VOC	Volatile Organic Compound

CERTIFICATION

I, Jason J. Hayes, am currently a registered professional engineer licensed by the State of New York. I performed professional engineering services and had primary direct responsibility for designing the remedial program for the 440 Washington Street site, site number 16CVCP003M. I certify the following:

- I reviewed this document, to which my signature and seal are affixed.
- Engineering Controls developed for this remedial action were designed by me or a person under my direct supervision and were designed to achieve the goals established in this Remedial Action Work Plan (RAWP) for this site.
- The Engineering Controls to be constructed during this remedial action are accurately reflected in the text and drawings of the RAWP and are of sufficient detail to enable proper construction.
- This RAWP has a plan for handling, transport and disposal of soil, fill, fluids and other materials removed from the property in accordance with applicable City, State and Federal laws and regulations. This RAWP also has a plan for importation of all soil, fill and other material from off-site that is in accordance with all applicable City, State and Federal laws and requirements. This RAWP has provisions to control nuisances during the remediation and all invasive work, including dust and odor suppression.

EXECUTIVE SUMMARY

270 West Street, LLC has enrolled in the New York City Voluntary Cleanup Program (NYCVCP) to investigate and remediate a site located at 440 Washington Street in New York, New York. A remedial investigation (RI) was performed to compile and evaluate data and information necessary to develop this Remedial Action Work Plan (RAWP). The remedial action described in this document provides for the protection of public health and the environment consistent with the intended property use, complies with applicable environmental standards, criteria and guidance, and conforms with applicable laws and regulations.

Site Location and Background

The site is located at 440 Washington Street in the Tribeca neighborhood in Manhattan, New York, and is identified as Block 223, and portions of Lots 13 and 15 on the NYC Tax Map. Figure 1 shows the site location. The site is 8,065 square feet and is bounded by Desbrosses Street followed by a newly constructed multi-story mixed-use (residential and commercial) building to the north; a four-story mixed-use (residential and commercial) building to the south; Washington Street followed by four multi-story mixed-use (residential and commercial) buildings and a three-story industrial and manufacturing building to the east; and a construction site for the 268 West Street development project to the west. A map of the site boundary is shown in Figure 2. The site is currently vacant and used for temporary parking and materials and equipment staging for the adjacent 268 West Street construction project. The site is covered by a concrete slab (former building foundation) with the exception of the northern portion of Lot 13, which contains a former cellar filled in with demolition debris.

Summary of Redevelopment Plan

The proposed development project consists of an 11-story mixed-use commercial and residential building with a partial cellar, ground level parking, and restaurant space. The northern portion of the site will be excavated to a depth of about 12 feet below ground surface (bgs) to accommodate the proposed basement, with some deeper excavation required for the elevator pit and foundation elements. The slab-on-grade (southern) portion of the site will be excavated to a depth of about 5 feet bgs with some deeper excavation for foundation elements and removal of the lead and copper hotspots. The ground floor will contain a parking lot for eight cars, a lobby, and a restaurant. The remaining floors will be used for residential apartments, with a community room on the 10th floor. The 11th floor will consist of a roof bulkhead. Excavation of about 2,600 cubic yards (cy) of soil, accompanied by dewatering, is anticipated to facilitate construction. The proposed development plans are included as Appendix A.

Summary of Surrounding Property

The site is located in an area characterized by multi-story, residential, and commercial buildings in a zoning district designated for mixed commercial, residential and manufacturing uses. The site is bounded by Desbrosses Street followed by a newly constructed multi-story mixed use (residential and commercial) building to the north, a four-story, mixed use (residential and commercial) building to the south, Washington Street followed by four multi-story mixed use (residential and commercial) buildings and a 3-story industrial and manufacturing building to the east, and a construction site for the 268 West Street development project to the west. Adjacent and surrounding property uses are summarized in the table below.

DIRECTION	ADJOINING PROPERTIES	SURROUNDING PROPERTIES
North	Desbrosses Street, followed by a multi-story commercial and residential building with a café on the 1st floor	Multi-story mixed use (residential and commercial) buildings and a construction site
East	Washington Street followed by four multi-story mixed use (residential and commercial) buildings and one three-story industrial and manufacturing building	Multi-story residential buildings, a parking lot and auto-repair
South	A four-story mixed use (residential and commercial) building	Vestry Street, Multi-story mixed use (residential and commercial) buildings
West	268 West Street development construction project	West Street, Hudson River Greenway and Hudson River Park

There are no schools, day care facilities or hospitals within 500 feet of the site. A surrounding land use map is presented as Figure 3.

Summary of Past Uses and Areas of Concern

Past uses of the site are based on review of Sanborn Maps, Building Department records and City Directories and are documented in Langan's August 28, 2015 Remedial Investigation Report (RIR).

The following is a summary of past uses of the site:

Lot 13

- A mahogany and veneer yard, a residence, store, and office (1894-1905)
- A chemical works (1920)
- A drug company (1927)
- A dowel company (1927)
- A chemical manufacturer and a wood products warehouse (1950-1977)
- A garage and a five-story residential building (1968-2005)

Lot 15

- A mahogany and veneer yard (1894-1905)
- A garage with two gasoline tanks (1950-1968)
- A building of unidentified use (1976-2005)
- A parking company (2013)

The Areas of Concern (AOC) identified for the site include:

1. Historical Site Use: Historical uses of the site include a mahogany and veneer yard (1894-1905), a chemical works (1920), a drug company (1927), a dowel company (1927), a chemical manufacturer and a wood products warehouse (1950-1977), and garages with gasoline tanks (1950-2005). Leaks or spills of petroleum products, solvents, and/or hazardous materials resulting from these uses may have adversely impacted soil, groundwater and/or soil vapor beneath the site.
2. Suspected Underground Storage Tanks (UST): Historical land use (Sanborn) maps from 1950 to 1968 show two gasoline USTs at the eastern site boundary, on Lot 15. Historical releases of gasoline may have impacted soil, soil vapor and/or groundwater at the site.

3. Historical Fill: According to historical geologic maps, the original shoreline of the Hudson River extended further eastward, beyond the site. The shoreline moved westward in the 1800s, by infilling with imported fill material. Historical fill typically contains contaminants, particularly metals and semivolatile organic compounds (SVOCs), at concentrations that exceed applicable state and/or federal standards and may also contain hazardous concentrations of metals.
4. Lead Hotspot: During the subsurface investigation performed by Langan in April 2015, lead was identified at a concentration of 3,100 milligrams per kilogram (mg/kg) in soil boring SB03 (advanced in the southeastern portion of the site) at a depth of 4 to 5 feet bgs.
5. Copper Hotspot: During the subsurface investigation performed by Langan in April 2015, copper was identified at a concentration of 42,000 mg/kg in soil boring SB05 (advanced in the central portion of the site) at a depth of 5 to 6 feet bgs.

Summary of the Work Performed Under the Remedial Investigation

Langan performed the following scope of work, which is outlined in the RIR:

1. Site inspection and geophysical survey to identify potential USTs, utilities, and subsurface obstructions that may impede boring advancement;
2. Advancement of 13 soil borings and the collection of 22 soil samples for laboratory analyses, including one duplicate sample;
3. Advancement of eight delineation soil borings at the lead and copper hotspot areas, and the collection of eight delineation soil samples for laboratory analyses;
4. Installation of four permanent groundwater monitoring wells and the collection of five groundwater samples for laboratory analysis, including one duplicate sample;
5. Installation of four soil vapor probes and the collection of five vapor samples for laboratory analysis, including one ambient air sample; and
6. Completion of a well survey to determine groundwater monitoring well elevations and to determine the direction of groundwater flow at the site.

Summary of Findings of Remedial Investigation

1. Elevation of the property ranges from el. 8.40¹ to el. 9.05 feet.
2. Depth to groundwater ranges from 8.26 feet bgs (el. -0.52) to 9.63 feet bgs (el. -1.4) at the site.
3. Groundwater flow is generally from west to east beneath the site.
4. The stratigraphy of the site, from the surface down, consists of 5 to 13.5 feet of historic fill underlain by native sand, silt, and organic silt. The top of the bedrock surface was observed during a geotechnical investigation at the adjacent property at about 89 feet bgs (about el. -80).
5. The geophysical survey did not identify anomalies consistent with USTs.
6. Soil sample results were compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 New York Codes, Rules and Regulations (NYCRR) Part 375 Unrestricted Use (UU) Soil Cleanup Objectives (SCO) and Restricted Residential Use (RRU) SCOs.
 - a. VOC - Concentrations of nine volatile organic compounds (VOC) exceeded their UU SCOs in seven soil samples collected, including benzene (max concentration 0.33 mg/kg), toluene (max concentration 1.6 mg/kg), ethylbenzene (max concentration 6.9 mg/kg), total xylenes (max concentration 36 mg/kg), naphthalene (max concentration 210 mg/kg), n-propylbenzene (max concentration 9.4 mg/kg), 1,3,5-trimethylbenzene (max concentration 30 mg/kg), acetone (max concentration 0.16 mg/kg), and 1,2,4-trimethylbenzene (max concentration 86 mg/kg). Of the nine VOCs whose concentrations exceeded their respective UU SCOs, the concentration of two VOCs, naphthalene and 1,2,4-trimethylbenzene, also exceeded their Part 375 Restricted Use Restricted-Residential Use (RRU) SCOs.
 - b. SVOC - Concentrations of 10 SVOCs including fluoranthene (max concentration 300 mg/kg), benzo(a)anthracene (max concentration 130 mg/kg), benzo(a)pyrene (max concentration 100 mg/kg),

¹ All elevations provided throughout this report are referenced to the North American Vertical Datum of 1988 (NAVD88) unless otherwise noted.

benzo(b)fluoranthene (max concentration 120 mg/kg), benzo(k)fluoranthene (max concentration 45 mg/kg), chrysene (max concentration 120 mg/kg), phenanthrene (max concentration 350 mg/kg), dibenzo(a,h)anthracene (max concentration 14 mg/kg), indeno(1,2,3-cd)pyrene (max concentration 59 mg/kg in SB06_05-1.0), and pyrene (max concentration 260 mg/kg), exceeded their respective RRU SCOs in six soil samples collected.

- c. Metals - Metals including arsenic (max concentration 130 mg/kg), cadmium (max concentration 4.8 mg/kg), copper (max concentration of 42,000 mg/kg), lead (max concentration of 3,100 mg/kg), mercury (max concentration of 1.7 mg/kg), zinc (max concentration of 4,000 mg/kg) exceeded their respective RRU SCOs.
 - d. Pesticides - Concentrations of three pesticides exceeded their respective UU SCOs in five soil samples collected, including 4-4'-DDE (max concentration of 0.00689 mg/kg), 4,4'-DDD (max concentration of 0.00372 mg/kg), and 4-4'-DDT (max concentration of 0.00486 mg/kg).
 - e. PCBs/Herbicides - Concentrations of polychlorinated biphenyls (PCB) and herbicides did not exceed their respective UU and RRU SCOs in any of the soil samples collected during the RI.
7. Groundwater samples were compared to the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards for Class GA groundwater (AWQS).
- a. SVOC - Concentrations of six SVOCs exceeded NYSDEC TOGS AWQS GA standards including chrysene (max concentration of 0.25 micrograms per liter [$\mu\text{g/L}$]), benzo(a)anthracene (max concentration of 0.26 $\mu\text{g/L}$), benzo(a)pyrene (max concentration of 0.28 $\mu\text{g/L}$), benzo(b)fluoranthene (max concentration of 0.3 $\mu\text{g/L}$), benzo(k)fluoranthene (max concentration of 0.12 $\mu\text{g/L}$), indeno(1,2,3-cd)pyrene (max concentration of 0.15 $\mu\text{g/L}$).
 - b. Metals - Dissolved concentrations of four metals exceeded their respective NYSDEC TOGS AWQS GA standards including iron (max concentration of 8,630 $\mu\text{g/L}$), magnesium (max concentration of 179,000 $\mu\text{g/L}$), manganese (max concentration of 3,861 $\mu\text{g/L}$), sodium (max concentration of 641,000 $\mu\text{g/L}$).

- c. VOCs, PCBs, and pesticides were not identified at concentrations exceeding their respective TOGS AWQS in the RI groundwater samples.
8. Soil vapor sample results were compared to the decision matrices established by the NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006. Carbon tetrachloride and trichloroethylene were not detected in any of the soil vapor samples collected during the RI. Based on the concentrations of 1,1,1-trichloroethane (max concentration of 1.64 micrograms per cubic meter [$\mu\text{g}/\text{m}^3$]), and tetrachloroethene (PCE, maximum concentration of 25.1 $\mu\text{g}/\text{m}^3$), the decision matrices recommend a range from “no further action” to “take reasonable and practical actions to identify sources and reduce exposures” to these compounds. However, a complete comparison cannot be made to the matrix considering there are no structures on the site and indoor air samples cannot be collected. Concentrations of total benzene, ethylbenzene, toluene, and xylene (BTEX) detected in soil vapor samples ranged from 20.23 to 166.44 $\mu\text{g}/\text{m}^3$. The highest reported concentrations were for isopropanol (489 $\mu\text{g}/\text{m}^3$), ethanol (431 $\mu\text{g}/\text{m}^3$), and acetone (228 $\mu\text{g}/\text{m}^3$). These compounds are common cleaning agents for laboratory equipment, and their reported concentration is likely attributed to laboratory interference.

Summary of the Remedial Action

The proposed remedial action achieves protection of public health and the environment for the intended use of the property. The proposed remedial action achieves all of the remedial action objectives established for the project; addresses applicable standards, criterion, and guidance; is effective in both the short-term and long-term; reduces mobility, toxicity and volume of contaminants; is cost effective and implementable; and uses standards methods that are well established in the industry.

The proposed remedial action consists of:

1. Preparation of a Community Protection Statement and implementation of a Citizen Participation Plan
2. Performance of a Community Air Monitoring Program for particulates and volatile organic carbon compounds
3. Establishment of Track 4 soil cleanup objectives (SCO) - Collection and analysis of documentation samples to determine the performance of the remedy with respect to attainment of Track 4 SCOs

4. Site mobilization involving site security setup, equipment mobilization, utility mark outs and marking & staking excavation areas
5. Completion of a Waste Characterization Study prior to excavation activities - Waste characterization soil samples will be collected at a frequency dictated by disposal facilities.
6. Excavation and removal of soil and fill exceeding Track 4 SCOs - The northern portion of the site will be excavated to a depth of about 12 feet bgs to accommodate the proposed basement, with some deeper excavation required for the elevator pit and foundation elements. The slab-on-grade (southern) portion of the site will be excavated to a depth of about 5 feet bgs with some deeper excavation for foundation elements and removal of the lead and copper hotspots.
7. Screening of excavated soil/fill during intrusive work for indications of contamination by visual means, odor, and monitoring with a photoionization detector (PID), and appropriate segregation of excavated media on-site
8. Dewatering in compliance with city, state, and federal laws and regulations - Extracted groundwater will either be containerized for off-site licensed or permitted disposal or will be treated under a permit from New York City Department of Environmental Protection (NYCDEP) to meet pretreatment requirements prior to discharge to the sewer system.
9. Management of excavated materials including temporarily stockpiling and segregating in accordance with defined material types and to prevent co-mingling of contaminated material and non-contaminated materials
10. Removal of any USTs identified during development and closure of any petroleum spills discovered in compliance with applicable local, State and Federal laws and regulations
11. Transportation and off-site disposal of soil/fill material at licensed or permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan - Sampling and analysis of excavated media as required by disposal facilities and appropriate segregation of excavated media on-site
12. Installation of a waterproofing membrane/vapor barrier system beneath the building slab and outside foundation sidewalls below grade, and beneath the slab-on-grade parts of the building that are not mechanically ventilated or open to outside air. The waterproofing membrane/vapor barrier will consist of Grace Preprufe 300R for

horizontal installations, and Grace Preprufe 160R or Bituthene 4000 for vertical installations, or an alternative OER-approved vapor barrier product that would provide similar vapor mitigation and waterproofing protection. Grace Preprufe 300R is a 45-mil thick high-density polyethylene (HDPE) film, and Preprufe 160R is a 30-mil thick HDPE film. Bituthene is a 60-mil thick self-adhesive HDPE film. In the slab-on-grade areas of the building that are not mechanically vented or open to outside air, Grace Florprufe 120 will be used, or an alternative OER-approved vapor barrier product that would provide similar vapor mitigation protection. Grace Florprufe 120 is a 20-mil thick polyolefin film. All welds, seams and penetrations will be properly sealed to prevent preferential pathways for vapor migration. The waterproofing membrane/vapor barrier system is an engineering control (EC) for the remedial action. The remedial engineer will certify in the Remedial Action Report (RAR) that the vapor barrier system was designed and properly installed to mitigate soil vapor migration into the building.

13. Construction and maintenance of an engineered composite cover consisting of concrete and asphalt pavement and a concrete building to prevent human exposure to residual soil/fill remaining under the site
14. Construction and operation of an at-grade-level parking garage with high volume air exchange in conformance with NYC Building Code
15. Import of materials to be used for backfill and cover in compliance with this plan and in accordance with applicable laws and regulations
16. Implementation of stormwater pollution prevention measures in compliance with applicable laws and regulations
17. Performance of all activities required for the remedial action, including permitting requirements and pretreatment requirements, in compliance with applicable laws and regulations
18. Submission of an RAR that describes the remedial activities, certifies that the remedial requirements have been achieved, defines the site boundaries, lists any changes from this RAWP, and describes all ECs and institutional controls (IC) to be implemented at the site
19. Submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual contamination, including plans for operation, maintenance, monitoring, inspection and certification of ECs and ICs and reporting at a specified frequency

20. The property will continue to be registered with an E-Designation by the NYC Buildings Department (NYCDOB) - Establishment of ECs and ICs in this RAWP and a requirement that management of these controls must be in compliance with an approved SMP - ICs will include prohibition of the following: (1) vegetable gardening and farming; (2) use of groundwater without treatment rendering it safe for the intended use; (3) disturbance of residual contaminated material unless it is conducted in accordance with the SMP; and (4) higher level of land usage without OER approval.

DRAFT

COMMUNITY PROTECTION STATEMENT

OER created the New York City Voluntary Cleanup Program (NYCVCP) to provide governmental oversight for the cleanup of contaminated property in NYC. This Remedial Action Work Plan ("cleanup plan") describes the findings of prior environmental studies that show the location of contamination at the Site, and describes the plans to clean up the site to protect public health and the environment.

This cleanup plan provides protection for neighboring communities. This cleanup plan also includes many other elements that address common community concerns, such as community air monitoring, odor, dust and noise controls, hours of operation, good housekeeping and cleanliness, truck management and routing, and opportunities for community participation. The purpose of this Community Protection Statement is to explain these community protection measures in non-technical language to simplify community review.

Project Information:

- Site Name: 440 Washington Street
- Site Address: 440 Washington Street, New York, New York
- NYC Voluntary Cleanup Program Project Number: 16CVCP003M

Project Contacts:

- OER Project Manager: Samantha Morris, 212-341-2082
- Site Project Manager: Angelo Ponte, (212) 274-1555
- Site Safety Officer: William Bohrer, (212) 479-5533
- Online Document Repository: <http://www.nyc.gov/html/oer/html/repository/RManhattan.shtml>

Remedial Investigation and Cleanup Plan. Under the NYCVCP, a thorough cleanup study of this property (called a remedial investigation) has been performed to identify past property usage; sample and test soil, groundwater and soil vapor; and identify contaminant sources present on the property. The cleanup plan has been designed to address all contaminant sources that have been identified during the study of this property.

Identification of Sensitive Land Uses. Prior to selecting a cleanup, the neighborhood was evaluated to identify sensitive land uses nearby, such as schools, day care facilities, hospitals and residential areas. The cleanup program was then tailored to address the special conditions of this community.

Qualitative Human Health Exposure Assessment. An important part of the cleanup planning for the site is the performance of a study to find all of the ways that people might come in contact with contaminants at the site now or in the future. This study is called a Qualitative Human Health Exposure Assessment (QHHEA). A QHHEA was performed for this project. This assessment has considered all known contamination at the site and evaluated the potential for people to come in contact with this contamination. All identified public exposures will be addressed under this cleanup plan.

Health and Safety Plan. This cleanup plan includes a Construction Health and Safety Plan (CHASP) that is designed to protect community residents and on-site workers. The elements of this plan are in compliance with safety requirements of the United States Occupational Safety and Health Administration. This plan includes many protective elements including those discussed below.

Site Safety Coordinator. This project has a designated site safety coordinator to implement the CHASP. The safety coordinator maintains an emergency contact sheet and protocol for management of emergencies. The site safety coordinator is William Bohrer and can be reached at (212) 579-5400.

Worker Training. Workers participating in cleanup of hazardous or potentially hazardous levels of contaminated material on this project are required to be trained in a 40-hour hazardous waste operators training course and to take annual refresher training. This pertains to workers performing specific tasks including removing contaminated material and installing cleanup systems in contaminated areas.

Community Air Monitoring Plan. Community air monitoring will be performed during this cleanup project to ensure that the community is properly protected from contaminants, dust and odors. Air samples will be tested in accordance with a detailed plan called the Community Air Monitoring Plan (CAMP). Results will be regularly reported to the OER. This cleanup plan also has a plan to address any unforeseen problems that might occur during the cleanup (called a 'Contingency Plan').

Odor, Dust and Noise Control. This cleanup plan includes actions for odor and dust control. These actions are designed to prevent off-site odor and dust nuisances and includes steps to be taken if nuisances are detected. Generally, dust is managed by application of physical covers and by water sprays. Odors are controlled by limiting the area of open excavations, physical covers, spray foams and by a series of other actions (called operational measures). The project is also required to comply with NYC noise control standards. If you observe problems in these areas, please contact the onsite Project Manager Brian Gochenaur at (212) 479-5400 or NYC OER Project Manager Samantha Morris at (212) 341-2082.

Quality Assurance. This cleanup plan requires that evidence be provided to illustrate that all cleanup work required under the plan has been completed properly. This evidence will be summarized in the final report, called the Remedial Action Report. This report will be submitted to the OER and will be thoroughly reviewed.

Stormwater Management. To limit the potential for soil erosion and discharge, this cleanup plan has provisions for storm-water management. The main elements of the storm water management include physical barriers such as tarp covers and erosion fencing, and a program for frequent inspection.

Hours of Operation. The hours for operation of cleanup will comply with the NYC Department of Buildings (NYCDOB) construction code requirements or according to specific variances issued by that agency. For this cleanup project, the hours of operation will conform to requirements of the NYCDOB.

Signage. While the cleanup is in progress, a placard will be prominently posted at the main entrance of the property with a laminated project Fact Sheet that states that the project is in the NYCVCP, provides project contact names and numbers, and locations of project documents can be viewed.

Complaint Management. The contractor performing this cleanup is required to address all complaints. If you have any complaints, you can call the facility Project Manager Angelo Ponte at (212) 274-1555, the NYC OER Project Samantha Morris at (212) 341-2082, or call 311 and mention the site is in the NYCVCP.

Utility Mark-outs. To promote safety during excavation in this cleanup, the contractor is required to first identify all utilities and must perform all excavation and construction work in compliance with NYCDOB regulations.

Soil and Liquid Disposal. All soil and liquid material removed from the site as part of the cleanup will be transported and disposed of in accordance with all applicable City, State and Federal regulations and required permits will be obtained.

Soil Chemical Testing and Screening. All excavations will be supervised by a trained and qualified environmental professional. In addition to sampling and chemical testing of soil on the site, excavated soil will be screened continuously using hand-held instruments, by sight, and by smell to ensure proper material handling and management, and community protection.

Stockpile Management. Soil stockpiles will be kept covered with tarps to prevent dust, odors and erosion. Stockpiles will be frequently inspected. Damaged tarp covers will be promptly

replaced. Stockpiles will be protected with silt fences. Hay bales will be used, as needed to protect storm water catch basins and other discharge points.

Trucks and Covers. Loaded trucks leaving the site will be covered in compliance with applicable laws and regulations to prevent dust and odor. Trucks will be properly recorded in logs and records and placarded in compliance with applicable City, State and Federal laws, including those of the New York State Department of Transportation. If loads contain wet material that can leak, truck liners will be used. All transport of materials will be performed by licensed truckers and in compliance with all laws and regulations.

Imported Material. All fill materials proposed to be brought onto the site will comply with rules outlined in this cleanup plan and will be inspected and approved by a qualified worker located on-site. Waste materials will not be brought onto the site. Trucks entering the site with imported clean materials will be covered in compliance with applicable laws and regulations.

Equipment Decontamination. All equipment used for cleanup work will be inspected and washed, if needed, before it leaves the site. Trucks will be cleaned at a truck inspection station on the property before leaving the site.

Housekeeping. Locations where trucks enter or leave the site will be inspected every day and cleaned regularly to ensure that they are free of dirt and other materials from the site.

Truck Routing. Truck routes have been selected to: (a) limit transport through residential areas and past sensitive nearby properties; (b) maximize use of city-mapped truck routes; (c) limit total distance to major highways; (d) promote safety in entry to highways; (e) promote overall safety in trucking; and (f) minimize off-site line-ups (queuing) of trucks entering the property. Operators of loaded trucks leaving the site will be instructed not to stop or idle in the local neighborhood.

Final Report. The results of all cleanup work will be fully documented in a final report (called a Remedial Action Report) that will be available for you to review in the public document repositories located at:

New York Public Library - Jefferson Market Library

425 Avenue of the Americas

New York, NY, 10011

(212) 243-4334

Library Manager: Frank Collierius

Hours (Call to verify):

Monday, Wednesday: 10:00 AM to 8:00 PM

Tuesday, Thursday:	11:00 AM to 6:00 PM
Friday, Saturday:	10:00 AM to 5:00 PM
Sunday:	Closed

Long-Term Site Management. To provide long-term protection after the cleanup is complete, the property owner may be required to comply with an ongoing Site Management Plan (SMP) that calls for continued inspection of protective controls, such as site covers. The SMP is evaluated and approved by the NYC OER. Requirements that the property owner must comply with are defined in the property's deed or established through a city environmental designation. A certification of continued protectiveness of the cleanup will be required from time to time to show that the approved cleanup is still effective.

DRAFT

REMEDIAL ACTION WORK PLAN

1.0 INTRODUCTION

270 West Street, LLC has enrolled in the New York City Voluntary Cleanup Program (NYCVCP) to investigate and remediate a property located at 440 Washington Street in the Tribeca section of Manhattan, New York (the "site"). A Remedial Investigation (RI) was performed to compile and evaluate data and information necessary to develop this Remedial Action Work Plan (RAWP) in a manner that will render the site protective of public health and the environment consistent with the contemplated end use. This RAWP establishes remedial action objectives, provides a remedial alternatives analysis that includes consideration of a permanent cleanup, and provides a description of the selected remedial action. The remedial action described in this document provides for the protection of public health and the environment, complies with applicable environmental standards, criteria and guidance and applicable laws and regulations.

1.1 Site Location and Current usage

The site is located at 440 Washington Street in the Tribeca neighborhood in Manhattan, New York, and is identified as Block 223, and portions of Lots 13 and 15 on the NYC Tax Map. Figure 1 shows the site location. The site is located on the northeast portion of the city block bounded by Desbrosses Street to the north, Washington Street to the east, Vestry Street to the south and West Street to the west. The 8,065 square feet site is currently vacant and used for temporary parking and materials and equipment staging for the adjacent 268 West Street construction project. The site is covered by a concrete slab (former building foundation) with the exception of the northern portion of Lot 13, which contains a former cellar filled in with demolition debris.

1.2 Proposed Redevelopment Plan

The proposed development project consists of an 11-story mixed-use commercial and residential building with a partial cellar, ground level parking, and restaurant space. The northern portion of the site will be excavated to a depth of about 12 feet below ground surface (bgs) to accommodate the proposed basement, with some deeper excavation required for the elevator pit and foundation elements. The slab-on-grade (southern) portion of the site will be excavated to a depth of about 5 feet bgs with some deeper excavation for foundation elements and removal of the lead and copper hotspots. The ground floor will contain a parking lot for eight cars, a lobby, and a restaurant. The remaining floors will be used for residential apartments, with a community room on the 10th floor. The 11th floor will consist of a roof bulkhead. Excavation of about 2,600 cubic yards (cy) of soil, accompanied by dewatering, is

anticipated to facilitate construction. The proposed development plans are included as Appendix A.

1.3 Description of Surrounding Property

The site is located in an area characterized by multi-story, residential, and commercial buildings in a zoning district designated for mixed commercial, residential and manufacturing uses. The site is bounded by Desbrosses Street followed by a newly constructed multi-story mixed use (residential and commercial) building to the north, a four-story, mixed use (residential and commercial) building to the south, Washington Street followed by four multi-story mixed use (residential and commercial) buildings and a 3-story industrial and manufacturing building to the east, and a construction site for the 268 West Street development project to the west. Adjacent and surrounding property uses are summarized in the table below.

DIRECTION	ADJOINING PROPERTIES	SURROUNDING PROPERTIES
North	Desbrosses Street, followed by a multi-story commercial and residential building with a café on the 1st floor	Multi-story mixed use (residential and commercial) buildings and a construction site
East	Washington Street followed by four multi-story mixed use (residential and commercial) buildings and one three-story industrial and manufacturing building	Multi-story residential buildings, a parking lot and auto-repair
South	A four-story mixed use (residential and commercial) building	Vestry Street, multi-story mixed use (residential and commercial) buildings
West	268 West Street development construction project	West Street, Hudson River Greenway and Hudson River Park

There are no schools, day care facilities or hospitals within 500 feet of the site.

Figure 3 shows the surrounding land usage.

1.4 Remedial Investigation

A remedial investigation (RI) was performed and the results are documented in a companion document called "*Remedial Investigation Report, 440 Washington Street*", dated August 28th, 2015 (RIR). The RIR is provided as Appendix C.

Summary of Past Uses of Site and Areas of Concern

Past uses of the site are based on review of Sanborn Maps, Building Department records and City Directories and are documented in Langan's August 28, 2015 RIR.

The following is a summary of past uses of the site:

Lot 13

- A mahogany and veneer yard, a residence, store, and office (1894-1905)
- A chemical works (1920)
- A drug company (1927)
- A dowel company (1927)
- A chemical manufacturer and a wood products warehouse (1950-1977)
- A garage and a five-story residential building (1968-2005)

Lot 15

- A mahogany and veneer yard (1894-1905)
- A garage with two gasoline tanks (1950-1968)
- A building of unidentified use (1976-2005)
- A parking company (2013)

The Areas of Concern (AOC) identified for the site include:

1. Historical Site Use: Historical uses of the site include a mahogany and veneer yard (1894-1905), a chemical works (1920), a drug company (1927), a dowel company (1927), a chemical manufacturer and a wood products warehouse (1950-1977), and garages with gasoline tanks (1950-2005). Leaks or spills of petroleum products, solvents, and/or

hazardous materials resulting from these uses may have adversely impacted soil, groundwater and/or soil vapor beneath the site.

2. Suspected Underground Storage Tanks (UST): Historical land use (Sanborn) maps from 1950 to 1968 show two gasoline USTs at the eastern site boundary, on Lot 15. Historical releases of gasoline may have impacted soil, soil vapor and/or groundwater at the site.
3. Historical Fill: According to historical geologic maps, the original shoreline of the Hudson River extended further eastward, beyond the site. The shoreline moved westward in the 1800s, by infilling with imported fill material. Historical fill typically contains contaminants, particularly metals and semivolatile organic compounds (SVOCs), at concentrations that exceed applicable state and/or federal standards and may also contain hazardous concentrations of metals.
4. Lead Hotspot: During the subsurface investigation performed by Langan in April 2015, lead was identified at a concentration of 3,100 milligrams per kilogram (mg/kg) in soil boring SB03 (advanced in the southeastern portion of the site), at a depth of 4 to 5 feet bgs.
5. Copper Hotspot: During the subsurface investigation performed by Langan in April 2015, copper was identified at a concentration of 42,000 mg/kg in soil boring SB05 (advanced in the central portion of the site), at a depth of 5 to 6 feet bgs.

Summary of the Work Performed under the Remedial Investigation

Langan performed the following scope of work as documented in the August 28th, 2015 RIR:

1. Site inspection and geophysical survey to identify potential USTs, utilities, and subsurface obstructions that may impede boring advancement;
2. Advancement of 13 soil borings and the collection of 22 soil samples for laboratory analyses, including one duplicate sample;
3. Advancement of eight delineation soil borings at the lead and copper hotspot areas, and the collection of eight delineation soil samples for laboratory analyses;
4. Installation of four permanent groundwater monitoring wells and the collection of five groundwater samples for laboratory analysis, including one duplicate sample;

5. Installation of four soil vapor probes and the collection of five vapor samples for laboratory analysis, including one ambient air sample; and
6. Completion of a well survey to determine groundwater monitoring well elevations and to determine the direction of groundwater flow at the site.

Summary of Environmental Findings

1. Elevation of the property ranges from approximately el. 8.40² to el. 9.05 feet.
2. Depth to groundwater ranges from approximately 8.26 feet bgs (el. -0.52) to 9.63 feet bgs (el. -1.4) at the site.
3. Groundwater flow is generally from west to east beneath the site.
4. The stratigraphy of the site, from the surface down, consists of 5 to 13.5 feet of historical fill underlain by native sand, silt, and organic silt. The top of the bedrock surface was observed during a geotechnical investigation at the adjacent property at about 89 feet bgs (about el. -80).
5. The geophysical survey did not identify anomalies consistent with USTs.
6. Soil sample results were compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 New York Codes, Rules and Regulations (NYCRR) Part 375 Unrestricted Use (UU) Soil Cleanup Objectives (SCO) and Restricted Residential Use (RRU) SCOs.
 - a. VOC - Concentrations of nine volatile organic compounds (VOC) exceeded their UU SCOs in seven soil samples collected, including benzene (max concentration 0.33 mg/kg), toluene (max concentration 1.6 mg/kg), ethylbenzene (max concentration 6.9 mg/kg), total xylenes (max concentration 36 mg/kg), naphthalene (max concentration 210 mg/kg), n-propylbenzene (max concentration 9.4 mg/kg), 1,3,5-trimethylbenzene (max concentration 30 mg/kg), acetone (max concentration 0.16 mg/kg), and 1,2,4-trimethylbenzene (max concentration 86 mg/kg). Of the nine VOCs whose concentrations exceeded their respective UU SCOs, the concentration of

² All elevations provided throughout this report are referenced to the North American Vertical Datum of 1988 (NAVD88) unless otherwise noted.

two VOCs, naphthalene and 1,2,4-trimethylbenzene, also exceeded their Part 375 RRU SCOs.

- b. SVOC - Concentrations of 10 SVOCs including fluoranthene (max concentration 300 mg/kg), benzo(a)anthracene (max concentration 130 mg/kg), benzo(a)pyrene (max concentration 100 mg/kg), benzo(b)fluoranthene (max concentration 120 mg/kg), benzo(k)fluoranthene (max concentration 45 mg/kg), chrysene (max concentration 120 mg/kg), phenanthrene (max concentration 350 mg/kg), dibenzo(a,h)anthracene (max concentration 14 mg/kg), indeno(1,2,3-cd)pyrene (max concentration 59 mg/kg in SB06_05-1.0), and pyrene (max concentration 260 mg/kg), exceeded their respective RRU SCOs in six soil samples collected.
 - c. Metals - Metals including arsenic (max concentration 130 mg/kg), cadmium (max concentration 4.8 mg/kg), copper (max concentration of 42,000 mg/kg), lead (max concentration of 3,100 mg/kg), mercury (max concentration of 1.7 mg/kg), zinc (max concentration of 4,000 mg/kg) exceeded their respective RRU SCOs.
 - d. Pesticides - Concentrations of three pesticides exceeded their respective UU SCOs in five soil samples collected, including 4-4'-DDE (max concentration of 0.00689 mg/kg), 4,4'-DDD (max concentration of 0.00372 mg/kg), and 4-4'-DDT (max concentration of 0.00486 mg/kg).
 - e. PCBs/Herbicides - Concentrations of polychlorinated biphenyls (PCB) and herbicides did not exceed their respective UU and RRU SCOs in any of the soil samples collected during the RI.
7. Groundwater samples were compared to the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards for Class GA groundwater (AWQS).
- a. SVOC - Concentrations of six SVOCs exceeded NYSDEC TOGS AWQS GA standards including chrysene (max concentration of 0.25 micrograms per liter [$\mu\text{g/L}$]), benzo(a)anthracene (max concentration of 0.26 [$\mu\text{g/L}$]), benzo(a)pyrene (max concentration of 0.28 [$\mu\text{g/L}$]), benzo(b)fluoranthene (max concentration of 0.3 [$\mu\text{g/L}$]), benzo(k)fluoranthene (max concentration of 0.12 [$\mu\text{g/L}$]), indeno(1,2,3-cd)pyrene (max concentration of 0.15 [$\mu\text{g/L}$]).

- b. Metals - Dissolved concentrations of four metals exceeded their respective NYSDEC TOGS AWQS GA standards including iron (max concentration of 8,630 $\mu\text{g/L}$), magnesium (max concentration of 179,000 $\mu\text{g/L}$), manganese (max concentration of 3,861 $\mu\text{g/L}$), and sodium (max concentration of 641,000 $\mu\text{g/L}$).
 - c. VOCs, PCBs, and pesticides were not identified at concentrations exceeding their respective TOGS AWQS in the RI groundwater samples.
 8. Soil vapor sample results were compared to the decision matrices established by the New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion, October 2006. Carbon tetrachloride and trichloroethylene were not detected in any of the soil vapor samples collected during the RI. Based on the concentrations of 1,1,1-trichloroethane (max concentration of 1.64 micrograms per cubic meter [$\mu\text{g/m}^3$]), and tetrachloroethene (PCE, maximum concentration of 25.1 $\mu\text{g/m}^3$), the decision matrices recommend a range from "no further action" to "take reasonable and practical actions to identify sources and reduce exposures" to these compounds. However, a complete comparison cannot be made to the matrix considering there are no structures on the site and indoor air samples cannot be collected. Concentrations of total benzene, ethylbenzene, toluene, and xylene (BTEX) detected in soil vapor samples ranged from 20.23 to 166.44 $\mu\text{g/m}^3$. The highest reported concentrations were for isopropanol (489 $\mu\text{g/m}^3$), ethanol (431 $\mu\text{g/m}^3$), and acetone (228 $\mu\text{g/m}^3$). These compounds are common cleaning agents for laboratory equipment, and their reported concentrations are likely attributed to laboratory interference.

For more detailed results, consult the RIR. Based on an evaluation of the data and information from the RIR and this RAWP, disposal of hazardous waste is not suspected at this site.

2.0 REMEDIAL ACTION OBJECTIVES

Based on the results of the RI, the following Remedial Action Objectives (RAO) have been identified for this site:

Groundwater

- Remove contaminant sources causing impact to groundwater
- Prevent direct exposure to contaminated groundwater

Soil

- Prevent direct contact with contaminated soil
- Prevent exposure to contaminants volatilizing from contaminated soil
- Prevent migration of contaminants that would result in groundwater or surface water contamination

Soil Vapor

- Prevent exposure to contaminants in soil vapor
- Prevent migration of soil vapor into dwelling and other occupied structures

3.0 REMEDIAL ALTERNATIVES ANALYSIS

The goal of the remedy selection process is to select a remedy that is protective of human health and the environment, with consideration of the current, intended, and reasonably anticipated future uses of the property. The remedy selection process begins by establishing RAOs for media in which chemical constituents were found in excess of applicable standards, criteria and guidance values (SCG). A remedy is then developed based on the following ten criteria:

1. Protection of human health and the environment;
2. Compliance with SCGs;
3. Short-term effectiveness and impacts;
4. Long-term effectiveness and permanence;
5. Reduction of toxicity, mobility, or volume of contaminated material;
6. Implementability;
7. Cost effectiveness;
8. Community acceptance;
9. Land use; and
10. Sustainability.

