CERTIFICATION

I, Christopher B. Brown, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Basis School Site, (NYC VCP Site No. site number pending). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 556 Columbia Street in the Red Hook section of Brooklyn, New York and is identified as Block 601 and Lot 17 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 48,800-square feet and is bounded by Bay Street to the north, Sigourney Street to the south, Columbia Street to the east, and a warehouse to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is used for parking trucks and buses. There is a raised loading dock at the western end of the lot. The site is otherwise vacant.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of a private school, grades K through 12. Layout of the proposed site development is presented in Figure 7. The current zoning designation is M-1-1 Special Mixed Use. The proposed use is consistent with existing zoning for the property, but will require a special use variance from the NYC Board of Standards and appeals.

The site is being proposed as the future location of a new private school with grades K through 12. The new school will be constructed over the grade-level parking lot. The total square footage of the future school will be 80,000 square feet and will consist of five floors with no ground-level occupied spaces, with the exception of a small security outpost. Parking areas and landscaping around the perimeter will cover the lot at the current grade. The current loading dock will be demolished. Excavation depths during construction will range from approximately 0 to 4 feet below grade. Excavation below the water table is not anticipated.

Summary of Past Uses of Site and Areas of Concern

The history of the subject property and surrounding area was researched through a review of readily ascertainable standard historical sources. These sources may include current and past

owners, property records, recorded land title records, property tax files, building department records and/or zoning & land use records. This review was conducted in order to identify those uses that are likely to have led to recognized environmental conditions. Following, is a summary of these findings.

The subject property was initially developed in the early 1900s as the CWH Carter Lithographic Varnish Works, which covered the eastern 2/3 of the block between Columbia Street and Otsego Street to the east and west, and Bay and Sigourney Streets to the north and south. Several kettles, and a furnace were operated on site, presumably for preparing varnish. A barrel shed and offices were located on site as well. By 1950 the site had been converted to the Cambeis Trucking Company and presumably served as the terminal for the operation. The site continued to be operated as a parking area for trucks and busses until the current use. No certificates of occupancy were available with NYC Buildings Department. The department of Finance building classification is “garage/gas station”. There is no evidence that the subject property was operated as a gas station. Refueling facilities may have been operated on site for the former trucking operation.

The subject property is currently owned by Red Hook Property Group LLC. Property ownership history was researched through deeds at ACRIS online. Previous owners and the approximate date of purchase are listed below. This ownership record is based on reasonably attainable information, may be incomplete, and does not constitute a title search.

The ownership history is as follows:

Flippy Realty Corp. Red Hook Property Group LLC 6/29/2005
Rainforth & Kelly Inc. Flippy Realty Corp. 1/23/1986
Columbia St. Associates Rainforth & Kelly Inc. 6/17/1970
Marvin Realty Corp. Columbia St. Associates 6/17/1970
Cambeis, Mary W. Marvin Realty Corp. 9/8/1967
Mae Realty Co. Inc. Cambeis, Mary W. 9/8/1967

Areas of concern (AOCs) include:

- Potential releases of wastes or chemical products from the lithographic varnish manufacturing business that operated on the subject property.

- Potential leakage of fuel or other hazardous or regulated substances from parked vehicles.
- Releases of petroleum or hazardous/regulated materials on properties near the subject property.

Summary of the Work Performed under the Remedial Investigation

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 44 soil borings across the entire project Site, and collected 46 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed seven temporary and/or permanent groundwater monitoring wells throughout the Site to establish groundwater flow and collected seven groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed six soil vapor probes around Site perimeter and collected six samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property is 6 feet above mean sea level.
2. Depth to groundwater ranges from 4 to 7 feet at the Site.
3. Groundwater flow is generally from north to south beneath the Site.
4. Depth to bedrock is approximately 150 feet at the Site.
5. The stratigraphy of the site, from the surface down, consists of 4 to 6 feet of unconsolidated fill, underlain by 2 to 3 feet of organic rich wetland deposits, underlain by 140 feet of unconsolidated coastal plain sediments of silt and sand, underlain by the Manhattan Formation.
6. Soil/fill samples collected during the RI showed several VOCs were detected at trace concentrations and below Track 1 Unrestricted Use SCOs. Three VOCs including 1,3,5-Trimethylbenzene (max. of 25 ppb), 2-Butanone (max. of 140 ppb), and acetone (max. 2,500 ppb) were detected above Unrestricted Use SCOs. Acetone was detected in all soil samples. Several SVOCs including benzo(a)anthracene (max 100,000 ppb),

benzo(a)pyrene (max 86,000 ppb), benzo(b)-fluoranthene (max 20,000 ppb), benzo(k)fluoranthene (max 85,000 ppb), chrysene (max 100,000 ppb), Dibenz(a,h)anthracene (max 4,300 ppb), Dibenzofuran (max of 17,000 ppb), fluoranthene (max 240,000 ppb) and indeno(1,2,3-cd)pyrene (max 40,000 ppb), and pyrene (max 190,000 ppb). Of these SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)-fluoranthene, benzo(k)fluoranthene, chrysene, Dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)pyrene, Phenanthrene and pyrene were detected above Restricted Residential Use SCOs. Three SVOC hotspot (max. total of 1,556 ppm) areas have been identified (in the vicinity of GB-6, GB-11 and GB-12). The PCB (PCB-1232) was detected in one sample at 297 ug/kg, exceeding Unrestricted Use SCOs. Five pesticides including 4,4'-DDE (max of 42 ug/kg), 4,4'-DDD (max of 86.3 ug/kg), 4,4'-DDT (max of 33.6 ug/kg), cis-Chlordane (max of 271 ug/kg) and Chlordane (max of 3130 ug/kg) were detected in half the samples at concentrations exceeding Unrestricted Use SCOs. Metals including arsenic (max of 160 mg/kg) barium (max 2,900 mg/kg), cadmium (max of 11 mg/kg), chromium (max of 100 mg/kg), copper (max of 40,000 mg/kg), lead (max of 10,000 mg/kg), mercury (max of 4.8 mg/kg) and zinc (max of 8,100 mg/kg) exceeded Unrestricted Use SCOs. Of these metals, arsenic, barium, cadmium, copper, lead and mercury exceeded Restricted Residential Use SCOs. There is a copper hotspot in the vicinity of GB-7. Metals were distributed throughout the site soils. No soil samples contained VOCs, PCBs or pesticides at concentrations exceeding Restricted Residential Use SCOs.

7. Groundwater samples collected during the RI showed no detectable concentration of PCBs, or Pesticides. Several VOCs were detected at trace concentration. Only two VOCs, isopropylbenzene (max of 62 ug/L) and total xylenes (7.8 ug/L), exceeded New York State 6NYCRR Part 703.5 Groundwater Quality Standards (GQS). Five SVOCs including benzo(a)anthracene (15 ug/L), benzo(b)-fluoranthene (16 ug/L), benzo(k)fluoranthene (7.3 ug/L), chrysene (16 ug/L), and Indeno(1,2,3-cd)pyrene (4.1 ug/L) exceeded GQS. Metals including arsenic (34ug/L), barium (3,800 ug/L),beryllium (8.5 ug/L), iron (max of 48,000 ug/L), and manganese (max of 1,500ug/L) were detected in filtered groundwater samples above GQS. MW-3 contained the highest concentrations of metal and SVOC exceedences.

8. The soil vapor collected during the RI were compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion. Soil vapor samples showed moderate levels of petroleum related and chlorinated VOCs in all soil vapor samples. Most contaminant concentrations were below 50 ug/m^3 except for acetone, which was detected in all samples at a maximum concentration of 1300 ug/m^3 and hexane (850 ug/m^3). Tetrachloroethylene was detected in 2 of the 6 samples at a maximum concentration of $2.5 \text{ } \mu\text{g/m}^3$. Trichloroethylene was detected in 4 of the 6 samples all at a maximum concentration of $7.4 \text{ } \mu\text{g/m}^3$. Carbon tetrachloride, and 1,1,1-trichloroethane (1,1,1-TCA), were not detected in any soil vapor samples during this RI. The TCE concentrations are above the monitoring level ranges established within the State NYS DOH soil vapor guidance matrix.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Highmark Schools has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 1.12-acre site located at 556 Columbia Street in the Red Hook section of Brooklyn, New York. Mixed commercial residential use is proposed for the property—a new private school, grades K through 12. The RI work was performed between July 31 and October 25, 2013. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY § 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 556 Columbia Street in the Red Hook section of Brooklyn, New York and is identified as Block 601 and Lot 17 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 48,800-square feet and is bounded by Bay Street to the north, Sigourney Street to the south, Columbia Street to the east, and a warehouse to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is used for parking trucks and buses. There is a raised loading dock at the western end of the lot. The site is otherwise vacant.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of a private school, grades K through 12. Layout of the proposed site development is presented in Figure 7. The current zoning designation is M-1-1 Special Mixed Use. The proposed use is consistent with existing zoning for the property, but will require a special use permit from the NYC Board of Standards and Appeals. The site is being proposed as the future location of a new private school with grades K through 12.

The new school will be constructed over the grade-level parking lot. The total square footage of the future school will be 80,000 square feet and will consist of five floors with no ground-level occupied spaces, with the exception of a small security outpost. Parking areas and landscaping around the perimeter will cover the lot at the current grade. The current loading

dock will be demolished. Excavation depths during construction will range from approximately 0 to 4 feet below grade. Excavation below the water table is not anticipated.

1.3 Description of Surrounding Property

- The parcel north of the subject property, on the north side of Bay Street includes light industrial operations including contractor's yards and offices, and automotive repair.
- The parcel east of the subject property is a City park.
- The property west of the subject property is a warehouse and light manufacturing facility.
- The parcel south of the subject property is a community garden.

Figure 8 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

The history of the subject property and surrounding area was researched through a review of readily ascertainable standard historical sources. These sources may include current and past owners, property records, recorded land title records, property tax files, building department records and/or zoning & land use records. This review was conducted in order to identify those uses that are likely to have led to recognized environmental conditions. Following, is a summary of these findings.

The subject property was initially developed in the early 1900s as the CWH Carter Lithographic Varnish Works, which covered the eastern 2/3 of the block between Columbia Street and Otsego Street to the east and west, and Bay and Sigourney Streets to the north and south. Several kettles, and a furnace were operated on site, presumably for preparing varnish. A barrel shed and offices were located on site as well. By 1950 the site had been converted to the Cambeis Trucking Company and presumably served as the terminal for the operation. The site continued to be operated as a parking area for trucks and busses until the current use.

No certificates of occupancy were available with NYC Buildings Department. The Department of Finance building classification is “garage/gas station”. There is no evidence that the subject property was operated as a gas station. Refueling facilities may have been operated on site for the former trucking operation.

The subject property is currently owned by Red Hook Property Group LLC. Property ownership history was researched through deeds at ACRIS online. Previous owners and the approximate date of purchase are listed below. This ownership record is based on reasonably attainable information, may be incomplete, and does not constitute a title search. The ownership history is as follows:

Flippy Realty Corp. Red Hook Property Group LLC - 6/29/2005
Rainforth & Kelly Inc. Flippy Realty Corp. - 1/23/1986
Columbia St. Associates Rainforth & Kelly Inc. - 6/17/1970
Marvin Realty Corp. Columbia St. Associates - 6/17/1970
Cambeis, Mary W. Marvin Realty Corp. - 9/8/1967
Mae Realty Co. Inc. Cambeis, Mary W. - 9/8/1967

2.2 Previous Investigations

Previous studies include a Phase I Environmental Site Assessment conducted in July and August 2013, and a Phase II Environmental Site Assessment conducted in July and August, 2013. The Phase I findings were as follows: Between 1904 and approximately 1950, the Site was operated as a lithographic varnish manufacturing facility. After 1950 the site was operated as a parking area for a trucking company and other tenants.

The Phase II assessment included direct-push soil cores, installation and sampling of four temporary groundwater monitoring wells, and a soil vapor investigation. SVOCs and metals in some samples of fill material above the water table exceeded both the Unrestricted Use SCOs and Restricted-Residential SCOs. No SVOCs, VOCs, pesticides, or PCBs were detected in groundwater above New York State 6NYCRR Part 703.5 Groundwater Quality Standards (GQS). Metals exceeded State groundwater standards for metals were limited to seven compounds.

2.3 Site Inspection

PVE Sheffler personnel inspected the subject property on July 31 and August 6, 2013. The site reconnaissance and interviews were conducted by Christopher Brown and Timothy Pagano.

2.4 Areas of Concern

The Phase 1 Report is presented in Appendix A.

The AOCs identified in the Phase I assessment include:

- Potential releases of wastes or chemical products from the lithographic varnish manufacturing business that operated on the subject property.
- Potential leakage of fuel or other hazardous or regulated substances from parked vehicles.
- Releases of petroleum or hazardous/regulated materials on properties near the subject property.

The Phase II report findings are as follows:

- Soil samples contained semi-volatile organic compounds (SVOCs) at concentrations exceeding UUSCOs, and in some instances exceed 6NYCRR Part 375 Restricted Residential SCOs (RRSCOs). Concentrations of SVOCs were higher in soil samples collected along the western section of the subject property. In particular GB-6, GB-11 and GB-12, contained total SVOC concentrations of 1,556 ppm; 465 ppm; and, 233 ppm, respectively.
- Soil samples contained the metals As, Ba, Cd, Cr, Cu, Pb, Hg and Zn at concentrations exceeding only the Unrestricted Use SCOs. As, Ba, Cd, Cu, Pb and Hg were detected at concentrations exceeding both the Unrestricted Use SCOs and the Restricted Residential SCOs.
- Filtered Groundwater samples contained the following metals at concentrations exceeding Class GA groundwater standards:

MW-3: Arsenic, Barium, Iron, Manganese
MW-5: Iron, Manganese
MW-6: Iron, Manganese

MW-7: Barium, Beryllium, Iron, Manganese
- Soil vapor samples showed Trichlorethylene (TCE) was detected in 4 of the 6 samples all at a maximum concentration of 7.4 µg/m³

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Christopher B. Brown.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Highmark Schools performed the following scope of work:

- Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.).
- Installed 44 soil borings across the entire project Site: Borings GB-1 through GB-12 were installed and sampled during the Phase II investigation in July and August 2013; Borings GB-13 through GB-45 were installed and sampled during the RI. We selected at least one soil sample from each boring for chemical analysis to evaluate soil quality. Not all samples were analyzed.
- Installed seven groundwater monitoring wells (temporary and permanent) throughout the Site to establish groundwater flow and collected groundwater samples for chemical analysis to evaluate groundwater quality. Four of the seven wells (MW-1 through MW-4) were installed during the prior Phase II investigation as temporary groundwater sampling points. Monitoring Wells MW-5, MW-6 and MW-7 were installed during the RIR. MW-7 is being re-sampled and results will be submitted to OER
- Installed six soil vapor probes around Site perimeter and collected six samples for chemical analysis. Vapor probe locations SG-1 through SG-3 were sampled during the prior Phase II investigation. Vapor probe locations SG-4 through SG-6 were sampled during the RIR.

4.1 Geophysical Investigation

None performed, except as needed for utility markout purposes.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

Borings GB-1 through GB-12 were installed and sampled during the Phase II investigation in July and August 2013; Borings GB-13 through GB-45 were installed and sampled during the RI.

Boring logs were prepared by a geologist are attached in Appendix C. A map showing the location of soil borings and monitor wells is shown in Figure 3. Borings were logged

continuously and were examined by visual and olfactory means and using a calibrated PID. All direct-push borings were extended to 8 feet below grade (or refusal), and samples were collected and screened. The results of soil screening are recorded on the soil boring logs. During the Phase II, one sample from each boring was submitted for laboratory analysis. During the RI, delineation of hot spots was one of the main goals, so one sample from 1-3' and one sample from 4-6' were collected from each boring and submitted for laboratory analysis, but not all borings were analyzed by the laboratory, depending on the results of the nearby borings.

Groundwater Monitoring Well Construction

Monitor well locations are shown in Figure 3. Monitoring Wells MW-1 through MW-4 were installed as temporary groundwater sampling points. Monitoring Wells MW-5 through MW-7 were installed using a conventional rig equipped with an auger.

| | Identification Number | Date of construction | Total Depth | Diameter | Ground surface elevation | Screened interval (Elevation Range) | Construction Material (PVC, steel, etc) | GPS Coordinates |
|---------------|-----------------------|----------------------|-------------|----------|--------------------------|-------------------------------------|-----------------------------------------|-----------------|
| Monitor Wells | MW-5, 6, and 7 | October 2013 | 13 feet | 2" | Pending | 13' to 3' bls | PVC | Pending |

Survey

The horizontal location of soil borings and monitoring wells was established using a mapping grade Trimble GPS system accurate to within 1 foot. Vertical datum are in the process of being collected.

Water Level Measurement

Groundwater elevations were established by surveying the top of casing elevation to the nearest 0.01 ft and measuring the depth to water using a graduated tape with water sensor.

Water level data is pending and will be submitted to OER at a later date.

| Monitoring Well ID No. | Date | Depth-to-water | Top of Casing Elevation | Water Elevation |
|------------------------|------------------|----------------|-------------------------|-----------------|
| MW -5 | October 28, 2013 | ... | Pending | Pending |
| MW- 6 | October 28, 2013 | ... | Pending | Pending |
| MW-7 | October 28, 2013 | ... | Pending | Pending |

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media, including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Forty-four soil borings were completed during the Phase II and the RI -- GB-1 through GB-45, with GB-42 not being drilled because of its location on the concrete loading ramp. Borings were completed using a GeoProbe direct-push rig. Soil cores were collected in 4-foot macro core acetate liners. Soils were logged by a field geologist and screened for VOCs in the field using a PID. One or two samples from each boring were selected for laboratory analysis. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, are reported in Tables 1-5. Figure 3 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

Soil samples were also collected at the soil-water interface in the location of MW-5, MW-6, and MW-7. Analytical data from these analyses are summarized in Tables 6-10.

Groundwater Sampling

Seven groundwater samples were collected from Monitoring Wells MW-1 through MW-6 for chemical analysis during the Phase II investigation and this RI. (On the date MW-7 was to be sampled, there was not sufficient water in the well, so MW-3 nearby was sampled instead. MW-7 will be sampled and results of the analysis will be included in a supplemental RIR.) Prior to sample collection, static water levels were measured. Each well was purged using USEPA low flow purge techniques until physical water quality parameters had stabilized. Groundwater samples were collected using a peristaltic pump and dedicated tubing. Samples for metals from monitoring wells MW-5, MW-6, and MW-3 (the second time) were collected as filtered and unfiltered samples. Samples were preserved on ice and accompanied by a chain of custody while on-site and during transport to the laboratory. Groundwater sample collection data are reported in Tables 11-15. Figure 3 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

Six soil vapor probes were installed and six soil vapor samples were collected for chemical analysis during the Phase II investigation and this RI. Soil vapor sampling locations are shown in Figure 3. Soil vapor sample collection data is reported in Table 16. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

Soil vapor ports SV-1, SV-2, and SV-3 were installed and sampled as follows: A 2"-diameter macro-core was pushed to 4' below grade. Slotted PVC screen was installed from 3' to 4' below grade, with solid PVC riser above to grade. Polyethylene tubing was installed to the depth of the slotted interval. The annular space between the PVC and the borehole was filled with sand from 3' to 4' below grade, with bentonite slurry above to grade. The port was allowed to set for one day. The next day, a helium tracer test was conducted on the three ports to verify correct completion. The ports were then purged one or more volumes using a peristaltic pump set to pump at 0.2 L/min or slower. The polyethylene tubing was then connected to a 1-liter summa canister and the sample was collected over a 1-hour period. Following sample collection, the canisters were shipped to Centek Laboratories, with a chain of custody, for analysis.

Soil vapor ports SV-4, SV-5, and SV-6 were installed and sampled as follows: A 2”-diameter macro-core was pushed to 4’ below grade. Slotted PVC screen was installed from 3’ to 4’ below grade, with solid PVC riser above to grade. Polyethylene tubing was installed to the depth of the slotted interval. The annular space between the PVC and the borehole was filled with sand from 3’ to 4’ below grade, with bentonite slurry above to grade. The port was allowed to set for one day. The next day, a helium tracer test was conducted on the three ports to verify correct completion. The ports were then purged one or more volumes using a peristaltic pump set to pump at 0.2 L/min or slower. The polyethylene tubing was then connected to a 1-liter summa canister and the sample was collected over a 1-hour period. Following sample collection, the canisters were shipped to Centek Laboratories, with a chain of custody, for analysis.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

| Factor | Description |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quality Assurance Officer | The chemical analytical quality assurance is directed by Doug Tawes |
| Chemical Analytical Laboratory | Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and were EnviroTest Laboratories, Inc. |

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 1-16. Laboratory data deliverables for all samples evaluated in the Phase II investigation and this RIR are provided in digital form in Appendices D, E, and F. Exceedences of standards are shown in Figures 4, 5, and 6 for soil, groundwater, and vapor, respectively.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

Unconsolidated materials above the water table consist of a sandy fill material with lesser amounts of silt, clay, gravel, concrete fragments, wood fragments, and brick fragments.

Hydrogeology

Water level data for all monitoring wells will be submitted in a supplemental submittal. The average depth to groundwater is 6.5 feet and the range in depth is 6 to 7 feet. A map of groundwater level elevations with groundwater contours and inferred flow lines will be submitted in a supplemental submittal. Groundwater flow is generally from north to south

5.2 Soil Chemistry

Soil/fill samples collected during the RI showed several VOCs were detected at trace concentrations and below Track 1 Unrestricted Use SCOs. Three VOCs including 1,3,5-Trimethylbenzene (max. of 25 ppb), 2-Butanone (max. of 140 ppb), and acetone (max. 2,500 ppb) were detected above Unrestricted Use SCOs. Acetone was detected in all soil samples. Several SVOCs including benzo(a)anthracene (max 100,000 ppb), benzo(a)pyrene (max 86,000 ppb), benzo(b)-fluoranthene (max 20,000 ppb), benzo(k)fluoranthene (max 85,000 ppb), chrysene (max 100,000 ppb), Dibenz(a,h)anthracene (max 4,300 ppb), Dibenzofuran (max of 17,000 ppb), fluoranthene (max 240,000 ppb) and indeno(1,2,3-cd)pyrene (max 40,000 ppb), and pyrene (max 190,000 ppb). Of these SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)-fluoranthene, benzo(k)fluoranthene, chrysene, Dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)pyrene, Phenanthrene and pyrene were detected above Restricted Residential Use SCOs. Three SVOC hotspot (max. total of 1,556 ppm) areas have been identified (in the vicinity of GB-6, GB-11 and GB-12). The PCB (PCB-1232) was detected in one sample at 297 ug/kg, exceeding Unrestricted Use SCOs. Five pesticides including 4,4'-DDE (max of 42 ug/kg), 4,4'-DDD (max of 86.3 ug/kg), 4,4'-DDT (max of 33.6 ug/kg), cis-Chlordane (max of 271 ug/kg) and Chlordane (max of 3130 ug/kg) were detected in half the samples at concentrations exceeding Unrestricted Use SCOs. Metals including arsenic (max of 160 mg/kg) barium (max 2,900 mg/kg), cadmium (max of 11 mg/kg), chromium (max of 100 mg/kg), copper (max of 40,000 mg/kg), lead (max of 10,000 mg/kg), mercury (max of 4.8 mg/kg) and zinc (max of 8,100 mg/kg) exceeded Unrestricted Use SCOs. Of these metals, arsenic, barium, cadmium, copper, lead and mercury exceeded Restricted Residential Use SCOs. There is a copper hotspot in the vicinity of GB-7. Metals were distributed throughout the site soils. No soil samples contained VOCs, PCBs or pesticides at concentrations exceeding Restricted Residential Use SCOs.

Below is a summary of SVOCs and Metals which exceeded Track 2 (Restricted-Residential SCOs)

- SVOC compounds detected above Track 2 limits (Restricted-Residential SCOs), and their concentration ranges, are as follows:

| | | |
|------------------------|------------------------|----------------------|
| Benzo[a]anthracene | 1,100 ug/kg (GB-17 S2) | 100,000 ug/kg (GB-6) |
| Benzo[a]pyrene | 1,300 ug/kg (GB-18 S1) | 86,000 ug/kg (GB-6) |
| Benzo[b]fluoranthene | 1,000 ug/kg (GB-17 S2) | 20,000 ug/kg (GB-12) |
| Benzo[k]fluoranthene | 4,000 ug/kg (GB-14 S2) | 85,000 ug/kg (GB-6) |
| Chrysene | 4,200 ug/kg (GB-14 S2) | 100,000 ug/kg (GB-6) |
| Dibenz(a,h)anthracene | 410 ug/kg (GB-4) | 4,300 ug/kg (GB-11) |
| Fluoranthene | 240,000 ug/kg (GB-6) | |
| Indeno[1,2,3-cd]pyrene | 510 ug/kg (GB-3) | 40,000 ug/kg (GB-6) |
| Phenanthrene | 190,000 ug/kg (GB-6) | |
| Pyrene | 190,000 ug/kg (GB-6) | |

- Metals detected above Track 2 limits (Restricted Residential SCOs), and their concentration ranges, are as follows:

| | | |
|---------|----------------------|-------------------------|
| Arsenic | 17 mg/kg (GB-1) | 150 mg/kg (GB-24 S1) |
| Barium | 690 mg/kg (GB-10) | 2,900 mg/kg (GB-2) |
| Cadmium | 10 mg/kg (GB-9) | 11 mg/kg (GB-2) |
| Copper | 280 mg/kg (GB-1) | 40,000 mg/kg (GB-7) |
| Lead | 420 mg/kg (GB-24 S1) | 10,000 mg/kg (GB-16 S2) |
| Mercury | 0.2 mg/kg (GB-3) | 4.8 mg/kg (GB-43 S-2) |

- Heavy metals and SVOCs are distributed across the site.
- In general, metals are present at greater concentrations in shallow soil (1-3 feet below grade) than in deeper soil (4-6 feet below grade).
- Past site operations – including manufacturing of varnish (early 1900s) through the use of outdoor boiling kettles - have contaminated shallow surface soil.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 1-5. Figure 4 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Track 2 Soil Cleanup Objectives.

5.3 Groundwater Chemistry

Groundwater samples collected during the RI showed no detectable concentration of PCBs, or Pesticides. Several VOCs were detected at trace concentration with the exception of isopropylbenzene (max of 62 ug/L) and total xylenes (7.8 ug/L) which exceeded New York State 6NYCRR Part 703.5 Groundwater Quality Standards (GQS). Four SVOCs including benzo(a)anthracene (6.2 ug/L), benzo(b)-fluoranthene (12 ug/L), benzo(k)fluoranthene (5.1 ug/L), and chrysene (9.9 ug/L) exceeded GQS. Metals including arsenic (110 ug/L), barium (4,100 ug/L), chromium (150 ug/L), copper (320 ug/L), iron (max of 46,000 ug/L), lead (1,600 ug/L) and manganese (max of 1,400 ug/L) were detected in filtered groundwater samples above GQS. MW-3 contained the highest concentrations of metal and SVOC exceedences. MW-7 is being re-sampled and results will be submitted to OER at a later date.

- VOC compounds detected above TOGS limits, and their concentration ranges, are as follows:

| | |
|------------------|--------------------------|
| Isopropylbenzene | 62 ug/L (MW) 10-16-13 |
| Total Xylenes | 7.8 ug/L (MW-6) 10-16-13 |

- SVOC compounds detected above TOGS limits, and their concentration ranges, are as follows:

| | |
|------------------------|----------------------------|
| Benzo[a]anthracene | 15 ug/L (MW-7) 10-28-13 |
| Benzo[b]fluoranthene | 16 ug/L (MW-7) 10-28-13 |
| Benzo[k]fluoranthene | 7.3J ug/L (MW-7) 10-28-13 |
| Chrysene | 16 ug/kg (MW-7) 10-28-13 |
| Indeno(1,2,3-cd)pyrene | 4.1J ug/kg (MW-7) 10-28-13 |

- Metals detected above TOGS limits, and their concentration ranges (in filtered samples), are as follows:

| | |
|-----------|----------------------------|
| Arsenic | 34ug/L (MW-3) 10-16-13 |
| Barium | 3,800 ug/L (MW-7) 10-28-13 |
| Beryllium | 8.5 ug/L (MW-7) 10-28-13 |
| Iron | 48,000ug/L (MW-7) 10-28-13 |
| Manganese | 1,500 ug/L (MW-7) 10-28-13 |

In general, permanent wells contain lower concentrations of metals in comparison to temporary wells; Arsenic, Barium, Chromium, Iron, Lead, and Manganese exceed 6 NYCRR Part 703.5 Class GA groundwater standards. Permanent wells (MW-5 and MW-6) only contain Iron and Manganese at 6 NYCRR Part 703.5 Class GA groundwater standards. Permanent well MW-7 contained Barium above 6 NYCRR Part 703.5 Class GA groundwater standards.

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 11-15. Exceedence of applicable groundwater standards are shown.

Figure 5 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

5.4 Soil Vapor Chemistry

The soil vapor collected during the RI were compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion. Soil vapor samples showed moderate levels of petroleum related and chlorinated VOCs in all soil vapor samples. Most contaminant concentrations were below 50 ug/m³ except for acetone, which was detected in all samples at a maximum concentration of 1300 ug/m³ and hexane (850 ug/m³). Tetrachloroethylene was detected in 2 of the 6 samples at a maximum concentration of 2.5 µg/m³. Trichlorethylene was detected in 4 of the 6 samples all at a maximum concentration of 7.4 µg/m³. Carbon tetrachloride, and 1,1,1-trichloroethane (1,1,1-TCA), were not detected in any soil vapor samples during this RI. The TCE concentrations are above the monitoring level ranges established within the State NYS DOH soil vapor guidance matrix.

VOC compounds detected above NYSDOH 2003 Median Concentrations, and their concentration ranges, are as follows:

| | | |
|------------------------|------------------------------|--------------------------------|
| 1,2,4-Trichlorobenzene | 8.5 µg/m ³ (SG-5) | 28 µg/m ³ (SG-2) |
| 1,3,5-Trimethylbenzene | 3.6 µg/m ³ (SG-6) | 8.5 µg/m ³ (SG-2) |
| 4-ethyltoluene | 2.4 µg/m ³ (SG-6) | 4.6 µg/m ³ (SG-3) |
| Acetone | 210 µg/m ³ (SG-4) | 1,300 µg/m ³ (SG-2) |
| Benzene | 2.9 µg/m ³ (SG-5) | 20 µg/m ³ (SG-1) |

| | | |
|-------------------------|-------------------------------|------------------------------|
| cis-1,2-Dichloroethene | 0.93 µg/m ³ (SG-3) | |
| Cyclohexane | 20 µg/m ³ (SG-5) | 330 µg/m ³ (SG-2) |
| Ethylbenzene | 5.8 µg/m ³ (SG-6) | 15 µg/m ³ (SG-3) |
| Freon 12 | 0.85 µg/m ³ (SG-2) | 2.4 µg/m ³ (SG-3) |
| Heptane | 38 µg/m ³ (SG-6) | 620 µg/m ³ (SG-1) |
| Hexane | 53 µg/m ³ (SG-6) | 650 µg/m ³ (SG-1) |
| m&p Xylene | 14 µg/m ³ (SG-4) | 21 µg/m ³ (SG-3) |
| Methyl tert-butyl ether | 25 µg/m ³ (SG-6) | 190 µg/m ³ (SG-2) |
| o- Xylene | 4.9 µg/m ³ (SG-3) | 6.1 µg/m ³ (SG-6) |
| Tetrachloroethylene | 1.6 µg/m ³ (SG-3) | 2.5 µg/m ³ (SG-5) |
| Trichloroethene | 3 µg/m ³ (SG-3) | 7.4 µg/m ³ (SG-5) |
| Toluene | 16 µg/m ³ (SG-6) | 25 µg/m ³ (SG-3) |

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 16.

Figure 6 shows the location and posts the values for soil vapor samples with detected concentrations.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

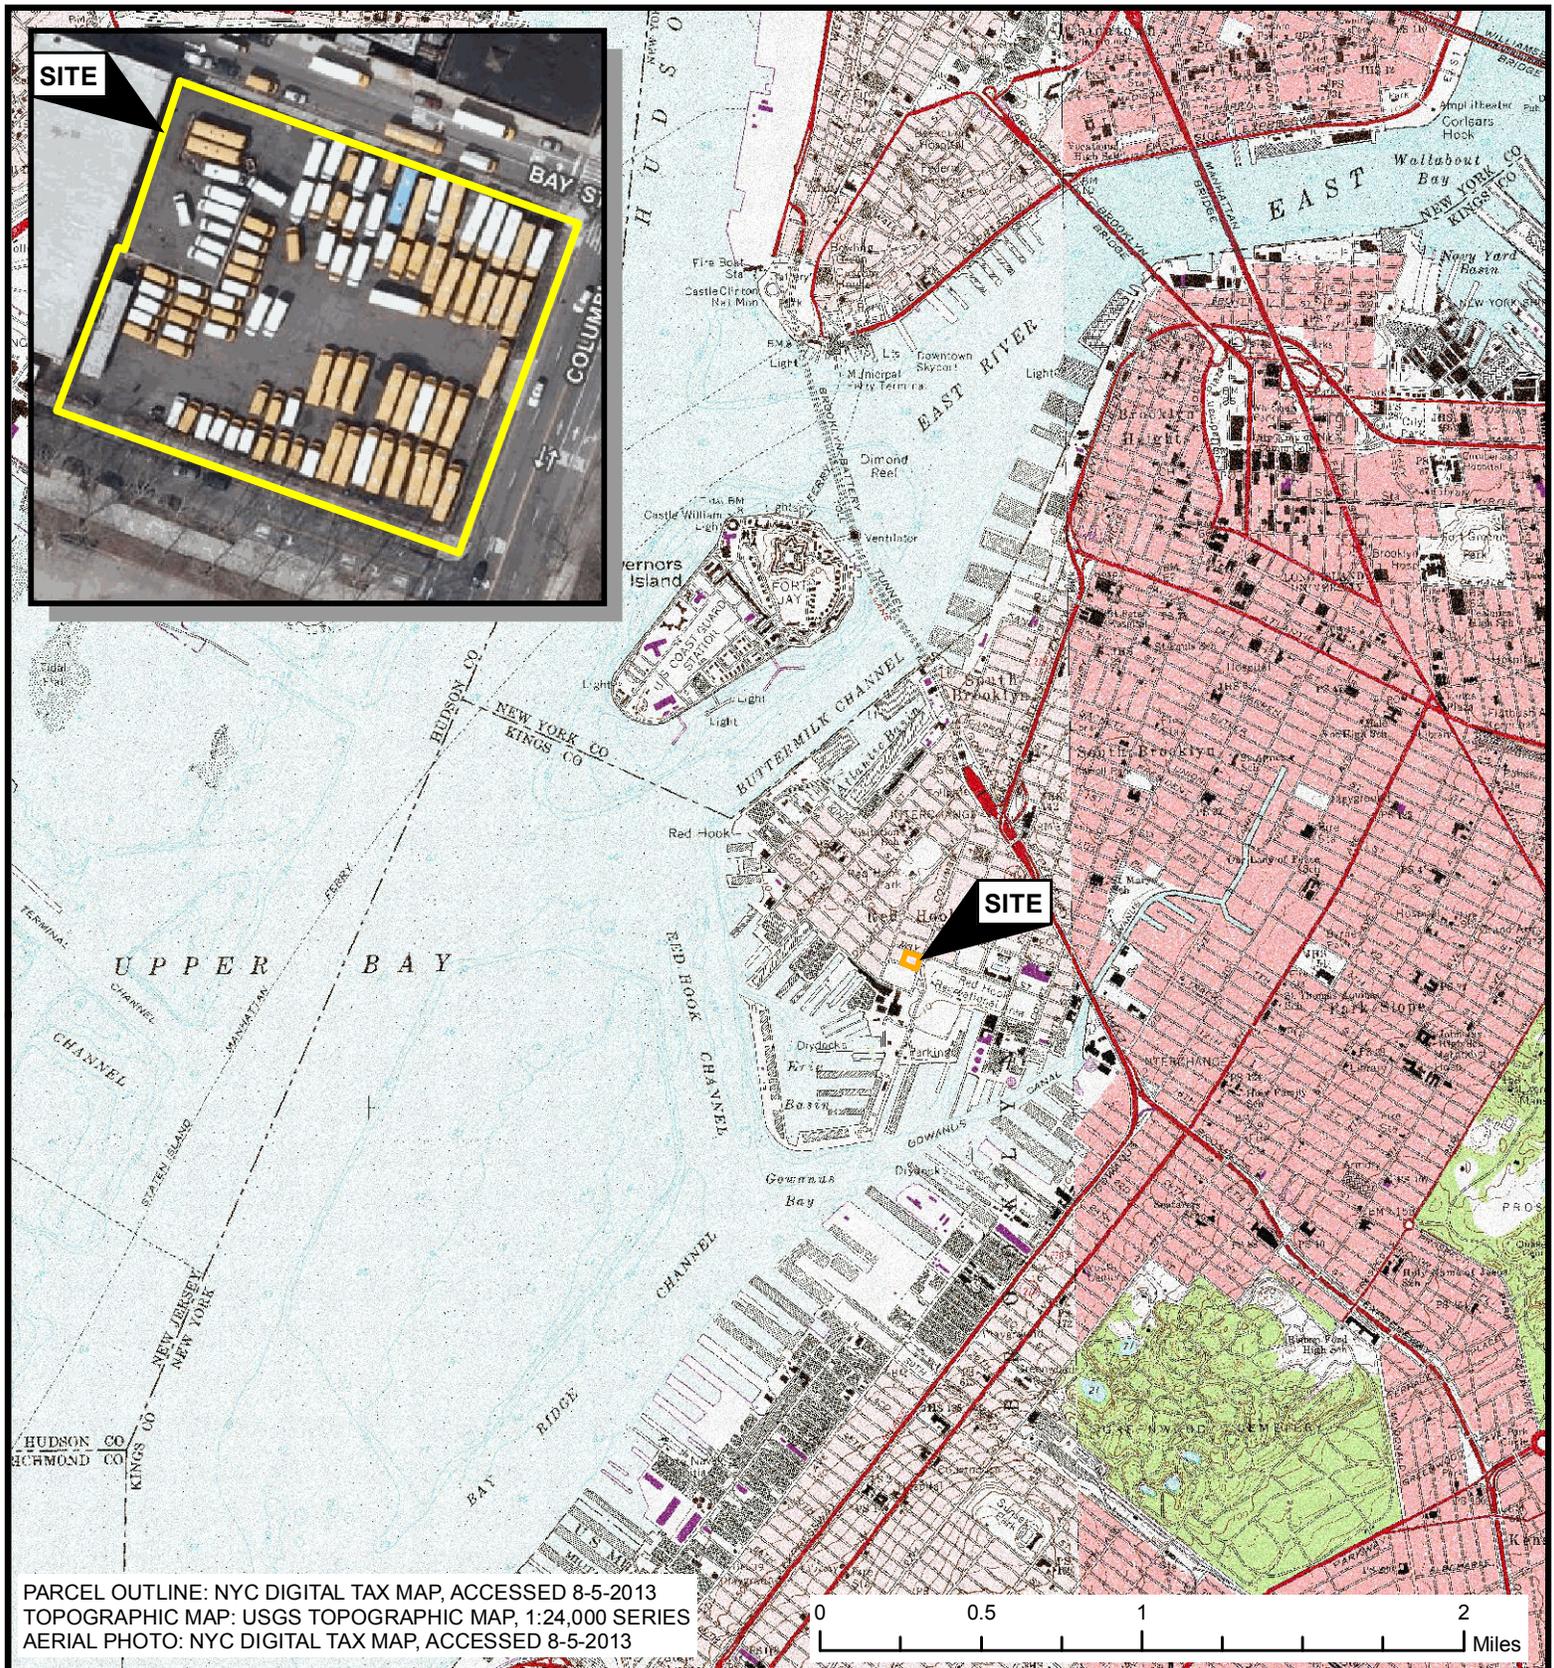

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

Site-Specific Standards, Criteria and Guidance

- 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes
- 6 NYCRR Part 375 - Inactive Hazardous Waste Disposal Sites
- 6 NYCRR Parts 700-706 - Water Quality Standards (June 1998)
- STARS #1 - Petroleum-Contaminated Soil Guidance Policy
- TOGS 1.1.1 - Ambient Water Quality Standards & Guidance Values and Groundwater Effluent Limitations
- Fish and Wildlife Impact Analysis for Inactive Hazardous Waste Sites (October 1994)
- Technical Guidance for Screening Contaminated Sediments (January 1999)
- NYSDOH Indoor Air Sampling & Analysis Guidance (August 8, 2001 or subsequent update)
- NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (draft October 2004 or subsequent final draft)
- DER Interim Strategy for Groundwater Remediation at Contaminated Sites in New York State
- 6 NYCRR Part 612 - Registration of Petroleum Storage Facilities (February 1992)
- 6 NYCRR Part 613 - Handling and Storage of Petroleum (February 1992)
- 6 NYCRR Part 614 - Standards for New and Substantially Modified Petroleum Storage Tanks (February 1992)
- 40 CFR Part 280 - Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks

1 – Standards are for soils according NYSDEC Part 375, *Unrestricted Use Soil Cleanup Objectives*;

3 - Standards are for soils according NYSDEC Part 375, *Restricted-Residential Use Soil Cleanup Objectives*;

All concentrationNA are in mg/kg unless otherwise indicated;

Boldface type designates those compounds detected at concentrations exceeding NYSDEC Unrestricted Use Limit;

Boldface and gray-highlighted type designates those compounds detected at concentrations exceeding NYSDEC Restricted-Residential Limits;

U = Not detected, detection limit listed;

NE = No standard established.

