CERTIFICATION

I, Chawinie Reilly, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Redevelopment Project located at 211 West 28th Street, Manhattan, NY, (NYC VCP Site No. TBD and OER project Number TBD). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Qualified Environmental Professional

Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 211 West 28th Street in the Chelsea section of Manhattan, New York, and is currently identified as Block 778, Lot 33 on the New York City Tax Map. Figure 1 shows the Site location. Lot 33 is a rectangular shaped lot consisting of 24.87 feet of street frontage on West 28th Street and a depth of approximately 98.75 feet for a total of approximately 2,456 ft². The Site is located on the north side of West 28th Street between 7th Avenue and 8th Avenue and is bordered by West 28th Street to the south, a 6-story commercial/office building to the east (207 West 28th Street), a 9-story commercial/office building to the north, a 5-story multi-family walk-up building to the west (213 West 28th Street), and two 10-story and one 6-story school buildings to the south just beyond West 28th Street. A map of the site boundary is shown on Figure 2.

The entire footprint of Lot 33 is currently developed with a 6-story commercial building that is currently vacant.

Summary of Proposed Redevelopment Plan

The development project consists of redeveloping the lot with a new 14-story residential apartment building with a full cellar level. The cellar level will consist of a multi-purpose room, a bicycle storage room, a laundry room, a janitor's closet, a trash compactor and recycling room, six mechanical rooms, a stairwell, and an elevator. The first floor consists of the residential lobby containing the mailbox area, as well as the elevator, the stairwell, two supportive service areas, and two janitor closets. Floors 2 through 12 will consist of three residential apartments. The thirteenth floor will consist of the two residential apartments. The fourteenth floor will consist of one residential apartment.

No excavation is anticipated to be required for the new building. A new slab will be installed across entire building foot print. The site will not be equipped with a yard area. The water table

is expected at approximately 37 feet below grade surface (bgs), and therefore will not be encountered during excavation.

Layout of the redevelopment plans for the cellar level is presented in Figure 3. The current zoning designation is M1-6D. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

A Phase I Environmental Site Assessment was performed by EBC on January 17, 2015. The Phase I Report noted the following recognized environmental condition in connection with the Site:

- Some of the past uses identified for the Site, including the printing use, fur dyeing company, scientific tool and die company, and aluminum company may have been associated with the use and storage of hazardous materials, such as solvents, metals, and dyes.
- Through the FDNY Review during the Phase I ESA, a tank was noted as being on the Site in 1985. It was not listed on the Sanborn maps or in the Federal Database search. The FDNY records did not indicate if the tank is an AST or UST. No tanks were noted during the site inspection.

EBC recommended a Phase II Subsurface Investigation including soil borings and sub slab vapor analysis to determine if any solvents, dyes, or metal contamination is present.

EBC conducted a Phase II Report on January 27, 2015. The Phase II Report and retained the following results:

- No VOCs were detected in any of the soil samples above Unrestricted Use SCOs. Chlorinated VOC tetrachloroethene (PCE) was detected in two of the 2-4 foot interval soil samples at concentrations well below Unrestricted Use SCOs.
- Soil vapor results indicated petroleum related VOCs were present at low concentrations.
- Chlorinated VOC concentrations in soil gas samples were below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion.

Areas of Concern (AOCs) identified for the Site include:

1. The presence of historic fill material to depths as great as 2 feet below cellar grade;
2. The Site was utilized as a fur dyeing company, scientific tool and die company, an aluminum company, and printing use; and
3. Through the FDNY Review during the Phase I ESA, a tank was noted as being on the Site in 1985. It was not listed on the Sanborn maps or in the Federal Database search. The FDNY records did not indicate if the tank is an AST or UST. No tanks were noted during the site inspection.

Summary of the Work Performed under the Remedial Investigation

EBC performed the following scope of work at the Site in January of 2015:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed three soil borings across the Site, and collected six soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three sub-slab soil gas implants and collected three soil gas samples for chemical analysis.

Summary of Environmental Findings

1. The elevation of the Site is approximately 34 feet.
2. Depth to groundwater is estimated to be approximately 37 feet below sidewalk grade.
3. Groundwater flow is generally northwest.
4. Depth to bedrock at the Site is greater than 100 feet.
5. The stratigraphy of the Site surrounding the existing foundation slab from the surface down consists of historic fill material to depths as great as 2 feet below cellar grade, underlain by native grey silt.
6. Soil/fill samples results were compared to New York State Department of Environmental Conservation (NYSDEC) Part 375 Table 375-6.8 Unrestricted Use and Restricted Residential Use Soil Cleanup Objectives (SCOs). The sample results showed no PCBs above detection limits. Several VOCs including acetone (9.4 µg/kg), methylene chloride

(maximum [max.] of 4.6 µg/kg), and tetrachloroethene (max. of 2.2 µg/kg) were detected in all six soil samples at concentrations below Unrestricted Use SCOs. Several SVOCs, including benzo(b)fluoranthene (130 µg/kg), benzyl butyl phthalate (max. of 970 µg/kg), bis(2-ethylhexyl)phthalate (max. of 3,300 µg/kg), dimethylphthalate (130 µg/kg), di-n-butylphthalate (max. of 810 µg/kg), fluoranthene (max. of 170 µg/kg), phenanthrene (170 µg/kg), and pyrene (max. of 170 µg/kg), were detected in all of the shallow soil samples and one deep soil sample at concentrations below Unrestricted Use SCOs. Five pesticides including, 4,4'-DDD (max. of 12 µg/kg), 4,4'-DDE (max. of 40 µg/kg), 4,4'-DDT (max. of 140 µg/kg), dieldrin (max. of 24 µg/kg), and endrin (max. of 33 µg/kg) were detected in all three of the shallow soil samples and two of the deep soil samples above Unrestricted Use SCOs, but below Restricted Residential Use SCOs. Several metals including cadmium (max 5.01 mg/kg), chromium (max. of 33.1 mg/kg), copper (max. of 86.7 mg/kg), lead (max. of 328 mg/kg), mercury (max. of 0.4 mg/kg), silver (max. of 316 mg/kg), and zinc (max. of 264 mg/kg) exceeded Unrestricted Use SCOs. Of these metals, silver and cadmium also exceeded Restricted Residential Use SCOs. Overall, the soil results were consistent with data identified at sites with urban fill material in NYC. Groundwater sampling was not performed as part of this investigation due to site access issues. One groundwater well be installed in the sidewalk prior to start of construction.

Soil vapor samples collected during the 2015 EBC RI were compared to the New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion (October 2006) Matrix 1 and Matrix 2 values. Samples indicated petroleum-related and chlorinated VOCs were present at low concentrations. The total concentration of petroleum-related VOCs (BTEX) ranged from 20.36 µg/m³ to 163.92 µg/m³. The chlorinated VOC, trichloroethylene (TCE) was detected in one of the soil gas samples at 1.72 µg/m³. Tetrachloroethylene (PCE) was detected in all three soil gas samples ranging in concentration from 2.91 µg/m³ to 7.39 µg/m³. Carbon tetrachloride (maximum of 0.44 µg/m³) was detected in all three of the soil gas samples. 1,1,1-Trichloroethane was not detected in any of the soil gas samples. The TCE, PCE, 1,1,1-Trichloroethane and carbon tetrachloride concentrations are below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

The Arker Companies has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.05-acre Site located at 211 West 28th Street in the Chelsea section of Manhattan, New York. The Site will be redeveloped with a 14-story residential apartment building with a full cellar level. The portion of the RI work conducted on the Site was conducted in July of 2015. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY § 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 211 West 28th Street in the Chelsea section of Manhattan, New York, and is currently identified as Block 778, Lot 33 on the New York City Tax Map. Figure 1 shows the Site location. Lot 33 is a rectangular shaped lot consisting of 24.87 feet of street frontage on West 28th Street and a depth of approximately 98.75 feet for a total of approximately 2,456 ft². The Site is located on the north side of West 28th Street between 7th Avenue and 8th Avenue and is bordered by West 28th Street to the south, a 6-story commercial/office building to the east (207 West 28th Street), a 9-story commercial/office building to the north, a 5-story multi-family walk-up building to the west (213 West 28th Street), and two 10-story and one 6-story school buildings to the south just beyond West 28th Street. A map of the site boundary is shown on Figure 2.

The entire footprint of Lot 33 is currently developed with a 6-story commercial building that is currently vacant.

1.2 Proposed Redevelopment Plan

The development project consists of redeveloping the lot with a new 14-story residential apartment building with a full cellar level. The cellar level will consist of a multi-purpose room, a bicycle storage room, a laundry room, a janitor's closet, a trash compactor and recycling room, six mechanical rooms, a stairwell, and an elevator. The first floor consists of the residential

lobby containing the mailbox area, as well as the elevator, the stairwell, two supportive service areas, and two janitor closets. Floors 2 through 12 will consist of three residential apartments. The thirteenth floor will consist of the two residential apartments. The fourteenth floor will consist of one residential apartment.

No excavation is anticipated to be required for the new building. A new slab will be installed across entire building foot print. The site will not be equipped with a yard area. The water table is expected at approximately 37 feet below grade surface (bgs), and therefore will not be encountered during excavation.

Layout of the redevelopment plans for the cellar level is presented in Figure 3. The current zoning designation is M1-6D. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The area immediately surrounding Site consists of a 6-story commercial/office building to the east, a 9-story commercial/office building to the north, a 5-story multi-family walk-up to the west, and a 6-story and two 10-story school buildings to the south beyond West 28th Street. Figure 4 shows the surrounding land usage of the adjacent properties listed below as well as additional properties located up to 500 feet away from the Site. No hospitals or daycare facilities are located within a 250 ft radius of the Site. Directly across the street located at 300 7th Avenue, Manhattan, NY are buildings associated with The Fashion Institute of Technology.

Surrounding Property Usage

Direction	Property Description
North – Adjacent Properties	<u>Block 778, Lot 46 – 210 West 29th Street</u> A 2,475 ft ² lot developed with a 9-story commercial/office building..
South – Opposite Side of West 28 th Street	<u>Block 777 Lots 1, 18, & 37– 340 8th Avenue, 243 West 27th Street, and 300 7th Avenue</u> A 66,700 ft ² and 59,350 ft ² lots developed with two 10-story school facility buildings. A 31,950 ft ² lot developed with a 6-story school facility building
East – Adjacent Property	<u>Block 778, Lot 34 – 207 West 28th Street</u> A 9,880 ft ² lot developed with a 6-story commercial/office building.

West – Adjacent Property	<u>Block 778, Lot 32 – 213 West 28th Street</u> A 2,456 ft ² lot developed with a 5-story residential multi-family walk-up building.
---------------------------------------	---

2.0 SITE HISTORY

2.1 Past Uses and Ownership

A Phase I Environmental Site Assessment was performed by EBC on January 17, 2015. The Phase I Report noted the following recognized environmental condition in connection with the Site:

- Some of the past uses identified for the Site, including the printing use, fur dyeing company, scientific tool and die company, and aluminum company may have been associated with the use and storage of hazardous materials, such as solvents, metals, and dyes.
- Through the FDNY Review during the Phase I ESA, a tank was noted as being on the Site in 1985. It was not listed on the Sanborn maps or in the Federal Database search. The FDNY records did not indicate if the tank is an AST or UST. No tanks were noted during the site inspection.

2.2 Previous Investigations

A Phase I Environmental Site Assessment was performed by EBC on January 17, 2015. The Phase I Report noted the following recognized environmental condition in connection with the Site:

- Some of the past uses identified for the Site, including the printing use, fur dyeing company, scientific tool and die company, and aluminum company may have been associated with the use and storage of hazardous materials, such as solvents, metals, and dyes.
- Through the FDNY Review during the Phase I ESA, a tank was noted as being on the Site in 1985. It was not listed on the Sanborn maps or in the Federal Database search. The FDNY records did not indicate if the tank is an AST or UST. No tanks were noted during the site inspection.

EBC recommended a Phase II Subsurface Investigation including soil borings and sub slab vapor analysis to determine if any solvents, dyes, or metal contamination is present.

EBC conducted a Phase II Report on January 27, 2015. The Phase II Report and retained the following results:

- No VOCs were detected in any of the soil samples above Unrestricted Use SCOs. Chlorinated VOC tetrachloroethene (PCE) was detected in two of the 2-4 foot interval soil samples at concentrations well below Unrestricted Use SCOs.
- Soil vapor results indicated petroleum related VOCs were present at low concentrations.
- Chlorinated VOC concentrations in soil gas samples were below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion.

2.3 Site Inspection

Mr. Kevin Brussee of EBC performed a site inspection on January 14, 2015, beginning at approximately 12:00 pm. The reconnaissance included a visual inspection of the property, the sidewalk immediately in front of the Site, and the exterior of adjacent properties. The Site consisted of a 6-story commercial office building. No evidence of an aboveground or underground storage tank was observed during the site inspection.

2.4 Areas of Concern

Areas of Concern (AOCs) identified for the Site include:

1. The presence of historic fill material to depths as great as 2 feet below cellar grade;
2. The Site was utilized as a fur dyeing company, scientific tool and die company, an aluminum company, and printing use; and
3. An underground gasoline tank was noted on the Site in 1985 and was identified through the Local Agency Review during the Phase I ESA.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Chawinie Reilly.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

EBC performed the following scope of work at the Site in January of 2015:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed three soil borings across the Site, and collected six soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three sub-slab soil gas implants and collected three soil gas samples for chemical analysis.