As required, a Track 1 UU scenario is evaluated for the remedial action. The following is a detailed description of the alternatives analyzed to address impacted media at the site:

Alternative I is the Track 1 scenario and would include the following remedial actions:

- Selection of 6 NYCRR Part 375 Table 6.8 (a) UU Track 1 SCOs
- Removal of any USTs encountered during development
- Removal of all soil and fill exceeding Track 1 UU SCOs throughout the site and confirmation that Track 1 UU SCOs have been achieved with post-excavation endpoint sampling - If soil and fill containing analytes at concentrations above UU SCOs is still present at the base of the excavation after removal of all soil required for construction of the new building's cellar level and slab-on-grade foundation is complete, additional excavation would be performed to ensure complete removal of soil/ fill that does not meet Track 1 Unrestricted Use SCOs.
- Collection and analysis of six confirmation endpoint samples to determine the performance of the remedy with respect to the SCOs

- Localized dewatering as necessary to accommodate excavation below the groundwater table
- Backfilling of excavated areas to development grade with certified-clean material (meeting UU SCOs), recycled concrete aggregate (RCA) or virgin, native crushed stone
- Development and execution of a construction health and safety plan (CHASP) and community air monitoring plan (CAMP) for the protection of site workers, the general public, and the environment during remediation and construction
- No Engineering Controls (EC) or Institutional Controls (IC) are required for a Track 1 cleanup. Although not considered an EC, the development will include construction and operation of a full-time parking garage that is ventilated in accordance with New York City Mechanical Code. The parking garage will occupy the southern portion of the building, which will consist of slab-on-grade construction. Excavation will extend to about 12 feet bgs within the remainder of the building footprint, and the building slab in this area will be installed within the water table. A waterproofing membrane/vapor barrier will be installed as a foundation waterproofing measure throughout the basement footprint, and along the basement sidewalls. A vapor barrier will also be installed in the areas of the slab-on-grade foundation that are not mechanically ventilated or open to outside air. The waterproofing membrane/vapor barrier and the ventilated parking garage will prevent VOCs from intruding into the building from on- and off-site sources.

Alternative II is a Track 2 scenario and includes the following remedial actions:

- Selection of 6NYCRR Part 375 Table 6.8 (b) RRU Track 2 SCOs
- Excavation and off-site disposal of fill and native soil exceeding the Track 2 RRU SCOs to 12 feet bgs in the northern portion of the site, and to about 5 feet bgs in the southern portion of the site, as shown on Figure 4, and any grossly-impacted soil, if encountered - Some deeper excavations will be required for elevator pits and foundation elements.
- Excavation and disposal of the copper and lead hotspots identified during the RI - Both are located within the area of the slab-on-grade portion of the proposed construction (southern portion of the site). Excavation to remove the copper and lead hotspots will extend to depths of about eight and seven feet bgs, respectively. Soil within the hotspot will be removed to the extent that the remaining material meets the Track 2 RRU SCOs.
- Removal of any USTs encountered during development

- Localized dewatering as necessary to accommodate excavation below the groundwater table
- Collection and analysis of eight documentation samples to document Track 2 RRU SCOs have been met.
- Backfilling of excavated areas to development grade with SCO-compliant material (meeting RRU SCOs), RCA, or virgin, native crushed stone, as needed
- Development and execution of a CHASP and CAMP for the protection of site workers, the general public, and the environment during remediation and construction
- Construction and operation of a full-time parking garage that is ventilated in accordance with New York City Mechanical Code - The parking garage will occupy the southern portion of the building, which will consist of slab-on-grade construction.
- Installation of a waterproofing membrane/vapor barrier to prevent VOC intrusion into site buildings, as an EC - The waterproofing membrane/vapor barrier will function as a waterproofing measure throughout the basement footprint, and along the basement sidewalls. A vapor barrier will also be installed in the areas of the slab-on-grade foundation that are not mechanically ventilated or open to outside air.
- Establishment of use restrictions including prohibitions on the use of groundwater from the site; prohibitions of restricted site uses, such as farming or vegetable gardening, to prevent future exposure pathways; and prohibition of a higher level of land use without OER approval
- Establishment of an approved Site Management Plan (SMP) to ensure long-term management of the EC and ICs including the performance of periodic inspections and certification that the controls are performing as they were intended - The SMP will note that the property owner and property owner's successors and assigns must comply with the approved SMP.
- The property will continue to be registered with an E-Designation at the NYC Department of Buildings (NYCDOB).
- Placement of a deed notice to record the ECs/ICs on the deed to ensure that future owners of the Site continue to comply with the SMP, as required

Alternative III is a Track 4 scenario and includes the following remedial actions:

- Establishment of Track 4 Site-Specific SCOs
- Excavation and off-site disposal of fill and native soil exceeding the Track 4 SCOs to 12 feet bgs in the northern portion of the site, and to about 5 feet bgs in the southern portion of the site, as shown on Figure 4, and any grossly-impacted soil, if encountered - Some deeper excavation will be required for elevator pits and foundation elements.
- Excavation and disposal of the copper and lead hotspots identified during the RI - Both are located within the area of the slab-on-grade portion of the proposed construction (southern portion of the site). Excavation to remove the copper and lead hotspots will extend to depths of about eight and seven feet bgs, respectively. Soil within the hotspot will be removed to the extent that the remaining material meets the Track 4 SCOs.
- Removal of any USTs encountered during development
- Localized dewatering as necessary to accommodate excavation below the groundwater table
- Collection and analysis of eight documentation samples to document Track 4 SCOs have been met
- Backfilling of excavated areas to development grade with SCO-compliant material (meeting Track 4 SCOs), RCA, or virgin, native crushed stone, as needed
- Development and execution of a CHASP and CAMP for the protection of site workers, the general public, and the environment during remediation and construction
- Construction and operation of a full-time parking garage that is ventilated in accordance with New York City Mechanical Code - The parking garage will occupy the southern portion of the building, which will consist of slab-on-grade construction.
- Installation of a waterproofing membrane/vapor barrier to prevent VOC intrusion into site buildings, as an EC - The waterproofing membrane/vapor barrier will function as a waterproofing measure throughout the basement footprint, and along the basement sidewalls. The waterproofing membrane/vapor barrier will also be installed in the areas of the slab-on-grade foundation that are not mechanically ventilated or open to outside air.
- Placement of a composite cover system over the entire site to prevent exposure to remaining soil and fill

- Establishment of use restrictions including prohibitions on the use of groundwater from the site; prohibitions of restricted site uses, such as farming or vegetable gardening, to prevent future exposure pathways; and prohibition of a higher level of land use without OER approval
- Establishment of an approved Site Management Plan (SMP) to ensure long-term management of these ECs and ICs including the performance of periodic inspections and certification that the controls are performing as they were intended - The SMP will note that the property owner and property owner's successors and assigns must comply with the approved SMP.
- The property will continue to be registered with an E-Designation at the NYCDOB.
- Placement of a deed notice to record the ECs/ICs on the deed to ensure that future owners of the Site continue to comply with the SMP, as required

3.1 Threshold Criteria

Protection of Public Health and the Environment

This criterion is an evaluation of the remedy's ability to protect public health and the environment, and an assessment of how risks posed through each existing or potential pathway of exposure are eliminated, reduced or controlled through removal, treatment, and implementation of ECs or ICs. Protection of public health and the environment must be achieved for all approved remedial actions.

Alternative I – The Alternative I remedy would eliminate all pathways of exposure from on-site contaminated media. Remediating the site to Track 1 standards would result in the elimination of all soil that exceeds Track 1 SCOs and groundwater protection standards, thus eliminating potential for direct contact with contaminated soil and historical fill once construction is complete and eliminating the risk of contamination leaching into groundwater. Any USTs encountered would be decommissioned, removed and disposed off-site, and any petroleum-impacted material discovered would be excavated and disposed off-site. The RAOs for public health and environmental protection would be met through the removal of all contaminated media, which would eliminate any possible ingestion, inhalation or dermal contact.

Alternative II – Alternative II would achieve protections of human health and the environment that are comparable to Alternative I by excavating historical fill to a depth of about 12 feet bgs in the northern portion of the site and to a depth of about 5 feet bgs in the remainder of the site, by ensuring that remaining soil and historical fill on-site meets Track 2 RRU SCOs, and by placement of ECs and ICs, including a waterproofing membrane/vapor barrier, and ventilated

parking garage. The composite cover system would prevent direct contact with any remaining on-site soil and historical fill. The waterproofing membrane/vapor barrier and ventilated parking garage would prevent soil vapors from entering the new building. Implementation of ICs and an SMP would ensure that the composite cover system, waterproofing membrane/vapor barrier, and parking garage ventilation system remain intact, operational, and protective. Establishment of Track 2 RRU SCOs would minimize the risk of contamination leaching into groundwater.

Alternative III – Alternative III would achieve protections of human health and the environment that are comparable to Alternative I by excavating historical fill to a depth of about 12 feet bgs in the northern portion of the site and to a depth of about 5 feet bgs in the remainder of the site, by ensuring that remaining soil and historical fill on-site meets Track 4 SCOs, and by placement of ECs and ICs, including a composite cover system, waterproofing membrane/vapor barrier, and ventilated parking garage. The composite cover system would prevent direct contact with any remaining on-site soil and historical fill. The waterproofing membrane/vapor barrier and ventilated parking garage would prevent soil vapors from entering the new building. Implementation of ICs and an SMP would ensure that the composite cover system, waterproofing membrane/vapor barrier, and parking garage remain intact, operational, and protective. Establishment of Track 4 SCOs would minimize the risk of contamination leaching into groundwater.

For each alternative, potential exposure to contaminated soils or groundwater during construction would be minimized by implementing a CHASP, an approved Soil/Materials Management Plan (SMMP), and CAMP. Potential contact with contaminated groundwater after construction is completed would be prevented, as its use is prohibited by city laws and regulations. Infiltration of off-site soil vapors into the buildings would be prevented by installing a waterproofing membrane/vapor barrier below the new building's cellar slab around foundation walls, and within unventilated areas of the slab-on-grade construction. The environment would be protected by implementing and enforcing the selected soil erosion plans. The SMMP is included as Appendix E, and the CHASP and CAMP are provided as Appendix F.

3.2 Balancing Criteria

Compliance with Standards, Criteria and Guidance (SCGs)

This evaluation criterion assesses the ability of the alternative to achieve applicable standards, criteria and guidance.

Alternative I would achieve compliance with the remedial goals, chemical-specific SCGs and RAOs for soil through removal of soil to achieve Track UU SCOs and Groundwater Protection

Standards. Compliance with SCGs for soil vapor would also be achieved by operating a ventilated garage, construction of a building slab within the groundwater table, and by installing a waterproofing membrane/vapor barrier below the building foundation slab and continuing the waterproofing membrane/vapor barrier around foundation walls, as part of development. The waterproofing membrane/vapor barrier would also be installed in unventilated areas of the slab-on-grade construction.

Alternatives II and III would achieve compliance with the remedial goals, chemical-specific SCGs and RAOs for soil through removal of soil to meet either the Track 2 RRU SCOs (Alternative II) or the Track 4 Site-Specific SCOs (Alternative III). Compliance with SCGs for soil vapor would also be achieved by installing a waterproofing membrane/vapor barrier below the building foundation slab and continuing the waterproofing membrane/vapor barrier around foundation walls, and within unventilated areas of the slab-on-grade construction. An SMP would govern long-term management of these Engineering and Institutional Controls.

Each remedial alternative complies with SCGs that involve protection of the public health and environment during the remedial action by implementing and enforcing a site-specific CHASP. Occupational Safety and Health Administration (OSHA) requirements for on-site construction safety will be followed by the site contractors. In each remedial alternative, focused attention on dust control and proper soil handling techniques would aid compliance with applicable SCGs. These measures will protect on-site workers and the surrounding community from exposure to site derived contaminants.

Short-term effectiveness and impacts

This evaluation criterion assesses the effects of the alternative during the construction and implementation phase until remedial action objectives are met. Under this criterion, alternatives are evaluated with respect to their effects on public health and the environment during implementation of the remedial action, including protection of the community, environmental impacts, time until remedial response objectives are achieved, and protection of workers during remedial actions.

Alternatives I, II and III have similar short-term effectiveness, as each requires excavation of historical fill material to depths of at least 5 to 12 feet bgs, and removal of the copper and lead hotspots. The alternatives would result in short-term dust generation associated with excavation, handling, load out of materials, and truck traffic. However, focused attention to dust control and proper soil handling during the remedial action, including community air monitoring and appropriate truck routing, would minimize or negate the overall impact of these activities.

The site construction is estimated to require about 104 twenty-five-cubic-yard-capacity truck trips to haul soil for disposal to advance excavation to development depth. Truck traffic will be routed on the most direct course using major thoroughfares where possible and flaggers will be used to protect pedestrians at site entrances and exits.

Under each remedial alternative, dust will be controlled by the application of water spray on the haul roads, and on site, when and where needed. Measures such as slowing the pace of work, applying foam suppressant or covering portions of the excavation will be used to minimize vapors and suppress odors when required. Work will be modified or stopped according to the action levels set forth in the CAMP. The effects of these potential adverse impacts to the community, workers and the environment will be minimized through implementation of corresponding control plans including a CHASP, a CAMP and an SMMP, during soil disturbance activities and would minimize the release of contaminants into the environment. Each alternative provides short term effectiveness in protecting the surrounding community by decreasing the risk of contact with site-derived contaminants. Construction workers operating under appropriate management procedures and a CHASP would be protected from site-derived contaminants (personal protective equipment would be worn consistent with the documented risks within the respective work zones).

Long-term effectiveness and permanence

This evaluation criterion addresses the results of a remedial action in terms of its permanence and quantity/nature of waste or residual contamination remaining at the site after response objectives have been met, such as permanence of the remedial alternative, magnitude of remaining contamination, adequacy of controls including the adequacy and suitability of ECs and ICs that may be used to manage contaminant residuals that remain at the site and assessment of containment systems and ICs that are designed to eliminate exposures to contaminants, and long-term reliability of ECs.

Alternative I - The Track 1 remedy will remove all soil exceeding UU SCOs. For development, excavation will extend to a minimum depth of 12 feet bgs in the northern portion of the site, and to a minimum depth of 5 feet bgs in the remainder of the site. If soil and fill containing analytes at concentrations above UU SCOs are still present at the base of the excavation after removal of all soil required for construction of the new building's cellar level and slab-on-grade foundation is complete, additional excavation would be performed to ensure complete removal of soil/ fill that does not meet Track 1 UU SCOs. Compliance with SCGs for soil vapor would also be achieved by operating a ventilated parking garage, construction of a building slab within the groundwater table, and by installing a waterproofing membrane/vapor barrier below the building foundation slab and continuing the waterproofing membrane/vapor barrier around foundation walls, as part of development. The waterproofing membrane/vapor barrier would

also be installed in unventilated areas of the slab-on-grade construction.

Alternatives II and III – Residual contaminated media will be managed because potential exposure pathways to soil, groundwater, and soil vapor will be eliminated by the completion of either the Track 2 (Alternative II) or Track 4 (Alternative III) remedy. These remedies will include the removal of soil exceeding Track 2 RRU SCOs or Track 4 site-specific SCOs to a depth of 12 feet bgs in the northern part of the site and to a depth of 5 feet bgs in the remainder of the site. Some deeper excavations will be required for elevator pits and foundation elements. An effective and permanent concrete composite site cap would be installed and maintained, which would provide a permanent barrier to any impacted groundwater. In addition, groundwater in this area of New York City is not used for drinking water. Soil vapor will be mitigated by the installation of a waterproofing membrane/vapor barrier and by operating a ventilated parking garage. Therefore, the long-term effectiveness of this remedy will eliminate risks and satisfy the objectives of this criterion.

Alternative I would achieve long-term effectiveness and permanence related to on-site contamination by permanently removing all impacted soil and fill above Track 1 UU SCOs. Removal of on-site contaminant sources will also prevent future groundwater contamination.

Alternatives II and III would provide long-term effectiveness by removing most on-site contamination and attaining RRU SCOs (Track 2) or site-specific SCOs (Track 4); installing a composite cover system (Alternative III) and waterproofing membrane/vapor barrier across the site; operating a ventilated parking garage, maintaining use restrictions; establishing an SMP to ensure long-term management of ICs and ECs; and maintaining registration as an E-designated property to memorialize these controls for the long term. The SMP would provide guidelines for monitoring the long-term effectiveness of all ECs and ICs by requiring periodic inspection and certification that these controls and restrictions continue to be in place and are functioning as they were intended.

Reduction of toxicity, mobility, or volume of contaminated material

This evaluation criterion assesses the remedial alternative's use of remedial technologies that permanently and significantly reduce toxicity, mobility, or volume of contaminants as their principal element. The following is the hierarchy of source removal and control measures that are to be used to remediate a site, ranked from most preferable to least preferable: removal or treatment, containment, elimination of exposure and treatment of source at the point of exposure. It is preferred to use treatment or removal to eliminate contaminants at a site, reduce the total mass of toxic contaminants, cause irreversible reduction in contaminants mobility, or reduce of total volume of contaminated media.

Alternative I - The Track 1 remedy will permanently and significantly reduce the toxicity, mobility, and volume of contamination through removal of contaminated soil. Installation of a building slab (portions of which will be installed within the groundwater table), and installation of a waterproofing membrane and ventilated parking garage as construction measures will mitigate exposure to impacted groundwater or off-site sources of soil vapor.

Alternatives II and III - The Track 2 and Track 4 remedies will reduce the toxicity through removal of historical fill, and material exceeding RRU SCOs (Track 2) or site-specific SCOs (Track 4). Installation of a building slab (portions of which will be installed within the groundwater table), installation of a waterproofing membrane/vapor barrier, and ventilated parking garage as ECs will mitigate exposure to impacted groundwater and off-site sources of soil vapor.

Alternative I represents the most stringent cleanup standard of the three alternatives; therefore, it will be more effective in reducing toxicity than Alternatives II and III. The mobility of residual contaminants does not represent an off-site migration concern.

Implementability

This evaluation criterion addresses the technical and administrative feasibility of implementing an alternative and the availability of various services and materials required during its implementation, including technical feasibility of construction and operation, reliability of the selected technology, ease of undertaking remedial action, monitoring considerations, administrative feasibility (e.g. obtaining permits for remedial activities), and availability of services and materials.

Implementation of each alternative is feasible. The techniques, materials and equipment to implement them are readily available and have been proven effective in remediating the contaminants associated with the site. Excavation support and dewatering will be required for the implementation of each alternative. Excavation of the targeted fill and soil would be completed using standard bucket excavators. These remedies use typical remediation methods to address site impacts, and contractors experienced in implementing the remedies are readily available in the area of the site. Each of the alternatives use technologies of comparable reliability. There are no special difficulties associated with any of the activities proposed.

Alternative I will require over-excavation beyond development depth to achieve Track 1 cleanup standards. Alternative II may also require over-excavation beyond development depth to achieve a Track 2 cleanup, in addition to the over-excavation required to remove the lead and copper hotspots. Therefore, Alternative III is considered to be the most implementable.

Cost effectiveness

This evaluation criterion addresses the cost of alternatives, including capital costs (such as construction costs, equipment costs, and disposal costs, and engineering expenses) and site management costs (costs incurred after remedial construction is complete) necessary for the continued effectiveness of a remedial action.

Over-excavation beyond development depth and additional soil disposal will be required to achieve a Track 1 cleanup. Alternative II may also require over-excavation beyond development depth to achieve a Track 2 cleanup, in addition to the over-excavation required to remove the lead and copper hotspots (required for all remedial alternatives). With exception to the lead and copper hotspots, implementation of Alternative III to meet the site-specific Track 4 SCOs will not require over-excavation. Additional long-term costs would be required for Alternatives II and III based on implementation of an SMP as part of these alternatives.

The remedial plan creates an approach that combines the remedial action with the redevelopment of the site, including the construction of the building foundation and subgrade structures. The remedial plan is also cost effective in that it will take into consideration the selection of the closest and most appropriate disposal facilities to reduce transportation and disposal costs during the excavation of historical fill and other soil during the redevelopment of the site.

Community Acceptance

This evaluation criterion addresses community opinion and support for the remedial action. Observations here will be supplemented by public comment received on the RAWP.

All three remedial alternatives should be acceptable to the community because the potential exposure pathways to on-site contamination will be mitigated during construction and eliminated upon completion of the respective alternatives. The site will also be redeveloped into an attractive use. However, as with any remediation or construction project, the temporary impacts during implementation given the extended construction time period and disruption to traffic patterns due to the significantly increased truck traffic may cause some community concerns. Alternatives I and II would require more truck trips and excavation to implement than Alternative III, therefore Alternative III would be most acceptable to the community during implementation.

This evaluation criterion addresses community opinion and support for the remedial action. Observations here will be supplemented by public comment received on the RAWP. Based on the overall goals of the remedial program and initial permitting associated with the proposed

site development, no adverse community opinion is anticipated for any of the alternatives. This RAWP will be subject to a public review under the NYCVCPC and will provide the opportunity for detailed public input on the remedial alternatives and the selected remedy. This public comment will be considered by OER prior to approval of this plan.

Land use

This evaluation criterion addresses the proposed use of the property. This evaluation has considered reasonably anticipated future uses of the site and takes into account: current use and historical and/or recent development patterns; applicable zoning laws and maps; NYS Department of State's Brownfield Opportunity Areas (BOA) pursuant to section 970-r of the general municipal law; applicable land use plans; proximity to real property currently used for residential use, and to commercial, industrial, agricultural, or recreational areas; environmental justice impacts, Federal or State land use designations; population growth patterns and projections; accessibility to existing infrastructure; proximity of the site to important cultural resources and natural resources, potential vulnerability of groundwater to contamination that might emanate from the site, proximity to flood plains, geography and geology; and current ICs applicable to the site.

The current, intended, and reasonably anticipated future land uses of the site and its surroundings should be compatible with the selected remedy of soil remediation. The future proposed development is a mixed-use residential and commercial building, which is expected to cover the entire site footprint. Review of previous environmental and public documents for the site has led to the following conclusions:

1. The current, intended, and reasonably anticipated future land use of the site and its surroundings should be compatible with the selected remedy. The reasonably anticipated future use of the site and the use of its surroundings have been documented by the volunteer in the VCP application.
2. The use proposed for the site conforms to applicable zoning laws or maps or the reasonably anticipated future use of the site.
3. The proposed use conforms to historical and recent development patterns in the area.
4. The site does not fall within the boundaries of an existing BOA.
5. The site is located in an urban setting that is characterized by residential, commercial, and industrial developments. There are no areas zoned for agricultural use in the proximity of the site.

6. There are no known environmental justice concerns.
7. There are no federal or state land designations.
8. The population growth patterns and projections support the proposed land use.
9. The site is accessible to existing infrastructure.
10. There are several landmark sites within 1/2-mile of the Site. The following table lists City Landmarks (L) and Properties Listed on National Register (NR) of Historic Places within approximately 1/2-Mile of the site:

Property/Site	Status	Address
Holland Tunnel	NR	West of West Street at Canal Street
Fleming Street Warehouse	L	451 Washington Street
480 Greenwich/502 Canal Street House	L	502 Canal Street
504 Canal Street House	L	504 Canal Street
506 Canal Street House	L	506 Canal Street
508 Canal Street House	L	508 Canal Street
486 Greenwich Street House	L	486 Greenwich Street
488 Greenwich Street House	L	488 Greenwich Street
Wilson Hunt House	L	41 Harrison Street
25 Harrison Street House	L	25 Harrison Street
29 Harrison Street House	L	29 Harrison Street
Holland Plaza Building	L	75 Varick Street
Notes: Sources: NYS Historic Preservation Office, National Register, and NYC.gov NYCityMap		

11. With the exception of the Hudson River, located 400 feet west of the site, the site is not located in close proximity to important federal, state or local natural resources, including waterways, wildlife refuges, wetlands, or critical habitats of endangered or threatened species.
12. Municipal water supply wells are not present in this area of New York City; therefore, groundwater from the site cannot affect municipal water supply wells or recharge areas. Manhattan does not use the groundwater as a source of drinking water.
13. According to Federal Emergency Management Agency (FEMA) flood maps, the site located within Zone AE "base flood elevations determined" area, which is a special flood hazard area subject to inundation by the 1% annual chance flood.
14. There are no known ICs in effect at the site.

Improvement to the environmental condition of the property achieved by each alternative is consistent with the City's goals for cleanup of contaminated land and bringing such properties into productive use.

Sustainability of the Remedial Action

This criterion evaluates the overall sustainability of the remedial action alternatives and the degree to which sustainable means are employed to implement the remedial action including those that take into consideration NYC's sustainability goals defined in *PlaNYC: A Greener, Greater New York*. Sustainability goals may include: maximizing the recycling and reuse of non-virgin materials; reducing the consumption of virgin and non-renewable resources; minimizing energy consumption and greenhouse gas emissions; improving energy efficiency; and promotion of the use of native vegetation and enhancing biodiversity during landscaping associated with site development. The sustainability of each remedial alternative is expected to be comparable. A list of green remedial activities considered as part of the NYCVCP is included in the Sustainability Statement, included as Appendix D.

4.0 REMEDIAL ACTION

4.1 Summary of Preferred Remedial Action

The preferred remedial action alternative is Alternative III, the Track 4 Alternative. The preferred remedial action alternative achieves protection of public health and the environment for the intended use of the property. The preferred remedial action alternative will achieve all of the remedial action objectives established for the project and addresses applicable SCGs. The preferred remedial action alternative is effective in both the short-term and long-term and reduces mobility, toxicity and volume of contaminants. The preferred remedial action alternative is cost effective and implementable and uses standards methods that are well established in the industry.

The proposed remedial action consists of:

1. Preparation of a Community Protection Statement and implementation of a Citizen Participation Plan
2. Performance of a Community Air Monitoring Program for particulates and volatile organic carbon compounds
3. Establishment of Track 4 SCOs - Collection and analysis of documentation samples to determine the performance of the remedy with respect to attainment of Track 4 SCOs
4. Site mobilization involving site security setup, equipment mobilization, utility mark outs and marking & staking excavation areas
5. Completion of a Waste Characterization Study prior to excavation activities - Waste characterization soil samples will be collected at a frequency dictated by disposal facilities.
6. Excavation and removal of soil and fill exceeding Track 4 SCOs - The northern portion of the site will be excavated to a depth of about 12 feet bgs to accommodate the proposed basement, with some deeper excavation required for the elevator pit and foundation elements. The southern slab-on-grade portion of the site will be excavated to a depth of about 5 feet bgs with some deeper excavation for foundation elements and removal of the lead and copper hotspots.
7. Screening of excavated soil/fill during intrusive work for indications of contamination by visual means, odor, and monitoring with a photoionization detector (PID), and appropriate segregation of excavated media on-site.

8. Dewatering in compliance with city, state, and federal laws and regulations - Extracted groundwater will either be containerized for off-site licensed or permitted disposal or will be treated under a permit from New York City Department of Environmental Protection (NYCDEP) to meet pretreatment requirements prior to discharge to the sewer system.
9. Management of excavated materials including temporarily stockpiling and segregating in accordance with defined material types and to prevent co-mingling of contaminated material and non-contaminated materials
10. Removal of any USTs identified during development and closure of any petroleum spills discovered in compliance with applicable local, State and Federal laws and regulations
11. Transportation and off-Site disposal of all soil/fill material at licensed or permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan - Sampling and analysis of excavated media as required by disposal facilities, and appropriate segregation of excavated media on-site
12. Installation of a waterproofing membrane/vapor barrier system beneath the building slab and outside foundation sidewalls below grade, and beneath the slab-on-grade parts of the building that are not mechanically ventilated or open to outside air - The waterproofing membrane/vapor barrier will consist of Grace Preprufe 300R for horizontal installations, and Grace Preprufe 160R or Bituthene 4000 for vertical installations, or an alternative OER-approved vapor barrier product that would provide similar vapor mitigation and waterproofing protection. Grace Preprufe 300R is a 45-mil thick high-density polyethylene (HDPE) film, and Preprufe 160R is a 30-mil thick HDPE film. Bituthene is a 60-mil thick self-adhesive HDPE film. In the slab-on-grade areas of the building that are not mechanically vented or open to outside air, Grace Florprufe 120 will be used, or an alternative OER-approved vapor barrier product that would provide similar vapor mitigation protection. Grace Florprufe 120 is a 20-mil thick polyolefin film. All welds, seams and penetrations will be properly sealed to prevent preferential pathways for vapor migration. The waterproofing membrane/vapor barrier system is an EC for the remedial action. The remedial engineer will certify in the Remedial Action Report (RAR) that the vapor barrier system was designed and properly installed to mitigate soil vapor migration into the building.
13. Construction and maintenance of an engineered composite cover consisting of concrete and asphalt pavement and a concrete building to prevent human exposure to residual soil/fill remaining under the site

14. Construction and operation of a grade-level parking garage with high volume air exchange in conformance with NYC Building Code
15. Import of materials to be used for backfill and cover in compliance with this plan and in accordance with applicable laws and regulations
16. Implementation of storm-water pollution prevention measures in compliance with applicable laws and regulations
17. Performance of all activities required for the remedial action, including permitting requirements and pretreatment requirements, in compliance with applicable laws and regulations
18. Submission of a RAR that describes the remedial activities, certifies that the remedial requirements have been achieved, defines the site boundaries, lists any changes from this RAWP, and describes all EC and IC to be implemented at the site
19. Submission of an approved SMP in the RAR for long-term management of residual contamination, including plans for operation, maintenance, monitoring, inspection and certification of EC and IC and reporting at a specified frequency
20. The property will continue to be registered with an E-Designation by the NYC Buildings Department. Establishment of EC and IC in this RAWP and a requirement that management of these controls must be in compliance with an approved SMP. IC will include prohibition of the following: (1) vegetable gardening and farming; (2) use of groundwater without treatment rendering it safe for the intended use; (3) disturbance of residual contaminated material unless it is conducted in accordance with the SMP; and (4) higher level of land usage without OER-approval.

4.2 Soil Cleanup Objectives and Soil and Fill management

Track 4 SCOs are proposed for this project. The SCOs for this site are listed in Table 1. The Track 4 SCOs for the project are the RRU SCOs defined in 6 NYCRR Part 375, Table 6.8 with the exception of the following site specific SCOs:

<u>Contaminant</u>	<u>Site-Specific SCO's</u>
Total SVOCs	500 ppm
Lead	1,000 ppm
Mercury	2.5 ppm

Copper	350 ppm
Arsenic	25 ppm

Soil and materials management on-site and off-site, including excavation, handling and disposal, will be conducted in accordance with the SMMP in Appendix E. The location of planned excavations is shown in Figure 4.

Soil/Fill Excavation and Removal

The total quantity of soil and fill expected to be excavated and disposed off-site is 3,900 tons. The northern portion of the site will be excavated to a depth of about 12 feet bgs for the proposed basement, with some deeper excavation required for the elevator pit and foundation elements. The southern slab-on-grade portion of the site will be excavated to a depth of about 5 feet bgs with some deeper excavation for foundation elements and removal of the lead and copper hotspots. Selected disposal facilities will be reported promptly to the OER Project Manager when they are identified and prior to the start of remedial action. The location of planned excavations is shown in Figure 4.

Documentation Samples

Documentation samples will be analyzed for compounds and elements as described below utilizing the following methodology:

- VOCs by EPA Method 8260;
- SVOCs by EPA Method 8270;
- TAL metals by EPA Methods 6010C and 7471B; and
- Pesticides/PCBs by EPA Method 8081/8082.

New York State Environmental Laboratory Accreditation Program (ELAP)-certified labs will be used for all documentation sample analyses. Labs performing documentation sample analyses will be reported in the RAR. The RAR will provide a tabular and map summary of all end-point sample results and will include all data including non-detects and applicable standards and/or guidance values.

Removal actions for development purposes under this plan will be performed in conjunction with documentation soil sampling. Six documentation samples will be collected from the base of the excavation at locations to be determined by OER. Proposed documentation sample locations are provided on Figure 5. To evaluate attainment of Track 4 SCOs, analytes will include those for which SCOs have been developed, including list SCO analytes, and the Track 4 site-specific SCOs provided above. Samples will be analyzed for VOCs, SVOCs, pesticides, PCBs and metals according to analytical methods described above.

Hot Spot Endpoint Sampling

Delineation samples collected at the copper and lead hot spot locations during the RI will be utilized as hot spot removal endpoint samples. No additional samples are required.

Quality Assurance/Quality Control

The fundamental quality assurance (QA) objective with respect to accuracy, precision, and sensitivity of analysis for laboratory analytical data is to achieve the quality control (QC) acceptance of the analytical protocol. The accuracy, precision and completeness requirements will be addressed by the laboratory for all data generated.

One blind duplicate sample for every 20 samples collected will be submitted to the approved laboratory for analysis of the same parameters. Trip blanks will be used whenever samples are transported to the laboratory for analysis of VOCs. One trip blank will be submitted to the laboratory within each cooler of soil VOC samples. Trip blanks will not be used for samples to be analyzed for metals, SVOCs or pesticides.

Collected samples will be appropriately packaged, placed in coolers and shipped via overnight courier or delivered directly to the analytical laboratory by a laboratory courier. Samples will be containerized in appropriate laboratory provided glassware and shipped in plastic coolers. Samples will be preserved through the use of ice or "cold-paks" to maintain a temperature of 4°C.

Dedicated disposable sampling materials will be used for the collection of documentation samples, eliminating the need to prepare field equipment (rinsate) blanks. However, if non-disposable equipment is used, (stainless steel scoop, etc.) field rinsate blanks will be prepared at the rate of 1 for every eight samples collected. Decontamination of non-dedicated sampling equipment will consist of the following:

- Gently tap or scrape to remove adhered soil
- Rinse with tap water
- Wash withalconox® detergent solution and scrub
- Rinse with tap water
- Rinse with distilled or deionized water

Field blanks will be prepared by pouring distilled or deionized water over decontaminated equipment and collecting the water in laboratory-provided containers.

Import and Reuse of Soils

Import of soils onto the property and reuse of soils already onsite will be performed in conformance with the SMMP in Appendix E. The estimated quantity of soil to be imported into the site for backfill and cover soil is not expected to exceed 250 tons. Reuse of on-site material is not expected.

4.3 Engineering Controls

Engineering Controls will be employed in the remedial action to address residual contamination remaining at the site. The site has three primary Engineering Control Systems. These are:

- A composite cover system consisting of asphalt and concrete pavement, and concrete building slabs,
- A soil vapor barrier/waterproofing membrane; and
- Ventilated parking garage.

Composite Cover System

Exposure to residual soil and fill will be prevented by an engineered, composite cover system to be built on the site. The concrete foundation slab of the future building, which will comprise the composite cover system, will be constructed to span the entire site. At least two feet of clean soil or crushed stone will be placed in any landscaped areas, if development plans are modified to include these. If cover soil is required, it will meet the UU SCOs. The cover system would serve as an EC for the protection of human health by establishing an incomplete exposure pathway to residual site soils. If clean soil cover is used in landscaped areas, a demarcation layer (e.g., orange snow fencing) will be installed on top of the residual soil layer prior to placing the clean soil cap with the upper 6 inches of the soil of sufficient quality to maintain a vegetation layer. The composite cover system will be considered a permanent EC. The system will be inspected and reported at specified intervals as required by this RAWP and the SMP. Contingency plans will be included in the SMP and will outline the procedures to be followed in the event that the composite cover system and underlying residual soil or fill is disturbed after the remedial action is complete. Maintenance of this composite cover system will be described in the SMP in the RAR. A plan showing the composite cover system layout is provided as Figure 6.

Waterproofing Membrane/Vapor Barrier

Migration of potential soil vapor will be mitigated with a combination of building slab and vapor barrier/waterproofing membrane. The waterproofing membrane/vapor barrier will consist of Grace Preprufe 300R for horizontal installations, and Grace Preprufe 160R or Bituthene 4000 for

vertical installations, or an alternative OER-approved vapor barrier product that would provide similar vapor mitigation and waterproofing protection. Grace Preprufe 300R is a 45-mil thick HDPE film, and Preprufe 160R is a 30-mil thick HDPE film. Bituthene is a 60-mil thick self-adhesive HDPE film. In the slab-on-grade areas of the building that are not mechanically vented or open to outside air, Grace Florprufe 120 will be used, or an alternative OER-approved vapor barrier product that would provide similar vapor mitigation protection. Grace Florprufe 120 is a 20-mil thick polyolefin film. The waterproofing membrane/vapor barrier will be installed prior to pouring the building's concrete slab and will continue up the foundation sidewalls in accordance with manufacturer specifications. The specifications for installation will be provided to the construction management company and the foundation contractor or installer of the liner. The specifications state that all waterproofing membrane/vapor barrier seam, penetrations, and repairs will be sealed either by the tape method or weld method, according to the manufacturer's recommendations and instructions.

The project's Professional Engineer licensed by the State of New York will have primary direct responsibility for overseeing the installation of the vapor barrier. This does not constitute waterproofing inspection. The extent of the proposed waterproofing membrane/vapor barrier membrane is provided in Figure 7. A plan showing details of the waterproofing membrane/vapor barrier is provided as Figure 8. Waterproofing membrane/vapor barrier product specification sheets are provided in Appendix G.

The RAR will include photographs (maximum of two photos per page) of the installation process, PE/RA certified letter (on company letterhead) from primary contractor responsible for installation oversight and field inspections, and a copy of the manufacturer's certificate of warranty.

Ventilated Parking Garage

Development plans include construction and operation of a slab-on-grade parking garage that will be continuously ventilated in accordance with New York City Mechanical Code.

4.4 Institutional Controls

A series of ICs are required under this Remedial Action to assure permanent protection of public health by elimination of exposure to residual materials. These ICs define the program to operate, maintain, inspect and certify the performance of ECs and ICs on this property. ICs would be implemented in accordance with an SMP included in the RAR. ICs would be:

- Continued registration of the E-Designation for the property. This RAWP includes a description of all ECs and ICs and summarizes the requirements of the SMP which will

note that the property owner and property owner's successors and assigns must comply with the approved SMP.

- Submittal of an SMP in the RAR for approval by OER that provides procedures for appropriate operation, maintenance, inspection, and certification of ECs and ICs. The SMP will require that the property owner and property owner's successors and assigns will submit to OER a periodic written statement that certifies that: (1) controls employed at the site are unchanged from the previous certification or that any changes to the controls were approved by OER; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP. OER retains the right to enter the site in order to evaluate the continued maintenance of any controls. This certification shall be submitted at a frequency to be determined by OER in the SMP and will comply with RCNY §43-1407(l)(3).
- Vegetable gardens and farming on the site are prohibited in contact with residual soil materials.
- Use of groundwater underlying the site is prohibited without treatment rendering it safe for its intended use.
- All future activities on the site that will disturb residual material must be conducted pursuant to the soil management provisions in an approved SMP.
- The site will be used for residential and commercial purposes and will not be used for a higher level of use without prior approval by OER.

4.5 Site Management Plan

Site Management is the last phase of remediation and begins with the approval of the Remedial Action Report and issuance of the Notice of Completion (NOC) for the Remedial Action. The SMP describes appropriate methods and procedures to ensure implementation of all ECs and ICs that are required by this RAWP. The SMP is submitted as part of the RAR but will be written in a manner that allows its use as an independent document. Site Management continues until terminated in writing by OER. The property owner is responsible to ensure that all Site Management responsibilities defined in the Site Management Plan are implemented.

The SMP will provide a detailed description of the procedures required to manage residual soil and fill left in place following completion of the remedial action in accordance with the

Voluntary Cleanup Agreement with OER. This includes a plan for: (1) implementation of ECs and ICs; (2) operation and maintenance of ECs; (3) inspection and certification of ICs and ECs.

Site management activities and EC/IC certification will be scheduled by OER on a periodic basis to be established in the RAR and the SMP and will be subject to review and modification by OER. The SMP will be based on a calendar year and certification reports will be due for submission to OER by July 30 of the year following the reporting period.

4.6 Qualitative Human Health Exposure Assessment

The objective of the qualitative exposure assessment is to identify potential receptors and pathways for human exposure to the contaminants of concern (COC) that are present at, or migrating from, the site. The identification of exposure pathways describes the route that the COC takes to travel from the source to the receptor. An identified pathway indicates that the potential for exposure exists; it does not imply that exposures actually occur.

Investigations reported in the RIR are sufficient to complete a Qualitative Human Health Exposure Assessment (QHHEA). As part of the VCP process, a QHHEA was performed to determine whether the site poses an existing or future health hazard to the site's exposed or potentially exposed population. The sampling data from the RI were evaluated to determine whether there is any health risk by characterizing the exposure setting, identifying exposure pathways, and evaluating contaminant fate and transport. This QHHEA was prepared in accordance with Appendix 3B and Section 3.3 (b) 8 of the NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation.

Known and Potential Sources

The AOCs identified for the site include:

1. Historical Site Use: Historical uses of the site include a mahogany and veneer yard (1894-1905), a chemical works (1920), a drug company (1927), a dowel company (1927), a chemical manufacturer and a wood products warehouse (1950-1977), and garages with gasoline tanks (1950-2005). Leaks or spills of petroleum products, solvents, and/or hazardous materials resulting from these uses may have adversely impacted soil, groundwater and/or soil vapor beneath the site.
2. Suspected USTs: Historical land use (Sanborn) maps from 1950 to 1968 show two gasoline USTs at the eastern site boundary, on Lot 15. Historical releases of gasoline may have impacted soil, soil vapor and/or groundwater at the site.