U = The analyte was analyzed for but not detected at or above the stated limit.

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

D = Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.

V = Serial Dilution exceeds the control limits

NA = Not Analyzed

** NYSDEC limit for Mercury (inorganic salts) is listed (see Technical Support Document Table 5.6-1);

Notes:

1 - Standards are for soils according NYSDEC Part 375, *Unrestricted Use Soil Cleanup Objectives*;

3 - Standards are for soils according NYSDEC Part 375, *Restricted-Residential Use Soil Cleanup Objectives*;

All concentrations are in ug/kg unless otherwise indicated;

Boldface type designates those compounds detected at concentrations exceeding NYSDEC Unrestricted Use Limit;

Boldface and gray-highlighted type designates those compounds detected at concentrations exceeding NYSDEC Restricted-Residential Limits;

ND = Not detected;

NE : Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit

J = ¹ (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Identified Compounds (TICs).

P = The RPD between the results for the two columns exceeds the method-specified criteria.

I = The lower value for the two columns has been reported due to obvious interference.

U = Not detected, method detection limit listed;

Notes:

1 - Standards are for soils according to NYSDDEC Part 375, Unrestricted Use Soil Cleanup Objectives ;

3 - Standards are for soils according to NYSDDEC Part 375, Restricted-Residential Use Soil Cleanup Objectives ;

All concentrations are in ug/kg (ppb) unless otherwise indicated;

Boldface type designates those compounds detected at concentrations exceeding NYSDDEC Unrestricted Use standards;

Boldface and gray highlighted type designates those compounds detected at concentrations exceeding NYSDDEC Restricted-Residential Limits;

NE = No standard established;

MDL = Method Detection Limit;

U = The analyte was analyzed for but not detected at or above the stated limit.

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

D = Burrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.

* = LCS or LCSd exceeds the control limits

Notes:
 1) Results are for soils according to NYDEC Part 193, Unconsolidated Soil Chemical Methods.
 2) Results are for soils according to NYDEC Part 193, Consolidated Soil Chemical Methods.
 All concentrations are in µg/kg, unless otherwise indicated.
 Method: Gas chromatography/mass spectrometry with semiquantitative analysis using NIST82 library reference data.
 Method: EPA 8270-10 for high-purity pure compounds. These compounds detected at concentrations exceeding NYDEC Method 8270-10.
 NE = Not Detected (analytical).
 N/A = Method Detection Limit.
 U = The analyte was analyzed but not detected at a detectable level.
 J = Analyte was detected, but greater than 100% of reportable level, and the concentration is an approximate value.
 D = Analyte was detected but not detected because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with D.
 * = U.S. EPA method for some analytes.
 * = Result exceeded calculation range, secondary dilution required.

Notes:

1 - Standards are for Class GA groundwater according to 6NYCRR Part 700-705;

All concentrations are in ppb (ug/L) unless otherwise indicated;

NE=Not Established;

Boldface type designates those compounds detected at concentrations exceeding NYSDEC standard;

E = Exceeded calibration range of instrumentation.

NE = No standard established;

U = The analyte was analyzed for but not detected at or above the stated limit.

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

D = Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.

** Standard for individual xylenes

* = LCS or LCSD exceeds the control limits

Notes:

1 - Standards are for Class GA groundwater according to 6NYCRR Part 700-705.

All concentrations are in ug/L (ppb) unless otherwise indicated;

Boldface type designates those compounds detected at concentrations exceeding NYSDEC standards;

NE = No standard established

** Total phenol concentration may not exceed 1.0

U = The analyte was analyzed for but not detected at or above the stated limit.

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

D = Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.

* = LCS or LCSD exceeds the control limits

PHASE I ENVIRONMENTAL SITE ASSESSMENT

**556 COLUMBIA STREET
BROOKLYN, NEW YORK
BLOCK 601, LOT 17**

PVE Sheffler, LLC. is submitting this report for work performed at the above-referenced site. This report has been prepared in conformance with the scope and limitations ASTM Standard E-1527-05, *Standard Practice for Phase I Environmental Site Assessments for Commercial Property Transactions*. If you have any questions or comments, please contact one of the individuals listed below. We declare that, to the best of our professional knowledge and belief, we meet the definition of *environmental professional* as defined in 40 CFR Part 312.10. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

PVE SHEFFLER, LLC.

Stephanie P. LaRose
Geologist/ Environmental Professional

Christopher B. Brown, CPG
Senior Hydrogeologist/Environmental Professional

1.0 Executive Summary

PVE Sheffler personnel have conducted a Phase I Environmental Site Assessment in conformance with ASTM Standard E-1527-05 of the property at 556 Columbia Street, Brooklyn, New York (the subject property). Any exceptions to, or deletions from, this practice are described in Section 2 of this report.

| <u>Environmental Concern</u> | <u>Number of Findings</u> |
|--------------------------------------------------------|---------------------------|
| Recognized Environmental Conditions (RECs) | 3 |
| Historical Recognized Environmental Conditions (HRECs) | None |
| De minimus Conditions | None |
| Data Gap/Data Failure | 2 |

1.1 Recognized Environmental Conditions

The definition of a *recognized environmental condition* is the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release, or material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, except for the following:

1. The subject property was operated as a manufacturing facility for lithographic varnish between 1904 and 1950. Kettles and furnaces were located on the property as a component of the manufacturing process. Stock materials used in the manufacturing of varnish include petroleum products and other hazardous or regulated materials. The manufacturing process may have contaminated local soil and/or groundwater.
2. Nearby industrial operations (paint and varnish manufacturing), fuel storage tanks, and petroleum spills/leaking underground storage tanks have the potential to contaminate local soil and/or groundwater.
3. The subject property was previously used as a storage lot for a trucking company and is currently utilized as a parking and storage area for various tenants. Surface spills of petroleum products or hazardous/regulated materials cannot be ruled out.

1.2 Historical Recognized Environmental Conditions

A *historical recognized environmental condition* (HREC) is an environmental condition which in the past would have been considered a *recognized environmental condition*, but which

may or may not be considered a *recognized environmental condition* currently. Examples include past releases of hazardous substances that have been remediated. This assessment has revealed no evidence of *historical recognized environmental conditions* in connection with the property.

1.3 De minimis Conditions

The term *recognized environmental conditions* is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are *not* recognized environmental conditions. There were no *de minimis* conditions found in connection with the subject property.

1.4 Data Gaps and Data Failures

Data gaps are defined as a lack or inability to obtain information required by ASTM E-1527-05 despite good faith efforts to gather such information. A *data gap* by itself is not inherently significant and is only significant if other information raises reasonable concerns. Examples of *data gaps* are the inability to inspect portions of the subject property during the site inspection, and an inability to identify the historical use of the subject property back to 1940 but the earliest source shows the subject property to be undeveloped.

Data failures are a subset of *data gaps* and indicate a failure to achieve historical research objectives even after reviewing standard historical sources that are reasonably attainable and likely to be useful. *Data failures* can occur when the use of the property was unable to be identified at approximately five-year intervals back to the first use or 1940, whichever is earlier.

The following are data failures or data gaps encountered during this assessment:

1. Records of ownership of the subject property are incomplete and do not date to initial development. The ownership record obtained during this assessment is based on reasonably attainable information and does not constitute a title search.
2. The City Directory Abstract and Sanborn Fire Insurance Maps have identified adjoining or nearly adjoining properties as that previously operated businesses which have potential environmental impacts. Such uses include paint and varnish manufacturing, gasoline refueling, and manufacture of dyes and food additives. A nearby warehouse formerly operated by Nalco, located at 18 Bay Street is potentially adjacent to the subject property and is listed as a generator of hazardous waste. No further information about these operations was encountered during the research for this Phase I ESA.

1.5 Opinion and Recommendations

Manufacturing activities at the subject property involved the use of hazardous and regulated substances. A subsurface investigation has commenced to evaluate the condition of soil and groundwater and evaluate the potential for vapor intrusion. A vapor intrusion condition can exist when vapors from the contaminated media accumulate indoors. These conditions can be effectively mitigated with incorporation of a barriers or caps in future construction.

Preliminary results indicate shallow subsurface soil contains elevated concentrations of semi-volatile organic compounds and heavy metals. Contaminated soil must be handled in accordance with applicable rules and regulations. The site is under consideration by the New York City Mayor's Office of Environmental Remediation for acceptance into the Voluntary Cleanup Program and the Brownfield Incentive Grant program.

2.0 Introduction

2.1 Objectives

This Environmental Site Assessment (ESA) is intended to identify *recognized environmental conditions* (RECs) with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and petroleum products on the subject property (defined in section 3.0). The term *recognized environmental conditions* is defined in accordance with ASTM E 1527-05 **Standard Practice of Environmental Site Assessments for Commercial Real Estate Transactions** as *the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property (ASTM 2005).*

2.2 Scope and Limitations of Report

Visual inspection of the subject property, a review of regulatory records and documents, and a review of historical records and documents in accordance with ASTM E 1527-05 and the appended Scope and Limitations (Appendix G).

2.3 Significant Assumptions

PVE Sheffler assumes that all database records, historical information, and interviews conducted regarding the subject property are from reliable sources. No attempt was made to independently verify the reliability of said sources, as it is not required to verify the information provided according to Section 7.5.2.1 of ASTM E 1527-05. Where access to portions of the site or to structures on the site was unavailable or limited, PVE Sheffler renders no opinion as to the presence of regulated or hazardous materials or to the presence of indirect evidence relating to hazardous or regulated material in that portion of the site or structure. Conclusions and recommendations in Section 8.0 are based on information obtained from said sources and a visual inspection of the subject property on the date listed herein. References and sources used for the preparation of this report may be viewed in Appendix H.

2.4 Special Terms and Conditions

An environmental liens and activity use limitations search was not included with the scope of this report, as per the direction of the user. In order to satisfy the ASTM E 1527-05 requirements for a Phase I ESA, a search for environmental liens must be included in the title search for the subject property.

Phase II investigations began with the completion of a draft of this report. The conclusions and recommendations included in this document have been developed based on preliminary findings from these investigations. A complete Phase II report will be prepared at a later date.

2.5 User Reliance

This report provides an assessment of the presence of regulated or hazardous materials, as defined by CERCLA, and an evaluation of any *recognized environmental conditions*.

Phase I ESA prepared for: HIGHMARK SCHOOLS
6900 South 900 East –Suite 100
Midvale, Utah 84047

Authorized to rely on Phase I ESA: HIGHMARK SCHOOLS
6900 South 900 East –Suite 100
Midvale, Utah 84047

3.0 Site Description

3.1 Subject Property Location

Street Address: 556 Columbia Street
Municipality: Brooklyn
County: Kings County
State: New York
Tax Parcel ID: Block 601, Lot 17

See Appendix A and B for site location maps.

3.2 Site Features, Characteristics and Current Operations

Site Features: The subject property consists of one tax parcel, improved with pavement across the lot, and a small loading dock along the western boundary. A chain-link fence surrounds the lot.

Current Use: Parking Lot

Topography: Generally level

Water Supply: New York City water supply

Sanitary Sewer: New York City sewer

3.3 Current Uses of Adjoining Properties

- The parcel north of the subject property, on the north side of Bay Street includes light industrial operations including contractor's yards and offices, and automotive repair.
- The parcel west of the subject property is a City park.
- The property east of the subject property is a warehouse and light manufacturing facility.
- The parcel south of the subject property is a community garden.

4.0 Database Search

A review of state and federal documents and databases was performed to identify recorded hazardous waste or regulated substance activities on or near the subject property. Information from state and federal databases was compiled by Environmental Data Resources (EDR), an independent subcontractor to PVE Sheffler, LLC. The information presented below is a summary of this report. A complete listing of the sources searched and a complete copy of the database report are provided in Appendix C. The search distances as assigned in ASTM E 1527-05 were used for each of the following environmental record sources. Additional reviewed records are provided in Appendix D.

Asterisked (*) sites are indicative of sites listed as un-mappable (“orphan”) in the EDR database report; however based on location information provided, the sites may be located within the appropriate search radius and are included in this Phase I ESA report. Information about these sites can be reviewed in the EDR Radius Map Report in Appendix C.

4.1 Federal and State Hazardous Waste Sites - NPL, CERCLIS, SHWS, HSWDS

National Priority List (NPL)

National Priority Listing (NPL) sites are those listed with the USEPA as hazardous waste disposal sites, also known as Superfund sites. Proposed and delisted NPL site lists are also maintained by the USEPA. Further information can be reviewed in Appendix C.

| | <i>Subject Property:</i> | <i>Properties within 1.0 mile:</i> |
|--------------|--------------------------|------------------------------------|
| NPL | No | 0 |
| Proposed NPL | No | 0 |
| Delisted NPL | No | 0 |

Comprehensive Environmental Response Compensation & Liability Information System (CERCLIS)

The USEPA CERCLIS list details proposed and existing federal Superfund sites. The USEPA also maintains a CERCLIS No Further Remedial Action Planned (NFRAP) inventory. Further information can be reviewed in Appendix C.

| | <i>Subject Property:</i> | <i>Properties within 0.5 mile:</i> |
|---------------|--------------------------|------------------------------------|
| CERCLIS | No | 1 |
| CERCLIS NFRAP | No | 0 |

Brookhattan Smelting & Refining Co. located at 162 Richards Street is a listed CERCLIS site. A pre-CERCLIS screening was conducted at the site in November of 2012. Additional action has not been undertaken, reference to a Preliminary Assessment is made in the project file.

State Hazardous Waste Sites (SHWS)

Inactive State Hazardous Waste Disposal Sites (SHWS) are designated by NYSDEC and are state-equivalent CERCLIS sites. NYSDEC also maintains an inventory of delisted SHWS. Further information can be reviewed in Appendix C.

| | <i>Subject Property:</i> | <i>Properties within 1.0 mile:</i> |
|---------------|--------------------------|------------------------------------|
| SHWS | No | 2 |
| Delisted SHWS | No | 4 |

SHWS

The following SHWS facilities are located within 1.0 mile of the subject property:

| FACILITY | STREET | CITY | ST | ZIP | DIST | MILES | DIR |
|----------------------|------------------------------------|----------|----|-------|------|-------|-----|
| CHEM TURA | 688-700 COURT ST 124-136 SECOND | BROOKLYN | NY | 11231 | 2162 | 0.409 | ESE |
| K - METROPOLITAN MGP | AVE | BROOKLYN | NY | 11215 | 4020 | 0.761 | E |

Both the Chem Tura and K-Metropolitan sites are listed as having a significant threat to public health or the environment.

Delisted SHWS

The following delisted SHWSs are located within 1.0 mile of the subject property:

| FACILITY | STREET | CITY | ST | ZIP | DIST | MILES | DIR |
|------------------------------------------|----------------------------------------|----------|----|-------|------|-------|-----|
| CARROLL GARDENS | CORNER OF 5TH STREET & SMITH STREET | BROOKLYN | NY | | 3648 | 0.691 | ENE |
| CARROLL GARDENS | CORNER OF 5TH STREET & SMITH STREET | BROOKLYN | NY | | 3648 | 0.691 | ENE |
| HAMILTON AVENUE PIERS/19TH & 18TH ST. | REAR OF 566 HAMILTON AVENUE | BROOKLYN | NY | 11232 | 4014 | 0.760 | ESE |
| HAMILTON AVENUE PIERS/19TH & 18TH ST. | REAR OF 566 HAMILTON AVENUE | BROOKLYN | NY | 11232 | 4014 | 0.760 | ESE |

4.2 Hazardous Waste Treatment, Storage, or Disposal - RCRA TSD and RCRA CA

RCRA Treatment Storage Disposal (TSD)

The database of RCRA facilities for treatment, storage, or disposal of hazardous materials (RCRA TSD) is maintained by the USEPA. Further information can be reviewed in Appendix C.

| | <i>Subject Property:</i> | <i>Properties within 0.5 mile:</i> |
|----------|--------------------------|------------------------------------|
| RCRA TSD | No | 0 |

RCRA Corrective Action Sites (CORRACTS)

The USEPA maintains a database of sites within the RCRA Corrective Action program, which are facilities permitted by the USEPA for treatment, storage, or disposal of hazardous waste which have conducted or are currently conducting a corrective action as regulated under the Resource Conservation and Recovery Act. Further information can be reviewed in Appendix C.

| | <i>Subject Property:</i> | <i>Properties within 1.0 mile:</i> |
|---------------|--------------------------|------------------------------------|
| RCRA CORRACTS | No | 2 |

The following RCRA CORRACTS facilities are located within 1.0 mile of the subject property:

| FACILITY | STREET | CITY | ST | ZIP | DIST | MILES | DIR |
|---------------------------|------------|----------|----|-------|------|-------|-----|
| DEBEVOISE CO | 74 20TH ST | BROOKLYN | NY | | 3820 | 0.723 | SE |
| PATTERSON CHEMICAL CO INC | 102 3RD ST | BROOKLYN | NY | 11231 | 4640 | 0.879 | ENE |

4.3 Hazardous Waste Generation - RCRA SQG and LQG

The USEPA maintains a database of facilities that generate hazardous waste. Large Quantity Generators (LQG) generate over 1,000 kg of hazardous waste or over 1 kg of acutely hazardous waste per month. Small Quantity Generators (SQG) generate between 100 kg and 1,00 kg of hazardous waste per month. Conditionally-exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste or less than 1 kg of acutely hazardous waste per month. Non-generators are sites that do not presently generate hazardous waste. Further information can be reviewed in Appendix C.

| | <i>Subject Property:</i> | <i>Properties within 0.125 mile:</i> |
|--------------------|--------------------------|--------------------------------------|
| RCRA LQG | No | 0 |
| RCRA SQG | No | 0 |
| RCRA CESQG | No | 3 |
| RCRA Non-generator | No | 15 |

RCRA CESQG

The following sites are listed as CESQGs:

| FACILITY | STREET | CITY | ST | ZIP | DIST | MILES | DIR |
|---------------------------|----------------|----------|----|-------|------|-------|-----|
| NEW YORK SHIPYARD CORP. | 1 BEARD STREET | BROOKLYN | NY | | 480 | 0.091 | WSW |
| BARGE AUTO BODY INC | 34 COFFEY ST | BROOKLYN | NY | 11231 | 658 | 0.125 | NW |
| RED HOOK SELF-STORAGE LLC | 83 LORRAINE ST | BROOKLYN | NY | 11231 | 668 | 0.127 | ENE |

RCRA Non-generator

Fifteen non-generators are listed in the EDR report. Further information about these sites can be reviewed in Appendix C.

The following are listed as Non-Generators. Note that the adjacent warehouse, at 18 Bay Street, is listed as a former generator of hazardous waste.

| FACILITY | STREET | CITY | ST | ZIP | DIST | MILES | DIR |

4.5 Petroleum Bulk Storage – PBS

NYSDEC maintains a database of petroleum bulk storage (PBS) facilities with regulated storage tanks. Further information can be reviewed in Appendix C.

| | <i>Subject Property:</i> | <i>Properties adjoining:</i> |
|-----|--------------------------|------------------------------|
| PBS | No | 1 |

| FACILITY | STREET | CITY | ST | ZIP | DIST | MILES | DIR |
|---------------------|-----------|----------|----|-------|------|-------|-----|
| TET REAL ESTATE LLC | 29 BAY ST | BROOKLYN | NY | 11231 | 31 | 0.006 | NNW |

Two 1,080-gallon diesel USTs were closed-removed in June 2002. Two 1,080-gallon diesel USTs were closed in place in July 1994. This property is located on the north side of Bay Street, north of the subject property.

4.6 Petroleum and Hazardous Material Releases - ERNS, SPILLS, LTANKS

Emergency Response Notification System (ERNS)

The USEPA Emergency Response Notification System (ERNS) stores information reported to the USEPA on sudden and/or accidental releases of hazardous substances to the environment. Further information can be reviewed in Appendix C.

| | <i>Subject Property:</i> |
|------|--------------------------|
| ERNS | No |

NYSDEC Spills Database (SPILLS)

NYSDEC maintains a database of petroleum spills reported to the department. Further information can be reviewed in Appendix C.

Open files indicate spills that have not been closed by the lead agency, which may indicate that contamination remains to be remediated and/or the agency has not yet received final

confirmation that remedial action is complete. Closed files indicate spills whose files have been closed by the lead agency. Spills are usually closed when the agency determines the contamination relating to the spill has been remediated to meet the applicable standards. Spill files may be closed even though contaminants in soil and groundwater do not meet applicable standards; this is especially true if groundwater is not relied upon for purposes of consumption or other institutional controls exist which minimize or prevent exposure to remaining contamination. Closed spill files always have the possibility of being reopened if additional information is received by the agency that demonstrates an increased risk to human health or the environment.

| | <i>Subject Property:</i> | <i>Properties within 0.125 mile:</i> |
|----------------------|--------------------------|--------------------------------------|
| SPILLS - Open File | No | 0 |
| SPILLS - Closed File | No | 14 |

NYSDEC Leaking Registered Storage Tanks (LTANKS)

NYSDEC maintains a database of leaking registered storage tank incident reports (LTANKS). Further information can be reviewed in Appendix C.

Open files indicate spills that have not been closed by the lead agency, which may indicate that contamination remains to be remediated and/or the agency has not yet received final confirmation that remedial action is complete. Closed files indicate spills whose files have been closed by the lead agency. Spills are usually closed when the agency determines the contamination relating to the spill has been remediated to meet the applicable standards. Spill files may be closed even though contaminants in soil and groundwater do not meet applicable standards; this is especially true if groundwater is not relied upon for purposes of consumption or other institutional controls exist which minimize or prevent exposure to remaining contamination. Closed spill files always have the possibility of being reopened if additional information is received by the agency that demonstrates an increased risk to human health or the environment.

4.7 Brownfield Sites

A Brownfield is any real property where redevelopment or reuse may be complicated by the presence or potential presence of hazardous waste, petroleum, pollutants, or contaminants. Further information can be reviewed in Appendix C.

| | | |
|------------|--------------------------|------------------------------------|
| | <i>Subject Property:</i> | <i>Properties within 0.5 mile:</i> |
| Brownfield | No | 2 |

| FACILITY | STREET | CITY | ST | ZIP | DIST | MILES | DIR |
|------------------------------|------------------|----------|----|-------|------|-------|-----|
| U. S. DREDGING SHIPYARD SITE | ONE BEARD STREET | BROOKLYN | NY | 11231 | 480 | 0.091 | WSW |
| RED HOOK SMITH STREET | 627 SMITH ST. | BROOKLYN | NY | 11231 | 2497 | 0.473 | ESE |

- The U.S. Dredging site locate at One Beard Street, approximately 480 feet southwest of the subject property (now the location of the Ikea Red Hook facility), is a 48 acre former industrial property in a commercial and industrial area along Beard Street in the Red Hook area of Brooklyn. Until early 2005, a ship repair facility and a variety of small industrial and commercial operations occupied the nineteen on-site buildings. Most of the upland portion of the site was created by filling in the basin at different points in the sites history. Fill materials used at the site are unknown, but may have included coal and incinerator ash, demolition debris, and industrial wastes. Groundwater tends to flow toward the adjacent Erie Basin. Remediation activities commenced in January 2006. Remediation at the site is complete including soil excavation and vapor barriers in the construction of new buildings.
- The Red Hook Smith Street site is located at 627 Smith Street in Brooklyn, and bounded by Smith Street to the west, Gowanus Canal to the east and south, and an industrial property to the north. The site encompasses an approximate area of 85,400 square feet. Barrett Manufacturing occupied a portion of the site from circa 1900 and utilized nine coal tar storage tanks and two gasoline underground storage tanks (UST) as part of their production of coal tar and roofing material. Various manufacturing and storage companies occupied other portions of the site, American Ice Company, Smith Street Dock Corporation and Seaboard Storage, Black Diamond Cargo, Pittston Stevedoring Cargo. The site is underlain by a layer of historic urban fill that extends to approximately 12 feet below grade surface. The historic fill generally consisted of sand, silt, clay gravel ,cobbles, wood and brick fragments, cinder, and ash. The BCP application is currently being reviewed by regulatory agencies.

4.8 Voluntary Cleanup Program (VCP) Sites

The VCP was established to address the environmental, legal, and financial barriers that hinder redevelopment and reuse of contaminated sites, and to enhance private sector cleanup of Brownfield sites by enabling parties to remediate using private rather than public funds.

| | | |
|-----|--------------------------|------------------------------------|
| | <i>Subject Property:</i> | <i>Properties within 0.5 mile:</i> |
| VCP | No | 0 |

4.9 Engineering Controls, Institutional Controls and Activity and Use Limitations

Engineering control and institutional control listings are maintained by the USEPA and NYSDEC and are controls designed to prevent exposure to contaminants remaining on a site. Activity use limitations (AULs) are based on liens searches on a property. Further information can be reviewed in Appendix C.

| | <i>Subject Property:</i> |
|------------------------|--------------------------|
| Engineering Controls | No |
| Institutional Controls | No |
| AULs | Not Searched |

Engineering controls are known to be in place at the nearby US Dredging site, now Ikea.

4.10 Environmental Liens

An environmental liens report was not acquired for this report.

| | <i>Subject Property:</i> |
|---------------------|--------------------------|
| Environmental Liens | Not Searched |

4.11 Other Conditions of Concern

Manifests

Numerous manifests were identified for sites within 0.25 mile of the subject property. Details may be reviewed in Appendix C.

Dry Cleaners

NYSDEC maintains a list of registered drycleaners.

| | <i>Subject Property:</i> | <i>Properties within 0.125 mile:</i> |
|-------------|--------------------------|--------------------------------------|
| Drycleaners | No | 1 |

- The YENELSY/LORRAINE/BIG APPLE DRY CLEANER at 56 Lorraine Street, is located approximately 535 northeast of the subject property

Manufactured Gas Plants

Manufactured gas plants (MGPs) produced gas for fuel until the 1950s. A significant amount of waste and hazardous byproducts were typically generated and often disposed of at the plant, resulting in contamination of the site.

| | | |
|-----|--------------------------|----------------------------------|

Historic Service Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Further information can be reviewed in Appendix C.

| | | |
|---------------------------|--------------------------|-------------------------------------|
| | <i>Subject Property:</i> | <i>Properties within 0.25 mile:</i> |
| Historic Service Stations | No | 7 |

The closest site is 20 Bay Street, listed as All Type Auto Service Repair in 2006. The EDR report indicates the site is 65 feet from the subject property. Further information can be reviewed in Appendix C.

Historic Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Further information can be reviewed in Appendix C.

5.0 Physical Setting Analysis

The physical setting of the subject property was evaluated by consulting regional bedrock geology maps, topographic maps, and information pertaining to regional hydrogeology. Following, is a summary of this review.

5.1 7.5 Minute USGS Topographic Map

According to the Jersey City, NJ NY, USGS topographic map, the subject property is approximately 6 feet above mean sea level.

5.2 Bedrock Geology

According to the Lower Hudson Sheet of the Geologic Map of New York and USGS data, bedrock underlying the subject property is Quaternary-age glacial and alluvial deposits; underlying geology is unknown.

5.3 Surficial Geology

According to the Lower Hudson sheet of the Surficial Geologic Map of New York, till of variable texture and clast content overlies bedrock.

5.4 Regional Hydrogeology

Based on geography, groundwater is presumed to flow to the southeast, toward the Upper Bay of New York Harbor.

6.0 Property History

The history of the subject property and surrounding area was researched through a review of readily ascertainable standard historical sources. These sources may include current and past owners, property records, recorded land title records, property tax files, building department records and/or zoning & land use records. This review was conducted in order to identify those uses that are likely to have led to recognized environmental conditions. Following, is a summary of these findings. Documentation pertaining to the aforementioned records review is on file with PVE Sheffler, and references are in Appendix H.

6.1 General Property History and Use

The subject property was initially developed in the early 1900s as the CWH Carter Lithographic Varnish Works, which covered the eastern 2/3 of the block between Columbia Street and Otsego Street to the east and west, and Bay and Sigourney Streets to the north and south. Several kettles, and a furnace were operated on site, presumably for preparing varnish. A barrel shed and offices were located on site as well. By 1950 the site had been converted to the Cambeis Trucking Company and presumably served as the terminal for the operation. The site continued to be operated as a parking area for trucks and busses until the current use.

No certificates of occupancy were available with NYC Buildings Department. The department of Finance building classification is “garage/gas station”. There is no evidence that the subject property was operated as a gas station. Refueling facilities may have been operated on site for the former trucking operation

6.2 Property Ownership

The subject property is currently owned by Red Hook Property Group LLC. Property ownership history was researched through deeds at ACRIS online. Previous owners and the approximate date of purchase are listed below. This ownership record is based on reasonably attainable information, may be incomplete, and does not constitute a title search.

| <i>Seller/Grantor</i> | <i>Buyer/Grantee</i> | <i>Approximate Date of Purchase</i> |
|-------------------------|-----------------------------|-------------------------------------|
| Flippy Realty Corp. | Red Hook Property Group LLC | 6/29/2005 |
| Rainforth & Kelly Inc. | Flippy Realty Corp. | 1/23/1986 |
| Columbia St. Associates | Rainforth & Kelly Inc. | 6/17/1970 |
| Marvin Realty Corp. | Columbia St. Associates | 6/17/1970 |
| Cambeis, Mary W. | Marvin Realty Corp. | 9/8/1967 |
| Mae Realty Co. Inc. | Cambeis, Mary W. | 9/8/1967 |

6.3 Historical Topographic Maps

Historical USGS topographic maps from 1891, 1900, 1905, 1925, 1947, 1955, 1967, and 1981 were provided in the EDR report. The maps are attached in Appendix C. Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

| | |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| 1891 | The subject property's block is densely developed and individual structures are not indicated. |
| 1900 | The subject property's block is densely developed and individual structures are not indicated. |
| 1905 | The subject property is obscured by a label for a nearby elevation mark. |
| 1925 | The area of the subject property is shaded pink to indicate dense development. Most individual structures are not indicated due to this density. |
| 1947 | The area of the subject property is shaded pink to indicate dense development. Most individual structures are not indicated due to this density. |
| 1955 | The area of the subject property is shaded pink to indicate dense development. Most individual structures are not indicated due to this density. |
| 1967 | The area of the subject property is shaded pink to indicate dense development. Most individual structures are not indicated due to this density. |
| 1981 | The area of the subject property is shaded pink to indicate dense development. Most individual structures are not indicated due to this density. |

6.4 Aerial Photographs

Aerial photographs from 1924, 1954, 1966, 1975, 1984, 1994, 2009, and 2011 were provided in the EDR report. The photographs are attached in Appendix C. Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

| | |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1924 | The subject property is developed. Resolution of the photograph is poor. Portions of property appear vacant with structures along the southeast perimeter and to the west. |
| 1940 | The subject property is developed. Resolution is poor. Portions of property appear vacant with structures along the southeast perimeter and to the west. |
| 1943 | The subject property is developed, with structures along the western and southern perimeter. |
| 1954 | The subject property is occupied by containers or trucks. |
| 1966 | The subject property is vacant with the exception of a structure along the western boundary. |
| 1975 | See 1966 description. |
| 1984 | The subject property is occupied by containers or trucks. |
| 1994/1995 | The subject property is occupied by containers or trucks. |
| 2006 | The subject property is occupied by containers, trucks or busses. |
| 2008 | The subject property is occupied by containers, trucks or busses. |
| 2009 | The subject property is occupied by containers, trucks or busses. |

| | |
|------|-------------------------------------------------------------------|
| 2011 | The subject property is occupied by containers, trucks or busses. |
|------|-------------------------------------------------------------------|

6.5 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps from were provided in the EDR report and are attached in Appendix C. Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

| | |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1886 | <p>556 Columbia Street: The property is vacant, labeled as “vacant swamp”.</p> <p>North of Bay Street, the property is labeled Richardson & Boynton Stove Works, with a foundry and machine shop.</p> |
| 1904 | <p>556 Columbia Street: The property is occupied by the CWH Carter Lithographic Varnish Works. Three kettles are located in the southwestern corner of the property, near Sigourney Street. A furnace is located on the south central portion of the property. Offices and a barrel shed are located in the central and northerly portion of the property.</p> <p>A portion of the Lithographic Varnish operation extends to the west of the subject property, including additional kettles and a proposed warehouse. The Keystone Varnish Works occupies property to the west. Operations include tanks, kettles, gum storage areas and offices.</p> <p>Property to the north includes the WM J. Bannerman – Ships Stores, presumably a shipping and storage warehouse.</p> <p>Property to the south appears vacant, Property to the east includes residential dwellings and vacant property.</p> |
| 1915 | <p>See 1904 description for the subject property. Several kettles are located on the property. The William J. Leach Boiler Scale operation is located in the northwest portion of the property.</p> <p>The Keystone Varnish Works occupies the remainder of the block to the west of the subject property.</p> <p>The H. Kohnstamm & Co. Dry Color manufacturing facility is located on the northeast corner of Columbia and Bay Street. A tank room is noted on the southern property boundary, parallel to Bay Street</p> <p>Other paint manufacturing, machine shops, steel works and other industrial property uses are located west, north and east of the subject property. Property south of Sigourney Street is largely vacant and residential.</p> |
| 1928 | No detail for the subject property or surrounding property is provided on this map. |

| | |

6.6 City Directory Abstract

The city directory abstract lists telephone company records of past occupants and businesses for an address by year, and is reviewed to determine if past occupants and businesses of the subject property and adjacent properties may have led to recognized environmental conditions. The City Directory Abstract is attached in Appendix C. Additionally, a city directory ordered for a previous, nearby property was also utilized and is attached in Appendix C.