4.1 Geophysical Investigation

A geophysical investigation was not performed at this Site. No excavation is planned for the Site and the depth of the current cellar is at 5.85 feet bgs.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

On January 26 and January 30, 2015, three soil borings (B1 through B3) were installed in the approximate locations shown on Figure 5. The three soil boring locations were chosen to gain representative soil quality information across the Site. For each of the three soil borings, soil samples were collected continuously from cellar grade to a final depth of 4 feet below existing cellar grade using a slap hammer and a hand auger. The cellar is located 5.85 feet below existing grade, therefore samples collected from the 0-2 foot interval below cellar grade are 6-8 feet below existing grade. Samples collected from the 2-4 foot interval below the cellar grade are 8-10 feet below existing grade. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a photoionization detector (PID) and visually inspected for evidence of contamination. No PID readings above background concentrations were detected. From each soil boring, soil samples were retained for laboratory analysis from the intervals 0 to 2 feet below cellar grade and 2 to 4 feet below cellar grade.

Soil boring details are provided in Table 1. Boring logs were prepared by a Qualified Environmental Professional and are attached in Attachment B.

Groundwater wells were not installed due to access issues within the current structure. One groundwater well will be installed in the sidewalk prior to start of construction; to assess the quality of groundwater.

Survey

Soil borings and soil gas sampling locations were located to the nearest 0.10 foot with respect to two or more permanent site features.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Six soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 2, 3, 4 and 5. Figure 5 shows the location of samples collected during this RI. Laboratories and analytical methods for soil samples collected during the RI are shown below.

The six soil samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted for analysis with proper chain of custody to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA

Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and target analyte list (TAL) metals.

Sub Slab Soil Vapor Sampling

Three sub-slab soil vapor probes (SS1, SS2, and SS3) were installed and three soil vapor samples were collected for chemical analysis during this RI. The three soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 6, and the soil vapor sampling logs are included in Attachment D. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

All three sub-slab soil vapor probes were installed by drilling a ½ inch hole through the concrete slab with a handheld drill and inserting 1/4 inch polyethylene tubing to no more than 2 inches below the base of the slab. All of the probes were installed utilizing the same technique to minimize discrepancies. The approximate location of each of the sub-slab soil vapor probes is shown on Figure 5. The three sub-slab soil vapor probes installed on January 26, 2015 were installed to a depth of 2 feet below the concrete slab. Each probe was attached to ¼ inch polyethylene tubing which extended approximately 18 inches beyond that needed to reach the surface. The tubing was capped with a ¼ inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the probe to a height of approximately 1 foot above the bottom of the probe. The remainder of the borehole was sealed with a bentonite slurry to the surface.

Soil vapor sampling for the three sub-slab soil vapor probes was conducted on January 26, 2015. Prior to sampling, each sampling location was tested to ensure a proper surface seal had been obtained. In accordance with NYSDOH guidance (NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2005), a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. Prior to testing and collecting samples, the surface immediately surrounding the polyethylene tubing of the vapor implant was sealed using a 1 foot ft by 1 ft square sheet of 2 mil HDPE plastic firmly adhered to a wetted layer of granular bentonite. The seal was then tested by enriching the air space above the seal with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model

MGD-2002, Multi-Gas Detector) for a minimum of 15 minutes. The tracer gas test procedure was employed at all four soil vapor sampling locations. No surface seal leaks were observed at any of the locations.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 6-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the four vapor implants. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a bound field note book. Sampling then proceeded by fully opening the flow control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approx 2 hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The soil gas sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet (Attachment D). Samples were submitted to Phoenix for laboratory analysis of VOCs EPA Method TO-15.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Phoenix Environmental Laboratories
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Phoenix Environmental Laboratories
Chemical Analytical Methods	Soil analytical methods: <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000);

	<ul style="list-style-type: none">• PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: <ul style="list-style-type: none">• VOCs by TO-15 VOC parameters.
--	--

Results of Chemical Analyses

Laboratory data for soil and soil vapor are summarized in Tables 2 through 6. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Attachment E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the Site from the surface down consists of a layer of urban fill material that extends to depths as great as 2 feet below cellar grade in some areas, underlain by native grey silt.

Hydrogeology

Groundwater flow is generally to the northwest.

5.2 Soil Chemistry

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 2 through 5. Figure 6 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Unrestricted Use and Restricted Residential Use Soil Cleanup Objectives.

Data collected during the RI showed showed no PCBs above detection limits. Several VOCs including acetone (9.4 µg/kg), methylene chloride (maximum [max.] of 4.6 µg/kg), and tetrachloroethene (max. of 2.2 µg/kg) were detected in all six soil samples at concentrations below Unrestricted Use SCOs. Several SVOCs, including benzo(b)fluoranthene (130 µg/kg), benzyl butyl phthalate (max. of 970 µg/kg), bis(2-ethylhexyl)phthalate (max. of 3,300 µg/kg), dimethylphthalate (130 µg/kg), di-n-butylphthalate (max. of 810 µg/kg), fluoranthene (max. of 170 µg/kg), phenanthrene (170 µg/kg), and pyrene (max. of 170 µg/kg), were detected in all of the shallow soil samples and one deep soil sample at concentrations below Unrestricted Use SCOs. Five pesticides including, 4,4'-DDD (max. of 12 µg/kg), 4,4'-DDE (max. of 40 µg/kg), 4,4'-DDT (max. of 140 µg/kg), dieldrin (max. of 24 µg/kg), and endrin (max. of 33 µg/kg) were detected in all three of the shallow soil samples and two of the deep soil samples above Unrestricted Use SCOs, but below Restricted Residential Use SCOs. Several metals including cadmium (max 5.01 mg/kg), chromium (max. of 33.1 mg/kg), copper (max. of 86.7 mg/kg), lead (max. of 328 mg/kg), mercury (max. of 0.4 mg/kg), silver (max. of 316 mg/kg), and zinc (max. of 264 mg/kg) exceeded Unrestricted Use SCOs. Of these metals, silver and cadmium also

exceeded Restricted Residential Use SCOs Overall, the soil results were consistent with data identified at sites with urban fill material in NYC.

5.3 Soil Vapor Chemistry

Soil vapor samples indicated petroleum-related and chlorinated VOCs were present at low concentrations. The total concentration of petroleum-related VOCs (BTEX) ranged from 20.36 $\mu\text{g}/\text{m}^3$ to 163.92 $\mu\text{g}/\text{m}^3$. The chlorinated VOC, trichloroethylene (TCE) was detected in one of the soil gas samples at 1.72 $\mu\text{g}/\text{m}^3$. Tetrachloroethylene (PCE) was detected in all three soil gas samples ranging in concentration from 2.91 $\mu\text{g}/\text{m}^3$ to 7.39 $\mu\text{g}/\text{m}^3$. Carbon tetrachloride (maximum of 0.44 $\mu\text{g}/\text{m}^3$) was detected in all three of the soil gas samples. 1,1,1-Trichloroethane was not detected in any of the soil gas samples. The TCE, PCE, 1,1,1-Trichloroethane and carbon tetrachloride concentrations are below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion.

5.4 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected for the Site.

5.5 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

EXECUTIVE SUMMARY

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of The Arker Companies: 211 W 28th Street, New York, New York, 10001. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

The Site consists of twelve lots located on the north side of West 28 Street in the Chelsea Section of the Borough of Manhattan, City of New York, New York County, New York. The street address associated with the Site is 211 W 28th Street, New York, New York 10001 and is identified as Block 778 and Lot 33 on the New York City (NYC) Tax Map. The lot is rectangular with 24.87 feet of street frontage along W 28th Street, and extends to a depth of 98.75 feet, for a total area of 2,456 square feet.

EBC was able to establish a history for the property dating back to 1890. The site appears to have been developed sometime prior to 1890 with two small buildings at the north and south end of the property. The northernmost building appears to have been demolished by 1899. Between 1899 and 1911, the remaining building on Site was demolished and the site was redeveloped with a 6-story building (with a cellar), occupying the entire lot. The building was identified on Sanborn maps containing an elevator. The site is listed as a store house (1911), storage for a wall paper warehouse (1911) and was a public storage facility (1919 and 1930). From the early 1920's until approximately 2008, the building contained several different clothing retail stores and fur companies, including a fur dyeing company from 1938 until 1941. During this time, the property contained flower shops, a scientific tool and die company, and novelty stores. In 1950 and 1976, the building was a mixed use building with both a flat and stores. At this time, the property contained a podiatrist and exports agency. From 1979 to 2005, the

building was mixed use with commercial space on the first floor with residential space above. Between 1979 and 2005, the building contained a moving company, aluminum company, finance agency, interior design studio, vending company, photographer studio, wellness studio and residential tenants. No residential tenants were identified for the Site between 2005 and 2013. The building appears to have been abandoned sometime between 2013 and 2015, and the last businesses remaining before its closure included a flower shop (occupying the first floor and cellar), a yoga studio, a photographer studio, and computer networking office.

RECOGNIZED ENVIRONMENTAL CONDITIONS

Based upon reconnaissance of the Site and surrounding properties, interviews and review of historical records and regulatory agency databases, *this assessment has revealed the following recognized environmental condition in connection with the Site:*

Historic Site Uses: Some of the past uses identified for the Site, including the printing use, fur dyeing company, scientific tool and die company, and aluminum company may have been associated with the use and storage of hazardous materials, such as solvents, metals, and dyes. Printing operations have been associated with the generation of waste ink and ink sludges that could contain solvents and heavy metals. Tool and die operations typically utilize solvents, which even when properly stored and disposed of, can be released from these facilities in small, frequent releases through floor drains, cracked concrete, and sewer systems. Chlorinated solvents are highly mobile chemicals that can easily accumulate in soil.

ADDITIONAL ENVIRONMENTAL ISSUES

The Site has been assigned an E-designation (E-137) for Hazmat and Noise as part of the Hudson Yards rezoning completed by the City in January 2005 (CEQR 03DCP031M).

An E-designation does not interfere with the present use of the Site; however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. Such release may require a full subsurface investigation,

remedial and health and safety planning, implementation of a remedial program and documentation that the remedial program was completed during redevelopment of the property.

The Noise E requires that any new building constructed on the property include a window wall system which will achieve a noise attenuation of 35 dBA to maintain a maximum interior noise level of 45 dBA. An alternate means of ventilation such as through the wall or central air conditioning will also be required to maintain a closed window condition. Satisfaction of the Noise E requires the submission of a Noise Remedial Action Plan and an Installation Report certified by a Professional Engineer or Registered Architect.

Additional information regarding “E” sites can be found on the New York City Office of Environmental Remediation website: http://www.nyc.gov/html/oer/html/e_designation/e_designation.shtml.

1.0 INTRODUCTION

1.1 Purpose

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of The Arker Companies: 211 W 28th Street, New York, New York, 10001. (**Figure 1**). The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

1.2 Scope of Services

The assessment consisted of a visual inspection of the site and surrounding areas, interviews, a review of historical information and maps, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Southport, Connecticut, provided the following information: a computerized database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, and a historical telephone directory search.

EBC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the Site or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). EBC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

1.3 Significant Assumptions

EBC has made the following assumptions in the preparation of this report:

1. Groundwater – The depth to groundwater at the Site is approximately 37 feet below grade surface (bgs). Groundwater is expected to flow north west, consistent with the regional trend.
2. Regulatory Records Information – EBC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate and current.
3. Other - EBC assumes that all information provided through interviews is complete and unbiased.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by EBC.
4. EBC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. EBC does not assume

liability for financial or other losses or subsequent damage caused by or related to any use of this document.

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
6. This report is based, in part, on information supplied to EBC by third-party sources. While efforts have been made to substantiate this third-party information, EBC cannot attest to the completeness or accuracy of information provided by others.

1.5 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between The Arker Companies and EBC.

1.6 User Reliance

This report was prepared for the exclusive use of The Arker Companies; no other party may use the report without the written authority of EBC.

2.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

2.1 Location and Legal Description

The Site consists of one lot located on the north side of West 28th in the Chelsea section of the Borough of Manhattan, City of New York, New York County, New York. The street address associated with the Site is 211 West 28th Street, Manhattan, New York 10001 and is identified as Block 778 and Lot 30 on the New York City (NYC) Tax Map. The lot is rectangular and is approximately 2,470 square feet (s.f.) in total, comprised of approximately 24.87 feet of street frontage along 28th West Street and extending approximately 98.75 feet into the lot.

Records were obtained from the New York City Registrar on January 16, 2015, including copies of the tax map and deeds for the Site dating back to 1981. A copy of all of the information obtained is attached in Appendix B.

The deed transfer information for the Site is listed below:

Block 778 Lot 30 -

August 26, 1981 - Ownership of Site transferred from Edward L. Zimmerman to Alberly Ohayon.

May 21, 1984 - Ownership of Site transferred from Jerome Rapoport to Town House Associates.

May 21, 1984 - Ownership of Site transferred from Albert Ohayon to 211 W 28th St Corp.

March 14, 1985 - Ownership of Site transferred from 211 W 28th St Corp to Kaiser Anwar.