3. Historical Fill: According to historical geologic maps, the original shoreline of the Hudson River extended further eastward, beyond the site. The shoreline moved westward in the 1800s, by infilling with imported fill material. Historic fill typically contains contaminants, particularly metals and SVOCs, at concentrations that exceed applicable state and/or federal standards and may also contain hazardous concentrations of metals.
4. Lead Hotspot: During the subsurface investigation performed by Langan in April 2015, lead was identified at a concentration of 3,100 mg/kg in soil boring SB03 (advanced in the southeastern portion of the site), at a depth of 4 to 5 feet bgs.
5. Copper Hotspot: During the subsurface investigation performed by Langan in April 2015, copper was identified at a concentration of 42,000 mg/kg in soil boring SB05 (advanced in the central portion of the site), at a depth of 5 to 6 feet bgs.

Nature, Extent, Fate and Transport of Contaminants

Data collected during the RIR confirmed the presence of historical fill material from surface grade to approximate depths of 5 to 13.5 feet bgs. The fill layer is primarily composed of loose reddish to dark brown, medium to coarse sand with varying amounts of gravel and silt. Construction and demolition debris, plant remains, wood, metal, slag, ash and coal were also observed within the fill layer. VOCs, SVOCs, metals, and pesticides at concentrations exceeding 6 NYCRR Part 375 UU SCOs were detected throughout the historical fill material.

Several SVOCs and metals were detected at concentrations above the NYSDEC TOGS AWQS GA standards in groundwater.

Soil vapor data collected during the RI was compared to the to the NYSDOH decision matrices provided in the Final Guidance on Soil Vapor Intrusion, 2006. The decision matrices recommend a range from “no further action” to “take reasonable and practical actions to identify sources and reduce exposures” to the compounds listed in the matrices. However, a complete comparison cannot be made to the matrices considering there are no structures on the site and indoor air samples cannot be collected. Carbon tetrachloride and trichloroethylene were not detected in any of the soil vapor samples collected during the RI. Based on the concentrations of 1,1,1-trichloroethane and PCE, the decision matrices recommend a range from “no further action” to “take reasonable and practical actions to identify sources and reduce exposures” to these compounds.

Receptor Populations

Potential receptors identified during implementation of the proposed remedy include:

- On-site workers: adult (remediation and construction workers);
- Temporary worker: adult (utility worker/inspector, subcontractors, sampler/remediation inspector); and
- Public adjacent to the site.

Potential Routes of Exposure

An exposure pathway begins with a source and mechanism of contaminant release, resulting in the contamination of a receiving matrix (environmental medium). A complete exposure pathway also requires a point of potential contact with the contaminated matrix (i.e., exposure point), an exposure route (i.e., inhalation, ingestion, or dermal contact), and a receptor population. If an exposure pathway is not complete because it does not include a contaminated matrix, a point of potential contact, an exposure route, or a receptor, then no risk exists.

Currently, parts of the site are not capped with asphalt pavement, concrete, or clean soil. Therefore, a potential route of exposure to historical fill material, soil, groundwater, and soil vapor currently exists.

During construction, impacted soil, groundwater and soil vapor will be encountered and potential routes of exposure (inhalation, ingestion, or dermal contact) exist for construction workers and people adjacent to the site.

All soil exceeding the Track 4 SCOs will be removed during implementation of this remedy. A ventilated parking garage will be installed and constructed as part of the proposed development. Therefore, there are no potential routes of exposure under future post-construction conditions. Additionally, groundwater in this area of New York City is not a source of drinking water; therefore, the pathway for ingestion will not be complete.

Potential Exposure Points

Current Conditions: Currently, parts of the site are not capped with asphalt pavement, concrete, or clean soil. Therefore, a potential route of exposure to historical fill material, soil, groundwater, and soil vapor currently exists. Groundwater is not exposed at the site. The site is served by the public water supply and groundwater is not used at the site for potable supply and there is no potential for exposure. Because the site is currently undeveloped, there is no potential for soil vapor to accumulate on site.

Construction/ Remediation Conditions: During the remedial action, onsite workers will come into direct contact with surface and subsurface soils as a result of on-site construction and excavation activities. On-site construction workers potentially could ingest, inhale or have dermal contact with exposed impacted soil and fill. Similarly, off-site receptors could be exposed to dust and vapors from on-site activities. Due to the depth of groundwater, direct contact with groundwater is expected in the northern portion of the site. During construction, on-site and off-site exposures to contaminated dust from on-site will be addressed through the SMMP, dust controls, and through the implementation of the CAMP and CHASP.

Proposed Future Conditions: Under future remediated conditions, all soils in excess of Track 4 SCOs will be removed. The site will be fully capped, preventing potential direct exposure to soil and groundwater remaining in place, and engineering controls (waterproofing membrane/vapor barrier and ventilated parking garage) will prevent any potential exposure due to inhalation by preventing soil vapor intrusion. The site is served by the public water supply, and groundwater is not used at the site. There are no plausible off-site pathways for oral, inhalation, or dermal exposure to contaminants derived from the site.

Overall Human Health Exposure Assessment

There are potential complete exposure pathways for the current site condition. There are potential complete exposure pathways that require mitigation during implementation of the remedy. There are no complete exposure pathways under future conditions after the site is developed. This assessment takes into consideration the reasonably anticipated use of the site, which includes a mixed-use commercial-residential structure, site-wide surface cover, ventilated parking garage, and waterproofing membrane/vapor barrier system for the building. Under current conditions, on-site exposure pathways exist for those with access to the site and trespassers. During remedial construction, on-site and off-site exposures to contaminated dust from historical fill material will be addressed through dust controls, and through the implementation of the CAMP, the SMMP, and CHASP. Potential post-construction use of groundwater is not considered an option because groundwater in this area of New York City is not used as a potable water source. There are no surface waters in close proximity to the Site that could be impacted or threatened.

Environmental Media & Exposure Route	Human Exposure Assessment for Proposed Remedial Action
Direct contact with surface and subsurface soils	<ul style="list-style-type: none">• There is no direct contact with soil because the site will be completely covered with an engineered composite

	<p>cover. Future contact with soil will be prevented by the implementation of a SMP and SMMP for any future ground intrusive work</p>
Ingestion of groundwater	<ul style="list-style-type: none">• The area is served by an upstate water supply and groundwater is not being used for potable water supply. Groundwater use for potable supply onsite is prohibited by municipal law.
Direct contact with groundwater	<ul style="list-style-type: none">• There is no direct contact with groundwater because the site will be completely covered with an engineered composite cover. Future contact with groundwater will be prevented by the implementation of a SMP and SMMP for any future ground intrusive work.
Direct contact with soil vapor	<ul style="list-style-type: none">• Contact with soil vapor will be prevented with a waterproofing membrane/vapor barrier and a high volume air exchange required by the Building Code for ventilation of the sub-grade parking garage.

DRAFT

5.0 REMEDIAL ACTION MANAGEMENT

5.1 Project Organization and Oversight

The following project personnel are anticipated for oversight of the RAWP implementation.

Remediation Engineer:	Jason J. Hayes, P.E.
Project Manager:	Brian Gochenaur
Langan Health & Safety Officer:	Tony Moffa, CHMM
Site Safety Coordinator	William Bohrer
Qualified Environmental Professional (QEP)	Jason J. Hayes, P.E.
Field Team Leader	Daniel Carrus
Quality Assurance Officer	Michael Burke, CHMM

A qualified environmental professional (QEP) or the remediation engineer (RE) will directly supervise field engineers, scientists and geologists that will be on-site during remedial action to monitor particulates and organic vapor in accordance with the CAMP. CAMP results that exceed specified action levels will be reported to OER in daily reports.

A QEP or the RE will directly supervise field engineers, scientists and geologists that will meet with the Construction Superintendent on a daily basis to discuss the plans for that day and schedule upcoming activities. The field engineers, scientists and geologists will document all remedial activities in the daily report. This document will be forwarded to the Field Team Leader on a daily basis and to the Project Manager and the RE on a weekly basis.

A QEP or the RE will directly supervise field engineers, scientists and geologists that will screen the excavation with a PID during intrusive activities. All readings will be noted in the record. Elevated readings will be reported to OER in the daily reports. The field engineers, scientists and geologists will collect the excavation documentation samples in accordance with this RAWP.

A photo log will be kept to document construction activities by still photos. The photo log may also be used to record activities recorded in the daily report.

The project field book will be used to document all sampling activities and how they correspond to the RAWP. All observations, field and/or laboratory tests will be recorded in the project field book or on separate logs. Recorded field observations may take the form of notes, charts, sketches, or photographs.

The Field Team Leader will maintain the current field book and all original field paperwork during the performance of work. The Project Manager will maintain the field paperwork after completion and will maintain all submittal document files.

5.2 Site Security

Site access will be controlled by gated entrances to the fenced property.

5.3 Work Hours

The hours for operation of remedial construction will be in accordance with the NYCDOB construction code requirements.

5.4 Construction Health and Safety Plan

The CHASP is included in Appendix F. The Site Safety Coordinator will be William Bohrer. Remedial work performed under this RAWP will be in full compliance with applicable health and safety laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements. Confined space entry, if any, will comply with OSHA requirements and industry standards and will address potential risks. The parties performing the remedial construction work will ensure that performance of work is in compliance with the CHASP and applicable laws and regulations. The CHASP pertains to remedial and invasive work performed at the site until the issuance of the NOC.

All field personnel involved in remedial activities will participate in training required under 29 CFR 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. The Site Safety Officer will be responsible for maintaining workers training records.

Personnel entering any exclusion zone will be trained in the provisions of the CHASP and be required to sign an CHASP acknowledgment. Site-specific training will be provided to field personnel. Additional safety training may be added depending on the tasks performed. Emergency telephone numbers will be posted at the site location before any remedial work begins. A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; PPE levels and other relevant safety topics. Meetings will be documented in a log book or specific form.

An emergency contact sheet with names and phone numbers is included in the CHASP. That document will define the specific project contacts for use in case of emergency.

5.5 Community Air Monitoring Plan

Real-time air monitoring for VOCs and particulate levels at the perimeter of the exclusion zone or work area will be performed. Continuous monitoring will be performed for all ground intrusive activities and during the handling of contaminated or potentially contaminated media. Ground intrusive activities include, but are not limited to, soil or waste excavation and handling, test pit excavation or trenching, and the installation of soil borings or monitoring wells.

Periodic monitoring for VOCs will be performed during non-intrusive activities such as the collection of soil and sediment samples or the collection of groundwater samples from existing monitoring wells. Periodic monitoring during sample collection, for instance, will consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. Depending upon the proximity of potentially exposed individuals, continuous monitoring may be performed during sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street, in the midst of a public park, or adjacent to a school or residence. Exceedences of action levels observed during performance of the CAMP will be reported to the OER Project Manager and included in the Daily Report.

VOC Monitoring, Response Levels, and Actions

VOCs will be monitored at the downwind perimeter of the immediate work area (i.e., the exclusion zone) on a continuous basis during invasive work. Upwind concentrations will be measured at the start of each workday and periodically thereafter to establish background conditions. The monitoring work will be performed using equipment appropriate to measure the types of contaminants known or suspected to be present. The equipment will be calibrated at least daily for the contaminant(s) of concern or for an appropriate surrogate. The equipment will be capable of calculating 15-minute running average concentrations, which will be compared to the levels specified below.

- If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities will be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities will resume with continued monitoring.
- If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities will be halted, the source of vapors identified, corrective actions taken to abate

emissions, and monitoring continued. After these steps, work activities will resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less - but in no case less than 20 feet, is below 5 ppm over background for the 15-minute average.

- If the organic vapor level is above 25 ppm at the perimeter of the work area, activities will be shutdown.

All 15-minute readings must be recorded and be available for OER personnel to review. Instantaneous readings, if any, used for decision purposes will also be recorded.

Particulate Monitoring, Response Levels, and Actions

Particulate concentrations will be monitored continuously at the upwind and downwind perimeters of the exclusion zone at temporary particulate monitoring stations. The particulate monitoring will be performed using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment will be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

- If the downwind PM-10 particulate level is $100 \mu\text{g}/\text{m}^3$ greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques will be employed. Work will continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed $150 \mu\text{g}/\text{m}^3$ above the upwind level and provided that no visible dust is migrating from the work area.
- If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than $150 \mu\text{g}/\text{m}^3$ above the upwind level, work will be stopped and a re-evaluation of activities initiated. Work will resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within $150 \mu\text{g}/\text{m}^3$ of the upwind level and in preventing visible dust migration.

All readings will be recorded and be available for OER personnel to review.

5.6 Agency Approvals

All permits or government approvals required for remedial construction have been or will be obtained prior to the start of remedial construction. Approval of this RAWP by OER does not constitute satisfaction of these requirements and will not be a substitute for any required permit.

5.7 Site Preparation

Pre-Construction Meeting

OER will be invited to attend the pre-construction meeting at the site with all parties involved in the remedial process prior to the start of remedial construction activities.

Mobilization

Mobilization will be conducted as necessary for each phase of work at the Site. Mobilization includes field personnel orientation, equipment mobilization (including securing all sampling equipment needed for the field investigation), marking/staking sampling locations and utility mark-outs. Each field team member will attend an orientation meeting to become familiar with the general operation of the Site, health and safety requirements, and field procedures.

Utility Marker Layouts, Easement Layouts

The presence of utilities and easements on the Site will be fully investigated prior to the performance of invasive work such as excavation or drilling under this plan by using, at a minimum, the One-Call System (811). Underground utilities may pose an electrocution, explosion, or other hazard during excavation or drilling activities. All invasive activities will be performed in compliance with applicable laws and regulations to assure safety. Utility companies and other responsible authorities will be contacted to locate and mark the locations, and a copy of the Markout Ticket will be retained by the contractor prior to the start of drilling, excavation or other invasive subsurface operations. Overhead utilities may also be present within the anticipated work zones. Electrical hazards associated with drilling in the vicinity of overhead utilities will be prevented by maintaining a safe distance between overhead power lines and drill rig masts.

Proper safety and protective measures pertaining to utilities and easements, and compliance with all laws and regulations will be employed during invasive and other work contemplated under this RAWP. The integrity and safety of on-Site and off-Site structures will be maintained during all invasive, excavation or other remedial activity performed under the RAWP.

Dewatering

For the remedy, dewatering is considered a remedial component inasmuch as it is necessary to facilitate excavation of contaminated material. Prior to mobilization, the Contractor will follow the New York City Department of Environmental Protection's (NYCDEP's) "Procedure for Obtaining Letter of Approval for Groundwater Discharge to Sanitary or Combined Sewer." Dewatering fluids will be discharged to a NYC sewer in accordance with a NYCDEP permit. Based on the NYCDEP's effluent limitations, the Contractor may be required to install additional pretreatment utilities for dewatering fluids to reduce contaminant concentration below the NYCDEP effluent limitations prior to discharge. Additional pretreatment may include bag filters, carbon filtration, etc. If the Contractor will discharge more than 10,000 gallons per day, a NYCDEP Temporary Discharge of Groundwater into the City Sewer System Permit will be required. Collected groundwater or rainwater will be discharged, as defined by the NYCDEP permit, into the New York City sewer system, via an entry point acceptable to the NYCDEP. If required, the dewatering and treatment system will be designed by the Contractor's New York State-licensed Professional Engineer.

Equipment and Material Staging

Equipment and materials will be stored and staged in a manner that complies with applicable laws and regulations.

Stabilized Construction Entrance

Steps will be taken to ensure that trucks departing the site will not track soil, fill or debris off-site. Such actions may include use of cleaned asphalt or concrete roads or use of stone or other aggregate-based egress paths between the truck inspection station and the property exit. Measures will be taken to keep adjacent roadways clean of project related soils, fill and debris.

Truck Inspection Station

An outbound-truck inspection station will be set up close to the site exit. Before exiting the NYC VCP Site, trucks will be required to stop at the truck inspection station and will be examined for evidence of contaminated soil on the undercarriage, body, and wheels. Soil and debris will be removed. Brooms and shovels will be utilized for the removal of soil from vehicles and equipment as necessary.

Extreme Storm Preparedness and Response Contingency Plan

Damage from flooding or storm surge can include dislocation of soil and stockpiled materials, dislocation of site structures and construction materials and equipment, and dislocation of support of excavation structures. Damage from wind during an extreme storm event can create unsafe or unstable structures, damage safety structures and cause downed power lines

creating dangerous site conditions and loss of power. In the event of emergency conditions caused by an extreme storm event, the enrollee will undertake the following steps for site preparedness prior to the event and response after the event.

Storm Preparedness

Preparations in advance of an extreme storm event will include the following: containerized hazardous materials and fuels will be removed from the property; loose materials will be secured to prevent dislocation and blowing by wind or water; heavy equipment such as excavators and generators will be removed from holes, trenches and depressions on the property to high ground or removed from the property; an inventory of the property with photographs will be performed to establish conditions for the site and equipment prior to the event; stockpile covers for soil and fill will be secured by adding weights such as sandbags for added security and worn or ripped stockpile covers will be replaced with competent covers; stockpiled hazardous wastes will be removed from the property; stormwater management systems will be inspected and fortified, including, as necessary: clean and reposition silt fences, haybales; clean storm sewer filters and traps; and secure and protect pumps and hosing.

Storm Response

At the conclusion of an extreme storm event, as soon as it is safe to access the property, a complete inspection of the property will be performed. A site inspection report will be submitted to OER at the completion of site inspection and after the site security is assessed. Site conditions will be compared to the inventory of site conditions and material performed prior to the storm event and significant differences will be noted. Damage from storm conditions that result in acute public safety threats, such as downed power lines or imminent collapse of buildings, structures or equipment will be reported to public safety authorities via appropriate means such as calling 911. Petroleum spills will be reported to NYSDEC within 2 hours of identification and consistent with State regulations. Emergency and spill conditions will also be reported to OER. Public safety structures, such as construction security fences will be repaired promptly to eliminate public safety threats. Debris will be collected and removed. Dewatering will be performed in compliance with existing laws and regulations and consistent with emergency notifications, if any, from proper authorities. Eroded areas of soil including unsafe slopes will be stabilized and fortified. Dislocated materials will be collected and appropriately managed. Support of excavation structure will be inspected and fortified as necessary. Impacted stockpiles will be contained and damaged stockpile covers will be replaced. Storm-water control systems and structures will be inspected and maintained as necessary. If soil or fill materials are discharged off site to adjacent properties, property owners and OER will be notified and corrective measure plan designed to remove and clean dislocated material will be submitted to OER and implemented following approval by OER and granting of

site access by the property owner. Impacted off-site areas may require characterization based on site conditions, at the discretion of OER. If onsite petroleum spills are identified, a qualified environmental professional will determine the nature and extent of the spill and report to NYSDEC's spill hotline at DEC 800-457-7362. If the source of the spill is ongoing and can be identified, it should be stopped if this can be done safely. Potential hazards will be addressed immediately, consistent with guidance issued by NYSDEC.

Storm Response Reporting

A site inspection report will be submitted to OER at the completion of site inspection. An inspection report established by OER is available on OER's website (www.nyc.gov/oer) and will be used for this purpose. Site conditions will be compared to the inventory of site conditions and material performed prior to the storm event and significant differences will be noted. The site inspection report will be sent to the OER project manager and will include the site name, address, tax block and lot, site primary and alternate contact name and phone number. Damage and soil release assessment will include: whether the project had stockpiles; whether stockpiles were damaged; photographs of damage and notice of plan for repair; report of whether soil from the site was dislocated and whether any of the soil left the site; estimates of the volume of soil that left the site, nature of impact, and photographs; description of erosion damage; description of equipment damage; description of damage to the remedial program or the construction program, such as damage to the support of excavation; presence of onsite or offsite exposure pathways caused by the storm; presence of petroleum or other spills and status of spill reporting to NYSDEC; description of corrective actions; schedule for corrective actions. This report should be completed and submitted to OER project manager with photographs within 24 hours of the time of safe entry to the property after the storm event.

5.8 Traffic Control

Drivers of trucks leaving the NYCVCP site with soil or fill will be instructed to proceed without stopping in the vicinity of the site to prevent neighborhood impacts. The planned route on local roads for trucks leaving the site is for trucks to travel north on Washington Street, then west on Desbrosses Street, and then north on West Street. Trucks travelling to New Jersey and Pennsylvania will use the Lincoln Tunnel to cross the Hudson River. Inbound trucks will travel south along West Street, east on Vestry Street, and north on Washington Street. A Truck Route Map is provided as Figure 9.

5.9 Demobilization

Demobilization will include:

- As necessary, restoration of temporary access areas and areas that may have been disturbed to accommodate support areas (e.g., staging areas, decontamination areas, storage areas, temporary water management areas, and access area);
- Removal of sediment from erosion control measures and truck cleaning and disposal of materials in accordance with applicable laws and regulations;
- Equipment decontamination, and;
- General refuse disposal.

Equipment will be decontaminated and demobilized at the completion of all field activities. Investigation equipment and large equipment (e.g., soil excavators) will be cleaned at the truck inspection station as necessary. In addition, all investigation and remediation derived waste will be appropriately disposed.

5.10 Reporting and Record Keeping

Daily Reports

Daily reports providing a general summary of activities for each day of *active remedial work* will be emailed to the OER Project Manager by the end of the following day. Those reports will include:

- Project number and statement of the activities and an update of progress made and locations of work performed;
- Quantities of material imported and exported from the site;
- Status of on-site soil and fill stockpiles;
- A summary of all citizen complaints, with relevant details (basis of complaint; actions taken; etc.);
- A summary of CAMP excursions, if any;
- Photograph of notable site conditions and activities.

The frequency of the reporting period may be revised in consultation with OER project manager based on planned project tasks. Daily email reports are not intended to be the primary mode of communication for notification to OER of emergencies (accidents, spills), requests for changes to the RAWP or other sensitive or time critical information. However, such information will be

included in the daily reports. Emergency conditions and changes to the RAWP will be communicated directly to the OER project manager by personal communication. Daily reports will be included as an appendix in the RAR.

Record Keeping and Photo-Documentation

Job-site record keeping for all remedial work will be performed. These records will be maintained on-site during the project and will be available for inspection by OER staff. Representative photographs will be taken of the site prior to any remedial activities and during major remedial activities to illustrate remedial program elements and contaminant source areas. Photographs will be submitted at the completion of the project in the RAR in digital format (i.e. jpeg files).

5.11 Complaint Management

All complaints from citizens will be promptly reported to OER. Complaints will be addressed and outcomes will also be reported to OER in daily reports. Notices to OER will include the nature of the complaint, the party providing the complaint, and the actions taken to resolve any problems.

5.12 Deviations from the Remedial Action Work Plan

All changes to the RAWP will be reported to the OER Project Manager and will be documented in daily reports and reported in the Remedial Action Report. The process to be followed if there are any deviations from the RAWP will include a request for approval for the change from OER noting the following:

- Reasons for deviating from the approved RAWP;
- Effect of the deviations on overall remedy; and
- Determination that the remedial action with the deviation(s) is protective of public health and the environment.

6.0 REMEDIAL ACTION REPORT

A RAR will be submitted to OER following implementation of the remedial action defined in this RAWP. The RAR will document that the remedial work required under this RAWP has been completed and has been performed in compliance with this plan. The RAR will include:

-
- Information required by this RAWP.
 - Text description with thorough detail of all engineering and institutional controls.
 - As-built drawings for all constructed remedial elements, required certifications, manifests and other written and photographic documentation of remedial work performed under this remedy.
 - Manifests for soil or fill disposal.
 - SMP (if Track 1 is not achieved).
 - Description of any changes in the remedial action from the elements provided in this RAWP and associated design documents.
 - Tabular summary of all end point sampling results and all material characterization results, QA/QC results for end-point or documentation sampling, and other sampling and chemical analysis performed as part of the remedial action and DUSR.
 - Test results or other evidence demonstrating that remedial systems are functioning properly.
 - Account of the source area locations and characteristics of all contaminated material removed from the site including a map showing source areas.
 - Full accounting of the disposal destination of all contaminated material removed from the Site. Documentation associated with disposal of all material will include transportation and disposal records, and letters approving receipt of the material.
 - Account of the origin and required chemical quality testing for material imported onto the site.
 - Continue registration of the property with an E-Designation by the NYC Department of Buildings.
 - The RAWP and RIR will be included as appendices to the RAR.
 - Reports and supporting material will be submitted in digital form and final PDF's will include bookmarks for each appendix.

Remedial Action Report Certification

The following certification will appear in front of the Executive Summary of the Remedial Action Report. The certification will include the following statements:

I, [name], am currently a professional engineer licensed by the State of New York. I had primary direct responsibility for implementation of the remedial program for the 440 Washington Street site, site no. [site number].

I certify that to the best of my knowledge the OER-approved Remedial Action Work Plan dated [month day year] and Stipulations in a letter dated [month day, year]; if any were implemented and that all requirements in those documents have been substantively complied with. I certify that to the best of my knowledge contaminated soil, fill, liquids or other material from the property were taken to facilities licensed to accept this material.

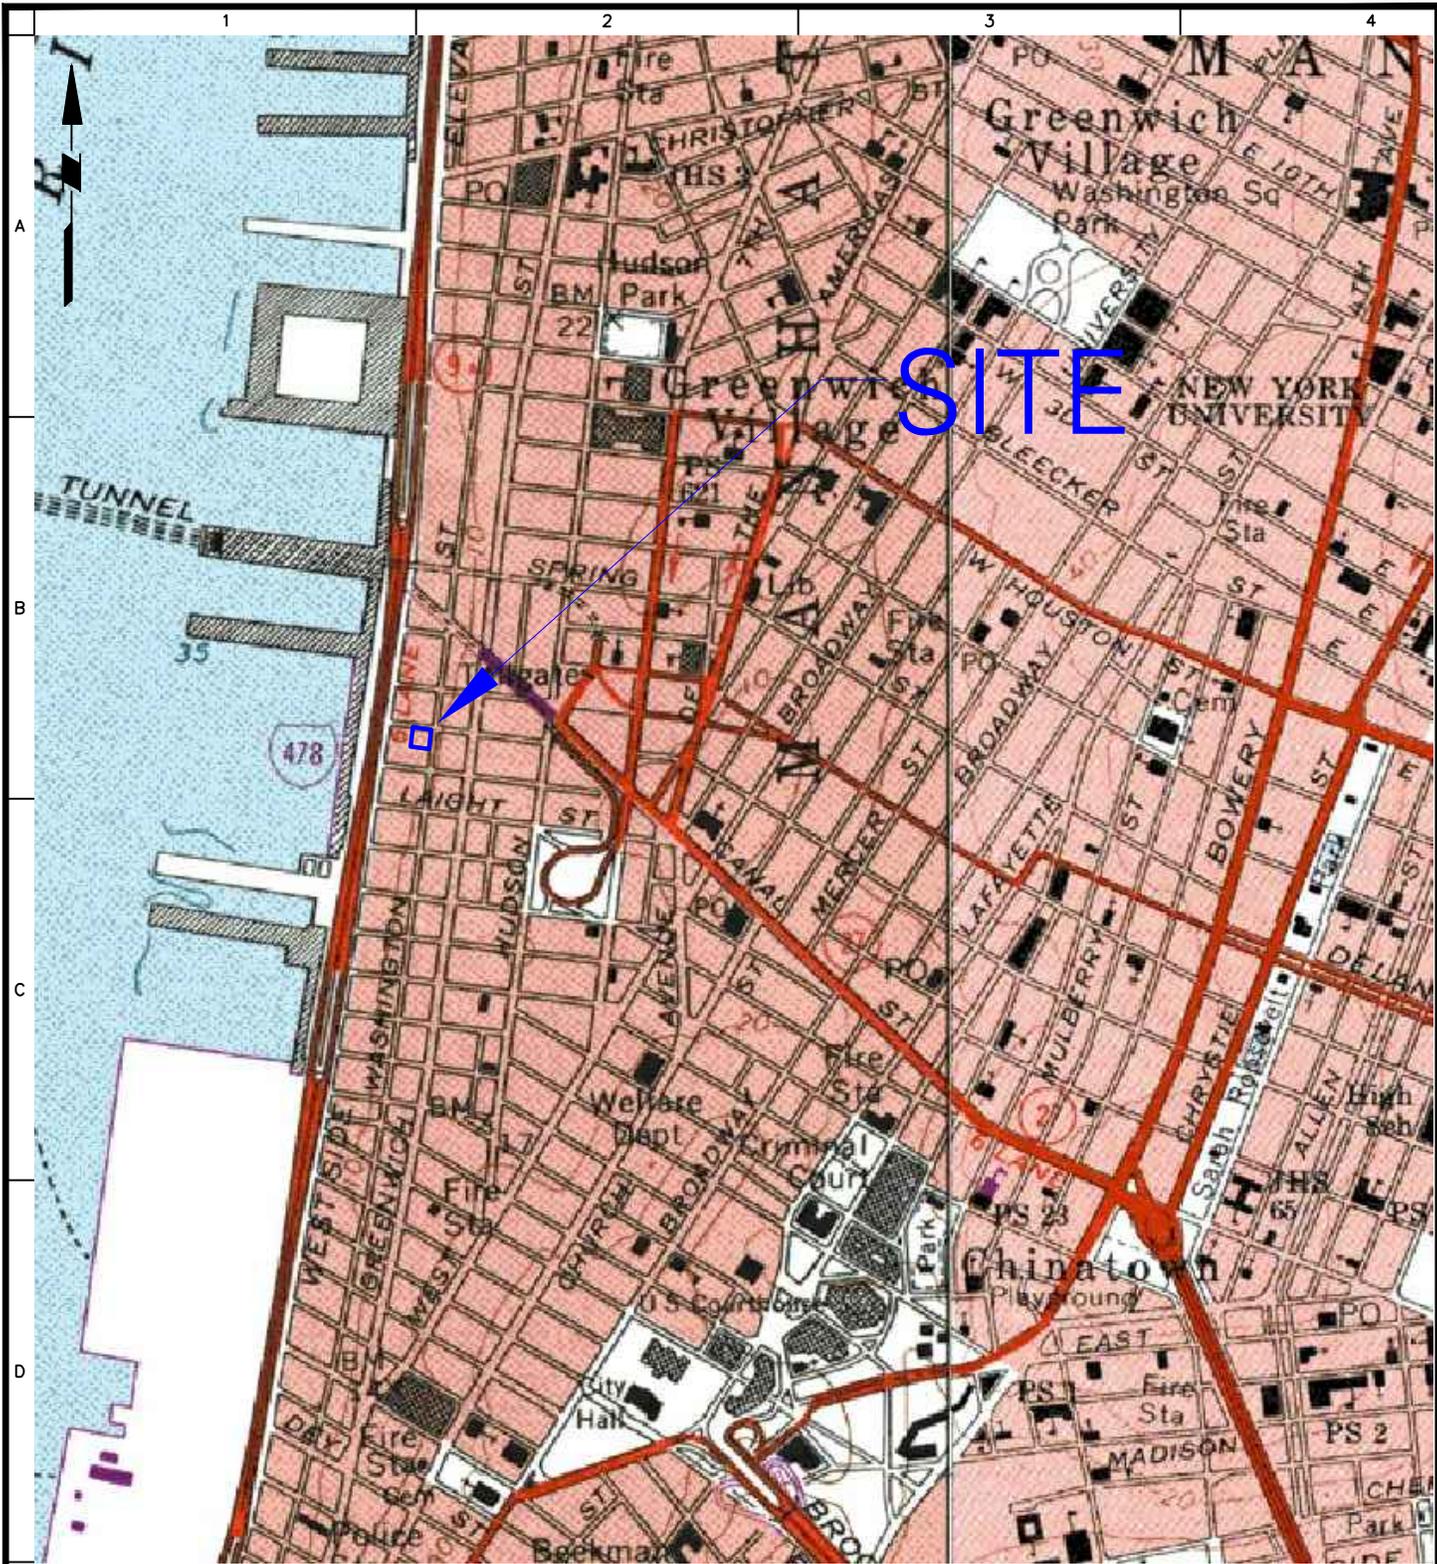

DRAFT

7.0 SCHEDULE

The table below presents a schedule for the proposed remedial action and reporting. If the schedule for remediation and development activities changes, it will be updated and submitted to OER. Currently, a 1 to 2 month remediation period is anticipated.

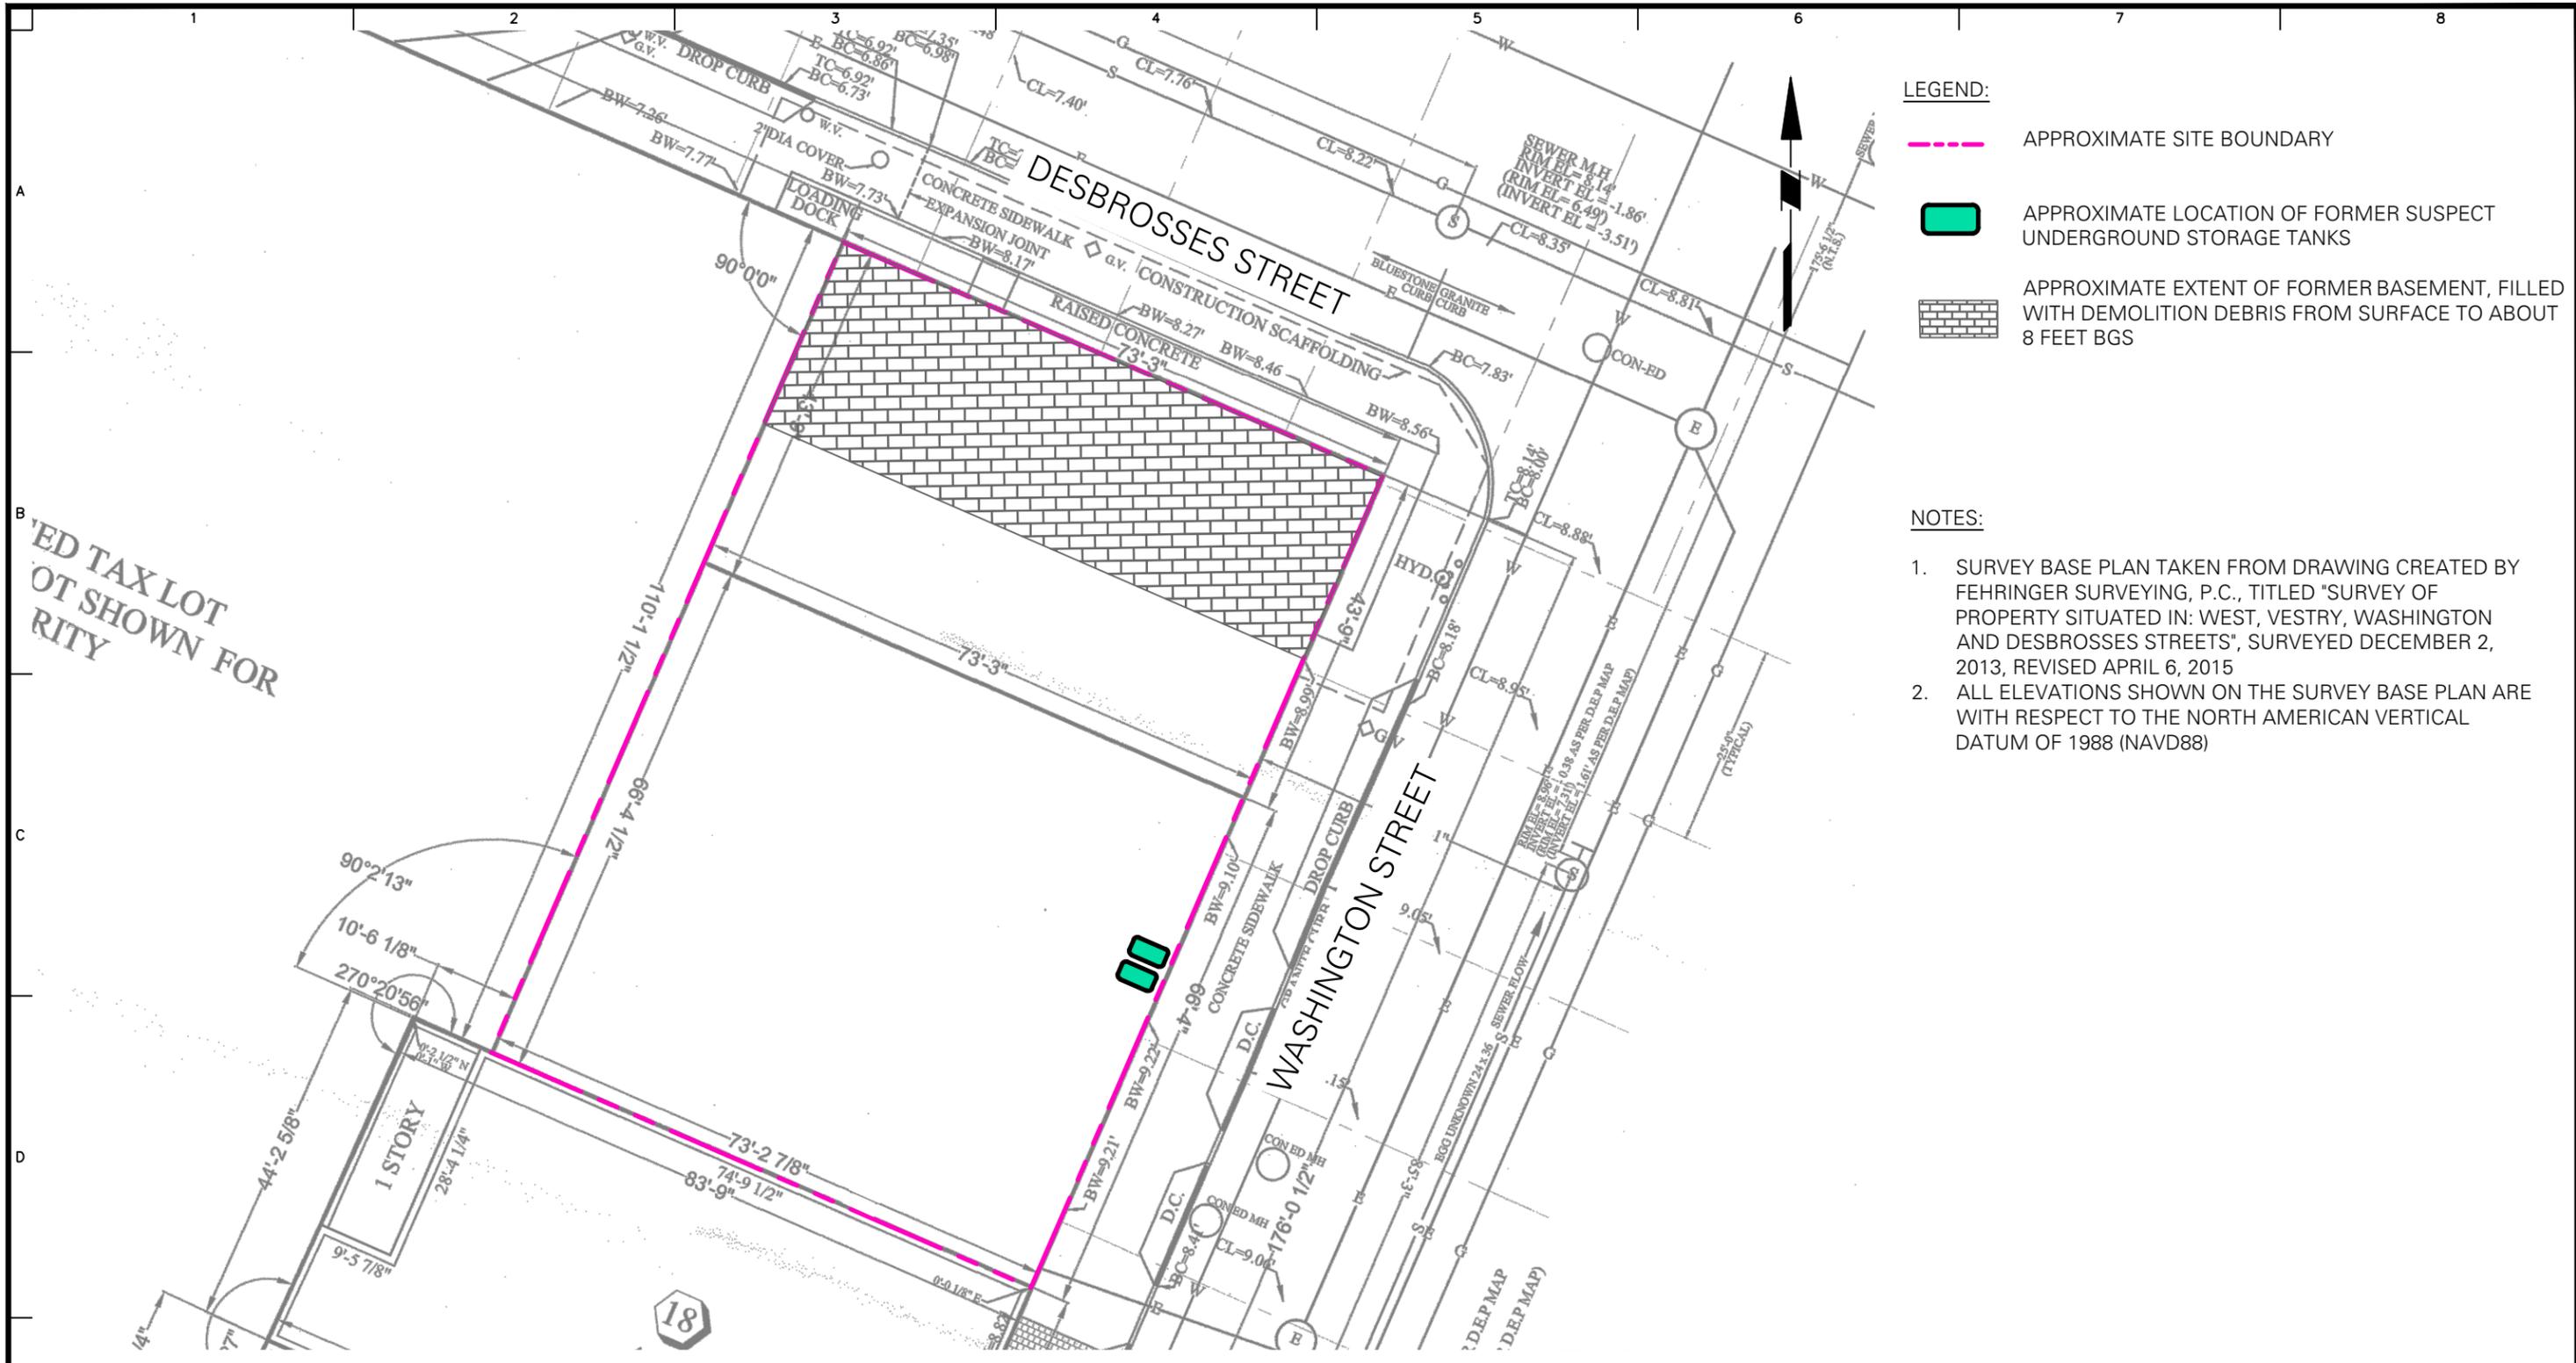

Schedule Milestone	Weeks from Remedial Action Start	Duration (weeks)
OER Approval of RAWP	0	-
Fact Sheet 2 announcing start of remedy	0	-
Mobilization	0	1
Remedial Excavation	1	12
Demobilization	13	1
Submit Remedial Action Report	17	4

- LEGEND:**
- - - - APPROXIMATE SITE BOUNDARY
 - APPROXIMATE EXTENT OF BASEMENT LEVEL
 - APPROXIMATE EXTENT OF VAPOR BARRIER/WATERPROOFING MEMBRANE INSTALLED IN BASEMENT
 - APPROXIMATE EXTENT OF VAPOR BARRIER INSTALLED AT GRADE

- NOTES:**
1. SURVEY BASE PLAN TAKEN FROM DRAWING CREATED BY FEHRINGER SURVEYING, P.C., TITLED "SURVEY OF PROPERTY SITUATED IN: WEST, VESTRY, WASHINGTON AND DESBROSSES STREETS", SURVEYED DECEMBER 2, 2013, REVISED APRIL 6, 2015.
 2. VAPOR BARRIER/WATERPROOFING MEMBRANE PRODUCT CONSISTS OF GRACE PREPRUFE 300R OR SIMILAR PRODUCT BENEATH THE BASEMENT SLAB, AND GRACE PREPRUFE 160R AND/OR GRACE BITUTHENE 4000 OR SIMILAR PRODUCTS BEHIND SUBSURFACE WALLS.
 3. VAPOR BARRIER/WATERPROOFING MEMBRANE WILL BE INSTALLED ON THE BASEMENT SLAB, AND THE BASEMENT SIDEWALLS.
 4. VAPOR BARRIER PRODUCT CONSISTS OF GRACE FLORPRUFE 120 OR SIMILAR PRODUCT .
 5. VAPOR BARRIER TO BE INSTALLED IN SLAB-ON-GRADE AREAS OF THE BUILDING THAT ARE NOT MECHANICALLY VENTED OR OPEN TO OUTSIDE AIR.