Only environmentally pertinent occupants and businesses are listed below.

Subject Property

556 Columbia Street

- Not listed.

Adjoining/Close Properties

There were no environmentally pertinent occupants and businesses on adjoining properties.

6.7 Other Records

Water and Sewer Records

An information request was sent to the New York City Water Board requesting any information the department has regarding municipal water systems, on-site supply wells, and/or septic systems serving the site. Any response from the department is included in Appendix D. If further information is received at a later date and modifies the conclusions of this report, we will notify the user of the report.

Health Department Records

An information request was sent to the New York City Department of Health and Mental Hygiene requesting any information the department has regarding on-site septic systems, supply or monitoring wells, chemical spills, health violations, or other environmental contamination issues associated with the site. Any response from the department is included in Appendix D. If further information is received at a later date and modifies the conclusions of this report, we will notify the user of the report.

Fire Department Records

A “Fuel Tank Special Request Form” was completed and submitted to the New York City Fire Department requesting any information they have regarding existing or previous fuel storage tanks. Any response from the department is included in Appendix D. If further information is received at a later date and modifies the conclusions of this report, we will notify the user of the report.

Building Department Records

New York City Department of Buildings records were accessed online. Information from this website is provided in Appendix D.

The address 556 Columbia Street is not in the property file. When searched by Block 601, Lot 17, the address that appears is 30 Bay Street. The Department of Finance Building Classification of this location is “garage/gas station”. No certificates of occupancy are available. Based on other historical research we believe this reference to represent the use of the site as a parking area for busses.

Assessor Records

Assessment records for the subject property were reviewed at the NYCProperty website. Information from this website is provided in Appendix D and included in Section 6.2.

7.0 Site Inspection and Interviews

PVE Sheffler personnel inspected the subject property on July 31 and August 6, 2013. The site reconnaissance and interviews were conducted by Christopher Brown and Timothy Pagano. Photographs are attached in Appendix E.

7.1 General Site Observations

The subject property consists of a vacant lot with no existing site improvements except for loading dock along the western property boundary. The loading dock abuts the building on the adjacent lot. The entire perimeter of the property is surrounded by a chain link fence with two access gates: One along Columbia Street, to the east, and one on Sigourney Street, to the south. The entire lot is covered with asphalt pavement. There are several storm drain drywells which discharge stormwater directly to the subsurface.

7.2 Hazardous and Regulated Substances

No hazardous or regulated substances were observed.

7.3 Storage Tanks

No storage tanks were observed on the subject property.

7.4 Polychlorinated Biphenyls (PCBs)

No PCBs or potential sources of PCBs were observed on the subject property.

7.5 Solid Waste

Solid waste (garbage) was observed on the subject property.

7.6 Septic System

The subject property does not utilize a private septic system.

7.7 Odors

No odors were observed during the site inspection.

7.8 Pools of Liquid

Other than stormwater ponding, no pools of liquid were observed.

7.9 Drums

No drums were observed on the subject property during the site inspection.

7.10 Petroleum Products Containers

No petroleum products containers were observed on the subject property during the site inspection.

7.11 Unidentified Substance Containers

No containers of unidentified substances were observed during the site inspection.

7.12 Pits, Ponds, or Lagoons

No pits, ponds, or lagoons were observed during the site inspection.

7.13 Stained Soil or Pavement

Stained pavement was noted across the site, presumably from drippage from parked vehicles.

7.14 Stressed Vegetation

No stressed vegetation was observed during the site inspection.

7.15 Waste Water

No waste water was observed during the site inspection.

7.16 Wells

The subject property does not utilize a supply well.

7.17 Other Conditions of Concern

No other conditions of concern exist at this site that have not been previously discussed.

7.18 Interviews

Several FOIL requests were submitted to local agencies and departments. See Section 6.7 for details.

PVE Sheffler personnel interviewed Humberto Lopez, the current property owner, in September 2013. He provided no additional information pertaining to the operating history of the property.

PVE Sheffler personnel interviewed Andrew McLaughlin, a representative of Highmark Schools. Mr. McLaughlin did not possess any specialized knowledge or experience that was material to recognized environmental conditions in the connection with the property.

8.0 Findings and Conclusions

PVE Sheffler personnel have conducted a Phase I Environmental Site Assessment in conformance with ASTM Standard E-1527-05 of the property at 155 Remsen Street, Brooklyn, New York (the subject property). Any exceptions to, or deletions from, this practice are described in Section 2 of this report.

| <u>Environmental Concern</u> | <u>Number of Findings</u> |
|--------------------------------------------------------|---------------------------|
| Recognized Environmental Conditions (RECs) | 3 |
| Historical Recognized Environmental Conditions (HRECs) | None |
| De minimis Conditions | None |
| Data Gap/Data Failure | 2 |

RECs, HRECs, de minimis conditions, and data gaps and failures are listed and described in Section 1.0 of this report.

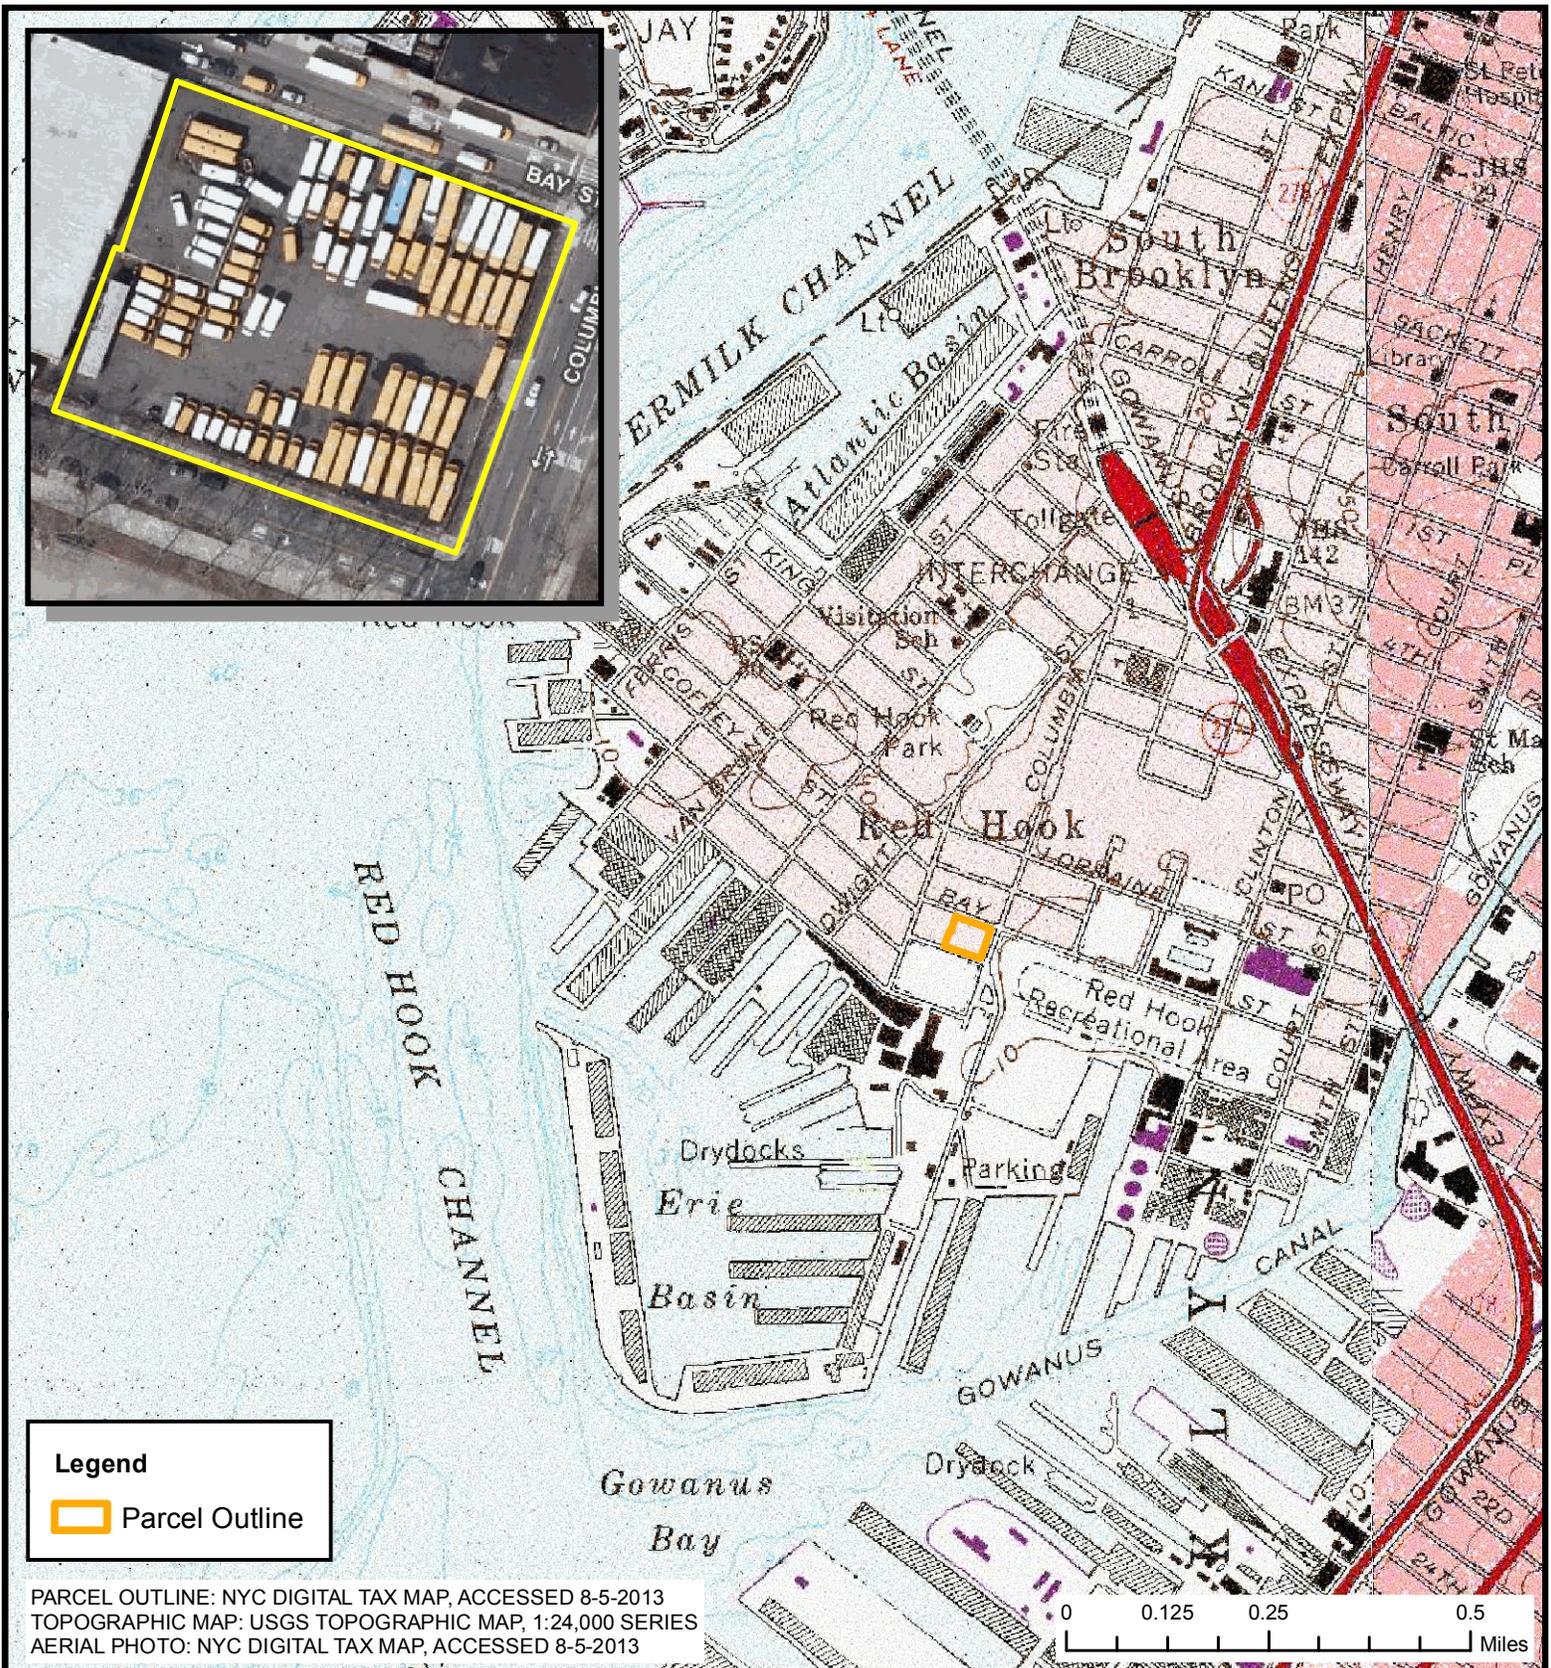

8.1 Opinion and Recommendations

Manufacturing activities at the subject property involved the use of hazardous and regulated substances. A subsurface investigation has commenced to evaluate the condition of soil and groundwater and evaluate the potential for vapor intrusion. A vapor intrusion condition can exist when vapors from the contaminated media accumulate indoors. These conditions can be effectively mitigated with incorporation of a barriers or caps in future construction.

Preliminary results indicate shallow subsurface soil contains elevated concentrations of semi-volatile organic compounds and heavy metals. Contaminated soil must be handled in accordance with applicable rules and regulations. The site is under consideration by the New York City Mayor's Office of Environmental Remediation for acceptance into the Voluntary Cleanup Program and the Brownfield Incentive Grant program.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-05 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records – The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Conrad Geoscience Corporation on Jul 30, 2013.

TARGET PROPERTY

556 Columbia Street
Brooklyn, NY 11231

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other common reasons for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000

Permit Type: Bldg -

New Permit Number: 101000000405

Status: Valuation: \$1,000,000.00

Contractor Company: OWNER-BUILDER

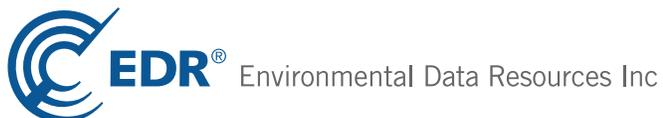

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

556 COLUMBIA STREET
BROOKLYN, NY 11231

COORDINATES

Latitude (North): 40.6731000 - 40° 40' 23.16"
Longitude (West): 74.0090000 - 74° 0' 32.40"
Universal Transverse Mercator: Zone 18
UTM X (Meters): 583757.9
UTM Y (Meters): 4502730.0
Elevation: 6 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/04/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

| BROOKHATTAN SMELTING & REFININ | 162 RICHARDS ST | NNW 1/8 - 1/4 (0.245 mi.) | 83 | 239 |

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/12/2013 has revealed that there are 2

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/21/2013 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 04/22/2013 has revealed that there are 9 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/21/2013 has revealed that there are 30 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 28 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants

EXECUTIVE SUMMARY

(manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

| BU-METROPOLITAN MGP | 124-136 SECOND AVE | E 1/2 - 1 (0.761 mi.) | T123 | 418 |

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 7 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 5 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

DEC Memo: Reassigned from Tomasello to Sigona on 11/6/00.This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004.Spill No. 9415606 was called in on 3-1-1995 due to free product in the submersible pump. The caller, ExxonMobil, reported that it was repaired and cleaned up. Groundwater samples were collected on 3-7-1995 and 7-20-1995 from on-site wells. Three groundwater samples were also collected on 6-27-1995. All five groundwater samples were acceptable. Based on this file information, this spill site is closed. John Durnin 6-22-2005.
Remarks: FREE PRODUCT FOUND IN SUBMERSIBLE PUMP SYSTEM- CALLER UNSURE OF CAUSE - REPAIRED CLEANED UP BY ON SITE PERSONNEL.

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Date form received by agency: 08/07/2008
Facility name: NALCO BROOKLYN WAREHOUSE
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

 DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"DEC Demeo responded confirmed that there were containers at the location requiring overpacking and disposal. DEC Sigona contacted FDNY Dispatcher at 718-636-1700 requesting that the drums be overpacked. Containers are 2/10 mile south of Halleck Street on Columbia Street, accross the street from backstop for baseball field.DEC Sigona contacted FDNY Dispatcher 414 at 718-636-1700 and confirmed that the containers would be overpacked by FDNY following inspection by Engine Co. DEC would schedule pickup by Drum Run.7/3/03 TJDDrum emptied as part of "Drum Run". No further action required.

Remarks:

Caller reporting 8 five gallon pails at above location. Some of containers are open. Caller is requesting pick up of material.

DEC Memo: DER/Albany was notified on 11/26/07 of a barge sinking/oil spill at an IKEA department store construction site along Erie Basin in Brooklyn. This barge had no fuel on it, other than the fuel and hydraulic oil in a front end loader that was on this vessel. To compound the problem, a second barge drifted over this sunk barge, and then sank on top of it. The barge's owner placed boom around the sunk barges, and a contractor was hired to collect the product as it rose to the water's surface. It was estimated that thee was approximately 50 gallons of diesel fuel and over 100 gallons of hydraulic fluid. The US Coast Guard will develop a salvage plan with the barge owner. CLOsed.
Remarks: HYDRALYIC OIL IS VEGTABLE BASED AND ENVIRO FRIENDLY; VESSEL SUNK AND ESCAVATOR WAS ON IT; AREA WAS BOONED;

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: K020

Waste name: HEAVY ENDS FROM THE DISTILLATION OF VINYL CHLORIDE IN VINYL CHLORIDE MONOMER PRODUCTION.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Site Description: Location: The U.S. Dredging site is 48 acre former industrial property in a commercial and industrial area along Beard Street in the Red Hook area of Brooklyn. Site Features: About 25 acres of the 48-acre site are underwater in the Erie Basin. Past Use of the Site: Until early 2005, a ship repair facility and a variety of small industrial and commercial operations occupied the nineteen on-site buildings. Since the 1860s shipyards and related ship maintenance and repair operations have occupied the site. Historically, shipyards have utilized a variety of hazardous materials, including petroleum products, solvents, PCBs, and heavy metals such as mercury, arsenic, lead, and copper. Most of the upland portion of the site was created by filling in the basin at different points in the sites history. The fill materials used at the site are unknown, but may have included coal and incinerator ash, demolition debris, and industrial wastes, which commonly were used as fill throughout the City in past decades. Site Geology and Hydrogeology: Prior to being filled in, the entire site had been marsh land or under water. Groundwater tends to flow toward the adjacent Erie Basin. Site Remediation and Management: Remediation activities commenced in January 2006 and continued prior to, and during site redevelopment activities through June 2008 when a furniture store opened at the site. The Final Engineering Report was approved on June 17, 2008. The Certificate of Completion was signed on that date. Site Management, has commenced in accordance with the Department-approved Site Management Plan that consists of sub-slab depressurization systems and engineering and institutional controls. The site is under site management with periodic soil vapor sampling and periodic certifications.

Env Problem:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were various petroleum products, volatile organic compounds (VOCs), and polychlorinated biphenyls (PCBs) related to site activities. Polycyclic aromatic hydrocarbons (PAHs) and metals were also present due to site activities and the historic fill across the entire site. Site investigations showed that metals and PAH contamination is ubiquitous to all soils at the site. The sediment in the Erie basin was similarly contaminated. Beginning in the 1860s, shipyards and related ship maintenance and repair operations occupied the Site. Historically, shipyards have utilized a variety of hazardous materials, including petroleum products, solvents, polychlorinated biphenyls (PCBs), and heavy metals (used in marine paints) such as mercury, arsenic, lead, and copper. Large portions of the site were filled in at different points in the sites history. The fill materials used at the site included coal and incinerator ash, demolition debris. During the site investigations, ninety-nine soil samples were collected from 80 locations, thirteen groundwater monitoring wells were constructed

on-site and sampled twice, thirty-six sediment samples were collected from the Erie Basin, five composite samples were collected from three waste piles, twenty-three samples of sludge or soil were collected from drainage structures, sumps and manholes, two samples of stained wood flooring were collected, five samples of stained concrete flooring were collected, wipe samples were collected from the floors of the seven electrical substations, thirteen soil gas monitoring wells were installed to collect soil gas samples, three wipe samples and one bulk dust sample were collected from ducts associated with a former dust collection system, and fifty-eight soil gas sampling points were constructed and sampled for organic vapors analyses and speciation. PAHs and heavy metals were detected in most of the soil samples at concentrations well above TAGM values and regional background. Most of the PAHs and much of the metals contamination is heterogeneously present through the entire site and is largely attributed to the historic fill. Site activities were the cause of the elevated concentrations of arsenic, copper, lead, and mercury found in some on-site locations that are well above the amounts typically found in urban fill. There were TCLP failures for lead at three locations that were excavated for off-site disposal. Some of the soil samples also exhibited elevated concentrations of VOCs and/or PCBs related to site activities. VOC and PCB impacted soil was remediated via excavation to TAGM 4046 cleanup objectives. Two rounds of groundwater sampling found that none of the PAHs, VOCs, nor PCB contamination found in the soil are significantly impacting groundwater. When the groundwater was sampled using a low-flow technique to minimize suspended solids during the second round, the metals concentrations were found to be below groundwater standards in all but three instances. Organic vapors, primarily methane, were detected in 35 of the soil gas sampling locations. Vapor barriers and sub-slab depressurization systems (SSDSs) were constructed in all locations (except support columns) that the large Ikea building contacts the ground. Three planned satellite buildings will also have SSDSs. The site does not present a significant environmental threat. Since some contaminated soils remain at the site below concrete or clean backfill, people will not come into contact with contaminated soils unless they dig below the surface. People are not coming into contact with contaminated groundwater since the area is served by a public water supply that is not affected by this contamination. A sub-slab depressurization was installed in the on-site retail building to prevent vapors beneath the slab from entering the building.

Health Problem:

Site Code: 57800

Site Description: Location: The U.S. Dredging site is 48 acre former industrial property in a commercial and industrial area along Beard Street in the Red Hook area of Brooklyn.

Site Features: About 25 acres of the 48-acre site are underwater in the Erie Basin.

Past Use of the Site: Until early 2005, a ship repair facility and a variety of small industrial and commercial operations occupied the nineteen on-site buildings. Since the 1860s shipyards and related ship maintenance and repair operations have occupied the site. Historically, shipyards have utilized a variety of hazardous materials, including petroleum products, solvents, PCBs, and heavy metals such as mercury, arsenic, lead, and copper. Most of the upland portion of the site was created by filling in the basin at different points in the site's history. The fill materials used at the site are unknown, but may have included coal and incinerator ash, demolition debris, and industrial wastes, which commonly were used as fill throughout the City in past decades.

Site Geology and Hydrogeology: Prior to being filled in, the entire site had been marsh land or under water. Groundwater tends to flow toward the adjacent Erie Basin.

Site Remediation and Management: Remediation activities commenced in January 2006 and continued prior to, and during site redevelopment activities through June 2008 when a furniture store opened at the site.

The Final Engineering Report was approved on June 17, 2008. The Certificate of Completion was signed on that date. Site Management, has commenced in accordance with the Department-approved Site Management Plan that consists of sub-slab depressurization systems and engineering and institutional controls.

The site is under site management with periodic soil vapor sampling and periodic certifications.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were various petroleum products, volatile organic compounds (VOCs), and polychlorinated biphenyls (PCBs) related to site activities. Polycyclic aromatic hydrocarbons (PAHs) and metals were also present due to site activities and the historic fill across the entire site.

Site investigations showed that metals and PAH contamination is ubiquitous to all soils at the site. The sediment in the Erie basin was similarly contaminated.

Beginning in the 1860s, shipyards and related ship maintenance and repair operations occupied the Site. Historically, shipyards have utilized a variety of hazardous materials, including petroleum products, solvents, polychlorinated biphenyls (PCBs), and heavy metals (used in marine paints) such as mercury, arsenic, lead, and copper.

Large portions of the site were filled in at different points in the site's history. The fill materials used at the site included coal and incinerator ash, demolition debris.

During the site investigations, ninety-nine soil samples were collected.

cted from 80 locations,
?thirteen groundwater monitoring wells were constructed on-site and s
ampled twice,
?thirty-six sediment samples were collected from the Erie Basin, ?f
ive composite samples were collected from three waste
piles,
?twenty-three samples of sludge or soil were collected from drainage
structures, sumps and
manholes,
?two samples of stained wood flooring were collected, ?five samples o
f stained concrete flooring were
collected,
?wipe samples were collected from the floors of the seven electrical
substations,
?thirteen soil gas monitoring wells were installed to collect soil ga
s
samples ?three wipe samples and one bulk dust sample were collected fr
om ducts associated with a former dust collection system,
and ?fifty-eight soil gas sampling points were constructed and sampled
for organic vapors analyses and
speciation.

PAHs and heavy metals were detected in most of the soil samples at c
oncentrations well above TAGM values and regional background. Most
of the PAHs and much of the metals contamination is heterogeneously
present through the entire site and is largely attributed to the
historic fill. Site activities were the cause the elevated
concentrations of arsenic, copper, lead, and mercury found in some
on-site locations that are well above the amounts typically found in
urban fill. There were TCLP failures for lead at three locations
that were excavated for off-site disposal.

Some of the soil samples also exhibited elevated concentrations of V
OCs and/or PCBs related to site activities. VOC and PCB impacted
soil was remediated via excavation to TAGM 4046 cleanup
objectives.

Two rounds of groundwater sampling found that none of the PAH
s, VOCs, nor PCB contamination found in the soil are significantly
impacting groundwater. When the groundwater was sampled using a
low-flow technique to minimize suspended solids during the second
round, the metals concentrations were found to be below groundwater
standards in all but three instances.

Organic vapors, primarily methane, were detected in 35 of the soil g
as sampling locations. Vapor barriers and sub-slab depressurization
systems (SSDSs) were constructed in all locations (except support
columns) that the large Ikea building contacts the ground. Three
planned satellite buildings will also have
SSDSs.

The site does not present a significant environmental threat.

Health Problem: Since some contaminated soils remain at the site below concrete or
clean backfill, people will not come into contact with contaminated
soils unless they dig below the surface. People are not coming into
contact with contaminated groundwater since the area is served by a
public water supply that is not affected by this contamination. A
sub-slab depressurization was installed in the on-site retail
building to prevent vapors beneath the slab from entering the
building.

report submitted 8/17/05 by Hydro Tech Environmental Corp. Report summarized earlier phase I and II investigations which found soil and GW contamination at site, a former gas station/repair shop. Rpt recommended removal of USTs, excavation of soil contamination, application of ORC to open excavation, and injection of ORC into subsurface. JK contacted Hydro Tech (Antoinette Ollivierre, 718-636-0800) on 9/12/05 to discuss rpt, found that USTs have already been removed and end-point samples indicate residual soil contam. JK asked that Hydro Tech submit report summarizing tank removal, with recommendations for addt'l invest to delineate soil and GW contam and develop remedial plan. Invest should include installation of permanent monitoring wells to determine GW flow direction. Hydro Tech indicated that property owner may proceed with addt'l excavation of contaminated soil without waiting for DEC report review. JK cautioned that an environmental professional should be on-site during excavation with a PID and that end-point samples should be taken and analyzed. - J. Kolleeny10/06/05: Hydrotech at site excavating addt'l contam soil from former UST area; Antoinette Ollivierre of Hydrotech contacted DEC to report that local residents were complaining of gasoline odors. Kolleeny and S. Kraszewski of DEC responded to site, instructed consultant to backfill excavation ASAP after taking end-point samples, discussed number and locations of samples. Also spoke with local residents, explaining that soil excavation was necessary to clean up site, and that gasoline odors would abate once excavation was backfilled. Called Ollivierre later that afternoon and was told that backfill material would be delivered next morning. Told consultant to cover open excavation with plastic sheeting. - J. Kolleeny10/07/05: Contacted consultant (Ollivierre) and confirmed that excavation was backfilled. Consultant will prepare a report summarizing soil excavation and end-point sample results, and proposing remedial action work plan. - J. Kolleeny11/08/05: Spoke with Antionette Ollivierre of Hydrotech and reiterated that I could not review Remedial Action Plan submitted in August since it did not include up-to-date info on activities performed since then. I asked her to prepare new report summarizing tank removal and soil excavation, and proposing plan for site investigation involving installation of monitoring wells to determine GW flow direction and delineate extent/severity of contamination. She said Hydrotech would prepare and submit such report. - J. Kolleeny03/01/06: Called Hydrotech and found that project manager for this site is now Mark Robbins (631-462-5866). He said he sent me report summarizing tank pull and soil excavation; I told him I never received it and he should re-send it, and that it should include plan for addt'l investigation to delineate soil and GW contam. He said site owner plans to put up building that will cover entire site, so entire site will be excavated. I suggested they should excavate down to water table to remove as much contam soil as possible, and apply ORC to open excavation. He agreed to suggest this to owner, and said that first they would do geoprobe borings to get GW samples from former tank location, since permanent wells can only be installed in sidewalk around site perimeter (these can determine GW flow direction). He will send report and get back to me about addt'l investigation and remedial action plan. - JK03/02/06: This spill transferred from J.Kolleeny to S.Kraszewski. Spoke with Mark Robbins from Hydrotech to inform him that I was current Project Manager for site. He mentioned he already sent out report, which should arrive to Jon's attention by tomorrow afternoon. - SK03/20/06: Reviewed Tank

S106969316

Closure & Soil Excavation Report dated Oct. 25, 2005 by Hydro Tech Environmental. Report summarized tank removal activities including soil analysis from excavation. Seven soil samples were collected from pit and analyzed for petroleum-related VOCs. High PID readings (High:1700, Low:550) were detected. Lab results indicate high concentrations of VOCs in soil in vicinity of former tanks. No MTBE was detected in any soil samples. BTEX concentrations were highly elevated. SK spoke with Mark Robbins about proposed remedial procedures. First step for Hydro Tech is to install 3 MWs to establish GW flow direction and sample GW around tank area; add'l delineation will follow. I asked him for electronic copy of MW locations and other related documents. He will email these things today. MW installation is scheduled within next week or so, Mark said he'll keep me abreast of what's going on. SK is meeting Mark at site on Friday, March 24 at 10:30. - SK03/24/06: S.Kraszewski visited site at 10:15 AM. Met with Mark Robbins and Rachel from Hydro Tech Env'tl. GeoProbe crew was already setting up truck-mounted rig. Three 1.5-inch slotted PVC wells are to be put in; two around former tank location and one down-gradient of tanks. Slotted PVC will rest 5 feet above GW and 10 feet below GW with riser sticking up several feet above ground. GW flow direction and GW quality delineation will be assessed. Only two wells will be installed today because access to rear of property is blocked by debris. Next week a tractor-mounted probe with ramps will be able to access area. Mark said once they have results from this investigation he will revise RAP. Also, Mark mentioned that ORC injections will most likely be most viable remediation for GW contamination. - SK05/03/06: SK called Mark Robbins of Hydro Tech. Well gauging has been delayed due to leaking water main, affecting water levels in several MWs. When leak issue is solved and GW flow established, work plan will be sent out. Rachel will call me with more details. - SK06/16/06: Received Groundwater Investigation Report dated June 7, 2006 by Hydro Tech Env'tl. Hydro Tech surveyed three on-site MWs and sampled for VOCs since several gasoline USTs are implicated in this spill. MW-1 and MW-2 both exhibited exceedance for Xylenes below 10 ppb. No VOCs were found in MW-3. GW flow direction gauged to be South-Southeast toward MW-3. Hydro Tech recommends ORC injections and continued monitoring. This site may need several more wells to properly delineate dissolved VOCs. - SK06/23/06: Called Yash Saha(ysaha@hydrotechenvironmental.com), Project Manager at Hydrotech (718-636-0800). I mentioned that GW results from report look good but aren't located near any hot spot soil sample locations, so a few add'l MWs are required to ensure that these areas aren't source for GW contam. She said that sounds fine but has to talk it over with Mark Robbins first. I told her OK, just give me a call next week. Also, I requested soil boring logs and PID results. She said they will be faxed over to me today. Finally, I mentioned to always include excavation diagram with all reports for comparison. - SK07/12/06: Called back Sharissa Singh (ssingh@hydrotechenvironmental.com) at Hydrotech Environmental (718-636-0800). We wanted to know what add'l work was required for site. I said I'd like to see three more temporary MWs located at three most contaminated end-point sample locations to ensure they aren't and won't be source of GW impacts. I asked her to screen soil with PID and take hottest sample from each location. Plus, grab GW samples from each location. I only need analysis for VOCs. Once I send out my comments regarding investigation report she will write up

S106969316

work plan summarizing what we talked about. - SK07/13/06: Called Hydro Tech, spoke with Yash Saha to ask for client's name and address: Chaim Streicher 17 West 9th Street Brooklyn, NY 11231. Sent letter requesting add'l investigation: several new MWs in impacted end-point sample areas, soil screening and sampling, complete round of GW samples for VOC analysis. - SK08/01/06: Spoke with Sharissa Singh at Hydrotech Environmental (718-636-0800). I asked about progress on work plan for additional site investigation. They will submit proposal to their client tomorrow and hopefully have work plan by end of next week. - SK09/12/06: Yash Saha (cell: 631-433-5048) sent me an email announcing that work would begin this Friday, September 15. I emailed her back informing her that a work plan was never submitted and it must be approved by the Department before work can start. SK reviewed the Investigation Work Plan submitted by Hydro Tech Environmental via email. As discussed with the Hydro Tech case manager, three MWs will be installed where end-point sampling from the tank removal revealed the highest contamination levels. For each well, the soil will be screened with a PID and the hottest soil sample will be sent for analysis. Sent approval email to ysaha@hydrotechenvironmental.com and the file was put into eDocs. - SK09/15/06: Visited on-site to witness the advancement of 3 MWs. Soil cores from each boring gave off petroleum odors from soil at or near GW. Hydro Tech must still develop the wells and retrieve GW samples for analysis. Results should be in within a couple weeks. - SK10/02/06: Yash Saha (ysaha@hydrotechenvironmental.com) emailed PDF of building plans for residential units to be built on-site. Units sit directly over contaminated area. - SK01/12/07: JK - Spoke with Yash Saha of HydroTech, she mailed report to S. Kraszewski, delivery confirmation on 1/8/07. I found rpt in SK mailbox, reviewed, sent email to Saha: I found Supplemental Investigation Report dated Jan. 3, 2007, sent to Steve Kraszewski, no need to send another hard copy. Please send electronic copy of report as pdf. I looked through file and found packet submitted by HydroTech in Aug. '05 containing design drawings and literature regarding vapor barrier and passive sub-slab venting system, but did not find any letter from DEC approving vapor barrier. Current report (Suppl. Inv. Rpt) proposes continuing monthly monitoring and quarterly sampling of Gw, and excavation of contam soil from northern portion of site during "remedial activities." Fig. 5 in rpt shows "Area of Concern - 53,000 Tons" outlined in purple around two soil samples that had benzene above TAGM levels. Is this area proposed for further soil excavation? Is property owner willing to do add'l excavation/disposal of contam soil? Please clarify these issues. Once these issues have been clarified, I will approve plan. If add'l soil excavation is performed, a follow-up round of GW sampling from all existing wells should be performed. If GW results are similar to recent results, with only minor exceedances of a few VOCs, it may be possible to close spill case. Please get back to me when possible about issues I questioned above. Yash sent email reply later on 1/12/07: "to answer your questions: 1. Yes, Area marked out is area proposed for further soil excavation and property owner is willing to do this add'l excavation. 2. We are still under contract to perform quarterly sampling and monthly monitoring. We just completed monitoring at Site. Next quarter for sampling is due by end of this month. 3. I will be sending you electronic copy of report for your records. [Rpt was sent, in eDocs.] 4. Can you please review vapor barrier and approve it since Client is going to begin construction soon at Site?" I spoke with Yash and said I would issue