December 4, 2002 - Ownership of Site transferred from Kaiser Anwar to 211 W 28 Realty LLC.

May 26, 2005 - Ownership of Site transferred from 211 W 28 Realty LLC to Sun Wansam Realty Corp.

July 2, 2013 - Ownership of Site transferred from Sun Wansam Realty LLC to Lawson 28 LLC.

2.2 Site Characteristics

The Site is developed with a six-story commercial office building, encompassing the entire lot. Site topography was noted to be generally level. Photographs taken during of the Site during the site inspection are attached in **Appendix A**.

2.2.1 Utilities

The Site is developed with a six-story commercial/office building. Electric service is provided by Con-Edison, potable water is supplied by the New York City Department of Environmental Protection (NYCDEP). Sanitary waste for the surrounding buildings is discharged to the New York City municipal sewer system.

2.3 Physical Setting

The topography of the site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Manhattan, New York (NY) Quadrangle (Figure 3), which indicates that the Site has a topographic elevation of approximately 32 feet above mean sea level (amsl). The Site is relatively flat with a generally level topographic gradient.

2.3.1 Surface Water

The Hudson River is located approximately 0.75 miles to the northwest of the Site.

2.3.2 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the Site is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinant soil types may be present in the general vicinity of the Site. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly-loamy sand, sandy loam, unweathered bedrock and stratified.

Additional information regarding the soil classification is also included in on Page A-6 of the Environmental Data Resources, Inc. (EDR) database report (Appendix E).

2.3.3 Groundwater

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the Upper Glacial, Magothy and Lloyd Aquifers Beneath Long Island, March-April 2006 (**Figure 6**), the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 32 feet amsl, the depth to groundwater in the vicinity of the Site is approximately 37 feet below grade surface (bgs). Groundwater is expected to flow to the west consistent with the regional trend.

2.3.4 Radon Risk

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that the Manhattan area is not a radon risk area. The EDR report provides information from the New York State Department of Health (NYSDOH) radon survey which indicates that 31 radon tests have been conducted in New York County. Test results indicate average radon concentrations of 0.690 pCi/L (first floor level) and 1.490 pCi/L (basements). Data indicate that approximately nineteen percent of basements tested showed results in excess of the 4.0 pCi/L USEPA action level. Based on these data, radon does not likely represent an environmental concern.

3.0 PROPERTY USAGE

3.1 Current Property Usage

The Site is developed with a six-story mixed use building that encompasses the entire lot. Site topography was noted to be generally level.

A review of New York City Department of Buildings (NYCDOB) records and the NYC Department of City Planning Zoning map indicates the lot was zoned manufacturing M1-5 until September 21, 2011. Since then it has been zoned manufacturing M1-6D (**Figure 5A & 5B**).

3.2 Current Usage of Adjoining/Surrounding Properties

A summary of the uses of the surrounding/adjacent properties is described below. Photos of the exterior of adjacent properties are attached in **Appendix A**.

Surrounding Property Usage

Direction	Property Description
North Adjacent to Site	210 W 29 Street, a 9-story mixed use building with the first and second floor commercial space, currently occupied by a furs and shearlings company. The floors above are office space.
South Opposite side of 28 Street	300 7 Avenue, the NYC Fashion Institute of Technology campus. A single story conference is directly across W 28 Street from Site.
East Adjacent to Site	207 W 28 Street, a 5-story mixed use building with first floor commercial space, currently a shipping company, and office space above.
West Adjacent to Site	211 W 28 Street, a 5-story mixed used building with a restaurant on the first floor and residential space above.

3.3 Historical Usage of Site and Surrounding Properties

Historical sources researched to determine past usage of the Site and surrounding properties are as follows:

Sanborn Fire Insurance Maps - Sanborn fire insurance maps for the Site and surrounding area were reviewed for the years 1890, 1899, 1911, 1919, 1930, 1950, 1976, 1979, 1980, 1982, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004 and 2005. The review is summarized in Section 3.3.1. Copies of Sanborn maps are included as **Appendix C**.

City Directory Abstract - A directory of historical telephone listings at the Site and surrounding properties were reviewed from approximately five year intervals for the years 1920 through 2013. The review is summarized in Sections 3.3.2 below. A copy of the City Directory is included in **Appendix D**.

3.3.1 Sanborn Fire Insurance Maps - Site and Adjacent Properties

The historical usage of the Site and adjacent properties, identified through Sanborn map review, is summarized below:

1890

Subject Site:

The Site appears to have been developed sometime prior to 1890 with one, four-story building on the Southern portion of the Site fronting W 28th Street, and one, three-story building at the north end of the Site.

Adjacent Sites:

The northerly adjacent property is developed with one, three-story building on the north half of the property, and one, two-story building on the south end. The westerly adjacent lot is developed with two buildings, the southerly adjacent property (along W 28th Street) is developed with a four-story building, and the northerly adjacent building is developed with a three-story building. To the east of the Site was a six-story paper manufacturing facility and to the south was a three-story commercial building with a stable in the rear yard.

1899

Subject Site:

The building at the north end has been demolished and the building along W 28th Street is identified as five stories.

Adjacent Sites:

The property to the north remains the same as it appears on the 1890 map, except the building on the north end of the Site is now listed as a dwellings. To the west of the property is identified as a five-story building occupying most of the property. The property to the east

remains the same as the 1890 map and the property to the south contains a three-story and a four-story dwelling.

1911

Subject Site:

The Site appears to be developed with a six-story store house with a basement, as part of the adjacent wallpaper factory to the east. The building occupies the entire lot. There is a frame enclosed elevator shaft northwest of the center of the building. The building has fire doors into the building to the east.

Adjacent Site:

To the north, the northern building is now a mixed use store and dwelling. Both the north and south buildings are described as junk. The building to the west is now listed as having a store on the first floor and dwellings above. The building to the east is now a wall paper factory and to the south across W 28th street are the same dwellings listed in the 1899 map.

1919

Subject Site:

The Site is identified as a public storage warehouse. An elevator is identified in the southwest corner of the building.

Adjacent Site:

All surrounding properties remain the same with the exception of the building to the east, which is now a furniture manufacturing facility. Two tanks, one 7,500 and one 10,000 gallon, are listed at the west side of the property. The property to the south is not shown in this map.

1930

Subject Site:

The Site appears the same as the 1919 map except the elevator is shown slightly further towards the rear of the building.

Adjacent Site:

All adjacent properties appear to remain the same with the exception of the properties to the south across W 28th Street, which appear to be a four-story flat and a three-story lumber facility.

1950

Subject Site:

The subject Site appears the same as the 1930 map, except that it is identified as a mixed use building, containing a store on the first floor.

Adjacent Sites:

The furniture warehouse to the east of the property is listed as a store and a flat.

1976

Subject Site:

The Site appears the same as the 1950 map.

Adjacent Sites:

The buildings to the south appear to have been demolished and the New York Fashion Institute of Technology has been constructed. Adjacent to the Site across W 28th Street is a vacant area followed by a gym and auditorium.

1979, 1980, 1982, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003

Subject Site:

The Site appears the same as in 1976, except the building now consists of commercial space on the first floor followed by residential space above.

Adjacent Sites:

The properties to the north, east and west appear the same as in 1976 except they are all identified as commercial.

2004, 2005

Subject Site:

The Site remains the same as the 1979 map.

Adjacent Sites:

The property to the south, the New York Fashion Institute of Technology, has constructed a one-story building located directly across W 28th Street from the subject Site.

The Site appears to have been developed sometime prior to 1890 with two small buildings at the north and south ends of the property. The northern building appears to have been demolished by 1899. Sometime between 1899 and 1911, the remaining building on Site was appears to have demolished and redeveloped with a six-story store building (with a cellar), occupying the entire lot. The building was identified as storage for a wallpaper warehouse in 1911 and a public storage facility from 1919 through 1930. In 1950 and 1976, the building was identified as a mixed use building with a store on the first floor. From 1979 to 2005, the Site was identified as a mixed-use building with commercial space on the first floor with residential space above. The historical usage of the Site according to the Sanborn summary does not represent an environmental concern.

3.3.2 City Directory Listings

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (**Appendix D**) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property.

Historical city directory information is summarized as follows:

Date	Property Information
1920	<p>Subject Property: Address Not Listed In Research Source</p> <p>Adjacent Properties: Consumers Sales Co Ny Chas A Neuman Pres Non Beverage Liquors (207 W 28th), Neuman Chas A Pres Consumers Sales Co Inc (207 W 28th), Concord Publishing Co Rtn Aug L Ganthier (209 W 28th), Fischthal Frimitt & Dollinger Max Frischthal Wm Frimitt Hyman Dollinger Furs (210 W 28th), Smith J Wesley Geo Smith & Son (210 W 28th), Smith Jno W Chimney Expert (210 W 28th), Smith Geo & Son J Wesley Smith Ventilating (210 W 28th), Mccabe Jno T Tormn (210 W 28th), Samios Peter K Tailor (213 W 28th), Odonovan L J, Moret Emil Waiter (213 W 28th), Hartman Philip Repairmn (213 W 28th), Chadwick Harry Presser (213 W 28th), Baratto Jos Carp (213 W 28th), Mcnamee Jas J Stable (210 W 28th H Woodmere Li),</p>

-------------	--

Information regarding additional surrounding properties identified on the City Directory search is included with the search in Appendix D. The city directory indicated that the Site was occupied by several different clothing and fur companies (1923-2008), fur dyeing (1938-1942), fur blending (1963-1978), leather goods (1947), flower shops (1947-1950, 1968, 2006-2013), novelty stores (1947-1963), scientific tools and dyes (1947-1950), overseas buyers/exports agency (1956-1958), a laboratory (1958-1963), a podiatrist (1963), a moving company (1978-1983), aluminum company (1983), finance company (1983), interior design studio (1983), vending company (2006), photographers studio (2006-2008), wellness studio (2013) and residential tenants (1963-1983) Some of the past uses identified for the Site, including the printing use, fur dyeing company, scientific tool and die company, and aluminum company may have been associated with the use and storage of hazardous materials, such as solvents, metals, and dyes and therefore, represents an environmental concern (further discussed in Sections 5.2.4 and 8.1).

3.3.3 Aerial Photographs

EBC reviewed aerial photographs for the following years; 1924, 1940, 1943, 1951, 1954, 1961, 1966, 1974, 1984, 1995, 2006, 2009 and 2011 from EDR. Beginning 1924 to 2011, the Site appears to be developed with one building occupying the entire Site and is surrounded by several multi-story buildings. In 1974 the buildings adjacent to the south across W 28 Street are no longer present. In 2009 the properties to the south appear to be redeveloped. Historical aerial photographs are included in Appendix F.

3.3.4 Historical Topographic Maps

1924, 1940, 1943, 1951, 1954, 1961, 1966, 1974, 1984, 1995, 2006, 2009, 2011; Scale 1"=500

Subject Site:

The Site appears to be developed with a single building occupying the entire Site.

Adjacent properties:

The adjacent properties appear to be heavily developed.

Historical topographic maps are included in Appendix H.

3.4 Site History Summary

EBC was able to establish a history for the property dating back to 1890. The site appears to have been developed sometime prior to 1890 with two small buildings at the north and south end of the property. The northernmost building appears to have been demolished by 1899. Between 1899 and 1911, the remaining building on Site was demolished and the site was redeveloped with a 6-story building (with a cellar), occupying the entire lot. The building was identified on Sanborn maps containing an elevator. The site is listed as a store house (1911), storage for a wall paper warehouse (1911) and was a public storage facility (1919 and 1930). From the early 1920's until approximately 2008, the building contained several different clothing retail stores and fur companies, including a fur dyeing company from 1938 until 1941. During this time, the property contained flower shops, a scientific tool and die company, and novelty stores. In 1950 and 1976, the building was a mixed use building with both a flat and stores. At this time, the property contained a podiatrist and exports agency. From 1979 to 2005, the building was mixed use with commercial space on the first floor with residential space above. Between 1979 and 2005, the building contained a moving company, aluminum company, finance agency, interior design studio, vending company, photographer studio, wellness studio and residential tenants. No residential tenants were identified for the Site between 2005 and 2013. The building was appears to have been abandoned sometime between 2013 and 2015, and the last businesses remaining before its closure included a flower shop (occupying the first floor and cellar), a yoga studio, a photographer studio, and computer networking office.

4.0 USER PROVIDED INFORMATION

4.1 Title Records

A record of the deeds for the Site is discussed in Section 2.1.

4.2 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws.

No environmental liens were noted. Four (4) ECB violation liens were noted pertaining to exits being completed obstructed, two (2) work without permits, and occupancy different than what was previously listed in building department of records. None of these pose an environmental concern for the Site.

4.3 Specialized Knowledge

The user has not made EBC aware of any specialized knowledge regarding the chemicals or processes formerly in use at the Site or surrounding property.

4.4 Commonly Known or Reasonably Ascertainable Information

The user has not made EBC aware of any commonly known or reasonably ascertainable information regarding the past uses of the Site, specific chemicals in use at the Site or any spills, chemical releases or environmental cleanups at the Site.

4.5 Valuation Reduction for Environmental Issues

The user has not made EBC aware of any valuation reduction regarding the sale price of the property.

4.6 Owner, Property Manager and Occupant Information

According to New York City Department of Finance records, the current owners of the site are identified as Lawson 28 LLC (211 West 28th Street).