AREA OF BUILDING FOOTPRINT THAT DOES NOT CONTAIN VAPOR BARRIER/WATERPROOFING MEMBRANE, BUT WILL CONTAIN VENTILATED AT-GRADE PARKING.

WATERPROOFING/VAPOR BARRIER MEMBRANE SYSTEM NOTES:

1. THE WATERPROOFING/VAPOR BARRIER SHALL BE INSTALLED IN ACCORDANCE WITH APPLICABLE MANUFACTURER GUIDELINES AND DETAILS.
2. THE WATERPROOFING/VAPOR BARRIER SHALL BE INSTALLED BY A MANUFACTURER-CERTIFIED INSTALLER.
3. WATERPROOFING/VAPOR BARRIER SHALL BE INSPECTED BEFORE CONCRETE IS PLACED. ALL PENETRATIONS, HOLES, OR TEARS SHALL BE SEALED BEFORE CONCRETE IS PLACED.
4. WATERPROOFING/VAPOR BARRIER MEMBRANE IS DESIGNED BY OTHERS.

WARNING: IT IS A VIOLATION OF THE NYS EDUCATION LAW ARTICLE 145 FOR ANY PERSON, UNLESS HE IS ACTING UNDER THE DIRECTION OF A LICENSED PROFESSIONAL ENGINEER, TO ALTER THIS ITEM IN ANY WAY.

Appendix A
Proposed Development Plans

GENERAL NOTES:

- ALL DIMENSIONS AND CONDITIONS DESCRIBED IN THE CONTRACT DOCUMENTS ARE TO BE VERIFIED IN THE FIELD. ARCHITECT IS TO BE ADVISED OF ANY DISCREPANCIES IMMEDIATELY.
- THE CONSTRUCTION NOTES AND/OR DRAWINGS ARE SUPPLIED TO ILLUSTRATE THE DESIGN AND THE GENERAL TYPE OF CONSTRUCTION DESIRED AND ARE INTENDED TO IMPLY THE FINEST QUALITY OF CONSTRUCTION, MATERIALS, AND WORKMANSHIP THROUGHOUT.
- THE CONTRACTOR SHALL MAINTAIN A CURRENT AND COMPLETE SET OF DOB CONSTRUCTION DRAWINGS, SPECIFICATIONS, AND SHOP DRAWINGS ON THE CONSTRUCTION FLOOR DURING ALL PHASES OF CONSTRUCTION FOR USE BY ALL TRADES AND WILL REMOVE ALL OUTDATED DRAWINGS FROM THE JOB SITE.
- THE CONTRACTOR UPON ACCEPTANCE AND APPROVAL OF THE DRAWINGS ASSUMES FULL RESPONSIBILITY FOR THE CONSTRUCTION MATERIALS AND WORKMANSHIP OF THE WORK DESCRIBED IN THESE NOTES AND DRAWINGS AND WILL EXECUTE TO COMPLY WITH THE SPIRIT AS WELL AS THE LETTER IN WHICH THEY WERE WRITTEN.
- THE DRAWINGS AND NOTES INDICATE AND REFER TO ANY INTERIOR/EXTERIOR WORK AND ARE MEANT TO CONVEY INSTRUCTIONS, WHETHER WRITTEN OR IMPLIED, FOR A COMPLETE SCOPE OF WORK, INCLUSIVE OF THOSE MINOR FIELD CONDITIONS INHERENT IN THE WORK.
- CONTRACTOR SHALL PERFORM ALL WORK IN COMPLIANCE WITH ALL APPLICABLE STATE AND CITY CODES AND REGULATIONS.
- CONTRACTOR SHALL OBTAIN ALL PERMITS REQUIRED BY LAW AND PAY FOR SAME PRIOR TO ANY WORK. PERMITS SHALL BE SUBMITTED TO ALL PARTIES INVOLVED IN PROJECT AND DISPLAY SAME AT SITE AS PER DOB REGULATIONS.
- CONTRACTOR SHALL COORDINATE ALL REQUIRED INSPECTIONS OF SYSTEMS OR OTHER REQUIRED APPROVALS.
- CONTRACTOR WILL COORDINATE WORK OF ALL TRADES, INCLUDING THOSE THAT MAY BE UNDER SEPARATE CONTRACT, PROJECT SCHEDULING AND OVERALL CLEANUP.
- CONTRACTOR IS TO KEEP JOB SITE CLEAN DURING CONSTRUCTION AND REMOVE ALL DEBRIS FROM PREMISES ON A CONTINUAL BASIS.
- SUBSTITUTION OF DETAILS, FIXTURES, MATERIALS, EQUIPMENT, ETC., IS TO BE BY ARCHITECT'S WRITTEN APPROVAL ONLY.
- THE CONTRACTOR SHALL COORDINATE WORK WITH THE MANUFACTURER'S SPECIFICATIONS.
- METAL STUD WALLS AND POSTS OF METAL PARTITIONS SHALL BE SECURED TO THE STRUCTURAL ELEMENTS AT ALL LOCATIONS.
- ALL DIMENSIONS FOR PARTITIONS ARE FROM FINISH TO FINISH, UNLESS OTHERWISE INDICATED.
- WALLS SHOWN ALIGNED WITH BASE BUILDING STRUCTURE SHALL BE CONSTRUCTED FLUSH AND SMOOTH WITH BASE BUILDING STRUCTURE UNLESS OTHERWISE INDICATED.
- ALL WALLS AND CEILINGS SHALL BE PROPERLY PREPARED, SPACKLED, SANDED, ETC. TO PROVIDE A PERFECTLY SMOOTH AND TRUE FINISH AND SURFACE.
- WORK SHALL CONFORM TO THE REQUIREMENTS OF THE NEW YORK CITY BUILDING CODE, FIRE DEPARTMENT REGULATIONS, UTILITY COMPANY REQUIREMENTS & BEST TRADE PRACTICES.
- BEFORE COMMENCING WORK, THE CONTRACTOR SHALL FILE ALL REQUIRED CERTIFICATES OF INSURANCE WITH THE DEPARTMENT OF BUILDINGS, PAY ALL FEES REQUIRED BY GOVERNING NEW YORK CITY AGENCIES, OBTAIN ALL REQUIRED PERMITS AND PROVIDE ANY AND ALL BONDS REQUIRED BY ANY CITY AGENCY IN ORDER TO DO WORK APPROVED DESCRIBED.
- CONTRACTOR SHALL OBTAIN SEPARATE PERMIT AND APPROVAL FROM DEPARTMENT OF HIGHWAYS FOR ALL WORK BEYOND BUILDING LINES AND REQUIRED.
- THE CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS IN THE FIELD PRIOR TO COMMENCING WORK AND SHALL REPORT ANY DISCREPANCIES BETWEEN DRAWINGS AND FIELD CONDITIONS TO THE ARCHITECT IMMEDIATELY.
- MINOR DETAILS NOT USUALLY SHOWN OR SPECIFIED, BUT NECESSARY FOR PROPER CONSTRUCTION OF ANY PART OF THE WORK SHALL BE INCLUDED AS IF THEY WERE INDICATED IN THE DRAWINGS.
- THE CONTRACTOR SHALL COORDINATE ALL WORK PROCEDURES WITH REQUIREMENTS OF LOCAL AUTHORITIES, BUILDING MANAGEMENT, AND OWNER'S REPRESENTATIVES.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF ALL CONDITIONS AND MATERIALS WITHIN THE PROPOSED CONSTRUCTION AREA. THE CONTRACTOR SHALL DESIGN AND INSTALL ADEQUATE SHORING AND BRACING FOR ALL STRUCTURAL OR REMOVAL TASKS. THE CONTRACTOR SHALL HAVE THE SOLE RESPONSIBILITY FOR ANY DAMAGE OR INJURIES CAUSED BY OR DURING THE EXECUTION OF THE WORK.
- THE CONTRACTOR SHALL LAYOUT HIS OWN WORK, AND SHALL PROVIDE ALL DIMENSIONS REQUIRED FOR OTHER TRADES: PLUMBING, ELECTRICAL, MECHANICAL, ETC.
- PLUMBING AND ELECTRICAL WORK SHALL BE PERFORMED BY PERSONS LICENSED IN THEIR TRADES, WHO SHALL ARRANGE OR AND OBTAIN INSPECTIONS AND REQUIRED SIGN-OFFS.
- THE CONTRACTOR SHALL DO ALL CUTTING, PATCHING, REPAIRING AS REQUIRED TO PERFORM ALL OF THE WORK INDICATED ON THE DRAWINGS, AND ALL OTHER WORK THAT MAY BE REQUIRED TO COMPLETE THE JOB.
- ENGINEER HAS NOT BEEN RETAINED TO SUPERVISE CONSTRUCTION.
- CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING TEMPORARY AND NEW CERTIFICATE OF OCCUPANCY, INCLUDING ALL REQUIRED FILINGS, APPLICATIONS, SIGN-OFFS, INSPECTIONS AND APPROVALS.

DEMOLITION NOTES:

- THE CONTRACTOR SHALL PERFORM ALL OPERATIONS OF DEMOLITION AND REMOVAL INDICATED ON THE DRAWINGS AND AS MAY BE REQUIRED BY THE WORK. ALL WORK SHALL BE DONE CAREFULLY AND NEATLY, IN A SYSTEMATIC MANNER.
- DURING REMOVAL OF ROOF, CARE SHALL BE MADE TO MAINTAIN WATER-TIGHT SEAL. CONTRACTOR SHALL BE RESPONSIBLE FOR REPAIRING ANY DAMAGE DUE TO WATER LEAKS.
- NO DEBRIS SHALL BE ALLOWED TO ACCUMULATE ON THE SITE. DEBRIS SHALL BE REMOVED BY THE CONTRACTOR WHO SHALL ASSUME FULL RESPONSIBILITY FOR DAMAGE AND SHALL MAKE REPAIRS REQUIRED WITHOUT ADDITIONAL COST TO THE OWNER.
- NO DEBRIS SHALL BE ALLOWED TO ACCUMULATE ON THE SITE. DEBRIS SHALL BE REMOVED BY THE CONTRACTOR AS THE JOB PROCEEDS. THE SITE SHALL BE LEFT ROOM CLEAN AT THE COMPLETION OF DEMOLITION.
- NO STRUCTURAL ELEMENTS SHALL BE REMOVED UNLESS PORTIONS AFFECTED ARE ADEQUATELY SUPPORTED BY EITHER TEMPORARY SHORING OR NEW STRUCTURAL ELEMENTS AS REQUIRED TO PROTECT THE STABILITY AND INTEGRITY OF THE EXISTING STRUCTURE.
- ALL ADJOINING PROPERTY AFFECTED BY ANY OPERATIONS OF DEMOLITION SHALL BE PROTECTED PER THE REQUIREMENTS OF ARTICLE 19 OF THE N.Y.C. BUILDING CODE.
- REMOVE OR RELOCATE ALL WIRING, PLUMBING, AND MECHANICAL EQUIPMENT AFFECTED BY REMOVAL OF PARTITIONS. REMOVE PIPES AND/OR LINES SHALL BE CUT TO A POINT OF CONCEALMENT BEHIND OR BELOW FINISH SURFACES, AND SHALL BE PROPERLY CAPPED OR PLUGGED.
- THE CONTRACTOR SHALL PROVIDE, ERECT AND MAINTAIN ALL TEMPORARY BARRIERS AND GUARDS, AND ALL TEMPORARY SHORING AND BRACING AS REQUIRED BY DEPARTMENT OF BUILDING RULES AND REGULATIONS.
- THE CONTRACTOR SHALL PROVIDE ADEQUATE WEATHER PROTECTION FOR THE NEW BUILDING AND ITS CONTENTS DURING THE COURSE OF THE WORK. ALL OPENINGS IN ANY WALL OR ROOF SHALL BE PROTECTED FROM ALL FORMS OF WEATHER OR WATER.

SMOKE/CARBON MONOXIDE DETECTORS NOTES PER 907.2.10.1:

- 907.2.10.1.1 SMOKE ALARMS IN GROUPS R-2, R-3, AND 1-1. SINGLE OR MULTIPLE-STATION SMOKE ALARMS SHALL BE INSTALLED AND MAINTAINED IN GROUPS R-2, R-3, REGARDLESS OF OCCUPANT LOAD AT ALL OF THE FOLLOWING LOCATIONS WITHIN A DWELLING UNIT:
 - ON THE CEILING OR WALL OUTSIDE OF EACH ROOM USED FOR SLEEPING PURPOSES WITHIN 15 FEET FROM THE DOOR TO SUCH ROOM.
 - IN EACH ROOM USED FOR SLEEPING PURPOSES.
 - IN EACH STORY WITHIN A DWELLING UNIT, INCLUDING BELOW-GRADE STORES AND PENT-HOUSES OF ANY AREA.
 - 907.2.10.2 POWER SOURCE. REQUIRED SMOKE ALARMS SHALL RECEIVE THEIR PRIMARY POWER FROM A DEDICATED BRANCH CIRCUIT OR THE UNSWITCHED PORTION OF A BRANCH CIRCUIT ALSO USED FOR POWER AND LIGHTING, AND SHALL BE EQUIPPED WITH A BATTERY BACKUP. SMOKE ALARMS SHALL EMIT A SIGNAL WHEN THE BATTERIES ARE LOW. WIRING SHALL BE PERMANENT AND WITHOUT A DISCONNECTING SWITCH OTHER THAN AS REQUIRED FOR OVER-CURRENT PROTECTION.
 - 907.2.10.5 GROUP R-2 OCCUPANCY. SMOKE ALARMS SHALL BE PROVIDED WITH THE CAPABILITY TO SUPPORT VISIBLE ALARM NOTIFICATION APPLIANCES IN ACCORDANCE WITH ICC/ANSI A117.1.-2003

BOILER ROOM NOTES (AS PER SEC. 65 OF MDL...)

- WALLS ENCLOSING BOILER TO BE OF FIREPROOF MATERIAL HAVING A 1HR FIRE RATING. NOTE: 4" SOLID CINDER BLOCK IS GENERALLY USED.
- CEILING OF ENTIRE BOILER ROOM SHALL BE PROPERLY FIRE RETARDED WITH ONE OF THE FOLLOWING: (a) 1/2" PLASTER BOARDS COVERED WITH 26 GA METAL. (b) METAL LATH AND 3/4" CEMENT OR 1" GYPSUM MORTAR. (c) ROCK LATH AND 3/4" GYPSUM MORTAR.
- FLOOR OF BOILER ROOM SHALL BE OF CONCRETE CONSTRUCTION.
- FIXED VENTILATION OUTER AIR FOR BOILER ROOM REQUIRED MIN. AREA EQUAL TO SMOKE STACK (NORMALLY 64 SF.) NOTE: WHERE DUCT IS REQUIRED TO PROVIDE FIXED VENTILATION, SAME MUST BE ENCASED IN METAL LATH AND CEMENT ON GYPSUM MORTAR.
- METERS DUMBWATER SHAFTS, ELEVATOR SHAFTS, INTERIOR STAIRS OR REQUIRED OUTSIDE CELLAR ENTRANCES CANNOT BE LOCATED WITHIN BOILER ROOM.
- A MINIMUM OF 18" CLEARANCE REQUIRED BETWEEN BOILER AND ENCLOSING WALLS.
- DOOR TO BOILER ROOM TO BE 1HR TEST FIREPROOF SELF-ENCLOSING AS PER BOARD OF STANDARDS AND APPEALS APPROVAL.
- ELECTRIC LIGHT TO BE PROVIDED WITHIN BOILER ROOM.
- OIL BURNER REMOTE CONTROL SWITCH MUST BE LOCATED OUTSIDE BOILER ROOM.
- NO STORAGE PERMITTED WITHIN BOILER ROOM.

HOUSING MAINTENANCE NOTES:

- CENTRAL HEAT TO BE PROVIDED AS PER D26-17.01 H.M.C.
- WATER SUPPLY TO BUILDING TO COMPLY WITH SECTION 27-2024 H.M.C.
- WATER SUPPLY TO INDIVIDUAL UNITS AND FIXTURES SHALL COMPLY WITH SECTION 27-2025 H.M.C.
- SUPPLY OF HOT WATER TO COMPLY WITH SEC. 27-2031 H.M.C.
- PROVIDE MAIL SERVICE AS PER D26-21.01 H.M.C.
- FLOOR SIGNS SHALL BE POSTED AND MAINTAINED PER SECTION 27-2048 H.M.C.
- STREET NUMBER SHALL BE POSTED AND MAINTAINED PER SEC. 27-2049 H.M.C.
- POSTING OF REGISTRATION SIGN AS PER D26-41.15 H.M.C.
- BUILDING TO BE REGISTERED AS PER D26-41.15 H.M.C.
- NIGHT LIGHTING IN PUBLIC HALLS AND STAIRS OF DWELLING TO COMPLY WITH D26-19.05 H.M.C.
- PROVIDE KEY LOCKS FOR ALL APARTMENT DOORS, HEAVY DUTY DEAD BOLT, THUMB TURN INSIDE LATCH SET AND CHAIN DOOR GUARD AS PER D26-20.05 H.M.C.
- PROVIDE BSA APPROVED PEEP HOLES IN ENTRANCE DOORS TO EACH DWELLING UNIT AS PER D26-20.01 H.M.C.
- PAINTING OF PUBLIC PARTS WITHIN DWELLINGS TO COMPLY WITH D26-12.01 H.M.C.
- PAINTING OF FIRE ESCAPES AND WINDOW FRAMES AS PER D26-12.03 H.M.C.
- RECEPTACLES FOR COLLECTION OF WASTE PAPER TO BE PROVIDED AS PER D26-14.03 H.M.C. AND D26-14.05 AND D26-14.07 H.M.C.
- DRAINAGE OF ROOFS, COURTS, AND YARDS TO COMPLY WITH D26-16.03 H.M.C.
- PROPER ELECTRIC LIGHTING EQUIPMENT WITHIN DWELLING TO BE PROVIDED AND MAINTAINED AS PER D26-19.01, D26-19.05, D26-19.03 H.M.C.
- PROVIDE ELECTRIC LIGHTS AT ENTRANCEWAYS, YARDS AND COURTS AS PER D26-19.07 H.M.C. ON SEPARATE CIRCUIT OR CONNECTED TO HOUSE LINE SERVICING PUBLIC HALLS, AND IN ACCORDANCE WITH THE REQUIREMENTS OF DEPT. OF WATER SUPPLY, GAS AND ELECTRICITY.
- ENGINEER HAS NOT BEEN RETAINED TO SUPERVISE WORK.
- CONTRACTORS ARE TO VERIFY AND CHECK ALL DIMENSIONS AND CONDITIONS AT THE JOB SITE AND REPORT ALL DISCREPANCIES TO THE ARCHITECT.
- PARTITIONS ENCLOSING BATHROOMS TO BE METAL STUDS AND MOISTURE RESISTANT GYPSUM WALL BOARD AS PER BSA 756-625M.
- ALL DOORS OPENING ON PUBLIC HALLWAY TO BE SELF CLOSING AS PER D26-20.07 H.M.C. ALL DOORS OPENING ON PUBLIC HALLWAY TO BE 1 HOUR FPSC.
- COMPLY WITH L1 29/89 FOR LOW FLOW FIXTURES
- SMOKE/CO DETECTORS SHALL BE INSTALLED PER SUBCHAPTER 17, ARTICLE 6 PER RS 17-12 AND SHALL BE LOCATED AT OR NEAR THE CEILING WITHIN 15 FT. OF ROOMS USED FOR SLEEPING PURPOSE IN J-2 OCCUPANCIES AND BE MAINTAINED PER H.M.C. SECTION 27-2045.
- NATURAL LIGHT AND VENTILATION SHALL BE PROVIDED IN ALL LIVING ROOMS IN MULTIPLE DWELLINGS PER H.M.C. SECTION 27-2057 AND 27-2058.
- SANITARY FACILITIES SHALL BE PROVIDED IN EVERY APARTMENT IN MULTIPLE DWELLING PER H.M.C. SECTION 27-2066 AND WITH HOT WATER SUPPLIED TO PLUMBING FIXTURES PER H.M.C. SECTION 27-2031.
- KITCHENS IN MULTIPLE DWELLINGS SHALL CONFORM TO H.M.C. SECTIONS 27-2070, 27-2071, AND 27-2072.
- LIVING ROOMS IN MULTIPLE DWELLINGS SHALL CONFORM TO H.M.C. SECTION 27-2074.
- THE ENTRANCE DOORS TO EACH DWELLING UNIT IN A MULTIPLE DWELLING BE PROVIDED WITH A PEEPHOLE PER H.M.C. SECTION 27-2041 AND WITH A LOCK AND CHAIN GUARD PER H.M.C. SECTION 27-2043.
- CLEANING OF ROOF, YARDS, COURTS AND OTHER OPEN SPACES SHALL COMPLY WITH H.M.C. SECTION 27-2010
- THE BUILDING OWNER SHALL MAINTAIN THE SANITARY AND STORM DRAINAGE SYSTEMS AND EQUIPMENT PER SECTIONS 27-2066 AND 27-2027 OF H.M.C.
- ELECTRIC LIGHTING FIXTURES OR OUTLETS FOR LIGHTING FIXTURES SHALL BE INSTALLED AND MAINTAINED FOR EVERY ROOM AND PUBLIC HALL PER SECTIONS 27-2937, 27-2038 AND 27-2039 H.M.C.
- PROVIDE ARTIFICIAL EXTERIOR LIGHTING AT ALL EXTERIOR ENTRANCEWAYS AND IN YARDS AND COURTS TO BE INSTALLED AND MAINTAINED PER SECTION 27-2040 OF H.M.C.

MULTIPLE DWELLING NOTES:

- BUILDING SHALL COMPLY WITH ART. 7 AND APPLICABLE PROVISIONS OF ART. 3 MULTIPLE DWELLING LAW (MDL)
- ROOMS IN BASEMENT TO COMPLY WITH SEC. 216, SEC. 34 (6) MDL, CEILING HEIGHTS TO COMPLY WITH SEC. 218 SUB (8) MDL.
- HOUSE NUMBERS SHALL BE PROPERLY DISPLAYED AS PER SEC. 886 CITY CHARTER.
- VENTILATION IN PUBLIC HALLS AND STAIRS TO COMPLY WITH SEC. 217 MDL.
- EGRESS TO COMPLY WITH SEC. 231 MDL, STAIRS TO MEET SEC. 233(5) TO SEC. 238 MDL.
- BULKHEAD TO COMPLY WITH SEC. 233 MDL, DOOR TO BE FIREPROOF AND SELF CLOSING.
- PUBLIC CORRIDORS AND STAIRS TO MEET SEC. 234 MDL, STAIRS IN PUBLIC CORRIDOR TO BE 9'-0" MIN.
- ALL DOORS TO PUBLIC HALLS TO BE SELF-CLOSING AND FIREPROOF.
- STAIRS TO COMPLY WITH SEC. 235, 237, 238, 239, AND 242 MDL, WINDOWS IN STAIR HALL TO BE GLAZED WITH WIRE GLASS, BALLUSTRADE AND RAILING TO BE 2'-6" AND 2'-8" MAX ABOVE FRONT EDGE OF TREADS (2'-8" MIN AND 3'-0" MAX ABOVE LANDING).
- PARTITIONS AND FIRESTOPPING TO COMPLY WITH SEC. 241 MDL, SOUNDPROOFING BETWEEN APTS AND PUBLIC HALL SHALL COMPLY W/SEC. 84 MDL.
- CELLAR STAIR TO COMPLY WITH SEC. 242 AND 50 MDL, STAIR TO BE ENCLOSED IN FIREPROOF ENCLOSURE AND HAVE FIREPROOF DOORS AND ASSEMBLIES AT ALL OPENINGS.
- SPACES UNDER STAIRS TO COMPLY WITH SEC. 244 MDL. NO CLOSETS CONSTRUCTED UNDER STAIRS LEADING FROM ENTRANCE STORY TO UPPER STORIES. SPACES TO BE CLEAR AND FREE OF ENCUMBRANCES.
- COOKING SPACES TO COMPLY WITH SECTION 33 MDL CEILINGS AND WALLS TO BE FIRE RETARDED. PROTECT ALL COMBUSTIBLE MATERIALS WITHIN 1'-0" OF COOKING APPARATUS AS PER SEC. 33 MDL.
- ALL GAS APPLIANCES TO COMPLY WITH SEC. 64 MDL AND LOCAL LAW 124/55.
- PROVIDE FRONT, COURT, AND REAR LIGHTING AS PER SEC 26 SUB (7A) AND 35 MDL.
- ALL BUILDING ENTRANCE DOORS MUST BE SELF-CLOSING AND HAVE SELF-CLOSING DEVICES AND INTERCOMMUNICATION SYSTEM AS PER 504 MDL.
- MAIN ENTRANCE DOOR SHALL HAVE NOT LESS THAN FIVE(5) SQ.FT. OF GLAZED SURFACE AS PER 35 MDL.
- TRASH COMPACTOR CHUTE TO COMPLY WITH SECTION 51 MDL, TO HAVE FIREPROOF ENCLOSURE AND FIREPROOF DOORS AND SELF CLOSING ASSEMBLIES.
- PEEP HOLES TO COMPLY WITH SC51-A MDL.
- MAIL RECEPTACLES TO COMPLY WITH SEC. 57 MDL.
- PARAPETS AND GUARD RAILS TO COMPLY WITH SEC 62 SUB 2 MDL.
- LIGHTING, GAS METERS AND APPLIANCES ON PREMISES SHALL COMPLY WITH SEC 64 MDL, NO GAS METERS PERMITTED IN BOILER ROOM.
- BOILER ROOMS TO COMPLY WITH SEC 65 MDL ENCLOSED IN FIREPROOF WALLS AND ALL OPENINGS TO HAVE FIREPROOF AND SELF CLOSING DOORS AND ASSEMBLIES.
- SMOKE DETECTORS TO COMPLY WITH SEC. 68 MDL.
- WATER CLOSETS TO COMPLY WITH SEC. 68 MDL. ALL BATHROOMS SHALL HAVE CERAMIC TILE FLOORS AND 6" MIN CERAMIC TILE SANITARY COVE BASE AT PERIMETER AND DUROCK FINISH ON WALLS (BSA NO. 486.39 SM). BATHROOMS TO BE VENTED NATURALLY AS PER SEC. 76 MDL OR MECHANICALLY WITH 4 AIR CHANGES PER HOUR AND OPERATE BETWEEN 6 A.M. TO MIDNIGHT. NO NUISANCE NOISE OR VIBRATION SHALL BE CREATED BY VENTILATING MOTORS.
- PLUMBING AND DRAINAGE AS PER 77 MDL.
- PROVIDE SEPARATE ELECTRICAL METER OR SUB-METER FOR EACH DWELLING UNIT AS PER C405.7.

ENERGY NOTES (NEW YORK CITY 2011 ENERGY CONSERVATION CODE):

- THE HEATING SYSTEM WHEN INSTALLED AS DESIGNED, WILL BE IN ACCORDANCE WITH ALL APPLICABLE LAWS, ORDINANCE, AND REGULATIONS. THE SYSTEM WAS DESIGNED AS RECOMMENDED BY THE AMERICAN SOCIETY OF HEATING, REFRIGERATION, AND AIR CONDITIONING ASSOCIATION GUIDES. THE SYSTEM IS BASED ON THE INSIDE TEMPERATURE BEING MAINTAINED AT 72 F, WHEN THE OUTSIDE TEMPERATURE IS ±15° F WITH A 1.5 MPH WIND.
- CALCULATIONS FOR HEATING (HEAT LOSS) ARE BASED ON FCC CHAPTER 5 OF 2011 NYCCEC MINIMUM INSULATION STANDARDS AS NOTED BELOW. A. EXTERIOR MASS WALLS R = 11.4d₁ B. EXTERIOR MTL. STUD WALLS R = 19 C. ROOF R = 38 (AVERAGE) D. FLOORS EXPOSED TO OUTSIDE R = 10.4d₁ E. FLOORS OVER UNHEATED AREA R = 10.4d₁ F. ALL WINDOWS (DOUBLE GLAZING) VINYL U = 0.40, ALUMINUM U = 0.55 G. CURTAIN WALL/STOREFRONT U=0.50 H. ENTRANCE DOORS U = 0.85 NOTE U-FACTOR = BTU/HOUR SQUARE FOOT DEGREE FAHRENHEIT TEMPERATURE DIFFERENCE.

SITE SAFETY PROGRAM

G.C. TO COMPLY WITH SITE SAFETY PROGRAM AS PER BC 3310.1

SPECIAL INSPECTIONS AND PROGRESS INSPECTIONS:

- AS PER TITLE 28, NYC BUILDING CODE (EFFECTIVE JULY 2008) SPECIAL INSPECTIONS AND PROGRESS INSPECTIONS SHALL BE PERFORMED FOR ALL ITEMS DESIGNATED BY THE DESIGN APPLICANT. TR-1 FORMS SHALL BE FILED WITH THE NEW YORK CITY DEPARTMENT OF BUILDINGS BY THE SPECIAL/PROGRESS INSPECTION APPLICANTS DESIGNATED BY THE CONTRACTOR PRIOR TO PERMIT AND PRIOR TO SIGN-OFF.
- PRIOR TO APPROVAL: THE P.E. OR R.A. RESPONSIBLE FOR THE PLANS SHALL IDENTIFY THE REQUIRED SPECIAL/PROGRESS INSPECTIONS AND/OR TESTS PRIOR TO APPROVAL. (DESIGN APPLICANT)
- PRIOR TO PERMIT FILING: THE SPECIAL/PROGRESS INSPECTION APPLICANT SHALL IDENTIFY, DATE AND DESIGNATE RESPONSIBILITY FOR PERFORMING THE REQUIRED SPECIAL/PROGRESS INSPECTIONS AT PERMIT.
- PRIOR TO SIGN-OFF: WHEN ALL OR A PORTION OF THE REQUIRED SPECIAL/PROGRESS INSPECTIONS HAVE BEEN SATISFIED THE SPECIAL/PROGRESS INSPECTION APPLICANT SHALL DATE AND CERTIFY COMPLETION OF THE SPECIFIED ITEMS.
- A LICENSED CONCRETE TESTING LABORATORY SHALL BE RETAINED TO PERFORM CONCRETE TESTS. THE LICENSED CONCRETE TESTING LAB SHALL IDENTIFY DATE AND DESIGNATE RESPONSIBILITY FOR CONCRETE TEST CYLINDERS AND CONCRETE DESIGN MIX; THIS NEED NOT BE PERFORMED BY A SPECIAL INSPECTION AGENCY. TAKE FOUR (4) CYLINDERS OF EACH 50 CUBIC YARD OF CONCRETE OF EACH CLASS PLACED ON ANY ONE DAY. TESTING ONE (1) AT 7 DAYS AND THREE (3) AT 28 DAYS. ALSO TAKE TESTS OF SLUMP, TEMPERATURE, AIR CONTENT AND UNIT WEIGHT.
- FORMS SHALL BE FILED BY THE MANUFACTURER AND SUPPLIER, RESPECTIVELY, OF STRUCTURAL MASONRY UNIT AND SHALL INDICATE STRENGTHS OF MASONRY UNITS SUPPLIED

THE GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR ALL FILING FEES AND ALL COSTS ASSOCIATED WITH RETAINING ENGINEERING SERVICES, INSPECTION & TESTING FOR THE FOLLOWING SPECIAL INSPECTIONS AND PROGRESS INSPECTIONS:

E.C.C. PROGRESS INSPECTIONS	
PROGRESS INSPECTIONS	TABLE REFERENCE IN 16RCNY §5000-01 (h)(2)

- NOTES:
- PROPERTY KNOWN AS LOTS 13 & 15, BLOCK 223, AS SHOWN ON THE NEW YORK CITY DIGITAL TAX MAP OF THE BOROUGH OF MANHATTAN, COUNTY, CITY AND STATE OF NEW YORK.
 - AREA SUMMARY:
BLOCK 223, LOT 13= 3,628 S.F. OR 0.083 AC.
BLOCK 223, LOT 15= 5,477 S.F. OR 0.126 AC.
TOTAL AREA= 9,105 S.F. OR 0.209 AC.
 - LOCATION OF UNDERGROUND UTILITIES ARE APPROXIMATE. LOCATIONS AND SIZES ARE BASED ON UTILITY MARK-OUTS, ABOVE GROUND STRUCTURES THAT WERE VISIBLE & ACCESSIBLE IN THE FIELD, AND THE MAPS AS LISTED IN THE REFERENCES AVAILABLE AT THE TIME OF THE SURVEY. AVAILABLE AS-BUILT PLANS AND UTILITY MARK-OUT DOES NOT ENSURE MAPPING OF ALL UNDERGROUND UTILITIES AND STRUCTURES. BEFORE ANY EXCAVATION IS TO BEGIN, ALL UNDERGROUND UTILITIES SHOULD BE VERIFIED AS TO THEIR LOCATION, SIZE AND TYPE BY THE PROPER UTILITY COMPANIES. CONTROL POINT ASSOCIATES, INC. DOES NOT GUARANTEE THE UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA EITHER IN SERVICE OR ABANDONED.
 - THIS PLAN IS BASED ON INFORMATION PROVIDED BY A SURVEY PREPARED IN THE FIELD BY CONTROL POINT ASSOCIATES, INC. AND OTHER REFERENCE MATERIAL AS LISTED HEREON.
 - THIS SURVEY WAS PREPARED WITHOUT THE BENEFIT OF A TITLE REPORT AND IS SUBJECT TO THE RESTRICTIONS, COVENANTS AND ENCUMBRANCES THAT MAY BE CONTAINED THEREIN.
 - BY GRADING PLOTTING ONLY PROPERTY IS LOCATED IN FLOOD HAZARD ZONE AE (BASE FLOOD ELEVATIONS DETERMINED-BASE FLOOD ELEVATION=10.00) PER REF. #2.
 - THE EXISTENCE OF UNDERGROUND STORAGE TANKS, IF ANY, WAS NOT KNOWN AT THE TIME OF THE FIELD SURVEY.
 - THIS PLAN IS PREPARED IN NAVD 1988 DATUM (MANHATTAN BOROUGH BENCH MARK #188 ELEV. = 13.68 FEET, TO CONVERT TO MANHATTAN BOROUGH HIGHWAY DATUM SUBTRACT 1.654 FROM THE ELEVATIONS LISTED, TO CONVERT TO MGDV 1929 ADD 1.996 FEET TO THE ELEVATIONS LISTED).
 - THERE WERE NO NATURAL STREAMS OR WATERCOURSES VISIBLE AT THE TIME OF THE FIELD SURVEY.
 - ENCROACHMENTS AND VAULTS, IF ANY, BELOW SURFACE NOT SHOWN HEREON.
 - THE OFFSETS SHOWN ARE NOT TO BE USED FOR THE CONSTRUCTION OF ANY STRUCTURE, FENCE, PERMANENT ADDITION, ETC.

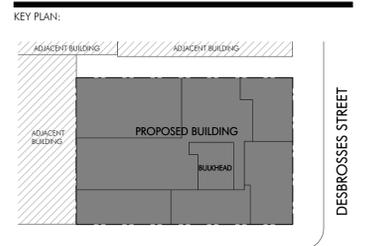

- REFERENCES:
- THE NEW YORK CITY DIGITAL TAX MAP OF MANHATTAN, THE COUNTY, CITY AND STATE OF NEW YORK.

Citizen Participation Plan

CITIZEN PARTICIPATION PLAN

The NYC Office of Environmental Remediation and 270 West Street, LLC have established this Citizen Participation Plan because the opportunity for citizen participation is an important component of the NYC Voluntary Cleanup Program. This Citizen Participation Plan describes how information about the project will be disseminated to the Community during the remedial process. As part of its obligations under the NYC VCP, 270 West Street LLC will maintain a repository for project documents and provide public notice at specified times throughout the remedial program. This Plan also takes into account potential environmental justice concerns in the community that surrounds the project Site. Under this Citizen Participation Plan, project documents and work plans are made available to the public in a timely manner. Public comment on work plans is strongly encouraged during public comment periods. Work plans are not approved by the NYC Office of Environmental Remediation (OER) until public comment periods have expired and all comments are formally reviewed. An explanation of cleanup plans in the form of a public meeting or informational session is available upon request to OER's project manager assigned to this Site, Eric Ilijevich, who can be contacted about these issues or any others questions, comments or concerns that arise during the remedial process at (212) 341-2034.

