9040B, 9045C, 9050, 9065, 1311, 1312, 3005A, 3050B, 3060A. Organic Parameters: SW-846 3540C, 3546, 3550B, 3580A, 3630C, 5030B, 5035, 8260B, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330, 8151A, 8015B, 8082, 8082A, 8081A, 8081B.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA935. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM9222B, 9221E, 9223B, 9215B, 4500CN-CE, 4500NO3-F, 4500F-C, EPA 300.0, 200.7, 200.8, 245.2, 2540C, SM2120B, 2320B, 2510B, 5310C, SM4500H-B. Organic Parameters: EPA 332, 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM5210B, EPA 410.4, SM5220D, 4500CI-E, EPA 300.0, SM2120B, 2340B, SM4500F-BC, EPA 200.7, 200.8, 351.1, LACHAT 10-107-06-2-D, EPA 353.2, SM4500NO3-F, 4500NO2-B, EPA 1664A, SM5310B, C or D, 4500-PE, EPA 420.1, SM510ABC, SM4500P-B5+E, 2540B, 2540C, 2540D, 2540G, EPA 120.1, SM2510B, SM15 426C, 9222D, 9221B, 9221C, 9221E, 9222B, 9215B, 2310B, 2320B, 4500NH3-H, 4500-S D, EPA 350.1, 350.2, SW-846 1312, 7470A, 5540C, SM4500H-B, 4500SO3-B, SM3500Cr-D, 4500CN-CE, EPA 245.1, 245.2, SW-846 9040B, 3005A, 3015, EPA 6010B, 6010C, 6020, 6020A, 7196A, 3060A, SW-846 9010B, 9030B. Organic Parameters: SW-846 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3510C, EPA 608, 624, 625, SW-846 3630C, 5030B, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 1,4-Dioxane by NJ Modified 8270, 8015B, NJ OQA-QAM-025 Rev.7, NJ EPH.)

Solid & Chemical Materials (Inorganic Parameters: SW-846, 6010B, 6010C, 6020, 6020A, 7196A, 3060A, 9010B, 9030B, 1010, 1030, 1311, 1312, 3005A, 3050B, 7471A, 7471B, 9014, 9012A, 9040B, 9045C, 9050A, 9065. Organic Parameters: SW-846 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3540C, 3546, 3580A, 3630C, 5030B, 5035L, 5035H, NJ OQA-QAM-025 Rev.7, NJ EPH.)

New York Department of Health Certificate/Lab ID: 11148. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM9223B, 9222B, 9215B, EPA 200.8, 200.7, 245.2, SM5310C, EPA 332.0, SM2320B, EPA 300.0, SM2120B, 4500CN-E, 4500F-C, 4500NO3-F, 2540C, SM 2510B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: SM9221E, 9222D, 9221B, 9222B, 9215B, 5210B, 5310C, EPA 410.4, SM5220D, 2310B-4a, 2320B, EPA 200.7, 300.0, SM4500CL-E, 4500F-C, SM15 426C, EPA 350.1, SM4500NH3-BH, EPA 351.1, LACHAT 10-107-06-2, EPA 353.2, SM4500-NO3-F, 4500-NO2-B, 4500P-E, 2540C, 2540B, 2540D, EPA 200.8, EPA 6010B, 6010C, 6020, 6020A, EPA 7196A, SM3500Cr-D, EPA 245.1, 245.2, 7470A, SM2120B, LACHAT 10-204-00-1-A, 4500CN-CE, EPA 1664A, EPA 420.1, SM14 510C, EPA 120.1, SM2510B, SM4500S-D, SM5540C, EPA 3005A, 3015, 9010B, 9030B. Organic Parameters: EPA 624, 8260B, 8270C, 8270D, 625, 608, 8081A, 8081B, 8151A, 8330, 8082, 8082A, EPA 3510C, 5030B.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1010, 1030, EPA 6010B, 6010C, 7196A, 7471A, 7471B, 9012A, 9014, 9065, 9050A, EPA 1311, 1312, 3005A, 3050B, 9010B, 9030B. Organic Parameters: EPA 8260B, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8015B, 8015C, 8081A, 8081B, 8151A, 8330, 8082 8082A, 3540C, 3546, 3580, 3580A, 5030B, 5035.)

North Carolina Department of the Environment and Natural Resources Certificate/Lab ID : 666. Organic Parameters: MA-EPH, MA-VPH.