4.7 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the Site as part of the due diligence to support the acquisition of the property by The Arker Companies.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Environmental Data Resources (EDR) of Southport, Connecticut was retained to provide a computerized database search of the project area within an ASTM-standard radius of the Site. A list of the databases searched and the search radius is shown on the summary table below. EBC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix E**). A summary of standard environmental record sources researched is as follows:

5.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Federal Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
USEPA	National Priority List	NPL	1.0 mile
USEPA	National Priority List Deletions	Delisted NPL	1.0 mile
USEPA	Comprehensive Environmental Response Compensation and Liability Act Registry	CERCLIS	0.5 mile
USEPA	CERCLIS No Further Remedial Action Planned	CERCLIS-NFRAP	0.5 mile
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG	Site and Adjoining
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Site
USEPA	Emergency Response Notification System	ERNS	Site
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile
USEPA	Records of Decision	ROD	1.0 mile
USEPA	Mines Master Index	MINES	0.25 mile

Federal NPL List - The National Priority List (NPL) is the United States Environmental Protection Agency (USEPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the federal Superfund Program.

Findings: The Site is not listed as an NPL facility. One (1) NPL site was identified within a 1-mile radius of the Site. This site is located greater than 1/8th mile radius of the Site and based on

the relative distance and/or assumed direction of groundwater flow, this site is not expected to represent a significant environmental concern.

Federal Delisted NPL List – NPL Delisted Sites are former NPL sites that have been remediated and removed from the USEPA’s priority list. Sites are deleted where the USEPA has determined that no further response is appropriate.

Findings: The Site is not identified as a Delisted NPL facility. There were no Delisted NPL sites identified within a one-mile radius of the Site.

Federal CERCLIS List - The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the USEPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

Findings: The Site is not listed as a CERCLIS facility. No CERCLIS sites were listed within a half-mile radius of the Site.

Federal CERCLIS-NFRAP List – No Further Remedial Action Planned (NFRAP) sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of USEPA’s knowledge, assessment at a site has been completed and that USEPA has determined no further steps will be taken to list this site on the National Priorities List (NPL).

Findings: The Site is not listed as a CERCLIS-NFRAP facility. Two CERCLIS-NFRAP sites were listed within a half-mile radius of the Site. These sites are located greater than 1/8th mile radius from the Site and based on the relative distance, are not expected to represent a significant environmental concern.

Federal RCRA CORRACTS List - The RCRA Corrective Actions (CORRACTS) database is the USEPA’s list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

Findings: The Site is not listed as a RCRA CORRACTS facility. No RCRA CORRACTS sites were identified within a one mile radius of the Site.

Federal RCRA Treatment, Storage and Disposal Facilities - The USEPA Resource Conservation and Recovery Act (RCRA) program identifies reporting facilities that treat, store or dispose of hazardous waste.

Findings: The Site is not listed as a RCRA TSD site. No RCRA TSD sites are located within half-mile radius of the Site.

Federal RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A LQG is a site which generates more than 1,000 kilograms (kg) of hazardous waste during any one calendar month and can store waste on-site for up to 90 days. A SQG is a site which generates more than 100 and less than 1,000 kg of hazardous waste during any one calendar month and accumulates less than 6,000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1,000 kg of hazardous waste at any time. A CESQG is a site which generates less than 100 kg of hazardous waste or less than one kg of acutely hazardous waste during any one calendar month. A NonGen site is a former registered/regulated generator which does not presently generate hazardous waste.

Findings: The Site is not listed as a RCRA SQG, RCRA LQG, RCRA-CESQG and RCRA NonGen site. Two (2) RCRA LQG, nine (9) RCRA-SQG, ten (10) RCRA-CESQG and eighty-nine (89) RCRA NonGen facilities were identified within a 1/4 mile radius of the Site. No adjacent sites were identified. According to the EDR database, no violations are listed or corrective action has been taken for any of the remaining sites. Based on this information, these sites are not expected to represent a significant environmental concern.

Federal Institutional/Engineering Controls – Federal Institutional/Engineering Controls databases list sites with institutional/engineering controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Findings: No Federal Institutional/Engineering Controls were listed for the Site and no sites were identified within a ½ mile radius of the Site.

Federal Emergency Response Notification System - The Emergency Response Notification System (ERNS) is national database used collect information on reported releases of oil or hazardous substances.

Findings: Neither Site nor the adjacent properties were identified in the ERNS databases.

Federal Superfund Consent Decrees - The Superfund Consent Decrees (CONSENT) list identifies major legal settlements that establish responsibility and standards for cleanup at NPL sites.

Findings: The Site was not identified in the CONSENT database. One (1) site within one mile of the Site was identified in the CONSENT database. The site is located greater than 1/8th mile radius of the Site and therefore, does not represent an environmental concern.

Federal Records of Decision - Record of Decision (ROD) documents mandate a permanent remedy at an NPL site containing technical and health information to aid in the cleanup.

Findings: The Site was not identified as a ROD site. One (1) site within one mile of the Site was identified in the ROD database. The site is located greater than 1/8th mile radius of the Site and therefore, does not represent and environmental concern.

Federal Master Mines Index - The Master Mines Index (MINES) file contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Findings: Neither the Site nor any property within ¼ mile of the Site is listed in the MINES database.

5.1.2 New York State Databases

The table below summarizes the State databases that were searched.

New York State Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile
NYSDEC	Solid Waste Facility Register	SWF	0.5 mile
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Site and Adjoining
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Site and Adjoining
NYSDEC	Institutional/Engineering Control registries	INST/ENG Controls	Site
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile
NYSDEC	Brownfield sites	Brownfields	0.5 mile
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile
NYSDEC	New York State Spills	NYSPILLS	0.125 mile
NYSDEC	Dry Cleaner Site	Drycleaners	0.25 mile

NYS Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance/waste sites.

Findings: The Site is not listed as a SHWS site. One (1) SHWS facility was identified within a one mile radius of the Site. All of the sites are located in excess of 1/4 to 1/2-mile from the Site. Based on the relative distance, these sites are not expected to represent a significant environmental concern.

NY Vapor Reopened – This is a database listing of previously dismissed/closed sites that are being re-evaluated with current knowledge of the potential for soil vapor intrusion.

Findings: The Site is not listed as a NY VAPOR REOPENED site. No NY VAPOR REOPENED facilities were identified within a one mile radius of the Site.

Hazardous Substance Waste Disposal Sites - The Hazardous Substance Waste Disposal Sites (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites de-listed from the Registry of Inactive Hazardous Waste Disposal Sites list and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared.

Findings: The Site is not listed on the HSWDS database. One (1) HSWDS site was identified within a half-mile radius of the Site. The sites are located in excess of 1/8th mile of the Site. Based on the relative distance, this site is not expected to represent a significant environmental concern.

NY Del SHWS – A database listing of sites delisted from the registry of Inactive Hazardous Waste Disposal Sites.

Findings: The Site is not listed in this database No Del SHWS sites were identified within a half-mile radius of the Site.

NYS Landfill - The NYSDEC Solid Waste Facility Register records contain an inventory of solid waste disposal facilities or landfills in New York State.

Findings: The Site is not listed as a landfill site. . No NYS Landfill sites were identified within a half mile radius of the Site.

NYS Registered Recycling Facilities - The Registered Recycling Facilities List (SWRCY) is a NYSDEC list of recycling facilities.

Findings: The Site was not listed as a SWRCY site. No SWRCY sites were identified within 1/4 mile radius of the Site.

NYS Registered Waste Tire Storage Facilities - The Registered Recycling Facilities List (SWTIRE) is a NYSDEC list of Registered Waste Tire Storage & Facility List.

Findings: The Site is not listed as a SWTIRE site. There were no SWTIRE sites identified within a ½ mile radius of the Site.

NYS Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Findings: The Site was not identified as a LTANKS site. One hundred and twenty-eight (128) LTANK sites were identified within ½ mile of the Site. With the exception of seven (7) sites, all of the LTANK sites have received closure from the NYSDEC. Based on this information, these LTANK sites are not expected to present a significant environmental concern to the Site. Four (4) of the open LTANKS listings are located greater than 1/4th mile and are hydraulically cross-gradient and based on the relative distance and assumed direction of groundwater flow, these sites are not expected to represent a significant environmental concern. Two (2) of the open LTANKS listings are located within the 1/8th mile and are hydraulically cross-gradient and based on the assumed direction of groundwater flow, these sites are not expected to represent a significant environmental concern. The closest open LTANKS listing is discussed below:

The property at 214 West 29th Street, located approximately 248 feet northeast (hydraulically cross-gradient) of the Site is identified as a LTANKS site. According to the database, on October 7, 2014 a 6,500 gallon No. 6 fuel oil underground storage tank failed a tank system test. Information provided within the case remarks indicate that corrective action has begun to address the violation listed for this Site. Based on the distance of the site and the material spilled, it is unlikely that this facility significantly impacted environmental conditions at the subject Site.

NYS Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage - Underground Tanks (UST) database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - Aboveground Tanks (AST) database lists facilities with registered above ground storage tanks.

Findings: The Site is not listed as a UST, AST site, Hist UST site, TANKS site or a Hist AST site. Eighteen (18) UST sites, two (2) TANKS site, thirteen (13) HIST UST sites and one

hundred and sixty-two (162) AST sites are registered within a ¼ mile radius of the Site. One Adjacent site was identified and is discussed below:

210 West 29th Street is located adjacent to the north (hydraulically cross-gradient) of the Site. This site was identified as a NY AST site in the database. According to the database, this site is equipped with one tank which is still in service and storing number 2 fuel oil. The Site is still currently equipped with one (1) AST; which contains #2 fuel oil. No violations were identified in connection with this site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Most tanks in the area hold home heating oil for on-site boilers and furnaces. Sites with leaking tanks or spills are addressed in the appropriate section.

The remaining properties are not located adjacent to the Site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Most tanks in the area hold home heating oil for on-site boilers and furnaces. Sites with leaking tanks or spills are addressed in the appropriate section.

NYS Chemical Bulk Storage - The Chemical Bulk Storage (CBS) database is a NYSDEC list of facilities that store regulated hazardous substances in aboveground tanks (AST) with capacities of 185 gallons or greater or underground tanks (UST) of any size.

Findings: The Site is not identified as a CBS facility. No CBS UST, CBS AST, or CBS facilities were identified within a ¼ mile radius of the Site.

NYS Institutional/Engineering Controls – NYSDEC list of Environmental Remediation sites with Institutional or Engineering Controls in place.

Findings: The Site is not identified in the NYSDEC Institutional/Engineering Controls databases. No sites within a ½ mile of the Site were identified in the NYSDEC Institutional/Engineering Controls databases.

NYS Voluntary Cleanup Agreements - The NYSDEC Voluntary Cleanup Program (VCP) database identifies hazardous waste sites undergoing private sector cleanup as part of redevelopment.

Findings: The Site was not identified as a VCP site. No VCP site was identified within a half mile radius of the subject property.

NYS Brownfields - A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

Findings: The Site was not identified as a NYS Brownfield site. No Brownfield sites were located within a ½ mile radius of the Site.

NYS Major Oil Storage Facilities - The NYSDEC Major Oil Storage Facilities (MOSF) database lists facilities or vessels with a petroleum storage capacity of more than 400,000 gallons.

Findings: The Site was not identified as an MOSF site. No MOSF UST sites, no MOSF AST site were identified within ½ mile of the Site. One MOSF facility was identified within ½ mile of the Site. The facility is located in excess of ¼- ½ mile from the Site and based on its relative distance from the Site it is not expected to pose an environmental concern.

NYS Spills - The New York State Spills Information Database (NY SPILLS) contains data collected on chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

Findings: The Site is not listed as a NY SPILLS site. Forty-eight (48) spill sites were identified within 1/8 mile of the Site. No adjacent site was identified. The adjacent property and open listings are further discussed in detail below:

217-221 West 29th Street is located approximately 261 feet north east (hydraulically cross gradient) from the Site. According to the regulatory database, a release of unknown petroleum occurred on December 18, 2013. A phase II with soil borings was performed on site and results of the soil and groundwater samples indicated low level petroleum impacts across the entire property. A cleanup plan was proposed to perform a complete excavation to below bedrock at 32 feet bgs. Based on the relative distance and inferred direction of groundwater flow; this release is not expected to represent a significant environmental concern.

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSDF.

Findings: The Site is not listed as a MANIFEST site. Two hundred and eight (208) manifest sites were identified within a ¼ mile radius of the Site. Two (2) adjacent sites were identified and are discussed below.

208 West 29th Street is located to the northeast (hydraulically cross-gradient) of the Site. Based on the information from the regulatory database, fifty (50) metal drums/barrels were removed from the site on December 12, 2007. No listed violations or that corrective action has been taken to address the violations listed for this Site; therefore, it is unlikely that this facility presents a significant environmental risk to the Site, and is not considered to be a REC.

214 West 29th Street is located to the northeast (hydraulically cross-gradient) of the Site. According to the regulatory database, ignitable hazardous waste, methyl ethyl ketone, solvents, and non-halogenated solvents were removed from site on July 27, 1993. No listed violations or that corrective action has been taken to address the violations listed for this Site; therefore, it is unlikely that this facility presents a significant environmental risk to the Site, and is not considered to be a REC.