COMMERCIAL PROPERTY (Continued)

S106969316

approval for remedial plan, approving idea of using vapor barrier and sub-slab venting system as mitigation measures, but that I wouldn't approve design specs for barrier and venting system because I'm not an engineer. Sent an email asking if some or all wells will be destroyed during excavation/construction. Yash wrote back saying "1. During construction activities, all wells on-site will be destroyed. However, if you like, we could move wells to sidewalk and perform follow-up monitoring. 2. As for VBS, I really need to get it approved by someone from State so that they can incorporate it during construction at Site. Am guessing someone from DEC must have asked for VBS since it was submitted to DEC office in '05. A different Project Manager was handling Site in 2005 and there seem to be gaps in documentation. Now, am trying to figure things out since it's been my Project since early 2006. I really need to get VBS approved." - J. Kolleeny01/16/07: Contacted Koon Tang to ask if he had requested design specs for vapor barrier / venting system and whether or not we should review/approve them. He responded that he had urged RP/consultant to install barrier/venting system but had not requested design specs, and it is not for us to review/approve them. Consultant's engineer should certify that system will operate as designed and be effective for its intended purpose. If they must have State approval, we should refer them to DOH. I relayed this to Yash Saha of HydroTech, and reiterated that I could issue approval for idea of using barrier/venting system, but not for design specs. - J. Kolleeny01/18/07: Completed review of Supplemental Site Investigation Report by HydroTech, dated Jan. 3, 2007 (in eDocs), sent letter (in eDocs) to RP (Chaim Streicher) approving recommendations for further GW monitoring, add'l excavation of contam soil, and installation of vapor barrier & passive venting system as mitigation measures for proposed building. Also asked for post-ex end-point soil sampling for contam soil removal and re-development excavation activities, especially under planned building footprint, and noted that if wells are destroyed during development, depending on end-point soil results and next round of GW sampling results, DEC may ask for replacement wells for follow-up monitoring. Emailed letter to Yash Saha of HydroTech. - J. Kolleeny02/07/07: Received email on 2/5/07 from Yash Saha of HydroTech asking if my letter approving their remedial proposal means that their client can begin construction at site. I sent email response: "I don't think it's up to me whether your client can begin construction (isn't that issue for NYC Buildings Dept.?) But insofar as remedial plan I approved involves excavating contaminated soil as part of site re-development, I suppose so. However, since we discussed that existing monitoring wells will be destroyed during re-development, you should first collect round of GW samples from existing wells ASAP. Once I get up-to-date GW data and end-point sample results for excavation, I'll determine if replacement wells need to be installed to perform follow-up GW monitoring. One other thing: During earlier soil excavation at site, strong gasoline odors were released from subsurface, resulting in complaints from neighboring residents. I expect your client Mr. Streicher to take necessary steps to mitigate potential vapor problems during excavation/construction. Possibilities include spraying Biosolve on bottom and sidewalls of open pit as excavation progresses, or covering area with large tent (best for controlling vapors). If there are any citizen complaints during excavation and/or construction, your client will be told to cease activities, delaying construction schedule, and may be issued summons by our Environmental

COMMERCIAL PROPERTY (Continued)

S106969316

Conservation Officers. I urge Mr. Streicher to take these vapor issues, and mitigation thereof, very seriously. Please forward this email to Mr. Streicher." Yash wrote back that she had informed her client. On 2/6/07, I sent another email to Yash, stating: "Upon further consideration, I would like HydroTech to prepare a "Community Air Monitoring Plan" in advance of soil excavation during site re-development. I'm asking this because I'd like to prevent situation that occurred last time contaminated soil was excavated, with members of neighborhood organization coming to site to complain, calls to DEC, calls to Fire Dept., etc. I have attached generic Community Air Monitoring Plan (CAMP) provided by NYS Dept. of Health. Please use this for guidance in developing your own site-specific CAMP. Your client should NOT move forward with excavation/construction at site until CAMP is reviewed and approved by NYSDEC." Yash replied "thank you." - JK08/09/07: On 8/8/07 sent email to Yash Saha of HydroTech Env'tl asking for update on this site, since Community Air Monitoring Plan I requested back in Feb. '07 has not been received. On 8/9/07, called Ms. Saha; she said work has not yet taken place, and she will send an email update on 8/10/07. - J. Kolleeny08/14/07: Received email on 8/14/07 from Yash Saha of HydroTech: "The Client is planning to start building at Site in four months. We are getting our Client to approve additional work since it wasn't covered under initial proposal. I will let you know once we get approval and I start working on it for your review and comment." I wrote email reply: "Thanks for your response. Please stress to your client that excavation work should not be undertaken without a health and safety plan and a Community Air Monitoring Plan approved by DEC being in place. Site has known subsurface contamination and there was a prior incident in which strong petroleum odors were released during soil excavation, resulting in complaints from neighboring residents. Also, I looked at my January 18, 2007 letter approving HydroTech's recommendations in Supplemental Site Investigation Report dated January 3, 2007, and I see that recommendations I approved included performance of quarterly groundwater sampling and additional excavation of contaminated soil. It was my impression that this soil excavation was to take place prior to, and independent of, excavation of site for re-development. Has any groundwater sampling been performed since then? And is there a plan to excavate additional contaminated soil, prior to site development? If you need a letter from DEC to responsible party regarding any of these issues, please let me know." - J. Kolleeny06/12/08: On 6/10/08, having heard nothing from RP or consultant about site in many months, I sent email to Yash Saha of HydroTech: "Can you please give update on situation at site? Last time we communicated was in August '07, when you indicated your client planned to start building at site in 4 months, and you were trying to get his approval for addt'l work not covered in your initial proposal. I responded by asking that you stress to your client that excavation should not be undertaken without health and safety plan and Community Air Monitoring Plan approved by DEC being in place, because site has known contamination and there was prior incident in which strong petroleum odors were released during soil excavation, resulting in complaints from neighboring residents. Also, plan I approved involved quarterly GW monitoring and addt'l excavation of soil, independent of site re-development. It seems that none of these actions have been performed. Please let your client know that if he is not responsive in addressing this open spill, he can be subjected to financial penalties. Please provide site update

COMMERCIAL PROPERTY (Continued)

S106969316

ASAP." On 6/11/08, Yash replied: "We have just been contracted by Client to perform env'tal services at 82 Lorraine St. Client fully understands DEC requirements and would like to commence work right away. All accessible contaminated soil will be removed in accordance with DEC regulations. A Health & Safety Plan and Community Air Monitoring Plan will be implemented during excavation. Please find attached CAMP for your review and approval [in eDocs]. Please send back as early as possible so I can have my Client start work on Site." On 6/12/08, I sent email to Yash: "I am preparing letter to your client Mr. Streicher approving CAMP, but wanted to ask first if any GW sampling has taken place since Nov. '06, which is last GW data I have? I approved quarterly GW monitoring at site, which should have been being performed all through intervening time period. At this point, I insist that all existing wells at site be sampled before excavation, to provide baseline for GW conditions and help determine need for follow-up post-remedial GW monitoring. Please let me know if you have any GW data more recent than Nov. '06." Received phone call from Yash, who explained that HydroTech did not implement quarterly GW monitoring because they were not continuously under contract to Client during elapsed time, but now Client is paying them; however, site has been "leveled," and all existing wells destroyed. I said in that case, I would include in CAMP approval letter requirement for taking GW grab samples if excavation extends into water table, and for installing perimeter monitoring wells for post-remediation monitoring. Sent approval letter (in eDocs) by email to Yash Saha, asking that she forward to RP, Chaim Steicher, and sent hard copy by regular mail to Mr. Streicher. - JK07/28/08: On 7/9/08, received email from Paul Matli (718-636-0800) of HydroTech: "This message is intended to inform that excavation of soil at spill site will take place tomorrow, July 10, 2008. NYSDEC-approved CAMP will be implemented during all excavation activities." On 7/21/08, I wrote back to Paul: "I was unable to visit site to observe this fieldwork because I was out on vacation from 7/10/08 through 7/18/08, and just got back in office today. Can you please send a brief site status update? Did soil excavation take place as planned? If so, were end-point soil samples collected for lab analysis? Any problems with odors? Please let me know." On 7/25/08, received email reply from Paul: "Sorry for delay in responding to your inquiry into excavation activities at 82 Lorrain Street. Excavation at Site has been proceeding with a relatively slow path. No odor or major levels of PID or dust rates exceeding CAMP criteria were noted. All contaminated soil was removed down to groundwater. No complaints were made during ongoing excavation that is terminated today. Endpoint soil samples will be collected on Monday [7/28/08]. Soil will be collected from sidewalls. Since bottom is excavation is at GW level, 2 GW samples will be collected. All samples will be analyzed for VOCs and SVOCs." - J. Kolleeny10/21/08: Received email from Yash Saha of HydroTech Env't'l: "I want to update you with current status at Site. As you may recall, excavation for new construction began in July and we've taken end point soil and groundwater samples. Results of end pt sampling indicate no VOCs present in soil. SVOCs are present in sidewall soil above standards. VOCs and SVOCs in 2 of 3 GW bottom samples. We are preparing soil excavation rpt which will be sent to you upon completion. Client is currently looking to place vapor barrier and continue construction. Please let me know if DEC requires anything add'l at this time?" I wrote back: "Based on info provided, I'd want to know VOC concentrations in bottom GW samples, depending

on which there may be need for permanent wells to be installed on site, or around site perimeter, to monitor GW contamination. If levels are high, add'l remedial action to address GW may be required. But without data, it's hard to know what needs to be done. If excavation is still open, may be advisable to apply ORC or chemical oxidant directly into GW to reduce contam, prior to backfilling. Vapor barrier (I believe I also saw plans for sub-slab venting system?) is good, but is really for protection of future building occupants; has nothing to do with cleaning up impacts of petroleum release. To close spill, I need to see that efforts have been made to address those impacts and that any residual impacts are minor and will naturally attenuate without adversely affecting area. If you want to forward sample data to me prior to sending final report, I'll take a look and we'd then be in better position to discuss course of action." Yash sent reply: "Attached are results and end pt sampling plan only, since report isn't ready yet. And yes, vapor barrier & depressurization system are to be placed. Please review attached data and let me know what you recommend." I reviewed data and site plan and wrote back: "Thanks for data and site plan [in eDocs]. Altho data don't look that bad, I need to confirm that more serious contam is not migrating off site. I don't know what's located to south of site, beyond fence. Ideally, I'd like 3 wells: one in sidewalk along Lorraine St., near GEP-1; another in sidewalk along Hicks St., near GEP-2; and 3rd at location of SEP-8 (or nearby, on other side of fence, if there's access). This would allow for triangulation and determination of GW flow direction, so you could evaluate whether any significant GW contam is flowing off-site. If not possible to put well near SEP-8, I could go with other two wells; to save on costs, you could do temporary wells at 2 sidewalk locations (and perhaps also at SEP-8?), however, if serious soil or GW contam is found, I would want permanent wells at those locations (i.e., requiring another mobilization). But based on bottom GW results, which aren't so bad, seems unlikely you'll find worse contamination in sidewalk (altho you never know). So I'd be OK with 2 temporary wells (3 preferred), to confirm that no serious contam is migrating off-site. Soil should be screened and sampled during well installation. If no significant contam is found (even if VOCs are found at low levels consistent with bottom GW end-points), I can close spill. Please let me know if its possible to put together work plan for well installation." Yash replied: "Thanks, I need to discuss with my Client. I will then put together work plan and send it to you." - J. Kolleeny11/05/08: On 10/30/08, received pdf of Monitoring Well Installation Work Plan, dated 10/24/08, by HydroTech Env'tl (in eDocs), from Timothy Lo of HydroTech. On 11/3/08, received hard copy of work plan. Plan calls for installation of 3 permanent wells, at locations I requested, around site, with soil and GW sampling. Site has new RP contact person: Mr. Yoel Gruber NY Developers & Management Inc. 174 Broadway Avenue, Suite 424 Brooklyn, NY 11211 yoel@nydevelopers.net, cell phone: (914) 906-4575 I sent approval letter (in eDocs) by email & regular mail on 11/5/08. - J. Kolleeny11/14/08: On 11/10/08, received back letter I had sent to Yoel Gruber, marked "Return to sender; not deliverable as addressed; unable to forward." I sent email to Timothy Lo, Yash Saha of HydroTech on 11/12/08: "I sent letter approving HydroTech's well installation plan to Mr. Yoel Gruber at address you provided, and letter was returned to me by Post Office, marked "Return to sender. Not deliverable as addressed. Unable to forward." Can you please

confirm correct mailing address for Mr. Gruber and let me know what it is? (According to my Hagstrom NYC 5-Boro map book, there is no street in Brooklyn called "Broadway Avenue.") Timothy Lo sent reply: "I apologize for invalid mailing address. Below is valid mailingaddress:NY Developers & Management Inc., 1303 53rd Street, Suite #193, Brooklyn, NY 11219On 11/13/08, I remailed letter to Mr. Gruber using new address. - J. Kolleeny01/08/09: Received Remedial Action Report by Hydro Tech Env't'l Corp., dated 12/12/08 (in eDocs); will review. - J. Kolleeny01/12/09: Completed review of Dec. 12, 2008 Remedial Action Report by Hydro Tech (in eDocs). Report summarizes history of spill and response actions (soil excavation, end-point soil & GW sampling), and reports on results of 3 wells installed at my request to evaluate potential off-site migration of residual GW contamination. Wells were installed in Nov. '08, soil and GW samples had no VOC exceedances. In light of remedial actions taken, fact that vapor barrier and sub-slab venting system have been installed for planned on-site building, minor levels of dissolved VOCs in water samples from excavation, and absence of any off-site migration of contaminants, I closed spill and send NFA letter (in eDocs) to RP Yoel Gruber, cc's to Timothy Lo and Yash Saha of Hydro Tech. - J. Kolleeny

Remarks: THE PROPERTY IS AN OLD GAS STATION AND FOUND CONTAMINATED SOIL. CLEAN UP IS PENDING.

 DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"no PBS on this site9/1/05 - Raphael Ketani. I spoke to Daniel Boyd of Hydrotech Environmental ((631) 462-5866) regarding the property at 173 Dwight St. in Brooklyn. The site is a vacant lot owned by Joseph Ercole (he also owns the neighboring house) of 173 Dwight St., Brooklyn, NY. A neighbor had called in the spill in the lot. Mr. Boyd told me that they took soil and water samples and the analytical results showed nothing. He will FAX me the results.Mr. Boyd FAXed me the analytical results, but there were no soil analyses. I asked him whether soil samples were ever taken. He said he was not the site geologist and he was new and didn't know. I asked

S106719426

him to find out and to let me know whether soil samples were ever taken. He said he would. Mr. Boyd called me back and he had Mark Robbins on the speaker phone with him. Mr. Robbins was the project manager on the site at the time of the spill. Mr. Robbins said that Michelle Tipple had told them to put in wells to the left of the shed on the site. Mr. Robbins said that MW-1 was put in the vicinity of the spill. I asked him why anyone suspected there was oil on the water. He said that another contractor had found a sheen on the water. So the investigation was prompted. Mr. Robbins had no idea who the other contractor was and he said that no one saw oil staining on the ground where the spill took place. Later, I e-mailed Ms. Tipple for more information on the site. 9/12/05 - Raphael Ketani. I talked to Daniel Boyd, again, of Hydrotech Environmental. I informed him that Michelle Tipple had wanted to see the original rough notes from the soil borings. Mr. Boyd said that he would send them to me. I added that any notes regarding PID readings and the sensing of odors should also be included. Mr. Boyd said that he would send all of the information I had requested. 9/20/05 - Raphael Ketani. I received a FAX yesterday from Mr. Boyd regarding the site and the rough drilling logs for the three wells that were installed. The rough logs say very little. Mr. Boyd reminded me that there never was much information as DEC told Hydro Tech Environmental to just take water samples and not do geologic sampling. He added that each soil sample had been tested with the PID and nothing was found. With this, I wrote a "No Further Action" letter and closed the case.

Remarks: unknown amount of petroleum spilled. they detected it floating on the water table.

DEC Memo: 06/14/06 - See e-docs for Con Ed report detailing cleanup and closure.163193. 3/6/06 10:15. B. REILLY PROJ. MGR. ENERGY SVS REPORTS APPROX 20 GALS DIELECTRIC OIL SPILLED FROM V2199 AND IS CONTAINED TO THE ABOVE GROUND CONCRETE STRUCTURE. NO FIRE ,SMOKE OR INJURIES INVOLVED. NO SEWERS, WATERWAYS OR PRIVATEPROPERTY AFFECTED. SPILL WAS DISCOVERED DURING INSPECTION OF AN ISOLATED UNIT(ACCT # TO FOLLOW) WHICH WAS VANDALIZED DURING AN ATTEMPT TO REMOVE A SEC. BUSHING. DIAPERS AND PLASTIC WERE USED TO TRY TO STOP THE LEAKAGE OF APPROX 60 DROPS PER MIN. ENV. STOP TAG#35589 WAS PLACED ON THE UNIT AND A LIQUID SAMPLE FOR PCB WAS TAKEN ON E-PRIORITY CHAIN OF CUSTODY FORM #EE-07872. A TANKER IS ON ORDER FOR 15:00 HRS TO DRAIN UNIT WHICH IS TOTALLY ISOLATED FROM FEED. CLEAN UP IS TO BE TREATED AS >50PPM UNTIL RESULTS ARE RETURNED. J. MASONUPDATE: 3/6/06 HISTORICAL DATA- ON 5/24/95--18 PPM LAB SEQ # 507460. CR-84446

Remarks: no to 5 questions' clean up pending a tanker arrival: coned # 163193

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 135307
DEC Memo: 01/24/06: This spill transferred from J.Kolleeny to S.Kraszewski. One 16K tank installed in 1955 was replaced in 1996 by a 10K tank. The original tank suffered one TTF before it's replacement. The ISRP from June 1996 gave limited information. Some of the soil and GW samples were not analyzed for STARS compounds and some borings were not analyzed. The results indicate a possible gasoline plume in the area. Benzene and MTBE were detected below soil and GW standards. One MW was not drilled down gradient of the tanks to establish a boundary for the plume. Impacts do not seem severe but this area has not been properly delineated. - SK03/14/06: This spill reassigned to K.Tang. - SK09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 5/29/12: J.kann - priority P0 assigned to site.07/18/12 - J.Kann - IWP received on 7/16/12.
Remarks: 15K TANK FAILED HORNER EZY CHECK WITH A VISUAL LEAK,LEAK ON MANWAY, WILL EXCAVATE,REPAIR & RETEST.

DEC Region: 2
DER Facility ID: 229851
DEC Memo: 01/24/06: This spill transferred from J.Kolleeny to S.Kraszewski. One TTF in 1991 for a 16K tank installed in 1939. A Subsurface Investigation was performed in 1995: 4 soil boings and 1 MW were installed. 3 soil samples and 1 GW samples were analyzed. A slight impact to the soil was discovered but no impact to the GW. However, it is doubtful that this area was properly delineated seeing that only one MW was put in. The shallow GW is of concern as well. An additional MW or two with GW samples would probably suffice. - SK03/22/06: This spill transferred to K.Tang - SK09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 07/18/12 - J.Kann - IWP received on 7/16/12.1/22/13: J.Kann - Discussed this site in an August 2012 meeting with NYCHA and Pardus Environmental (646-577-8280). Closure was proposed by NYCHA's consultant. The file is under review. Initial investigation perforemed by TRC did not show impacts (with the exception of a TPH reading in one sample - likely the "slight" impact discussed above). Requested any tank closure/removal documentation available from NYCHA on January 16.2/8/13: J.Kann - After file review, it is important to note that this was the only spill called in for this site. No other spills were called in (as is common for NYCHA during a tank excavation). PBS registration from 2002 shows that the tank was removed in 1996. Presented the case to the spill closure panel. Edoced the summary email. Closure Letter prepared and sent. Spill closed.

DEC Region: 2
DER Facility ID: 306651
DEC Memo: 01/19/06: This spill transferred from J.Kolleeny to S.Kraszewski. ISRP from 1995 advanced seven soil boring and three monitoring wells. 6 of the borings exhibited oil impacts. Shallow GW at 7.5 fbg to 10.5 fbg. Oil impacts in the GW was noted as sheen and free product. Volatiles were detected in 4 of the 7 soil samples, one sample had SVOCS. Volatiles detected in all GW samples, only one MW above standards and no SVOCS. It is unknown what the actual contamination numbers were. No documentation on file that suggests monitoring records for the site. Need more information. - SK02/09/07 - J.Kann - Spill reassigned from S.Kraszewski to J.Kann.07/18/12 : J.Kann - IWP received 7/16/12

NYCHA - RED HOOK EAST HOUSES (Continued)

1001493628

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

DEC Memo: 01/02/07-Hiralkumar Patel. visited site on 12/31/06. DEP crew was working at site repairing broken water main line. during excavation, as they reached closed to main line, they found oily water filling excavation pit. they don't know whether any line leaked during excavation or this oil coming from oil saturated soil. there is old sugar factory on other side of street where this excavation work going on. spoke with security guard at sugar factory. he mentioned that he observed oil and water overflowing from sewer on street at 3 O'clock in morning and after smelling gasoline, he reported to fire department. fire department responded and found sheen on water and left scene. as per security guard, suger factory will be demolished soon for reconstruction. walked along sugar facotry side walk. all water puddles on street had oil sheen on it. light to heavy oil sheen observed inside sugar facoty as oil/water from sewer ran into factory also. no odors at site. very little sheen on water in excavation pit for water main break.spoke with DEC Jacob. explained him situation about oily puddles over street. he asked not to call DEC contracctor for any cleanup as oil from unknown site. he asked to check any open/close spill in this area.met Ms. Persis and Endrew Kelly from DEP. Ms. Persis contacted their department and asked for vaccum truck to remove water from this excavation. DEP will do cleanup of their excavation area only and will not do any further cleanup. before leaving site, asked Ms. Persis to check for any contaminated soil, once they empty out excavation pit.Ms. Persis917-662-0768Endrew Kelly718-595-4761Dan Jennings (sugar factory manager)280 Richards StreetBrooklyn, NYPh. (212) 434-3045 (718) 254-0584received call from Shay McAtamney (718-595-4618) from DEP on 01/01/07. she mentioned that they removed water from excavation pit but still more water coming in. so they decided to pump this water in local catch basin and will treat this water in treatment plant. they already notified treatment plant for additional load. once they get clear area, they will check whether main line was affected with this oil or not. asked Shay to call back with more details.spoke with Shay today. they have finished their repair. DEP observed contaminated soil around water line. as per Shay this are was industrial in past and believes this contamination is from past. main water line was not affected.spoke with DEC Jacob. he suggested to close this case.
Remarks: excavation for a water main breakHole is filling up with oil - unknown from wherePlease contact caller

DEC Memo: I spoke with Jamie Barr. He is not contractor. Roux is. During drilling, free phase 6 oil was found approx 10' below the water table. Investigation is ongoing. Geotech contractor was drilling found contamination below water table. site is along water. DEC Piper spoke with Roux. RAWP is being generated.
Remarks: Were drilling for development/discovered 17 ft below grade found free product of #6 oil.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

DEC Memo: 4/7/06 - Raphael Ketani. I spoke to Michael Sepe of Fenley & Nichols (631) 586-4900 ext. 139 (cell (516) 818-8767) regarding the tank test failure. He said it was a dry failure and they are presently digging up the lines. He said the failure took place at a NYC Parks recreational center at 155 Bay Street in the Red Hook section of Brooklyn. Then I spoke to Gabe Ramos, Environmental Coordinator for the NYC Dept. of Parks and Recreation. He said they were working on the tank failure.09/02/09-Hiralkumar Patel.1:18 PM:- received email from Mr. Ramos. he mentioned that Olmsted has a contract in place for Red Hook Rec. Center (Contract # B-126-108MA). he asked to contact Tohamy Bahr at 718-760-6674.Gabe RamosDep. Chief of Citywide OperationsCity of New York, Parks & Recreation5-Boro OperationsRandalls Island, NY 10035PH. (212) 410-8916email: Gabriel.Ramos@parks.nyc.gov05/24/12-Hiralkumar Patel.2:02 PM:- sent email to Mr. Ramos inquiring updates.
Remarks: dig up, isolate lines, retest.

Site Description: Location: The site is located at 688-700 Court Street within the Red Hook Industrial area of Brooklyn. The site is located southwest of the Court Street and Halleck Street intersection. Site Features: At one point, the main site features included 19 buildings, five designated tank farms and a wastewater pretreatment system. However, the site has been substantially decommissioned. Current Zoning/Use(s): The site is zoned for industrial use, but is currently mostly unoccupied. Some light manufacturing (stone countertops) takes place on site. The surrounding parcels are currently used for a combination of commercial, light industrial and recreational uses. The site is bordered immediately to the east by Court Street, Brooklyn Union Gas and Spentonbush Red Star Companies, to the west by Clinton Street and American Import Export Trucking and to the south by Bryant Street and Hess Oil Company. A recreational park (Red Hook Recreational) is located immediately to the north of the site. Past Use of the Site: Milliken Brothers Iron Works occupied the southwestern portion of the site in 1904. The remaining property was occupied by Barrett plant

from 1904 to 1949 for the manufacturing of tar paper. In 1939 John F. McKenna, Inc. Lumber Yard, Marine Canvas Supply Corporation and John Menton Boiler Maker occupied the site. The site remained a lumberyard and marine canvas supply business until approximately 1958, when manufacturing at the site began. Historic manufacturing processes at the site include production of metallic-organic soaps and salts, phosphates and epoxy plasticizers. A hot-oil system, that used PCB containing oil, was part of the manufacturing process. Contamination at the site appears related to several historic operations, including materials handling from the tar paper operation and the various manufacturing processes, as well as releases to the environment from the hot oil system. Site Geology and Hydrogeology: The site was formed by backfilling the marsh and waterfront areas of the Gowanus Canal in the late 1800s through the early 1900s. Fill material consisting of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.) was observed across the site from ground surface to a depth of 12 ft. Underlying the fill materials, a clay layer was encountered with lateral continuity across the site. This layer (former base of the Gowanus Canal) acts as a low permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site. Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections, a horizontal and somewhat radial (north, northwest, west, southwest, south) pathway for groundwater flow exists. Depth to water beneath the site has ranged from 2.0 ft to 9.0-ft bgs over the course of investigation. Groundwater beneath the site does not appear to be tidally influenced.

Env Problem:

Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminants of concern at the site include petroleum related compounds, phenolic compounds, and PCBs. BTEX is found in soil from the ground surface to the water table throughout a significant portion of the site. Xylenes were detected at concentrations up to 560 ppm (UUSCO of 1.6 ppm); benzene was detected as high as 5.3 ppm (UUSCO of 0.06 ppm.) The highest concentrations of xylenes are located at the east side of building 14 and north of building 19. The SVOCs phenol; 2,4-dichlorophenol and naphthalene are found in soil from the ground surface to the water table throughout the center of the site. SVOCs, carcinogenic PAHs and metals related to historic fill are found throughout the site. Carcinogenic PAHs (up to 100 ppm) and metals (4370 ppm for lead; 1420 ppm for Barium and 305 ppm for cadmium) were detected well above UUSCOs. PCBs are found in soil at concentrations as high as 320 ppm. PCB contamination is located near buildings 13 and 14 in the north and northwestern part of the property where the hot oil system was located and operated. Contaminated soil is a source of groundwater contamination. Benzene is found in groundwater above the groundwater standard of 1 ppb at concentrations as high as 3,400 ppb. SVOCs in soil from the use of tar in the manufacturing of tar paper are of a source of groundwater contamination. For example, naphthalene is found in groundwater as high as 5,500 ppb (groundwater standard 10 ppb.) Non-aqueous phase material, in the form of tar and less viscous oil, is found in the environment.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. However, people could come into contact with contaminants if they dig below the ground surface. People are not drinking the contaminated

groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur in the existing buildings will be investigated.

Dump: False

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "K FOLEY"REASSIGNED TO J.VOUGHT ON 12/04/2001. Spills #0108780 and 0108781 due to tank test failure of two tanks at this site.7/16/2003-Vought-Received call from Patricia Badding (Environmental Management-908-604-2291) who is working for owner of property. Badding inquired as to future work that remains to be done for spill closure. File review by Vought:Surface Hydrocarbon Assessment Report-Dec 2001-Delta (Aaron Lapine 914-765-8196)-Assesment performed as part of property divestment. In Oct 2001 five geoprobe borings peformed to a depth of 15' and were converted to temporary monitoring wells. Diesel fuel also historically stored on-site so samples will be analyzed also for 8270. Delta recommends quarterly sampling to document concentration trends in order to develop an appropriate remedial strategy. Two (7000-gallon) gasoline USTs, one (3000-gallon) gasoline UST, one (3000-gallon) diesel UST. Across Hamilton Avenue are residential units, across Huntington Street are residential units, to the southeast is an auto repair shop. Nearest surface water body is Gowanus Canal 2000' southeast of site. Groundwater located at a depth of 10' and flows to the south. Soil analyticals show concentrations up to 744ppb naphthalene, no BTEX, 21700ppb benzo(a)pyrene(SB3) and 22700ppb chrysene(SB3). Groundwater analyticals show up to 869ppb MTBE(MW5) and 8.68ppb chrysene(MW3).Quarterly Monitoring Reports-Oct 2002 thru May 2003-Delta-Five monitoring wells onsite. Groundwater concentrations up to 1990ppb MTBE(MW1) which is downgradient well. Delta recommends to continue quarterly monitoring. 7/16/2003-Vought-NYSDEC requires 1)remediation plan 2) delineation to the south and southwest of MW5 and MW1 and 3)analysis of 8270 due to historic diesel storage and SVOC exceedances found during subsurface assessment. Vought sent email with requirements to both Delta and Badding.8/29/2003-Vought-Site visit on 7/11 and MW1 thru MW5 resampled. MTBE at 1100ppb(MW1). Vought still requires well installation. SVOC ran for MW3. Wells will be installed followed by a report to the DEC with historical and current soil and gw data.9/30/2003-Vought-Received fax with proposed boring locations on 9/26/2003. Vought accepted boring location on adjacent to sidewalk of Henry Street and proposed boring location at intersection of Henry and Huntington Street and required one additional boring across Huntington Street from MW1. Vought called Badding (908-604-4949) with additional request of one well across Huntington. Vought sent

S105230482

sidewalk permit letter to Badding and she will contact DEC with investigation date.10/13/2003-Vought-Received call from Patricia that monitoring wells were installed. Vought called Badding and two monitoring wells were installed to a depth of 18'. No PID readings, no sheen and and no product. 11/4/2003-Vought-Well sampling occurred on 11/4/03 and sampling report will be sent to DEC by Badding by 1/1/04.12/2/03-Vought-Reviewed analyticals received from Badding on 11/19/03. Groundwater analyticals from 6/12/03 show 1100ppb MTBE(MW1) and 700ppb MTBE(MW5). Groundwater analyticals from five onsite monitoring wells sampled 11/5/03 show 290ppb MTBE(MW1), 15ppb MTBE(MW4) and 44ppb MTBE(MW5). 1/8/04 Reassigned from Vought to Foley.3/23/04 Spoke with P. Badding, Env Mgmt. She faxed summary of what they've done so far. Three additional wells had been installed at Vought's request. Approved one more round of sampling on wells 1-5 and three additional rounds on 6-8. MTBE is only contaminant of concern at concentrations of 220ppb(MW-1), 40ppb(MW-5) and 24ppb(MW-6) as of 2/19/04. 5/27/04 Reviewed 5/4/04 groundwater analyticals faxed by P. Badding. MTBE at 110ppb(MW-1), 30ppb(MW-5), 22ppb(MW-6). DTW approx 10'bgs. No sensitive receptors nearby. No further action letter mailed to Mr. Walter Gorman, Red Hook LLC, 115-14 Beach Channel Dr, Rockaway Park NY 11694.

 Description: The 10.5-acre Atlantic Basin Iron Works is located in Brooklyn, New York. It was situated in the Erie Basin, adjacent to Conover Street and below Van Dyke Street. The Navy used the site as a shipyard. Abandoned tanks are present. Vehicles are currently stored on site. Between 1941 and 1942, the government obtained 10.50 acres fee by declaration of taking. On 25 October 1958, the General Services Administration accepted care of the site. In 1960, it conveyed the site to the New York/New Jersey Port Authority, which is the current owner.

DEC Memo: 07/13/09-Vought-Primary off-hours responder. Vought called and spoke to John Geitner (908-358-3436) and spill of approximately 1 gallon spray caused by failed gasket on a piping manifold resulting into oil spray on barge containment and on dock. One gallon total estimate of spill. Kens Marine onsite to clean dock and barge pan. Sheen observed in Gowanus as a result. Spill closed by Vought due to insignificant spill amount to surface water and immediate response by Hess.

Remarks: # 6 oil sprayed while bardge transfer. Kens marine will be responding for clean up at this time.

