CERTIFICATION

I, Kevin Brussee, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Redevelopment Project located at 108 Frost Street, Brooklyn, NY, (NYC VCP Site No. TBD and OER project Number 15EHAZ276K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 108 Frost Street in the Williamsburg section of Brooklyn, New York, and is currently identified as Block 2738, Lot 15 on the New York City Tax Map. Figure 1 shows the Site location. Lot 15 is a rectangular shaped lot consisting of 25 feet of street frontage on Frost Street and a depth of approximately 100 feet for a total of approximately 2,500 ft². The Site is located on the south side of Frost Street between Manhattan Avenue and Meeker Avenue and is bordered by Frost Street to the north, a 2-story manufacturing building to the west, two 3-story multi-family walk ups (110 and 112 Frost Street) to the east, and multiple 3-story multi-family walk ups to the south. A map of the site boundary is shown on Figure 2.

The entire footprint of Lot 15 is currently developed with a 1-story slab-on-grade commercial building used by an electrical contractor.

Summary of Proposed Redevelopment Plan

The development project consists of redeveloping the lot with a new 5-story residential apartment building with a full cellar level and a landscaped rear yard. The cellar level will consist of two open cellar areas for the 1st floor tenants, a mechanical room, stairwells, an elevator, two bathrooms, and a laundry area. The first floor consists of the residential lobby, as well as two residential apartments. Floors 2 through 5 will consist of residential apartments.

The first 65 feet of the Site will require excavation to a depth of approximately 6 feet below grade for construction of the building's cellar level. Additional excavation of the top 2 feet would be performed across the rear yard to construct a landscaped rear yard. Therefore, an estimated 425 cubic yards (640 tons) of soil will require excavation for the new building's cellar and rear yard. The water table is expected at approximately 5 feet below grade surface (bgs), and may be encountered during excavation.

Layout of the redevelopment plans for the cellar level as well as the proposed building's front elevation drawing are presented in Figure 3. The current zoning designation is R6B. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

A Phase I Environmental Site Assessment was performed by Merritt Engineering Consultants, P.C. (Merritt) on June 30, 2004. The Phase I Report noted the following recognized environmental condition in connection with the Site:

- Sanborn maps from 1965-1996 indicate a gas tank on the Site.

Merritt recommended a Phase II Subsurface Investigation to include a ground penetrating radar (GPR) survey and soil borings to determine if any buried tanks or sub-surface contamination is present.

EBC conducted a supplemental Sanborn investigation for 108 Frost Street, utilizing Sanborn Maps from 1887 through 2007. The following Site history was established based on historic Sanborn maps:

In 1887 the Site was developed with a small dwelling in the front of the lot. The 1905 and 1916 Sanborn maps show a vacant one-story commercial building located in the rear of the lot, and the 1942 Sanborn map shows a one-story industrial building utilized as a Pickle Works facility. Sanborn maps from 1951 to 2007 label the industrial building as a garage building with an underground gasoline tank in the front of the building.

Areas of Concern (AOCs) identified for the Site include:

1. The presence of historic fill material to depths as great as 4 feet;
2. The Site was utilized as an auto repair facility from 1951 to at least 2007; and
3. An underground gasoline tank is drawn on Sanborn maps from 1951 to 2007.

Summary of the Work Performed under the Remedial Investigation

EBC performed the following scope of work at the Site in July of 2014:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed three soil borings across the Site, and collected six soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three groundwater monitoring wells throughout the Site and collected three groundwater samples and one duplicate groundwater sample for chemical analysis to evaluate groundwater quality;
4. Installed three soil gas implants and collected three soil gas samples for chemical analysis.

Summary of Environmental Findings

1. The elevation of the Site is approximately 21 feet.
2. Depth to groundwater is estimated to be approximately 5 feet below sidewalk grade.
3. Groundwater flow is generally west-northwest.
4. Depth to bedrock at the Site is greater than 100 feet.
5. The stratigraphy of the Site surrounding the existing foundation slab from the surface down consists of historic fill material to depths as great as 4 feet, underlain by native brown or grey clay.
6. Soil/fill samples results were compared to New York State Department of Environmental Conservation (NYSDEC) Part 375 Table 375-6.8 Unrestricted Use and Restricted Residential Use Soil Cleanup Objectives (SCOs). The sample results showed no pesticides or PCBs above detection limits. Several VOCs including acetone (maximum [max] of 21 µg/kg), methylene chloride (max. of 2.2 µg/kg), and naphthalene (780 µg/kg) were detected at trace amounts in the shallow soil samples at concentrations below Unrestricted Use SCOs. Six SVOCs, including benz(a)anthracene (max. of 15,000 µg/kg), benzo(a)pyrene (max. of 12,000 µg/kg), benzo(b)fluoranthene (max. of 15,000 µg/kg), benzo(k)fluoranthene (4,200 µg/kg), chrysene (max. of 15,000 µg/kg), and indeno(1,2,3-cd)pyrene (5,300 µg/kg), were detected above Restricted Residential Use SCOs within two of three shallow soil samples. Several metals including arsenic (max.

36 mg/kg), chromium (max. of 43.4 mg/kg), copper (max. of 111 mg/kg), lead (max. of 489 mg/kg), mercury (max. of 1.2 mg/kg), and zinc (max. of 151 mg/kg) exceeded Unrestricted Use SCOs within shallow soil samples. Of these metals, arsenic and lead also exceeded Restricted Residential Use SCOs in shallow soil samples. Overall, the soil results were consistent with data identified at sites with urban fill material in NYC.

7. Groundwater samples results were compared to NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (GQS) for Class GA (drinking water). The samples showed no PCBs or pesticides at detectable concentrations. No VOCs were detected above GQS, but the VOC acetone (max. of 2.1 µg/L) was detected at trace amounts in all three groundwater samples and the trip blank. One SVOC, benzo(a)anthracene (max. of 0.03 µg/L) was detected above the GQS in all three groundwater samples. Four SVOCs, including acenaphthylene (max. of 0.07 µg/L), benzo(a)pyrene (max. of 0.04 µg/L), bis(2-ethylhexyl)phthalate (max. of 0.05 µg/L), and pyridine (0.22 µg/L) were detected in trace amounts. Several metals were identified, but iron (max. of 2.38 mg/L), manganese (max. of 3.64 mg/L) and sodium (max. of 50.9 mg/L) exceeded their respective GQS in all three groundwater samples.
8. Soil vapor samples collected during the 2014 EBC RI were compared to the New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion (October 2006) Matrix 1 and Matrix 2 values. Samples indicated petroleum-related VOCs were present at low concentrations and chlorinated VOCs present at low to moderate concentrations. The total concentration of petroleum-related VOCs (BTEX) ranged from 24.39 µg/m³ to 57.8 µg/m³. The chlorinated VOC, trichloroethylene (TCE) was not detected in any of the soil gas samples. Tetrachloroethylene (PCE) was detected in all three soil gas samples ranging in concentration from 1.22 µg/m³ to 114 µg/m³. The NYSDOH Final Guidance on Soil Vapor Intrusion (October 2006) notes monitoring is the recommended action for a PCE concentration above 100 µg/m³ in soil gas. Carbon tetrachloride (maximum of 0.629 µg/m³) was detected in all three of the soil gas samples and 1,1,1-trichloroethane (maximum of 46.4 µg/m³) was detected within two of the three soil gas samples. The TCE, carbon tetrachloride and TCA concentrations are below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Joel Berkowitz has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.06-acre Site located at 108 Frost Street in the Bedford Stuyvesant section of Brooklyn, New York. The Site will be redeveloped with a 5-story residential apartment building with a full cellar level. The portion of the RI work conducted on the Site was conducted in July of 2014. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 108 Frost Street in the Williamsburg section of Brooklyn, New York, and is currently identified as Block 2738, Lot 15 on the New York City Tax Map. Figure 1 shows the Site location. Lot 15 is a rectangular shaped lot consisting of 25 feet of street frontage on Frost Street and a depth of approximately 100 feet for a total of approximately 2,500 ft². The Site is located on the south side of Frost Street between Manhattan Avenue and Meeker Avenue and is bordered by Frost Street to the north, a 2-story manufacturing building to the west, two 3-story multi-family walk ups (110 and 112 Frost Street) to the east, and multiple 3-story multi-family walk ups to the south. A map of the site boundary is shown on Figure 2.