Information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for these sites; therefore, it is unlikely that these properties present a significant environmental risk to the Site, and are not considered RECs.

Drycleaner Sites - The NYSDEC maintains a listing of all registered drycleaners. Drycleaner sites do not necessarily pose a hazard unless a spill occurs. Sites at which spills have been identified are addressed in the appropriate section.

Findings: The Site is not identified as a drycleaner. Six (6) Drycleaner sites were identified within ¼ mile of the site. No adjacent sites were identified. Based on the assumed direction of

groundwater flow these sites (hydraulically cross to down-gradient) do not pose an environmental concern to the Site.

NYS Manufactured Gas Plants - Manufactured gas plants (MGP) were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Findings: The Site is not identified as an MGP site. Four (4) MGP sites was identified within a one-mile radius of the Site. These sites are not located within a 1/4 mile radius of the Site and information provided within the EDR report indicates that there are no listed violations listed for the sites. Therefore, it is unlikely that the sites present a significant environmental risk to the Site, and are not considered an REC.

E Designation - The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designation also includes a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Findings: The Site is identified as an E Designation site. Forty one (41) E Designation sites were identified within 1/8-mile of the Site. The Site and adjacent properties are further discussed below:

The Site, identified as Taxblock 778 Lots 33 was identified as an E Designation site for Hazmat and Noise under E-137. E Designation listing is further discussed in Section 5.2.6.

Lot 34 Tax block 778; 207 West 28th Street is located adjacent to the east (hydraulically up-gradient) of the Site was identified as an E Designation site for Hazmat, Air and Noise under E-276. The effective date is listed as September 21, 2011 and the current owner of this site is Yung Brothers Real Estate. E-designations on other properties do not necessarily pose a significant environmental concern for the Site, and are not considered a significant environmental concern for this assessment.

Lot 47 Taxblock, 778; 210 West 29th Street, located adjacent to the north (hydraulically cross gradient) from the Site was identified as an E Designation site for Hazmat, Air and Noise under E-276. The effective date is listed as September 21, 2011 and the current owner of this site is 210 West 29th Street. E-designations on other properties do not necessarily pose a significant environmental concern for the Site, and are not considered a significant environmental concern for this assessment.

Lot 46 Taxblock, 778; 212 West 29th Street; located adjacent to the northeast (hydraulically cross gradient) from the Site was identified as an E Designation site for Hazmat, Air and Noise under E-276. The effective date is listed as September 21, 2011 and the current owner of the site is Kopatsos (General PA). E-designations on the other properties do not necessarily pose a significant environmental concern for the Site, and are not considered a significant environmental concern for this assessment.

The remaining sites are not located adjacent to the Site. E-designations on other properties do not necessarily pose a significant environmental concern for the Site, and are not considered a significant environmental concern for this assessment.

EDR Historical Auto Stations - EDR has searched selected national collections of business directories and has collected listings of potential gas station/ filling station/ service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/ filling station/ service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station etc.

Findings: The Site was identified as an EDR Historical Auto Station site. Thirty-four (34) sites were identified within ¼ mile of the Site. None of these sites are located adjacent to the Site and based on assumed groundwater flow these sites do not pose a significant environmental concern.

EDR Historical Cleaners - EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry, etc.

Findings: The Site was not identified as an EDR Historical Cleaners site. Thirty-three (33) sites were identified within ¼ mile of the Site. These sites are not located adjacent to the Site and information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for these sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs.

5.1.3 EDR Vapor Encroachment Screen

A Vapor Encroachment Screen was conducted using the EDR VEC App™. A copy of the EDR Vapor Encroachment Screen report is included in Appendix G. Numerous waste oil, fuel oil, and transfer oil spills were reported within the immediate area, however no spills of chlorinated volatile organic compounds were reported adjacent to the Site. No vapor encroachment issues were identified. In addition, soil vapor was evaluated during a Phase II investigation which is further discussed in Section 5.2.4.

5.2 Additional Environmental Record Sources

5.2.1 Local Agency Review

Freedom of Information Act (FOIA) requests were sent to the New York City Department of Environmental Protection (NYCDEP), New York City Fire Department, New York City Department of Health (NYCDOH) and the New York City Fire Department (FDNY) for information regarding hazardous operations and or other environmental reports/investigations for the Site, including the

registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

5.2.2 New York City Department of Finance

The following is a summary of pertinent information obtained from the New York City Department of Finance website:

Tax Lot:	Block 778 – Lot No. 33
Address:	211 West 28 th Street, New York, New York
Owner:	Lawson 28 LLC
Lot Size:	2,470 square feet – rectangular
Building Class:	O9 – Miscellaneous Office Building
Zoning:	M1-6D

5.2.3 New York City Department of Buildings

The Department of Buildings (DOB) computerized Property Profile Overviews (PPOs) were reviewed. Pertinent information regarding Site is summarized below:

The lot associated with the Site is identified as an E Designation site with a Hazmat/Noise restriction.

Fifty-seven (57) actions are on file for the Site in reference to:

211 West 28th Street (Lot 33):

Alterations (1913, 1917, 1920, 1929, 1944, 1945, 1956, 1986), building notice (1934, 1953, 1982, 1985, 1986) certificate of occupancy (1989), complaints (1953, 1955, 1963, 1964, 1965), demolition (1901), elevator building notice (1988), elevator (1917, 1920, 1921, 1945, 1986), elevator sign application (1963), oil burner (1946), non-registered interim mult dwelling, miscellaneous (1987), new building (1902), plumbing (1913, 1920, 1934, 1935), permit (1944, 1945), plumbing repair slip (1949, 1955, 1957, 1979), special report (1926, 1934, 1947, 1948, 1949, 1950, 1952, 1953, 1954, 1957, 1960), DOB violation (1981, 1983, 1984, 1985, 1986, 1987, 1990, 1993, 1994, 1999, 2000, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014), and ECB violation (1993, 1994, 1995, 2006).

5.2.4 Previous Environmental Reports

EBC was not informed of or provided any previous environmental reports regarding the Site.

5.2.5 Historic Zoning Map

A review of the NYC Department of City Planning Zoning Maps for the years 1961 through 2014 indicates that in December 1961 the entire Site is zoned M1-5. In September 2010, the lot was rezoned M1-6D. The site received its E-designation (E-137) in January of 2005. A copy of the December 1961 zoning map is included as **Figure 5B**.

5.2.6 Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject properties, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property as a result of environmental issue identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDCP) and is commonly depicted on zoning maps with an “E” designation, as well as maintained within Chain of Title Records. For a site to be designated with an “E” restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a “Potential” or “Projected” re-development property, and finally, the site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an “E” designation require additional investigation and/or remediation be performed in order to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the site. No change of use or development requiring a building permit will be issued for an “E” designated site without approval from the NYCOER.

The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDCP and NYCOER websites.

The Site has been assigned an E-designation (E-137) for Hazmat and Noise as part of the Hudson Yards rezoning completed by the City in January 2005 (CEQR 03DCP031M).

An E-designation does not interfere with the present use of the Site; however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. Such release may require a full subsurface investigation, remedial and health and safety planning, implementation of a remedial program and documentation that the remedial program was completed during redevelopment of the property.

Typical NYCOER Phase II investigation/sampling requirements for hazmat “E” sites are as follows:

- Collection and laboratory analysis of for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), target analyte list (TAL) metals, PCBs and pesticides.
- Collection and laboratory analysis of groundwater samples for VOCs, SVOCs, TAL metals (filtered and unfiltered), PCBs and pesticides.
- Collection and laboratory analysis of soil gas samples for laboratory analysis of VOCs via EPA Method TO-15.

The Noise E requires that any new building constructed on the property include a window wall system which will achieve a noise attenuation of 35 dBA to maintain a maximum interior noise level of 45 dBA. An alternate means of ventilation such as through the wall or central air conditioning will also be required to maintain a closed window condition. Satisfaction of the Noise E requires the submission of a Noise Remedial Action Plan and an Installation Report certified by a Professional Engineer or Registered Architect.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Mr. Kevin Brussee of EBC performed the site inspection on January 14, 2015; beginning at approximately 12:00 pm. The reconnaissance included a visual inspection of the Site, the sidewalk immediately in front of the Site, and the exterior of adjacent properties.

Photographs taken during the inspection are attached (**Appendix A**).

6.2 Observations

The Site is developed with a 6-story commercial office building. Site topography was noted to be generally level.

6.3 Aboveground and Underground Storage Tanks (ASTs/USTs)

The Site is equipped with one portable AST. This AST was observed to be on a flatbed. EBC was not able to determine if the tank was full or empty. No stains or conduits to the sub-surface were observed in the vicinity of the AST. EBC recommends properly removing AST from the Site.

6.4 Hazardous and Non-Hazardous Chemical Storage and Disposal

No hazardous or non-hazardous chemical storage drums were detected on the Site during the visual inspection.

6.5 Underground Injection Control (UIC) Structures

Underground injection wells are regulated by the Underground Injection Control (UIC) Program under the authority of Part C of the Safe Drinking Water Act (SDWA) (42 U.S.C. 300h et seq.). The SDWA is designed to protect the quality of drinking water in the United States, and Part C specifically mandates the regulation of underground injection fluids through wells. The USEPA has promulgated a series of UIC regulations under this authority. Recent applicable revisions to UIC regulations were published in the State Implementation Guide - Revisions to the Underground Injection Control Regulations for Class V Injection Wells, September 2000. This document specifically addresses Class V injection wells, which include on-site wastewater disposal features such as drywells, cesspools and in-situ drains. The USEPA issued a Notice of Final Determination for Class V wells; Final Rule on

June 7, 2002. With the exception of motor vehicle waste disposal wells and large-capacity cesspools, Class V wells are “authorized by rule” (40 CFR 144.24) and may inject non-hazardous waste as long as the following criteria are met:

- The injection does not endanger underground sources of drinking water (40 CFR 144.12); and
- The well owners or operators submit basic inventory information (40 CFR 144.26).

The USEPA may, at its discretion, require the owner or operator of any well authorized by rule to submit information for review to determine if a well may be endangering an underground source of drinking water. In regard to motor vehicle waste disposal wells and large capacity cesspools (those that serve more than 20 persons per day), owners and/or operators of such wells in regulated areas must close the wells or obtain a permit. These requirements are being phased-in through 2008. Owners and operators of large-capacity cesspools must close the structures by April 5, 2005.

Sanitary wastewater is currently discharged from the property. The area surrounding the property is serviced by the NYC municipal sewer system.

No features subject to UIC regulations were observed on the subject property during the site inspection.

6.6 Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

Observed on Site there is a hydraulic elevator lift that would contain hydraulic fluid. The hydraulic fluid on the site could be a possible environmental concern.

6.7 Asbestos

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect asbestos-containing materials (ACM). Due to the age of the building, asbestos containing materials (roofing, roof flashing, pipe insulation, and other concealed materials) could be present. These materials were observed to be in poor to fair condition. Prior to any renovations or demolition of the building, an asbestos survey would be recommended.

6.8 Lead-Based Paint (LBP)

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. A visual inspection of painted surfaces was conducted during the site inspection. Based on the date of construction for the building located on Site, lead based paint containing materials may be present. During the Site inspection conducted by EBC, the painted surfaces were noted to be in poor condition for the property building. Prior to any renovations or demolition of the building, a lead based paint survey would be recommended.

6.9 Mold

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and oxygen are present. There are molds that can grow on wood, paper, carpet, foods, sheetrock, plaster and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

As part of this assessment, a visual inspection was conducted for the presence of water damage and odors, indicative of the potential for mold growth. Water damage from a leaking roof was observed on all floors of the building; however, no mold growth was observed. Prior to replacement of impacted materials, the source of water intrusion should be identified and fixed.

6.10 Wetlands

A review of the NYSDEC Freshwater Wetland Map, Brooklyn Quadrangle, indicates that no NYS freshwater wetlands are located within a one mile radius of the Site. EBC also reviewed NYSDEC Tidal Wetlands Maps available online at <http://twi.ligis.org>. The tidal wetlands map indicates that there are no NYS tidal wetlands located within a one mile radius of the Site.

Potential federal wetlands were identified from the U.S. Fish and Wildlife Service (FWS) Wetlands Mapper software, which indicate that no potential federal wetlands are located within a half mile radius of the Site.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the Site is located within the 100-year or 500-year flood zones. The FIRM showing the property (No. 3604970201F) indicates that the entire property is located outside of the 100-year and outside the 500-year flood zones indicating a minimal risk of flooding at the Site. A copy of the FEMA FIRM is included in **Appendix B**.

7.0 INTERVIEWS

7.1 Owner

EBC interviewed the building supervisor of the Site during the Site walk through. The building supervisor provided access to the building, access to each floor, and provided information about the previous tenants of each floor. The building supervisor was not aware of any environmental issues associated with the Site.

7.2 Occupants

EBC did not get an interview with occupants of the Site. The building has no current tenants and the building is currently abandoned.