Drinking Water Program Certificate/Lab ID: 25700. (Inorganic Parameters: Chloride EPA 300.0. Organic Parameters: 524.2)

Pennsylvania Department of Environmental Protection Certificate/Lab ID : 68-03671. **NELAP Accredited.**
Drinking Water (Organic Parameters: EPA 524.2, 504.1)

Non-Potable Water (Inorganic Parameters: EPA 1312, 3005A, 200.7, 410.4, 1664A, SM2540D, 5210B, 5220D, 4500-P, BE. Organic Parameters: EPA 3510C, 3630C, 5030B, 625, 624, 608, 8081A, 8081B, 8082, 8082A, 8151A, 8260B, 8270C, 8270D, 8330)

Solid & Hazardous Waste (Inorganic Parameters: EPA 350.1, 1010, 1030, 1311, 1312, 3050B, 3060A, 6010B, 6010C, 7196A, 7471A, 9010B, 9012A, 9014, 9040B, 9045C, 9050, 9065, SM 4500NH3-H. Organic Parameters: 3540C, 3546, 3580A, 3630C, 5035, 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8260B, 8270C, 8270D, 8330)

Rhode Island Department of Health Certificate/Lab ID: LAO00065. **NELAP Accredited via NY-DOH.**
Refer to MA-DEP Certificate for Potable and Non-Potable Water.
Refer to NJ-DEP Certificate for Potable and Non-Potable Water.

Texas Commission on Environmental Quality Certificate/Lab ID: T104704476-09-1. **NELAP Accredited.**

Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664, 200.7, 200.8, 245.1, 245.2, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1, 6010, 6020, 7196, 7470, 9040, SM 2120B, 2310B, 2320B, 2510B, 2540B, 2540C, 2540D, 426C, 4500CL-E, 4500CN-E, 4500F-C, 4500H+B, 4500NH3-H, 4500NO2B, 4500P-E, 4500 S²⁻ D, 510C, 5210B, 5220D, 5310C, 5540C. Organic Parameters: EPA 608, 624, 625, 8081, 8082, 8151, 8260, 8270, 8330.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1311, 1312, 9012, 9014, 9040, 9045, 9050, 9065.)

Virginia Division of Consolidated Laboratory Services Certificate/Lab ID: 460195. **NELAP Accredited.**

Non-Potable Water (Inorganic Parameters: EPA 3005A, 3015, 1312, 6010B, 6010C, SM4500S-D, SM4500-CN-CE, Lachat 10-204-00-1-X. Organic Parameters: EPA 8260B)

Solid & Hazardous Waste (Inorganic Parameters: EPA 3050B, 1311, 1312, 6010B, 6010C, 9030B, 9010B, 9012A, 9014. Organic Parameters: EPA 5035, 5030B, 8260B, 8015B, 8015C.)

Department of Defense, L-A-B Certificate/Lab ID: L2217.

Drinking Water (Inorganic Parameters: SM 4500H-B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: EPA 200.7, 200.8, 6010B, 6010C, 6020, 6020A, 245.1, 245.2, 7470A, 9040B, 9010B, 180.1, 300.0, 332.0, 6860, 353.2, 410.4, 9060, 1664A, SM 4500CN-E, 4500H-B, 4500NO3-F, 4500CL-D, 5220D, 5310C, 2130B, 2320B, 2540C, 3005A, 3015, 9010B, 9056. Organic Parameters: EPA 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330A, 8082, 8082A, 8081A, 8081B, 3510C, 5030B, MassDEP EPH, MassDEP VPH.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 200.7, 6010B, 6010C, 7471A, 6860, 1311, 1312, 3050B, 7196A, 9010B, 9012A, 9040B, 9045C, 3500-CR-D, 4500CN-CE, 2540G, Organic Parameters: EPA 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330A/B-prep, 8082, 8082A, 8081A, 8081B, 3540C, 3546, 3580A, 5035A, MassDEP EPH, MassDEP VPH.)