The entire footprint of Lot 15 is currently developed with a 1-story slab-on-grade commercial building used by an electrical contractor.

1.2 Proposed Redevelopment Plan

The development project consists of redeveloping the lot with a new 5-story residential apartment building with a full cellar level and a landscaped rear yard. The cellar level will consist of two open cellar areas for the 1st floor tenants, a mechanical room, stairwells, an elevator, two bathrooms, and a laundry area. The first floor consists of the residential lobby, as well as two residential apartments. Floors 2 through 5 will consist of residential apartments.

The first 65 feet of the Site will require excavation to a depth of approximately 6 feet below grade for construction of the building's cellar level. Additional excavation of the top 2 feet would be performed across the rear yard to construct a landscaped rear yard. Therefore, an estimated 425 cubic yards (640 tons) of soil will require excavation for the new building's cellar and rear yard. The water table is expected at approximately 5 feet below grade surface (bgs), and may be encountered during excavation.

Layout of the redevelopment plans for the cellar level as well as the proposed building's front elevation drawing are presented in Figure 3. The current zoning designation is R6B. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The area immediately surrounding Site consists of manufacturing two-story building to the west, residential streets consisting of 3-story multi-family walk ups to the south and east, and a vacant lot north beyond Frost Street. Figure 4 shows the surrounding land usage of the adjacent properties listed below as well as additional properties located up to 500 feet away from the Site. No hospitals, schools or daycare facilities are located within a 250 ft radius of the Site.

Surrounding Property Usage

Direction	Property Description
North – Opposite side of Frost Street	<u>Block 2733, Lot 30 – 380 Meeker Avenue</u> A 1,913 ft ² vacant lot.
South – Adjacent Properties	<u>Block 2738 Lots 31, 32, and 33 – 117 through 123 Withers Street</u> Two 2,500 ft ² wide lots and one 5,000 ft ² wide lot, each developed with a 3-story multi-family walk-up with rear yards behind each building.
East – Adjacent Property	<u>Block 2738, Lot 16 – 110 Frost Street</u> A 2,350 ft ² lot developed with a 3-story multifamily walk up with a small front yard and the building located on the rear of the lot.
West – Adjacent Property	<u>Block 2738, Lot 13 – 104 Frost Street</u> A 5,000 ft ² lot developed with a 2-story manufacturing building.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

A Phase I Environmental Site Assessment was performed by Merritt Engineering Consultants, P.C. (Merritt) on June 30, 2004. The Phase I Report noted the following recognized environmental condition in connection with the Site:

- Sanborn maps from 1965-1996 indicate a gas tank on the Site.

Merritt recommended a Phase II Subsurface Investigation to include a ground penetrating radar (GPR) survey and soil borings to determine if any buried tanks or sub-surface contamination is present.

EBC conducted a supplemental Sanborn investigation for 108 Frost Street, utilizing Sanborn Maps from 1887 through 2007. The following Site history was established based on historic Sanborn maps:

In 1887 the Site was developed with a small dwelling in the front of the lot. The 1905 and 1916 Sanborn maps show a vacant one-story commercial building located in the rear of the lot, and the 1942 Sanborn map shows a one-story industrial building utilized as a Pickle Works facility. Sanborn maps from 1951 to 2007 label the industrial building as a garage building with an underground gasoline tank in the front of the building.

2.2 Previous Investigations

EBC is not aware of any previous investigations conducted at the Site.

2.3 Site Inspection

Mr. Reuben Levinton of EBC performed a site inspection on July 2 2014, beginning at approximately 7:30 am. The reconnaissance included a visual inspection of the property, the adjacent property to the west with an office building towards the front of the lot, and a paved walkway towards the residential walk up to the rear of the lot. The Site consisted of a single-story garage. No evidence of an aboveground or underground storage tank was observed during the site inspection, however there is the possibility of a gas tank on Site in the northwest corner based on information from Sanborn Maps.

2.4 Areas of Concern

Areas of Concern (AOCs) identified for the Site include:

1. The Site was occupied by an auto repair from 1951 to at least 2007.
2. A gas tank is listed as present on Site in the northwest corner from 1965 to 1996.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Kevin Brussee.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

EBC performed the following scope of work at the Site in July of 2014:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed three soil borings across the Site, and collected six soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three groundwater monitoring wells throughout the Site and collected three groundwater samples and one duplicate groundwater sample for chemical analysis to evaluate groundwater quality; and
4. Installed three soil gas implants and collected three soil gas samples for chemical analysis.

4.1 Geophysical Investigation

A geophysical investigation was performed by Nova Geophysical Services on July 2, 2014. An anomaly indicative of an underground storage tank was noted in the front of the building, in the approximate area of the underground gasoline storage tank noted on historic Sanborn maps.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

On July 2, 2014, three soil borings (B1 through B3) were installed in the approximate locations shown on Figure 5. The three soil boring locations were chosen to gain representative soil quality information across the Site. For each of the three soil borings, soil samples were collected continuously from grade to a final depth of 16 feet below existing grade using a five-foot steel macro-core sampler with acetate liners and Geoprobe direct-push equipment. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a photoionization detector (PID) and visually inspected for evidence of contamination. No PID readings above background concentrations were detected. From each soil boring, soil samples were retained for laboratory analysis from the intervals 0 to 2 feet below grade and 14 to 16 feet below grade.

Soil boring details are provided in Table 1. Boring logs were prepared by a Qualified Environmental Professional and are attached in Attachment B.

Groundwater Monitoring Well Construction

Three temporary 1-inch diameter PVC monitoring wells (MW1 through MW3) with 10 feet of 0.010 slot screen were installed by EBC at the approximate locations, shown on Figure 5, set to intersect the water table. Since groundwater was encountered at approximately 5 feet below grade, monitoring wells were installed to a depth of 15 feet. Monitoring well sampling details are provided in Table 1. Monitoring well locations are shown in Figure 5.

Survey

Soil borings, monitoring wells and soil gas sampling locations were located to the nearest 0.10 foot with respect to two or more permanent site features.

Water Level Measurement

Approximate groundwater level measurements were collected using a Solinst oil/water interface meter to ensure the surface of the water table was within the screened section of the monitoring well. No free product was observed within the two monitoring wells. Water level data is included in Table 1.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Six soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in

Tables 2, 3, 4 and 5. Figure 5 shows the location of samples collected during this RI. Laboratories and analytical methods for soil samples collected during the RI are shown below.

