NYC VCP Cleanup Plan Remedial Activities to Begin

The New York City Office of Environmental Remediation (OER) is providing this Fact Sheet pursuant to the New York City Voluntary Cleanup Program (VCP). OER has approved the Remedial Action Work Plan (RAWP) submitted by 125th and Lenox LLC for West 125th Street and Lenox Avenue, New York (Block 1909, Lot 33 previously lots 25-33, 38-39, 129 and 140). The remedial work will begin in January 2014. The RAWP can be reviewed electronically or in person at the document repositories identified in the box at left.

Site Description:

The 0.75-acre site is currently a vacant lot. The proposed future use of the Site consists of a 6-story retail building with a single cellar level that will span across the entire Site.

Summary of the Remedy:

The remedial action for West 125th Street and Lenox Avenue is a Track 1 Unrestricted Use cleanup. The specific elements of the proposed remedial action include:

- Preparation of a Community Protection Statement and performance of all required NYC VCP citizen participation activities according to an approved Citizen Participation Plan;
- Performance of a Community Air Monitoring Program for particulates and volatile organic carbon compounds;
- Selection of Track 1 Unrestricted Use Soil Cleanup Objectives (SCOs);
- Excavation and removal of soil/fill exceeding Track 1 Unrestricted Use SCOs. Excavations will be performed to the depths from 18 feet to 21 feet. Approximately 35,000 tons of soil will be excavated and removed from Site;
- Transportation and off-site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport and disposal of contaminated soil;
- Collection and analysis of endpoint samples to determine if the remedy meets SCOs; and
- Submission of a Remedial Action Report (RAR) that describes the remedial activities and certifies that the remedial requirements have been achieved and lists any changes from this RAWP.

If Track 1 Cleanup is not achieved, the following construction elements will constitute Engineering and Institutional Controls:

- As part of new development, installation and operation of a waterproofing/vapor barrier membrane beneath the building slab;
- As part of new development, construction of a composite cover system consisting of a concrete building slab to prevent human exposure to residual soil/fill that may remain under the Site;
- Submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual fill, including certification of Engineering and Institutional Controls and reporting at a specified frequency; and
- Continued registration with E designation for the property.

Cleanup activities are scheduled to begin in January 2014 and are expected take approximately 12 months to complete.

Next Steps: After the enrollee completes the remedial work, a RAR will be prepared and submitted to OER. The RAR will describe the cleanup activities and certify that all cleanup requirements were met. Once the RAR is approved, OER will issue a Notice of Completion, a City liability release, and a New York City Green Property Certificate. OER will then issue a fact sheet announcing the completion of the remedial action and identify all engineering and institutional controls to be used at the Site.

If you have any questions or know of any neighbor that would like to be added to the site contact list, please contact the OER Project Manager listed on the front page of this Fact Sheet. We encourage you to share this Fact Sheet with neighbors and tenants and/or post it in a prominent area of your building. For information regarding New York City’s Voluntary Cleanup Program, please visit our website at: www.nyc.gov/oer.