Project Contact List. OER has established a Site Contact List for this project to provide public notices in the form of fact sheets to interested members of the Community. Communications will include updates on important information relating to the progress of the cleanup program at the Site as well as to request public comments on the cleanup plan. The Project Contact List includes owners and occupants of adjacent buildings and homes, principal administrators of nearby schools, hospitals and day care centers, the public water supplier that serves the area, established document repositories, the representative Community Board, City Council members, other elected representatives and any local Brownfield Opportunity Area (BOA) grantee organizations. Any member of the public or organization will be added to the Site Contact List on request. A copy of the Site Contact List is maintained by OER's project manager. If you would like to be added to the Project Contact List, contact NYC OER at (212) 788-8841 or by email at brownfields@cityhall.nyc.gov.

Repositories. A document repository is maintained in the nearest public library that maintains evening and weekend hours. This document repository is intended to house, for community review, all principal documents generated during the cleanup program including Remedial Investigation plans and reports, Remedial Action work plans and reports, and all public notices and fact sheets produced during the lifetime of the remedial project. 270 West Street, LLC will inspect the repositories to ensure that they are fully populated with project information. The repository for this project is:

New York Public Library - Jefferson Market Library

425 Avenue of the Americas

New York, NY, 10011

(212) 243-4334

Library Manager: Frank Collierius

Hours (Call to verify):

Monday, Wednesday: 10:00 AM to 8:00 PM

Tuesday, Thursday: 11:00 AM to 6:00 PM

Friday, Saturday: 10:00 AM to 5:00 PM

Sunday: Closed

Digital Documentation. NYC OER strongly encourages the use of digital documents in repositories as a means of minimizing paper use while also increasing convenience in access and ease of use.

Public Notice and Public Comment. Public notice to all members of the Project Contact List is required at three major steps during the performance of the cleanup program (listed below) and at other points that may be required by OER. Notices will include Fact Sheets with descriptive project summaries, updates on recent and upcoming project activities, repository information, and important phone and email contact information. All notices will be prepared by 270 West Street, LLC, reviewed and approved by OER prior to distribution and mailed by 270 West Street, LLC. Public comment is solicited in public notices for all work plans developed under the NYC Voluntary Cleanup Program. Final review of all work plans by OER will consider all public comments. Approval will not be granted until the public comment period has been completed.

Citizen Participation Milestones. Public notice and public comment activities occur at several steps during a typical NYC VCP project. See flow chart on the following page, which identifies when during the NYC VCP public notices are issued: These steps include:

- **Public Notice of the availability of the Remedial Investigation Report and Remedial Action Work Plan and a 30-day public comment period on the Remedial Action Work Plan.**

Public notice in the form of a Fact Sheet is sent to all parties listed on the Site Contact List announcing the availability of the Remedial Investigation Report and Remedial Action Work Plan and the initiation of a 30-day public comment period on the Remedial Action Work Plan. The Fact Sheet summarizes the findings of the RIR and provides details of the RAWP. The public comment period will be extended an additional 15 days upon public request. A public meeting or informational session will be conducted by OER upon request.

- **Public Notice announcing the approval of the RAWP and the start of remediation**

Public notice in the form of a Fact Sheet is sent to all parties listed on the Site Contact List announcing the approval of the RAWP and the start of remediation.

- **Public Notice announcing the completion of remediation, designation of Institutional and Engineering Controls and issuance of the Notice of Completion**

Public notice in the form of a Fact Sheet is sent to all parties listed on the Site Contact List announcing the completion of remediation, providing a list of all Institutional and Engineering Controls implemented for to the Site and announcing the issuance of the Notice of Completion.

CERTIFICATION

I, Jason Hayes, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 440 Washington Avenue site, (NYC VCP Site No. #16CVCP003M). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Qualified Environmental Professional	Date	Signature

EXECUTIVE SUMMARY

This Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The site is located at 440 Washington Street in the Tribeca neighborhood in Manhattan, New York, and is identified as Block 223, and portions of Lots 13 and 15 on the NYC Tax Map. Figure 1 shows the site location. The site is 8,065 square feet and is bounded by Desbrosses Street followed by a newly constructed multi-story mixed use (residential and commercial) building to the north; a four-story mixed use (residential and commercial) building to the south; Washington Street followed by four multi-story mixed use (residential and commercial) buildings and a three-story industrial and manufacturing building to the east; and a construction site for the 268 West Street development project to the west. The site is currently vacant and used for temporary parking and materials and equipment staging for the adjacent 268 West Street construction project. The site is covered by a concrete slab (former building foundation) with the exception of the northern portion of Lot 13, which contains a former cellar filled in with demolition debris.

Summary of Proposed Development Plan

The proposed development project consists of an 11-story mixed-use commercial and residential building with a partial cellar, ground level parking, and restaurant space. Excavation across the northern portion of the site (approximately 50% of the site) is anticipated to extend to approximately 15 feet below grade surface (bgs) to accommodate the partial basement. The basement will be used as commercial storage space and amenity spaces (including a gymnasium). Excavation of up to five feet bgs will be required to accommodate foundation elements and utilities across the remainder of the site, which will be a slab on-grade foundation. The ground floor will contain a parking lot for eight cars, a lobby, and a restaurant. The remaining floors will be used for residential apartments, with a community room on the 10th floor. The 11th floor will consist of a roof bulkhead. Excavation of about 2,100 cubic yards (cy) of soil, accompanied by dewatering, is anticipated to facilitate construction.

The site's current zoning designation is C6-2A, which is a contextual commercial district with a maximum building height. A C6-2A district permits both commercial and residential use. The proposed development plans are consistent with the current zoning designation of the site.

Summary of Past Uses of Site and Areas of Concern

Past uses of the site are based on review of Sanborn Maps, Building Department records and City Directories and are documented in Langan's May 27, 2015 Remedial Investigation Work Plan (RIWP).

The following is a summary of past uses of the site:

Lot 13

- A mahogany and veneer yard, a residence, store, and office (1894-1905)
- A chemical works (1920)
- A drug company (1927)
- A dowel company (1927)
- A chemical manufacturer and a wood products warehouse (1950-1977)
- A garage and a five-story residential building (1968-2005)

Lot 15

- A mahogany and veneer yard (1894-1905)
- A garage with two gasoline tanks (1950-1968)
- A building of unidentified use (1976-2005)
- A parking company (2013)

The Areas of Concern (AOC) identified for the site include:

1. Historical Site Use: Historical uses of the site include a mahogany and veneer yard (1894-1905), a chemical works (1920), a drug company (1927), a dowel company (1927), a chemical manufacturer and a wood products warehouse (1950-1977), and garages with gasoline tanks (1950-2005). Leaks or spills of petroleum products, solvents, and/or hazardous materials resulting from these uses may have adversely impacted soil, groundwater and/or soil vapor beneath the site.
2. Suspected Underground Storage Tanks (UST): Historical land use (Sanborn) maps from 1950 to 1968 show two gasoline USTs at the eastern site boundary, on Lot 15. Historical releases of gasoline may have impacted soil, soil vapor and/or groundwater at the site.
3. Historical Fill: According to historical geologic maps, the original shoreline of the Hudson River extended further eastward, beyond the site. The shoreline moved westward in

the 1800s, by infilling with imported fill material. Historic fill typically contains contaminants, particularly metals and semivolatile organic compounds (SVOCs), at concentrations that exceed applicable state and/or federal standards and may also contain hazardous concentrations of metals.

4. Lead Hotspot: During the subsurface investigation performed by Langan in April 2015, lead was identified at a concentration of 3,100 milligrams per kilogram (mg/kg) in soil boring SB03 (advanced in the southeastern portion of the site), at a depth of four to five ft bgs.
5. Copper Hotspot: During the subsurface investigation performed by Langan in April 2015, copper was identified at a concentration of 42,000 mg/kg in soil boring SB05 (advanced in the central portion of the site), at a depth of 5 to 6 feet bgs.

Summary of the Work Performed under the Remedial Investigation

Langan performed the following scope of work, which is outlined in the May 27, 2015 RIWP:

1. Site inspection and geophysical survey to identify potential USTs, utilities, and subsurface obstructions that may impede boring advancement;
2. Advancement of 13 soil borings and the collection of 22 soil samples for laboratory analyses, including one duplicate sample;
3. Advancement of eight delineation soil borings at the lead and copper hotspot areas, and the collection of eight delineation soil samples for laboratory analyses;
4. Installation of four permanent groundwater monitoring wells and the collection of five groundwater samples for laboratory analysis, including one duplicate sample;
5. Installation of four soil vapor probes and the collection of five vapor samples for laboratory analysis, including one ambient air sample; and
6. Completion of a well survey to determine groundwater monitoring well elevations and to determine the direction of groundwater flow at the site.

Summary of Environmental Findings

1. Elevation of the property ranges from el. 8.40¹ to el. 9.05 feet.
2. Depth to groundwater ranges from 8.26 feet bgs (el. -0.52) to 9.63 feet bgs (el. -1.4) at the site.
3. Groundwater flow is generally from west to east beneath the site.
4. The stratigraphy of the site, from the surface down, consists of 5 to 13.5 feet of historic fill underlain by native sand, silt, and organic silt. The top of the bedrock surface was observed during a geotechnical investigation at the adjacent property at about 89 feet bgs (about el. -80).
5. The geophysical survey did not identify anomalies consistent with USTs.
6. Soil sample results were compared to the NYSDEC Title 6 New York Codes, Rules and Regulations (NYCRR) Part 375 Unrestricted Use (UU) Soil Cleanup Objectives (SCO) and Restricted Residential Use (RRU) SCOs. Concentrations of nine volatile organic compounds (VOC) exceeded their UU SCOs in seven soil samples collected, including benzene (max concentration 0.33 milligrams per kilogram [mg/kg]), toluene (max concentration 1.6 mg/kg), ethylbenzene (max concentration 6.9 mg/kg), total xylenes (max concentration 36 mg/kg), naphthalene (max concentration 210 mg/kg), n-propylbenzene (max concentration 9.4 mg/kg), 1,3,5-trimethylbenzene (max concentration 30 mg/kg), acetone (max concentration 0.16 mg/kg), and 1,2,4-trimethylbenzene (max concentration 86 mg/kg). Of the nine VOCs whose concentrations exceeded their respective UU SCOs, the concentration of two VOCs, naphthalene and 1,2,4-trimethylbenzene, also exceeded their Part 375 Restricted Use Restricted-Residential Use (RRU) SCOs. Concentrations of 10 SVOCs including fluoranthene (max concentration 300 mg/kg), benzo(a)anthracene (max concentration 130 mg/kg), benzo(a)pyrene (max concentration 100 mg/kg), benzo(b)fluoranthene (max concentration 120 mg/kg), benzo(k)fluoranthene (max concentration 45 mg/kg), chrysene (max concentration 120 mg/kg), phenanthrene (max concentration 350 mg/kg), dibenzo(a,h)anthracene (max concentration 14 mg/kg), indeno(1,2,3-cd)pyrene (max concentration 59 mg/kg in SB06_05-1.0), and pyrene (max concentration 260 mg/kg), exceeded their respective RRU SCOs in six soil samples collected. Metals including arsenic (max concentration 130 mg/kg), cadmium (max concentration 4.8 mg/kg),

¹ All elevations provided throughout this report are referenced to the North American Vertical Datum of 1988 (NAVD88) unless otherwise noted.

copper (max concentration of 42,000 mg/kg), lead (max concentration of 3,100 mg/kg), mercury (max concentration of 1.7 mg/kg), zinc (max concentration of 4,000 mg/kg) exceeded their respective RRU SCOs. Concentrations of three pesticides exceeded their respective UU SCOs in five soil samples collected, including 4-4'-DDE (max concentration of 0.00689 mg/kg), 4,4'-DDD (max concentration of 0.00372 mg/kg), and 4-4'-DDT (max concentration of 0.00486 mg/kg). Concentrations of polychlorinated biphenyls (PCB) and herbicides did not exceed their respective UU and RRU SCOs in any of the soil samples collected during the RI.

7. Groundwater samples were compared to the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards for Class GA groundwater (AWQS). Concentrations of six SVOCs exceeded NYSDEC TOGS AWQS GA standards including chrysene (max concentration of 0.25 micrograms per liter [$\mu\text{g/L}$]), benzo(a)anthracene (max concentration of 0.26 $\mu\text{g/L}$), benzo(a)pyrene (max concentration of 0.28 $\mu\text{g/L}$), benzo(b)fluoranthene (max concentration of 0.3 $\mu\text{g/L}$), benzo(k)fluoranthene (max concentration of 0.12 $\mu\text{g/L}$), indeno(1,2,3-cd)pyrene (max concentration of 0.15 $\mu\text{g/L}$). Dissolved concentrations of four metals exceeded their respective NYSDEC TOGS AWQS GA standards including iron (max concentration of 8,630 $\mu\text{g/L}$), magnesium (max concentration of 179,000 $\mu\text{g/L}$), manganese (max concentration of 3,861 $\mu\text{g/L}$), sodium (max concentration of 641,000 $\mu\text{g/L}$). VOCs, PCBs, and pesticides were not identified at concentrations exceeding their respective TOGS AWQS in the RI groundwater samples.
8. Soil vapor sample results were compared to the decision matrices established by the NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006. Carbon tetrachloride and trichloroethylene were not detected in any of the soil vapor samples collected during the RI. Based on the concentrations of 1,1,1-trichloroethane (max concentration of 1.64 micrograms per cubic meter [$\mu\text{g/m}^3$]), and tetrachloroethene (PCE, maximum concentration of 25.1 $\mu\text{g/m}^3$), the decision matrices recommend a range from "no further action" to "take reasonable and practical actions to identify sources and reduce exposures" to these compounds. However, a complete comparison cannot be made to the matrix considering there are no structures on the site and indoor air samples cannot be collected. Concentrations of total benzene, ethylbenzene, toluene, and xylene (BTEX) detected in soil vapor samples ranged from 20.23 to 166.44 $\mu\text{g/m}^3$. The highest reported concentrations were for isopropanol (489 $\mu\text{g/m}^3$), ethanol (431 $\mu\text{g/m}^3$), and acetone (228 $\mu\text{g/m}^3$). These compounds are common cleaning agents for laboratory equipment, and their reported concentration is likely attributed to laboratory interference.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

270 West Street, LLC has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate an 8,065 square foot site located in the Tribeca neighborhood of the Borough of Manhattan, New York. The proposed development consists of the construction of an 11-story mixed-use (commercial and residential) building.

The remedial investigation (RI) work was performed between April 28, 2015 and June 3, 2015. This remedial investigation report (RIR) summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The site is located at 440 Washington Street in the Tribeca neighborhood in Manhattan, New York, and is identified as Block 223, and portions of Lots 13 and 15 on the NYC Tax Map. Figure 1 shows the site location. The site is 8,065 square feet and is bounded by Desbrosses Street followed by a newly constructed multi-story mixed-use (residential and commercial) building to the north; a four-story mixed-use (residential and commercial) building to the south; Washington Street followed by four multi-story mixed-use (residential and commercial) buildings and a three-story industrial and manufacturing building to the east; and a construction site for the 268 West Street development project to the west. A map of the site boundary is shown in Figure 2. The site is currently vacant and used for temporary parking and materials and equipment staging for the adjacent 268 West Street construction project. The site is covered by a concrete slab (former building foundation) with the exception of the northern portion of Lot 13, which contains a former cellar filled in with demolition debris.

1.2 Proposed Redevelopment Plan

The proposed development project consists of an 11-story mixed-use commercial and residential building with a partial cellar, ground level parking, and restaurant space. Excavation across the northern portion of the site (approximately 50% of the site) is anticipated to extend to approximately 15 feet below grade surface (bgs) to accommodate the partial basement. The basement will be used as commercial storage space and amenity spaces (including a gymnasium). Excavation of up to five feet bgs will be required to accommodate foundation elements and utilities across the remainder of the site, which will be a slab on-grade foundation. The ground floor will contain a parking lot for eight cars, a lobby, and a restaurant. The remaining floors will be used for residential apartments, with a community room on the

10th floor. The 11th floor will consist of a roof bulkhead. Excavation of about 2,100 cubic yards (cy) of soil, accompanied by dewatering, is anticipated to facilitate construction. The proposed development plans are included as Appendix A.

The site's current zoning designation is C6-2A, which is a contextual commercial district with a maximum building height. A C6-2A district permits both commercial and residential use. The proposed development plans are consistent with the current zoning designation of the site.

1.3 Description of Surrounding Property

The site is located in an area characterized by multi-story, residential, and commercial buildings in a zoning district designated for mixed commercial, residential and manufacturing uses. The site is bounded by Desbrosses Street followed by a newly constructed multi-story mixed use (residential and commercial) building to the north, a four-story, mixed use (residential and commercial) building to the south, Washington Street followed by four multi-story mixed use (residential and commercial) buildings and a 3-story industrial and manufacturing building to the east, and a construction site for the 268 West Street development project to the west. Adjacent and surrounding property uses are summarized in the table below.

DIRECTION	ADJOINING PROPERTIES	SURROUNDING PROPERTIES
North	Desbrosses Street, followed by a multi-story commercial and residential building with Fika Espresso and Wine on the 1st floor	Multi-story mixed use (residential and commercial) buildings and a construction site
East	Washington Street followed by four multi-story mixed use (residential and commercial) buildings and one three-story industrial and manufacturing building	Multi-story residential buildings, a parking lot and auto-repair
South	A four-story mixed use (residential and commercial) building	Vestry Street, Multi-story mixed use (residential and commercial) buildings
West	268 West Street development construction project	West Street, Hudson River Greenway and Hudson River Park

There are no schools, day care facilities or hospitals within 500 feet of the site. A surrounding land use map is presented as Figure 3.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Past uses of the site are based on review of Sanborn Maps, Building Department records and City Directories and are documented in Langan's May 27, 2015 Remedial Investigation Work Plan (RIWP).

The following is a summary of past uses of the site:

Lot 13

- A mahogany and veneer yard, a residence, store, and office (1894-1905)
- A chemical works (1920)
- A drug company (1927)
- A dowel company (1927)
- A chemical manufacturer and a wood products warehouse (1950-1977)
- A garage and a five-story residential building (1968-2005)

Lot 15

- A mahogany and veneer yard (1894-1905)
- A garage with two gasoline tanks (1950-1968)
- A building of unidentified use (1976-2005)
- A parking company (2013)

2.2 Previous Investigations

A due diligence review and subsurface investigation were conducted on April 28, 2015. The subsurface investigation consisted of a geophysical survey, installation of nine soil borings and collection of 12 soil samples. Laboratory analysis of soil samples identified semivolatile organic compounds (SVOC) and metals at concentrations exceeding their respective Title 6 of the New York Codes, Rules and Regulations (6 NYCRR) Part 375 Restricted Residential Use (RRU) criteria. The geophysical survey did not confirm the presence of underground storage tanks (UST) at the site. Details and findings from this investigation are incorporated into this RIR. The May 7, 2015 geophysical investigation report is provided as Appendix B.

2.3 Site Inspection

A site inspection was performed by Langan on April 28, 2015. At the time of the inspection, both lots were vacant and being used for temporary parking and materials and equipment staging for the adjacent 268 West Street construction project. The site is covered by a concrete slab (former building foundation) with the exception of the northern portion of Lot 13, which contains a former cellar filled in with demolition debris. A wooden construction fence surrounds the site, which was accessible through a locked gate along Washington Street. Evidence of a material release was not observed during the site inspection.

Adjoining and surrounding properties include multi-story residential and commercial buildings, a parking garage, and two active construction sites located on the western and northeastern adjoining properties. A fill port was observed along the sidewalk, in front of the western adjoining property.

2.4 Areas of Concern (AOC)

The Areas of Concern (AOC) identified for the site include:

1. Historical Site Use: Historical uses of the site include a mahogany and veneer yard (1894-1905), a chemical works (1920), a drug company (1927), a dowel company (1927), a chemical manufacturer and a wood products warehouse (1950-1977), and garages with gasoline tanks (1950-2005). Leaks or spills of petroleum products, solvents, and/or hazardous materials resulting from these uses may have adversely impacted soil, groundwater and/or soil vapor beneath the site.
2. Suspected Underground Storage Tanks (UST): Historical land use (Sanborn) maps from 1950 to 1968 show two gasoline USTs at the eastern site boundary, on Lot 15. Historical releases of gasoline may have impacted soil, soil vapor and/or groundwater at the site.
3. Historical Fill: According to historical geologic maps, the original shoreline of the Hudson River extended further eastward, beyond the site. The shoreline moved westward in the 1800s, by infilling with imported fill material. Historic fill typically contains contaminants, particularly metals and semi-volatile organic compounds (SVOCs), at concentrations that exceed applicable state and/or federal standards and may also contain hazardous concentrations of metals.
4. Lead Hotspot: During the subsurface investigation performed by Langan in April 2015, lead was identified at a concentration of 3,100 milligrams per kilogram (mg/kg) in soil boring SB03 (advanced in the southeastern portion of the site), at a depth of four to five ft bgs.

5. Copper Hotspot: During the subsurface investigation performed by Langan in April 2015, copper was identified at a concentration of 42,000 mg/kg in soil boring SB05 (advanced in the central portion of the site), at a depth of 5 to 6 feet bgs.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Jason Hayes, P.E.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including site and Occupational Health and Safety Administration (OSHA) worker safety requirements and Hazardous Waste Operation and Emergency Response (HAZWOPER) requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations. Except in the instances when gross contamination was observed, clean soil cuttings were backfilled into soil boreholes. Excess purge water generated during the RI was containerized in two steel, Department of Transportation (DOT)-approved, 55-gallon drums. The drums were transported off-site by Arco Environmental Services Corp. (Arco) of Lindenhurst, New York, and disposed of at Advanced Waste & Water Technology, Inc. of Farmingdale, New York on June 10, 2015.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Langan performed the following scope of work, which is outlined in a Remedial Investigation Work Plan (RIWP), prepared by Langan and dated May 27, 2015:

1. Site inspection and geophysical survey to identify potential USTs, utilities, and subsurface obstructions that may impede boring advancement;
2. Advancement of 13 soil borings and collection of 22 additional soil samples for laboratory analyses, including one duplicate sample.
3. Advancement of eight delineation soil borings in the lead and copper hotspots, and the collection of 8 delineation soil samples for laboratory analyses.
4. Installation of four permanent groundwater monitoring wells and the collection of five groundwater samples for laboratory analysis, including one duplicate sample;
5. Installation of four soil vapor probes and the collection of five vapor samples for laboratory analysis, including one ambient air sample; and
6. A well survey to determine groundwater monitoring well elevations and to determine the direction of groundwater flow at the site.

The RIWP is provided as Appendix C.

4.1 Geophysical Investigation

A geophysical survey was completed by NOVA Geophysical & Environmental, Inc. (NOVA) on April 28, 2015. NOVA completed the geophysical survey using ground penetrating radar (GPR), electromagnetic detectors, and comprehensive subsurface utility locators to locate and identify current and former utility lines, anomalies, USTs, and other subsurface structures, and to clear proposed boring locations. The survey did not identify anomalies consistent with USTs. Borings were relocated as necessary to avoid subsurface utilities and minor anomalies. The geophysical survey is included as Appendix B.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

Warren George, Inc. (WGI) of Jersey City, New Jersey completed nine preliminary RI borings on April 28 and 29, 2015 using an Acker truck-mounted drilling rig with split spoon attachment and a hand auger. Borings were advanced by WGI to depths ranging from 1.5 to 16 feet bgs. AARCO Environmental Services (ARRCO) completed the remaining RI borings on June 1 and 2,

2015 using a 730 DT Geoprobe® direct-push drill rig, to depths ranging from 5 to 15 feet bgs. engineer was on-site to observe all drilling activities. Soil boring locations are shown on Figures 4 and 5.

Soil samples were collected continuously to the completion depth of each boring. Two-foot spilt spoons were used for sample collection when drilling with the Acker truck-mounted drilling rig, and four-foot macrocore® sample barrels with dedicated acetate liners were used for sample collection when drilling with the 7730 DT Geoprobe® drill rig. Soil samples were inspected for visual and olfactory evidence of contamination and screened for organic vapors with a photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp. Soil boring logs are provided as Appendix D.

Groundwater Monitoring Well Construction

Four soil borings (SB10/MW1, SB11/MW2, SB12/MW3, and SB13/MW4) were completed as permanent groundwater monitoring wells. Based on observed soil saturation depths, well screens were installed to straddle the groundwater table, which was encountered at depths of about 8 to 13 ft bgs. All four of the permanent monitoring wells were constructed with 1.5-inch inner diameter by 2.5-inch outer diameter pre-packed well screens with attached solid riser pipe. Clean sand was used to fill the remaining void between the pre-packed well screen and the borehole, to approximately 2 feet above the top of the screened interval. A minimum three feet of hydrated bentonite clay was placed above the screen to seal the wells. Permanent wells were developed by purging a minimum of three well volumes using a down-hole pump. Monitoring well locations are shown on Figure 6 and monitoring well construction details are summarized in Table 1 and Appendix E.

Soil Vapor Sample Point Construction

Four soil vapor points (SV01 through SV01) were installed during the RI. At each sample location, a soil vapor implant attached to dedicated polyethylene tubing was inserted into each boring. The annulus around the probe and tubing was filled with clean sand to a minimum depth of approximately one foot above the probe. Bentonite was then used to seal the top of the boring. Soil vapor sampling locations are shown in Figure 7 and soil vapor sampling logs are provided as Appendix F.

Permanent Groundwater Monitoring Well Survey and Water Level Measurement

Groundwater monitoring well locations and elevations were surveyed by a NYS licensed surveyor on June 15, 2015. Together with the synoptic groundwater level measurements collected on June 3, 2015, well locations and elevations were used to determine the groundwater flow direction at the site. A groundwater elevation summary is provided in Table 2 and a contour map showing groundwater flow direction is provided as Figure 8.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all AOCs, and considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, and other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

A total of 30 soil samples, including one duplicate sample, were collected for laboratory analysis during the RI. Generally one sample was collected from each boring at the interval exhibiting the greatest visual, olfactory or instrumental (PID) indication of impacts; however, additional samples were collected from borings (SB30 and SB08) where impacts were observed at multiple intervals.

Up to two soil samples were collected from each soil boring for laboratory analysis during the second phase of the RI. For borings located within the cellar footprint of the proposed building (SB-12, SB-13), samples were collected from 1) the upper two feet of soil beneath the existing concrete cover, and 2) the interval just below the proposed development depth, which is about 10 to 12 feet bgs. For borings located within the proposed on-grade construction (SB-10, SB-11), samples were collected from 1) the upper two feet of soil, and 2) from the interval directly above the groundwater table.

During the preliminary subsurface investigation, a lead hotspot was encountered at the location of soil boring SB03, at a depth of four to five feet bgs, and a copper hotspot was encountered at the location of soil boring SB05 at a depth of five to six feet bgs. To delineate each hotspot area, a total of four soil samples were collected from each area. Hotspot areas were delineated vertically by collecting one sample at the original boring location, from a depth of about two to three feet below the original sample interval. Hotspot areas were delineated horizontally by advancing a delineation boring about five feet to the north, southeast, and southwest of the original boring locations and collecting a sample at the corresponding depth interval. Due to detectable odors and PID readings above background, an additional sample was collected from SB03N, and analyzed for the full suite of parameters.

All soil samples were collected into pre-cleaned, laboratory-supplied sampling containers, labeled, and placed into laboratory-supplied coolers with ice to preserve the samples. In

addition, a field blank and two trip blanks were collected and placed into laboratory-supplied coolers with ice to preserve the samples. Coolers were retrieved at the end of each day by a laboratory courier and transported under standard chain-of-custody protocol to Alpha Analytical, Inc. (Alpha), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory.

Soil samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOC) via US Environmental Protection Agency (USEPA) Method 8260C, TCL SVOCs via EPA Method 8270D, Target Analyte List (TAL) metals via EPA 6000/7000 Series methods, polychlorinated biphenyls (PCB) via EPA Method 8082A, pesticides via EPA Method 8081B. In addition, chlorinated herbicides were analyzed for select samples via EPA Method 8151A.

Soil samples collected from delineation borings were analyzed for the corresponding total metal (i.e., lead for the SB03 hotspot and copper for SB05 hotspot). Additionally, delineation samples associated with SBO3 were analyzed for Toxicity Characteristic Leaching Procedure (TCLP) lead. Due to detectable odors and PID readings above background in SB03N from 3 to 4 feet bgs, an additional sample was collected and analyzed for VOCs, SVOCs, PCBs, Metals and Pesticides.

A sample collection summary, including chemical analyses, dates of collection and sample depths, is reported in Table 3. Figures 4 and 5 show the locations of soil samples collected during the RI.

Groundwater Sampling

One groundwater sample was collected from each of the four monitoring wells and one duplicate sample was collected for quality assurance/quality control (QA/QC) purposes. Samples were collected from permanent wells at least 24 hours after installation. Prior to sampling, the static groundwater level was measured to the nearest 0.01 foot with a decontaminated water level meter, and a minimum of three well volumes were purged from each well using a down-hole pump. Dedicated, disposable polyethylene tubing was used for sample collection. Purging rates varied from 0.05 to 0.09 gallons per minute, and were based on the well volume and observed recharge rate. The purging rate was adjusted to minimize drawdown and sample turbidity. A Horiba U-52 water quality monitor was used to measure monitoring well effluent during purging and sampling. The purge water was monitored for hydrogen ion concentration (pH), oxidation/reduction potential (ORP), conductivity, temperature, dissolved oxygen (DO), and turbidity. Groundwater samples were collected when the groundwater quality parameters had stabilized to approximately 10 percent of their respective values, and when the turbidity was below 5 nephelometric turbidity units (NTUs).

Groundwater samples were collected directly from the discharge line into pre-cleaned, laboratory-provided containers. The sample containers were labeled, placed into laboratory-

supplied coolers, along with trip blank samples (five in total), packed with ice to preserve the samples, and transported by a laboratory courier to Alpha under standard chain-of-custody protocol. The samples were analyzed for TCL VOCs via EPA Method 8260C, SVOCs via EPA Method 8270D, TAL metals via EPA 6000/7000 Series methods for both total and dissolved metals, PCBs via EPA Method 8082A, and pesticides via EPA Method 8081B. Field filtering was performed for each sample to prepare the samples for dissolved TAL metals analysis, with the exception of MW01, which was lab filtered due to the volume of water collected as a result of its poor recharge rate. Monitoring well locations are shown on Figure 6 and groundwater sampling logs are included in Appendix G.

Soil Vapor Sampling

Soil vapor sampling was conducted in accordance with the New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion, October 2006. Following soil vapor sample point construction, each soil vapor point was purged at a rate of 0.2 liters per minute (L/min) to evacuate a minimum of three tubing volumes. After purging, soil vapor samples were collected into laboratory-supplied, batch-certified, six-liter Summa canisters that were calibrated for a sampling rate of two hours per sample. An inert tracer gas (helium) was introduced into an above-grade sampling chamber to ensure that the soil vapor sampling points were properly sealed above the targeted sampling depth, thereby preventing infiltration of ambient air. The canisters were properly labeled and transported to Alpha following standard chain-of-custody protocols. One ambient air sample was collected for QA/QC purposes. Samples were analyzed for VOCs via EPA Method TO-15. Soil vapor sample locations are shown in Figure 7 and soil vapor sampling logs are included in Appendix F.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Michael Burke
Chemical Analytical Laboratory	The chemical analytical laboratory used during the RI was NYSDOH ELAP- certified Alpha Analytical, Inc.
Chemical Analytical Methods	Soil analytical methods: <ul style="list-style-type: none">• VOCs by EPA Method 8260C (rev. 2006)• SVOCs by EPA Method 8270D (rev. 2007)• TAL Metals by EPA Method 6010C (rev. 2007) and 7471B

--	--

Results of Chemical Analyses

Laboratory data for soil is summarized in Tables 4 and 5 and Laboratory data for groundwater and soil vapor is summarized in Tables 6 and 7, respectively. Laboratory analytical reports are provided in Appendix H.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

According to United States Geologic Survey (USGS) maps and historic topographic maps, New York City geology is generally characterized by layers of fill and native soil overburden underlain by metamorphic bedrock. The native overburden was deposited during the last continental glaciation. The overburden generally consists of glacial till and outwash predominantly in inland areas, and riverine deposits (peat, organic silt and clay) along the shorelines that have been filled in over time. The site is underlain by the Manhattan Schist, described as a gray, sillimanite-muscovite-tourmaline schist.

Beneath the ground surface, groundwater is contained within the unconsolidated geologic materials and fractured bedrock. The upper surface of the groundwater reservoir is marked by the water table surface, which fluctuates seasonally in response to precipitation events and tides (along shorelines). The overburden deposits typical to the project area can have low to moderate hydraulic conductivities. The bedrock is relatively impermeable except where fractures, faults, or joints are present. Preferential flow occurs through the more permeable zones of the overburden, such as within individual sand or gravel layers, and through bedrock

fractures and joints. Flow of groundwater in an urban setting can be altered and interrupted by the presence of pumping stations, building foundations, utilities, retaining walls, or other buried structures.

Stratigraphy

The stratigraphy underlying the site is composed of a surficial layer of fill overlaying natural sand, silt and clay deposits. Thicknesses of fill observed during the RI ranged from 5 to 13.5 feet. The fill layer is primarily composed of loose reddish to dark brown medium to coarse sand with varying amounts of gravel and silt. Construction and demolition debris, plant remains, wood, metal, slag, ash and coal were also observed within the fill layer.

The underlying natural deposits were primarily composed of loose brown fine to medium sand with varying amounts of gravel and silt. Organic silt was observed in borings SB10 and SB13 at a depth of 13.5 feet bgs to the termination of each boring. Bedrock was not encountered during the RI; however, the top of the bedrock surface was observed during a geotechnical investigation performed at the adjacent 268 West Street site at about 89 ft bgs (about el. -80). Soil boring logs are provided as Appendix D.

Hydrogeology

Top of the groundwater table measurements ranged from 8.26 ft bgs (el. -0.52) to 9.63 ft bgs (el. -1.4). A groundwater elevation contour map, derived from groundwater elevations recorded from site monitoring wells, is provided as Figure 8. Groundwater appears to flow generally to the west across the site.

5.2 Soil Chemistry

A total of 30 soil samples were collected and analyzed for VOCs, SVOCs, metals, pesticides, PCBs, and chlorinated herbicides (for select samples). Soil analytical results were compared to the 6 NYCRR Part 375 Unrestricted Use (UU) SCOs and Restricted Residential Use (RRU) SCOs. TCLP samples taken to delineate the elevated lead identified in the preliminary subsurface investigation were compared to 40 Code of Federal Regulations (CFR) 261 Subpart C and Table 1 of 40 CFR 261.24 - EPA Resource Conservation and Recovery Act (RCRA) Maximum Concentration of Contaminants for the Toxicity Characteristic. One of the 30 soil samples was a duplicate of sample SB12_1-2, and was analyzed for QA/QC purposes. Data collected during the RI was sufficient to delineate the vertical and horizontal distribution of contaminants at the site.

VOCs – The concentrations of nine VOCs exceeded their Part 375 UU SCOs in seven soil samples collected, consisting of:

- benzene (max concentration 0.33 mg/kg in SB03N_3-4)

- toluene (max concentration 1.6 mg/kg in SB03N_3-4)
- ethylbenzene (max concentration 6.9 mg/kg in SB03N_3-4)
- total xylenes (max concentration 36 mg/kg in SB03N_3-4)
- naphthalene (max concentration 210 mg/kg in SB07_1-2)
- n-propylbenzene (max concentration 9.4 mg/kg in SB03N_3-4)
- 1,3,5-trimethylbenzene (max concentration 30 mg/kg in SB03N_3-4), acetone (max concentration 0.16 mg/kg in SB10_7-8)
- 1,2,4-trimethylbenzene (max concentration 86 mg/kg in SB03N_3-4)

Acetone is a common laboratory contaminant, which was identified in the batch blank of several samples, and its presence in soil is not representative of site conditions. Of the nine VOCs whose concentrations exceeded their respective UU SCOs, the concentration of two VOCs, naphthalene and 1,2,4-trimethylbenzene, also exceeded their Part 375 RRU SCOs, in samples SB07_1.0-2.0 and SB03N_3-4, respectively. Exceedances per sample location are summarized in the table below (“x” indicates a UU SCO exceedance, with bold applied for RRU exceedances):

Location	SB03N	SB06	SB07	SB08	SB10	SB13	SB13
Depth	3-4	0.5-1	1-2	5-5.5	7-8	1-2	14-15
1,2,4-Trimethylbenzene	x						
1,3,5-Trimethylbenzene	x						
Acetone				x	x	x	x
Benzene	x						
Ethylbenzene	x						
n-Propylbenzene	x						
Naphthalene		x	x				
Toluene	x						
Xylenes, Total	x						

With the exception of acetone, elevated concentrations of VOCs are potentially attributed to a release from historic USTs located at the site or from historic on-site operations.

SVOCs – Concentrations of 14 Semivolatile organic compounds (SVOC) exceeded their respective UU SCOs in six soil samples collected, consisting of:

- acenaphthene (max concentration 43 mg/kg in SB06_05-1.0)
- fluoranthene (max concentration 300 mg/kg in SB06_05-1.0)
- naphthalene (max concentration 67 mg/kg in SB06_05-1.0)

- benzo(a)anthracene (max concentration 130 mg/kg in SB06_05-1.0)
- benzo(a)pyrene (max concentration 100 mg/kg in SB06_05-1.0)
- benzo(b)fluoranthene (max concentration 120 mg/kg in SB06_05-1.0)
- benzo(k)fluoranthene (max concentration 45 mg/kg in SB06_05-1.0), chrysene (max concentration 120 mg/kg in SB06_05-1.0)
- fluorene (max concentration of 50 mg/kg in SB06_0.5-1.0)
- phenanthrene (max concentration 350 mg/kg in SB06_05-1.0)
- dibenzo(a,h)anthracene (max concentration 14 mg/kg in SB06_05-1.0)
- indeno(1,2,3-cd)pyrene (max concentration 59 mg/kg in SB06_05-1.0)
- pyrene (max concentration 260 mg/kg in SB06_05-1.0)
- dibenzofuran (max concentration 35 mg/kg in SB06_05-1.0)

Of the 14 SVOCs whose concentrations exceeded their respective UU SCOs, concentrations of 10 SVOCs, consisting of fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, phenanthrene, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, and pyrene also exceeded their respective RRU SCOs. Exceedances per sample location are summarized in the table below (“x” indicates a UU SCO exceedance, with bold applied for RRU SCO exceedances):

Location	SB03	SB04	SB06	SB07	SB10	SB13
Depth	4-5	2-3	0.5-1	1-2	1-2	1-2
Acenaphthene			x	x		
Fluoranthene			x	x		
Naphthalene			x	x		
Benzo(a)anthracene	x	x	x	x	x	x
Benzo(a)pyrene	x	x	x	x	x	x
Benzo(b)fluoranthene	x	x	x	x	x	x
Benzo(k)fluoranthene	x	x	x	x	x	x
Chrysene	x	x	x	x	x	x
Fluorene			x			
Phenanthrene			x	x		
Dibenzo(a,h)anthracene	x	x	x	x	x	
Indeno(1,2,3-cd)pyrene	x	x	x	x	x	x
Pyrene			x	x		
Dibenzofuran			x	x		

Location	SB01	SB02	SB03	SB03C	SB03E	SB03N	SB03N	SB03W	SB04	SB05C
Depth	1-2	0.5-1	4-5	6-7	4-5	3-4	4-5	4-5	2-3	7-8
Zinc		x	x	x		x	x		x	

Elevated concentrations of metals are attributed to historic fill material that was identified from surface grade to approximately 13.5 ft bgs. Delineation samples surrounding SB03 and SB05 did not identify lead or copper, respectively, at concentrations exceeding the RRU SCOs, which is the applicable cleanup level for the intended use of the site. In addition, hazardous concentrations of lead were not identified in SB05 or the corresponding delineation borings.

Pesticides – Concentrations of three pesticides exceeded their respective UU SCOs in five soil samples collected, consisting of:

- 4-4'-DDE (max concentration of 0.00689 mg/kg in SB12_1-2)
- 4,4'-DDD (max concentration of 0.00372 mg/kg in SB13_1-2)
- 4-4'-DDT (max concentration of 0.00486 in SB11_8-9)

Concentrations of these compounds did not exceed their respective RRU SCOs in any of the samples collected during the RI. The presence of pesticides in soil samples is likely attributed to the composition of the fill material at the site.