The six soil samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted for analysis with proper chain of custody to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and target analyte list (TAL) metals.

Groundwater Sampling

Three groundwater samples and one duplicate sample were collected for chemical analysis during this RI. Groundwater samples were collected from the monitoring wells utilizing dedicated polyethylene tubing and a peristaltic pump. Groundwater samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted to Phoenix for analysis of VOCs by EPA Method 8260, SVOCs by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and TAL metals. Groundwater sample collection data is reported in Tables 6 through 9. Sampling logs with information on purging and sampling of groundwater monitoring wells are included in Appendix C. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

Three soil vapor probes (SG1, SG2, and SG3) were installed and three soil vapor samples were collected for chemical analysis during this RI. The three soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 10, and the soil vapor sampling logs are included in Attachment D. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

All three soil vapor probes were installed using Geoprobe™ equipment and tooling. The approximate location of each of the soil vapor probes is shown on Figure 5. The vapor probes that were installed were the Geoprobe™ Model AT86 series, which are constructed of a 6-inch

length of double woven stainless steel wire. The three soil vapor probes installed on July 2, 2014 were installed to a depth of 4 feet below grade. Each probe was attached to ¼ inch polyethylene tubing which extended approximately 18 inches beyond that needed to reach the surface. The tubing was capped with a ¼ inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the probe to a height of approximately 1 foot above the bottom of the probe. The remainder of the borehole was sealed with a bentonite slurry to the surface.

Soil vapor sampling for the three soil vapor probes was conducted on July 9 and 14, 2014. Prior to sampling, each sampling location was tested to ensure a proper surface seal had been obtained. In accordance with NYSDOH guidance (NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2005), a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. Prior to testing and collecting samples, the surface immediately surrounding the polyethylene tubing of the vapor implant was sealed using a 1 foot by 1 foot square sheet of 2 mil HDPE plastic firmly adhered to a wetted layer of granular bentonite. The seal was then tested by enriching the air space above the seal with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model MGD-2002, Multi-Gas Detector) for a minimum of 15 minutes. The tracer gas test procedure was employed at all four soil vapor sampling locations. No surface seal leaks were observed at any of the locations.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 6-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the four vapor implants. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a bound field note book. Sampling then proceeded by fully opening the flow control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approx 2

hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The soil gas sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet (Attachment D). Samples were submitted to Phoenix for laboratory analysis of VOCs EPA Method TO-15.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Phoenix Environmental Laboratories
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Phoenix Environmental Laboratories
Chemical Analytical Methods	Soil and groundwater analytical methods: <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2 through 10. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Attachment E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the Site from the surface down consists of a layer of urban fill material that extends to depths as great as 4 feet below grade in some areas, underlain by a native brown or grey clay.

Hydrogeology

A table of water level data for monitoring wells MW1 through MW3 is included in Table 1. The average depth to groundwater is 5 feet and the range is depth is 4.81 feet to 6.15 feet. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 9. Groundwater flow is generally to the west-northwest.

5.2 Soil Chemistry

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 2 through 5. Figure 6 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Unrestricted Use and Restricted Residential Use Soil Cleanup Objectives.

Data collected during the RI showed no pesticides or PCBs above detection limits. Several VOCs including acetone (maximum [max] of 21 µg/kg), methylene chloride (max. of 2.2 µg/kg), and naphthalene (780 µg/kg) were detected at trace amounts in the shallow soil samples at concentrations below Unrestricted Use SCOs. Six SVOCs, including benz(a)anthracene (max. of 15,000 µg/kg), benzo(a)pyrene (max. of 12,000 µg/kg), benzo(b)fluoranthene (max. of 15,000 µg/kg), benzo(k)fluoranthene (4,200 µg/kg), chrysene (max. of 15,000 µg/kg), and indeno(1,2,3-cd)pyrene (5,300 µg/kg), were detected above Restricted Residential Use SCOs within two of three shallow soil samples. Several metals including arsenic (max. 36 mg/kg), chromium (max. of 43.4 mg/kg), copper (max. of 111 mg/kg), lead (max. of 489 mg/kg), mercury (max. of 1.2 mg/kg), and zinc (max. of 151 mg/kg) exceeded Unrestricted Use SCOs within shallow soil samples. Of these metals, arsenic and lead also exceeded Restricted Residential Use SCOs in

shallow soil samples. Overall, the soil results were consistent with data identified at sites with urban fill material in NYC.

5.3 Groundwater Chemistry

Groundwater samples collected during the RI showed no PCBs or pesticides at detectable concentrations. No VOCs were detected above GQS, but the VOC acetone (max. of 2.1 µg/L) was detected at trace amounts in all three groundwater samples and the trip blank. One SVOC, benzo(a)anthracene (max. of 0.03 µg/L) was detected above the GQS in all three groundwater samples. Four SVOCs, including acenaphthylene (max. of 0.07 µg/L), benzo(a)pyrene (max. of 0.04 µg/L), bis(2-ethylhexyl)phthalate (max. of 0.05 µg/L), and pyridine (0.22 µg/L) were detected in trace amounts. Several metals were identified, but iron (max. of 2.38 mg/L), manganese (max. of 3.64 mg/L) and sodium (max. of 50.9 mg/L) exceeded their respective GQS in all three groundwater samples.

5.4 Soil Vapor Chemistry

Soil vapor samples collected during the RI showed petroleum-related VOCs were present at low concentrations and chlorinated VOCs present at low to moderate concentrations. The total concentration of petroleum-related VOCs (BTEX) ranged from 24.39 µg/m³ to 57.8 µg/m³. The chlorinated VOC, trichloroethylene (TCE) was not detected in any of the soil gas samples. Tetrachloroethylene (PCE) was detected in all three soil gas samples ranging in concentration from 1.22 µg/m³ to 114 µg/m³. The NYSDOH Final Guidance on Soil Vapor Intrusion (October 2006) notes monitoring is the recommended action for a PCE concentration above 100 µg/m³ in soil gas. Carbon tetrachloride (maximum of 0.629 µg/m³) was detected in all three of the soil gas samples and 1,1,1-trichloroethane (maximum of 46.4 µg/m³) was detected within two of the three soil gas samples. The TCE, carbon tetrachloride and TCA concentrations are below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion.

5.4 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected for the Site.

5.5 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

MEC Project No	Project E17491
Report Date	June 30, 2004
Inspection Date	June 23, 2004

EXECUTIVE SUMMARY

Merritt Engineering Consultants, P.C., was retained by Christopher Jon Electrical to conduct a Phase I Environmental Site Assessment (ESA) at 108 Frost Street, Brooklyn, New York 11211.

The on site investigation was conducted on June 23, 2004.

The following Recognized Environmental Conditions (RECs) were noted at the time of our inspection.

A Recognized Environmental Condition means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under compliance with laws.

	ITEM	APPROXIMATE COST	PAGE
1a	Provide documentation for removal/abandonment of buried gasoline tank noted on Sanborn maps from 1965-1996	Cost not determined	13
1b	Should no documentation be available, a phase II investigation including soil borings and a Ground Penetrating Radar scan (GPR) should be conducted to determine if any buried tanks or sub surface contamination is present	\$5,000-\$7,000	13

In addition, no de minimis conditions were noted.

A de minimis condition is one that generally does not present a material risk of harm to public health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate governmental agencies (excluding local asbestos & lead situations).