DEC Memo: 02/29/13 - LZThe 01/26/12 report by EnviroTrac Ltd.(eDocs) notes that from October to December 2011, 0.86 gallon of LNAPL was recovered. Hess to continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. The next update report, which will summarize site activities from January 2012 through March 2012, will be submitted to NYSDEC in April 2012.12/16/11 - LZThe October 2011 Report by EnviroTrac Ltd.(eDocs) notes that in July 2011 - September 201130 monitoring wells were gauged and enhanced fluid recovery conducted on select wells. LNAPL (max): July: 0.29 feet (MW-13); August: 0.26 feet (RW-1); September: 1.01 feet (MW-13)LNAPL Recovered: 1.61 gallons (this monitoring period) LNAPL Recovered: 2,614 gallons (to date).Hess will to continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. The next update report, which will summarize site activities from October 2011through December December 2011, will be submitted to NYSDEC in January 2012.09-19-11- LZ The April - June 2011 Report in eDocs. The nex report in October 30, 2011.05/03/11 - LZThe Update Report, dated April 29, 2011 by EnvironTrac, summarizes remedial activities from January to March 2011(eDocs). Twenty nine monitoring wells and one recovery well were gauged monthly. Enhanced fluid recovery was

HESS TERMINAL (Continued)

S102141580

performed weekly on selected wells. Total of 0.31 gallon of free product was recovered. Hess will continue monthly well gauging and weekly enhanced fluid recovery. In addition, Hess will explore other options of free product recovery. The next report will be submitted in July 2011. 01/20/11 - LZThe January 17, 2011 quarterly report (eDocs) shows that the facility conducts weekly vacuum enhanced fluid recovery. Slightly more than 1 gallon of free product was recovered. The next report will be submitted in April 2011. 11/2/10 - LZThe October 25, 2010 quarterly report (eDocs) shows that the facility conducts weekly vacuum enhanced fluid recovery. Slightly more than 0.2 gallon of free product was recovered. The highest thickness of free product was noted in MW-13 (0.25 foot). 11-2-10 - LZThe Update Report, dated July 30, 2010, by EnvironTrac, summarizes remedial activities from April through June 2010 (eDocs). Twenty nine monitoring wells and one recovery well were gauged monthly. Enhanced fluid recovery was performed weekly on selected wells. Total of 2,175 gallons of fluids were recovered, and 0.21 gallon of free product were recovered. Hess will continue monthly well gauging and weekly enhanced fluid recovery. 05/12/10 - LZThe April 30th quarterly report (eDocs) shows that the facility conducts weekly vacuum enhanced fluid recovery. The highest thickness of free product was noted in RW-1 (0.93 foot). 01/28/10 - LZReviewed the EnviroTrac Ltd January 28, 2010 quarterly report (eDocs) containing recovery data from October 2009 through December 2009. The report shows that 1.79 gallons of free product were recovered during this period. The highest thickness of free product was in RW-1 (0.9 foot) and 10 wells of 30 total monitoring wells exhibited the presence of free product. 02/18/10 - LZReviewed the January 28, 2010 Remedial Action Plan (RAP) (eDocs) prepared by EnviroTrac Ltd. The RAP provides the status of remediation at the site and evaluates four methods that might be used to expedite the remedial process; excavation, chemical injection, groundwater treatment, and enhanced fluid recovery are assessed by their feasibilities and associated risks. Approved your recommendation that enhanced fluid recovery be continued since EnviroTrac Ltd asserts that only this remedial option does not compromise the integrity of storage tanks. NYSDEC requires that the frequency of enhanced fluid recovery be increased temporarily from twice a month to weekly. Starting March 1, 2010, the weekly events must be performed for at least six months. After this period, recovery data will be evaluated, and a future configuration of enhanced fluid recovery will be determined. 01/28/10 - LZI received the January 28, 2010 quarterly report (eDocs) containing recovery data. It is under review. 10/29/09 - LZAs a result of today's meeting between DEC and Ed Russo of Environtrac and Donald Bull of Hess-Woodbridge, by February 1, 2010, NYSDEC will receive a report on the extent of contamination and the evaluation of feasible options to expedite remediation in the area south of Tanks 9409 and 9410. 10/08/09 - LZEnviroTrac e-mailed missing information about volume of recovered LNAPL (eDocs). 09/25/09 - LZThe September 16, 2009, Envirotrac report (eDocs) provides the results of monthly gauging of 29 monitoring wells and 1 recovery well. Eleven wells exhibited LNAPL. In January, the maximum thickness was 0.55 foot (MW-8a); February - 2.16 feet (MW-13); March - 0.32 (RW-1); April - 0.56 foot (RW-1); May - 0.59 foot (MW-13); June - 0.84 foot (RW-1); July - 0.26 foot (MW-13); August - 1.15 feet (MW-13); and September - 0.31 foot (RW-1). No information about volume of recovered free-phase product (I e-mailed them requesting this information and a meeting on

October 29th). The report was received with a delay because miscommunication between Hess and Envirotrac (this consultant replaced Delta Consultants, Inc). The next report before January 31, 2010.03/10/08 - LZDuring November 2007 - January 2008, 6,25 gallons of LNAPL were recovered, a Delta Consultants, Inc. quarterly report informs. Enhanced fluid recovery events were conducted twice a month at a number of monitoring wells that reveal the presence of free product. On November 13, 2007, the highest thickness of LNAPL was in MW-13 (0.67feet) and in RW-1 (0.38 feet). On November 11, 2007, MW-13 revealed 0.77 feet of LNAPL and RW-1 0.33 feet. On January 9, 2008, MW-13 had 0.88 feet of free product and RW-1 had 0.29 feet of free product. Delta Consultants, Inc., propose continuation of bi-monthly recovery activities.12/12/07 - ZielinskiDelta Environmental Consultants' report covers August-October 2007 free product recovery activities. According to the report, 6.61 gallons of LNAPL were removed in this period. Since June 1998, when recovery system was installed, 2,518 gallons of LNAPL were recovered. Free product was detected in in a number of wells: MW-8 (0.01 feet), MW-8A (0.14 feet), MW-13 (0.5 feet), RW-1 (0.26 feet), MW-15 (0.32 feet), MW-19 (0.05 feet), MW-17 (0.27 feet), and MW-20 (0.13 feet). Delta, on behalf of Hess, intends to continue twice-a-month operations using the enhanced fluid recovery system. 08/31/07 - ZielinskiDelta Environmental Consultants, Inc., provides a report on remedial activities for May -July 2007. Total 5.56 gallons of LNAPL were recovered. In May , LNAPL was recovered from wells MW-8A 0.07 MW-13 0.08 feet, MW-17 0.17 feet,MW-20, 0.08 feet, RW-1 0.08 feet. In June, LNAPL was recovered from MW-8 0.07 feet, MW-8A 0.05 feet, MW-13 0.03 feet, MW-17 0.06 feet, MW-19 0.06 feet, MW-20, 0.07 feet, RW-1 0.40 feet. in July, LNAPL was recovered from MW-8 0.07 feet, MW-8A 0.12 feet, MW-11 0.11 feet, MW-13 0.39 feet, MW-14 0.28 feet, MW-15 0.08 feet, MW-20 0.16 feet, RW-1 0.15 feet. since 1990, 2,5411 gallons of free product were recovered. The next progress report will be submitted on December 8, 2007.06/22/07 - ZielinskiDelta Environmental Consultants, Inc., in its report of June 8, 2007, provides information on the quantity of LNAPL recovered during February- April 2007. Total of 5.36 gallons of LNAPL was pumped out from wells MW-8A, MW-13, MW-14, MW-20, and RW-1. Since June 1999, 2,506 gallons of free product have been recovered. The next progress report will be submitted on September 8, 2007.03/21/07 - ZielinskiA site status report, prepared by Delta Environmental Consultants, Inc., includes data collected during November 2006 to January 2007. LNAPL was recovered from wells MW-13, MW-17, RW-1. Free product was also found in MW-8, MW-8a, MW-11, MW-12, MW-13, MW-14, MW-19, MW-20. The next progress report will be submitted on June 8, 2007.12/15/06 - ZielinskiThe Fourth Quarter STIP Agreement Progress Report, prepared by Hess Corporation, indicates that free product exists in Wells MW-13 and MW-8(RW1). The facility uses an enhanced fluid recovery system to remove LPH. Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO"This spill site has been consolidated under spill No. 9002896.4/21/04 - This project is re-assigned to Zhao from Sigona.06/29/12 - THIS SPILL CASE HAS BEEN TRANSFERRED TO SECTION B ON 06/29/12 AS DISCUSSED WITH RANDY AUSTIN 08/01/2012 V. Remarks: TT results via fax. December 23, 2005A "Tank Test Failure Letter" was sent to: Surinder Singh 289 Management 289 Hamilton Ave Brooklyn, NY 112311/25/06. J. Krimgold reviewed the t/t results. Tanks passed the test. Also Russel (718-909-0148) stated that the spill closure report will be submitted via fax tomorrow. 2/1/06. J. Krimgold reviewed a letter from Russel Construction Corp. submitted on Jan 30, 2006. According to the letter, during excavation of the piping (as part of investigation) it was found that a diesel fill vertical riser has a small hole on it. The fill was repaired and no evidence of contamination was found around this pipe. NFA.
PBS No: 2-600218 under ground tank. Leak is where the two tanks join together at the manifold. Leak is just a vapor. Russell from Russell Construction will be doing the repairs as soon as possible.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL." This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. This spill site cleanup (9100446) has been consolidated under Spill No. 9104080. 3/17/06 Contaminated soil was being excavated. Need to ascertain nature of entire response. Need to contact owner. 4/6/06 Left message for owner (289 Management Inc.) 11/02/06 Reassigned to Sun. (MS) 11/28/06 Sun sent letter to Cosmic Ventures Inc., 44 West 85th Street Apt. 1B, NY, NY 10024, on 11/27/06 requiring that following be submitted to NYSDEC by 12/27/06: 1. Tank closure assessment report. 2. Locations of tank and/or line test failure. 3. Subsurface investigation rpt, including current and historical soil and GW analyses. 4. Surrounding property sketch including property layout and usage. North arrow and scale must also be included on site plan. If no tank closure report was prepared or no subsurface investigation was conducted before, Department requires that following be performed and submitted: 1. Submission of Tank Closure & Site Assessment Rpt, including Soil and Groundwater Investigation Results. (JS/MS) 12/1/06: Spoke to owner, he will send documents (Andersen). 8/6/07: Upon receipt and review of add'l documents, add'l investigation may be required to assess possible impacts to groundwater beneath site. Reviewing full report. (JS/MS) 10/30/07: Need to re-establish contact with RP. Will send add'l SI letter. (JS/MS) 1/28/08: MS called Mr. Tauber at Cosmic Ventures to get site status (212.7248342). 4/15/08: Send 2nd tank closure rpt/subsurface investigation rpt letter to Tauber. (JS/MM) 4/23/08: Spoke to Russell McCroy; wants to close out spill. Indicated that there may be monitoring wells at site; may hire AMC Engineering to perform sampling. Send email (rmccroy@gmail.com) requesting location of MW's before sampling. (JS/MM) 08/05/08: Transferred to Kolleeny/Mandac. - JK10/2/08: AMC has not yet sampled. No response to email asking for an update (JK/MM) 01/15/09: Spoke to Ariel Czemerinski of AMC. Requested a site update. He will review the file and call me early next week. (JK/KG) 01/29/09: Czemerinski has not provided update. Sent him email asking if supplmtl subsurface investig work plan had been prepared or if any GW samples have been collected. (JK/KG) 02/02/09: Rec'd email from Czemerinski on 1/30/09: "We have contacted Mr. Singh, owner of the two facilities. He has indicated willingness to proceed with plans. We should hear from him today or early next week. At Hamilton Ave, we went to site twice to

S106703536

collect samples but were unable to retrieve them, either because GW table was too low, or because wells were clogged. I sent Mr. Singh proposal to unclog & develop wells to obtain new samples. Please let me know if you have add'l questions. I apologize for delay with these projects." - JK/KG02/24/09: Sent letter to Mr. Tauber requesting a work plan for soil and groundwater investigation be submitted by 03/27/09. (JK/KG)02/27/09: Czemerinski called and said he developed wells and collected samples yesterday from wells surrounding current tanks. I asked him if current tanks are in same location as former tanks. He didn't have map indicating location of former tanks. I emailed him copy of 1991 rpt with map. If tanks are in same location he should submit GW samples he collected for lab analysis. When results are available he should submit rpt to DEC. If wells aren't located around former tanks he will need to submit work plan as requested in 2/24/09 letter. Rec'd following email from Czemerinski: "Thank you for sending rpt. I checked plot plan in rpt with actual location of tanks and it seems that current tanks have been installed in same area as old tanks. It is thus my opinion that monitoring wells (existing) would reflect condition of GW in area of concern. Summarizing our conversation, we will submit samples for analysis obtained from 4 existing monitoring wells. As results become available we will report to your Dept. Samples are to be analyzed for STARS compounds using methods 8260 (VOC) and 8270 (sVOC). Please let me know if you have any questions. Sincerely, Ariel Czemerinski, PE" Spoke to Larry Tauber (owner of property), informed him that GW samples were collected and would be submitted by Czemerinski. Based on results DEC will determine next course of action. Work plan requested in 2/24/09 letter does not have to be prepared at this time. (JK/KG)03/19/09: Rec'd pdf of Limited Subsurface Investig rpt dated 3/18/09; under review. (JK/KG)03/24/09: Four on-site wells are tank pad wells. AMC stated that there is no record that these wells have been sampled since their install'n in 1991. Wells were developed prior to sampling. All four wells indicated high levels of VOCs. AMC recommends preparation of a remedial investigation plan and evaluation of need for new tank tightness test. February 26, 2009 groundwater samples: W-1: Total VOCs - 13029.6 ug/LW-2: Total VOCs - 177,950 ug/LW-3: Total VOCs - 28,400 ug/LW-4: Total VOCs - 27,758 ug/L Letter sent to Mr. Tauber requiring that work plan for soil and GW investigation be prepared & submitted by 4/24/09. Work plan should include install'n of soil borings and add'l wells and collection of soil and GW samples. New and existing wells should be surveyed. (JK/KG)04/01/09: Rec'd email from Czemerinski stating that tank tightness test has been scheduled for 4/7/09. Also rec'd pdf of Limited Subsurface Investigation Plan; under review. (JK/KG)04/06/09: I spoke to Czemerinski, told him that at least 3 of proposed borings should be converted to monitoring wells and that wells, not borings, should be surveyed. I also told him that when collecting soil samples, deepest dry sample from each boring must be submitted for lab analysis, not just sample with highest PID reading. He requested that before making any changes to work plan, he wants to see results of tank tightness test to be performed tomorrow. He will call back 4/7 or 8 to discuss results & need for add'l actions. - JK/KG 04/07/09: Rec'd call from Czemerinski informing me that 4,000-gal diesel UST failed tightness test. Spill No. 0900247 was opened. Czemerinski informed operator that tank should be taken out of service and emptied. He mentioned that bottom of tank is 4-5" below groundwater. Rec'd email from Czemerinski: "I just finished tanks'

MAP FINDINGS

GAS STATION -MTBE (Continued)

S106703536

tests. Diesel tank failed. Below is copy tank test company regarding call to spill hotline. Tank, 4000-gal steel single wall, will be emptied today or tomorrow and remain empty until we complete site delineation, which needs to be approved by DEC. In meantime, empty diesel tank will be monitored for next few days. If there is no noticeable water increase in tank, it will be tested again. If there is water (and leakage confirmed), plan will be submitted for its removal/replacement. Please let me know if you have any comments. Also note that new spill number was issued, since old open spill dates from 1991." (JK/KG)04/20/09: Rec'd email from Czemerinski; diesel tank will be retested on 4/22/09. I asked if he will be sending revised work plan. Czemerinski replied, "I'd like to wait until Wednesday. It appears there was water in line that was not properly plugged during test, which could have been source of water level increase. Delineation work plan will be somewhat different depending on whether diesel tank has to come out or not. I will then incorporate all other changes you indicated in 4/7 email." In separate email, Czemerinski stated, "We will sample wells on Thursday. We will report to DEC as soon as we get results back from lab." (JK/KG)04/22/09: Rec'd call from Czemerinski; diesel tank was retested and passed. (JK/KG)04/23/09: Rec'd memo with requested changes to workplan dated 3/31/09. Work plan and addendum were combined into one pdf file and uploaded to eDocs. Letter sent approving work plan; investigation summary rpt is due 6/26/09. Scope of work includes install'n of borings and monitoring wells, collection of soil and GW samples, GW elevation survey, and submission of summary rpt. In same letter, DEC required that rpt for spill 0900247 be submitted by 5/22/09. Rpt should identify cause of tank failure and actions taken to resolve matter. It should also include copy of results from tank tests conducted on April 7 and 22, 2009. (JK/KG)05/07/09: Rec'd email from Czemerinski on 5/6/09: "We have scheduled Limited SSI for Saturday, May 9, 2009. Thanks, Ariel Czemerinski, PE" (JK/KG)06/25/09: AMC Engineering sent pdf of Limited Subsurface Investigation rpt dated 6/17/09. A revised Figure 6 with corrected GW elevations was sent separately. Under review. (JK/KG)07/02/09: Left a message for Czemerinski to discuss site. On 5/9/09, 11 borings were installed, soil and groundwater samples were collected from each boring, and wells were surveyed. Soil borings were labeled SB-1 through SB-8 and SB-10 through SB-12. SB-2, 3, 7, and 12 were converted to permanent 1" monitoring wells. Depth to groundwater was between 8 and 10' bg. Groundwater flow was determined to be west/SW. GW collected on 5/9/09: SB-1: Total VOCs (15.22 ug/L), Benzene (<1.0 ug/L), MTBE (<1.0 ug/L) SB-2: Total VOCs (32,735 ug/L), Benzene (180 ug/L), MTBE (140 ug/L) SB-3: Total VOCs (11,311 ug/L), Benzene (940 ug/L), MTBE (860 ug/L) SB-4: Total VOCs (4,680 ug/L), Benzene (1,100 ug/L), MTBE (3,000 ug/L) SB-5: Total VOCs (10,400 ug/L), Benzene (6,600 ug/L), MTBE (750 ug/L) SB-6: Total VOCs (4,292 ug/L), Benzene (1,900 ug/L), MTBE (1,600 ug/L) SB-7: Total VOCs (10,653 ug/L), Benzene (2,600 ug/L), MTBE (850 ug/L) SB-8: Total VOCs (41,578 ug/L), Benzene (2,400 ug/L), MTBE (33,000 ug/L) SB-10: Total VOCs (105,080 ug/L), Benzene (5,700 ug/L), MTBE (4,200 ug/L) SB-11: Total VOCs (17,664 ug/L), Benzene (1,100 ug/L), MTBE (2,900 ug/L) SB-12: Total VOCs (506,300 ug/L), Benzene (11,000 ug/L), MTBE (2,200 ug/L) Soil collected on 6/9/09: SB-3(9-10'): Benzene (710J ug/kg), Total Xylenes (9,200 ug/kg), Ethylbenzene (70,000 ug/kg) SB-5 (9-10'): Benzene (110 ug/kg) SB-6 (8'): Benzene (340J ug/kg) SB-6 (10'): Benzene (<720 ug/kg) SB-7 (9'): Benzene (<710 ug/kg), MTBE

(<710 ug/kg)SB-10 (8'): Benzene (420J ug/kg), MTBE (<740 ug/kg), 1,2,4-Trimethylbenzene (210,000 ug/kg), Total Xylenes (124,000 ug/kg)SB-10 (9-10'): Benzene (1,100 ug/kg), MTBE (<700 ug/kg), 1,2,4-Trimethylbenzene (200,000 ug/kg), Total Xylenes (340,000 ug/kg)SB-11 (9-10'): Benzene (92J ug/kg), MTBE (<740 ug/kg), 1,2,4-Trimethylbenzene (30,000 ug/kg), Total Xylenes (42,000 ug/kg)SB-12 (9-10'): Benzene (350J ug/kg), MTBE (<700 ug/kg), 1,2,4-Trimethylbenzene (230,000 ug/kg), Total Xylenes (370,000 ug/kg)AMC recommends another investigation to delineate contam plume and submission of remedial action plan. Changed priority ranking from P0 to P1 due to high levels of contam. (JK/KG)07/15/09: Letter sent to Tauber approving AMC's recommendations to conduct supplemental investigation and prepare RAP. Supplemental investigation work plan is due 8/14/09. It should propose, at minimum, 5 addt'l monitoring wells. In meantime, RAP should also be prepared. Email for Larry Tauber: Tauberproperties@yahoo.com. A Stipulation Agreement was issued to Cosmic Ventures, Inc. Signed Stip is due by 8/3/09.(JK/KG)07/23/09: Rec'd call from Czemerinski on 7/21 stating that Tauber would like Stip to be signed by tenant as well. Tenant has been paying for site investigation to date. Rec'd a letter dated 7/22 from Frederick Eisenbud, Tauber's atty, requesting that DEC add tenant, 289 Management Inc., to Stip (in eDocs). Stipulation Agreement was re-issued to Cosmic Ventures Inc. (Larry Tauber-site owner) and to 289 Management Inc. (Mangat Singh-tenant and tank owner). It is required that Stip is signed by both parties; due back 8/10/09. (JK/KG)08/05/09: Czemerinski called to inform me that he will be submitting letter to DEC. Tenant, Singh, is in process of hiring an attorney and will not be signing Stip until then. He anticipates that signed Stip will be returned in Sept. In addition, work plan due on 8/14 will be submitted at end of August. (JK/KG)08/10/09: Rec'd two letters dated 8/6/09; one from AMC and one from Eisenbud. AMC requested extensions of deadlines for submission of signed Stip and suppl work plan. In addition, AMC requested that install'n of off-site well be postponed until GW flow direction has been confirmed. Eisenbud also requested extensions of deadlines and modification to language in paragraph 2 of stipulation. Deadline extensions were approved. Signed stip is due 9/4/09 and work plan is due 9/18/09. Request to postpone install'n of off-site well was approved. As advised by John Urda of DEC legal staff, original language in Stipulation Agreement must remain. (JK/KG)09/01/09: I rec'd email from Czemerinski: "Hi Kathy, I am away until Thursday, 9/3; will call you then. But this is what is happening: landlord, Tauber Properties, is requesting addt'l week for signing Stip Agreement. They also asked if new dates and deferment of off-site drilling should be part of narrative in stip agreement (way it reads now, deadlines are still Aug 14, and requires drilling across street from Hamilton Ave). 289 Management just recently retained counsel, and I have not spoken to them yet. I am not sure if I will continue with them, or I think they are working with some other envt'l consultant. As soon as I clarify these issues, I will let you know. Thanks, Ariel Czemerinski, PE" I responded: "Ariel, Thanks for update. Tauber Properties should refer to our letter dated Aug. 10 (attached) for new deadlines. Corrective Action Plan does not specify install'n of well across Hamilton Ave. It does state that contaminant plume must be delineated. Aug. 10th letter states that off-site well does not need to be installed at this time, but if contam plume is not completely delineated, addt'l wells may be needed (as part of addt'l

S106703536

investig). I will extend deadline to return signed stip agreement one more time to Sept. 11,'09. Be advised that if deadline is not met, case may be referred to legal dept for enforcement. I will talk to you later this week. Thanks, Kathy" (JK/KG)09/14/09: On 9/11/09 rec'd letter from Eisenbud. Included with letter was Stipulation Agreement signed by Larry Tauber of Cosmic Ventures, Inc. and revised Corrective Action Plan. Eisenbud states that tenant, M. Singh of 289 Management Inc., is not willing to sign Stip. Revisions to CAP will be reviewed with John Urda. (JK/KG) 09/15/09: Updated Stip Agreement and revised CAP were sent to Tauber. Signed Stip is due 10/1/09. Revisions in CAP were to deadlines for submittals. Changes to language of CAP requested by Eisenbud were not approved. Spoke to Czemerinski. He will be prepared to submit work plan. He has been retained by Tauber to continue with site investigation & remediation. He stated that at this time tenant is not taking responsibility for spill clean-up. (JK/KG)09/20/09: Rec'd call from Eisenbud on 9/17/09 re: DEC letter dated 9/15/09. He wants DEC to reconsider language he proposed in paragraph 4 of CAP. He states that his client should be able to decide whether or not he will move forward with remediation of site (once RAWP is approved) after cost is determined. I suggested he speak to John Urda. I then received email from Eisenbud to DEC Dale Desnoyers regarding request. Email is in eDocs.(JK/KG) 09/30/09: If signed Stip is not returned, discuss site with legal staff to determine what next appropriate action should be. (JK/KG)10/08/09: Received pdf of investig work plan from Ariel Czemerinski of AMC Engrng (RP's consultant). Ariel wrote in email: "Attached, please find addt'l workplan for 289 Hamilton Ave. for your review. Please note that we are adamant to not drill in area between SB1 and SB2, given that utility markout indicated presence of underground power lines." - JK10/16/09: Received stip signed by Lawrence Tauber of Cosmic Ventures, Inc. by email on 10/1/09; received hard copy on 10/6/09, forwarded to Regional Direction on 10/7 for RD's signature. RD signed on 10/8/09; I got back on 10/15/09 (in eDocs). On 10/16/09, sent pdf of executed stip by email to Mr. Tauber, cc's to Fred Eisenbud (att'y) & Ariel Czemerinski. Email stated: "I have attached fully executed Stipulation Agreement for site. Stipulation was signed by our Regional Director on Oct. 8, '09, but due to delays in processing of document, I didn't get it back until yesterday. Therefore, I will consider effective date of Agreement (i.e., when "clock starts ticking") to be today. I have already received investigation work plan, as required by CAP, from your consultant AMC Engineering, PLLC; work plan is currently under review. Feel free to contact me if you have any questions." - J. Kolleeny10/26/09: Completed review of AMC Engrg's 10/5/09 Inv. Work Plan (in eDocs). Sent approval letter (in eDocs) to Mr. Larry Tauber of Cosmic Ventures, Inc. (RP), with cc's to Ariel Czemerinski of AMC Engrng, Frederick Eisenbud (RP's att'y). Approval letter had addt'l comments: (1) All monitoring wells, whether pre-existing or newly installed, should be surveyed (if they have not already been surveyed) to determine top-of-casing elevation, so depth to GW can be accurately determined and local GW flow direction calculated. (2) If significant field indications of contam are encountered during drilling of proposed boring B5, monitoring well should be installed at that location. Even if there are no obvious signs of contam at B5, if GW is found to be highly contaminated in new well at location B4, well may be necessary at B5 to delineate contam. (3) Following drilling of soil borings and install'n of new wells, round of GW samples should

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

GAS STATION -MTBE (Continued)

S106703536

be collected from all newly installed wells, and from existing wells SB2, SB3, SB7 and SB12. (4) If results of this study indicate southerly GW flow direction, it may be necessary to install permanent well at boring location SB1 to delineate GW contam at SB2. (5) Investig summary rpt should include proposal for conceptual remedial strategy to address contam associated with this spill; this remedial strategy, if approved by NYSDEC, should be presented in greater detail in Remedial Action Plan. Set Dec. 11, 2009 as deadline for submission of invest summary rpt. - J. Kolleeny11/09/09: Was cc'ed on email from Ariel Czemerinski (RP's consultant) to Fred Eisenbud (Att'y for RP): We are making final arrangements to start with addt'l subsurface investigation at site. Tentative date is Wednesday, Nov. 18, 2009. We are planning to start at 7:30 AM and it should take whole day. During investigation activities we will have to temporarily cordon off areas of property, including both dispensing islands, to investigate subsurface conditions. Please contact operator to inform him about plans." - J. Kolleeny12/08/09: Received email from Ariel Czemerinski (consultant): "I just received analytical results for supplemental ssi at 289 Hamilton Ave. Work conducted on 11/18 went as planned. We obtained 12 GW and 7 soil samples. Our deadline for SSIR is this Friday, Dec 11. I need a few more days to analyze data for rpt, and submittal of RAP. Can an extension be granted?" I sent reply to him, cc to Larry Tauber (RP): "I will extend deadline for submission of invest summary rpt to Friday, Dec. 18, 2009 (an extra week). Please keep in mind that summary rpt should include recommendation for conceptual remedial strategy to address site conditions, but does not need to include all details of remedial proposal - that would come later in RAWP, which will be due within 90 days of my approval of invest summary rpt with remedial strategy proposal. Also, please reference NYSDEC spill number for site (which I have entered into subject line above) in all correspondence regarding this project." - J. Kolleeny02/05/10: Reviewed "Supplemental Subsurface Site Investigation Rpt: Remedial Investig Rpt" dated 12/21/09 by AMC Engineering, PLLC (in eDocs). Rpt summarizes addt'l site investigation done in Nov.'09, which found high levels of soil & GW contam near USTs and dispensers. AMC recommends that a RAP be prepared involving soil excavation, application of chem ox to open excavation pit, chem ox injections on eastern up-gradient part of site, removal of abandoned UST, and replacement of wells as necessary for follow-up GW monitoring. I sent approval letter (in eDocs) to Larry Tauber of Cosmic Ventures, cc's to Ariel Czemerinski of AMC and Frederick Eisenbud (Tauber's att'y), stating that RAP should be submitted by May 7, 2010 to comply with Stip CAP, and that RAP should include implementation schedule. - J. Kolleeny04/30/10: Received email request for 1-week extension of RAP submittal deadline from Ariel Czemerinski of AMC Engrg (consultant). I sent email to Larry Tauber (RP), cc to A. Czemerinski, approving extension of deadline to May 14, 2010. - J. Kolleeny06/04/10: Reviewed May 2010 Remedial Action Work Plan by AMC Engineering, received 5/20/10. On 6/2/10, contacted Ariel Czemerinski of AMC to request revisions to text, site plan and Implementation Schedule. Same day, Mr. Czemerinski emailed me revised RAWP (in eDocs) with changes addressing my concerns. RAWP proposes excavation of contam soil from several areas, collection of end-point samples, application of chem ox to excavations, possible install'n of infiltration galleries if need to treat residual contam by addit'l chem ox injections is anticipated, dewatering of excavated areas (if

Map ID
Direction

GAS STATION -MTBE (Continued)

S106703536

necessary), possible removal of 2 recently discovered/suspected 550-gal USTs located near Dunkin Donuts on north end of site, and post-remedial GW monitoring. If, based on monitoring results, it is necessary to inject addit'l chem ox, EPA's UIC program will be notified in advance. If dewatering into NYC sewer system is required, DEP Sewer Discharge Permit will be obtained, and discharge will be treated as necessary to comply with DEP sewer discharge criteria. If presence of 2 suspected USTs is confirmed and they are removed, they will be registered with DEC's PBS Unit and listed as Closed-Removed. Because some existing monitoring wells at site will likely be destroyed during excavation, rpt proposes install'n of 5 new/replacement wells. RAWP includes Community Air Monitoring Plan & Health & Safety Plan. AMC anticipates that bids for remedial work will be solicited, received and processed within 6 weeks of receiving DEC's approval of plan, and that plan will be implemented by Aug. 30, 2010. I sent approval letter (in eDocs) to Larry Tauber of Cosmic Ventures, cc's to Czemerinski of AMC and Frederick Eisenbud (att'y), noting that if contam is found at suspect northern UST, a well should be installed nearby. - JK12/08/10: In October 2010, I was contacted by consultant Ariel Czemerinski, who explained that implementation of approved RAP will shut down gas station for considerable length of time with consequent loss of business revenue, and that station operator and property owner are already in contentious litigation so gaining access to site to implement RAP will be difficult. In light of situation, he requested that DEC consider an alternate, less intrusive remedial plan. On Oct. 29th, he sent email with attached revised RAP, stating "Attached is revised RAWP for site [in eDocs]. Please let me know if you need hard copies, and how many. In summary, plan addresses GW contam though combination of vacuum-enhanced fluid recovery to remove NAPL and Chem Ox injection using two systems with persulfate: one with chelating agent as an activator and another a high pH solution for tank area. This approach will allow service station to conduct normal business with no or minimal disruption." After discussing situation with DEC atty John Urda, I agreed to review new RAP on condition that if revised approach is not successful in reducing contam levels to achieve spill closure, then addt'l actions, including implementation of original RAP, will have to be taken. Ariel spoke with his client, Larry Tauber, who understood and agreed to this condition. I asked that 1 hard copy of revised RAP be forwarded; received hard copy on 12/08/10; will review. - J. Kolleeny12/22/10: Completed review of new Oct. 2010 RAWP by AMC Engineering (in eDocs). Plan proposes (1) removal of 2 suspected 550-gallon USTs at site with excavation (to extent feasible) of contam soil found during removal and application of sodium persulfate to excavations to treat any residual soil contam; (2) install'n of product recovery wells and use of vacuum-enhanced fluid recovery to address free product identified in one area of site; and (3) implementation of chemical oxidant injection program involving install'n of 14 injection wells and application of sodium persulfate via wells; depending on results of 1st round of injections, addt'l injections may be performed. Dewatering may be performed, if necessary, during excavation of impacted soils; recovered water will be discharged to NYC sewer system. GW sampling will be performed quarterly, or more frequently, during and following remedial actions to evaluate effectiveness. GW sampling will be performed on 2 existing monitoring wells and 3 proposed new wells. Quarterly project status rpts will be submitted to DEC. RAWP includes

GAS STATION -MTBE (Continued)

S106703536

Community Air Monitoring Plan and Health & Safety Plan. I sent letter (in eDocs) to Larry Tauber of Cosmic Ventures (RP), cc's to Ariel Czemerinski of AMC and Fred Eisenbud (atty), approving new RAWP but stating that full round of GW samples should be collected prior to implementing plan to get baseline data, existing well 09-MW5 should be included in lists of wells for performance monitoring and quarterly GW sampling, if significant contam is found while removing UST north of Dunkin Donuts, well should be installed there, and that if these remedial actions are not effective enough to bring about spill closure, addtl actions may be required, including implementation of original May 2010 RAWP. - J. Kolleeny02/03/11: On 2/1/11, received email from Ariel Czemerinski of AMC: "Regarding Hamilton, we scheduled but had to cancel install'n of fluid recovery wells [weather-related]. Also, as soon as weather clears, we will go onsite. I will give you advance notice." - J. Kolleeny03/01/11: Received email from Ariel Czemerinski of AMC: "This is to notify DEC that we have scheduled following to commence remedial activities at subject site, as per our RAWP:Wednesday, March 2, 2011: Onsite private utility and gasoline markout (ETA: 10:30 am)Thursday, March 3, 2011: Onsite to install two (or three) fluid recovery wells. Install injection points as time allows. (ETA 7:00 am)Please let me know if you have any comments/questions." - J. Kolleeny05/16/11: On 5/15/11, received email from Ariel Czemerinski of AMC with attached pdf file of Remedial Progress Rpt (in eDocs). Rpt summarizes install'n of three 2" VEFR wells for product recovery in March 2011. After install'n, on 3/17/11 they pumped wells with vac truck and recovered 228 gals of water, but no product. Wells were surveyed on 3/27/11 and no product was observed (wells not sampled). Rpt lists addtl work: During months of June/July:1. Install injection points as per RAWP, Figure 5.2. Obtain a round of GW samples from existing monitoring wells to provide abackground level of contaminants prior to start of remedial activities.3. Remove two suspected 550-gal underground storage tanks.4. Commence with injection activities5. Monitor GW quality two weeks after initial injection.- J. Kolleeny09/07/11: Received email from Ariel Czemerinski of AMC Engrg: "Please be advised that we are mobilizing tomorrow, Sept. 8, 2011, to install injection wells as part of remedial activities at site. Eastern Envt'l will be at site at 7:00 am. We estimate that injection well install'n will take 3 or 4 days. Please let me know if you have any comments or questions." - JK10/24/11: Received email from Ariel Czemerinski of AMC Engrg: "Mr. Kolleeny, Regarding this spill, please be informed that we are tentatively planning to be on-site sometime next week to conduct 1st round of injections. In addition, we have prepared documentation to be filed with NYCDoB to obtain permit for removal of USTs. We expect to file this week. It normally takes 2-3 weeks to get DoB approval. We will keep you abreast of developments. Please let me know if you have any questions/comments." Attached to email was pdf file (in eDocs as "brief") of fax from Czemerinski to station tenants, Mr. Muhammed & Mr. Singh, informing them of upcoming remedial actions at site (injections and UST removal) and potential impacts on station operations. - J. Kolleeny11/08/11: On 11/7/11, received email from Ariel Czemerinski of AMC Engrg: "Jon, I have a question regarding this site. While revising RAWP, where we proposed use of high pH activated persulfate, I have second thoughts about it, solely because site has 1x4000 gal diesel tank which is in contact with water, in addition to electric and control lines (conduits) which are within radius of influence of injected chemical. While

talking to Regenesis, it appears that Regenox is more gentle on steel, so I would like to know if we can inject Regenox (Part A and Part B) instead of Persulfate. If this modification will create unnecessary delays or burden on DEC, we will proceed as per approved RAWP. Please, let me know." On 11/8/11, I sent email reply: "Ariel, I'm not sure why this is coming up now, and was not considered back when you presented revised RAWP. I have seen mixed results for RegenOx at projects where it has been used. You might want to look into use of sulfate (not sodium persulfate) as an alternative. Either way (use of RegenOx or sulfate), please put together brief addendum to RAWP proposing change in chemical oxidant and explaining rationale behind change. But be aware that my approval letter will state, as my earlier approval letter did, that if this approach fails to reduce petroleum contamination at site to levels suitable for spill closure, DEC may require add'l remedial actions, possibly including implementation of original RAWP which proposed more extensive soil excavation and install'n of infiltration galleries for chemical injections. And as before, my letter will state that Responsible Party and its contractor(s) will be solely responsible for safe execution of remedial work." - JK11/28/11: Received email from Ariel Czemerinski of AMC Engrg: "Cc: Mr. Singh and Muhammad (via fax); Mr. Kolleeny and Mr. Tauber: We have made arrangements to ship injection chemicals, which are arriving on Friday, Dec. 2, 2011. First round of injections will take place on Saturday, Dec. 3, 2011. Please let me know if you have any questions." I sent email to Mr. Czemerinski: "What are injection chemicals being shipped - high pH activated persulfate, or RegenOx? I received email from you on Nov. 7, 2011 proposing switch to using RegenOx. In response, on Nov. 8, 2011 I sent email requesting brief addendum to RAWP, but I never received any addendum. Please let me know." Then got phone call from Ariel, explaining that they decided to stay with the high pH activated persulfate, and that he would send a formal email responding to my Nov. 8, 2011 email. - J. Kolleeny01/25/12: Reviewed Remedial Action Progress Rpt by AMC Engineering dated 1/20/12 (in eDocs), submitted via email by Ariel Czemerinski on 1/23/12. Rpt states that 14 injection wells were installed in early Sept. 2011, and later in Sept. monitoring wells were sampled to provide baseline GW data. Injections were performed on Dec. 3rd and 10th, and follow-up GW sampling was performed on Dec. 22nd. Results show that VOC levels decreased in many (but not all) wells. Well PMW12 (aka OW8) had 2,357 ug/L total VOCs in Dec. 2011 (up from 480 ug/L in Sept. 2011 but down from 4,680 ug/L in May 2009); well 09-MW-6 (aka OW7) had 2,097 ug/L tVOCs in Dec. 2011 (down from 2,182 ug/L in Sept. 2011, 3,161 ug/L in Nov. 2009, and 4,293 ug/L in May 2009); well 09-MW7 (aka OW6) had 973 ug/L tVOCs in Dec. 2011 (down from 2,033 ug/L in Sept. 2011); well PMW11/VEFR1 (aka OW5) had 13,360 ug/L tVOCs in Dec. 2011 (up from 5,442/9,650 ug/L in Sept. 2011); well VEFR2 (aka OW4) had 17,780 ug/L tVOCs in Dec. 2011 (up from 9,470 ug/L in Sept. 2011 but down from 506,350 ug/L in May 2009); well VEFR3 (aka OW3) had 21,710 ug/L tVOCs (up from 13,010 ug/L in Sept. 2011 and 18,191 ug/L in Nov. 2009); well PMW09 (aka OW2) had 6,881 ug/L tVOCs in Dec. 2011 (down from 9,710 ug/L in Sept. 2011 and 21,700 ug/L in Nov. 2009); well 09-MW9 (aka OW1) had 17,440 ug/L tVOCs in Dec. 2011 (down a little from 17,620 ug/L in Sept. 2011). Rpt states that plans to remove two suspect USTs are on hold due to litigation between owner and tenant; lists future work as conducting another round of chem ox injections and removal of USTs. - J. Progress Rpt for Jan.-May 2012 by AMC Engineering PLLC, dated 6/12/12 (in eDocs). Rpt presents results of post-injection GW sampling in May 2012; data show some wells had decreases in contam but other(s) increased. Worst well, OW-3, had 42,240 ug/L total VOCs, up from 21,710 ug/L in Dec. 2011. Well OW-4 had trace of product and couldn't be sampled; OW-2 went dry during purging and couldn't be sampled. Rpt states that due to ongoing litigation between tenant & owner, USTs could not yet be removed, and states that another round of GW sampling will be performed in June or July 2012. - J.