The following analytes are not included in our current NELAP/TNI Scope of Accreditation:

EPA 8260B: Freon-113, 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene. **EPA 8330A:** PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT. **EPA 8270C:** Methyl naphthalene, Dimethyl naphthalene, Total Methylnaphthalenes, Total Dimethylnaphthalenes, 1,4-Diphenylhydrazine (Azobenzene). **EPA 625:** 4-Chloroaniline, 4-Methylphenol. Total Phosphorus in a soil matrix, Chloride in a soil matrix, TKN in a soil matrix, NO₂ in a soil matrix, NO₃ in a soil matrix, SO₄ in a soil matrix. **EPA 9071:** Total Petroleum Hydrocarbons, Oil & Grease

Project Name: 400 PAS
Project Number: 4440

Lab Number: L1209487
Report Date: 06/07/12

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples free of charge for 30 days from the date the project is completed. After 30 days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 400 PAS
Project Number: 4440

Lab Number: L1209487
Report Date: 06/07/12

Case Narrative (continued)

Report Submission

This is a partial report. A final report will be issued as soon as the results of all requested analyses become available.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The chain of custody did not list any analyses. The analyses performed were specified by the client.

Semivolatile Organics

L1209487-01 and -17 have elevated detection limits due to the dilutions required by the presence of non-target analytes.

The surrogate recoveries for L1209487-01 are below the acceptance criteria for 2-Fluorophenol, Phenol-d6, Nitrobenzene-d5, 2-Fluorobiphenyl, and 4-Terphenyl-d14 (All at 0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

Pesticides

L1209487-01 and -17 have elevated detection limits due to the dilutions required by the presence of non-target analytes.

The surrogate recoveries for L1209487-01 are below the acceptance criteria for 2,4,5,6-Tetrachloro-m-xylene and Decachlorobiphenyl (All at 0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

The dual column RPD for L1209487-01 is above the acceptance criteria for 4,4'-DDE; however, obvious column interferences are present. Due to these interferences, the lower of the two results is reported and qualified with a "P".

The dual column RPD for L1209487-17 is above the acceptance criteria for Chlordane; however, obvious column interferences are present. Due to these interferences, the lower of the two results is reported and qualified with a "P".

Project Name: 400 PAS
Project Number: 4440

Lab Number: L1209487
Report Date: 06/07/12

Case Narrative (continued)

Total Metals

The WG539842-4 MS recovery, performed on L1209487-01, is above the acceptance criteria for Mercury (164%). A post digestion spike was performed with an acceptable recovery of 103%.

TCLP Metals

The WG539866-4 MS recovery, performed on L1209487-01, is above the acceptance criteria for Mercury (141%). A post digestion spike was performed with an acceptable recovery of 118%.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	- Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
G	- The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
H	- The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
I	- The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
M	- Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
NJ	- Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

Report Format: DU Report with "J" Qualifiers

Project Name: 400 PAS
Project Number: 4440

Lab Number: L1209487
Report Date: 06/07/12

Data Qualifiers

- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL). This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised May 11, 2012 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. **NELAP Accredited Solid Waste/Soil.**

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP) 504.1, Ethylene Dibromide (EDB) 504.1, 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223 P/A), E. Coli. – Colilert (SM9223 P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D, Fecal Coliform-EC Medium 9221E).

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. Microbiology Parameters: Total Coliform – MF mEndo (SM9222B), Total Coliform – MTF (SM9221B), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform – A-1 Broth (SM9221E), Enterolert, E.Coli 9223.

Solid Waste/Soil (Inorganic Parameters: pH, Sulfide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), SPLP Leach (1312 metals only), Reactivity. Organic Parameters: PCBs, PCBs in Oil, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH, Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Dalapon, Volatile Organics, Acid Extractables (Phenols), Benzidines, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Maine Department of Human Services Certificate/Lab ID: 2009024.

Drinking Water (Inorganic Parameters: SM9215B, 9222D, 9223B, EPA 180.1, 353.2, SM2130B, 2320B, 2540C, 4500CI-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B, 4500NO3-F, EPA 200.7, EPA 200.8, 245.1, EPA 300.0. Organic Parameters: 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 350.1, 351.1, 353.2, 410.4, 420.1, SM2320B, 2510B, 2540C, 2540D, 426C, 4500CI-D, 4500CI-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-B, 4500Norg-C, 4500NH3-B, 4500NH3-G, 4500NO3-F, 4500P-B, 4500P-E, 5210B, 5220D, 5310C, 9010B, 9040B, 9030B, 7470A, 7196A, 2340B, EPA 200.7, 6010B, 200.8, 6020, 245.1, 1311, 1312, 3005A, Enterolert, 9223D, 9222D. Organic Parameters: 608, 624, 625, 8081A, 8082, 8330, 8151A, 8260B, 8270C, 3510C, 3630C, 5030B, ME-DRO, ME-GRO, MA-EPH, MA-VPH.)