No Historical Recognized Environmental Conditions (HRECs) were reported. In addition no evidence of HRECs were observed during our on-site inspection/ identified in our database search/historical review.

TABLE OF CONTENTS

- 1) Executive Summary**
 - 1.1 Recognized Environmental Conditions (RECs) / De Minimis Conditions
 - 1.2 Historical Recognized Environmental Conditions (HRECs)

- 2) Introduction**
 - 2.1 Purpose
 - 2.2 Detailed Scope of Services
 - 2.3 Significant Assumptions
 - 2.4 Limitations and Exceptions
 - 2.5 Special Terms and Conditions
 - 2.6 Reliance

- 3) Site Description**
 - 3.1 Location and Legal Description
 - 3.2 Site and Vicinity General Characteristics
 - 3.3 Current Use of the Property
 - 3.4 Descriptions of Structures, Roads, Other Improvements on the Site
 - 3.5 Current Uses of the adjoining Properties

- 4) User Provided Information**
 - 4.1 Title Records
 - 4.2 Environmental Liens
 - 4.3 Specialized Knowledge
 - 4.4 Valuation Reduction for Environmental Issues
 - 4.5 Owner, Property Manager, and Occupant Information
 - 4.6 Reason for Performing Phase I
 - 4.7 Other / Additional Information Provided

- 5) Records Review**
 - 5.1 Standard Environmental Record Sources
 - 5.2 Database Searches
 - 5.2.2 Ecological Sensitive Area
 - 5.3 Database Site Maps
 - 5.4 Orphan Sites
 - 5.5 Local Agency Review
 - 5.6 Additional Environmental Record Sources
 - 5.7 Physical Setting Sources
 - 5.8 Bodies of Water
 - 5.9 Ground Water Flow
 - 5.10 Site Geology and Topography
 - 5.11 Historical Use Information on the Property
 - 5.12 Historical Use Information on Adjoining Properties

6) Site Reconnaissance

- 6.1 Methodology and Limiting Conditions
- 6.2 General Site Setting
- 6.3 Exterior Observations
- 6.4 Interior Observations
- 6.5 Underground Storage Tanks (USTs) and Drums
- 6.6 Aboveground Storage Tanks (ASTs) and Drums
- 6.7 Asbestos
- 6.8 Electrical Transformers (PCBs)
- 6.9 Garbage Disposal
- 6.10 Lead Based Paint
- 6.11 Natural Gas
- 6.12 Radon
- 6.13 Storm and Sanitary Discharge
- 6.14 Water Supply

7) Interviews

- 7.1 Interview with Owner
- 7.2 Interview with Site Representative
- 7.3 Interviews with Occupants
- 7.4 Interviews with Local Government Officials
- 7.5 Interviews with Others

8) Report Summary

- 8.1 Findings
- 8.2 Conclusions
- 8.3 Opinions
- 8.4 Deviations
- 8.5 Additional Services
- 8.6 References

9) Consultant Information

- 9.1 Signature and Qualifications of Environmental Professional

10) Appendices

- 10.1 Site Photography
- 10.2 Site (Vicinity) Map
- 10.3 Hazardous Waste Site Map
- 10.4 Regulatory Records Documentation
- 10.5 Historical Research Documentation
- 10.6 Interview Documentation
- 10.7 Qualifications
- 10.8 Special Contractual Conditions between User and Environmental Professional (If Applicable)
- 10.9 Historical Recognized Environmental Conditions (HREC) documentation provided (If Applicable)
- 10.10 Additional Information obtained

2) INTRODUCTION

2.1 PURPOSE

The report was prepared by Merritt Engineering Consultants, P.C., whose purpose is to provide comprehensive Phase I Environmental Site Assessments (ESA) in accordance with American Society of Testing Materials (ASTM E 1527-00) standards for a Phase I Environmental Site Assessment. The survey personnel are trained in the field of Environmental Site inspections as Certified Environmental Specialist (CES) by the Environmental Assessment Association as well as asbestos investigators by the Federal Environmental Protection Agency and NY State.

2.2 DETAILED SCOPE OF SERVICES

For the Phase I Environmental Site Assessment (ESA), Merritt Engineering Consultants (MEC) performed the following primary tasks:

- 1. Physical site inspection by Merritt Engineering Consultants Certified Environmental Specialists (CES) who traversed the interior and exterior areas of the site by foot, in addition to conducting a review of adjacent areas and their exteriors.*
- 2. Investigations of historical usage of site based upon:
 - a. Interview of persons knowledgeable about the sites current and past usage.*
 - b. Review of Sanborn Fire Insurance Maps and/or a review of Local Building Department records and/or Aerial Photographs.**
- 3. Review of USGS geologic and 7.5 Minute Topographical Maps.*
- 4. Review of the federal and state environmental databases as per ASTM E1527-00 guidelines, as well as a review of pertinent information provided by local government records.*
- 5. Limited survey of site for the presence of electrical transformers that may contain Poly-chlorinated biphenyl (PCBs).*
- 6. Limited survey for the presence of friable asbestos containing material (ACM).*
- 7. Limited survey of site for the presence of lead based paint surfaces within common areas.*
- 8. Inspection of water supply, gas supply, garbage disposal practices, groundwater flow, storm and sanitary discharge methods.*
- 9. Review of Radon averages.*
- 10. Inspection for petroleum storage tanks, above and below grade, stored on site.*
- 11. Review of report by a senior certified environmental specialist (CES).*

The following services are not included as part of this Phase I Assessment:

- Lead Based Paint Testing
- Soil Borings
- Testing of Water Main
- Wetlands Evaluation
- ACP-5 Asbestos Report
- High Voltage Power Lines
- Indoor Air Quality
- Radon Testing
- Non-friable Asbestos Testing
- Evaluation of Fluorescent light fixtures that may contain PCBs
- Endangered Species
- Ecological Resources
- Health & Safety
- Industrial Hygiene
- Cultural & Historical Risk
- Regulatory Compliance
- Testing for Mold Spores

2.3 SIGNIFICANT ASSUMPTIONS

Information and records provided by the client and outside vendors retained by Merritt Engineering Consultants are assumed to be correct and complete.

2.4 LIMITATIONS AND EXCEPTIONS

The contents of this report are correct to our knowledge and belief. This report and conclusions stated herein are, however, limited to actual knowledge based upon a visual inspection of the Property, the examination of readily available public records concerning the current and prior use of the Property, and interviews with individuals knowledgeable about present and past property uses.

Merritt Engineering Consultants, P.C., has performed this Phase I Environmental Site Assessment (ESA) of the Property in accordance with the detailed scope of work in section 2.2.

Merritt Engineering Consultants, P.C., cannot guarantee that the Property is completely free of hazardous substances or other materials or conditions that could subject the Client to potential liability. The presence or absence of any such condition can only be confirmed through the collection and analysis of soil and groundwater samples, as well as through testing building materials that may contain asbestos or lead paint. This is beyond the scope of the investigation.

Merritt Engineering Consultants, P.C., has no interest other than professional in this Assessment and neither its performance, nor compensation for same, is contingent upon the findings and recommendations that are represented herein.

2.5 SPECIAL TERMS AND CONDITIONS

There are no special terms or conditions to the content of the report that are in addition to the scope outlined in Section 2.2.