Kolleeny10/02/12: Reviewed Remedial Action Progress Rpt for May-July 2012 by AMC Engineering PLLC, dated 9/24/12 (in eDocs). Rpt states that 2nd round of chem ox injections (FMC's Klozur plus NaOH solution) was performed May 5, 2012, and follow-up GW sampling was performed in July 2012. Results showed increase in MTBE in all wells, compared with May 2012 data. Worst well was OW-3, which had 27,590 ug/L total VOCs (down from 39,540 ug/L in May 2012) and 3,600 ug/L MTBE (up from 2,700 ug/L in May 2012); well OW-5 had 10,700 ug/L tVOCs (up from 8,439 ug/L in May 2012); well OW-1 had 9,049 ug/L tVOCs (down from 11,208 ug/L in May 2012) and 1,200 ug/L MTBE (up from 540 ug/L in May 2012); other wells had less severe contam levels. Rpt states that another round of injections will be performed in Oct. 2012, followed by GW sampling, and that due to ongoing litigation between tenant & owner, USTs could not yet be removed. I sent email to Ariel Czemerinski of AMC, cc to Larry Tauber (RP): "Ariel, I've reviewed remedial progress rpt for May-July 2012, dated Sept. 24, 2012. Can you let me know why well OW-4 has not been sampled since December 2011? Text does not seem to mention it; I think an earlier rpt mentioned it had some free product and could not be sampled in May 2012. Was that case again in July? If so, can you let me know how much product was measured in well, and what actions are being taken to address free product? (For example, vacuum truck extraction, manual bailing, or perhaps install'n of a petroleum-absorbent sock in well?) Also, I'd like to request that "09" wells be sampled during upcoming Oct. 2012 GW sampling event - i.e., wells 09-MW1, 09-MW2, 09-MW3, 09-MW4 & 09-MW8, to ensure that contaminant plume is delineated (at least to north, east and south). If there are no significant impacts in these wells, they can be sampled once a year to make sure plume is not migrating. Please let me know if this can be done, and let me know about well OW-4. Feel free to call and discuss, if you have any questions or comments." Ariel sent response: "Jon, While surveying OW-4 in May 12 we found only trace amounts of free product, not measurable. During subsequent injection event, we injected in this well. OW-4 is located 10 ft east from property line. There is no reason why OW-4 well could not be sampled, but since we injected persulfate into that well it did not occur to me to obtain a sample from it. We will sample it next time, after next injection event which is this coming Saturday (Oct 6). We will also obtain a round of samples from other wells. But specific to 09-MW2, this well is IW#4. Would you still want us to sample from a well into which we inject? I will let you know next week how things went." I sent reply: "Ariel, I would suggest that if free product is again detected in OW-4 (even if it's a trace amount), you should perform some type of product recovery (vacuum truck preferred, as was proposed in RAP), rather than using it as an injection well. If you're able to remove product and it does not come back into well, you can collect a GW sample from it during upcoming sampling round. You can omit well 09-MW2 (IW#4) from upcoming GW sampling event, but

DEC Memo: ***(REF SPILL # 9104080)04/22/09: Notified by Ariel Czemerinski of AMC Engineering (516-987-1662) that the diesel tank was retested today and passed. (JK/KG)04/23/09: Letter sent to Larry Tauber, RP, requiring a report identifying the cause of the tank system failure and actions taken to resolve matter. The rpt should also include a copy of the results from the tank tests conducted on April 7 and 22, 2009. The report is due 5/22/09. (JK/KG)04/30/09: Rec'd Tank Retest and Closure Report dated 4/29/09 from Czemerinski; under review. April 7 tank test report was not included. Sent an email to Czemerinski requesting report. Received a pdf of the 4/7/09 tank test report conducted by Crompco. Czemerinski will send a revised report.(JK/KG)05/21/09: Sent an email to Czemerinski reminding him that the report is due tomorrow. (JK/KG)05/26/09: Rec'd Tank Retest and Closure Report-Rev2 dated 5/21/09. (JK/KG)06/01/09: The report and tank tests indicate that the diesel tank failed due to an unused line (for future expansion) that was not capped tightly. When the tank was retested it passed inspection. The consultant performed a suburface investigation on 5/9/09 at the site for spill 9104080. The consultant stated that the soil borings did not indicate an active spill or a release of product to the environment from the diesel tank. No further action is required. (JK/KG)

Remarks: ***(REF SPILL # 9104080) DIESEL TANK IS LEAKING. REMAINING PRODUCT TO BE PUMPED OUT. LEAKING TO SOIL CLEAN UP PENDING.

Site Description: Location: The Red Hook Smith Street site is located in Brooklyn, an urban area. The site is bounded by Smith Street to the west, the Gowanus Canal to the east and south, and an industrial property to the north. Site Features: The site encompasses an approximate area of 85,400 square feet. Block 493 (the northern part of the site) is occupied by a vacant one-story warehouse and an asphalt-paved parking lot. The warehouse is connected to the warehouse on the lot to the south (Block 495, Lot 1). Block 495 is occupied by an approximate 40,000-square-foot vacant one-story warehouse. Current Zoning/Use(s): The site is zoned industrial but is currently vacant. Historical Use(s): Barrett Manufacturing occupied Block 493 from circa 1900 to 1940 and utilized nine coal tar storage tanks and two gasoline underground storage tanks (UST) as part of their production of coal tar and roofing material. Their manufacturing facility also extended to the west of the site (hydraulically up-gradient). Various manufacturing and storage companies occupied Block 495 (the southern part of the site). American Ice Company occupied Block 495 in the early 1900s and Smith Street Dock Corporation and Seaboard Storage occupied Block 495 from around 1930 to 1950. Black Diamond Cargo Line and Pittston Stevedoring Cargo Storage occupied Block 495 from the late 1960s to the 1990s. Site Geology and Hydrogeology: The topography is relatively flat, gently sloping to the east-southeast towards the Gowanus Canal. The site is underlain by a layer of historic urban fill that extends to approximately 12 feet below grade surface (bgs). The historic fill generally consisted of sand, silt, clay, gravel, cobbles, wood and brick fragments, cinder, and ash. The historic fill is underlain by finesands and silts from 2 to 55 feet bgs and stiff clays (potential confining layers) with some organic materials in lenses at varying depths (8 to 35 feet bgs). Bedrock underlying the site is part of the Hartland Formation comprised of gray, fine to medium-grained biotite-muscovite quartz schist with minor garnet and gray sillimanite-plagioclase-muscovite schist with minor garnet with localized concentrations of granite and intrusions of coarse grained granitic pegmatite.

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also

| Site Description: | <p>This site is located in a commercial/industrial area within 70 feet of the Gowanus Canal, which empties into the Gowanus Bay of the New York Harbor. Approximately 10,000 people live within a half-mile radius of the site. The potable water supply for the area is the New York City reservoir system. Information received in a letter dated November 24, 1982, from the Brooklyn District Attorney's Office, indicates hazardous wastes were disposed of at the foot of 17th and 18th streets, off Hamilton Ave. in Brooklyn. The piers at the end of these streets behind Jetro Foods were filled in from 1974 to 1979. It is alleged that also over this period of time (1974 - 1979), hazardous wastes were regularly spread on the landfill during the night. Field work for the Phase II State Superfund investigation was completed, in 1989, to address the possibility of soil and groundwater contamination from on-site activities and to determine whether hazardous wastes had been released to the environment. The Phase II Investigation had five test borings drilled onsite, three of these were converted into monitoring wells. One well contained 1.2 dichlorobenzene at low concentrations. A supplemental site investigation workplan by the NYSDEC was approved in December, 1992; fieldwork was completed in spring of 1993. A review of additional information with supporting documentation provided by the PRP indicates that we are unable to pinpoint the source of contamination. Based on this, the site will be delist</p> |

Site Description: The Metropolitan Gas Works site is located at the intersection of 12th Street and Second Avenue in Brooklyn. Virtually the entire site is flat and covered with buildings or pavement. The surrounding neighborhood is primarily industrial and commercial, with some residential properties within a few blocks. To the south, across 12th Street, the New York City Board of Education maintains a two story office and supply building. Across 2nd Avenue to the east is a municipally owned garbage truck maintenance facility. An active commercial property borders the site to the north, and the Gowanus Canal borders on the west. The site was occupied by a large manufactured gas plant (MGP) from the late 1800s to the 1930s. The MGP converted coal and petroleum products to gas, which was used for heating, cooking, and lighting purposes in the surrounding areas. The process produced large amounts of coal tar wastes which have heavily contaminated the soils beneath the site. The western third of the site (where the actual gas plant was located) is now occupied by a multi-story brick commercial building including a Pathmark grocery store. The remainder of the site, (which housed gas purification and storage facilities and three large gas holders) was redeveloped under

the Departments Voluntary Cleanup Program in 2003 and now houses a large Lowes building supply store. Remediation included removal of the contents of the gas holder foundations and grossly contaminated soils in the surrounding areas to depths ranging from 4 to 16 feet. Tar contamination has penetrated deeper than this, down to depths of 60-80 feet; however, this material could not be reached by conventional excavation techniques and presents little danger of exposure. Some of the tar which was left behind at depth remains mobile in the subsurface. A series of passive tar recovery wells remain in service and continue to recover tar as of June, 2007. Tar is collected on a monthly basis, and shipped off site for proper treatment and disposal. No evidence of tar contamination entering the Gowanus Canal from this site has been found to date. However, tar contamination from a similar site nearby (Carroll Gardens) has been found entering the canal, and investigation of tar migration at this site remains incomplete. The remaining portion of the site (beneath the Pathmark store), and off site areas where tar and contaminated groundwater have migrated, were beyond the scope of the Voluntary Cleanup Agreement. The site was listed on the registry, and has now been included in National Grid's multisite consent order. A remedial investigation is began in late 2009 and is still under way.

Env Problem: Contaminants of concern
The principal waste disposed on the site was MGP tar, which is a brown, oily liquid that is slightly denser than water. Large amounts of this tar escaped from the foundation of the gas holders, and appear to have migrated off site to the south and west of the site. The tar contains high levels of BTEX and PAH compounds. Both groups of compounds have been found in site groundwater. Impacted media
Soils and groundwater at the site are heavily impacted by BTEX and PAH compounds. The impacted soils are found at depths of 8-16 feet and greater beneath the Lowes portion of the property; contaminated soils above this elevation were removed and replaced with clean backfill during the remedial action in 2002. No information is available on the Pathmark portion of the site. However, gross contamination was found within a few feet of the Pathmark foundation and it is likely that significant amounts of soil and groundwater contamination are present in this area also. Known SCG exceedances
Soil and groundwater contain BTEX and PAH compounds at levels far in excess of SCGs. These exceedances represent a significant threat to the environment. Special Resources impacted
No special resources identified. The adjacent portion of the Gowanus Canal is heavily contaminated from a variety of sources, but specific impacts from this MGP site have not been identified. The off site tar migration appears to be taking place at depths below the bottom of the canal.

Health Problem: Further investigation is needed to assess the nature and extent of site-related contamination and the potential for exposure to site contaminants. The site currently has several buildings and a paved parking lot, therefore, contact with subsurface contamination is unlikely. Exposure to site-related contaminants in groundwater is not expected because the area is served by public water. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion on the site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 02/12/2013

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

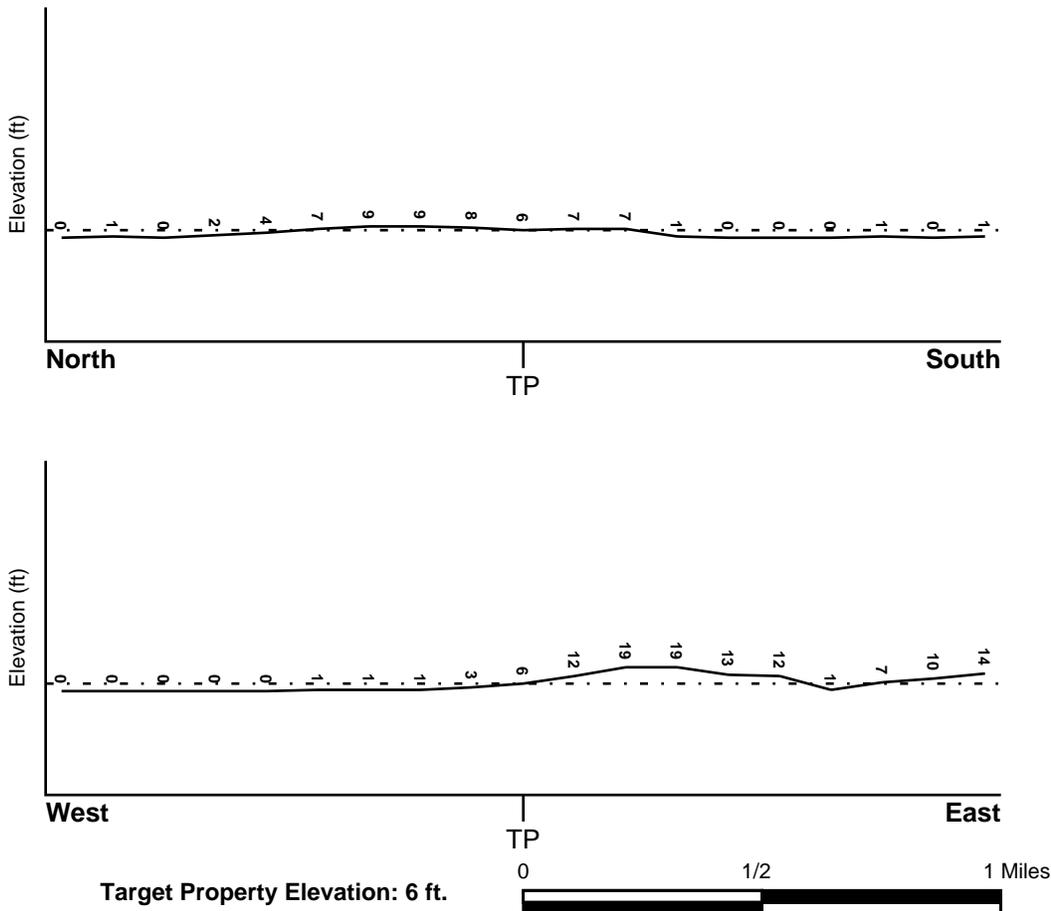

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

|---------------------------------------------------|------------------------------------------------------------------------------------------|

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

| | |
|-----------------------------|---------------------------------------------------------------------------|
| Search Radius: | 1.25 miles |
| Location Relative to TP: | 1 - 2 Miles ENE |
| Site Name: | Vidan Auto Salvage |
| Site EPA ID Number: | NYD986961167 |
| Groundwater Flow Direction: | SW TOWARD THE NARROWS. |
| Inferred Depth to Water: | approximately 38 feet. |
| Hydraulic Connection: | The surficial aquifer and underlying aquifer are hydraulically connected. |
| Sole Source Aquifer: | No information about a sole source aquifer is available |
| Data Quality: | Information is inferred in the CERCLIS investigation report(s) |

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |

| Not Reported | | |

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Cretaceous
Series: Upper Cretaceous
Code: uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |
|------------------------|----------|----------|--------------------|----------------|--------------|---------------------------|------------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Permeability Rate (in/hr) | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 6 inches | variable | Not reported | Not reported | Max: 0.00 Min: 0.00 | Max: 0.00 Min: 0.00 |

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinator soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

DEC Memo: Reassigned from Tomasello to Sigona on 11/6/00.This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004.Spill No. 9415606 was called in on 3-1-1995 due to free product in the submersible pump. The caller, ExxonMobil, reported that it was repaired and cleaned up. Groundwater samples were collected on 3-7-1995 and 7-20-1995 from on-site wells. Three groundwater samples were also collected on 6-27-1995. All five groundwater samples

were

acceptable. Based on this file information, this spill site is closed. John Durnin 6-22-2005.

Re: Freedom of Information Request: Municipal Water
Site: **556 Columbia Street, Brooklyn, New York**
Tax ID: **Block 601, Lot 17**
PVE Sheffler File: #560896

To Whom It May Concern:

We are preparing a Phase I Environmental Site Assessment for the above-referenced site. As part of this assessment, we are requesting any information that your department has regarding a municipal water system or on-site supply well serving the site, including date of installation and any violations or other environmental contamination issues associated with the site. Additionally, please provide any information on-site septic systems, date of installation, and type, if applicable.

Please let us know whether or not you have any relevant information. You may respond by either phone (845-454-2544), fax (845-454-2655), or email (slarose@pvesheffler.com). If you do have records, please either include them or contact our office so we may retrieve them. If no files are available, please complete the box below and return this form via fax.

Please feel free to contact us with any questions. Thank you.

Sincerely,

PVE SHEFFLER, LLC

Stephanie P. LaRose
Geologist

Appendix F:
Qualifications

TIMOTHY PAGANO

POSITION

Senior Hydrogeologist, Conrad Geoscience Corp.

EDUCATION

M.A., Environmental Geology, State University of New York at Binghamton

B.A., Geological Sciences, State University of New York at Geneseo

LICENCES & CERTIFICATIONS

- Geologist, 1995, PG-001754-G, Active, Pennsylvania
- Certified Professional Geologist, 1994, CPG-09135, AIPG
- Licensed Subsurface Evaluator, License No. 462000, NJDEP

FIELDS OF SPECIALIZATION

- Landfill Investigation & Closure
- Hazardous Waste Site Investigations
- Phase I and II Environmental Site Assessments
- Petroleum Spill Investigations and Remediation
- Subsurface Characterization
- Residual Pesticide and Road Salt Studies

EXPERIENCE SUMMARY

Mr. Pagano has over 24 years of experience in field supervision and management of hydrogeologic investigations. This includes work in solid waste/landfill projects that involved siting, drilling, monitoring, compliance, expansion, closure, and reporting tasks. His experience includes project and task management, report preparation, proposal preparation, interaction with regulatory personnel, marketing, identification and classification of lithologic and stratigraphic materials, piezometer and monitoring well installations, test pit programs, geologic and surficial mapping, permeability/packer testing, environmental sampling, methane control, remediation, water supply investigations, and geophysical investigations which involved the interpretation of surface/borehole geophysical data and piezocone data.

CHRISTOPHER B. BROWN, CPG

POSITION

Vice-President & Senior Hydrogeologist, Conrad Geoscience Corp.

EDUCATION

M.A. Geology, Binghamton University

B.A. Geology, Colgate University

PROFESSIONAL MEMBERSHIPS & REGISTRATIONS

- American Institute of Professional Geologists, CPG #10599
- NYS DOL Certified Asbestos Inspector # 07-18782

FIELDS OF SPECIALIZATION

- Aquifer Investigations
- Soil and Groundwater Contaminant Delineation
- Phase I and II Environmental Site Assessments
- Project Management, Bidding and Contracting
- Geologic Carbon Sequestration

EXPERIENCE SUMMARY

Mr. Brown, conducts geologic and hydrogeologic investigations related to subsurface characterization, including hazardous waste site characterization and petroleum spills, Class II UIC brine disposal wells, landfills, Phase I and II property transfer assessments, soil and groundwater evaluations, and vapor intrusion.

His experience includes site assessments and remediation in a variety of commercial and industrial settings, including gas stations, landfills, construction yards, heavy industrial and manufacturing facilities, agricultural sites, and large residential institutions. Mr. Brown is proficient in site assessment techniques, including monitoring well installation and groundwater sampling, soil boring programs, geophysical surveys, and Geoprobe investigations, as well as pumping tests and aquifer studies.

Mr. Brown's responsibilities include project management, interaction and negotiations with regulatory agencies, construction management, field investigations, staff supervision, and proposal and report preparation for all project phases.

STEPHANIE P. LAROSE

POSITION

Geologist/GIS Specialist

EDUCATION

B.S., Geology-Biology, Brown University, 2007

TRAINING/SEMINARS

- NYS GIS Association Conference, October 2010
- Northeast Arc Users Group Spring 2010 Conference, May 2010
- In-Situ Chemical Oxidation Workshop, October 2008
- ArcGIS Desktop I, October 2008
- ArcGIS Desktop II, October 2008
- NGWA Conference on Eastern Regional Ground Water Issues, June 2008
- ASTM, E 2600-08 Standard for Vapor Intrusion Assessment, March 2008
- Environmental Data Resources Seminar: Vapor Intrusion: ASTM Standard, March 2008
- OSHA 40-Hour Hazardous Waste Operations and Emergency Response Health and Safety Training, 2007

PROFESSIONAL AFFILIATIONS

- National Ground Water Association
- Association of Ground Water Scientists & Engineers

FIELDS OF SPECIALIZATION

- Soil Boring and Monitoring Well Installation
- Groundwater Sampling and Analysis
- Landfill Gas Monitoring and Inspection
- Maintenance of Soil and Groundwater Remediation Systems
- Phase I Environmental Site Assessments
- Geographic Information Systems (GIS) Analysis

EXPERIENCE SUMMARY

Ms. LaRose, Geologist and GIS Specialist, is responsible for conducting field investigations at *Conrad Geoscience Corp.* and for the GIS component of projects. Responsibilities include supervision of drilling contractors for installation of soil borings and groundwater monitoring wells; classification, screening and logging of soil samples; and monitoring well development, sampling and analysis.

Ms. LaRose is responsible for conducting quarterly groundwater monitoring programs at selected sites, including landfill post-closure monitoring programs.

Ms. LaRose assembles regulatory, historical, and environmental information for Phase I Environmental Site Assessments and other environmental investigations.

Ms. LaRose's other responsibilities include: GIS and GPS mapping; scientific and environmental research; map preparation and drafting; data management and comparison of test results to regulatory standards; records review; and report preparation.

Prior to joining *Conrad Geoscience*, Ms. LaRose earned a Bachelors Degree in Geology-Biology at Brown University. While earning her degree at Brown, Ms. LaRose completed an internship with *Roy T. Budnik and Associates., Inc.*, a geological and environmental consulting firm, in Poughkeepsie, New York.

Appendix G:

Scope and Limitations of Report

SCOPE OF SERVICES

PHASE I ENVIRONMENTAL SITE ASSESSMENT

The main objective of this Scope of Services is to identify recognized environmental conditions, specifically: Any evidence of past or present releases of hazardous substances or petroleum products into the ground, groundwater, surface water, or structures of the subject property. This Scope of Services meets or exceeds Standard Practice E 1527-05 for Phase I Environmental Site Assessments of Commercial Real Estate.

A. REVIEW OF ENVIRONMENTAL RECORDS AND HISTORICAL SOURCES

1. Environmental Record Sources

Conrad Geoscience will obtain and review public records from standard sources that will help identify recognized environmental conditions relevant to the subject property:

| | |
|--------------------------------------|------------------------------------------------|
| Federal NPL Site List | Federal RCRA TSD List |
| Federal Delisted NPL Site List | Federal ERNS List |
| Federal CERCLIS List | State Lists of Hazardous Waste Sites |
| Federal CERCLIS NFRAP List | State Leaking Underground Storage Tank Lists |
| State Registered Storage Tanks Lists | State Landfill/Solid Waste Disposal Site Lists |
| Federal RCRA Generators List | State VCP Sites |
| Brownfields Sites | |

To the extent necessary, Conrad Geoscience will check one or more of the following additional records or local sources:

Local Lists of Landfill/Solid Waste Disposal Sites
Fire Department
Planning Department
Local Lists of Hazardous Waste/Contaminated Sites
Building Permit/Inspection Department
Local/Regional Pollution Control Agency
Local/Regional Water Quality Agency
Local Electric Utility Companies
Local Lists of Registered Underground Storage Tanks
Local Records of Emergency Release Reports
Local Records of Contaminated Public Wells
Department of Health/Environmental Division

2. Physical Setting Sources

Conrad Geoscience will review one or more of the following Physical Setting Sources:

USGS 7.5 Minute Topographic Map
USGS or State Bedrock Geology Maps
USGS or State Groundwater Maps
USGS or State Surficial Geology Maps
Soil Conservation Service Soil Maps

3. Historical Use Information

Conrad Geoscience will consult one or more historical sources to develop a history of previous uses or occupancies of the subject property in order to identify those uses or occupancies that are likely to have led to recognized environmental conditions:

| | |
|---------------------------------|--------------------------|
| Aerial Photographs | Fire Insurance Maps |
| Property Tax Files | Recorded Land Title Maps |
| USGS 7.5 Minute Topographic Map | Local Street Directories |
| Building Department Records | Zoning/Land Use Records |

B. SITE RECONNAISSANCE

On a visit to the property, Conrad Geoscience will visually and physically observe the property and any structures (interior and exterior) to the extent not obstructed by bodies of water, adjacent buildings, or other obstacles. The site reconnaissance will include:

Periphery of the Property
Interior of Structures
Past Uses of Property
Past Uses of Adjoining Properties
Geologic and Topographic Conditions
Description of Structures
Potable Water Supply
Hazardous Substances
Storage Tanks
Pools of Liquid
PCB Containing Equipment
Stains or Corrosion
Pits, Ponds, Lagoons
Stressed Vegetation
Wastewater
Septic Systems

Periphery of Structures
Current Uses of Property
Current Uses of Adjoining Properties
Uses of Surrounding Properties
Hydrogeologic & Hydrologic Conditions
Roads
Sewage Disposal System
Petroleum Products
Odors
Drums and Containers
Means of Heating & Cooling
Drains & Sumps
Stained Soil or Pavement
Solid Waste
Dry wells, Injection wells, Floor drains
Suspect Asbestos Containing Material

C. INTERVIEWS WITH OWNERS, OCCUPANTS, AND GOVERNMENT OFFICIALS

Conrad Geoscience will conduct interviews with individuals familiar with the uses and conditions on the subject property. Questions may be asked in person, by telephone, or in writing. An attempt will be made to interview one or more of the following:

User of the Phase I ESA
Owner or Key Site Manager
Occupants
Past Owners or Occupants

and one or more government officials:

Local Fire, Health, or Environmental Agencies

Interviewees will be asked to provide helpful documents, if available:

Site Plans, Maps, Drawings or Surveys
Environmental Site Assessment Reports
Environmental Audit Reports
Environmental Permits
Petroleum Bulk Storage Registrations
Material Safety Data Sheets
Community Right-to-Know Plan
Safety Plans
Hydrogeologic Reports
Notices or Correspondence from Agencies Regarding Environmental Violations
Hazardous Waste Generator Notices or Reports
Geotechnical Studies

D. REPORT PREPARATION

Conrad Geoscience will prepare a written evaluation of the subject property summarizing results of the Records Review, Site Reconnaissance, and Interviews. The following will be included in the report:

Site and Vicinity Characteristics
Description of Structures and Other Improvements
Current Uses of the Property
Past Uses of the Property
Current & Past Uses of Adjoining Properties (to the extent identified)
Site Location Map
Site Features Map
Summary of Environmental Records Review
Physical Setting
Historical Use
Hazardous Substances Stored, Handled or Disposed
Petroleum Products Stored, Handled or Disposed
Indications of Solid Waste Disposal
Findings and Conclusions
List of Information Sources

Note: No attempt will be made to verify the presence of asbestos, radon, lead-based paint, lead in drinking water, or wetlands. Conrad Geoscience can provide additional services relating to those matters if requested.

Scope and Limitations of Report

Scope:

The specific components of this investigation are as follows:

Records Review:

Federal and State records were reviewed and compiled into report format by an independent subcontractor to Conrad Geoscience. The following reasonably ascertainable standard environmental record sources were consulted

- U.S. Environmental Protection Agency (USEPA) Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list;
- USEPA CERCLIS No Further Remedial Action Planned list;
- USEPA National Priority List (NPL) and Delisted NPL sites;
- Resource Conservation and Recovery Act (RCRA) list of hazardous waste generators, both small quantity and large quantity (SQG and -LQG) and RCRA Treatment, Storage, and Disposal (TSD) facilities list;
- USEPA Emergency Response and Notification System (ERNS) list;
- New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage Inventory list (PBS);
- NYSDEC Leaking Storage Tank list (LRST) and NYSDEC Spills List (SPILLS)
- New York Active Solid Waste Facility Register (SWF);
- New York Inactive Hazardous Waste Disposal Sites list (SHWS); and
- Voluntary Cleanup Program sites
- Brownfields sites
- Practically reviewable local records.

Environmental Setting:

Compiled through review of the following physical setting sources:

- United States Geological Survey (USGS) 7.5 Minute Topographic Maps
- New York State Geological Survey (NYGS) Surficial and Bedrock Geology Map of New York.

History

The history of the site and of the surrounding area was developed based on consultation with any or all of the following reasonably ascertainable standard historical sources: aerial

photographs, site maps, topographic maps, property tax files and interviews with owners, operators and local officials.

Limitations and Exceptions of Assessment

This report is intended for the sole use of the Client listed on the cover page to this Report and must be used in its entirety. The scope of services performed in execution of this evaluation may not be appropriate to satisfy the needs of other users, and any use or re-use of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of said user.

This written analysis is an assessment of the property completely described in Section 3.0 and depicted in Figure 2, and is not valid for any other property or location. It is a representation of the property analyzed as of the dates of the record reviews and site inspection. This report does not apply to any activities or events resulting in contamination after the date of site inspection or historic research.

Observations were made as indicated within the report. Where access to portions of the site or to structures on the site was unavailable or limited, Conrad Geoscience renders no opinion as to the presence of regulated or hazardous material or to the presence of indirect evidence relating to hazardous or regulated material in that portion of the site or structure.

This Environmental report was performed in accordance with ASTM E 1527-05 **Standard Practice for Phase I Environmental Site Assessments for Commercial Real Estate Transactions**. The findings and conclusions contained herein must not be considered scientific certainties, but probabilities based on professional judgment concerning the significance of the limited data gathered during the course of this study. The following potential site conditions are outside the scope of this report and were not the subject of analysis during this investigation: asbestos-containing materials, radon, lead-based paint, lead in drinking water, and wetlands.

Conclusions and findings of this report are based in part on certain information provided by federal, state, and local officials and other parties referenced herein, and on information contained in the files of governmental agencies available at the time of this report. Reasonable attempts were made to interview users and property owners. No attempt was made to independently verify the accuracy or completeness of all information reviewed or received. The information provided on present and past property ownership does not constitute a title search.

Appendix H:
References and Sources

REFERENCES AND SOURCES

DATABASE SEARCH

- All federal, tribal, state and local databases researched by EDR are provided in Appendix C.
- All historical data sources (fire insurance maps, aerial photographs, city directories) researched by EDR are provided in Appendix C.
- See Section 6.7 for additional sources.

PROPERTY HISTORY

- General property history and ownership history was researched through a review of readily obtainable and practically reviewable sources. Sources utilized for this Phase I ESA are as follows:
 - Town of Wappinger Assessor's Office
 - Dutchess County Office of Real Property Tax

1.0 Introduction

1.1 HASP Applicability

This site-specific Health and Safety Plan (HASP) has been developed by Lawrence Environmental Group and establishes the health and safety procedures to minimize potential risks to personnel involved with the Phase II Investigation activities at the future location of BASIS Charter School (BASIS) Site (the Site) located at 556 Columbia Street, Brooklyn, New York. This HASP applies to all personnel potentially exposed to safety and/or health hazards related to the activities described in Section 3.0 of this document.

This HASP has been prepared to comply with the applicable requirements of the Occupational Safety and Health Administration (OSHA) Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120). Activities covered by this HASP must be conducted in complete compliance with this HASP and with all applicable Federal, State, and local health and safety regulations. Personnel covered by this HASP who cannot or will not comply will be excluded from site activities.

This HASP will be distributed to each person involved with investigative activities at the site. Each person must sign a copy of the attached HASP Receipt and Acceptance Form (see Attachment A).

1.2 Organization/Responsibilities

The implementation of health and safety at this project location will be the shared responsibility of the Project Manager (PM), the Health and Safety Manager (HSM), the Project Site Safety Officer (SSO) and all other personnel who conduct activities at the site.

- Project Manager (PM): Christopher Brown.
- Health and Safety Manager (HSM): Gerard Baril.
- Project Site Safety Officer (SSO): Tim Pagano.

1.2.1 Project Manager (PM)

The Project Manager (PM) has the primary responsibility for ensuring the overall health and safety of this project. As such, the PM is responsible for ensuring that the requirements of this HASP are implemented. Some of the PM's specific responsibilities include:

- Ensuring that all personnel to whom this HASP applies have received a copy of it;
- Providing the SSO with updated information regarding environmental conditions at the site and the scope of site work;
- Providing adequate authority and resources to the on-site SSO to allow for the successful implementation of all necessary safety procedures;
- Supporting the decisions made by the SSO;
- Maintaining regular communications with the SSO; and
- Coordinating the activities of all subcontractors and ensuring that they are aware of the pertinent health and safety requirements for this project.

1.2.2 Health and Safety Manager (HSM)

The Health and Safety Manager (HSM) is responsible for the preparation, interpretation and modification of this HASP. Modifications to this HASP which may result in less stringent precautions cannot be undertaken by the SSO without the approval of the HSM. Specific duties of the HSM include:

- Writing, approving and amending the HASP for this project;
- Advising the SSO on matters relating to health and safety on this site;
- Recommending appropriate personal protective equipment (PPE) and air monitoring instrumentation to protect personnel from potential site hazards; and
- Maintaining regular contact with the SSO to evaluate site conditions and new information which might require modifications to the HASP.

1.2.3 Site Safety Officer (SSO)

All field technicians are responsible for implementing the safety requirements specified in this HASP. One (1) technician will be designated to serve as the Site Safety Officer (SSO). The SSO will be appointed by the PM. The SSO will be on-site during all activities covered by this HASP. The SSO is responsible for enforcing the requirements of this HASP once work begins. The SSO has the authority to immediately correct all situations where non-compliance with this HASP is noted and to immediately stop work in cases where an immediate danger is perceived. Some of the SSO's specific responsibilities include:

- Ensuring that all personnel to whom this HASP applies have submitted a completed copy of the HASP Receipt and Acceptance Form (see Attachment A);
- Ensuring that all personnel to whom this HASP applies have attended a pre-entry briefing prior to entering the work zone;
- Maintaining a high level of health and safety consciousness among employees at the work site;
- Procuring and distributing the PPE needed for personnel involved with this project;
- Procuring the air monitoring instrumentation required and performing air monitoring for field activities;
- Verifying that all PPE and health and safety equipment is in good working order;
- Setting up and maintaining the work zones and ensuring proper cleanup of all site personnel;
- Notifying the PM of all non-compliance situations and stopping work in the event that an immediate danger situation is perceived;
- Monitoring and controlling the safety performance of all personnel within established restricted areas to ensure that required safety and health procedures are being followed;
- Conducting accident/incident investigations and preparing accident/incident investigation reports;
- Conducting the pre-entry briefing as required by Section 10.3 of this HASP; and
- Initiating emergency response procedures in accordance with Section 11.0 of this HASP.

1.2.4 Field Personnel and Covered Subcontractor Personnel

All field personnel covered by this HASP are responsible for following the health and safety procedures specified in this HASP and for performing their work in a safe and responsible manner. Some of the specific responsibilities of the field personnel are as follows:

- Reading this HASP in its entirety prior to the start of on-site work;
- Submitting a completed HASP Receipt and Acceptance Form (see Attachment A) and documentation of medical surveillance and training to the PM prior to the start of work;
- Attending the required pre-entry briefing prior to beginning on-site work;
- Bringing forth any questions or concerns regarding the content of this HASP to the PM or the SSO prior to the start of work;
- Reporting all accidents, injuries and illnesses, regardless of their severity, to the SSO; and
- Complying with the requirements of this HASP and the requests of the SSO.

1.2.5 Contractors

In addition to other requirements referenced in this HASP, all contractors are required to:

- Provide appropriate PPE for their employees;
- Ensure, via daily inspections, that their equipment is maintained in good working condition;
- Operate their equipment in a safe manner; and
- Appoint an on-site safety coordinator to interface with the SSO.

1.3 Modification of this HASP

The procedures in this HASP have been developed based on general knowledge of the site, proposed tasks, and anecdotal information from previous investigations at the site. Should additional information become available regarding potential on-site hazards, it may be necessary to modify this HASP. All proposed modifications to this HASP must be reviewed and approved by the HSM before such modifications are implemented.