PCBs and Herbicides –PCBs and herbicides were not identified at concentrations exceeding their respective UU or RRU SCOs in any of the soil samples collected during the RI.

A summary of data for chemical analyses performed on soil samples is included in Tables 4 and 5. Figures 4 and 5 provide a map of soil sample locations and include a summary of analytical results that exceeded the Part 375 UU and RRU SCOs. Soil laboratory analytical reports are provided in Appendix H.

5.3 Groundwater Chemistry

Five groundwater samples, including once duplicate sample, were analyzed for VOCs, SVOCs, metals (total and dissolved), pesticides and PCBs. Groundwater analytical results were compared to the New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Standard (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) for Class GA groundwater. Groundwater sample results are summarized below.

VOCs, PCBs and Pesticides – VOCs, PCBs, and pesticides were not identified at concentrations exceeding their respective TOGS AWQS in any of the groundwater samples collected during the RI.

SVOCs – Concentrations of six SVOCs exceeded TOGS AWQS in MW04, consisting of:

- chrysene (max concentration of 0.25 micrograms per liter [µg/L])

- benzo(a)anthracene (max concentration of 0.26 µg/L)
- benzo(a)pyrene (max concentration of 0.28 µg/L)
- benzo(b)fluoranthene (max concentration of 0.3 µg/L)
- benzo(k)fluoranthene (max concentration of 0.12 µg/L)
- indeno(1,2,3-cd)pyrene (max concentration of 0.15 µg/L)

The presence of SVOCs in groundwater in MW04 is attributed to the presence of historic fill, which extends into the groundwater table in this location.

Metals – Total concentrations of six metals exceeded their respective TOGS AWQS, consisting of:

- chromium (max concentration of 73.8 µg/L in MW03_060315)
- iron (max concentration of 25,500 µg/L in MW03_060315)
- lead (max concentration of 451.5 µg/L in MW03_060315)
- magnesium (max concentration of 181,000 µg/L in MW02_060315)
- manganese (max concentration of 3,318 µg/L in MW03_060315)
- sodium (max concentration of 670,000 µg/L in MW01_060315)

Dissolved concentrations of four metals exceeded their respective TOGS AWQS standards, consisting of:

- iron (max concentration of 8,630 µg/L in sample MW03_060315)
- magnesium (max concentration of 179,000 µg/L in sample MW02_060315)
- manganese (max concentration of 3,861 µg/L in sample MW03_060315)
- sodium (max concentration of 641,000 µg/L in sample MW01_060315)

None of the compounds detected in the dissolved samples were detected at elevated concentrations in on-site soils and their presence is considered indicative of regional groundwater quality or potential off-site sources.

A summary of data for chemical analyses performed on groundwater samples is included in Table 6. Figure 6 provides a map of groundwater sample locations and includes a summary of analytical results that exceed the TOGS AWQS. Laboratory analytical data reports are provided as Appendix H.

5.4 Soil Vapor Chemistry

Five soil vapor samples were collected during the RI, including one ambient air sample. Sample results were compared to the ambient air sample and the decision matrices established by the NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006. Based on the concentrations

of 1,1,1-trichloroethane (max concentration of 1.64 micrograms per cubic meter [$\mu\text{g}/\text{m}^3$] in SV02-060315), and tetrachloroethene (PCE, maximum concentration of 25.1 $\mu\text{g}/\text{m}^3$ in SV03-060315), the decision matrices recommends a range from “no further action” to “take reasonable and practical actions to identify sources and reduce exposures” to these compounds. However, a complete comparison cannot be made to the matrix considering there are no structures on the site and indoor air samples cannot be collected. Carbon tetrachloride and trichloroethylene were not detected in any of the soil vapor samples collected during the RI.

Compounds detected above ambient air concentrations consisted of:

- 1,2,4-trimethylbenzene
- acetone
- ethanol
- cyclohexane
- ethyl benzene
- 4-methyl-2-pentanone
- n-hexane
- toluene
- tetrahydrofuran
- 2,2,4-trimethylpentane
- 1,3,5-trimethylbenzene
- benzene
- chloroform
- p/m Xylene
- isopropanol
- methylene chloride
- o-xylene
- tetrachloroethene
- 1,1,1-trichloroethane
- 2-hexanone
- 4-ethyltoluene
- carbon disulfide
- chloromethane
- tertiary butyl alcohol
- 2-butanone
- n-heptane
- styrene
- trichlorofluoromethane
- bromodichloromethane
- 1,3-dichlorobenzene

The highest reported concentrations were for isopropanol (489 $\mu\text{g}/\text{m}^3$ in SV01-060315), ethanol (431 $\mu\text{g}/\text{m}^3$ in SV01-060315), and acetone (228 $\mu\text{g}/\text{m}^3$ in sample SV02-060315). These compounds are common cleaning agents for laboratory equipment, and their reported concentration is likely attributed to laboratory interference. Excluding isopropanol, ethanol and acetone, the highest reported concentrations were of tertiary butyl alcohol (79.7 $\mu\text{g}/\text{m}^3$ in SV02-060315 and 63.1 $\mu\text{g}/\text{m}^3$ in SV04-060315), toluene (72.0 $\mu\text{g}/\text{m}^3$ in SV02-060315), and 1,2,4-trimethylbenzene (59.0 $\mu\text{g}/\text{m}^3$ in SV04-060315).

Total VOCs detected in soil vapor samples range from about 579 $\mu\text{g}/\text{m}^3$ in SV03-060315 to 1,315 $\mu\text{g}/\text{m}^3$ in SV01-060315, compared to the ambient air sample which had a total VOC concentration of about 101 $\mu\text{g}/\text{m}^3$. Thirty VOCs were detected in soil vapor samples at concentrations greater than those detected in the ambient air.

A summary of data for chemical analyses performed on soil vapor samples is included in Table 7. Figure 7 provides a map of soil vapor sample locations and includes a summary of analytical results that exceed the ambient sample. Laboratory analytical data reports are provided as Appendix H.

5.5 Hazardous Waste Potential

Based on an evaluation of the data and information from the RIR, the presence of or need for disposal of hazardous waste may not be required at this site. However, future sampling for waste characterization may change the requirement.

5.6 Deviations from remedial investigation work plan

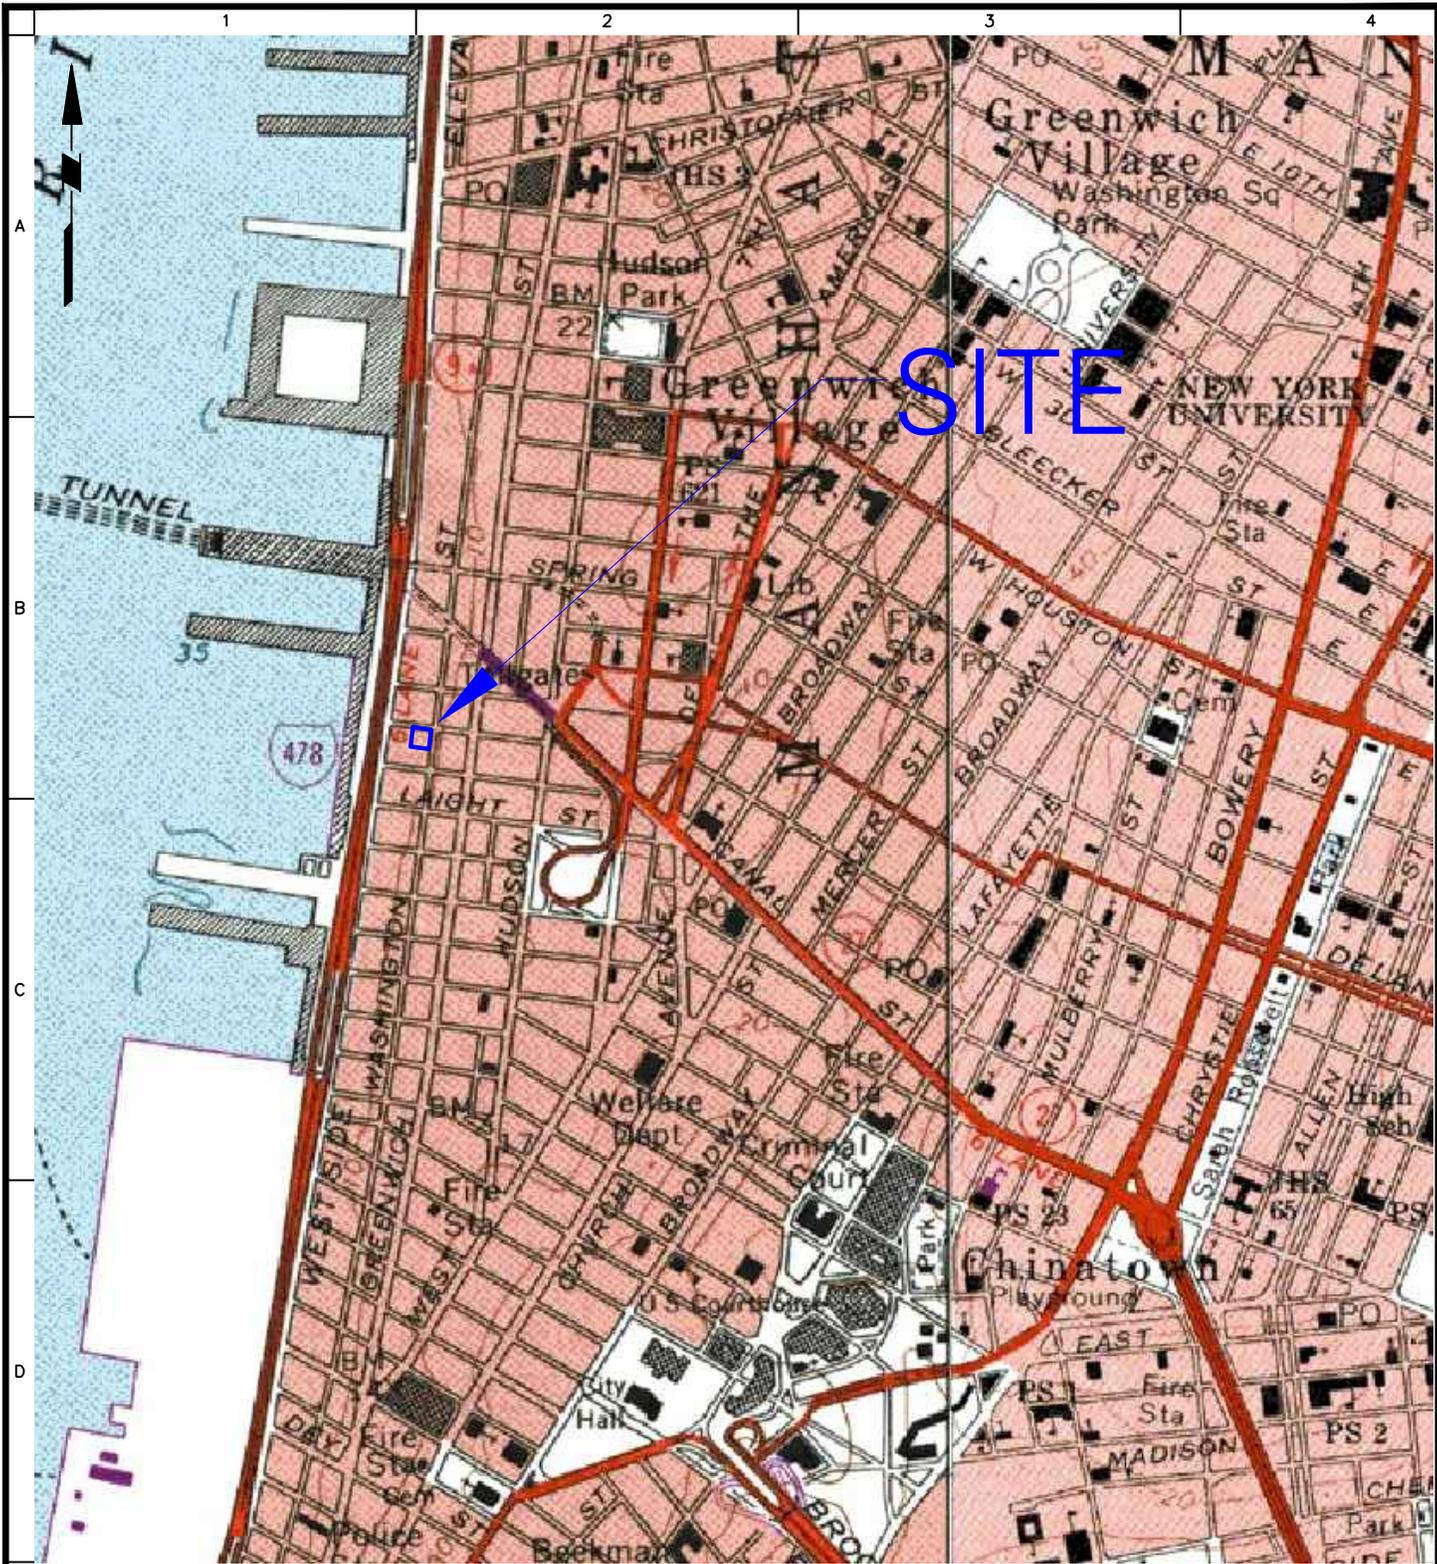

TCLP analyses for copper was not completed for delineation borings surrounding the copper hotspot, as proposed in the RIWP, due to lack of a corresponding regulatory standard. The deviation was discussed with, and approved by, NYCOER prior to sampling.

Poor well recovery in MW01 prohibited field filtering of the groundwater sample collected from this well. Therefore, the dissolved metals sample result was obtained from a lab filtered groundwater sample.

5.7 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

o-Xylene	7.95
1,3,5-Trimethylbenzene	2.29
1,2,4-Trimethylbenzene	7.72
1,3-Dichlorobenzene	19.8

SV04	
Lab ID	L1512324-04
Sample Date	6/3/2015
VOC (ug/m3)	
Dichlorodifluoromethane	1.4
Chloromethane	1.01
Ethanol	21.9
Acetone	173
Trichlorofluoromethane	1.63
Isopropanol	4.92
Tertiary butyl Alcohol	63.1
Methylene chloride	6.91
2-Butanone	13.2
Chloroform	33.7
n-Hexane	12.9
Benzene	1.65
Cyclohexane	1.27
Bromodichloromethane	3.31
2,2,4-Trimethylpentane	6.21
Heptane	10.2
4-Methyl-2-pentanone	9.67
Toluene	20.6
2-Hexanone	3.01
Tetrachloroethene	1.75
Ethylbenzene	10.7
p/m-Xylene	46.9
Styrene	22.1
o-Xylene	25.6
4-Ethyltoluene	9.93
1,3,5-Trimethylbenzene	21.3
1,2,4-Trimethylbenzene	59

- LEGEND:**
-  APPROXIMATE SITE BOUNDARY
 -  SV04 SOIL VAPOR POINT LOCATION
 -  APPROXIMATE LOCATION OF FORMER SUSPECT UNDERGROUND STORAGE TANKS
 -  APPROXIMATE EXTENT OF FORMER BASEMENT, FILLED WITH DEMOLITION DEBRIS FROM SURFACE TO ABOUT 8 FEET BGS

- NOTES:**
- SURVEY BASE PLAN TAKEN FROM DRAWING CREATED BY FEHRINGER SURVEYING, P.C., TITLED 'SURVEY OF PROPERTY SITUATED IN: WEST, VESTRY, WASHINGTON AND DESBROSSES STREETS', SURVEYED DECEMBER 2, 2013, REVISED APRIL 6, 2015
 - VOC = VOLATILE ORGANIC COMPOUND
 - TABLES SHOW VOC ANALYTES DETECTED IN THE VAPOR SAMPLES
 - ug/m3 = MICROGRAMS PER CUBIC METER

Notes:

- Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and the NYSDEC Part 375 Restricted Residential Use SCOs.
- NYSDEC Part 375 Unrestricted Use SCO exceedances are **BOLD**.
- NYSDEC Part 375 Restricted Residential Use SCO exceedances are **BOLD** and shaded.
- Non detected compounds with Reporting Limits (RL) above the NYSDEC Part 375 Unrestricted Use SCO standards are in italics.
- mg/kg = milligrams per kilogram.
- DUP01_060215 is a duplicate of SB12_1-2.
- bgs = below ground surface.

Qualifiers:

J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.
 U = analyte not detected at or above the level indicated.
 ~ = this indicates that no regulatory limit has been established for this analyte.

Notes:

- Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and the NYSDEC Part 375 Restricted Residential Use SCOs.
- NYSDEC Part 375 Unrestricted Use SCO exceedances are **BOLD**.
- NYSDEC Part 375 Restricted Residential Use SCO exceedances are **BOLD** and shaded.
- Non detected compounds with Reporting Limits (RL) above the NYSDEC Part 375 Unrestricted Use SCO standards are in italics.
- mg/kg = milligrams per kilogram.
- DUP01_060215 is a duplicate of SB12_1-2.
- bgs = below ground surface.

Qualifiers:

J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.
 U = analyte not detected at or above the level indicated.
 ~ = this indicates that no regulatory limit has been established for this analyte.

Notes:

- Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and the NYSDEC Part 375 Restricted Residential Use SCOs.
- NYSDEC Part 375 Unrestricted Use SCO exceedances are **BOLD**.
- NYSDEC Part 375 Restricted Residential Use SCO exceedances are **BOLD** and shaded.
- Non detected compounds with Reporting Limits (RL) above the NYSDEC Part 375 Unrestricted Use SCO standards are in italics.
- mg/kg = milligrams per kilogram.
- DUP01_060215 is a duplicate of SB12_1-2.
- bgs = below ground surface.

Qualifiers:

J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.
 U = analyte not detected at or above the level indicated.
 ~ = this indicates that no regulatory limit has been established for this analyte.

Notes:

- Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and the NYSDEC Part 375 Restricted Residential Use SCOs.
- NYSDEC Part 375 Unrestricted Use SCO exceedances are **BOLD**.
- NYSDEC Part 375 Restricted Residential Use SCO exceedances are **BOLD** and shaded.
- Non detected compounds with Reporting Limits (RL) above the NYSDEC Part 375 Unrestricted Use SCO standards are in italics.
- mg/kg = milligrams per kilogram.
- DUP01_060215 is a duplicate of SB12_1-2.
- bgs = below ground surface.

Qualifiers:

J = analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated.
 U = analyte not detected at or above the level indicated.
 P = the relative percentage difference between the results for the two instrument columns exceeds the method-specified criteria.
 I = The lower value for the two instrument columns has been reported due to obvious interference.
 ~ = this indicates that no regulatory limit has been established for this analyte.

Notes:

- Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and the NYSDEC Part 375 Restricted Residential Use SCOs.
- NYSDEC Part 375 Unrestricted Use SCO exceedances are **BOLD**.
- NYSDEC Part 375 Restricted Residential Use SCO exceedances are **BOLD** and shaded.
- Non detected compounds with Reporting Limits (RL) above the NYSDEC Part 375 Unrestricted Use SCO standards are in italics.
- mg/kg = milligrams per kilogram.
- DUP01_060215 is a duplicate of SB12_1-2.
- bgs = below ground surface.

Qualifiers:

J = analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated.
 U = analyte not detected at or above the level indicated.
 P = the relative percentage difference between the results for the two instrument columns exceeds the method-specified criteria.
 I = The lower value for the two instrument columns has been reported due to obvious interference.
 ~ = this indicates that no regulatory limit has been established for this analyte.

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs), the NYSDEC Part 375 Restricted Residential Use SCOs and 40 CFR 261 Subpart C and Table 1 of 40 CFR 261.24 - US Environmental Protection Agency (USEPA) Resource Conservation and Recovery Act (RCRA) Maximum Concentration of Contaminants for the Toxicity Characteristic.
2. NYSDEC Part 375 Unrestricted Use SCO exceedances are **BOLD**.
3. NYSDEC Part 375 Restricted Residential Use SCO exceedances are **BOLD** and shaded.
4. TCLP = Toxicity Characteristic Leaching Procedure.
5. mg/kg = milligrams per kilogram.
6. mg/L = milligram per liter.
7. NA = not applicable.

Qualifiers:

- J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.
- U = analyte not detected at or above the level indicated.
- ~ = this indicates that no regulatory limit has been established for this analyte.

Notes:

- Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards (AWQS) Class GA Standards.
- NYSDEC TOGS AWQS exceedances are **BOLD** and shaded.
- Non detected compounds with Reporting Limits (RL) above the NYSDEC AWQS TOGS standards are in italics.
- (µg/L) = micrograms per liter.
- DUP1_060315 is a duplicate of MW01.

Qualifiers:

J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.
 U = analyte not detected at or above the level indicated.
 ~ = this indicates that no regulatory limit has been established for this analyte.

Re: Geophysical Engineering Survey (GES) Report
Commercial Property
440 Washington Street
New York, New York 10013

Dear Mr. Carrus:

Nova Geophysical Services (NOVA) is pleased to provide findings of the geophysical engineering survey (GES) at the above referenced project site: Commercial Property, 440 Washington Street, New York, New York (the "Site"). Please see attached Site Location and Geophysical Survey maps for more details.

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a Geophysical engineering surveys (GES) consisting of a Ground Penetrating Radar (GPR) survey at the site. The purpose of this survey is to locate and identify USTs, anomalies, utilities and other substructures and to clear and mark proposed environmental boring areas on April 28, 2015.

The equipment selected for this investigation was Noggin's 250 MHz ground penetrating radar (GPR) shielded antenna.

A GPR system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulses into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

GEOPHYSICAL METHODS

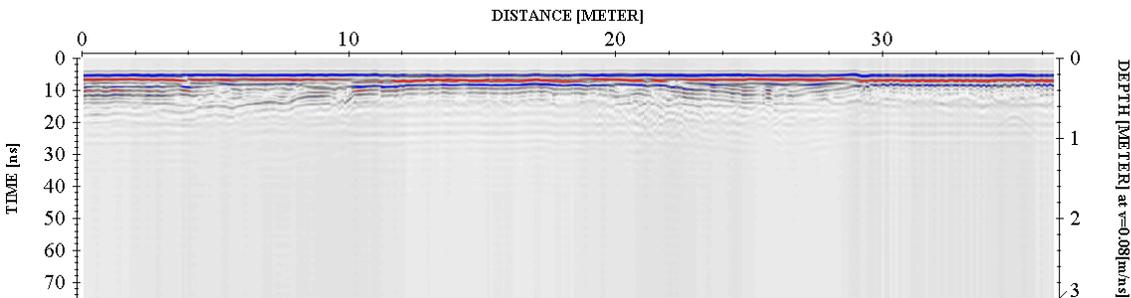

The project site was screened using the GPR to search the areas of interest and inspected for reflections, which could be indicative of major anomalies and substructures. Specific borehole locations were screened in a smaller grid prior to finalizing placement.

GPR data profiles were collected for the areas of the Site specified by the client. The surveyed areas consisted of concrete surfaces.

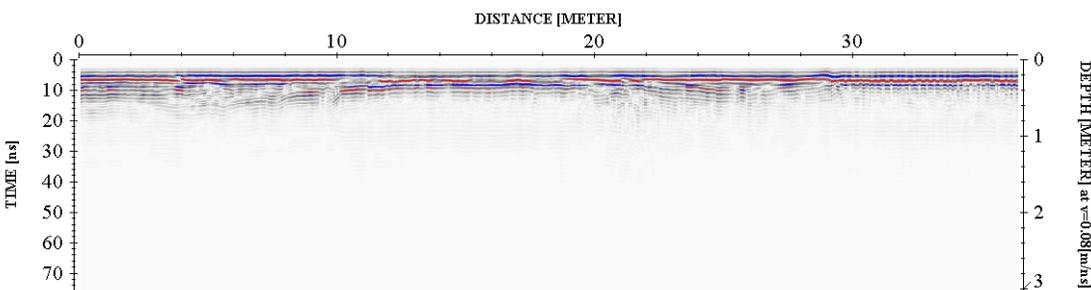

DATA PROCESSING

In order to improve the quality of the results and to better identify subsurface anomalies NOVA processed the collected data. The processes flow is briefly described at this section.

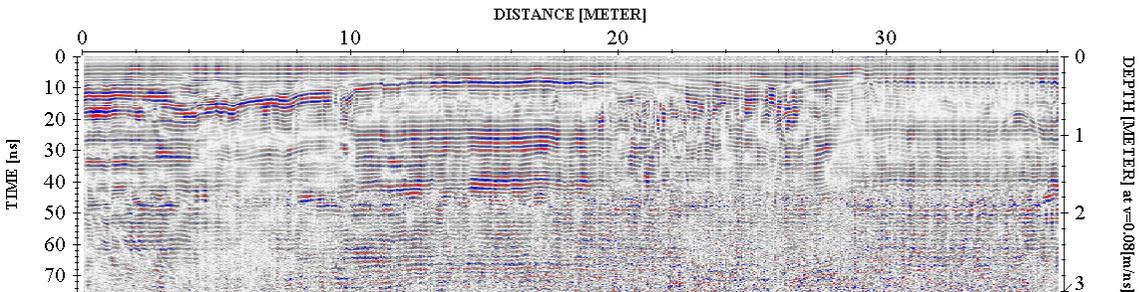

Step 1. Import raw RAMAC data to standard processing format

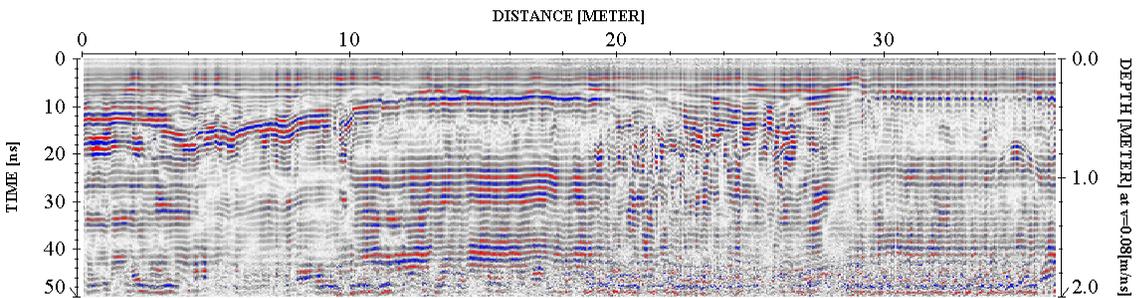

Step 2. Remove instrument noise (*dewow*)

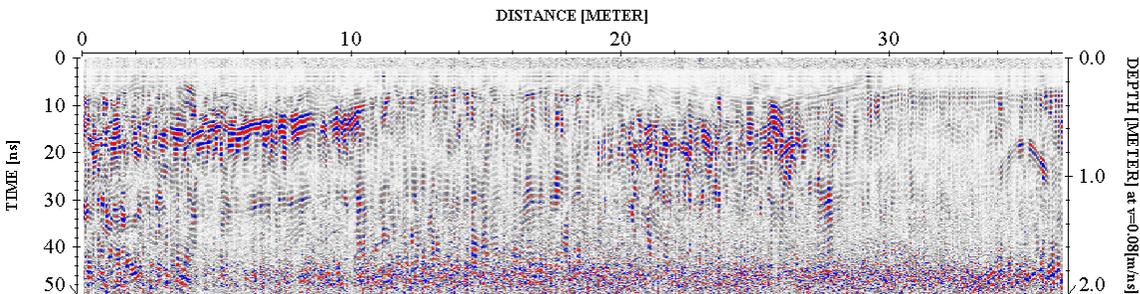

Step 3. Correct for attenuation losses (*energy decay function*)

Step 4. Remove static from bottom of profile (*time cut*)

Step 5. Mute horizontal ringing/noise (*subtracting average*)

The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and describes the subsurface anomalies more accurately.

PHYSICAL SETTINGS

Nova observed following physical conditions at the time of the survey:

The weather: Sunny

Temp: 45 Degrees (F).

Surface: Concrete surfaces

Geophysical Noise Level (GNL): Geophysical Noise Level (GNL) was medium to high at the site. The noise was a result of the site being located in an urban environment.

RESULTS

The results of the geophysical engineering survey (GES) identified following at the project Site:

- GES survey identified scattered anomalies located throughout the project site. Based on their rates and proximity, these anomalies were inconsistent with any USTs. These areas were indicated on the on-site markout.
- Several utilities (sewer, gas and electrical) were located on the site. These utilities were indicated on the survey map.
- Geophysical Survey Plan portrays the areas investigated during the geophysical survey.

If you have any questions please do not hesitate to contact the undersigned.
Sincerely,

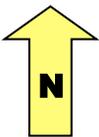

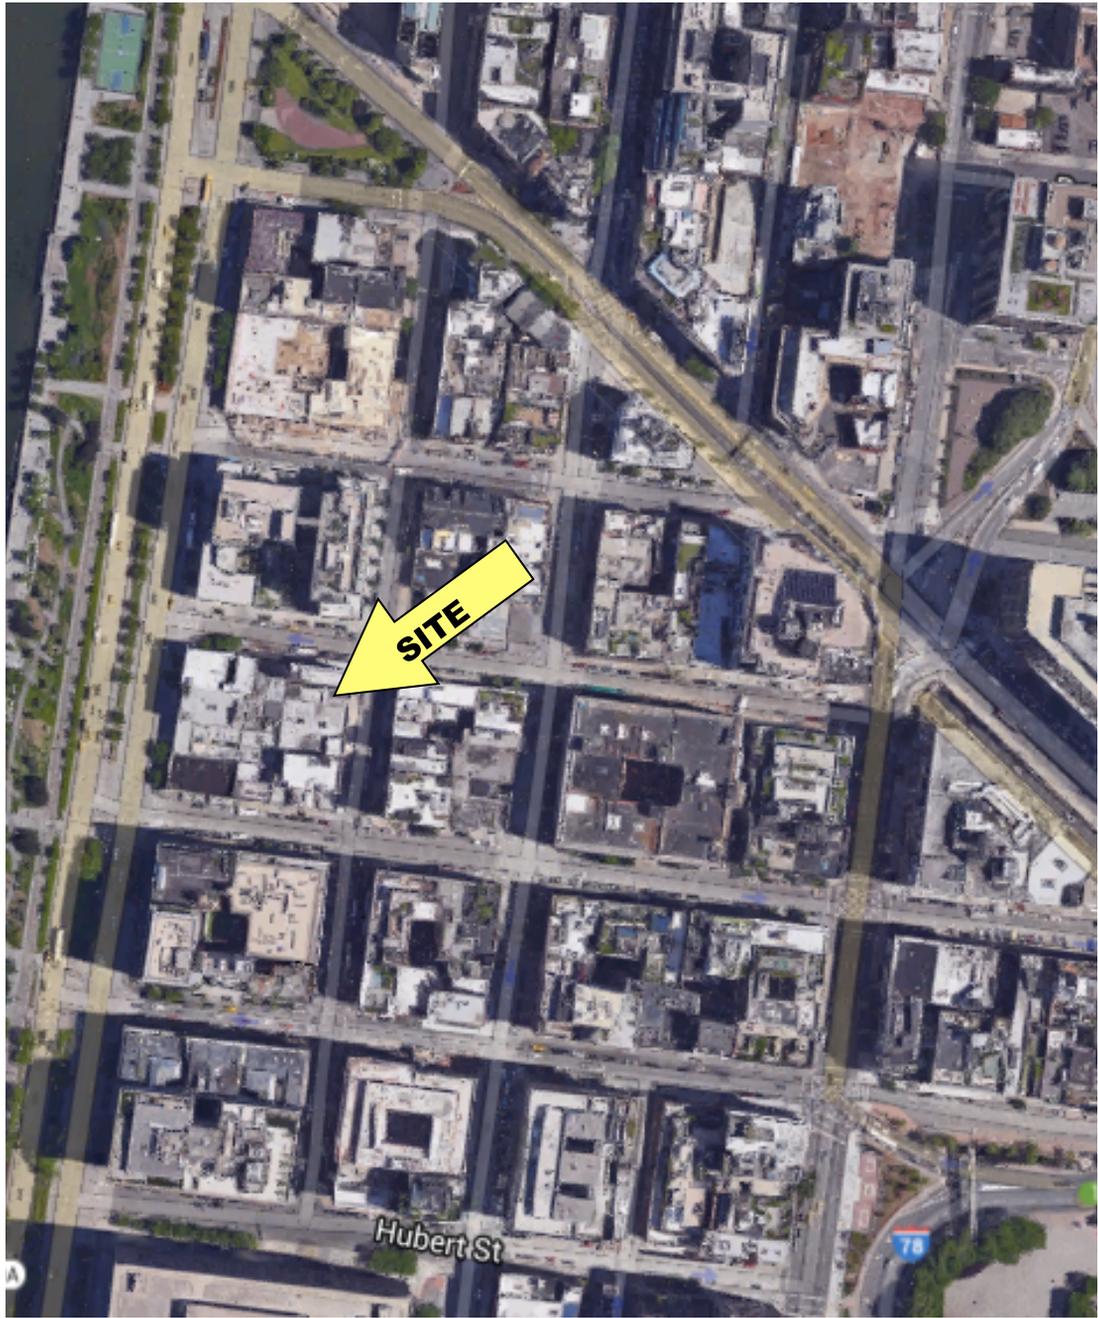

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.
Project Engineer

LIST OF APPENDICES

Appendix A	Proposed Development Plans
Appendix B	Due Diligence Review Documents

1.0 INTRODUCTION

This Remedial Investigation Work Plan has been developed for the property located at 440 Washington Street in the Tribeca neighborhood of New York, New York (see Figure 1). The following work scope has been developed based on the findings of Langan's May 2015 preliminary due diligence review and limited subsurface investigation, the May 11, 2015 meeting with the New York City Office of Environmental Remediation (OER), and the proposed development project.

2.0 SITE LOCATION, CURRENT USE, AND PROPOSED DEVELOPMENT PLAN

The site is located in the Tribeca neighborhood of Manhattan and is identified as Block 223, and portions of Lots 13 and 15. The site structures were recently demolished, and the site is currently used to stage construction equipment and materials for the adjacent 268 West Street development. The proposed development project consists of an 11-story, mixed-used commercial and residential building with a partial cellar, ground level parking, and restaurant space. A portion of the ground-level parking will be open space, with the remainder constructed below the southeastern residential units. The proposed development plans are included in Appendix A.

Groundwater was encountered at depths ranging from 8 to 12 feet below grade surface (bgs) during the April 2015 limited subsurface investigation performed by Langan.

3.0 PRELIMINARY DUE DILIGENCE REVIEW

3.1 Review of Historical and Regulatory Documentation

Langan performed a review of the following document sources to identify current and historical activities and conditions that may have adversely impacted the subsurface at the site:

- Environmental Data Resources, Inc. (EDR) environmental database report¹;
- Historical geological maps;
- Sanborn Fire Insurance Maps (Sanborn Maps);
- City directories;

¹ A review of environmental databases maintained by federal, state, and local agencies within the approximate minimum search distance.

-
- New York City Department of Buildings (DOB) records;
 - New York State Department of Environmental Conservation (DEC) Petroleum Bulk Storage (PBS) database; and
 - NYSDEC Spills Incidents database.

Copies of the documentation reviewed are provided as Appendix B.

3.1.1 Site Use History and Database Findings

Below is a list of historical site uses obtained from the documents reviewed:

Lot 13

- A mahogany and veneer yard, a residence, store, and office (1894-1905)
- A chemical works (1920)
- A drug company (1927)
- A dowel company (1927)
- A chemical manufacturer and a wood products warehouse (1950-1977)
- A garage and a five-story residential building (1968-2005)

Lot 15

- A mahogany and veneer yard (1894-1905)
- A garage with two gasoline tanks (1950-1968)
- A building of unidentified use (1976-2005)
- A parking company (2013)

According to the DOB records review, Lot 15 has a Department of Finance classification of G1 – GARAGE / GAS STATION. The January 10, 1969 Certificate of Occupancy for Lot 15 listed the building as a two-story building with a cellar. Use of the first floor is indicated as storage of commercial motor vehicles with accessory motor fuel pumps and truck terminal, and offices on the mezzanine and second floor. The site was not listed in either the DEC PBS or the DEC Spills Incidents database; however, the site was listed in the Historical Auto Stations database as Automotive Service Systems Inc. in 2009.

3.1.2 Preliminary Due Diligence Review Findings

Based on the regulatory and historical documentation review, the following potential environmental conditions were identified:

Historical Use of the Subject Property

Historical site uses include those listed in Section 3.1.1. Leaks or spills of petroleum products, solvents, and/or other hazardous materials resulting from these uses may have adversely impacted soil, groundwater and/or soil vapor beneath the site.

Historical Fill

According to historical geologic maps, the original shoreline of the Hudson River extended further eastward, beyond the site. The shoreline moved westward in the 1800s using imported fill material. Fill imported to the site is of unknown origin and may contain hazardous materials.

Current and Historical Uses of Adjoining and Surrounding Properties

Historical uses of adjoining and surrounding properties include a copper works (1894), woodworking operations (1894 to 1905), a painting facility (1905), laboratories (1920), scrap metal facilities (1927), a motor freight station with gasoline tanks (1950 to 2005), a parking garage with gasoline tanks (1950 to 2005), and auto repair facilities with hydraulic lift systems (1968 to 2005). Leaks or spills of petroleum products, solvents, and/or hazardous materials resulting from these uses may have adversely impacted groundwater and/or soil vapor beneath the site.

3.2 Preliminary Subsurface Investigation

Langan completed a preliminary subsurface investigation on April 28, 2015, which consisted of a geophysical survey, installation of nine soil borings and collection of twelve soil samples. Boring locations are shown on Figure 2. Sample analysis found semivolatile organic compounds (SVOCs) and metals at concentrations exceeding their 6 New York Codes Rules and Regulations (NYCRR) Part 375 Restricted Use, Restricted Residential criteria. The geophysical survey did not confirm the presence of underground storage tanks (UST) at the site. Details and findings from this investigation will be incorporated into the forthcoming Remedial Investigation Report (RIR).

4.0 REMEDIAL INVESTIGATION WORK SCOPE

A remedial investigation is required to satisfy the Hazardous Materials Restrictive Declaration, and will include the collection and analysis of soil, groundwater and soil vapor samples.

4.1 Geophysical Survey

No additional geophysical work will be performed. A geophysical survey was completed by NOVA Geophysical & Environmental, Inc. (NOVA) on April 28, 2015 as part of the preliminary subsurface investigation. A copy of NOVA's geophysical survey report and findings will be included in the forthcoming RIR.

4.2 Soil, Groundwater, and Soil Vapor Sampling Summary

An investigation of soil, groundwater, and soil vapor is proposed to characterize the site for potential environmental impacts from historical on- and off-site uses. The proposed sampling event will: 1) address environmental concerns identified in Langan's May 2015 preliminary due diligence review and limited subsurface investigation; 2) characterize historical fill; and 3) provide general horizontal/vertical characterization across the site for development purposes. The sampling procedures of this investigation will be performed in accordance with the NYSDEC Technical Guidance for Site Investigation and Division of Environmental Remediation (DER-10).

A total of four soil borings and eight delineation borings will be completed, from which up to 18 soil samples will be collected. All four soil borings will be converted into permanent monitoring wells, which will be screened to straddle the groundwater table interface located at about 12 feet bgs. One groundwater sample will be collected from each well. Four delineation borings each will be advanced in the vicinity of SB03 and SB05, to delineate the horizontal and vertical extents of lead and copper hotspots, respectively, identified during the preliminary subsurface investigation. Four soil vapor samples will be collected from four separate soil vapor points.

Each sample point location will be measured to fixed benchmarks (i.e., select properly lines, adjacent structures, etc.). Proposed sample locations are presented on Figure 2. Conditions in the field may require adjustment of sampling locations.

4.2.1 Soil Sampling

Four soil borings, SB10 through SB13, will be advanced throughout the site during the remedial investigation. Typical direct-push drilling equipment will be used to advance the borings. A geologist, scientist, engineer, or qualified environmental professional (QEP) will screen the soil during borehole advancement for organic vapors with a photoionization detector (PID) and evaluate soil for visual and olfactory impacts prior to collecting environmental samples. Field observations will be recorded in a field log.

Up to two soil samples will be collected from each soil boring for laboratory analysis. For borings located within the cellar footprint of the proposed building (SB-12, SB-13), samples will be collected from 1) the upper two feet of soil beneath the existing concrete cover, and 2) the interval just below the proposed development depth, which is about 10 to 12 feet bgs. For borings located within the proposed on-grade construction (SB-10, SB-11), samples will be collected from 1) the upper two feet of soil, and 2) from the interval directly above the groundwater table. If contamination is observed in any borings, a third sample will be collected from the depth interval exhibiting the greatest degree of contamination based on visual, olfactory and instrumental (i.e. PID) evidence.