2.6 RELIANCE

This Phase I Assessment was performed at the client's request utilizing methods and procedures that are consistent with acceptable professional standards ASTM-E1527-00.

The report has been prepared for the sole use of MEC's client. No other party may use the report without the written authority of MEC.

3) SITE DESCRIPTION

3.1 LOCATION AND LEGAL DESCRIPTION

The property address is 108 Frost Avenue. The legal site address is Block 2738, Lot 15. The site is located in the Northside section of Brooklyn.

3.2 SITE AND VICINITY GENERAL CHARACTERISTICS

The current site is situated on a plot size 2,500 square feet.

The current structure was built circa 1930.

The weather conditions during our on site inspection consisted of clear skies. The temperature was approximately 70°.

3.3 CURRENT USE OF THE PROPERTY

The current use of the site consists of one (1) vacant commercial unit.

The site usage appears to remain similar, since the building's construction (commercial).

None of the current tenants or their on site operations appear to pose an adverse environmental impact to the property or neighboring sites.

3.4 DESCRIPTIONS OF STRUCTURES, ROADS AND OTHER IMPROVEMENTS

The current site consists of a 1-story commercial building, located on a plot size approximately 2,500 square feet (building size is approximately 2,500 square feet). There are no basements or subbasements at the subject site. All utilities are located on the ground floor. The heating system for this site is located on the ground floor and is supplied by gas fired ceiling hung heating units.

3.5 CURRENT USES OF THE ADJOINING PROPERTIES

North	commercial / Front Street
South	residential
East	residential
West	2-story commercial

The adjacent properties do not appear to pose an adverse environmental impact to the site.

4) USER PROVIDED INFORMATION

4.1 TITLE RECORDS

No title records were provided.

4.2 ENVIRONMENTAL LIENS

No environmental liens were indicated.

4.3 SPECIALIZED KNOWLEDGE

No information regarding specialized knowledge was provided.

4.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

No information regarding the valuation reduction for environmental issues was provided by the owner.

4.5 OWNER, PROPERTY MANAGER AND OCCUPANT INFORMATION

The current owner of the site is Pierce Allen, Inc. which purchased the property in 2003.

4.6 REASON FOR PERFORMING PHASE I

Merritt Engineering was retained to perform a Phase I Environmental Site Assessment (ESA) as an agent for the buyer conducting a due diligence evaluation prior to purchasing site.

4.7 OTHER/ADDITIONAL INFORMATION PROVIDED

No additional information was provided.

5) RECORDS REVIEW

5.1 STANDARD ENVIRONMENTAL RECORD SOURCES

The federal government and New York State have compiled database lists of contaminated, potentially hazardous and regulated sites that may impact the subject property. Environmental Data Resources (EDR) has provided this information to Merritt Engineering Consultants.

5.2 DATABASE SEARCHES

The following Federal and State databases were reviewed by Merritt Engineering Consultants on June 30, 2004, with the corresponding distance.

Database	Radius Searched
FEDERAL	
1. Federal National Priority List	1 Mile
2. Federal CERCLIS list	½ Mile
3. Federal RCRA TSD facilities list	½ Mile
4. Federal RCRA generators list	Site & Adjacent Properties
5. Federal ERNS list	Site
STATE	
1. State lists of Haz. Waste Sites	1 Mile
2. State landfill/solid waste site lists	½ Mile
3. State leaking UST lists (LUSTs)	½ Mile
4. State registered tanks	Site & Adjacent Properties

FINDINGS

The closest 53 sites have been included in Appendix A.

National Priorities List (NPL) - list compiled by EPA pursuant to CERCLA 42 USC 9605(a)(8)(B) of properties with the highest priority for cleanup pursuant to EPA's Hazard Ranking System.

Findings: No sites located within a 1-mile radius. (See State Hazardous Waste Sites Maps)

Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) - the list of sites compiled by EPA that EPA has investigated or is currently investigating for potential hazardous substance contamination for possible inclusion on the National Priorities List.

Findings: No sites located within a ½-mile radius.

Resource Conservation Recovery Act (RCRA) Treatment Storage Disposal (TSD) facilities - those facilities on which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA. Inclusion on the RCRA TSD list does not imply contamination has occurred at the site.

Findings: No sites located within a ½-mile radius.

Resource Conservation Recovery Act (RCRA) generators list - list kept by EPA of those persons or entities that generate hazardous wastes as defined and regulated by RCRA. Inclusion on the RCRA list does not imply contamination has occurred at the site.

Findings: No generators listed at property.
13 generators listed within a ¼-mile radius.

Emergency Response Notification System (ERNS) list - list of reported CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, as maintained at the National Response Center. Notification requirements for such releases or spills are codified in 40 CFR Parts 302 & 355.

Findings: Site not listed.

Department of Environmental Conservation (DEC) lists the contaminated sites throughout the State and classifies the degree of contamination. Number 1 being highly contaminated; number 5 being the least hazardous to the public.

code:

1. Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or environment - immediate action required;
2. Significant threat to the public health or environment - action required;
- 2a. Temporary classification assigned to sites that have inadequate and/or insufficient data for inclusion in any of the other classifications;
3. Does not present a significant threat to the public health or the environment - action may be deferred;

4. Site is properly closed - requires continued management;
5. Site is properly closed, no evidence of present or potential adverse impact - no further action is required.

Findings: No sites located within a 1-mile radius. **(See State Hazardous Waste Maps)**

Solid Waste Disposal Site - any place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term landfill and is also known as a garbage dump, trash dump or by similar terms.

Findings: No sites located within a ½-mile radius.

Spill Logs/LUST list – New York Department of Environmental Conservation (NYDEC) has a computerized list of spills that have occurred as of 1986, including the present status of the sites. In addition, the leaking underground storage tank (LUST) database was also reviewed for reported incidents in the area.

Findings: 22 LUSTs located within a ½-mile radius.

10 NY Spills located within a 1/8-mile radius.

The closest sites are:

- | | |
|--|--|
| <p>1) 398 Manhattan Avenue
 NY Spill # 9608634
 Spill date: 10/10/96
 Close date: 10/10/96</p> | <p>2) 375 Manhattan Avenue
 NY Spill # 9400072
 Spill date: 4/3/94
 Close date: 4/4/94</p> |
| <p>3) Meeker Ave & Leonard St
 NY Spill # 9103785
 Spill date: 6/28/94
 Close date: Corrective action taken
 Cause: Dielectric fluid spill</p> | <p>4) 392 Leonard Street
 NY Spill # 9900802
 Spill date: 4/21/99
 Close date: 8/10/99</p> |

Since the spills have been closed by the New York State Department of Environmental Conservation (NYSDEC) or corrective action has been taken by the responsible party, they do not appear to adversely affect the subject site.

State registered tanks - state lists of storage tanks required to be registered under Subtitle I, Section 9002 of RCRA.

Findings: No registered tanks located on site.
 7 registered tank sites located within a 1/8-mile radius.

ECOLOGICAL SENSITIVE AREA

Based on information provided by Environmental Data Resources (EDR), no designated wetlands or flood plains are located in the immediate vicinity of the property.

5.3 DATABASE SITE MAPS

A map provided by Merritt Engineering Consultants indicating the property and surrounding 1-mile radius has been included in Appendix A. The map denotes any National Priority Listed Sites (NPL) and State Hazardous Waste Sites (SHWS) sites within the ASTM radius of 1 mile.