7.3 Local Government Officials

Freedom of Information Act (FOIA) requests were sent to the NYCDEP, NYCDOH and FDNY York City Department of Health (NYCDOH) for information regarding hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

8.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the Site and surrounding properties, interviews and review of historical records and regulatory agency databases, **one (1) recognized environmental condition was identified in connection with the Site.**

Conditions which were examined and determined to be RECs:

Historic Site Uses: Some of the past uses identified for the Site, including the printing use, fur dyeing company, scientific tool and die company, and aluminum company may have been associated with the use and storage of hazardous materials, such as solvents, metals, and dyes. Printing operations have been associated with the generation of waste ink and ink sludges that that could contain solvents and heavy metals. Tool and die operations typically utilize solvents, which even when property stored and disposed of, can be released from these facilities in small, frequent releases through floor drains, cracked concrete, and sewer systems. Chlorinated solvents are highly mobile chemicals that can easily accumulate in soil.

8.1 Additional Environmental Issues

The Site has been assigned an E-designation (E-137) for Hazmat and Noise as part of the Hudson Yards rezoning completed by the City in January 2005 (CEQR 03DCP031M).

An E-designation does not interfere with the present use of the Site; however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. Such release may require a full subsurface investigation, remedial and health and safety planning, implementation of a remedial program and documentation that the remedial program was completed during redevelopment of the property.

The Noise E requires that any new building constructed on the property include a window wall system which will achieve a noise attenuation of 35 dBA to maintain a maximum interior noise level of 45 dBA. An alternate means of ventilation such as through the wall or central air conditioning will also be required to maintain a closed window condition. Satisfaction of the Noise E requires the submission of

a Noise Remedial Action Plan and an Installation Report certified by a Professional Engineer or Registered Architect.

Additional information regarding “E” sites can be found on the New York City Office of Environmental Remediation website: http://www.nyc.gov/html/oer/html/e_designation/e_designation.shtml.

9.0 CONCLUSIONS AND RECOMMENDATIONS

EBC performed a Phase I Environmental Site Assessment in conformance with the scope and limitations as described under ASTM Practice E1527-13 for the commercial property identified by the street address 211 West 28th Street, Block 778 Lot Number 33 in New York, New York. Any exceptions to, or deletions from, this practice are described in **Section 1.4** of this report. Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, this assessment has revealed the following recognized environmental condition in connection with the Site:

Historic Site Uses: Some of the past uses identified for the Site, including the printing use, fur dyeing company, scientific tool and die company, and aluminum company may have been associated with the use and storage of hazardous materials, such as solvents, metals, and dyes. Printing operations have been associated with the generation of waste ink and ink sludges that that could contain solvents and heavy metals. Tool and die operations typically utilize solvents, which even when property stored and disposed of, can be released from these facilities in small, frequent releases through floor drains, cracked concrete, and sewer systems. Chlorinated solvents are highly mobile chemicals that can easily accumulate in soil.

ADDITIONAL ENVIROMENTAL ISSUES

The Site has been assigned an E-designation (E-137) for Hazmat and Noise as part of the Hudson Yards rezoning completed by the City in December 2013 (CEQR 03DCP031M).

An E-designation does not interfere with the present use of the Site; however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. Such release may require a full subsurface investigation, remedial and health and safety planning, implementation of a remedial program and documentation that the remedial program was completed during redevelopment of the property.

The Noise E requires that any new building constructed on the property include a window wall system which will achieve a noise attenuation of 35 dBA to maintain a maximum interior noise level of 45

dBA. An alternate means of ventilation such as through the wall or central air conditioning will also be required to maintain a closed window condition. Satisfaction of the Noise E requires the submission of a Noise Remedial Action Plan and an Installation Report certified by a Professional Engineer or Registered Architect.

Additional information regarding “E” sites can be found on the New York City Office of Environmental Remediation website: http://www.nyc.gov/html/oer/html/e_designation/e_designation.shtml.

10.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding additional services outlined in Section 11.0, there were no deviations or deletions from this practice.

11.0 ADDITIONAL SERVICES

EBC has included, in addition to those items outlined by ASTM E 1527-13, a general evaluation of the following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-based Paint;
- Asbestos-containing Materials; and
- Wetlands.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

ENVIRONMENTAL BUSINESS CONSULTANTS

Kimberly Somers, Project Manager

Professional Experience

EBC: December 2014

Prior: 14 years

Education

Bachelor of Arts, Environmental Studies, Elmira College, NY

Areas of Expertise

- Phase I Property Assessments
- Phase II Property Assessments
- Soil and Groundwater Investigations
- Hazardous Materials Assessments

Professional Certification

- OSHA 40-hr HAZWOPER

PROFILE

Ms. Somers has 14 years experience as an environmental consultant/contractor and has worked on and managed a wide range of environmental projects. Major responsibilities include Phase I, II and III Investigations, Environmental Impact Statements, Remedial Action Work Plans, Feasibility Studies, site remediation oversight, data analysis, environmental sampling (groundwater, soil, surface water, air, soil gas), wetland delineation and assessments, OSHA Right-to-Know workplace audits, proposal writing and public outreach.

211 W. 28TH STREET CORPORATION, with a principal place of business at 211 West 28th Street, New York, New York

party of the second part,

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the

BEGINNING at a point on the Northerly side of 28 Street, distant 147 feet 7 1/2 inches westerly from the corner formed by the intersection of the northerly side of 28th Street with the westerly side of 7th Avenue.

RUNNING THENCE northerly, parallel with the westerly side of 7th Avenue 98 feet 9 inches to the center line of the block;

THENCE westerly, parallel with the northerly side of 29 Street, 24 feet 10 1/2 inches;

THENCE southerly parallel with the westerly side of 7th Avenue, 98 feet 9 inches to the northerly side of 28 Street;

THENCE easterly along said northerly side of 28 Street, 24 feet 10 1/2 inches to the point or place of BEGINNING.

Said premises being known as 211 West 28th Street.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

REEL 580 PAGE 1122

THIS INDENTURE, made the 13th day of August, nineteen hundred and eighty-one **BETWEEN**

EDWARD L. ZIMMERMAN residing at 312 The Colony, Hartsdale, N.Y. 10530 and MELVIN ZIMMERMAN, residing at 370 E. 76 Street, New York, N. Y. 10021,

party of the first part, and

ALBERT OHAYON, residing at 300 East 40 Street, New York, N. Y. 10016 and JEROME RAPOPORT residing at 470 Park Avenue, New York, N.Y. 10022

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Manhattan, City, County and State of New York, bounded and described as follows:

BEGINNING at a point on the northerly side of 28 Street, distant 147 feet 7-1/2 inches westerly from the corner formed by the intersection of the northerly side of 28 Street with the westerly side of 7th Avenue;

RUNNING THENCE northerly, parallel with the westerly side of 7th Avenue 98 feet 9 inches to the center line of the block;

THENCE westerly, parallel with the northerly side of 28 Street, 24 feet 10-1/2 inches;

THENCE SOUTHERLY parallel with the westerly side of 7th Avenue, 98 feet 9 inches to the northerly side of 28 Street;

THENCE easterly along the said northerly side of 28 Street, 24 feet 10-1/2 inches to the point or place of beginning.

BEING the same premises devised to the party of the first part by Will of Pauline Zimmerman who died a resident of Kings County, New York, which Will was admitted to probate in the Surrogates Court, Kings County, on August 4, 1966. Said Pauline Zimmerman had obtained title by deed dated December 16, 1943, which was recorded in the Office of the Register of Kings County on December 17, 1943 in Liber 4251, cp. 109.

SUBJECT to a purchase money mortgage of even date in the principal sum of \$250,000.00 intended to be recorded simultaneously herewith.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid. AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose. Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

- (1) Property receiving service: BOROUGH: MANHATTAN BLOCK: 778 LOT: 33
- (2) Property Address: 211 WEST 28TH STREET, NEW YORK, NY 10001
- (3) Owner's Name: LAWSON 28 LLC

Additional Name:

Affirmation:

Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

- A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.
- B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

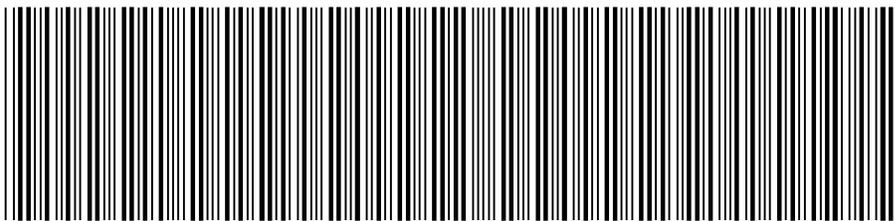

Print Name of Owner:

Signature: Winnie Law 5/1/13 Date (mm/dd/yyyy)

Bargain and Sale Deed, with Covenant against Grantor's Acts

BARGAIN AND SALE DEED

THIS INDENTURE, made the 1st day of April 2005

BETWEEN 211 W. 28 REALTY LLC, a New York Limited Liability Company having an office at 60 East 11th Street, New York, New York 10003

party of the first part, and

SUN WANSAM REALTY CORP., a New York Corporation having an office at 80 ELIZABETH Street, Apt. 3-Q, New York, New York 10013

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the

SEE SCHEDULE "A" ANNEXED

Said premises known as 211 West 28th Street, New York, New York
Said premises conveyed to the party of the first part by deed dated July 26, 2002, and recorded on December 4, 2002 in Reel 3675, Page 1767

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

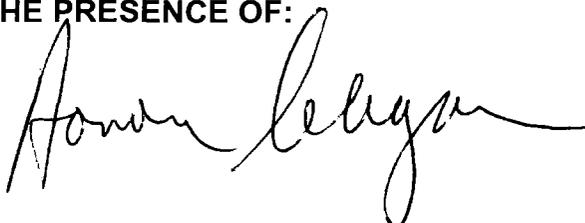

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first party has duly executed this deed the day and year first above written.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid. AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose. The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible omitted or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations (BFEs)** and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations (BFEs) shown on this map apply only to areas of 0.2% annual chance flood (also known as the base flood). Users of the FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations tables in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations tables should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the Floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The projection used in the preparation of this map was New York State Plane NAD83/2011. The horizontal datum was NAD 83/2011 spheroid. Differences in datum, spheroid, projection or State Plane zones used in the production of FIRM by adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of the FIRM.

Flood elevations on this map are referenced to the National Geodetic Vertical Datum of 1929. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at <http://www.ngs.noaa.gov> or contact the National Geodetic Survey at the following address:

NGS Information Services
 NOAA, NAD83/2011
 National Geodetic Survey
 55MC-3, #0302
 1315 East-West Highway
 Silver Spring, Maryland 20910-3182
 (301) 713-3242

To obtain current elevation, description and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at <http://www.ngs.noaa.gov>.

Base map information shown on this FIRM was provided in digital format by the Department of Information Technology and Telecommunication, City of New York. This information was derived from digital orthophotos produced at a scale of 1:1,200 with 2-foot pixel resolution from photography dated 2004.

Based on updated topographic information, this map reflects more detailed and up-to-date stream channel configurations and floodplain delineations than those shown on the previous FIRM for this jurisdiction. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map. Also, the relationship to floodplain relationships for unresurfaced streams may differ from what is shown on previous maps.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map showing the layout of map panels for this jurisdiction.

Contact the **FEMA Map Service Center** at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at <http://www.fema.gov>.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA website at <http://www.fema.gov>.

LEGEND

- SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD**
- The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zone A, AE, AH, AO, AR, AR-A, AV, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.
- ZONE A** No Base Flood Elevation determined.
 - ZONE AH** Base Flood Elevation determined.
 - ZONE AO** Flood depths of 1 to 3 feet (usually areas of parking); Base Flood Elevation determined.
 - ZONE AR** Flood depths of 1 to 3 feet (usually sheet flow on impervious); average depth determined; For areas of above farm flooding, velocities also determined.
 - ZONE AR-A** Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently determined. Zone AH indicates that the former flood control system is being retained to provide protection from the 1% annual chance or greater flood.
 - ZONE AR-AV** Area in excess from 1% annual chance flood by a Federal flood protection system under construction; see Base Flood Elevation determined.
 - ZONE AV** Coastal Flood zone with velocity hazard (wave action); see Base Flood Elevation determined.
 - ZONE VE** Coastal Flood zone with velocity hazard (wave action); see Base Flood Elevation determined.
- FLOODWAY AREAS IN ZONE AE**
- The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment to the 1% annual chance flood can be carried without substantial increases in flood height.
- OTHER FLOOD AREAS**
- ZONE A** Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile, and areas protected by levees from 1% annual chance flood.
- OTHER AREAS**
- ZONE G** Areas determined to be outside the 0.2% annual chance floodplain.
 - ZONE D** Areas in which flood hazards are undetermined, but possible.
- COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS**
- CBRS areas and CBRA are normally located within or adjacent to Special Flood Hazard Areas.
- 1% annual chance floodplain boundary
 - 0.2% annual chance floodplain boundary
 - Floodway boundary
 - Zone D boundary
 - CBRS and CBRA boundary
 - Boundary showing Special Flood Hazard Area Zones and boundary showing Special Flood Hazard Areas of different base Flood Elevations, flood depths or flood velocities.
 - Base Flood Elevation line and value, elevation in feet (EL 987)
 - Base Flood Elevation value where offshore water elevation in feet
- Referenced to the National Geodetic Vertical Datum of 1929
- Circle section line
 - Traverse line
 - Geographic coordinates referenced to the North American Datum of 1983 (NAD 83), decimal hemisphere
 - 100-meter Universal Transverse Mercator grid values, zone 18
 - 100-foot grid value: New York State Plane coordinate system, Long Island zone (SPS20E 3104), Lambert Conformal Conic projection
 - North arrow (see explanation in Notes to Users section of this FIRM panel)
 - Base Map
 - MAP REPOSITORY
 - Refer to listing of Map Repositories on Map Index.
 - INITIAL FIRM MAP DATE: June 26, 1974
 - FLOOD HAZARD BOUNDARY MAP REVISIONS: June 11, 1975
 - FLOOD INSURANCE RATE MAP EFFECTIVE: November 14, 1993
 - FLOOD INSURANCE RATE MAP REVISIONS: September 5, 2007 - to change Special Flood Hazard Areas, to reflect updated topographic information, and to update map format
- To determine if flood insurance is available in this community, contact your insurance agent or call the National Flood Insurance Program at 1-800-426-6252.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Env. Business Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