Solid Waste/Soil (Inorganic Parameters: 9010B, 9012A, 9014A, 9030B, 9040B, 9045C, 6010B, 7471A, 7196A, 9050A, 1010, 1030, 9065, 1311, 1312, 3005A, 3050B. Organic Parameters: ME-DRO, ME-GRO, MA-EPH, MA-VPH, 8260B, 8270C, 8330, 8151A, 8081A, 8082, 3540C, 3546, 3580A, 3630C, 5030B, 5035.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.

Drinking Water (Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl) (EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Fluoride, Sulfate); (EPA 353.2 for: Nitrate-N, Nitrite-N); (SM4500NO3-F for: Nitrate-N and Nitrite-N); 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, 2320B, SM2540C, SM4500H-B. Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics); (504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), EPA 332. Microbiology Parameters: SM9215B; ENZ. SUB. SM9223; ColilertQT SM9223B; MF-SM9222D.)

SM2510B, 2540C, 2340B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Ammonia-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.

Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics),(608 for: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs-Water), (EPA 625 for SVOC Acid Extractables and SVOC Base/Neutral Extractables), 600/4-81-045-PCB-Oil. Microbiology Parameters: (ColilertQT SM9223B; Enterolert-QT: SM9222D-MF.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 200307. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM 9222B, 9223B, 9215B, EPA 200.7, 200.8, 245.2, 300.0, SM4500CN-E, 4500H+B, 4500NO3-F, 2320B, 2510B, 2540C, 4500F-C, 5310C, 2120B, EPA 332.0. Organic Parameters: 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM9222D, 9221B, 9222B, 9221E-EC, EPA 3005A, 200.7, 200.8, 245.1, 245.2, SW-846 6010B, 6010C, 6020, 6020A, 7196A, 7470A, SM3500-CR-D, EPA 120.1, 300.0, 350.1, 350.2, 351.1, 353.2, 410.4, 420.1, 426C, 1664A, SW-846 9010B, 9030B, 9040B, SM426C, SM2120B, 2310B, 2320B, 2540B, 2540D, 4500H+B, 4500CL-E, 4500CN-E, 4500NH3-H, 4500NO3-F, 4500NO2-B, 4500P-E, 4500-S2-D, 5210B, 5220D, 2510B, 2540C, 4500F-C, 5310C, 5540C, LACHAT 10-204-00-1-A, LACHAT 10-107-06-2-D. Organic Parameters: SW-846 3510C, 3630C, 5030B, 8260B, 8270C, 8270D, 8330, EPA 624, 625, 608, SW-846 8082, 8081A, 8081B, 8151A.)

Solid & Chemical Materials (Inorganic Parameters: SW-846 6010B, 6010C, 7196A, 7471A, 1010, 1030, 9010, 9012A, 9014, 9030B, 9040B, 9045C, 9050, 9065, 1311, 1312, 3005A, 3050B, 3060A. Organic Parameters: SW-846 3540C, 3546, 3550B, 3580A, 3630C, 5030B, 5035, 8260B, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330, 8151A, 8015B, 8082, 8082A, 8081A, 8081B.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA935. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM9222B, 9221E, 9223B, 9215B, 4500CN-CE, 4500NO3-F, 4500F-C, EPA 300.0, 200.7, 200.8, 245.2, 2540C, SM2120B, 2320B, 2510B, 5310C, SM4500H-B. Organic Parameters: EPA 332, 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM5210B, EPA 410.4, SM5220D, 4500CI-E, EPA 300.0, SM2120B, 2340B, SM4500F-BC, EPA 200.7, 200.8, 351.1, LACHAT 10-107-06-2-D, EPA 353.2, SM4500NO3-F, 4500NO2-B, EPA 1664A, SM5310B, C or D, 4500-PE, EPA 420.1, SM510ABC, SM4500P-B5+E, 2540B, 2540C, 2540D, 2540G, EPA 120.1, SM2510B, SM15 426C, 9222D, 9221B, 9221C, 9221E, 9222B, 9215B, 2310B, 2320B, 4500NH3-H, 4500-S D, EPA 350.1, 350.2, SW-846 1312, 7470A, 5540C, SM4500H-B, 4500SO3-B, SM3500Cr-D, 4500CN-CE, EPA 245.1, 245.2, SW-846 9040B, 3005A, 3015, EPA 6010B, 6010C, 6020, 6020A, 7196A, 3060A, SW-846 9010B, 9030B. Organic Parameters: SW-846 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3510C, EPA 608, 624, 625, SW-846 3630C, 5030B, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 1,4-Dioxane by NJ Modified 8270, 8015B, NJ OQA-QAM-025 Rev.7, NJ EPH.)