5.4 ORPHAN SITES

Our database review indicated several sites that cannot be positively plotted (orphan sites). A total of 30 sites were classified as orphans.

The subject site does not appear on the orphan list.

5.5 LOCAL AGENCY REVIEW

We have researched the New York City Health & Fire Department records for any information of hazardous operations including, past spills, leaks or violations. The information we received from the Fire Department indicated no violations (See Appendix A).

The Health Department information has not yet been provided. We will forward any information that appears to impact the scope of this assessment.

5.6 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

No additional environmental records were researched.

None of the sites on the database or local agency review provided appear to impact the scope of this assessment.

5.7 PHYSICAL SETTING SOURCES

5.8 BODIES OF WATER

The nearest body of water to the subject site is the East River, which is approximately ½ mile west of the site.

5.9 GROUND WATER FLOW

Through information provided by EDR, hydrological data involving ground water flow has been obtained. Based on our findings, the hydrological groundwater flows in a westerly direction eventually emptying into the East River.

Groundwater in this area is at a depth of approximately 20-40 feet.

Drinking water for the five boroughs has been supplied by the New York reservoir system for many years (See Map in Appendix A). Groundwater is not a primary source of drinking water for Brooklyn. The property is not within a public potable well field protection area and is, therefore, not subject to land use restrictions for such areas.

5.10 SITE GEOLOGY AND TOPOGRAPHY

Information pertaining to the hydrogeologic setting in the vicinity of the subject property was obtained from a review of selected published documents and maps. United States Geological Survey (USGS) 7.5-minute Topographic Maps were used to characterize surface topography, water table elevation and drainage. Subsurface characteristics were obtained from USGS Surficial and Bedrock Geology Maps from the lower Hudson Sheet.

5.11 HISTORICAL USE INFORMATION ON THE PROPERTIES

Sanborn Fire Insurance maps of the site and immediate area were available for the years 1887, 1905, 1916, 1942, 1951, 1965, 1978, 1979, 1980, 1981, 1982, 1983, 1986, 1987, 1988, 1989, 1991, 1992, 1993 & 1996. The maps indicate the following information:

- 1887 vacant lot with scattered dwellings
- 1905-1996 similar to current conditions

Sanborn maps from 1965-1996 indicate a gas tank on the target property. It is recommended the owner provide documentation for abandonment/removal of tank. Should no documentation be available, a phase II investigation should be conducted including a Ground Penetrating Radar scan (GPR) and soil borings to determine if any buried tanks or sub-surface contamination is present. (Approximate cost \$5,000-\$7,000)

5.12 HISTORICAL USE INFORMATION ON ADJOINING PROPERTIES

The Sanborn Fire Insurance Maps reviewed by Merritt Engineering Consultants cover the adjoining properties on the **north, south, east & west.**

6) SITE RECONNAISSANCE

6.1 METHODOLOGY AND LIMITING CONDITIONS

At the time of our inspection, the following areas were accessed by Mr. James Merritt, of our staff: ground floor, mechanical areas, utilities areas, roof top, and all accessible exterior areas of the site.

6.2 GENERAL SITE SETTING

South side of Frost Street
Topography is flat

6.3 EXTERIOR OBSERVATIONS

No potential environmental conditions such as, dead vegetation, gas/chemical spills or storage drums were observed throughout the exterior areas at the time of our inspection.

6.4 INTERIOR OBSERVATIONS

The interior inspection revealed no evidence of any on-site spillage or disposal of chemicals or other hazardous materials.

6.5 UNDERGROUND STORAGE TANKS (UST) AND DRUMS

Each year, thousands of petroleum leaks and spills are reported to the Department of Environmental Conservation (DEC) / Department of Environmental Protection (DEP). Thousands of others may go unreported mainly because they have not yet been discovered. These leaks can enter the ground, seep into an aquifer and contaminate a water supply. In some places, water wells have been closed down and people have had to vacate their homes. Even small amounts of petroleum in soil or groundwater can be tasted or smelled and can subsequently affect health.

Leaking petroleum storage tanks are a major source of groundwater contamination. The DEC/DEP estimates that there may be as many as 185,000 tanks storing petroleum, which are subject to state regulations. Many of these tanks are bare steel and were installed underground in the 1950's and 1960's. These tanks have weakened by rust and have a fifty percent chance of developing leaks.

FINDINGS

A visual inspection and physical walkover of the property indicated that there are no signs of underground storage tanks (UST's) located on the property.

We have reviewed the Fire Departments records for underground storage tanks (UST's) and find no records of any tanks being located at this site (See Appendix A).

Sanborn maps from 1965-1996 indicate a gas tank on the target property. It is recommended the owner provide documentation for abandonment/removal of tank. Should no documentation be available, a phase II investigation should be conducted including a Ground Penetrating Radar scan (GPR) and soil borings to determine if any buried tanks or sub-surface contamination is present. (Approximate cost \$5,000-\$7,000)

6.6 ABOVEGROUND STORAGE TANKS (AST)

No above ground tanks or storage drums were observed in any of the accessible areas at the time of our inspection.

6.7 ASBESTOS

The EPA has identified over 3,000 products used in buildings containing asbestos fibers. Our inspection of the premises is to determine the presence of **friable asbestos**, as defined by the Federal Environmental Protection Agency as any material, which may be pulverized with hand pressure. This material has the potential to release asbestos fibers into the atmosphere and in turn may be hazardous to the building occupants' health.

We have not inspected for or included in our report any building materials, which may contain non-friable asbestos such as vinyl asbestos floor tiles, exterior asbestos shingles, asbestos roofing felts, etc. Many of these materials are still manufactured today and not considered hazardous unless the material is cut, sawed, or grounded in a manner that might release asbestos fibers into the atmosphere.

We have used the 4-category system as defined by Asbestos Hazardous Emergency Response Act (AHERA) to designate the different conditions of asbestos noted throughout the areas of the site.

1. *Good Condition*

Material with no visible damage or deterioration to very limited damage or deterioration.

2. Fair Condition

Material with one or more of the following characteristics:

- A few water stains or less than one tenth of insulation with missing jackets.
- Crushed insulation or water stains, gouges, puncture or mars on up to one tenth of the insulation if the damage is evenly distributed (or up to one quarter if the damage is localized).

3. Poor Condition

Material with one or more of the following characteristics:

- Missing jackets on at least one tenth of the piping equipment.
- Crushed or heavily gouged or punctured insulation on at least one tenth of pipe runs/risers, boiler, tank duct, etc., if the damage is evenly distributed (one quarter if the damage is localized).

4. Significantly Damaged

Thermal systems insulation on pipes, boilers, tanks, ducts, and other thermal system insulation equipment which the insulation has lost its structural integrity, or its covering, in whole or in part, is crushed, water-stained, gouged, punctured, missing, or not intact such that is not able to contain fibers. Damage may be further illustrated by occasional puncture, gouges, or other signs of physical injury to ACM; occasional water damage on the protective coverings/jackets; or exposed ACM ends or joints. Asbestos debris, originating from the ACM in question may also indicate damage.

ASBESTOS FINDINGS

No friable asbestos containing material was observed in any of the accessible areas of the building.

Many buildings' fireproofing is concealed in a plenum above the ceiling. These areas were not accessible and, therefore, we are unable to determine the type of fireproofing for those areas above the first floor.