Any significant modifications must be incorporated into the written document as addenda and the HASP must be re-issued. The PM will ensure that all personnel covered by this HASP receive copies of all issued addenda. Sign-off forms will accompany each addendum and must be signed by all personnel covered by the addendum. Sign-off forms will be submitted to the PM. The HASP addenda will be distributed during the regularly scheduled meetings so that they can be reviewed and discussed. Attendance forms will be collected during the meeting.

2.0 Site Description and History

Site Location and Current Usage

The Site is located at 556 Columbia Street in the Red Hook section of Brooklyn, New York and is identified as Block 601 and Lot 17 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 48,800-square feet and is bounded by Bay Street to the north, Sigourney Street to the south, and Columbia Street to the east. It adjoins a building to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is vacant but was previously used for manufacturing lithographic varnish and vehicle parking for a trucking company and other tenants. No site improvements remain, with the exception of an abandoned loading dock along the western property boundary.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will be a new charter school. Parking areas will cover the lot at the current grade. The new school will be constructed over the grade-level parking lot. The total square footage of the future school will be 80,000 square feet and will consist of five floors with no ground-level occupied spaces, with the exception of a small security outpost. Excavation depths will range from 0 to 4 feet below grade. Excavation is not anticipated below the groundwater table. The current zoning designation is MX-1 (M1-2/R6A), which is a Special Mixed Use District with mixed manufacturing and residential. The proposed use is consistent with existing zoning for the property, but will require a special use permit from the NYC Board of Standards and Appeals.

Summary of Past Uses of Site and Areas of Concern (AOC)

Historically, the Site has been operated as a lithographic varnish manufacturing facility and a parking area for a trucking company and other tenants. Currently, the Site is vacant.

The AOCs identified for this site include:

1. Potential releases of wastes or chemical products from lithographic varnish manufacturing.
2. Leakage from parked trucking or tenant's vehicles.

Summary of the Work Performed under the Remedial Investigation

In August 2013, PVE Sheffler performed the following scope of work for the enrollee, BASIS Charter School:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.)
2. Installed 12 soil borings across the project Site, and collected one soil sample from each of the 12 soil borings to evaluate soil quality. Samples were analyzed for the following parameters:
 - Target Compound List (TCL) of volatile organic compounds (VOCs) via USEPA Method 8260.
 - Full semi-volatile organic compounds (SVOCs) via USEPA Methods 8270.
 - Target Analyte List (TAL) of Metals.
 - PCBs/Pesticides.
3. Installed four small-diameter groundwater monitoring wells and collected one groundwater sample from each of the four wells to evaluate groundwater quality; (elevations of the wells

were not surveyed, so groundwater flow direction was not established). Samples were analyzed for the following parameters:

- Target Compound List (TCL) of VOCs via USEPA Method 8260
 - Full SVOCs via USEPA Methods 8270
 - Target Analyte List (TAL) of Metals
 - PCBs/Pesticides
4. Installed three sub-grade vapor sampling wells across the property. Samples submitted to for analysis of VOCs.

Summary of Soil Borings

A total of 12 soil borings (Figure 2) were completed at the site during August 2013. The borings were advanced, using a Geoprobe drilling rig, to the water table or to refusal, whichever was encountered. The soils encountered above the water table consist of fill composed of sand with lesser amounts of silt, clay, and gravel. Crushed pieces of brick and concrete were encountered in the fill. Organics were noted in some samples close to the water table. Two borings encountered refusal, prior to reaching the water table in the southeastern part of the site, which was likely caused by obstructions in the fill material. The water table was encountered at approximately 6 to 7 feet below ground surface.

Soil samples were screened for the presence of volatile organics with a photoionization detector (PID) upon opening the sample and by headspace analysis. No volatiles were detected from the samples using the PID when opening the sampling tube. About half of the fill samples registered a response for volatiles using the PID for headspace analysis, with values below 50 ppm.

At four of the test boring locations, monitoring wells were installed and screened across the water table to permit the collection of groundwater samples. The monitoring wells (Figure 2) were installed in soil borings GB-11(MW-1), GB-3 (MW-2), GB-2 (MW-3), and GB-6 (MW-4). Results of groundwater sampling are discussed below. Wells elevations were not surveyed, so groundwater flow direction was not determined.

Summary of Soil Analytical Data

Below, is a summary of the results of laboratory testing conducted on the soil samples obtained from the test boring. The tabulated results are provided in Tables 1 through 10.

Semi-Volatile Organic Compounds - Soil/fill samples collected during the RI contained several SVOCs at concentrations exceeding 6NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), and in some instances exceed 6NYCRR Part 375 Restricted Residential SCOs (RRSCOs). Higher SVOC concentrations were detected along the western section of the subject property. No SVOCs were detected in groundwater samples at concentration exceeding applicable standards.

Volatile Organic Compounds - Several VOCs were detected at trace levels with the exception of acetone, which was detected in all samples ranging from 96 to 1900 ppb, and was detected above Unrestricted Use SCOs. No VOCs were detected in groundwater samples at concentrations exceeding groundwater standards. However, based on the soil vapor results discussed below, possible volatile organic soil and groundwater contamination problem cannot be ruled out at this time. Further site characterization involving obtaining additional samples for analysis may be necessary to adequately define the extent of volatile organic contamination given that the results of this evaluation are only based on the limited data set of the 4 monitoring wells referenced above.

Metals - At many locations, certain metals exceeded only the Unrestricted Use SCOs. However, at many locations, certain metals exceeded both the Unrestricted Use SCOs and the Restricted Residential SCOs. Metals detected in groundwater samples at concentrations exceeding groundwater standards were iron (all wells), arsenic, (one well), barium (one well), and lead (two wells).

Pesticides and PCBs - Pesticides were detected at concentrations exceeding Unrestricted Use SCOs in several soil samples. None of the soil samples exceeded the Restricted Residential SCOs for pesticides. No pesticides were detected in groundwater samples at concentrations exceeding groundwater standards.

Total PCBs were detected at concentrations exceeding Unrestricted Use SCOs in only one sample. No PCBs were detected in groundwater samples at concentrations exceeding groundwater standards.

Summary of Soil Vapor Analytical Data

Preliminary data obtained from three subgrade vapor sampling well locations suggests that volatiles are present in the subsurface, which indicated the potential for a vapor intrusion condition.

Summary of Findings

1. Soils above the water table consist of a sandy fill material with lesser amounts of silt, clay, gravel, concrete fragments, and brick fragments.
2. Depth to groundwater ranges from 6 to 7 feet.
3. Groundwater flow direction beneath the site is unknown, but is inferred to be generally toward the south and west toward Red Hook Channel.
4. Semi-volatiles and metals in some samples of fill material above the water table exceeded both the Unrestricted Use SCOs and Restricted Residential SCOs.
5. No semi-volatiles, volatile organics, pesticides, or PCBs were detected in groundwater above State standards. Exceedances of State groundwater standards for metals were limited to only four parameters, occurring in only one or two wells, with the exception of iron, which exceeded the standard in all four wells.
6. Preliminary soil vapor data suggests that volatiles are present in the subsurface, which indicates the potential for a vapor intrusion condition. Given these results, additional sampling and analysis may be necessary to determine the extent of volatile organic contamination in the soil and groundwater.

3.0 SCOPE OF WORK

Based on the findings summarized above, it has been determined that supplemental soil and groundwater sampling and analysis is necessary to complete the evaluation of the subject property. The scope of work will consist of the following tasks:

1. Mark out of public utilities.
2. 40 Geoprobe soil borings to depth of 8 feet on a grid.
3. Installation, development and sampling of 4 2-inch PVC groundwater monitoring wells.
4. Data management/reporting.

Task 1 – Utility Mark-out

PVE Sheffler will request a mark-out of public utilities from the Underground Facilities Protective Organization (UFPO). To supplement the UFPO mark-out, PVE Sheffler will retain the services of a private mark-out company. Geophysical techniques (electromagnetics, GPR, etc.) will be used to determine if the previously identified fill-ports are connected to existing underground storage tanks (USTs). If tanks are identified, and can be accessed using hand tools, the contents of the USTs will be verified.

An addendum to this Work Plan will be submitted to NYCDEP if boring locations require significant alteration, or if field conditions necessitate additional tasks.

Task 2 - Soil Borings

A total of 34 soil borings (Figure 2) will be completed at the site during this phase of the investigation. The borings will be advanced using a Geoprobe drilling rig, and will be advanced to the water table or to refusal, whichever is encountered first. In the previous phase, the soils encountered above the water table consisted of fill composed of sand with lesser amounts of silt, clay, and gravel. Crushed pieces of brick and concrete were also encountered in the fill. The water table was encountered at approximately 6 to 7 feet below ground surface.

Soil samples will be screened for the presence of volatile organics with a photoionization detector (PID) upon opening the sample and by headspace analysis.

At a minimum, two soil samples will be collected from each test borings (for a total of 68 soil samples) for laboratory analysis. A surface soil sample (from the 0-2 feet bgs interval) and subsurface soil sample (from the two (2) foot interval beneath the proposed maximum excavation depth. Discrete (grab) samples will be taken from the aforementioned sampling intervals. The subsurface soil samples may also serve as in-situ post-excavation soil samples for the remedial plan. A third soil sample may be collected from each or several test boring(s) if 1) elevated PID readings and/or visual and olfactory observations are noted during borehole advancement and/or 2) field observations identify an upper fill layer underlain by native material the additional soil sample from the upper zone of the native layer will help delineate the vertical migration of impacts (if any), as well as determine a more detailed remedy and potentially provide a cost savings for disposal options.

Soil samples will be collected from up to two depths from each of the borings. If unconsolidated sediment is less than 3 feet thick, only one soil sample will be collected for analysis. Samples will be

dispensed into laboratory provided containers, packed on ice and shipped via overnight delivery to Paradigm Environmental Services (ELAP #10958) for analysis

Borings completed in bedrock will be plugged with bentonite to the top of bedrock and backfilled with sand to grade. Borings completed in unconsolidated material will be backfilled with sand and uncontaminated drill cuttings. Contaminated cuttings will be staged on site, pending waste characterization and off-site disposal. The surface will be restored with asphalt patch or concrete mix.

Task 3 – Monitoring Well Installation/Groundwater Sampling

Two 2 inch-diameter permanent groundwater monitoring wells will be installed. Representative groundwater samples will be collected using low-flow sampling techniques from all four on site wells (four small-diameter wells and the two new wells). Properly sized screen and silica sand pack will be used for noted site conditions. A representative groundwater sample will be collected from each well with a peristaltic pump and dedicated tubing. Sampling will be conducted in accordance with NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010, and Sampling Guidelines and Protocols, dated March 1991. Groundwater wells will be gauged with a water level meter to record a depth to groundwater reading (1/100 foot), and if necessary, an interface meter to determine the thickness of LNAPL or DNAPL. The well casings will be surveyed by a trained QEP and/or NYS licensed surveyor to facilitate preparation of a groundwater contour map and determine the direction of groundwater flow.

Task 4 – Soil Vapor Sampling

Samples will be collected in accordance with the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH October 2006). Conditions in the field may require adjustment of sampling locations. Groundwater is expected to be encountered at a depth of 6 feet.

Two soil vapor samples will be collected from existing soil vapor implants set at a depth of approximately 3 feet. The soil vapor probe will be installed between one and two feet above the groundwater interface. The vapor implants were installed with a Geoprobe during previous investigations. Sampling will occur for the duration of 2 hours.

Sample Analysis

Soil, groundwater, and soil vapor samples will be submitted to a NYSDOH Environmental Laboratory Accreditation Program (ELAP)-certified laboratory for Full analysis:

- Volatile Organic Compounds by EPA Method 8260;
- Semi-volatile organic compounds by EPA Method 8270;
- Pesticides/PCBs by EPA Method 8081/8082;
- Target Analyte List metals by EPA Method 6010 and 7471; and
- Soil vapor samples will be analyzed for VOCs by using USEPA Method TO-15.

As depicted on the attached drawing, samples from 16 of the 34 borings will be analyzed during the first round of sample analysis. Results will be used to select samples for additional analysis from the remaining boring locations to fully delineate contaminants in soil.

All groundwater samples will be analyzed for both filtered (dissolved) and unfiltered (total) metals. If either LNAPL and/or DNAPL are detected, appropriate samples will be collected for characterization and “finger print analysis” and required regulatory reporting (i.e. NYSDEC spills hotline) will be performed.

Quality Assurance/Quality Control Procedures

QA/QC procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used (1) to document that samples are representative of actual conditions at the Site and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. QA/QC samples (field and trip blanks, duplicates, etc.) will be collected and analyzed at an ELAP-certified laboratory.

Investigation Derived Waste

Cuttings may be disposed at the site within the borehole that generated them to within 24 inches of the surface unless:

- Free product or grossly contaminated soil, are present in the cuttings;
- The borehole has penetrated an aquitard, aquiclude or other confining layer; or extends significantly into bedrock;
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability;
- The soil cannot fit into the borehole.

Those soil cuttings needing to be managed on-site will be containerized in properly labeled DOT approved 55-gallon drums for future off-site disposal at a permitted facility. All boreholes which require drill cuttings disposal would ultimately be filled with bentonite chips (hydrated) and asphalt/concrete capping. Disposable sampling equipment including, spoons, gloves, bags, paper towels, etc. that came in contact with environmental media will be double bagged and disposed as municipal trash in a facility trash dumpster as non-hazardous trash.

Reporting

A Phase II Investigation Report (template version) will be prepared following completion of the field activities and receipt of the laboratory data. The report will provide detailed summaries of the investigative findings. Soil, groundwater and soil vapor analytical results will be compared to the NYSDEC Part 375-6.8(a) Unrestricted Used Soil Cleanup Objectives, appropriate Part 375-6.8(b) Restricted Soil Cleanup Objectives and NYSDEC Part 703 Groundwater Quality Standards (GQS) (class GA) or Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS), and NYSDOH October 2006 Final Guidance for Evaluating Soil Vapor Intrusion Matrices. The report will include an updated sampling plan, spider diagrams, analytical data tables for all reported constituent compounds (including non-detectable concentrations) and remedial recommendations, as warranted.

4.0 Chemical Hazard Assessment and Controls

4.1 Chemical Hazards

The predominant contaminants potentially encountered during the subsurface investigation in soil and groundwater include: volatile and semi-volatile organic compounds (VOCs and SVOCs); and inorganic metals including arsenic, barium, cadmium, chromium, copper, lead, magnesium, manganese, mercury, nickel, vanadium, and zinc. Chemical Hazard and MSDS Sheets are provided in Attachment D.

4.1.1 Table: Occupational Exposure Limits and Ionization Potentials of VOCs and SVOCs

| VOCs | | | | | | | | |
|----------------------------|-----------------|--------------------------|--------------------------|--------------------|------------|--------------------------|---------|------------|
| Name | Skin Absorption | PEL ⁽¹⁾ (PPM) | REL ⁽²⁾ (PPM) | STEL (PPM) | IDLH (PPM) | TLV ⁽³⁾ (PPM) | IP (eV) | Carcinogen |

- 1 -OSHA (Occupational Safety and Health Administration)
 PEL - Permissible Exposure Limit (OSHA Standard)
 STEL -Short Term Exposure Limit
- 2 - NIOSH (National Institutes for Occupational Safety and Health)
 REL - Recommended Exposure Limit
 IDLH – Immediately Dangerous to Life and Health
 STEL -Short Term Exposure Limit
- 3 - ACGIH (formerly American Conference of Governmental Industrial Hygienists)
 TLV - Threshold Limit Value
 STEL -Short Term Exposure Limit
 L – exposure by all routes should be as carefully controlled to levels as low as possible
- 4 - PELs are listed for these items under Coal Tar Pitch Volatiles
- 5 - Benzene Soluble fraction
- 6 – Cyclohexane-extractable fraction
- 7 - Benzene Soluble Aerosol
- NA – not applicable
- PPM – parts of airborne contaminant per million parts of air (by volume)
- mg/m³ – milligrams of airborne contaminant per cubic meter of air
- IP – ionization potential
- eV – electron volt

OSHA PELs, ACGIH TLVs, and NIOSH RELs are time-weighted averages (TWAs), which are defined as concentrations for a normal 8-hour work day(NIOSH RELs are based on 10 hours) and 40-hour work week to which almost all workers can be exposed repeatedly without suffering adverse health effects.

Per ACGIH, a STEL is defined as the concentration to which “workers can be exposed for short time periods without irritation, chronic or irreversible tissue damage, dose-rate-dependent toxic effects, or narcosis sufficient to be likely to increase the likelihood of accidental injury, impaired self-rescue or materially reduced work efficiency.” The STEL is a 15-minute TWA. STELs are used by OSHA, ACGIH, and NIOSH.

IP refers to ionization potential which is the amount of energy required to remove an electron from an atom or molecule. Air sampling devices known as photo ionization detectors (PIDs) use ultraviolet (UV) light to ionize gas molecules in order to measure the presence of volatile organic compounds (VOCs). The most common light source used in PIDs is a 10.6 eV (electron volt) lamp.

4.1.2 Chemical Hazards of Metals of Concern

The metals detected in on-site soils and associated potential health effects are presented below. If dust control measures implemented during excavation cannot maintain dust levels at an acceptable level, the SSO will notify site workers of the condition. Personal Protective Equipment (PPE) summarized in Section 4.2.2 will be utilized.

Arsenic:

Exposure Routes: Inhalation, skin absorption, skin and/or eye contact.

Symptoms: Ulceration of nasal septum, dermatitis, gastrointestinal disturbances, peripheral neuropathy, respiratory irritation, hyperpigmentation of skin, potential carcinogen.

Target Organs: Liver, kidneys, skin, lungs, and lymphatic system.

Cancer Site: Lung & lymphatic cancer.

OSHA PEL: 0.01 mg/m³ as an 8-hour time-weighted average (TWA).

Barium:

Exposure Routes: Inhalation, skin and/or eye contact.

Symptoms: Irritation of eyes, skin, upper respiratory system; skin burns; gastroenteritis; muscle spasm; slow pulse; extrasystoles; hypokalemia.

Target Organs: Eyes, skin, respiratory system, heart, and central nervous system.

OSHA PEL: 0.5 mg/m³ as an 8-hour TWA.

Cadmium:

Exposure Routes: Inhalation, skin and/or eye contact.

Symptoms: Pulmonary edema, dyspnea (breathing difficulty), cough, chest tightness, substernal (occurring beneath the sternum) pain; headache; chills, muscle aches; nausea; vomiting; diarrhea; anosmia (loss of the sense of smell), emphysema; proteinuria; mild anemia; potential carcinogen.

Target Organs: Respiratory system, kidneys, prostate, and blood.

Cancer Site: Prostatic & lung cancer.

OSHA PEL: 0.005 mg/m³ as an 8-hour TWA.

Chromium:

Exposure Routes: Inhalation, skin and/or eye contact.

Symptoms: Irritation eyes, skin; lung fibrosis.

Target Organs: Eyes, skin, and respiratory system.

OSHA PEL: 1 mg/m³ as an 8-hour TWA.

Copper:

Exposure Routes: Inhalation skin and/or eye contact.

Symptoms: Contact can irritate and burn the eyes and skin. Inhalation can irritate the nose and throat causing coughing and wheezing.

Target Organs: Eye, skin and respiratory system.

OSHA PEL: 1 mg/m³ as an 8-hour TWA

Lead:

Exposure Routes: Inhalation, ingestion, skin and/or eye contact.

Symptoms: Lassitude (weakness, exhaustion), insomnia; facial pallor; anorexia, weight loss, malnutrition; constipation, abdominal pain, colic; anemia; gingival lead line; tremor; paralysis wrist, ankles; encephalopathy; kidney disease; irritation eyes; hypotension.

Target Organs: Eyes, gastrointestinal tract, central nervous system, kidneys, blood, and gingival tissue.

OSHA PEL: 0.050 mg/M³ as an 8-hour TWA.

Magnesium:

Exposure Routes: Inhalation, skin and/or eye contact.

Symptoms: Inhaling this substance can irritate the nose, throat and lungs causing tightness in the chest and difficulty in breathing.

Target Organs: Nose, throat and lungs.

OSHA PEL: 15 mg/M³ as an 8-hour TWA.

Manganese:

Exposure Routes: Inhalation.

Symptoms: The aerosol is irritating to the respiratory tract. The substance may have effects on the lungs and central nervous system, resulting in increased susceptibility to bronchitis, pneumonitis and neurologic, neuropsychiatric disorders

Target Organs: Respiratory tract and central nervous system.

OSHA PEL: 5 mg/M³ as a Ceiling.

Mercury:

Exposure Routes: inhalation, skin absorption, ingestion, skin and/or eye contact.

Symptoms: Irritation of eyes and skin; cough, chest pain, dyspnea (breathing difficulty), bronchitis, pneumonitis; tremor, insomnia, irritability, indecision, headache, lassitude (weakness, exhaustion); stomatitis, salivation; gastrointestinal disturbance, anorexia, weight loss; proteinuria.

Target Organs: Eyes, skin, respiratory system, central nervous system, kidneys.

OSHA PEL: 0.1mg/m³ as an 8-hour TWA.

Nickel

Exposure Routes: inhalation, skin absorption, ingestion, skin and/or eye contact.

Symptoms: Irritation and burning of eyes and skin; skin allergy; irritation of nose, throat and lungs; headache, dizziness and vomiting; probable lung carcinogen; asthma-like allergy; chronic bronchitis and scarring of the lungs.

Target Organs: Eyes, skin, respiratory system, kidneys and liver.

OSHA PEL: 1.0mg/m³ as an 8-hour TWA

Vanadium:

Exposure Routes: Inhalation, skin and/or eye contact.

Symptoms: The aerosol can irritate the nose, throat and lungs causing coughing, wheezing, and/or shortness of breath. Exposure can cause headache, tremors, and dizziness. Exposure may cause an asthma-like allergy. Exposure may damage the kidneys.

Target Organs: Respiratory tract, kidneys, eyes and skin and central nervous system.

OSHA PEL: 0.5 mg/M³ as a Ceiling.

Zinc:

Exposure Routes: Inhalation, skin and/or eye contact.

Symptoms: The aerosol can irritate the nose and throat resulting in wheezing.

Target Organs: Eyes, skin, nose and throat.

OSHA PEL: 15 mg/M³ as a Ceiling.

4.2 Chemical Exposure and Control

4.2.1 Activities with Chemical Exposure Potential

The primary route of exposure during site activities in areas contaminated with VOCs, SVOCs and inorganic metals is direct dermal contact, accidental or incidental ingestion, and inhalation of contaminant laden dust. The following work areas and site related activities are areas where chemical exposure is possible:

- Areas where drilling activities will be conducted.
- Contact with soil boring cores and samples.
- Contact with purge water from soil borings and samples.

4.2.2 Potential Chemical Exposures and Exposure Action Levels

4.2.2.1 Metals

Exposure potential exists during excavation of soils. Airborne dust can be an issue during soil excavation operations and skin contact can be anticipated during handling. Potential worker exposures exist, through accidental ingestion and direct skin contact, during the excavation task, as airborne dusts can be generated. Semi-volatile organic compounds typically adhere to the airborne soil particles while metals are liberated as well. Of the metals identified in the soil samples, Arsenic and Cadmium possess the lowest Threshold Limit Values (TLVs) at 0.01 mg/m³ (10 ug/m³). The highest level of Arsenic detected in the soil samples was 63 ug/kg. The highest level of Cadmium detected in the soil samples was 10 ug/kg. Assuming an uniform distribution and applying a safety factor, worker exposure can be controlled by establishing **an action level of 0.5 mg/m³** total airborne dust, through engineering controls such as dust control. A direct reading dust monitor (e.g. TSI DustTrak) will be used as a surrogate to obtain real time data to aid in monitoring the effectiveness of dust controls. The dust monitor will be set to sample

aerosols at PM₁₀ (10 micron size particles) Exposures above the action level on 0.5 mg/m³, will require the use of a NIOSH approved half-face respirator with an N or P, 100 filter.

4.2.2.2 Mercury Vapor

Soil data indicates the possibility of mercury exposures during performance of work at the site. The highest Mercury concentration measured in the soil was 4.3 ug/kg. Therefore, usage of a direct reading Mercury vapor analyzer will be required. The TLV for Mercury, 25 ug/m³, will serve as the site's action level. Exposures above the Mercury TLV will require the use of a half face respirator with a NIOSH approved combination Mercury Vapor cartridge (with end of service life indicator) and P-100 pre-filter or a supplied air respirator. . PPE will be discussed in section 10.

Engineering controls such as wetting with an airless sprayer will be utilized as a control measure to suppress dust levels.

4.2.2.3 VOCs

The VOC detected in the soil borings with the lowest Threshold Limit Value level (TLV) is benzene, which has a 8 hour time weighted average (TWA) TLV of 0.5 ppm and a short term exposure limit (STEL) of 2.5 ppm. However, benzene was detected in only one of the twelve soil borings. The most frequently detected VOC with the lowest TLV was Naphthalene, which has measured in six of the twelve soil borings. The naphthalene TLV of 10 ppm will be used as the site's VOC action level. PPE will be upgraded to include NIOSH approved half-face respirators with organic vapor cartridges, if airborne concentrations of VOCs, as measured with a direct reading Photo Ionization Detector (PID) exceed 10 ppm or are above background level during on-site activities.

If PID readings in the areas above and surrounding the work area exceed 250 ppm, all on-site activities will be suspended. Future PPE selected will depend on the identity and concentrations of the contaminants encountered. PPE will be discussed in section 10.

First aid equipment will be available based on MSDS requirements.

To summarize, dust generated during excavation activities will be monitored continuously using a particulate air monitoring instrument. VOC levels during excavation activities will be continuously monitored using a PID. In the western parking area, the above monitoring activities will, be supplemented by usage of a mercury vapor analyzer. Exposure monitoring will be further discussed in section 9.

4.2.3 Exposure Control

A combination of PPE and engineering controls will be utilized to control skin contact and airborne exposures. Engineering controls will consist of demarcating areas to be bored and allow required personnel only in the work areas. Dust suppression will be used whenever possible to keep dust from becoming airborne. PPE will be discussed in section 7.

The following chemical exposure control measures will be implemented during the proposed site investigations:

- The SSO will perform air monitoring (see Section 6.1) in the worker's breathing zone to determine exposure to VOCs during field activities. If exposures exceed the action levels, respiratory protection, as discussed in Section 7.2, will be donned.

- To avoid direct dermal contact with potentially contaminated media, chemical protective clothing, as described in Section 7.1, will be required when collecting samples and decontaminating sampling equipment.
- Although highly unlikely, exposure to all of the contaminants of concern may occur via ingestion (hand-to-mouth transfer). The decontamination procedures described in Section 9.0 address personal hygiene issues that will limit the potential for contaminant ingestion.

5.0 Physical Hazards and Controls

5.1 Utility Hazards

5.1.1 *Underground Utilities*

New York law requires that, at least 48 hours prior to initiation of any subsurface work, a utility clearance be performed at the site. The driller will contact New York City One Center (1-800-272-4480) to request a mark-out of underground utilities in the proposed sampling areas. Work will not begin until the required utility clearances have been performed. Public utility clearance organizations typically do not mark-out underground utility lines that are located on private property. As such, the driller must exercise due diligence and try to identify the location of any private utilities on the properties being investigated. This requirement can be fulfilled in several ways, including:

- obtaining as-built drawings for the areas being investigated from the property owner;
- visually reviewing each proposed excavation location with the property owner or knowledgeable site representative;
- identifying a no-drilling/digging zone; or
- hand digging in the proposed drilling/excavation locations if insufficient data is available to accurately determine the location of the utility lines.

Natural gas and municipal water transmission and service lines are likely to be in Bay Street, Columbia Street and/or Sigourney Street. The exact location of these utilities is not known at this time. A mark-out of utilities leading to the subject property will be requested from the Underground Facilities Protection Organization.

5.1.2 *Overhead Utilities*

Be particularly aware of overhead power lines in the work area. Any vehicle or mechanical equipment capable of having parts of its structure elevated (drill rig, crane, etc.) near energized overhead lines shall be operated so that a clearance of at least ten (10) feet is maintained. If the voltage is higher than 50kV, the clearance shall be increased four (4) inches for every 10kV over that voltage. Overhead utility lines are located along the south side of Main Street and cross a portion of the parking lot on to the north of the building on the site.

5.2 Traffic Concerns

Work is being performed at exterior locations where traffic may be a concern (i.e. Columbia Street and intersecting cross streets). The following precautions should be followed. All are designed to draw attention to the work and to warn other people of the activities.

- Notify the property owner of your work location, dates of work and the anticipated work times. Suggest the possibility of a detour around the work area.
- Wear an orange safety vest. If work is being performed at dawn, dusk or evening, the vests must have reflective tape.
- Set up traffic cones 50 feet in front of the work area. "Work Zone" signs should also be placed in a conspicuous area to warn others of your presence.

5.3 Drilling Hazards

Use of a conventional drilling rig to complete soil borings will require all personnel in the vicinity of the operating rig to wear steel-toed boots, hardhats, hearing protection and safety eyewear. Personnel shall not remain in the vicinity of operating equipment unless it is required for their work responsibilities. Additionally, the following safety requirements must be adhered to:

- All drill probes and other machinery with exposed moving parts must be equipped with an operational emergency stop device. Drillers and geologists must be aware of the location of this device. This device must be tested prior to job initiation and periodically thereafter. The driller and helper shall not simultaneously handle augers unless there is a standby person to activate the emergency stop.
- The driller must never leave the controls while the tools are operating unless all personnel are kept clear of operating equipment.
- Drillers, helpers and geologists must secure all loose clothing when in the vicinity of drilling operations.
- Only equipment that has been approved by the manufacturer may be used in conjunction with site equipment and specifically to attach sections of drilling tools together.

5.4 Noise Exposure

The use of the drilling rig will generate noise levels that will require the use of hearing protection in the immediate vicinity. Appropriate earmuffs or earplugs (i.e., with an NRR greater than 25 dB) should be worn to prevent overexposure. The general rule of thumb is that if you have to raise your voice to be understood by someone who is standing 3 to 5 feet away from you, the noise levels are likely to be above 85 dB and therefore require the use of hearing protection.

5.5 Back Safety

Using the proper techniques to lift and move heavy pieces of equipment, such as drums of investigation-derived wastes, are important to reduce the potential for back injury. The following precautions should be implemented when lifting or moving heavy objects.

- Use mechanical devices to move objects, such as drums of investigation derived wastes, that are too heavy to be moved manually.
- If mechanical devices are not available, ask another person to assist you.
- Bend at the knees, not the waist. Let your legs do the lifting.
- Do not twist while lifting.
- Bring the load as close to you as possible before lifting.
- Be sure the path you are taking while carrying a heavy object is free of obstructions and slip, trip and fall hazards.

5.6 Electrical Safety

If using portable tools that are electrically powered, follow the safety precautions listed below:

- Check to see that electrical outlets used to supply power during field operations is of the three (3) wire grounding type.

- Extension cords used for field operations should be of the three (3) wire grounding type and designed for hard or extra-hard usage. This type of cord uses insulated wires within an inner insulated sleeve and will be marked S, ST, STO, SJ, SJO or SJTO.
- NEVER remove the ground plug blade to accommodate ungrounded outlets.
- Do not use extension cords as a substitute for fixed or permanent wiring. Do not run extension cords through openings in walls, ceilings or floors.
- Protect the cord from becoming damaged if the cord is run through doorways, windows or across pinch points.
- Examine extension and equipment cords and plugs prior to each use. Damaged cords with frayed insulation or exposed wiring and damaged plugs with missing ground blades must be removed from service immediately.
- All portable or temporary wiring which is used outdoors or in other potentially wet or damp locations must be connected to a circuit that is protected by a ground fault circuit interrupter (GFCI). GFCI's are available as permanently installed outlets, as plug-in adapters and as extension cord outlet boxes. Do not continue to use a piece of equipment or extension cord that causes a GFCI to trip.
- When working in flammable atmospheres, be sure that the electrical equipment being used is approved for use in Class I, Division I atmospheres.
- Do not touch a victim who is still in contact with current. Separate the victim from the source using a dry, non-metallic item such as a broom stick or cardboard box. Be sure your hands are dry and you are standing on a dry surface. Turn off the main electrical power switch and then begin rescue efforts.

5.7 Thermal Stress

The hazards of both heat and cold stress are addressed in this HASP.

5.7.1 Heat Stress

Types of Heat Stress

Heat related problems include heat rash, fainting, heat cramps, heat exhaustion and heat stroke. Heat rash can occur when sweat isn't allowed to evaporate, leaving the skin wet most of the time and making it subject to irritation. Fainting may occur when blood pools to lower parts of the body and as a result, does not return to the heart to be pumped to the brain. Heat related fainting often occurs during activities that require standing erect and immobile in the heat for long periods of time. Heat cramps are painful spasms of the muscles due to excessive salt loss associated with profuse sweating. Heat exhaustion results from the loss of large amounts of fluid and excessive loss of salt from profuse sweating. The skin will be clammy and moist and the affected individual may exhibit giddiness, nausea and headache.

Heat stroke occurs when the body's temperature regulatory system has failed. The skin is hot, dry, red and spotted. The affected person may be mentally confused and delirious. Convulsions could occur. Early recognition and treatment of heat stroke are the only means of preventing brain damage or death. A person exhibiting signs of heat stroke should be removed from the work area to a shaded area. The person should be soaked with water to promote evaporation. Fan the person's body to increase cooling. Immediate medical assistance is needed in case of heat stroke. Dial 911 to request an ambulance.

Increased body temperature and physical discomfort also promote irritability and a decreased attention to the performance of hazardous tasks.

Early Symptoms of Heat-Related Health Problems:

- decline in task performance
- incoordination
- decline in alertness
- unsteady walk
- excessive fatigue
- reduced vigilance
- muscle cramps
- dizziness

Susceptibility to Heat Stress Increases due to:

- lack of physical fitness
- lack of acclimation
- increased age
- dehydration
- obesity
- drug or alcohol use
- sunburn
- infection

People unaccustomed to heat are particularly susceptible to heat fatigue. First timers in PPE need to gradually adjust to the heat.

The Effect of Personal Protective Equipment

Sweating normally cools the body as moisture is removed from the skin by evaporation. However, the wearing of certain personal protective equipment (PPE), particularly chemical protective coveralls (e.g., Tyvek), reduces the body's ability to evaporate sweat and thereby regulate heat buildup. The body's efforts to maintain an acceptable temperature can therefore become significantly impaired by the wearing of PPE.

Measures to Avoid Heat Stress:

The following guidelines should be adhered to when working in hot environments:

- Establish work-rest cycles (short and frequent are more beneficial than long and seldom).
- Identify a shaded, cool rest area.
- Rotate personnel, alternate job functions.
- Water intake should be equal to the sweat produced. Most workers exposed to hot conditions drink less fluids than needed because of an insufficient thirst. Do not depend on thirst to signal when and how much to drink. For an 8-hour work day, 50 ounces of fluids should be consumed.
- Eat lightly salted foods or drink salted drinks such as Gatorade to replace lost salt.
- Save most strenuous tasks for non-peak heat hours such as the early morning or at night.
- Avoid alcohol during prolonged periods of heat. Alcohol will cause additional dehydration.
- Avoid double shifts and/or overtime.

The implementation and enforcement of the above-mentioned measures will be the joint responsibility of the PM and SSO. Potable water and fruit juices should be made available each day for the field team.

Heat Stress Monitoring Techniques

Site personnel should regularly monitor their heart rate as an indicator of heat strain by the following method:

Check radial pulse rates by using fore- and middle fingers and applying light pressure to the pulse in the wrist for one (1) minute at the beginning of each rest cycle. If the pulse rate exceeds 110 beats/minute,

shorten the next work cycle by one-third and keep the rest period the same. If, after the next rest period, the pulse rate still exceeds 110 beats/minute, shorten the work cycle again by one-third.

5.7.2 Cold Stress

Types of Cold Stress

Cold injury is classified as either localized, as in frostbite, frostnip or chilblain; or generalized, as in hypothermia. The main factors contributing to cold injury are exposure to humidity and high winds, contact with wetness and inadequate clothing.

The likelihood of developing frostbite occurs when the face or extremities are exposed to a cold wind in addition to cold temperatures. The freezing point of the skin is about 30°F. The fluids around the cells of the body tissue freeze, causing the skin to turn white. This freezing is due to exposure to extremely low temperatures. As wind velocity increases, heat loss is greater and frostbite will occur more rapidly.

Symptoms of Cold Stress

The first symptom of frostbite is usually an uncomfortable sensation of coldness, followed by numbness. There may be a tingling, stinging or aching feeling in the effected area. The most vulnerable parts of the body are the nose, cheeks, ears, fingers and toes.

Symptoms of hypothermia, a condition of abnormally low body temperature, include uncontrollable shivering and sensations of cold. The heartbeat slows and may become irregular, the pulse weakens and the blood pressure changes. Pain in the extremities and severe shivering can be the first warning of dangerous exposure to cold.