Solid & Chemical Materials (Inorganic Parameters: SW-846, 6010B, 6010C, 6020, 6020A, 7196A, 3060A, 9010B, 9030B, 1010, 1030, 1311, 1312, 3005A, 3050B, 7471A, 7471B, 9014, 9012A, 9040B, 9045C, 9050A, 9065. Organic Parameters: SW-846 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3540C, 3546, 3580A, 3630C, 5030B, 5035L, 5035H, NJ OQA-QAM-025 Rev.7, NJ EPH.)

New York Department of Health Certificate/Lab ID: 11148. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM9223B, 9222B, 9215B, EPA 200.8, 200.7, 245.2, SM5310C, EPA 332.0, SM2320B, EPA 300.0, SM2120B, 4500CN-E, 4500F-C, 4500NO3-F, 2540C, SM 2510B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: SM9221E, 9222D, 9221B, 9222B, 9215B, 5210B, 5310C, EPA 410.4, SM5220D, 2310B-4a, 2320B, EPA 200.7, 300.0, SM4500CL-E, 4500F-C, SM15 426C, EPA 350.1, SM4500NH3-BH, EPA 351.1, LACHAT 10-107-06-2, EPA 353.2, SM4500-NO3-F, 4500-NO2-B, 4500P-E, 2540C, 2540B, 2540D, EPA 200.8, EPA 6010B, 6010C, 6020, 6020A, EPA 7196A, SM3500Cr-D, EPA 245.1, 245.2, 7470A, SM2120B, LACHAT 10-204-00-1-A, 4500CN-CE, EPA 1664A, EPA 420.1, SM14 510C, EPA 120.1, SM2510B, SM4500S-D, SM5540C, EPA 3005A, 3015, 9010B, 9030B. Organic Parameters: EPA 624, 8260B, 8270C, 8270D, 625, 608, 8081A, 8081B, 8151A, 8330, 8082, 8082A, EPA 3510C, 5030B.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1010, 1030, EPA 6010B, 6010C, 7196A, 7471A, 7471B, 9012A, 9014, 9065, 9050A, EPA 1311, 1312, 3005A, 3050B, 9010B, 9030B. Organic Parameters: EPA 8260B, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8015B, 8015C, 8081A, 8081B, 8151A, 8330, 8082 8082A, 3540C, 3546, 3580, 3580A, 5030B, 5035.)

North Carolina Department of the Environment and Natural Resources Certificate/Lab ID : 666. Organic Parameters: MA-EPH, MA-VPH.

Drinking Water Program Certificate/Lab ID: 25700. (Inorganic Parameters: Chloride EPA 300.0. Organic Parameters: 524.2)

Pennsylvania Department of Environmental Protection Certificate/Lab ID : 68-03671. **NELAP Accredited.**
Drinking Water (Organic Parameters: EPA 524.2, 504.1)

Non-Potable Water (Inorganic Parameters: EPA 1312, 3005A, 200.7, 410.4, 1664A, SM2540D, 5210B, 5220D, 4500-P, BE. Organic Parameters: EPA 3510C, 3630C, 5030B, 625, 624, 608, 8081A, 8081B, 8082, 8082A, 8151A, 8260B, 8270C, 8270D, 8330)

Solid & Hazardous Waste (Inorganic Parameters: EPA 350.1, 1010, 1030, 1311, 1312, 3050B, 3060A, 6010B, 6010C, 7196A, 7471A, 9010B, 9012A, 9014, 9040B, 9045C, 9050, 9065, SM 4500NH3-H. Organic Parameters: 3540C, 3546, 3580A, 3630C, 5035, 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8260B, 8270C, 8270D, 8330)

Rhode Island Department of Health Certificate/Lab ID: LAO00065. **NELAP Accredited via NY-DOH.**
Refer to MA-DEP Certificate for Potable and Non-Potable Water.
Refer to NJ-DEP Certificate for Potable and Non-Potable Water.