6.8 ELECTRICAL TRANSFORMERS (PCBs)

Transformers often contain Poly-chlorinated biphenyl (PCB) Askarel coolant liquid and are generally used in hazardous locations where flammability is of concern. PCB transformers are no longer produced because of EPA's ban on the manufacture of new equipment containing PCB's.

FINDINGS

No electrical transformers were observed on the property. Therefore, the release of toxic P.C.B. chemicals is not a concern.

Per to toxic substance contract act (TSCA) the transformer owner, i.e. Utility Company, is responsible for all transformers maintenance and all spills of PCB's from their transformers.

Fluorescent light fixtures were not inspected for PCB content under the scope of this assessment.

6.9 GARBAGE DISPOSAL

There are no active incinerators located on the property.

Since the site is unoccupied, there is currently no sanitation service.

6.10 LEAD BASED PAINT

Lead-based paint (LBP) was used extensively in buildings and structures that were constructed prior to 1978 and can be hazardous when damaged (i.e., chipped, broken, crumbling, pulverized); lead is toxic to humans particularly to children, if ingested, inhaled, or otherwise absorbed. Exposure to lead can cause health problems in children ranging from damage to the brain and nervous system, behavioral and learning problems (such as hyperactivity), slowed growth, hearing problems and headaches. In adults the health problems can range from difficulties during pregnancy, other reproductive problems, high blood pressure, digestive problems, nerve disorders, memory and concentration problems and muscle and joint pain.

Our research indicates the building was constructed prior to 1978, and lead based paint is assumed to be present throughout the building.

FINDINGS

The painted surface in the common areas inspected by Merritt Engineering Consultant's staff did not demonstrate signs of peeling or cracking. No samples of the paint were analyzed since this is beyond the scope of a Phase I Environmental Assessment.

In addition, the site is not used for residential purposes.

A lead based paint survey in accordance with The Housing & Urban Development (HUD) guidelines was not conducted under the scope of this assessment.

6.11 NATURAL GAS

There is one (1) underground gas main that enters the building from Frost Street. The main is connected to a meter located on the ground floor. The gas is then distributed to the heating system only.

Gas service is provided by Key Span.

6.12 RADON

Radon first gained national attention in early 1984, when extremely high levels of indoor radon were found in areas of Connecticut, Pennsylvania, New Jersey, and New York. Radon is a colorless, odorless radioactive gas. Nearly one out of every 15 homes in the U.S. is estimated to have elevated annual average levels of indoor radon. EPA established a Radon Program in 1985 to assist States and homeowners in reducing their risk of lung cancer from indoor radon.

FINDINGS

The New York State Department of Health indicates the average radon level for this area of New York to be 1.4 pico curies per liter (pCi/L), which is below the EPA action level of 4 pCi/L.

A radon canister was not initiated at the time of our inspection since this is beyond the scope of this assessment.

6.13 STORM AND SANITARY DISCHARGE

There are no cesspools or septic tanks located on the property. The drainage system for this building consists of a combination storm and sanitary drainage system, which empties by gravity into the New York City sewer system located under Frost Street.

6.14 WATER SUPPLY

The U.S. Environmental Protection Agency estimates that drinking water can comprise 20% or more of a person's total exposure to lead. Although lead in drinking water is rarely the single cause of lead poisoning, it can significantly increase a person's total lead exposure. Infants who are fed baby formula or drinks mixed with hot water from the tap are the most vulnerable to lead in drinking water. Lead solder can leach into the water supply. Standing water in the piping system can aid in the leaching process.

The EPA action level for lead in drinking water is 15 parts per billion, (PPB).

A sample with lead levels that equal or exceed 15 PPB is considered to have elevated levels of lead, and it is recommended that response action be taken. This response action may include additional testing, replacement of plumbing components, or an operations and maintenance program.

FINDINGS

A copper water main enters the property from Frost Street. The main is connected to a water meter located on the ground floor. The domestic water is supplied by New York City through aqua-ducts from upstate reservoirs.

There are no private ground water wells servicing this property.

No testing of the water was conducted under this scope.

7) INTERVIEWS

7.1 INTERVIEW WITH OWNER

The owner was not present during our inspection.

7.2 INTERVIEW WITH SITE REPRESENTATIVE

During our on-site visit, we interviewed Mr. Fred Rufrano, who is the real estate broker.

Copies of the above records of communications are included in Appendices, Section 10.6.

7.3 INTERVIEWS WITH OCCUPANTS (TENANTS)

No other individuals were interviewed regarding the facility.

7.4 INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

MEC has retained Barretta Research to provide local government agency information which includes the following:

New York City Health Department
New York City Fire Department
New York City Department of Housing Preservation and Development

Copies of the above records of communications are included in Appendices, Section 10.4.

7.5 INTERVIEWS WITH OTHERS

No additional interviews were conducted as part of this assessment.

8) REPORT SUMMARY

The following Recognized Environmental Conditions (RECs) were noted at the time of our inspection.

A Recognized Environmental Condition means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under compliance with laws.

	ITEM	APPROXIMATE COST	PAGE
1a	Provide documentation for removal/abandonment of buried gasoline tank noted on Sanborn maps from 1965-1996	Cost not determined	13
	Should no documentation be available, a phase II investigation including soil borings and a Ground Penetrating Radar scan (GPR) should be conducted to determine if any buried tanks or sub surface contamination is present	\$5,000-\$7,000	13

In addition, no de minimis conditions were noted.

A de minimis condition is one that generally does not present a material risk of harm to public health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate governmental agencies (excluding local asbestos & lead situations).

No Historical Recognized Environmental Conditions (HRECs) were reported. In addition no evidence of HRECs were observed during our on-site inspection/ identified in our database search/historical review.

8.2 CONCLUSION

Merritt Engineering Consultants has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Practice E1527 of 108 Frost Street, Brooklyn, New York, 11211, the property. Any exceptions to, or deletions from, this practice are described in Section [2.2] of this report.

8.3 OPINIONS

Based on our site reconnaissance, database review, historical review and interviews with persons familiar with the subject site and adjacent properties, the above Recognized Environmental Conditions (RECs) were identified under the scope of services outlined in Section 2.2. Further investigation is recommended.

Based on our site reconnaissance, database review, historical review and interviews with persons familiar with the subject site and adjacent properties, no de minimis conditions were identified under the scope of services outlined in Section 2.2.

No Historical Recognized Environmental Conditions were indicated or discovered during our on site inspection / database review / Historical Research.

8.4 DEVIATIONS

The assessment was performed in accordance with the Phase I (ESA) detailed scope of services in section 2.2, and the requirements of the detailed scope of work were met.

8.5 ADDITIONAL SERVICES

No additional services were performed beyond the detailed scope of services in section 2.2.

8.6 REFERENCES

All references relied upon are located in Appendix A.

9) CONSULTANT INFORMATION

9.1 QUALIFICATIONS AND SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

See Appendix A

We thank you for allowing Merritt Engineering Consultants, P.C., to serve as your Environmental Consultant for this project.

Should you have any questions regarding the contents of this report, please feel free to contact us to discuss the report in further detail.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL ASTM STANDARD

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRIS-LQG list, as provided by EDR, and dated 04/13/2004 has revealed that there is 1 RCRIS-LQG site within approximately 0.25 miles of the target property.

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 02/10/2004 has revealed that there are 22 LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 CBS UST site within approximately 0.25 miles of the target property.