During the preliminary subsurface investigation, a lead hotspot was encountered at the location of soil boring SB03, at a depth of four to five feet bgs, and a copper hotspot was encountered at the location of soil boring SB05 at a depth of five to six feet bgs. To delineate each hotspot area, a total of four soil samples will be collected from each area. Hotspot areas will be delineated vertically by collecting one sample at the original boring location, from a depth of about two to three feet below the original sample interval. Hotspot areas will be delineated horizontally by advancing a delineation boring about five feet to the north, southeast, and southwest of the original boring locations and collecting a sample at the corresponding depth interval.

4.2.2 Groundwater Sampling

Soil borings SB10 through SB13 will be converted into 1 or 2-inch diameter permanent groundwater monitoring wells and will be screened to straddle the groundwater table. Properly sized screen and silica sand pack will be used for noted site conditions. A representative groundwater sample will be collected from each well with a peristaltic pump and dedicated tubing using low-flow sampling techniques. Sampling will be conducted in accordance with

NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010, and Sampling Guidelines and Protocols, dated March 1991. Groundwater wells will be gauged with a water level meter to record a depth to groundwater reading (1/100 foot), and an interface meter to determine the thickness of light or dense non-aqueous phase liquid (LNAPL or DNAPL), if observed. The well casings will be surveyed by a trained QEP and/or NYS licensed surveyor to facilitate preparation of a groundwater contour map and determine the direction of groundwater flow.

4.2.3 Soil Vapor Sampling

Four soil vapor sampling points will be installed using direct-push drilling. Samples of soil vapor will be collected in accordance with the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006. **Samples will be collected at approximately 5 feet bgs, roughly 3 feet above the water table.**

Samples will be collected in appropriate sized Summa canisters that have been batch-certified clean by the laboratory. Samples will be analyzed by using USEPA Method TO-15. One to three implant volumes shall be purged prior to the collection of any soil gas samples. Flow rate for both purging and sampling will not exceed 0.2 liters per minute (L/min). A sample log sheet will be maintained that will include: sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, and apparent moisture content of the sampling zone.

As part of the vapor intrusion evaluation, a tracer gas will be used in accordance with NYSDOH protocols to serve as a quality assurance/quality control (QA/QC) measure to check the integrity of the soil vapor probe seal. A container (box, plastic pail, etc.) will serve to keep the tracer gas in contact with the probe seal during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer gas prior to sampling. If the tracer sample results show a significant presence of the tracer (i.e. greater than 10% by volume), the probe seals will be adjusted to prevent infiltration. At the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seal was maintained during sampling.

4.3 Sample Analysis

Samples will be submitted to a NYSDOH Environmental Laboratory Accreditation Program

(ELAP)-certified laboratory for analysis. Soil samples will be analyzed of the following parameters:

- Target Compound List (TCL) VOCs by EPA Method 8260
- TCL SVOC by EPA Method 8270
- Pesticides and polychlorinated biphenyls (PCB) by EPA Method 8081/8082, including Part 375 herbicides
- Target Analyte List (TAL) metals by EPA Method 6010 and 7471, including trivalent chromium, hexavalent chromium, and cyanide

Groundwater samples will be analyzed of the following parameters:

- TCL VOCs by EPA Method 8260
- TCL SVOCs by EPA Method 8270
- Pesticides and PCBs by EPA Method 8081/8082
- Filtered (dissolved) and unfiltered (total) TAL metals by EPA Method 6010 and 7471

Soil vapor samples will be analyzed for VOCs using USEPA Method TO-15.

Soil samples collected from delineation borings will be analyzed for the corresponding total and TCLP metal (i.e., lead for the SB03 hotspot and copper for SB05 hotspot).

If either LNAPL and/or DNAPL are detected, appropriate samples will be collected for characterization and “fingerprint analysis” and required regulatory reporting (i.e. NYSDEC spills hotline) will be performed.

4.4 Quality Assurance/Quality Control Procedures

QA/QC procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used (1) to document that samples are representative of actual conditions at the site and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. QA/QC samples (field and trip blanks, duplicates, etc.) will be collected and analyzed at an ELAP-certified laboratory.

4.5 Investigation-Derived Waste

Drill cuttings may be disposed at the site within the borehole that generated them to within 24 inches of the surface unless:

- Free product, grossly contaminated, or petroleum-impacted soil are present in the cuttings
- The borehole has penetrated an aquitard, aquiclude or other confining layer; or extends significantly into bedrock
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability
- The soil cannot fit into the borehole.

Those soil cuttings needing to be managed on-site will be containerized in properly labeled DOT approved 55-gallon drums for future off-site disposal at a permitted facility. All boreholes that require drill cutting disposal would ultimately be filled with bentonite chips (hydrated) and asphalt/concrete capping. Disposable sampling equipment including, spoons, gloves, bags, paper towels, etc. that came in contact with environmental media will be double bagged and disposed as municipal trash in a facility trash dumpster as non-hazardous trash.

5.0 REPORTING

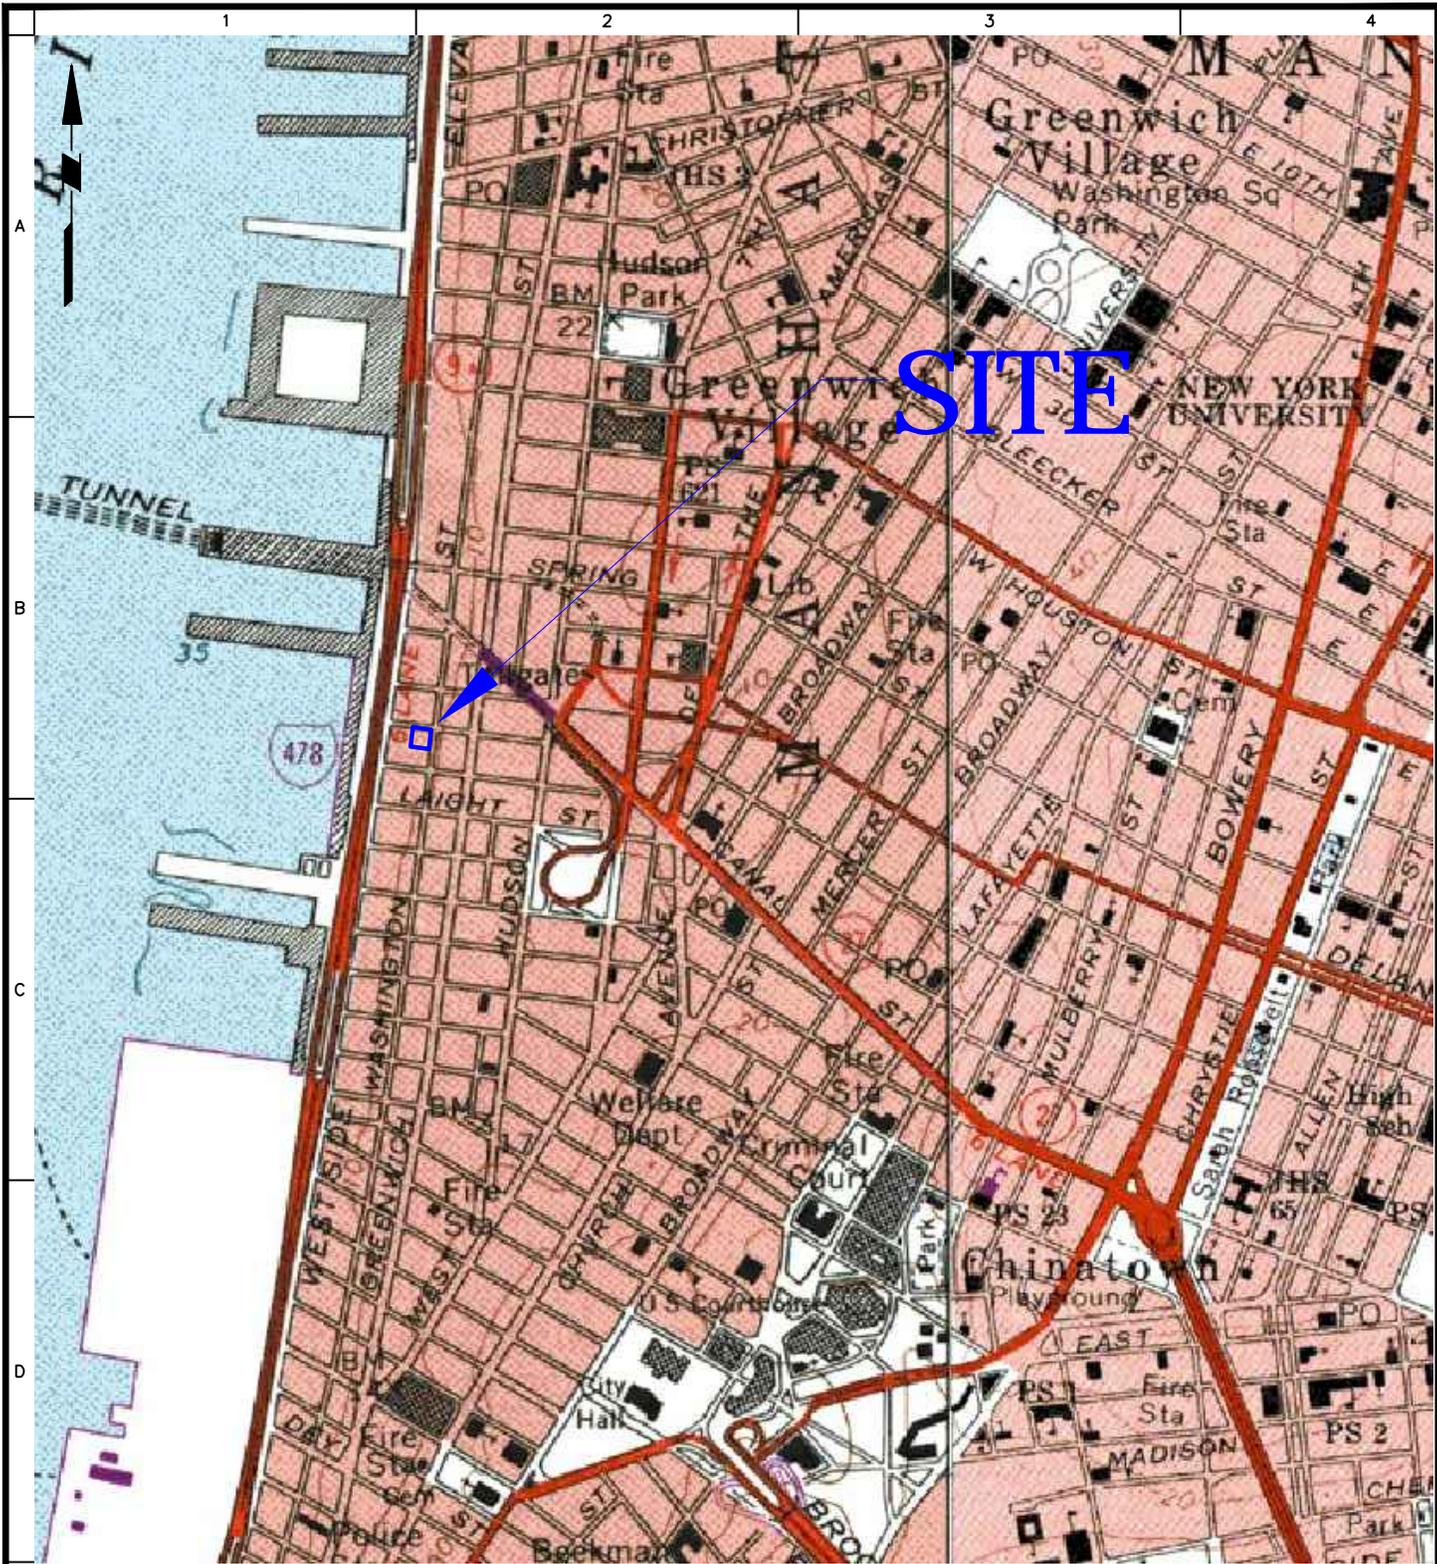

A Remedial Investigation Report will be prepared following completion of the field activities and receipt of the laboratory data. The report will provide detailed summaries of the investigative findings. Soil, groundwater and soil vapor analytical results will be compared to the NYSDEC Part 375-6.8(a) Unrestricted Used Soil Cleanup Objectives, appropriate Part 375-6.8(b) Restricted Soil Cleanup Objectives, 40 CFR 261 Maximum Concentrations of Contaminants for the Toxicity Characteristic, NYSDEC Part 703 Groundwater Quality Standards (GQS) (class GA) or Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS), and NYSDOH October 2006 Final Guidance for Evaluating Soil Vapor Intrusion Matrices. The report will include an updated sampling plan, figures depicting analytical exceedances, analytical data tables for all reported constituent compounds (including non-detectable concentrations) and remedial recommendations, as warranted.

6.0 INVESTIGATION HEALTH AND SAFETY PLAN

An Occupational Safety and Health Administration (OSHA) compliant Health and Safety Plan that meets all OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) requirements will be implemented during the site work to protect worker safety. The Site Safety Coordinator will ensure full compliance of the HASP in accordance with applicable health and safety laws and regulations. All field personnel involved in investigation activities will participate in training required under OSHA HAZWOPER 29 CFR 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. Emergency telephone numbers will be posted at the site location before any work begins.

A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; personal protective equipment (PPE) levels and other relevant safety topics including a highlighted route map to the nearest hospital/emergency room. Meetings will be documented in a log book or specific form. Potential on-site chemicals of concern include VOCs, SVOCs, pesticides/PCBs, and metals. Information fact sheets and/or summary tables for each contaminant group are included in the HASP. A copy of this HASP will be on-site during each sampling event.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/16/2014 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS	NO STREET APPLICABLE	W 0 - 1/8 (0.087 mi.)	0	10

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 11 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 65 RCRA-CESQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 09/18/2014 has revealed that

EXECUTIVE SUMMARY

there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>HUDSON RIVER PCBS</i>	<i>NO STREET APPLICABLE</i>	<i>W 0 - 1/8 (0.087 mi.)</i>	<i>0</i>	<i>10</i>

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 09/18/2014 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 03/25/2015 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/06/2015 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 03/19/2015 has revealed that there are 57 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 03/30/2015 has revealed that there are 2 NY TANKS sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, and dated 11/18/2010 has revealed that there are 5 NY RES DECL sites within approximately 0.125 miles of the target property.

Local Lists of Registered Storage Tanks

NY HIST UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY HIST UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 8 NY HIST UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 03/19/2015 has revealed that there are 33 NY Spills sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2014 has revealed that there are 64 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites

EXECUTIVE SUMMARY

on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 19 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 3 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB

Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human

HUDSON RIVER PCBs (Continued)

1000384273

carcinogens. They are also linked to other serious non- cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB- contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in- place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA ?121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is

HUDSON RIVER PCBs (Continued)

1000384273

conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

Action Completion date: 02/01/2002
Operable Unit: 02
Contaminated Media : Surface Water
Engineering Control: Natural Attenuation

US INST CONTROL:

EPA ID: NYD980763841
Site ID: 0202229
Name: HUDSON RIVER PCBS
Action Name: RECORD OF DECISION
Address: NO STREET APPLICABLE
HUDSON RIVER, NY 12801

EPA Region: 02
County: WASHINGTON
Event Code: Not reported
Inst. Control: Fishing Advisory
Actual Date: 12/30/2001
Comple. Date: 02/01/2002
Operable Unit: 02
Contaminated Media : Surface Water

CONSENT:

EPA ID: NYD980763841
Site ID: 0284
Case Title: U.S.V. GENERAL ELECTRIC COMPANY (HUDSON RIVER) (EPA-SUPERFUND)
Court Num: 05-1270
District: New York, North
Entered Date: 11/02/06

MAP FINDINGS

LOT 7, TAXBLOCK 223 (Continued)

S108469734

Town: New York City

Update By: JEBROWN

Site Description: Location: The 268 West Street site is located in an urban area on the west side of Manhattan with a mix of residential and commercial properties. The property was previously owned by several property owners and identified by the addresses: 33-41 Desbrosses Street, 264-271 West Street, 62-74 Vestry Street, and portions of 440 and 432 Washington Street. It has since been purchased by one owner who now has one property identified as 268 West Street (Block 223, Lot 3 and also tentative Lots 1013 and 1015). The tentative lots are a nine foot strip of the western portion of existing Block 223, Lot 13 and Lot 15. The neighborhood is known as the Tribeca neighborhood of Manhattan. Site Features: The site consists of approximately 0.53 acres. The five vacant buildings on the site consist of a mixture single story buildings, two story buildings and a five story building. The site is in a very flat area. Current Zoning/Use: The current zone designation for the site is C6-3A commercial with a residential overlay. The area immediately surrounding the site is residential with some small commercial establishments. Past Use of the Site: Historic uses of the site include an automotive repair facility, a copper works, a wagon painting operation, a truck sales and service facility, a paper stock facility, parking garages, manufacturing (unspecified), warehouses, a packaging facility, and office and storage space. The automotive repair facility reportedly had hydraulic lift systems and underground storage tanks, and the motor freight station had gasoline tanks. The site was developed with several multi-level commercial and manufacturing buildings as early as 1894. Automotive repair facilities were identified at the site as early as 1950. Although the exact time is not available, the shoreline was moved westward in the 1800s using imported fill material. According to previous reports, the fill imported to the subject property is of unknown origin and may contain hazardous materials. Site Geology and Hydrogeology: The site is typical of an urban area. The Remedial Investigation Report found that historic fill extended across the site to a depth of approximately 6 to 12 feet below ground surface (bgs). The site is 6 feet above sea level. Beneath the fill layer, is brown and gray sand with some interbedded layers of sandy silt followed by organic silt and clay with trace shell and wood fragments. Groundwater flow has been found to be toward the northeast and may be influenced by pumping action from beneath nearby buildings or underground utilities. The depth to groundwater is approximately 7 feet below ground surface. The Hudson River is located about 300 feet west of the site.

Env Problem: Based upon investigations conducted to date, the primary contaminants of concern include metals, volatile organic compounds (VOCs) and semi-VOCs (SVOCs). No PCBs were detected on site. Historic fill was found at depths ranging from 6 to 12 feet below ground surface (bgs) throughout the site, and two underground petroleum storage tanks (USTs) were also found on-site. The SVOCs and metals noted in site soils and groundwater are likely related to historic fill. Soil PCE was found in shallow soils, typically in the top 2 feet below ground surface (bgs), primarily in the southern portion of the site. PCE was detected in several locations above the unrestricted use soil cleanup objective (UUSCO) of 1.3 parts per million (ppm) with one detection of 47 ppm above the residential and restricted residential use SCO (RSCOs/RRSCO) of 5.5 ppm and 19 ppm, respectively. On-site soil samples exceeded UUSCOs for 13 SVOCs; some also exceeded the RSCOs

S108469734

and RRSCOs. Seven of the more significant findings were: benzo(a)anthracene (up to 140 ppm vs. RSCO/RRSCO of 1 ppm), benzo(a)pyrene (up to 140 ppm vs. RSCO/RRSCO of 1 ppm), benzo(b)fluoranthene (up to 160 ppm vs. RSCO/RRSCO of 1 ppm), benzo(k)fluoranthene (up to 48 ppm vs. RSCO/RRSCO of 1 and 3.9 ppm, respectively), chrysene (up to 140 ppm vs. RSCO/RRSCO of 1 and 3.9 ppm, respectively), dibenzo(a,h)anthracene (up to 0.20 ppm vs RSCO/RRSCO of 0.33 ppm), and indeno(1,2,3-c,d)pyrene (up to 84 ppm vs. RSCO/RRSCO of 0.5 ppm). On-site soil samples exceeded UUSCOs for six metals, with four of the six exceeding the RSCO and/or RRSCO as follows: arsenic (up to 60 ppm vs. RSCO/RRSCO of 16 ppm), copper (up to 1000 ppm vs. RSCO/RRSCO of 270 ppm), lead (up to 880 ppm vs. RSCO/RRSCO of 400 ppm) and mercury (up to 5.4 ppm vs. RSCO/RRSCO of 0.81 ppm). Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - Groundwater samples were collected from seven monitoring wells. Groundwater samples showed no detectable levels of VOCs, pesticides or PCBs. Five SVOCs were detected above the groundwater standard of 0.002 parts per billion (ppb) for each compound as follows:: benzo(a)anthracene at 0.11 ppb, benzo(a)pyrene at 0.16 ppb, benzo(b)fluoranthene at 0.18 ppb, benzo(k)fluoranthene at 0.08 ppb, and chrysene (0.13 ppb standard 0.002 ppb). These compounds were detected in one well located in the vicinity of the elevated SVOCs in soils. No site-related metals were detected over groundwater standards. The marginally contaminated groundwater is not migrating off-site. Soil Vapor PCE was detected in soil vapor in shallow soils (top 2 feet bgs), with concentrations up to 2,690 micrograms per cubic meter (ug/m3).

Health Problem: Since the site is fenced and covered by asphalt or concrete, people are not expected to come into contact with site-related soil or groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant so soil vapor intrusion is not a current concern. Sampling indicates that soil vapor intrusion is not a concern for off-site properties.

Brian.10:14 AM:- spoke with Brian. Brian mentioned that a Phase II investigation is being conducted prior to site redevelopment. during field work, they noted petroleum contamination via visual/olfactory/PID (300 ppm). samples have been submitted to lab. asked Brian to submit phase I for review. also asked to submit contact info for property owner/developer.Brian GochenaurLangan EngineeringPH. (212) 479-5479email: bgochenaur@langan.com01/07/14-Hiralkumar Patel.10:14 AM:- received email from Brian including Phase I and property developer's contact details.Joe WalshRelated Companies **site developer**Ph. (212) 500-0787abstract of Phase I:- site on block #: 223 / lots #: 3 (264-265 West St, 70-74 Vestry St), 5 (266-267 West St, 62-68 Vestry St), 7 (268-269 West St), 9 (270-271 West St, 37-39 Desbrosses St), 11 (35 Desbrosses St) and 12 (33 Desbrosses St)- Hudson River is located approx. 300 ft west of the site- proposed development would include demolition of the existing buidings and the construction of a new twelve-story residential building- site has been assigned a restrictive "E" zoning designation for noise ----- subject property is situated at an elevation of approx. 6 ft- according to previous investigations in the area, depth to bedrock is estimated at around 85 to 100 ft bg and depth to groundwater is approx. 4 ft bg and is presumed to flow west towards the Hudson River- currently, site has four (4) 2-story commercial building and two (2) 5-story commercial buildings- subject property was listed as a historical automobile repair station. 70 Vestry St (lot # 3) for 1991, 2000 and 2001; 266 West St (lot # 5) for 1999, 2007, 2008, 2009 and 2010- Sanborn Map review revealed that the subject property was developed with several multi-level commercial and manufacturing buildings as early as 1894- recognized environmental concerns associated with the histoical use of the site include a copper works, a wagon painting facility, a truck sales and service facility, a motor freight station with a gasoline tank, an unspecified manufacturing facility, and several auto repair facilities- building on lot 3 is identified as 264-265 West St (70-74 Vestry St) is a vacant 2-story building. building has a crawl space approx. 30 ft in length- commercial building on lot # 3 was previously used as an auto repair garage- two hydraulic lifts were identified in the garage on lot 3, along the east and west walls. some staining was observed on the floor surrounding the lifts- lot 5 contains an L-shaped building that has been converted into two separate spaces by addition of a cinderblock wall placed in a north-south orientation- eastern portion of lot 5 is identified as 62-68 Vestry St and currently used as a garage/storage space- several manhole covers were identified in the garage in eastern portion of lot # 5- an underground fuel oil tank or oil/water separator may be located beneath the floor of the garage in eastern portion of lot 5- fuel oil and gasoline fill port were located on the sidewalk of the Vestry Street, directly south of the building on lot 5- western portion of the lot 5 is identified as 266-267 West St and is currently used as an auto repair shop- a 275 gal waste oil AST (PBS #: 2-612070) is located near the entrance on West street, on western portion of lot 5- three hydraulic lifts were identified in the garage along the north and west walls, in western potion of lot 5- chemical storage area, containing mostly lubricants and brake cleaners, is located on the estern wall of the repair shop near a parts cleaning basin, in western portion of lot 5 ----- manhole was located on the floor in the entranceway of the garage on western portion of lot 5- building on lot 7 identified as 268-269

S108469724

West St is a 5-story building with full basement- building on lot 9 identified as 270-271 West St (37-39 Desbrosses St) is a vacant 5-story building with partial basement- buildings on lot 11 (35 Desbrosses St) and lot 12 (33 Desbrosses St) are vacant 2-story buildings with no basement- on 1950 Sanborn Map, lots 3, 11 and 12 are identified as motor freight stations- 1950 Sanborn Map shows a gasoline tank at 35 Debrosses St (lot # 11) -----no other spills found for lots 3, 5, 7,9, 11 and 12 involved in this project.PBS #: 2-612070. as per PBS record, site 266 West ST (lot # 5) has one 275 gal waste oil AST, in-service. the tank was installed in June 2007.04/04/14-Hiralkumar Patel.10:40 AM:- received email from Brian including link to Phase II report. Brian also mentioned that they are currently pursuing acceptance into the NYSDEC BCP and application was submitted last week.abstract of Phase II:- proposed development includes the demolition of the existing buildings and the construction of a new 12-story residential building with a basement parking level- during GPR survey, major anomalies which appear indicative of USTs were identified in the northeastern and southeastern corners of lot 5- installed eight soil borings (EB-1 through EB-8)- soil beneath the site was observed to be historical urban fill extended from approx. 6 to 9 ft bg- the fill material predominately consisting of fine to coarse brown silty sand with varied amounts of clay, rock, gravel, brick, cement, metal, glass, wood and coal- fill material is underlain primarily by organic silt with some sand, clay and gravel- boring EB-1 was installed in the crawl sapce of lot 9, to a depth of 11 ft bg- borings EB-2 through EB-8 were completed to a depth of 15 ft bg- petroleum impacts, including odors, staining and PID readings were observed in borings EB-3, EB-6 and EB-7- total of 15 grab samples collected: one sample from EB-1 and EB-8; two samples from EB-2, EB-3, EB-4, EB-6 and EB-7; and three from EB-5 (including one duplicate)- with exception of EB-8, all borings were converted to one inch groundwater monitoring well- depth to groundwater ranged from 6.89 to 8.27 ft bg- total eight groundwate samples were collected, including one duplicate from MW05- groundwater in MW03 and MW07 exhibited a petroleum odors; but no evidence of free product was identified in these wells- no petroleum compounds found in soil or groundwater samples; except one compound n-Propylbenzene at 4.5 ppm (limit: 3.9 ppm) at 7.5-9 ft bg in boring EB-7- PCE contamination found in soil samples from 0-2 ft bg in borings EB-2, EB-5 (duplicate) and EB-8- found high metal concentrations in soil and groundwater samples04/08/14-Hiralkumar Patel. discussed with DEC DeMeo. based on findings of PCE and metals and as a NYSBCP application has been submitted, DeMeo asked to send p-site memo to DEC Jane and assign case to her.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo:

5000 gal #6 fo tank ruptured, the tank room had a large hole broken through it leading into the many rooms of the basement. PTC brought a vac truck and numerous other trucks and people to begin the cleanup. Cleanup continued Saturday and Monday. What was observable on friday eve of the concrete floor appeared to be sound. Tipple also inspected the adjoining neighbors basements which are currently under construction and they had no oil impact at that time.12/23/04 tipple updating/// most of the oil removed/ powerwashed// the tank room has not been cleaned, numeros proposals from different companies, awaiting company to be awarded contract. Once the tank is removed and the room cleaned, Tipple will conduct followup inspection.2/10/04 not yet cleaned, temporary tanks still in place3/3/05 Tipple and Rahman conducted a site visit.... The majority of the spill has been successfully cleaned, there are a few edges and at the former tank grave that must be re-cleaned.3/16/05 site visit, followup electronic photos, manifests to follow, cleanup completed, no further aaction, letter sent.....MT

Remarks: CREWS ARE ON THE WAY TO CLEAN UP.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT"E2MIS 1088817/2/97MGO construction mech Zambiasi reports while testing an abandoned 6" CI main for an ongoing Construction Management job had 6 ozs of main water leak from main onto soil in excavation. The spill was contained and did not enter any sewers, subsurface structures or water ways. The pilot hole in the main wasplugged, the leak secured with a strap straddle. The soil was double bagged and removed in 6 mil plastic bags in a 27 gal drum.All solid waste was bagged and removed. A sample was taken of the water in a jar, to be sent to the chem lab in the a.m. for testing. The drum and waste was taken to 271 ave c (e16 st yard) and placed in Hazardous waste area, pending lab results for proper disposal. CIG romero was notified.entered by 77472Logger Chris McCallion (86578) 21-MAY-2003 14:10 - Reviewed incident. Performed historical ChemLab search for lab results from this incident. Found ResultsLSN# 97-08149 analyzed for Benzene. Results came back <0.5 ppm for Benzene. Liquid was non-haz, therefore soil removed was non-haz. Soil was disposed of accordingly. Changed Opn Status to "-CLODE" for closure by NYSDEC. Removed Resolved date/time.

Remarks: DIP WATER 6 IN CASE IRON MAIN CLEAN UP IS UNDERWAY

visit by Vought. Parking lift elevators present on site and also observed was approximate 50'x15' excavation. Slight gasoline odor in bottom of excavation (excavation approximately 3' deep). Piping observed in excavation but undeterminable if piping was from former UST system. No vents, former pump islands or remote fills were found. Entire lot repaved with asphalt. Soil in excavation composed of urban fill (brick, coal, coal ash). No odors were detected at street level. Vought called Rocco Basile and required that excavation be covered with plastic. Vought suggested to DEC Feng that Community Air Monitoring Plan be implemented during excavation to prevent further odor complaints. Vought called DeSarm and left message with results of site visit and to contact DEC Feng with further issues. Spill closed by Vought and referred to open spill #0505263.

Remarks: PIPES ARE STICKING UP OUT OF THE GROUNDS .THIS AN OLD GAS STATION. THERE IS A GAS ODOR SEEPING OUT DUE TO RAIN. UNKNOWN IF THERE IS A SPILL. CLEAN UP IS UNKNOWN.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER" 1/9/2003-Vought-Spoke with Jim Romeo (201-714-9858) will be starting excavation of contaminated soil. Soil will be analyzed for VOC and SVOC. Sampling will be four sidewalls and one bottom groundwater sample. Report will be sent to NYSDEC by 2/15/2003. 7/21/2003-Vought-File review by Vought:Owner of property is Asi Cymbal (212-398-2000x11). New building will consist of residential apartments with underground garage. Property address is also 416-424 Washington Street. Letter DEP-10/31/2002-Letter from John Wuthenow (DEP Site Assessment Unit-718-595-4416). 259 West street will be demolished prior to building new structure. According to letter several suspect UST's may still exist at the site. Lens of #2 fuel oil free product found in SB-10. Letter DEP-11/12/02-Letter from Daniel Cole approving of health and safety plan and remedial action workplan. Corrective Action Report-Environmental Management Services (Jim Romeo-201-714-9858). Report received 2/14/03. Report requests No Further Action. Owner of property is W Squared, LLC 700 Pacific Street Brooklyn, NY 11217. Site underlain by fill material. Groundwater flow to the west or southwest. Groundwater at a depth of 7' below grade. GPR survey performed to determine if abandoned UST's were present. GPR survey not performed at 416-424 Washington due to presence of debris in the basement. GPR survey also encountered "excessive background noise" Seventeen Geoprobe borings performed on 9/10/2002. Only a sheen found at SB-10. Soil excavation completed on 1/21/03. 21 cubic yards (36.86 tons) of soil were removed from the site and four endpoint soil sidewall samples and one bottom groundwater sample were collected (analyticals provided). Future excavation of new building is planned for 12 below grade. Groundwater infiltration from the north displayed an oil sheen. Soil samples showed PAH exceedances (due to historical fill). Groundwater

analyticals up to 470ppb naphthalene. PBS and Spill database search indicated no registered tanks at West st or Washington Ave sites. Vought will perform site visit on 7/23 to: 1)confirm northern source of contamination via sidewall inspection and adjacent property investigation 2)inspection of soil for fill characteristics 3)examination of foundation depth and possibility of undiscovered on-site USTs at 259 West and 416-424 Washington Avenue 4)inspection for abandoned fill ports or vent pipes suggesting historical presence of USTs.7/24/2003-Vought-Site visit by Vought on 7/23. Excavation was not open and northern source could not be confirmed. Soil exhibited fill characteristics in exposed portions of site (brick, coal, ash). 416-424 Washington Street property excavated to a depth of 5' and parking lot/259 West Street were excavated to a depth of 14' and no UST's or piping were discovered. No abandoned fill port or vents were found due to new sidewalks. Vought inspected adjacent property to the north (67 Vestry) and found no evidence of spills. Secondary containment vault of 3000-gallon #6 fuel oil showed no evidence of spills. Vought required owner of 67 Vestry to tightness test tank (letter sent 7/24). TPH Fingerprinting of groundwater sample by EAI indicated #2 fuel oil despite #6 oil storage to the north. Possible source may be former on-site AST and no definitive soil samples taken from the vadose zone other than PID screening of excavator buckets (soil source may have been missed during excavation). Vought called Jim Romeo (201-951-5198) and informed him of tank tightness test letter. Romeo will send Vought copy of DEP ESA which describes soil borings from 259 West Street. During the discussion with Romeo he indicated that a 275-gallon AST was removed from the first floor of 259 West street (slab on grade construction).1/6/04-Vought-Spill transferred from Vought to Austin.1/27/04 - Sawyer - Spill transferred from Austin to Sawyer.7/22/04 - Sawyer - Talked to Anna of EAI, Inc., who took over for departed Jim Romeo about reviewing corrective action report dated 2/13/03. 9/14/04 - Sawyer - Talked to Anna and she expressed the fact that the building owners were reluctant to do more work without a letter from the Department directing them to do so. I am drafting the letter now.1/27/04 - Sawyer - Received detailed explanation of the schedule of events that have happened with this spill from James Grond at GCI Environmental Advisory, Inc. He explained that a subsequent water sample taken 5/8/03 indicated that there were no exceedances of groundwater criteria. There is no further action required. Closed.

Remarks:

THEY WERE DIGGING DOING GEO PROBE SAMPLING AT THE SITE.THE PROPERTY WAS UP FOR SALE AND HAS BEEN BROUGHT BY A COMPANY CALLED W SQUARED LLC 700 PACIFIC STREET BROOKLYN NY 11217.THEY DID 17 SOIL BORINGS AND CONTAMINATION WAS NOTICED ON 2 BORING SAMPLES.THE SAMPLES WERE ANALYZED AT LABRATORY CALLED SCIENTIFIC LABRATORIES 8 SCHOOL STREET WEYMOUTH MASSACHSETTS 02189

DEC Memo: 10/24/13-Hiralkmar Patel.alternate addresses: 443-453 Greenwich Street, 34-48 Vestry Street, 9-17 Desbrosses StreetPBS #: 2-607372, 2-610249as per PBS # 2-610249, site has one 7,000 gal empty UST. PBS record is administratively closed.as per PBS # 2-607372, site has one 7,000 gal #6 oil AST in contact with impervious barrier. the tank was installed in Jan. 1905. the PBS registration expired on 07/18/2011.other spills: 9211278spill # 9211278 was reported on 12/30/1992 due to 15 gal #6 oil overfill at the vent. case closed.little 'E' designation for hazmat/noise/air.
-----SGN 443 Greenwich Street Owner, LLC. **property owner**c/o Metro Loft Management, LLC. **management company**20 Exchange Place, Suite 1100New York, NY 10005Attn.: Robert TravisPh. (212) 706-3030email: rtravis@metroloftnyc.com12:35 PM:- spoke with Dustin at AKRF. they are working with NYC OER as part of little E designation. the building is vacant for couple of years. now, building owner is renovating the building for residential use. currently, there is a basement with floor at 7-8 ft bg. owner decided to extend the basement for another 2-2.5 ft depth. before excavation, AKRF collected waste characterization samples. during sampling, they found thin layer of soil contamination, below basement floor where the 7,000 gal tank was located. Dustin mentioned that the tank was removed as part of renovation project. he will submit PBS application. asked Dustin to submit sample results, once available.11/12/13-Hiralkumar Patel.3:45 PM:- left message for Dustin.12/06/13-Hiralkumar Patel.2:04 PM:- left message for Dustin.12/09/13-Hiralkumar Patel.3:00 PM:- visited site. met George, site supervisor. inspected area where tank was located. no odors noted in basement. no renovation activities in basement.4:13 PM:- received email from Dustin including sample results and site map. total of six soil samples were collected from five borings. out of six samples, four samples were collected from 0.5-1 ft depth. one sample was collected at 2-3 ft depth and one sample was collected at 5-6 ft depth. no VOC contamination noted in any sample. found SVOC contamination in surface sample (0.5-1 ft depth) from boring WC-2D-1, but no contamination noted in deeper sample (at 2-3 ft depth).based on observations during the site visit and avaiable sample results, case closed.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 08.02.05 SR..Spoke with Rachel Ataman. They came across SVOC's while doing soil probes at that facilities. Will send DEC the report and propety owners info.8/12/2005 CSL sent to:Jack Lefkowitz/Washington HJ, LLC1524 52nd StreetBrooklyn, NY 1121910.03.05 SR// SVOC's level are pretty high and the site is a historic gas station. I suggested Rachel Ataman to go for further delineation of the ground water and soil in respect to MTBE, Specifically, instalation of one bedrock monitoring well at least is necessary since the site is a historic gas station.12/20/05-Sharif// Case was transferred from Rahman to Koon Tang for reassignment.1/3/2005 - Feng - VOCs and SVOCs found in SP-5 are extremely high. DEC Rahman has requested the groundwater samples and monitoring well through the bedrock on 10/3/2005. SIR pending. Contacted Yasemin Kacar (Hydro Tech Environmental) and she would check the status of the site and call back.4/13/2006 - Feng - Daniell Dunn from IVI Diligent Service (914-694-9600, fax 914-694-8549) called and requested FOIL because she doesn't have any information on this spill. Received FOIL application and gave to Robert Leung. (RJF)5/8/2006 - Feng - Call from Francis Fonaca, CES Environmental Services. (office: 732-257-2091, cell: 732-500-7465). CES will perform soil excavation and then collect soil samples. Groundwater samples might be collected via air rotary. Will submit the report after the job is done. (RJF)5/10/2006 - Feng - Received Site Assessment report from Gary Dent, 1st Bank of Beverly Hills (818-223-8447).5/11/2006 - Feng - Call from Francis Onega, soil excavation will start tomorrow, 5/12/2006, PID will be utilized and probably more than 10 soil samples will be taken. I told him that before any excavation, all the underground utilities must be marked out. Report will be submitted after the work is done. (RJF)5/12/2006 - Feng - Call from Ms. Robynice (RP's lawyer) explaining that during