Texas Commission on Environmental Quality Certificate/Lab ID: T104704476-09-1. **NELAP Accredited.**

Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664, 200.7, 200.8, 245.1, 245.2, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1, 6010, 6020, 7196, 7470, 9040, SM 2120B, 2310B, 2320B, 2510B, 2540B, 2540C, 2540D, 426C, 4500CL-E, 4500CN-E, 4500F-C, 4500H+B, 4500NH3-H, 4500NO2B, 4500P-E, 4500 S²⁻ D, 510C, 5210B, 5220D, 5310C, 5540C. Organic Parameters: EPA 608, 624, 625, 8081, 8082, 8151, 8260, 8270, 8330.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1311, 1312, 9012, 9014, 9040, 9045, 9050, 9065.)

Virginia Division of Consolidated Laboratory Services Certificate/Lab ID: 460195. **NELAP Accredited.**

Non-Potable Water (Inorganic Parameters: EPA 3005A, 3015, 1312, 6010B, 6010C, SM4500S-D, SM4500-CN-CE, Lachat 10-204-00-1-X. Organic Parameters: EPA 8260B)

Solid & Hazardous Waste (Inorganic Parameters: EPA 3050B, 1311, 1312, 6010B, 6010C, 9030B, 9010B, 9012A, 9014. Organic Parameters: EPA 5035, 5030B, 8260B, 8015B, 8015C.)

Department of Defense, L-A-B Certificate/Lab ID: L2217.

Drinking Water (Inorganic Parameters: SM 4500H-B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: EPA 200.7, 200.8, 6010B, 6010C, 6020, 6020A, 245.1, 245.2, 7470A, 9040B, 9010B, 180.1, 300.0, 332.0, 6860, 353.2, 410.4, 9060, 1664A, SM 4500CN-E, 4500H-B, 4500NO3-F, 4500CL-D, 5220D, 5310C, 2130B, 2320B, 2540C, 3005A, 3015, 9010B, 9056. Organic Parameters: EPA 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330A, 8082, 8082A, 8081A, 8081B, 3510C, 5030B, MassDEP EPH, MassDEP VPH.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 200.7, 6010B, 6010C, 7471A, 6860, 1311, 1312, 3050B, 7196A, 9010B, 9012A, 9040B, 9045C, 3500-CR-D, 4500CN-CE, 2540G, Organic Parameters: EPA 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330A/B-prep, 8082, 8082A, 8081A, 8081B, 3540C, 3546, 3580A, 5035A, MassDEP EPH, MassDEP VPH.)

The following analytes are not included in our current NELAP/TNI Scope of Accreditation:

EPA 8260B: Freon-113, 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene. **EPA 8330A:** PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT. **EPA 8270C:** Methyl naphthalene, Dimethyl naphthalene, Total Methylnaphthalenes, Total Dimethylnaphthalenes, 1,4-Diphenylhydrazine (Azobenzene). **EPA 625:** 4-Chloroaniline, 4-Methylphenol. Total Phosphorus in a soil matrix, Chloride in a soil matrix, TKN in a soil matrix, NO₂ in a soil matrix, NO₃ in a soil matrix, SO₄ in a soil matrix. **EPA 9071:** Total Petroleum Hydrocarbons, Oil & Grease

MATERIAL CLASSIFICATION AND WEIGHT

Classification of Material:

W05(L)

NOTES:

WEIGHTS

GROSS/TARE/NET (lbs)

80940 lb
27500 lb
53440 lb

NET (tons):

26.720 tn

WEIGHT CERTIFICATION

Certification: By issuing this ticket, I hereby certify that the above named material has been accepted by this facility, and that the weights stated above are accurate. The weights were calculated in accordance with New Jersey's Weights and Measures Program.

Where applicable, I hereby certify that the Transportation Security Seal referenced in the **Scale Operator Notes** section of this ticket was intact upon entrance to this facility, and that I removed the seal upon the removal of the bed cover on the truck.

Name of Scale Operator: CIS

Date and Time In	Tare Time	Gross Time
7/19/12	8:08 am	8:08 am

Scale Operator Notes:

TRANSPORTER DATA AND CERTIFICATION

Transporter Name, Address and Permit #:

Driver Name and Signature (conditional):

APQ19A

Truck Plate:

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

Driver Name and Signature (conditional):

Truck Plate:

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

Charles O...