NEW TANKS HAVE BEEN INSTALLED AND THE OWNER OPERATOR ARE IN DISCUSSIONS AS TO WHO IS RESPONSIBLE AND WHAT WILL BE DONE. ACCORDING TO MR. TUROFF, THE OPERATORS ARE: KAY SINGH AND K. JANGI 718-388-3329). OWNERS ARE: DIMITRI (DAVID) SHTAIRMAN AND WALTER ROMANSKY 718-388-3464) 7/28/99 SPOKE WITH DIMITRI SHTAIRMAN - HE SAYS A NEW LEASE WAS SIGNED WITH KAY SINGH FOR THE STATION AND MR. SINGH AS OPERATOR IS RESPONSIBLE FOR ALL ENVIRONMENTAL WORK ON THE SITE. DIMITRI SAYS THAT ALL CONTAMINATED SOIL HAS BEEN DUG OUT AND REMOVED. HE SAYS END POINT SAMPLES OF THE OPEN HOLE WERE TAKEN BY ASTEM LAB INC (DR. NORMAN MUNROE 718-459-3770). RIGHT NOW THE SITE HAS A LARGE OPEN HOLE AND THEY ARE NOW WAITING FOR THE CONTRACTOR TO INSTALL THE NEW TANK SYSTEM, BACKFILL AND REPAVE THE SITE. 8/10/99 - ASTEM LABORATORIES, INC. SUBMITTED A REPORT SHOWING 6 END POINT SAMPLES (1 EACH SIDE, 2 BOTTOM) TAKEN FROM PIT WHERE 550 TANKS WERE. ALL SAMPLES WERE TESTED FOR 8021 + MTBE. ALL RESULTS INDICATE BTEX AND MTBE WERE <50 PPB. CLOSE OUT CPT SAYS OK) CALLER STATES THAT DURING REMOVAL OF 550 GAL TANKS CONTAMINATED SOIL WAS FOUND.

Last Date: 09/29/1994
Num Times Material Entry In File: 21329
DEC Remarks: 11/1/99 On site. All tanks out. Station covered with fresh concrete already. Two 55 gallon drums on side of station need to be disposed. All tanks off site. No stockpile of soil. Spill 9909344 reported by anonymous citizen. 11/2/99 Spoke to Butch (516) 831-2982 - beeper? from ITAR Tanks. Dr. Munroe was on site to collect samples from the excavation. NO soil was removed. Concrete slab was removed. PBS needs to be updated - tanks listed as temporarily-out-of-service.
Spill Cause: underground storage tanks were being removed and contaminated soil was discovered - site assessment will be done and the owner will decide what he wants to do for clean up

EPA Waste Codes Addendum

Code	Description
------	-------------

D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
------	--

D035	METHYL ETHYL KETONE
------	---------------------

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRIS: Resource Conservation and Recovery Information System

Source: EPA

Telephone: 800-424-9346

Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency
Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 04/14/04
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 03/15/04

RMP: Risk Management Plans

Source: Environmental Protection Agency
Telephone: 202-564-8600

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

STATE OF NEW YORK ASTM SUPPLEMENTAL RECORDS

HSWDS: Hazardous Substance Waste Disposal Site Inventory

Source: Department of Environmental Conservation

Telephone: 518-402-9564

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency
Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation
Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

LABORATORY REPORTS IN DIGITAL
FORMAT

Thursday, July 17, 2014

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 108 FROST ST.
Sample ID#s: BG74069 - BG74070

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Project ID: 108 FROST
Sample ID#s: BG72601

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

SDG Comments

July 29, 2014

SDG I.D.: GBG69286

Version 1: Analysis results minus QC and forms.

Version 2: Complete report with QC and forms.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

BG69286 - Client provided soil jar for volatile analysis. Phoenix prepared sample per method 5035.

BG69287 - Client provided soil jar for volatile analysis. Phoenix prepared sample per method 5035.

BG69288 - Client provided soil jar for volatile analysis. Phoenix prepared sample per method 5035.

BG69289 - Client provided soil jar for volatile analysis. Phoenix prepared sample per method 5035.

BG69290 - Client provided soil jar for volatile analysis. Phoenix prepared sample per method 5035.

BG69291 - Client provided soil jar for volatile analysis. Phoenix prepared sample per method 5035.

Methodology Summary

Metals

ICP :

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 6010C.

Mercury:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, 7471

Pesticides:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8081B.

Polychlorinated Biphenyls (PCBs):

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8082A.

Semivolatile Organic Compounds

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8270D.

Volatile Organics

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update III, Method 8260C.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

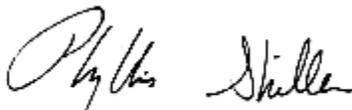

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the pesticide analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

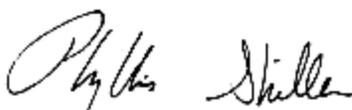

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B* = Present in blank, a bias is possible.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

Semi-Volatile Comment:

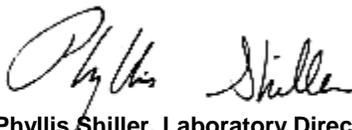

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the pesticide analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B* = Present in blank, a bias is possible.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

Comments:

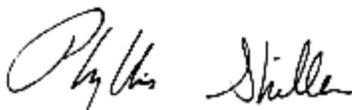

TRIP BLANK INCLUDED 100% SOLID ASSUMED

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

Comment:

Alpha and gamma chlordane were spiked and analyzed instead of technical chlordane. Gamma chlordane recovery is reported in the LCS, LCSD, MS and MSD.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

SDG Comments

July 29, 2014

SDG I.D.: GBG72576

Version 1: Analysis results minus QC and forms.

Version 2: Complete report with QC and forms.

8260 Volatile Organics:

1,2-Dibromoethane, 1,2,3 Trichloropropane, and 1,2-Dibromo-3-chloropropane do not meet NY TOGS GA criteria, these compounds are analyzed by GC/FID method 504 or 8011 to achieve this criteria.

SIM Analysis:

The lowest possible reporting limit under SIM conditions is 0.02 ug/L. The NY TOGS GA criteria for some PAHs is 0.002 ug/L. This level can not be achieved.

Methodology Summary

Metals

ICP :

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 6010C.

Mercury:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, 7471

Pesticides:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8081B.

Polychlorinated Biphenyls (PCBs):

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8082A.

Semivolatile Organic Compounds

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8270D.

Volatile Organics

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update III, Method 8260C.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 3 = This parameter exceeds laboratory specified limits.
 B* = Present in blank, a bias is possible.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 3 = This parameter exceeds laboratory specified limits.
 B* = Present in blank, a bias is possible.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 3 = This parameter exceeds laboratory specified limits.
 B* = Present in blank, a bias is possible.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
 3 = This parameter exceeds laboratory specified limits.
 B* = Present in blank, a bias is possible.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

% TCMX	97	99	103	4.0				30 - 150	20

Comment:

A LCS and LCSD duplicate were performed instead of a MS and MSD. Alpha and gamma chlordane were spiked and analyzed instead of technical chlordane. Gamma chlordane recovery is reported in the LCS, LCSD, MS and MSD.

Comment:

A blank MS/MSD was analyzed with this batch.

l = This parameter is outside laboratory lcs/lcsd specified recovery limits.
m = This parameter is outside laboratory ms/msd specified recovery limits.
r = This parameter is outside laboratory rpd specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.