211 WEST 28TH ST
NEW YORK County, NY 10001

COORDINATES

Latitude (North): 40.7474000 - 40° 44' 50.64"
Longitude (West): 73.9937000 - 73° 59' 37.32"
Universal Transverse Mercator: Zone 18
UTM X (Meters): 584956.6
UTM Y (Meters): 4510992.0
Elevation: 32 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 09/29/2014 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS	NO STREET APPLICABLE	W 1/2 - 1 (0.879 mi.)	0	11

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 10 RCRA-CESQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/18/2014 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FORMER GUARDIAN CLEANERS	27-35 WEST 24TH STREET	SSE 1/4 - 1/2 (0.380 mi.)	656	1626

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/18/2014 has revealed that there are 128 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 09/30/2014 has revealed that there are 2 NY TANKS sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, and dated 11/18/2010 has revealed that there are 4 NY RES DECL sites within approximately 0.125 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

NY HIST UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY HIST UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 13 NY HIST UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/18/2014 has revealed that there are 48 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/10/2014 has revealed that there are 89 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 12/31/2013 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 11/01/2014 has revealed that there are 192 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CON EDISON - WEST 18TH ST. GAS	WEST 16TH - WEST 20TH S	WSW 1/2 - 1 (0.688 mi.)	720	1765

19TH STREET DEVELOPMENT SITE	80 11TH AVENUE	W 1/2 - 1 (0.766 mi.)	722	1765
CON EDISON - WEST 42ND ST. GAS	WEST 41ST - WEST 42ND S	NNW 1/2 - 1 (0.943 mi.)	723	1765

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 34 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 33 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of

the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC

MAP FINDINGS

HUDSON RIVER PCBS (Continued)

1000384273

prepared a design for the in- place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA ?121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

DEC Memo: Air emission issue.Buildings in NYC that burn #6 oil have no limits on emissions for the first 15 minutes of boiler startup. Black smoke is common and legal. Incomplete combustion until the boiler is hot.

Remarks: We received the following email concern(I will forward the attached pictures in another email)Hello,I would like to report that the building at the corner of 7th avenue and 28th street (North East corner) in Manhattan (New York City) was emitting very black smoke from its chimney form about 7-7:30 am this morning. The same thing happened yesterday morning at the same time. I believe that the black smoke shows a massive pollution and a problem with the exhaust system for that building. I have attached a few pictures. Thank you for investigating this issue. Let me know if you need any additional information.I look forward to hearing back from you.Thank you.Best regards,Olivier ANDRE, Esq.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

is at the site. oil spilled on concrete floor only. will investigate further for possible contamination under the sidewalk.02/12/13-Hiralkumar Patel.4:24 PM:- left message for Rob.04/10/13-Hiralkumar Patel.3:30 PM:- visited site. met with Frank Oddo, building super. inspected #6 oil tank in basement. the tank is aboveground completely wrapped in concrete. lines to and from the tank are aboveground, except part of fill line (about 12 ft long in L-shape) under the sidewalk. there is a sub-grade area between the sidewalk and building's foundation wall. the fill port is located at curb line and approx. 8 ft from the sub-grade area. Mr. Oddo mentioned that oil was noted into sub-grade area, below the fill line. Riteway exposed the fill line and removed contaminated soil to approx. 5 ft bg. a new fill line installed in secondary containment.Frank Oddo **building super**Ph. (212) 216-939104/11/13-Hiralkumar Patel.alternate address: 229-239 West 28th Streetno other spills noted.PBS #: 2-248851. site has one 3,000 gal #2 oil AST in conatct with soil and one 3,500 gal #6 oil AST in contact with soil. PBS registration expired on 12/16/07.2:21 PM:- spoke with Mr. Oddo regarding number of tanks at the site. Mr. Oddo mentioned that they have two tanks: one is for #6 oil and another for #4 oil. Mr. Oddo mentioned that the #4 oil tank has some oil in it, but the tank is not in service. informed Mr. Oddo about expired PBS registration.229 West 28th Owner LLC.c/o Winoker Realty Company462 7th Avenue #12ANew York, NY 10018Attn.: James DohertyPh. (212) 519-2000 Ext. 315email: jdoherty@winokerrealty.com3:03 PM:- left message for Rob.4:35 PM:- received message from David from Riteway. he will submit report tomorrow.04/15/13-Hiralkumar Patel. received email from David (at 3:11 PM on 04/12/13) including cleanup report. three endpoint samples were collected from excavation. no contamination found in endpoint samples.based on available information, case closed.

Remarks:

broken fill line. Cleanup crew is on site. No resources.

DEC Memo: 01/10/07-Hiralkumar Patel. visited site. met building super Ramon Vargas. site has 6000 gal #6 tank in concrete vault with access. could not see bottom of tank as tank sides are close to tank room wall and tank room has access from top. smelled heavy odors inside tank vault, in basement and little odor upstairs. oil stain on tank room walls.PBS #: 2-099309as per Mr. Vargas, about two years ago, there was water leak in one of store upstairs which flooded basement and entire tank vault. and water went inside tank from manhole and pushed oil out of tank. this cause spill at that time and Eastmond responded and did cleanup. since then tank room has speedy dry, water and oil mixed around tank. Castle oil delivers oil at site and last oil delivery was on 12/29 for 2302 gallons. no oil stains found on wall, inside boiler room, which separating tank room and boiler room. there are 94 units in building.PTC was removing oil/dirt from area around tank. they haven't done any tank test yet. spoke with building manager Tim Smith. asked Mr. Smith to do tank system test immediately to check any leak in tank system. if leak found, need isolation test and if found any wet leak, oil has to be removed from tank immediately. Mr. Smith will contact PTC for immeidate tank test.Ramon Vargas, Super of buildingPh. (212) 645-8042 (O) (646) 262-0856 (C)Timothy D. SmithFashion Place Management Corp.1 Main StreetNorth Bennington, VT 05257Ph. (802) 442-5077Fax (802) 442-5241received call from Mark from PTC. he will finish tank test and will send test result by tomorrow noon.tank is located in such a way that no soil boring possible inside tank room. if required, can do soil boring outside tank room (in other part of basement).01/11/07-Hiralkumar Patel. received call from Mark from PTC. they did tank system test and found wet leak. supply and return lines runs aboverground from tank to boiler room crossing wall in between. Mark told that he will empty out tank tomorrow morning.spoke with DEC Jacob. he suggested that as tank has #6 oil, it is ok if they empty that tank tomorrow, but it has to be empty out tomorrow.left message for Mr. Smith. received call from Mr. Smith. explained him that as tank system has wet leak, oil has to be removed from tank. Mr. Smith wants to run isolation test to check if lines has any problem. told Mr. Smith that test has to be done tomorrow and if any leak found in tank, tank has to be emtied out by end of tomorrow. no later than tomorrow. he will call Mark and check when they do isolation test.01/12/07-Hiralkumar

Patel. received call from Mark. he explained situation to Mr. Smith and now Mr. Smith agreed to empty out tank. tank will be empty by end of today. sent out letter to Mr. Smith requiring tank test, soil/groundwater delineation, endpoint samples and vapor barrier installation. letter faxed to Mr. Smith and to Mark at PTC. 1/11/07 - Austin - Temporarily assigned to Sangeland, in Patel's absence 1/26/2007 Sangeland spoke to Ray at PTC. He said the tank was tested and failed. The tank was emptied and a temp tank set up. PTC is still working on cleaning out the vault. They have NOT yet started any work below the vault floor, but they have been approved to do this work. 02/12/07 - Hiralkumar Patel. received call from Mark. he took three soil samples through bottom of tank. based on test results, he is planning to abandon tank and tank room. asked Mark to fax soil results with site plan. received sample analyticals. no contamination found in sample. spoke with Mark. he told that concrete under tank is about 9 inch thick. he doesn't know which part of tank was failed in test. they removed most of contaminated materials from tank top. but due to very small space between tank and room wall, it is impossible to remove remaining material without removing tank. no space to drill for soil samples on side of tank. tank is located in tank vault in sub-basement. so instead of taking out tank, Mark was suggesting to close this tank and tank vault with cement/foam. asked Mark to submit investigation report with all details before closing tank and tank room. 02/20/07 - Hiralkumar Patel. received report from Mark. PTC removed contaminated debris from around tank and has emptied out tank as tank failed in isolation test. they took three soil samples through bottom of tank. during sampling, found concrete floor under tank of about 10 inch thick. samples taken at about one foot depth below concrete floor. no contamination found in samples. as per Mark, there is not enough space around tank to clean everything. based on tank location, no more cleanup is possible. no oil stains observed on wall, between tank and boiler room, in boiler room. no contamination found in soil sample. leftover contamination, if any, be considered as contained. no soil/groundwater affected. 02/21/07 - Hiralkumar Patel. received call from Mark. he asked about what material should use to abandon tank as well as tank room. discussed with DEC Jacob. he told that it is not required to fill tank with any inert material if tank is aboveground, to avoid putting more load on foundation. but tank has to be cleaned out and vapor free. he suggested to cut open tank from side and clean it. tank has to be stamped with closure date as required by law. left message for Mark with these suggestions and requirements. also mentioned him to notify DEC prior to closure and to register new tank which will be installed soon. spoke with Mr. Smith, property manager. he mentioned that they will not installing any new tank as they are switching to gas heating system. they will leave tank room and tank empty with door sealed and stamp of closing date on it. asked Mr. Smith to correct PBS record as record shows use of #2 oil while site was using #6 oil. also asked him to put closing date and send form to PBS unit. case closed. NFA sent to Mr. Smith with PBS Correction form. letter faxed to Mr. Smith and Mark at PTC.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PM:- spoke with Rob. he mentioned that as part of heating system conversion from #6 to #2 oil/natural gas, the 7,500 gal tank was pumped out and cleaned. after cleaning, the tank system was tested and it failed. based on tank's condition, Riteway will send proposal to replace the tank system. currently, the building is using natural gas. Rob mentioned that all piping run aboveground, except part of fill line that runs under the sidewalk.3:01 PM:- sent TTF letter to Mr. Faraci requiring report submission by the end of 11/21/14. letter emailed to Mr. Faraci and Rob.**report due on 11/21/14.**

DEC Memo: 12-18-13 -Obligado - I called Matthew Carrol (646) 606-2332. Left message to call back the DEC. From google, site appears to be a parking lot. As per Vought, this spill will be assigned to me.12/19/13 - Obligado - I called again and left a message to call back DEC.Matt called me back. A geophysical was investigation was done. NO evidence of tank or fill port. There was an above grade hydraulic system for the carpark. A soil boring investigaiton also was completed. Elevated PID readings, widespread petroleum impacts found across the site. Carrol was doing work for the potential property developer:Developer:Ironstate Development201-963-5200Property Owner:29 Park LLC370 SEVENTH AVESTE 217NEW YORK, NEW YORK, 10001 BBL: 00779 0028He said he will email me a copy of the Phase II report within a couple weeks.Matt Carrol - mcarroll@tenen-env.com2/18/14 - Obligaod - I reviewed the Phase I and the RAP. This site has relatively low level petroleum impacts. The RAP proposes a complete dig out to below bedrock at 32 ft. The digout will require dewatering. The proposed development will be a 95 apartment building. The cellar will have a parking garage. The foundation floor will have a Grace Pre proof barrier. I emailed Matt that I had no comments on the plan as it will be a complete dig out and requested a copy of the Compelition Report upon completion of the remediation. The site is in the OER cleanup program.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Small Quantity Generator

Date form received by agency: 10/13/1999
Site name: FASHION INSTITUTE OF TECHNOLOGY
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Facility Has Received Notices of Violations:

Regulation violated: SR - 371.1(f);374-3.2(e)&(g)

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019824788

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. DEC Memo:

Case started as a TTF on March 13, 2012 On May 30, 2012 Sangesland spoke to property manager (Pedro Martin 212-868-3888). He said there is a 5,000 gal #6 tank that has some contamination issues (he didn't know details). Owner hired Riteway Tank to deal with the problems. Sangesland sent an e-mail to both David at Riteway and Veronica Zhune to ask them to work together on this site. Unknown if tank is being repaired or closed/removed?5/29/2012 Sangesland got an e-mail from David Chan at Riteway. He said they just got a signed proposal back from the owner. They will move forward with additional sampling and work in the next few weeks. 7/6/2012 Sangesland received an e-mail from Riteway:Sampling was performed this past Monday we core drilled through the bottom of the tank to retrieve samples. The samples returned dirty (verified onsite via PID). Ground water is at the tank, as soon as we core drilled through the bottom, water rushed in. We are currently writing an action plan for Veronica. We propose to IMMEDIATELY cut/install perforations on the interior of the tank of various sizes and at various heights to minimize the spreading of the contamination and to aid in the migration of loose product back into the tank. We are working on a delineation proposal for the client. Due to the location of the tank (buried in the basement), To perform an accurate delineation may be extremely difficult, if not near impossible. Access to the area is limited, especially when trying to get "geo probe" equipment onsite.7/27/2012 - Sangesland sent this message to Riteway today after a site visit:Earlier today I inspected the basement of 245 West 29th St and discussed the project with Joe Ostrowski.Based on the inspection and discussion, the NYSDEC is requiring two tasks to be completed before the tank can be closed in place.1) The NYSDEC requests that several additional holes be drilled in the sidewall of the buried tank to allow groundwater (and petroleum) to freely flow back into the tank.This liquid should be pumped out weekly for a period of 4-6 weeks. An inspection should be made of this liquid to determine what percentage is petroleum. 2) Two additional soil borings need to be drilled through the basement floor at a location approx 8 feet North of the buried tank and another 8 feet South of the buried tank down below the Groundwater level in the area. A soil sample should be taken at the Groundwater interface level and tested for VOC's and SVOC's per Methods 8260 & 8270.Based on the results of these two tasks, the NYSDEC may require additional work, or may close the case out and allow the existing tank to be closed in place.Please provide a short writeup of the results of this investigation.Thanks,

SS*****
***** 10/26/2012 Sangesland spoke to David Chan at Riteway. He

APARTNMENT BUILDING TTF (Continued)

S111738872

tried to take soil borings around the tank as requested. He hit refusal at about 6ft. He got minor "hits" on some VOCs. Slots were cut in the buried tank and they have pumped out several hundred gallons of water from the tank about 6 times over the last 1-2 months. Visual inspection of this water shows no oil. Riteway will return one more time to take a water sample and do a "sniff" test. If the sample smells at all, a sample will be sent to the lab.

*****11/27/2012

Sangesland spoke to David Chan at Riteway. He said they put slots in the existing buried tank and have pumped out groundwater from the tank several times over the last month. The water appears clean and there is no oil mixed in. Based on this information, DEC has approved closing the spill case and allowing the property owners to go ahead with closing this tank and constructing a new tank.

Remarks: test failure, no loss of product, tank has been pumped

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"Con Ed e2mis #148255:05/07/03 09:50 hrsT Lynch of Manhattan I&A reported to N Muldoon that at 09:20 hrs while doing a rebadge in V 1798 located at 245 W 27 St. discovered approx 2 gallons of transformer oil mixed with dirt on the floor of the vault. The source of the spill is possible bottom leak of the unit as unit is below min. There is no water in the vault. Feeder is 13M57. There is an oil minder in the vault and pump has been disconnected. Spill tag # 38581 was installed. Account # H3282 is being used. Two samples were taken one for PCB and one for OIL ID on a priority " E" basis. At this time he is awaiting supervisor for chain of custody form. Initial cleanup action taken by placing pads and hanging spill tag. Cleanup pending removal of transformer.05/07/03 10:45 hrs UPDATET Lynch reports that the unit capacity is 285 gallons. J Gnull will take a measurement to determine amount of oil in unit. An over 50 tanker was ordered and is on its way to drain unit.UPDATE05/07/03 13:30 hrsS Mahoney of ERT reported to N Muldoon #18723 that after checking the unit it was discovered approx 100 gallons of oil was missing from the unit.Update: 05/07/03 @ 20:50 hrsLab Sequence Number:

03-03759-001 Analysis indicates the presence of a substance similar to a dielectric fluid. Update: May 07, 2003 @ 21:35 hrs Transformer Lab Sequence Number: 03-03758-001 TOTAL PCB 31 ppm Lab Sequence Number: 03-03758-002 Soil grab TOTAL PCB 6 ppm 5/8/2003 @ 16:32 Upon speaking to Dave Duke # 88158 of ERT @ 16:25, after further investigation, this spill can be down-graded to have lost only the original amount of two(2) gallons of Transformer oil. UPDATE 05/09/03 12:05 hrs E Hulser # 39723 Operating Supervisor Manhattan Cable Dept reported to N Muldoon #18723 that the cleanup was 100% complete at 11:30 hrs. The structure was double washed with slix and all liquid and solids were removed by the vacor truck and the unit was removed. Spill tag # 38581 was also removed.

Remarks: no to the five questions, spill in in vault #1798. Cleanup will be completed as soon as the transformer is replaced

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"Con Ed e2mis #138151:7/11/01 11:10 HRS.Bob Mahoney #97417, Field Operator, Field Operations Dept., reported at 10:29 hrs. that he found at 10:15 hrs. approx. 20 gallons of unknown fluid (dark color) mixed with approx. 40 gallons of water in vault V4466 located at 204 West 30 Street between 7th & 8th Ave. He was performing a vault inspection when he discovered the spill. This unknown substance or fluid was found mixed with the water in the concrete vault.Samples were taken by Bob Mahoney #97417 for PCB and Oil ID on a priority "E" basis. Samples will be taken to Astoria for analysis. Chain of Custody form will be delivered to site by the field supervisor. Initial cleanup action taken by placing absorbent pads down.UPDATE @ 18:26 hrs.Joe Cumberbatch, I&A Supervisor, reported at 15:36 hrs. that he arrived on location at 15:10 hrs. He also reported that Mr. Wong of the DEP left the site at 15:26 hrs. Mr. Cumberbatch inspected the vault and checked the capacity of the transformer, which he said was 362 gallons. The level was at 25 deg. C and apparently full. He stated that the unit would have to be pressure tested to verify no leaks. He inspected the vault and the oil level is good and there is no visual leaks. The substance appears to be cooking oil or restaurant waste. He also reported that the drain is clogged. Mr. Wong of the DEP observed that the drain was clogged. Prior PCB historical data indicates 9 ppm PCB.UPDATE 7/11/2001 @ 21:27 HRSLab results for Lab Sequence # 01-07229-001, <1ppm PCBUPDATE 7/11/2001 @ 21:45 HRSCleanup completed @ 20:30 HRS on 7/11/2001.Oil & water of approx 150 gallons picked up by Tanker and 1 bag of Industrial waste taken out. The structure was double washed and flushed using "Slix". The Environmental Tag # 20747 was removed. The Unit was pressure tested and found not to leak.

Remarks: found on 40 gals water. clean up pending

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "RODRIGUEZ"E2MIS NOTES 143557On 6/24 @ 01:26 HRS R Oravec # 15482 of FOD, reported to me that @ 01:15 HRS he discovered approx. 8 gallons of unknown oil and no water in V-5843. He was "shooting trouble" on feeder 13M45.Sewer/waterways cannot be determined to be affected, but there is a sump and according to Conduit plate 22-G-1 there is a connection through M-60881 which V-5483 has a connection to. There were no injuries related to this spill and weather conditions did not contribute to this spill. The source and cause of the spill are unknown at this time. No private property was affected. There is dielectric-filled feeder(s) in this structure. There were no substantial cracks observed in this structure.Two samples will be taken for PCB and ID. The Chain of Custody form used is # AA 27677. An Environmental Tag #33569 will be hung in the structure. No other cleanup action will be taken at this time. No standing except Trks loading/unloading Mon to Fri .6/25/2002 @ 02:06 HRSNotified CIG, spoke to McCarthy # 06416 @ 02:05 HRS6/25/2002 @ 03:30 HRSJ Liguori # 14084. operating Supervisor of I&A south reported to me that he condemned the Unit in question becuase it would not hold pressure and removal will be pending.6/25/2002EPA # NYP 004 099 479Transportation was faxed information and called to request an "OVER 50" tnaker for partial cleanup and draining of Transformer in V-5843 on 6/25/02 @ 07:00 HRS06/25/2002 06:34OS Ligouri I/A South reports additional adjacent vault 5661 13m49 will also be cleaned. The spill went through the weepholes into the adjacent vault. Mr. Ligouri determined that no additional samples will be required as this came from the original spill for which samples have already been taken.Update: 06/25/02Mr. Cumberbatch # 10660Reports that at at 11:25 hour's approx. 300 gallons of oil and water mixed was pumped into tanker from V-5843. Also reports that unit in V-5843 unit was drained and it was dry. (No oil in transformer) Total capacity of this unit is 396 gallons. He also reports that oil and water migrated via weep holes into adjacent V-5661, and down drain to V-1331 and out of sump, and into sewer. At 12:10 E/V desk was told that approx.25 gallons went into sewer as per Mr.Cumberbatch. But after further investigation he reports that approx. 300 gallons went into sewer from V-1331. At 13:30 hours Mr. Cumberbatch informed Mr. Duke Of E.R.T of this information as well. As of 15:30 hours partial clean up has started in V-1331, next to be done will V-5661 also partial clean up. In V-5843 unit will have to be removed to do full clean up.6/25/02 19:54 J. Cumberbatch # 10660 I&A (cleanup) supervisor repted that a tanker removed 200 gallons of water/oil mixture from the floor of vaults-5661, 1331. There was 4 drums of solid waste removed which contained oil soaked leaves and cleanup debris. A partial cleanup was done on these 2 vaults. They were doulde washed with riptide & rinsed with a flush truck. The reason being it was only a partial cleanup is that they can not get behind the units while they are in place. He is

not sure when they will be able to remove the units to clean behind them because they are online. The cleanup crew was M Reiter # 27277, E. Mignone # 36975, M. Prystupa # 02394, J. Adorno # 19496, R. Ciulla # 8838906/27/02 03:47 E. Higgins # 18537 cable (cleanup) supervisor Reported that the cleanup was complete 100% at 03:15. All the debris was removed with the flush truck. The structure was double washed with slix & rinsed down with the flush truck. The cleanup crew was: J. Rotondi # 11602, G. Rosario # 11464, Platt # 13218. The spill tag # 33569 was removed.

Remarks: spill is contained con edison ref 143557

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AIRS (AFS):

Airs Minor Details:

EPA plant ID: 110002367527
Plant name: N Y SCHOOL OF DRY CLEANING
Plant address: 252 W 29TH ST
NEW YORK, NY 10001
County: NEW YORK
Region code: 02
Dunn & Bradst #: Not reported
Air quality cntrl region: 043
Sic code: 7216
Sic code desc: DRYCLEANING PLANTS, EXCEPT RUG
North Am. industrial classf: 812320
NAIC code description: Drycleaning and Laundry Services (except Coin-Operated)
Default compliance status: IN COMPLIANCE WITH PROCEDURAL REQUIREMENTS
Default classification: POTENTIAL UNCONTROLLED EMISSIONS < 100 TONS/YEAR
Govt facility: ALL OTHER FACILITIES NOT OWNED OR OPERATED BY A FEDERAL, STATE, OR LOCAL GOVERNMENT

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
Waste name: CHROMIUM

Waste code: D011
Waste name: SILVER

Violation Status: No violations found

FINDS:

Registry ID: 110009484744

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number: 001
Tank Id: 9453
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
K00 - Spill Prevention - None
B01 - Tank External Protection - Painted/Asphalt Coating
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G02 - Tank Secondary Containment - Vault (w/access)
I05 - Overfill - Vent Whistle
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
3
Tank Location: Steel/Carbon Steel/Iron
Tank Type: Closed - Removed
Tank Status: Not reported
Pipe Model: 12/01/1951
Install Date: 15000
Capacity Gallons: NN
Tightness Test Method: Not reported
Date Test: Not reported
Next Test Date: Not reported

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007

Waste name: CHROMIUM

Waste code: D008

Waste name: LEAD

Waste code: X001

Waste name: WASTE OILS

Violation Status: No violations found

Registry ID: 110004518415

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"11/26/02 - most tank is burried. top of the tank is covered by concrete. oil stains can be found from side of the tank. It's been concluded that tank leaked. Due to the construction situation and utility lines there, it might come DEC to do letter has been sent out to owner. tank 1 is 4,000 gls.5/5/03 - Zhao/DO: Tank was removed by May 1 by Abilene Group. Application is needed for PBS registration. Application form sent.5/6/2003-Vought-Received call from John Thiemer (Abilene-718-372-4210). Tank was removed on 5/1/03 and temporary tanks were set up. Tank was cleaned before removal. Thiemer requested information on tank closure and endpoint samples. Tank will not be placed in location of previous tank. NYSDEC will sample analyticals and site plan and copy of invoice from tank removal. NYSDEC will receive report by 6/15/2003.1/7/04-Vought-Spill transferred from Vought to Austin.1/27/04 - Sawyer - Spill transferred from Austin to Sawyer.4/08/04 - Sawyer - Called Mr. Traum of Matthew Adams Properties and asked him to send receipts of the work done with end point samples and disposal manifest. He forwarded all needed documents from AL Eastmond and Abliene. Closed.
Remarks: TANK FAILURE AT ABOVE LOCATION. TANK TO BE DRAINED. CALLER IS

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Classification: Not a generator, verified

Date form received by agency: 09/09/1998
Site name: 6TH AVENUE WEST ASSOC
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSLEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110004546411

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