Truck Plate:

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

Transporter Name, Address and Permit #:

Driver Name and Signature (conditional):

Truck Plate: AP920A

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

Driver Name and Signature (conditional):

Truck Plate:

AN 744 M

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at the GM Linden Brownfield Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from GM Linden Brownfield Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental Consulting, Inc., its owners, employees and/or all of its affiliated companies including Duke Realty and its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at the GM Linden Brownfield Facility as directed by its representatives.

Transporter Name, Address and Permit #:
Tri State #69

Driver Name and Signature (conditional):

Truck Plate: AN 660 Y

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at the GM Linden Brownfield Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from GM Linden Brownfield Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental Consulting, Inc., its owners, employees and/or all of its affiliated companies including Duke Realty and its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she is bound by all posted safety procedures at the GM Linden Brownfield Facility directed by its representatives.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at the GM Linden Brownfield Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from GM Linden Brownfield Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental Consulting, Inc., its owners, employees and/or all of its affiliated companies including Duke Realty and its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at the GM Linden Brownfield Facility as directed by its representatives.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at the GM Linden Brownfield Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from GM Linden Brownfield Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental Consulting, Inc., its owners, employees and/or all of its affiliated companies including Duke Realty and its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at the GM Linden Brownfield Facility as directed by its representatives.

TRANSPORTER DATA AND CERTIFICATION

Transporter Name, Address and Permit #:

TRISTATE # 68

Driver Name and Signature (conditional):

Paulo Souza

Truck Plate:

AN 745 M

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at the GM Linden Brownfield Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from GM Linden Brownfield Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental Consulting, Inc., its owners, employees and/or all of its affiliated companies including Duke Realty and its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at the GM Linden Brownfield Facility as directed by its representatives.

Driver Name and Signature (conditional):

AM701K *[Handwritten Signature]*

Truck Plate:

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at the GM Linden Brownfield Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from GM Linden Brownfield Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental Consulting, Inc., its owners, employees and/or all of its affiliated companies including Duke Realty and its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at the GM Linden Brownfield Facility as directed by its representatives.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at Impact Environmental Class B Recycling Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from Impact Environmental Class B Recycling Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental, its owners, employees and/or all of its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at Impact Environmental Class B Recycling Facility and as directed by company staff.

THE CAT SCALE GUARANTEE

The CAT Scale Company guarantees that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.®

WEIGH WHAT WE SAY OR WE PAY®

If you get an overweight fine from the state AFTER one of our CAT Scales showed a legal weight, we will immediately check our scale and we will:

- (1) Reimburse you for the cost of the overweight fine if our scale is wrong, **OR**
- (2) A representative of CAT Scale Company will appear in court **WITH** the driver as an expert witness if we believe our scale was correct.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE, ext. 7 (Toll Free) or visit www.catscaleguarantee.com for instructions.
- 3) **IMMEDIATELY** send a copy of the citation, CAT Scale Ticket, your name, company, address, and phone number to CAT Scale Company Attn: Guarantee Department.

*The four weights shown below are separate weights. The GROSS WEIGHT is the CERTIFIED WEIGHT and was weighed on a full length platform scale. All weights are guaranteed by CAT Scale.

TRANSPORTER DATA AND CERTIFICATION

Transporter Name, Address and Permit #:

Driver Name and Signature (conditional):

AN9617

Truck Plate:

By signing this ticket the transport vehicle driver accepts sole responsibility and therefore assumes all liabilities for the gross weight of this divisible load of material scaled and accepted at the GM Linden Brownfield Facility. The driver acknowledges that he or she is solely responsible for compliance with all traffic safety rules and regulations for the operation and maintenance of the vehicle when transporting to, driving in and leaving from GM Linden Brownfield Facility. Further, the driver represents that he or she will immediately report any incidents of overloading or vehicle equipment failure/hazards associated with the vehicle to the owner of the vehicle, and in doing so will relieve Impact Environmental Consulting, Inc., its owners, employees and/or all of its affiliated companies including Duke Realty and its affiliated companies to serve any form of notice to the truck owner. Furthermore, driver accepts that he or she will abide by all posted safety procedures at the GM Linden Brownfield Facility as directed by its representatives.