Maximum severe shivering develops when the body temperature has fallen to 95°F. This must be taken as a sign of danger and exposure to cold must be immediately terminated. Productive physical and mental work is limited when severe shivering occurs.

Methods to Prevent Cold Stress

When the ambient temperature, or a wind chill equivalent, falls to below 40°F, site personnel who must remain outdoors should wear insulated coveralls, insulated boot liners, hard hat helmet liners and insulated hand protection. Wool mittens are more efficient insulators than gloves. Keeping the head covered is very important, since 40% of body heat can be lost when the head is exposed. If it is not necessary to wear a hard hat, a wool knit cap provides the best head protection. A face mask may also be worn.

Persons should dress in several layers rather than one single heavy outer garment. The outer piece of clothing should ideally be wind and water proof. Clothing made of thin cotton fabric or synthetic fabrics such as polypropylene is ideal since it helps to evaporate sweat. Polypropylene is best at wicking away moisture while still retaining its insulating properties. Loosely fitting clothing also aids in sweat evaporation. Denim is not a good protective fabric. It is loosely woven which allows moisture to penetrate. Socks with a high wool content are best. If two pairs of socks are worn, the inner sock should be smaller and made of cotton, polypropylene or a similar type of synthetic material that wicks away moisture. If clothing becomes wet, it should be taken off immediately and a dry set of clothing put on.

If wind conditions become severe, it may become necessary to shield the work area temporarily. The SSO and the PM will determine if this type of action is necessary. Heated break trailers or a designated area that is heated should be available if work is performed continuously in the cold at temperatures, or equivalent wind chill temperatures of 20°F.

Dehydration occurs in the cold environment and may increase the susceptibility of the worker to cold injury due to significant change in blood flow to the extremities. Drink plenty of fluids, but limit the intake of caffeine.

6.0 Air Monitoring

6.1 Monitoring Parameters and Action Levels

Based on the existing Site data, it is not expected that significant levels of organic vapors will be encountered during the Site work. However, air monitoring will be conducted for VOCs. Air monitoring of the breathing zone will be conducted periodically or continuously during excavation activities to assure proper health and safety protection for the team, workers, and passersby.

VOCs will be monitored with a PID in accordance with the C-HASP with an action level of 10 ppm in the absence of benzene. If the action level is exceeded and adequate ventilation cannot be provided, work will cease and the potential affected portion of the work area will be evacuated, until adequate mechanical ventilation can be setup to reduce the VOC exposure. Level C respiratory protection may be donned in accordance with the C-HASP, if the action level is exceeded.

Fugitive dust generation that could affect Site workers, Site occupants, or the public is not expected because the majority of work will be conducted in moist soil. Soil that is not moist will be wetted as appropriate to minimize visible dust emissions. Particulate monitoring will be conducted at the perimeter of the Site. If dust levels exceed the action level of 0.5 mg/m^3 or background levels (whichever is highest), based on PM-10 size for a duration exceeding 15 or more minutes, work activities will be suspended until dust levels are diminished to an acceptable level.

During the performance of site work, mercury vapor will be monitored using a factory calibrated direct instrument such as the Jerome 431-X. If mercury vapor levels exceed the action level of 0.025 mg/m^3 for a duration exceeding 15 or more minutes, work activities will be suspended until mercury levels diminish to an acceptable level.

All monitoring instruments must be calibrated and maintained periodically. Calibration and on-site maintenance records will be kept in the field log book. The operator must understand the limitations and possible sources of errors for each instrument. It is important that the operator checks that the instrument responds properly to the substances it was designed to monitor. Portable air quality monitoring equipment that measures total volatile organic compounds present such as the Rae Systems MiniRae 2000 (or equivalent) photo ionization detector (PID) must be calibrated at least once per week. Dust monitors must be calibrated at least once a week. The specific instructions for calibration and maintenance provided for each instrument should be followed.

Site air monitoring data will be reviewed weekly by a Certified Industrial Hygienist (CIH). Electronic copies of all air monitoring data will be maintained by the CIH.

Air monitoring results will be recorded in the field book during site activities and made available for NYCDEP and New York State Department of Health (NYSDOH) review.

The following table summarizes **air monitoring action levels** established for the site:

| Contaminants | Action level | Actions |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Organic Vapor | | Measure and record the upwind background concentration. |
| | Reading less than 10 ppm above background for a sustained period of 15 minutes in WBZ. | Continue work in Level D protection. |
| | Reading greater than 10 ppm above background for a sustained period of 15 minutes in the WBZ | Discontinue work, allow work area to ventilate, collect additional PID readings. If concentrations remain greater than 10 ppm, work can resume in Level C protection with respiratory protection equipped with organic vapor cartridges. |
| | Readings greater than 100 ppm above background for a sustained period of 15 minutes in the WBZ. | Discontinue work, allow work area to ventilate, collect additional PID readings until concentrations are below 100 ppm before work can resume. |
| Dusts | | Measure and record the upwind background concentration. |
| | Reading less than 0.5 mg/m³ , based on PM-10, above background for a sustained period of 15 minutes in the WBZ. | Continue work in level D protection. |
| | Reading greater than 0.5 mg/m³, based on PM-10 , above background for a sustained period of 15 minutes in the WBZ | Discontinue work. Employ dust suppression using a water spray, collect additional airborne dust measurements. If concentrations remain greater than 0.5 mg/m ³ , work can resume in Level C protection with respiratory protection equipped with P-100 cartridges. |
| Mercury Vapor | | Measure and record the upwind background concentration. |
| | Reading less than 0.025 mg/m³ above background for a sustained period of 15 minutes in the WBZ. | Continue work in level D protection. |
| | Reading greater than 0.25 mg/m³ above background for a sustained period of 15 minutes in the WBZ | Discontinue work, allow work area to ventilate, collect additional Hg vapor readings. If concentrations remain greater than 1.0 mg/m ³ , work can resume in Level C protection with respiratory protection equipped with mercury vapor cartridges with HEPA pre-filter. |
| | Readings greater than 2.5 mg/m³ above background for a sustained period of 15 minutes in the WBZ. | Discontinue work, allow work area to ventilate, collect additional Hg vapor readings until concentrations are below 2.5 mg/m ³ before work can resume. |

6.2 Direct Reading Instruments

A PID such as the RAE MiniRAE 2000, equipped with a 10eV lamp, shall be used to monitor total VOCs during soil excavation activities. The PID is an appropriate direct-read monitoring instrument given the suspected presence of VOC contamination in on-site soil.

Dust levels will be monitored using a particulate air monitoring instrument (PM10).

Mercury vapor will be monitored using a factory calibrated direct instrument such as the Jerome 431-X or an equivalent device.

6.3 Personal Air Sampling

OSHA does not require the collection of personal air sampling during the proposed activities. As such, this type of monitoring will not be conducted by personnel during any of the proposed tasks.

6.4 Record Keeping

Air monitoring results will be recorded in the field book during construction activities and made available for NYCDEP and New York State Department of Health (NYSDOH) review.

Site air monitoring data will be reviewed weekly by the HSM. Electronic copies of all air monitoring data will be maintained by the HSM.

7.0 Personal Protective Equipment

Personal protective equipment (PPE) will be worn during site activities to prevent on-site personnel from being injured by the safety hazards posed by the site and/or the activities being performed. In addition, chemical protective clothing will be worn to prevent direct dermal contact with the site's chemical contaminants.

In general, field activities will be conducted in Level D PPE, as described in the table below. PPE will be upgraded to Level C if air monitoring demonstrates VOCs, dust or mercury vapor concentrations in the breathing zone exceeding the action levels outlined in Section 4.2.2. Level C will only be considered during task 1 if tanks are identified and an attempt is made to identify the contents.

If the concentration of volatile organics which can be detected with a PID equals or exceeds the specified action level (100 ppm) or mercury levels exceed 2.5 ppm, all field personnel associated with the project will immediately retreat to a location up-wind of the source of contamination. At this point the SSO must consult with the HSM, who will review the condition with PVE Sheffler home office staff to discuss appropriate actions.

7.1 Chemical Protective Clothing

The following tables describe the Level D and Level C PPE and chemical protective clothing to be worn for general site activities and for certain specific tasks.

Level D PPE

| PPE Item | Task 1 | Task 2 | Task 3 | Task 4 |
|----------------------------------|--------|--------|--------|--------|
| Hard Hat | ✓ | ✓ | ✓ | |
| Steel Toed Safety Shoes | ✓ | ✓ | ✓ | |
| Safety Glasses with Side shields | | ✓ | ✓ | |
| Traffic Vests | * | * | * | |
| Inner PVC/Outer Nitrile Gloves | | ✓ | ✓ | |
| Hearing Protection | | ✓ | | |

Level C PPE

| PPE Item | Task 1 | Task 2 | Task 3 | Task 4 |
|----------------------------------|--------|--------|--------|--------|
| Hard Hat | ✓ | ✓ | ✓ | |
| Steel Toed Safety Shoes | ✓ | ✓ | ✓ | |
| Safety Glasses with Side shields | ✓ | ✓ | ✓ | |
| Traffic Vests | * | * | * | |
| Inner PVC/Outer Nitrile Gloves | ✓ | ✓ | ✓ | |
| Hearing Protection | | ✓ | | |
| Half-Face Respirator | ✓ | ✓ | ✓ | |
| Tyvek Protective Suit | ✓ | ✓ | ✓ | |

Task 1 – Utility mark-out/UST Investigation (* - when working in or near streets)

Task 2 – Soil Borings (* - when working in or near streets)

Task 3 –Groundwater Sampling (* - when working in or near street)

7.2 Respiratory Protection

Level D PPE: No respiratory protection required. Air monitoring devices will be used to determine when PPE will be upgraded to include respiratory protection (Section 4.2.2 and 6.0).

Level C PPE: Half-mask, air-purifying respirator equipped with organic vapor/PM100 cartridges.

Respiratory protection will also be worn if odors become objectionable at any time, if respiratory tract irritation is noticed, or if VOCs are detected in the breathing zone as discussed in Section 4.2.2. All on-site personnel who are expected to wear respiratory protection must have successfully passed a qualitative or quantitative fit-test within the past year for the brand, model and size respirator they plan to wear during the proposed activities.

7.3 Other Safety Equipment

The field team will bring the following additional safety items to the site for use as necessary:

- Portable, hand-held eyewash bottles
- First aid kit
- Portable communications equipment
- Fire Extinguisher

8.0 Site Control

8.1 Work Zones

To prevent both exposure of unprotected personnel and migration of contamination due to tracking by personnel or equipment, work areas along with personal protective equipment requirements will be clearly identified. Work areas or zones will be designated as suggested in the "Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities," NIOSH/OSHA/USCG/EPA, November, 1985. They recommend the areas surrounding each of the work areas to be divided into three zones:

- Exclusion or "hot" Zone
- Contamination Reduction Zone (CRZ)
- Support Zone

8.1.1 Exclusion Zone

An exclusion zone (work zone) will be established around each boring location. This zone will move as work progresses to each boring location. This zone should be large enough (i.e. 20 foot radius) to protect unprotected personnel from contact with vapors or dusts that may arise from these operations as well as the physical hazards associated with the operation of heavy equipment. Traffic cones or tape will be used to demarcate the active exclusion zone.

All personnel entering the exclusion zone must be trained in accordance with the requirements defined in Section 10.2 of this HASP and must wear the prescribed level of personal protective equipment.

8.1.2 Contamination Reduction Zone

The decontamination zone will be established adjacent to the exclusion zone. Personnel will remove contaminated gloves and other disposable items in this area and place them in a plastic bag until they can be properly disposed of. Reusable equipment, if any, will be decontaminated with tap water, deionized water, methanol, nitric acid and a liquid detergent solution. A complete description of decontamination procedures is presented in Appendix A to the Remedial Investigation Work Plan.

8.1.3 Support Zone

At this site, the support zone will include the area outside of the decontamination zone.

8.2 Safety Practices

The following measures are designed to augment the specific health and safety guidelines provided in this plan.

- Eating, drinking, chewing gum or tobacco, smoking or any practice that increases the probability of hand-to-mouth transfer and ingestion of materials is prohibited in the immediate work area and the decontamination zone.
- Smoking is prohibited in all work areas. Matches and lighters are not allowed in these areas.
- Hands and face must be thoroughly washed upon leaving the work area and before eating, drinking or any other activities.
- Beards or other facial hair that interfere with respirator fit are prohibited.
- The use of alcohol or illicit drugs is prohibited during the conduct of field operations.
- All equipment must be decontaminated or properly discarded before leaving the site in accordance with the project work plan.

9.0 Decontamination

9.1 Personal Decontamination

Proper decontamination is required of all personnel before leaving the site. Decontamination will occur within the contamination reduction zone. Disposable PPE will be removed in the decontamination zone and placed in lined garbage bags.

If worn, respirators will be cleaned after each use with respirator wipe pads and will be stored in plastic bags after cleaning.

Regardless of the type of decontamination system required, a container of potable water and liquid soap will be made available so employees can wash their hands before leaving the site for lunch or for the day.

9.2 Equipment Decontamination

Reusable equipment, if any, will be decontaminated with tap water, deionized water, methanol, nitric acid and a liquid detergent solution. A complete description of decontamination procedures is presented in Appendix A to the Remedial Investigation Work Plan.

10.0 Medical Monitoring and Training Requirements

10.1 Medical Monitoring

Medical monitoring (29 CFR 1910.1020(f)) is not a requirement of this HASP.

10.2 Health and Safety Training

Although not a requirement for the activities at this site, personnel performing activities covered by this HASP are recommended to have completed the appropriate training requirements specified in 29 CFR 1910.120(e). Each individual should have completed an annual 8-hour refresher-training course and/or initial 40-hour training course within the last year prior to performing any work on the sites covered by this HASP.

10.3 Pre-Entry Briefing

The SSO will conduct a pre-entry briefing before site activities begin. HASP receipt and acceptance sheets will be collected at this meeting. Short safety refresher meetings will be conducted, as needed, throughout the duration of the project. Attendance of the pre-entry meeting is mandatory and will be documented by the SSO. An attendance form is presented in Attachment B.

11.0 Emergency Response

OSHA defines emergency response as any "response effort by employees from outside the immediate release area or by other designated responders (i.e., mutual-aid groups, local fire departments, etc.) to an occurrence which results, or is likely to result in an uncontrolled release of a hazardous substance." On-site personnel shall not participate in any emergency response where there are potential safety or health hazards (i.e., fire, explosion, or chemical exposure). Response actions will be limited to evacuation and medical/first aid as described within this section below. As such this section is written to comply with the requirements of 29 CFR 1910.38 (a).

The basic elements of an emergency evacuation plan include:

- employee training,
- alarm systems,
- escape routes,
- escape procedures,
- critical operations or equipment,
- rescue and medical duty assignments,
- designation of responsible parties,
- emergency reporting procedures and
- methods to account for all employees after evacuation.

11.1 Employee Training

Employees must be instructed in the site-specific aspects of emergency evacuation. On-site refresher or update training is required anytime escape routes or procedures are modified or personnel assignments are changed. The SSO must verify the specific evacuation procedures that the facility prefers contractors follow in the event of a facility-related emergency. This information will be communicated to the field team during the pre-entry briefing.

11.2 Alarm Systems/Emergency Signals

An emergency communication system must be in effect at all sites. The most simple and effective emergency communication system in many situations will be direct verbal communication. Each site must be assessed at the time of initial site activity and periodically as the work progresses. Verbal communication must be supplemented anytime voices can not be clearly perceived above ambient noise levels (i.e., noise from drilling probe) and anytime a clear line-of-sight can not be easily maintained among all personnel because of distance, terrain or other obstructions.

Verbal communication will be adequate to warn on-site personnel of hazards associated with the immediate work area. However, the two person sampling team may be split up during the day to expedite sampling. Each team member will be equipped with a cellular phone to ensure immediate communication can occur between each other. These phones can also be used to contact local emergency responders.

11.3 Escape Routes and Procedures

The SSO will verify the escape routes from each work area with a facility representative. Assembly areas must also be identified. The escape routes and assembly areas will be reviewed during the pre-entry briefing. All personnel on site are responsible for knowing the escape route from the site and where to assemble after evacuation.

11.4 Rescue and Medical Duty Assignments

The phone numbers of the police and fire departments, ambulance service, local hospital, and project representatives are provided in the emergency reference sheet and on the cover of this HASP. This sheet will be posted in the site vehicle.

In the event an injury or illness requires more than first aid treatment, the SSO will accompany the injured person to the medical facility and will remain with the person until release or admittance is determined. The SSO will relay all appropriate medical information to the on-site project manager and the HSM.

If the injured employee can be moved from the accident area, he or she will be brought to the contamination reduction zone where their PPE will be removed. If the person is suffering from a back or neck injury the person will not be moved and the requirements for decontamination do not apply. The SSO must familiarize the responding emergency personnel about the nature of the site and the injury. If the responder feels that the PPE can be cut away from the injured person's body, this will be done on-site. If this not feasible, decontamination will be performed after the injured person has been stabilized.

11.5 Designation of Responsible Parties

The SSO is responsible for initiating emergency response. In the event the SSO can not fulfill this duty, the PM or HSO will take charge.

11.6 Employee Accounting Method

The SSO is responsible for identifying all personnel on-site at all times. On small, short duration jobs this can be done informally as long as accurate accounting is possible.

11.7 Accident Reporting and Investigation

Any incident (other than minor first aid treatment) resulting in injury, illness or property damage requires an accident investigation and report. The investigation should be conducted as soon as emergency conditions are under control. The purpose of the investigation is not to attribute blame but to determine the pertinent facts so that repeat or similar occurrences can be avoided. An accident investigation form is presented in Attachment C of this HASP. The Supervisor of the injured personnel and the HSM should be notified immediately of the injury.

If a subcontractor personnel is injured, they are required to notify the SSO. Once the incident is under control, the subcontractor will submit a copy of their company's accident investigation report to the SSO.

Job Narrative
420-J68610-1

Comments

No additional comments.

Receipt

All samples were received in good condition within temperature requirements.

GC/MS VOA

Method 8260C: Soil samples in job # 68610 detected Acetone. Samples #1,2,3,4,5 and #7. had levels of acetone above the high point of calibration curve which were confirmed with the second low level vial. When run as a high level soil from the MeOH preserved vial, no acetone was detected. While acetone is a known laboratory artifact there was no Acetone was detected in the Method Blank.

No other analytical or quality issues were noted.

GC/MS Semi VOA

Sample Dilution

Due to the high level of several target compounds, some samples were diluted. For the following samples, a few compounds exceeded the calibration range in the undiluted analysis and were not detected in the diluted analysis, therefore the undiluted value is reported and they are flagged with an "E" (indicating estimated value):

68610-3 : 2-methylnaphthalene and naphthalene

68610-5 : 2-methylnaphthalene

No analytical or quality issues were noted.

GC Semi VOA

No analytical or quality issues were noted.

Metals

No analytical or quality issues were noted.

General Chemistry

No analytical or quality issues were noted.

Organic Prep

No analytical or quality issues were noted.

DATA REPORTING QUALIFIERS

Client: PVE Sheffler

Job Number: 420-68610-1

Sdg Number: 565 Columbia St, Brooklyn, NY 560896

| Lab Section | Qualifier | Description |
|----------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GC/MS VOA | | |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| | E | Result exceeded calibration range, secondary dilution required. |
| GC/MS Semi VOA | | |
| | X | Surrogate exceeds the control limits |
| | D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| | E | Result exceeded calibration range, secondary dilution required. |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| | * | LCS or LCSD exceeds the control limits |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| GC Semi VOA | | |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| | X | Surrogate exceeds the control limits |
| Metals | | |
| | V | Serial Dilution exceeds the control limits |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |

Definitions and Glossary

Client: PVE Sheffler

Job Number: 420-68610-1

Sdg Number: 565 Columbia St, Brooklyn, NY 560896

| <u>Abbreviation</u> | <u>These commonly used abbreviations may or may not be present in this report.</u> |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| %R | Percent Recovery |
| DL, RA, RE | Indicates a Dilution, Reanalysis or Reextraction. |
| EPA | United States Environmental Protection Agency |
| MDL | Method Detection Limit - an estimate of the minimum amount of a substance that an analytical process can reliably detect. A MDL is analyte- and matrix-specific and may be laboratory-dependent. |
| ND | Not detected at the reporting limit (or MDL if shown). |
| QC | Quality Control |
| RL | Reporting Limit - the minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. |
| RPD | Relative Percent Difference - a measure of the relative difference between two points. |

Job Narrative
420-J68636-1

Comments

No additional comments.

Receipt

All samples were received in good condition within temperature requirements.

GC/MS VOA

Method 8260C: The laboratory control standard (LCS) for batch # 68016 exceeded control limits for the analytes indicated by an asterisk (*) on the results form. These compounds were low, but not detected in the corresponding samples so the data is determined to be valid. Also all other QC was within reportable limits for these compounds.

No other analytical or quality issues were noted.

GC/MS Semi VOA

Method 8270D: Surrogate recovery for sample 68636-6 was outside control limits. This sample shows evidence of matrix interference; therefore, re-extraction and/or re-analysis was not performed.

No other analytical or quality issues were noted.

GC Semi VOA

No analytical or quality issues were noted.

Metals

No analytical or quality issues were noted.

General Chemistry

No analytical or quality issues were noted.

Organic Prep

No analytical or quality issues were noted.

METHOD SUMMARY

Client: PVE Sheffler

Job Number: 420-68636-1
SDG Number: 565 Columbia St. Brooklyn, NY 560896

| Description | Lab Location | Method | Preparation Method |
|-------------------------------------------------------------------|--------------|-------------------|--------------------|
| Matrix: Solid | | | |
| Inductively Coupled Plasma - Atomic Emission Spectrometry | EnvTest | SW846 6010B | |
| Acid Digestion of Sediments, Sludges, and Soils | EnvTest | | SW846 3050B |
| Mercury in Solid or Semisolid Waste (Manual Cold Vapor Technique) | EnvTest | SW846 7471A | |
| Mercury in Solid or Semi-Solid Waste (Manual Cold | EnvTest | | SW846 7471A |
| Polychlorinated Biphenyls (PCBs) by Gas Chromatography | EnvTest | SW846 8082A | |
| Microwave Extraction | EnvTest | | SW846 3546 |
| Volatile Organic Compounds by GC/MS | EnvTest | SW846 8260C | |
| Closed System Purge & Trap Low Level | EnvTest | | EPA 5035-L |
| Semivolatile Compounds by GC/MS | EnvTest | SW846 8270D | |
| Microwave Extraction | EnvTest | | SW846 3546 |
| General Sub Contract Method | Alpha | Subcontract | |
| Matrix: Water | | | |
| ICP Metals by 200.7 | EnvTest | EPA 200.7 Rev 4.4 | |
| Total Metals Digestion for 200.7 | EnvTest | | EPA 200.7 |

DATA REPORTING QUALIFIERS

Client: PVE Sheffler

Job Number: 420-68636-1

Sdg Number: 565 Columbia St. Brooklyn, NY 560896

| Lab Section | Qualifier | Description |
|----------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GC/MS VOA | * | LCS or LCSD exceeds the control limits |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| GC/MS Semi VOA | * | LCS or LCSD exceeds the control limits |
| | D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| | X | Surrogate exceeds the control limits |
| GC Semi VOA | * | LCS or LCSD exceeds the control limits |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| Metals | U | The analyte was analyzed for but not detected at or above the stated limit. |

Definitions and Glossary

Client: PVE Sheffler

Job Number: 420-68636-1

Sdg Number: 565 Columbia St. Brooklyn, NY 560896

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| %R | Percent Recovery |
| DL, RA, RE | Indicates a Dilution, Reanalysis or Reextraction. |
| EPA | United States Environmental Protection Agency |
| MDL | Method Detection Limit - an estimate of the minimum amount of a substance that an analytical process can reliably detect. A MDL is analyte- and matrix-specific and may be laboratory-dependent. |
| ND | Not detected at the reporting limit (or MDL if shown). |
| QC | Quality Control |
| RL | Reporting Limit - the minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. |
| RPD | Relative Percent Difference - a measure of the relative difference between two points |

Revision: 1

cc: Tara Alvarado

The test results in this report meet all NELAP requirements unless specified within the case narrative. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. EnviroTest Laboratories Inc. certifies that the analytical results contained herein apply only to the samples tested as received by our laboratory. All questions regarding this report should be directed to the EnviroTest Customer Service Representative.

EnviroTest Laboratories, Inc. Certifications and Approvals: NELAP Accredited, NYSDOH 10142, NJDEP NY015, CTDOH PH-0554, EPA NY00049.

Job Narrative
420-J70885-1

Comments

No additional comments.

Receipt

All samples were received in good condition within temperature requirements.

GC/MS VOA

Method 8260C: A low level 8260C was performed on sample # 70885-23. The Acetone result was over calibration which requires a Medium level 8260C to be performed. Some of the results for the aromatic compounds do not match up well with the two different methods. This is most likely due to the purging efficiencies of the aromatics in a water/soil sample versus the extraction efficiency of the aromatics with Methanol.

No other analytical or quality issues were noted.

GC/MS Semi VOA (Method 8270)

Sample Dilution

Due to sample matrix the final volume was 5 ml instead of 1 ml, therefore the reporting limits were elevated (5x) for the following samples:

70885-2, 5, 10

Internal Standard Response

The following samples shows evidence of matrix interference. Internal standard: perylene-d12 response was low however the samples were subsequently diluted and have acceptable internal standard response:

70885-1,15,16,18,20,21,27

The following samples showed evidence of matrix interference. Internal standard: perylene-d12 response was low The sample was subsequently diluted and confirms the same internal standard failure. The sample was biased high and therefore does not negatively affect the data:

70885-4,5,7,10,19,22,23,24,25,26

Surrogate Recovery

As per method 8270 the surrogate recoveries were acceptable. Re-extraction is not necessary for high recoveries (due to matrix interference). Additionally one acid and one base failure is acceptable, as for sample 70885-23.

Continuing Calibration Verification(CCV)

Samples 70885-28,30,32 were initially analyzed following a CCV in which the listed compounds failed low: Hexachloroethane, 2-Nitrophenol, Hexachlorocyclopentadiene, 2-Nitroaniline, 2,4-Dinitrophenol, 2,4-Dinitrotoluene, 4-Nitrophenol, 4-Nitroaniline, 2-Methyl-4,6-Dinitrophenol and Pentachlorophenol. The samples were subsequently re-analyzed and or diluted following a CCV that was passing with concurring sample results.

Metals

No analytical or quality issues were noted.

General Chemistry

No analytical or quality issues were noted.

Organic Prep

No analytical or quality issues were noted.

VOA Prep

No analytical or quality issues were noted.

DATA REPORTING QUALIFIERS

Client: PVE Sheffler

Job Number: 420-70885-1
Sdg Number: Columbia Street Brooklyn 560896

| Lab Section | Qualifier | Description |
|----------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GC/MS VOA | | |
| | D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| | E | Result exceeded calibration range, secondary dilution required. |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| GC/MS Semi VOA | | |
| | * | LCS or LCSD exceeds the control limits |
| | D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| | X | Surrogate exceeds the control limits |
| GC Semi VOA | | |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |

| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| | V | Serial Dilution exceeds the control limits |

Definitions and Glossary

Client: PVE Sheffler

Job Number: 420-70885-1

Sdg Number: Columbia Street Brooklyn 560896

| <u>Abbreviation</u> | <u>These commonly used abbreviations may or may not be present in this report.</u> |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| %R | Percent Recovery |
| DL, RA, RE | Indicates a Dilution, Reanalysis or Reextraction. |
| EPA | United States Environmental Protection Agency |
| MDL | Method Detection Limit - an estimate of the minimum amount of a substance that an analytical process can reliably detect. A MDL is analyte- and matrix-specific and may be laboratory-dependent. |
| ND | Not detected at the reporting limit (or MDL if shown). |
| QC | Quality Control |
| RL | Reporting Limit - the minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. |
| RPD | Relative Percent Difference - a measure of the relative difference between two points |

DATA REPORTING QUALIFIERS

Client: PVE Sheffler

Job Number: 420-70927-1
Sdg Number: Columbia Street Brooklyn 560896

| Lab Section | Qualifier | Description |
|----------------|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GC/MS VOA | | |
| | D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| | E | Result exceeded calibration range, secondary dilution required. |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| GC/MS Semi VOA | | |
| | D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| | E | Result exceeded calibration range, secondary dilution required. |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| | X | Surrogate exceeds the control limits |
| GC Semi VOA | | |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| | X | Surrogate exceeds the control limits |
| Metals | | |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |

Definitions and Glossary

Client: PVE Sheffler

Job Number: 420-70927-1

Sdg Number: Columbia Street Brooklyn 560896

| <u>Abbreviation</u> | <u>These commonly used abbreviations may or may not be present in this report.</u> |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| %R | Percent Recovery |
| DL, RA, RE | Indicates a Dilution, Reanalysis or Reextraction. |
| EPA | United States Environmental Protection Agency |
| MDL | Method Detection Limit - an estimate of the minimum amount of a substance that an analytical process can reliably detect. A MDL is analyte- and matrix-specific and may be laboratory-dependent. |
| ND | Not detected at the reporting limit (or MDL if shown). |
| QC | Quality Control |
| RL | Reporting Limit - the minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. |
| RPD | Relative Percent Difference - a measure of the relative difference between two points |

DATA REPORTING QUALIFIERS

Client: PVE Sheffler

Job Number: 420-71337-1
Sdg Number: Columbia Street Brooklyn 560896

| Lab Section | Qualifier | Description |
|--------------------|------------------|----------------------------------------------------------------------------------------------------------------|
| GC/MS VOA | U | The analyte was analyzed for but not detected at or above the stated limit. |
| GC/MS Semi VOA | * | LCS or LCSD exceeds the control limits |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| | U | The analyte was analyzed for but not detected at or above the stated limit. |
| GC Semi VOA | U | The analyte was analyzed for but not detected at or above the stated limit. |
| Metals | U | The analyte was analyzed for but not detected at or above the stated limit. |

Definitions and Glossary

Client: PVE Sheffler

Job Number: 420-71337-1

Sdg Number: Columbia Street Brooklyn 560896

| <u>Abbreviation</u> | <u>These commonly used abbreviations may or may not be present in this report.</u> |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| %R | Percent Recovery |
| DL, RA, RE | Indicates a Dilution, Reanalysis or Reextraction. |
| EPA | United States Environmental Protection Agency |
| MDL | Method Detection Limit - an estimate of the minimum amount of a substance that an analytical process can reliably detect. A MDL is analyte- and matrix-specific and may be laboratory-dependent. |
| ND | Not detected at the reporting limit (or MDL if shown). |
| QC | Quality Control |
| RL | Reporting Limit - the minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. |
| RPD | Relative Percent Difference - a measure of the relative difference between two points |

FAX

RE: Columbia Street

Dear Tim Pagano:

Centek Laboratories, LLC received 3 sample(s) on 10/4/2013 for the analyses presented in the following report.

I certify that this data package is in compliance with the terms and conditions of the Contract, both technically and for completeness. Release of the data contained in this hardcopy data package and/or in the computer readable data submitted has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Centek Laboratories performs all analyses according to EPA, NIOSH or OSHA-approved analytical methods. Centek Laboratories is dedicated to providing quality analyses and exceptional customer service. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the case narrative. All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

We do our best to make our reporting format clear and understandable and hope you are thoroughly satisfied with our services. Please contact your client service representative at (315) 431-9730 or myself, if you would like any additional information regarding this report.

Thank you for using Centek Laboratories. This report can not be reproduced except in its entirety, without prior written authorization.

Sincerely,

William Dobbin
Lead Technical Director

Disclaimer: The test results and procedures utilized, and laboratory interpretations of the data obtained by Centek as contained in this report are believed by Centek to be accurate and reliable

for sample(s) tested. In accepting this report, the customer agrees that the full extent of any and all liability for actual and consequential damages of Centek for the services performed shall be equal to the fee charged to the customer for the services as liquidated damages. ELAP does not offer certification for the following parameters by this method at present time, they are: 4-ethyltoluene, ethyl acetate and propylene.

Centek Laboratories, LLC Terms and Conditions

Sample Submission

All samples sent to Centek Laboratories should be accompanied by our Request for Analysis Form or Chain of Custody Form. A Chain of Custody will be provided with each order shipped for all sampling events, or if needed, one is available at our website www.CentekLabs.com. Samples received after 3:00pm are considered to be a part of the next day's business.

Sample Media

Samples can be collected in an canister or a Tedlar bag. Depending on your analytical needs, Centek Laboratories may receive a bulk, liquid, soil or other matrix sample for headspace analysis.

Blanks

Every sample is run with a surrogate or tracer compound at a pre-established concentration. The surrogate compound run with each sample is used as a standard to measure the performance of each run of the instrument. If required, a Minican can be provided containing nitrogen to be run as a trip blank with your samples.

Sampling Equipment

Centek Laboratories will be happy to provide the canisters to carry-out your sampling event at no charge. The necessary accessories, such as regulators, tubing or personal sampling belts, are also provided to meet your sampling needs. The customer is responsible for all shipping charges to the client's destination and return shipping to the laboratory. Client assumes all responsibility for lost, stolen and any damages of equipment.

Turn Around time (TAT)

Centek Laboratories will provide results to its clients in one business-week by 6:00pm EST after receipt of samples. For example, if samples are received on a Monday they are due on the following Monday by 6:00pm EST. Results are faxed or emailed to the requested location indicated on the Chain of Custody. Non-routine analysis may require more than the one business-week turnaround time. Please confirm non-routine sample turnaround times.

Reporting

Results are emailed or faxed at no additional charge. A hard copy of the result report is mailed within 24 hours of the faxing or emailing of your results. Cat "B" like packages are within 3-4 weeks from time of analysis. Standard Electronic Disk Deliverables (EDD) is also available at no additional charge.

Payment Terms

Payment for all purchases shall be due within 30 days from date of invoice. The client agrees to pay a finance charge of 1.5% per month on the overdue balance and cost of collection, including attorney fees, if collection proceedings are necessary. You must have a completed credit application on file to extend credit. Purchase orders or checks information must be submitted

for us to release results

Rush Turnaround Samples

Expedited turn around times is available. Please confirm rush turnaround times with Client Services before submitting samples.

Applicable Surcharges for Rush Turnaround Samples:

Same day TAT = 200%

Next business day TAT by Noon = 150%

Next business day TAT by 6:00pm = 100%

Second business day TAT by 6:00pm = 75%

Third business day TAT by 6:00pm = 50%

Fourth business day TAT by 6:00pm = 35%

Fifth business day = Standard

Statement of Confidentiality

Centek Laboratories, LLC is aware of the importance of the confidentiality of results to many of our clients. Your name and data will be held in the strictest of confidence. We will not accept business that may constitute a conflict of interest. We commonly sign Confidential Nondisclosure Agreements with clients prior to beginning work. All research, results and reports will be kept strictly confidential. Secrecy Agreements and Disclosure Statements will be signed for the client if so specified. Results will be provided only to the addressee specified on the Chain of Custody Form submitted with the samples unless law requires release. Written permission is required from the addressee to release results to any other party.

Limitation on Liability

Centek Laboratories, LLC warrants the test results to be accurate to the methodology and sample type for each sample submitted to Centek Laboratories, LLC. In no event shall Centek Laboratories, LLC be liable for direct, indirect, special, punitive, incidental, exemplary or consequential damages, or any damages whatsoever, even if Centek Laboratories, LLC has been previously advised of the possibility of such damages whether in an action under contract, negligence, or any other theory, arising out of or in connection with the use, inability to use or performance of the information, services, products and materials available from the laboratory or this site. These limitations shall apply notwithstanding any failure of essential purpose of any limited remedy. Because some jurisdictions do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of liability for consequential or incidental damages, the above limitations may not apply to you. This is a comprehensive limitation of liability that applies to all damages of any kind, including (without limitation) compensatory, direct, indirect or consequential damages, loss of data, income or profit and or loss of or damage to property and claims of third parties.

CASE NARRATIVE

Samples were analyzed using the methods outlined in the following references:

Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999 and Centek Laboratories, LLC SOP TS-80:

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the corrective action report(s). All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

NYSDEC ASP samples:

Canisters should be evacuated to a reading of less than or equal to 50 millitorr prior to shipment to sampling personnel. The vacuum in the canister will be field checked prior to sampling, and must read 28" of Hg (± 2 ", vacuum, absolute) before a sample can be collected. After the sample has been collected, the pressure of the canister will be read and recorded again, and must be 5" of Hg (± 1 ", vacuum, absolute) for the sample to be valid. Once received at the laboratory, the canister vacuum should be confirmed to be 5" of Hg, ± 1 ". Please record and report the pressure/vacuum of received canisters on the sample receipt paperwork. A pressure/vacuum reading should also be taken just prior to the withdrawal of sample from the canister, and recorded on the sample preparation log sheet. All regulators are calibrated to meet these requirements before they leave the laboratory. However, due to environmental conditions and use of the equipment Centek can not guarantee that this criteria can always be achieved.