415 WASHINGTON ST - MISC (Continued)

S106970171

the soil removal process, polices came to stop the excavation. She requested Stipulation Agreement. 5/15/2006 - Feng - Emailed a copy of STIP to Francis Onega (CES) as per their request. His technician will come to pick up tomorrow morning and deliver to the RP. (RJF)5/16/2006 - Feng - Charles Onwudinjo came to pick up the STIP. (RJF)5/16/2006 - Feng - Shary Laskowitz, attorney for the tenant (212-736-4500) saying that the tenant of the parking lot owns the hydraulic lifts. Both of the property owner and tenant are fighting in court. I explained we won't get involve in this and we might wait for them to settle this case. (RJF)5/17/2006 - Feng - Refer to Attorney, John Urda and he spoke to Shary Laskowitz. The owner and the tenant are fighting in court right now. Remediation will be on hold until the final disposition from court (might take a couple weeks). (RJF)05/18/06-Vought-See also spill #0601769 at same location.5/18/2006 - Feng - Spoke to Francis Onega and require him to stop any further work onsite.5/19/2006 - Feng - Residential complain about petroleum odor associated with the excavation. DEC Joe Sun called Francis Onega and Rocco Basile required: 1) Stop further excavation, 2) Cover the excavation and the stock pile soil with plastic sheet. 3) Submit Community Air Monitoring Plan immediately. 4) Register the USTs found during excavation with DEC. (RJF)5/19/2006 - Feng - DEC Koon Tang, Joe Sun and Jun Feng Contacted Alyssa Ziegler of Assemblywoman Deborah Glick Office with updates of the site. 5/22/2006 - Feng - Meeting with Rocco Basile (property owner) and Francis Onega (his consultant). DEC required: 1) dispose the stockpiled soil ASAP. 2) submit workplan included Community Air Monitoring Plan (CAMP). 5/23/2006 - Feng - DEC Koon Tang, Joe Sun and Jun Feng Contacted Alyssa Ziegler of Assemblywoman Deborah Glick Office with updates of the site. 5/25/2006 - Feng - Workplan, dated 5/22/2006 submitted by CES. The entire property will be excavated down to 8'-10'. The USTs will be registered upon discovered. The excavation will be left opened and covered with 6 mil plastic sheet pending the soil samples analyticals. 10 soil endpoint samples will be taken for post-excavation. 4 Groundwater samples will be collected prior excavation. Community Air Monitoring Plan. The CAMP will be implemented during any work onsite in accordance with the DOH guidance. Discussed with DEC Joe Sun and Approved CAMP and workplan with some conditions. 1) DEC required complete groundwater delineation before any further excavation, submit site plan of sampling location before any drilling and a report will be submitted for review and approval. 2) After the completion of soil excavation, the excavation will be covered at all time when there is no construction. DEC also recommended drill for groundwater samples after the stockpiled disposed off site because currently the stockpiled soil occupied 1/3 of the property, the lifts occupied 1/3 of the property and the excavation the rest of 1/3. (RJF)6/8/2006 - Feng - Sent letter of notice of violation and Stipulation Agreement with modified CAP to Rocco Basile. cc to CES. STIP due 6/21/2006. (RJF)6/19/2006 - Feng - STIP executed by Lou Oliva. (RJF)6/20/2006 - Feng - Meeting with Rocco Basile and Francis Onaga. Site excavation and stockpiled soil will be removed tomorrow. A fact sheet will be sent from DEC if anyone interested or concerned. Fact sheet copy to Francis Onaga. (RJF)6/21/2006 - Feng - DEC Jun Feng and Joe Sun visited the site, 10:30am to 11:30am. A backhoe was there, and 6 trucks were loading the soil off site. DEC staff didn't smell any gasoline. Air monitoring conducted every half hour and during work. The PID didn't detect any VOCs at street level nor in the bottom of

S106970171

the excavation (3'-4' bg). The highest level of dust the particulates detector has been detected is 80 mcg/m³. Water is ready to suppress the dust onsite. DEC required daily written briefing about the work onsite to be submitted. 6/22/2006 - Feng - Daily Status Report from CES, dated 6/21/2006. Work hours from 7:30am to 3:30pm. Total of 480 tons (16 load) of contaminated soil was trucked off-site for disposal. The truck was properly covered before leaving the site. An abandoned UST fuel oil (275 gallon) was discovered at the north east corner of the site. The tank was cut open, cleaned and filled with sand upon excavation. The tank is staged onsite for disposal at a scrap metal yard. CAMP has implemented. No detectable or high readings were noted on VOCs or dust. Excavation and soil removal will be continued tomorrow. (RJF)6/23/2006 - Feng - Daily Status Report from CES, dated 6/22/2006. Work hours from 7:00am to 2:30pm. Total 40 loads (1,000 tons) of contaminated soil was trucked offsite. Two 550-gallon USTs were discovered at the source area. The discovered tanks were encased in concrete. USTs will be removed on 6/23/2006. Again, CAMP implemented and no detectable VOCs, and low dust level detected. An official of the NYCDOB was onsite and had the excavation stopped in order to install shoring at the four corner of the excavation. No further excavation will be done until DOB allow to. (RJF)10/13/2006 - Feng - Updates. Began October 2006, DEC was informed by the consultant that the NYCDOB's STOP ORDER was lifted and the construction will be resumed. On 10/4/2006, additional groundwater samples were collected from the former tanks area and the sampling result will be submitted in the next Status Report. Concrete slab is extended to the entire site, about 4" thick and it is 6' bg. No excavation will be further advanced. 10-foot interval of endpoint samples will be taken. Endpoint samples will be collected from 6" to 12" below concrete slab. Further excavation decision will be made based on the soil samples results. (RJF)Site Investigation/Closure Report, November 2006, submitted by CES Environmental Services. The site investigation including series of soil and groundwater sampling. The site was excavated down to the concrete/brick old foundation. 21 soil borings were advanced and soil samples were taken for SVOCs and VOCs analysis. Minor SVOCs exceedances observed in some borings. 4 groundwater samples taken. No VOCs, except 16 ppb MTBE in W-1. SVOCs exceedances detected in W-3 and W-4. 5/22/2007 - Feng - DEC staff J. Sun and J. Feng visited the site and met with the developer's project manager Mr. S. Cafiso and the construction superintendent Mr. Artie. The excavation was advanced down to 8'-10' bg. A structure engineer from Langang Environmental was onsite. Mr. Artie explained that a 10-mil vapor barrier was installed beneath the basement floor before 4 feet of concrete slab was poured. The concrete had mixed with Krytol Internal Membrane Waterproofing Admixture for Concrete. Mr. Artie also told us that they had resampled soil and groundwater. The foundation wall will be 14 inches thick. DEC required vapor barrier to be installed at the exterior foundation wall before pouring the foundation wall. Soil/gw sampling results, vapor barrier specification and design will be forward to DEC. (RJF)11/26/2007 - Feng - A copy of the lab report, 10/4/2007, submitted by Basile Danali, LLC. No text report included. A map indicates the boring locations attached. Soil samples were collected at depth of 14'-18' bg. Only some minor SVOCs detected in EB-1. The others are below MDL. (RJF)11/29/2007 - Feng - Discussed with Joe Sun. It is necessary to have more groundwater data in the vicinity of the former tank area due to the exceedances of SVOCs. Letter to Rocco Basile (Atlantic

S106970171

Walk, LLC) and requiring further delineation of the SVOCs contaminated former tank area and the documentation of vapor barrier/water proof layer installation for the new building. Work plan and the vapor barrier installation document to be submitted by 1/14/2008. (RJF)4/18/2008 - Feng - Reviewed the whole package of analysis reports, previous reports sent by A-1 Testing Laboratories, Inc. Attached with black and white pictures taken 5/22/2007 installation of the membrane. (RJF)5/5/2008 - Feng - Letter to Rocco Basile (Atlantic Walk LLC) requiring a soil boring to be installed at the sidewalk of Washington Street. Soil and groundwater samples to be taken. Report due 7/7/2008. (RJF)5/8/2008 - Feng - Rocco Basile called. The project is taken over by the developer. He will forward the DEC's letter to the developer and let the developer know what needs to be done. (RJF)6/4/2008 - Feng - Reviewed Limited Subsurface Investigation Report, dated 5/28/2008, prepared by JC Broderick & Associates, Inc. (JCB). On 5/21/2008, JCB advanced one soil boring at the sidewalk of Washington Street using GeoProbe. Soil boring depth 16 feet bg. Groundwater was encountered at 14 feet bg. 2 soil samples (at 10'-12', 12'-14') and 1 groundwater samples were collected. Analyticals did not show any exceedances, all below MDL. Discussed with Joe Sun, spill could be closed. The onsite soil sampling were done and only show minor SVOCs exceedance detected in some borings. The onsite soil was excavated down to the old foundation/concrete slab and disposed offsite because of the site development. Groundwater was detected with SVOCs exceedances in the former tank area. The recent soil and groundwater samples which were collected in downgradient of the former tank area at the sidewalk of Washington Street sidewalk did not show exceedances, that means no migration off site. A vapor barrier membrane was installed for the new building. Spill closed. 6/9/2008 - NFA issued. (RJF)

Site Description: Location:The Site is located at 460 Washington Street (456 Washington Street) and 281 West Street in New York, New York (Tax Block 595, Lot 1). The Site was previously identified as Block 595, Lots 1 and 22 but the two lots were combined into one lot (Lot 1) on June 1, 2012. The Site is approximately 25,800 square feet and is bordered by mixed-use commercial/residential properties to the north, Washington

MAP FINDINGS

WEST & WATTS DEVELOPMENT (Continued)

S111455783

Street to the east, Watts Street to the south, and West Street (Route 9A Highway) to the west. Site Features: The western portion of the Site (formerly Lot 1) was initially occupied by an approximately 13,320 square-foot (0.31 acres) asphalt-paved parking lot and the eastern portion of the Site (formerly Lot 22) was occupied by two interconnected one- and two-story buildings. The two-story building, located on the northeastern portion of the Site, had a basement. This portion of the Site occupied an area of approximately 12,480 square feet (0.287 acres). The buildings and parking lot were demolished prior to remedial action at the Site. The Site has now been improved with a multi-story residential building with a partial cellar level and courtyard area that was constructed concurrently with implementation of the remedial action. Ground floor slabs at the Site now range from el 3 to el 8 and the top of the basement slab is at el -4. Surrounding sidewalk elevations range from approximately el 4 to el 7.5. The Site and regional topography slopes gently to the west towards the Hudson River. Current Zoning: In October 2010, the City Council adopted the North Tribeca Rezoning, which is intended to continue the neighborhood's transformation from industrial uses to "family-friendly" residential uses. The rezoning created the Special Tribeca Mixed Use District in which the Site is located. Currently, adjacent properties consist of residential to the north and south, mixed commercial and residential to the east; the Hudson River and West Side Highway to the west and the Holland tunnel to the northwest. Historic Uses: Former lots 1 and 22 were developed with two to five-story buildings in 1894 with unknown use. In 1905, a warehouse was built on the northern two-thirds of lot 22 and used to store steel through 1925. In 1922 lot 1 was developed into a building with use labeled as Tower Stores Inc. Lot 1 was then used as a gasoline filling station from 1950 through 1968. Subsequently, it has been used as a parking lot. From 1928 to 2005, lot 22 was used as a railroad freight station/freight warehouse. Site Geology: The generalized stratigraphy underlying the Site is composed of a layer of historic fill overlying natural clay and sand deposits with varying amounts of silt, clay, and gravel followed by bedrock between approximately 85 and 98 feet below grade surface (bgs). The surficial fill layer extends to a maximum depth of approximately 23 feet bgs and is comprised of gray, black, and brown, coarse to fine sand with varying amounts of silt, gravel, crushed stone, concrete, brick, wood and shell fragments. The fill layer is underlain by a layer of organic clay or clay with varying amounts of silt and shell fragments in the western portion of the Site. The clay layer was encountered immediately below the fill layer at depths ranging from 11 to 23 feet bgs. A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation. Site Hydrology: Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The groundwater elevation is highest in the southeast and appears to slope toward the west, northwest across the majority of the Site, with some redirection toward the east along the western Site border. The lowest groundwater elevation, approximately el -2.0, was documented at a monitoring well located in the center of the parking lot on former Lot 1. Regional groundwater is presumed to flow west towards the Hudson River.

WEST & WATTS DEVELOPMENT (Continued)

S111455783

Env Problem: Nature and Extent of Contamination Prior to Completion of Remediation: Based on the results of the Remedial Investigation there are elevated levels of petroleum related Volatile Organic Compounds (VOCs) in soil and groundwater in the northwestern section of lot 1 and elevated levels of semi-volatile organic compounds (SVOCs) and metals in the soil at lot 22. See attached Table 1 for concentrations compared to the Part 375 Soil Cleanup Objectives (SCOs). Soil: Historic Fill Impacts - The historic fill layer contained exceedances of the Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) for VOCs, SVOCs, metals, and poly chlorinated biphenyls (PCBs). PCB exceedances were only reported in the eastern portion of former Lot 1. SVOCs and metals were detected at concentrations exceeding the RRUSCOs throughout the fill layer that were typical of historic urban fill material, except for the following: Metals exceeding RRUSCOs were identified in fill from between 1 and 10 feet bgs in the western half of the Site, and in fill from between 2 and 12 feet bgs in the southeastern portion of the Site. Fill material from intervals between 1 and 12 feet bgs on the southern portion of former Lot 22 contained the following metal concentrations: arsenic up to 58 parts per million (ppm) ; barium up to 510 ppm; cadmium up to 17 ppm; nickel up to 12,000 ppm; mercury up to 20 ppm ; lead up to 9,600 ppm; and copper up to 51,000 ppm. SVOCs, specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were reported at concentrations above RRUSCOs throughout the Site, but at anomalously higher concentrations in fill between 2 and 12 feet bgs in the southeastern portion of the Site. The following concentrations that exceed RRUSCOs were reported for fill from between 2 and 12 feet bgs: naphthalene up to 190 ppm; benzo(a)anthracene up to 86 ppm; benzo(a)pyrene up to 59 ppm; benzo(b)fluoranthene up to 78 ppm; benzo(k)fluoranthene up to 24 ppm; dibenzo(a,h)anthracene up to 8.9 ppm; chrysene up to 82 ppm; indeno(1,2,3-cd)pyrene up to 31 ppm; fluoranthene up to 160 ppm; phenanthrene up to 220 ppm; and pyrene up to 200 ppm. Petroleum-Impacted Fill - Petroleum-impacted soil/fill was encountered in the northwestern corner of the Site and is likely related to historic use of the lot as a gasoline filling/service station. Petroleum-impacted soil/fill (based on visual observations and analytical results) was identified at depths ranging from 5 to 15 feet bgs, straddling the groundwater table. Borings with VOC exceedances are located in the northwestern portion of the Site. The VOCs include 1,2,4-trimethylbenzene at 460 ppm; 1,3,5-trimethylbenzene at 180 ppm; ethylbenzene at 270 ppm; benzene at 1.2 ppm; toluene at 50 ppm; total xylenes at 860 ppm; n-propylbenzene at 120 ppm; sec-butylbenzene at 14 ppm; and n-butylbenzene at 13 ppm. Underground Storage Tanks (USTs) - USTs were not uncovered during the test pit investigation conducted in the northwestern portion of the Site as part of the RI; however, a fragment of an apparent former fill or vent line was observed, indicating a tank may have previously been located in this area. USTs may still be located at the Site. Groundwater: Petroleum-related VOCs and SVOCs were identified in groundwater at concentrations exceeding the applicable groundwater standards at MW-1, MW-3, RI-MW5, and/or RI-MW6 in the northwestern portion of the Site. Petroleum-related VOC exceedances in groundwater are limited to the northwest corner of the Site. Based on RI data, groundwater flow in this area of the site is to the east southeast. The two wells at the western site perimeter (RI-MW5 and RI-MW6) had total BTEX concentrations ranging from 26.9 to 126 parts per billion (ppb). Monitoring well MW-1, located west of

MAP FINDINGS

WEST & WATTS DEVELOPMENT (Continued)

S111455783

the site perimeter wells and within what is estimated to be the most-impacted petroleum area, had a total BTEX concentration of 11,956 ppb. Petroleum-related VOCs were also identified in soil samples collected from boring EB-1, and RI-SB1; therefore, it is likely that petroleum impacts to groundwater are related to the historic petroleum-release identified in the same area. Metal contaminants in the groundwater that exceeded applicable groundwater standards included iron, lead, manganese, mercury, selenium, sodium and magnesium in unfiltered samples. This likely arises from the quality of the fill material. However, filtered groundwater samples exhibited exceedances for sodium, magnesium and selenium only. The presence of sodium and magnesium can be attributed to saltwater intrusion. SVOC contaminants that exceeded applicable groundwater standards included the cPAHs - benzo(a)pyrene, benzo(b)fluoranthene, benzo(k) fluoranthene - chrysene and naphthalene. However, this exceedance was exhibited at well MW-1 which is located in the northwest section of the Site where petroleum contamination was identified. Off-site migration is expected to be limited based on groundwater analytical data. Soil Vapor: Soil vapor sampling results indicated the presence of several VOCs, namely those associated with petroleum such as tri-methylbenzene, ethyl benzene, toluene and xylenes, above the anticipated range of background concentrations. Total VOCs in the subsurface soil vapor samples ranged from 155 micrograms per cubic meter (g/m3) in RI-SV5 to 802 g/m3 in RI-SV1. VOC concentrations in soil vapor are greatest in the eastern and western most portions of the Site. VOCs may be due to a combination of petroleum impacts in the northwestern portion of the Site and unknown off-site sources. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs and SVOCs in soil and groundwater. Remedial action has successfully achieved soil cleanup objectives for restricted residential use. Seven USTs were also removed and appropriately decommissioned. Residual contamination in the soil, and groundwater is being managed under a Site Management Plan. Remedial activities undertaken at the site have effectively reduced the potential for exposure to site-related contaminants and measures are in place to ensure that these measures remain protective in the future.

From 1928 to 2005, lot 22 was used as a railroad freight station/freight warehouse. Site Geology: The generalized stratigraphy underlying the Site is composed of a layer of historic fill overlying natural clay and sand deposits with varying amounts of silt, clay, and gravel followed by bedrock between approximately 85 and 98 feet below grade surface (bgs). The surficial fill layer extends to a maximum depth of approximately 23 feet bgs and is comprised of gray, black, and brown, coarse to fine sand with varying amounts of silt, gravel, crushed stone, concrete, brick, wood and shell fragments. The fill layer is underlain by a layer of organic clay or clay with varying amounts of silt and shell fragments in the western portion of the Site. The clay layer was encountered immediately below the fill layer at depths ranging from 11 to 23 feet bgs. A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation. Site Hydrology: Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The groundwater elevation is highest in the southeast and appears to slope toward the west, northwest across the majority of the Site, with some redirection toward the east along the western Site border. The lowest groundwater elevation, approximately el -2.0, was documented at a monitoring well located in the center of the parking lot on former Lot 1. Regional groundwater is presumed to flow west towards the Hudson River.

Env Problem: Nature and Extent of Contamination Prior to Completion of Remediation: Based on the results of the Remedial Investigation there are elevated levels of petroleum related Volatile Organic Compounds (VOCs) in soil and groundwater in the northwestern section of lot 1 and elevated levels of semi-volatile organic compounds (SVOCs) and

WEST & WATTS DEVELOPMENT (Continued)

S111455783

metals in the soil at lot 22. See attached Table 1 for concentrations compared to the Part 375 Soil Cleanup Objectives (SCOs). Soil: Historic Fill Impacts - The historic fill layer contained exceedances of the Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) for VOCs, SVOCs, metals, and poly chlorinated biphenyls (PCBs). PCB exceedances were only reported in the eastern portion of former Lot 1. SVOCs and metals were detected at concentrations exceeding the RRUSCOs throughout the fill layer that were typical of historic urban fill material, except for the following: Metals exceeding RRUSCOs were identified in fill from between 1 and 10 feet bgs in the western half of the Site, and in fill from between 2 and 12 feet bgs in the southeastern portion of the Site. Fill material from intervals between 1 and 12 feet bgs on the southern portion of former Lot 22 contained the following metal concentrations: arsenic up to 58 parts per million (ppm); barium up to 510 ppm; cadmium up to 17 ppm; nickel up to 12,000 ppm; mercury up to 20 ppm; lead up to 9,600 ppm; and copper up to 51,000 ppm. SVOCs, specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were reported at concentrations above RRUSCOs throughout the Site, but at anomalously higher concentrations in fill between 2 and 12 feet bgs in the southeastern portion of the Site. The following concentrations that exceed RRUSCOs were reported for fill from between 2 and 12 feet bgs: naphthalene up to 190 ppm; benzo(a)anthracene up to 86 ppm; benzo(a)pyrene up to 59 ppm; benzo(b)fluoranthene up to 78 ppm; benzo(k)fluoranthene up to 24 ppm; dibenzo(a,h)anthracene up to 8.9 ppm; chrysene up to 82 ppm; indeno(1,2,3-cd)pyrene up to 31 ppm; fluoranthene up to 160 ppm; phenanthrene up to 220 ppm; and pyrene up to 200 ppm. Petroleum-Impacted Fill - Petroleum-impacted soil/fill was encountered in the northwestern corner of the Site and is likely related to historic use of the lot as a gasoline filling/service station. Petroleum-impacted soil/fill (based on visual observations and analytical results) was identified at depths ranging from 5 to 15 feet bgs, straddling the groundwater table. Borings with VOC exceedances are located in the northwestern portion of the Site. The VOCs include 1,2,4-trimethylbenzene at 460 ppm; 1,3,5-trimethylbenzene at 180 ppm; ethylbenzene at 270 ppm; benzene at 1.2 ppm; toluene at 50 ppm; total xylenes at 860 ppm; n-propylbenzene at 120 ppm; sec-butylbenzene at 14 ppm; and n-butylbenzene at 13 ppm. Underground Storage Tanks (USTs) - USTs were not uncovered during the test pit investigation conducted in the northwestern portion of the Site as part of the RI; however, a fragment of an apparent former fill or vent line was observed, indicating a tank may have previously been located in this area. USTs may still be located at the Site. Groundwater: Petroleum-related VOCs and SVOCs were identified in groundwater at concentrations exceeding the applicable groundwater standards at MW-1, MW-3, RI-MW5, and/or RI-MW6 in the northwestern portion of the Site. Petroleum-related VOC exceedances in groundwater are limited to the northwest corner of the Site. Based on RI data, groundwater flow in this area of the site is to the east southeast. The two wells at the western site perimeter (RI-MW5 and RI-MW6) had total BTEX concentrations ranging from 26.9 to 126 parts per billion (ppb). Monitoring well MW-1, located west of the site perimeter wells and within what is estimated to be the most-impacted petroleum area, had a total BTEX concentration of 11,956 ppb. Petroleum-related VOCs were also identified in soil samples collected from boring EB-1, and RI-SB1; therefore, it is likely that petroleum impacts to groundwater are related to the

S111455783

historic petroleum-release identified in the same area. Metal contaminants in the groundwater that exceeded applicable groundwater standards included iron, lead, manganese, mercury, selenium, sodium and magnesium in unfiltered samples. This likely arises from the quality of the fill material. However, filtered groundwater samples exhibited exceedances for sodium, magnesium and selenium only. The presence of sodium and magnesium can be attributed to saltwater intrusion. SVOC contaminants that exceeded applicable groundwater standards included the cPAHs - benzo(a)pyrene, benzo(b)fluoranthene, benzo(k) fluoranthene - chrysene and naphthalene. However, this exceedance was exhibited at well MW-1 which is located in the northwest section of the Site where petroleum contamination was identified. Off-site migration is expected to be limited based on groundwater analytical data. Soil Vapor: Soil vapor sampling results indicated the presence of several VOCs, namely those associated with petroleum such as tri-methylbenzene, ethyl benzene, toluene and xylenes, above the anticipated range of background concentrations. Total VOCs in the subsurface soil vapor samples ranged from 155 micrograms per cubic meter (g/m3) in RI-SV5 to 802 g/m3 in RI-SV1. VOC concentrations in soil vapor are greatest in the eastern and western most portions of the Site. VOCs may be due to a combination of petroleum impacts in the northwestern portion of the Site and unknown off-site sources. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs and SVOCs in soil and groundwater. Remedial action has successfully achieved soil cleanup objectives for restricted residential use. Seven USTs were also removed and appropriately decommissioned. Residual contamination in the soil, and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial activities undertaken at the site have effectively reduced the potential for exposure to site-related contaminants and measures are in place to ensure that these measures remain protective in the future.

Site Description: Location: The Site is located at 460 Washington Street (456 Washington Street) and 281 West Street in New York, New York (Tax Block 595, Lot 1). The Site was previously identified as Block 595, Lots 1 and 22 but the two lots were combined into one lot (Lot 1) on June 1, 2012. The Site is approximately 25,800 square feet and is bordered by mixed-use commercial/residential properties to the north, Washington Street to the east, Watts Street to the south, and West Street (Route 9A Highway) to the west. Site Features: The western portion of the Site (formerly Lot 1) was initially occupied by an approximately 13,320 square-foot (0.31 acres) asphalt-paved parking lot and the eastern portion of the Site (formerly Lot 22) was occupied by two interconnected one- and two-story buildings. The two-story building, located on the northeastern portion of the Site, had a basement. This portion of the Site occupied an area of approximately 12,480 square

feet (0.287 acres). The buildings and parking lot were demolished prior to remedial action at the Site. The Site has now been improved with a multi-story residential building with a partial cellar level and courtyard area that was constructed concurrently with implementation of the remedial action. Ground floor slabs at the Site now range from el 3 to el 8 and the top of the basement slab is at el -4. Surrounding sidewalk elevations range from approximately el 4 to el 7.5. The Site and regional topography slopes gently to the west towards the Hudson River. Current Zoning: In October 2010, the City Council adopted the North Tribeca Rezoning, which is intended to continue the neighborhood's transformation from industrial uses to "family-friendly" residential uses. The rezoning created the Special Tribeca Mixed Use District in which the Site is located. Currently, adjacent properties consist of residential to the north and south, mixed commercial and residential to the east; the Hudson River and West Side Highway to the west and the Holland tunnel to the northwest. Historic Uses: Former lots 1 and 22 were developed with two to five-story buildings in 1894 with unknown use. In 1905, a warehouse was built on the northern two-thirds of lot 22 and used to store steel through 1925. In 1922 lot 1 was developed into a building with use labeled as Tower Stores Inc. Lot 1 was then used as a gasoline filling station from 1950 through 1968. Subsequently, it has been used as a parking lot. From 1928 to 2005, lot 22 was used as a railroad freight station/freight warehouse. Site Geology: The generalized stratigraphy underlying the Site is composed of a layer of historic fill overlying natural clay and sand deposits with varying amounts of silt, clay, and gravel followed by bedrock between approximately 85 and 98 feet below grade surface (bgs). Currently, adjacent properties consist of residential to the north and south, mixed commercial and residential to the east; the Hudson River and West Side Highway to the west and the Holland tunnel to the northwest. Historic Uses: Former lots 1 and 22 were developed with two to five-story buildings in 1894 with unknown use. In 1905, a warehouse was built on the northern two-thirds of lot 22 and used to store steel through 1925. In 1922 lot 1 was developed into a building with use labeled as Tower Stores Inc. Lot 1 was then used as a gasoline filling station from 1950 through 1968. Subsequently, it has been used as a parking lot. From 1928 to 2005, lot 22 was used as a railroad freight station/freight warehouse. Site Geology: The generalized stratigraphy underlying the Site is composed of a layer of historic fill overlying natural clay and sand deposits with varying amounts of silt, clay, and gravel followed by bedrock between approximately 85 and 98 feet below grade surface (bgs). The surficial fill layer extends to a maximum depth of approximately 23 feet bgs and is comprised of gray, black, and brown, coarse to fine sand with varying amounts of silt, gravel, crushed stone, concrete, brick, wood and shell fragments. The fill layer is underlain by a layer of organic clay or clay with varying amounts of silt and shell fragments in the western portion of the Site. The clay layer was encountered immediately below the fill layer at depths ranging from 11 to 23 feet bgs. A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation. Site Hydrology: Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The groundwater elevation is highest in the southeast and appears to slope toward the west, northwest across the majority of the Site, with some redirection toward the east along the western Site border. The lowest groundwater elevation, approximately el -2.0, was documented at a monitoring well located in the center of the parking lot on former Lot 1. Regional groundwater is presumed to flow west towards the Hudson River.

Env Problem:

Nature and Extent of Contamination Prior to Completion of Remediation: Based on the results of the Remedial Investigation there are elevated levels of petroleum related Volatile Organic Compounds (VOCs) in soil and groundwater in the northwestern section of lot 1 and elevated levels of semi-volatile organic compounds (SVOCs) and metals in the soil at lot 22. See attached Table 1 for concentrations compared to the Part 375 Soil Cleanup Objectives (SCOs). Soil: Historic Fill Impacts - The historic fill layer contained exceedances of the Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) for VOCs, SVOCs, metals, and poly chlorinated biphenyls (PCBs). PCB exceedances were only reported in the eastern portion of former Lot 1. SVOCs and metals were detected at concentrations exceeding the RRUSCOs throughout the fill layer that were typical of historic urban fill material, except for the following: Metals exceeding RRUSCOs were

WEST & WATTS DEVELOPMENT (Continued)

S111455783

identified in fill from between 1 and 10 feet bgs in the western half of the Site, and in fill from between 2 and 12 feet bgs in the southeastern portion of the Site. Fill material from intervals between 1 and 12 feet bgs on the southern portion of former Lot 22 contained the following metal concentrations: arsenic up to 58 parts per million (ppm); barium up to 510 ppm; cadmium up to 17 ppm; nickel up to 12,000 ppm; mercury up to 20 ppm; lead up to 9,600 ppm; and copper up to 51,000 ppm. SVOCs, specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were reported at concentrations above RRUSCOs throughout the Site, but at anomalously higher concentrations in fill between 2 and 12 feet bgs in the southeastern portion of the Site. The following concentrations that exceed RRUSCOs were reported for fill from between 2 and 12 feet bgs: naphthalene up to 190 ppm; benzo(a)anthracene up to 86 ppm; benzo(a)pyrene up to 59 ppm; benzo(b)fluoranthene up to 78 ppm; benzo(k)fluoranthene up to 24 ppm; dibenzo(a,h)anthracene up to 8.9 ppm; chrysene up to 82 ppm; indeno(1,2,3-cd)pyrene up to 31 ppm; fluoranthene up to 160 ppm; phenanthrene up to 220 ppm; and pyrene up to 200 ppm. Petroleum-Impacted Fill - Petroleum-impacted soil/fill was encountered in the northwestern corner of the Site and is likely related to historic use of the lot as a gasoline filling/service station. Petroleum-impacted soil/fill (based on visual observations and analytical results) was identified at depths ranging from 5 to 15 feet bgs, straddling the groundwater table. Borings with VOC exceedances are located in the northwestern portion of the Site. The VOCs include 1,2,4-trimethylbenzene at 460 ppm; 1,3,5-trimethylbenzene at 180 ppm; ethylbenzene at 270 ppm; benzene at 1.2 ppm; toluene at 50 ppm; total xylenes at 860 ppm; n-propylbenzene at 120 ppm; sec-butylbenzene at 14 ppm; and n-butylbenzene at 13 ppm. Underground Storage Tanks (USTs) - USTs were not uncovered during the test pit investigation conducted in the northwestern portion of the Site as part of the RI; however, a fragment of an apparent former fill or vent line was observed, indicating a tank may have previously been located in this area. USTs may still be located at the Site. Groundwater: Petroleum-related VOCs and SVOCs were identified in groundwater at concentrations exceeding the applicable groundwater standards at MW-1, MW-3, RI-MW5, and/or RI-MW6 in the northwestern portion of the Site. Petroleum-related VOC exceedances in groundwater are limited to the northwest corner of the Site. Based on RI data, groundwater flow in this area of the site is to the east southeast. The two wells at the western site perimeter (RI-MW5 and RI-MW6) had total BTEX concentrations ranging from 26.9 to 126 parts per billion (ppb). Monitoring well MW-1, located west of the site perimeter wells and within what is estimated to be the most-impacted petroleum area, had a total BTEX concentration of 11,956 ppb. Petroleum-related VOCs were also identified in soil samples collected from boring EB-1, and RI-SB1; therefore, it is likely that petroleum impacts to groundwater are related to the historic petroleum-release identified in the same area. Metal contaminants in the groundwater that exceeded applicable groundwater standards included iron, lead, manganese, mercury, selenium, sodium and magnesium in unfiltered samples. This likely arises from the quality of the fill material. However, filtered groundwater samples exhibited exceedances for sodium, magnesium and selenium only. The presence of sodium and magnesium can be attributed to saltwater intrusion. SVOC contaminants that exceeded applicable groundwater standards included the cPAHs - benzo(a)pyrene, benzo(b)fluoranthene,

benzo(k) fluoranthene - chrysene and naphthalene. However, this exceedance was exhibited at well MW-1 which is located in the northwest section of the Site where petroleum contamination was identified. Off-site migration is expected to be limited based on groundwater analytical data. Soil Vapor: Soil vapor sampling results indicated the presence of several VOCs, namely those associated with petroleum such as tri-methylbenzene, ethyl benzene, toluene and xylenes, above the anticipated range of background concentrations. Total VOCs in the subsurface soil vapor samples ranged from 155 micrograms per cubic meter (g/m3) in RI-SV5 to 802 g/m3 in RI-SV1. VOC concentrations in soil vapor are greatest in the eastern and western most portions of the Site. VOCs may be due to a combination of petroleum impacts in the northwestern portion of the Site and unknown off-site sources. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs and SVOCs in soil and groundwater. Remedial action has successfully achieved soil cleanup objectives for restricted residential use. Seven USTs were also removed and appropriately decommissioned. Residual contamination in the soil, and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial activities undertaken at the site have effectively reduced the potential for exposure to site-related contaminants and measures are in place to ensure that these measures remain protective in the future.

Site Code: 459779

Site Description: Location: The Site is located at 460 Washington Street (456 Washington Street) and 281 West Street in New York, New York (Tax Block 595, Lot 1). The Site was previously identified as Block 595, Lots 1 and 22 but the two lots were combined into one lot (Lot 1) on June 1, 2012. The Site is approximately 25,800 square feet and is bordered by mixed-use commercial/residential properties to the north, Washington Street to the east, Watts Street to the south, and West Street (Route 9A Highway) to the west. Site Features: The western portion of the Site (formerly Lot 1) was initially occupied by an approximately 13,320 square-foot (0.31 acres) asphalt-paved parking lot and the eastern portion of the Site (formerly Lot 22) was occupied by two interconnected one- and two-story buildings. The two-story building, located on the northeastern portion of the Site, had a basement. This portion of the Site occupied an area of approximately 12,480 square feet (0.287 acres). The buildings and parking lot were demolished prior to remedial action at the Site. The Site has now been improved with a multi-story residential building with a partial cellar level and courtyard area that was constructed concurrently with implementation of the remedial action. Ground floor slabs at the Site now range from el 3 to el 8 and the top of the basement slab is at el -4. Surrounding sidewalk elevations range from approximately el 4 to el 7.5. The Site and regional topography slopes gently to the west towards the Hudson River. Current Zoning: In October 2010, the City

Site Description: Location: The Site is located at 460 Washington Street (456 Washington Street) and 281 West Street in New York, New York (Tax Block 595, Lot 1). The Site was previously identified as Block 595, Lots 1 and 22 but the two lots were combined into one lot (Lot 1) on June 1, 2012. The Site is approximately 25,800 square feet and is bordered by mixed-use commercial/residential properties to the north, Washington Street to the east, Watts Street to the south, and West Street (Route 9A Highway) to the west. Site Features: The western portion of the Site (formerly Lot 1) was initially occupied by an approximately 13,320 square-foot (0.31 acres) asphalt-paved parking lot and the eastern portion of the Site (formerly Lot 22) was occupied by two interconnected one- and two-story buildings. The two-story building, located on the northeastern portion of the Site, had a basement. This portion of the Site occupied an area of approximately 12,480 square feet (0.287 acres). The buildings and parking lot were demolished prior to remedial action at the Site. The Site has now been improved with a multi-story residential building with a partial cellar level and courtyard area that was constructed concurrently with implementation of the remedial action. Ground floor slabs at the Site now range from el 3 to el 8 and the top of the basement slab is at el -4. Surrounding sidewalk elevations range from approximately el 4 to el 7.5. The Site and regional topography slopes gently to the west towards the Hudson River. Current Zoning: In October 2010, the City Council adopted the North Tribeca Rezoning, which is intended to continue the neighborhood's transformation from industrial uses to "family-friendly" residential uses. The rezoning created the Special Tribeca Mixed Use District in which the Site is located. Currently, adjacent properties consist of residential to the north and south, mixed commercial and residential to the east; the Hudson

WEST & WATTS DEVELOPMENT (Continued)

S111455783

River and West Side Highway to the west and the Holland tunnel to the northwest. Historic Uses: Former lots 1 and 22 were developed with two to five-story buildings in 1894 with unknown use. In 1905, a warehouse was built on the northern two-thirds of lot 22 and used to store steel through 1925. In 1922 lot 1 was developed into a building with use labeled as Tower Stores Inc. Lot 1 was then used as a gasoline filling station from 1950 through 1968. Subsequently, it has been used as a parking lot. From 1928 to 2005, lot 22 was used as a railroad freight station/freight warehouse. Site Geology: The generalized stratigraphy underlying the Site is composed of a layer of historic fill overlying natural clay and sand deposits with varying amounts of silt, clay, and gravel followed by bedrock between approximately 85 and 98 feet below grade surface (bgs). The surficial fill layer extends to a maximum depth of approximately 23 feet bgs and is comprised of gray, black, and brown, coarse to fine sand with varying amounts of silt, gravel, crushed stone, concrete, brick, wood and shell fragments. The fill layer is underlain by a layer of organic clay or clay with varying amounts of silt and shell fragments in the western portion of the Site. The clay layer was encountered immediately below the fill layer at depths ranging from 11 to 23 feet bgs. A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation. Site Hydrology: Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The groundwater elevation is highest in the southeast and appears to slope toward the west, northwest across the majority of the Site, with some redirection toward the east along the western Site border. The lowest groundwater elevation, approximately el -2.0, was documented at a monitoring well located in the center of the parking lot on former Lot 1. Regional groundwater is presumed to flow west towards the Hudson River.

Env Problem: Nature and Extent of Contamination
Prior to Completion of Remediation: Based on the results of the Remedial Investigation there are elevated levels of petroleum related Volatile Organic Compounds (VOCs) in soil and groundwater in the northwestern section of lot 1 and elevated levels of semi-volatile organic compounds (SVOCs) and metals in the soil at lot 22. See attached Table 1 for concentrations compared to the Part 375 Soil Cleanup Objectives (SCOs). Soil: Historic Fill Impacts - The historic fill layer contained exceedances of the Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) for VOCs, SVOCs, metals, and poly chlorinated biphenyls (PCBs). PCB exceedances were only reported in the eastern portion of former Lot 1. SVOCs and metals were detected at concentrations exceeding the RRUSCOs throughout the fill layer that were typical of historic urban fill material, except for the following: Metals exceeding RRUSCOs were identified in fill from between 1 and 10 feet bgs in the western half of the Site, and in fill from between 2 and 12 feet bgs in the southeastern portion of the Site. Fill material from intervals between 1 and 12 feet bgs on the southern portion of former Lot 22 contained the following metal concentrations: arsenic up to 58 parts per million (ppm); barium up to 510 ppm; cadmium up to 17 ppm; nickel up to 12,000 ppm; mercury up to 20 ppm; lead up to 9,600 ppm; and copper up to 51,000 ppm. SVOCs, specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were reported at

WEST & WATTS DEVELOPMENT (Continued)

S111455783

concentrations above RRUSCOs throughout the Site, but at anomalously higher concentrations in fill between 2 and 12 feet bgs in the southeastern portion of the Site. The following concentrations that exceed RRUSCOs were reported for fill from between 2 and 12 feet bgs: naphthalene up to 190 ppm; benzo(a)anthracene up to 86 ppm; benzo(a)pyrene up to 59 ppm; benzo(b)fluoranthene up to 78 ppm; benzo(k)fluoranthene up to 24 ppm; dibenzo(a,h)anthracene up to 8.9 ppm; chrysene up to 82 ppm; indeno(1,2,3-cd)pyrene up to 31 ppm; fluoranthene up to 160 ppm; phenanthrene up to 220 ppm; and pyrene up to 200 ppm. Petroleum-Impacted Fill - Petroleum-impacted soil/fill was encountered in the northwestern corner of the Site and is likely related to historic use of the lot as a gasoline filling/service station. Petroleum-impacted soil/fill (based on visual observations and analytical results) was identified at depths ranging from 5 to 15 feet bgs, straddling the groundwater table. Borings with VOC exceedances are located in the northwestern portion of the Site. The VOCs include 1,2,4-trimethylbenzene at 460 ppm; 1,3,5-trimethylbenzene at 180 ppm; ethylbenzene at 270 ppm; benzene at 1.2 ppm; toluene at 50 ppm; total xylenes at 860 ppm; n-propylbenzene at 120 ppm; sec-butylbenzene at 14 ppm; and n-butylbenzene at 13 ppm. Underground Storage Tanks (USTs) - USTs were not uncovered during the test pit investigation conducted in the northwestern portion of the Site as part of the RI; however, a fragment of an apparent former fill or vent line was observed, indicating a tank may have previously been located in this area. USTs may still be located at the Site. Groundwater: Petroleum-related VOCs and SVOCs were identified in groundwater at concentrations exceeding the applicable groundwater standards at MW-1, MW-3, RI-MW5, and/or RI-MW6 in the northwestern portion of the Site. Petroleum-related VOC exceedances in groundwater are limited to the northwest corner of the Site. Based on RI data, groundwater flow in this area of the site is to the east southeast. The two wells at the western site perimeter (RI-MW5 and RI-MW6) had total BTEX concentrations ranging from 26.9 to 126 parts per billion (ppb). Monitoring well MW-1, located west of the site perimeter wells and within what is estimated to be the most-impacted petroleum area, had a total BTEX concentration of 11,956 ppb. Petroleum-related VOCs were also identified in soil samples collected from boring EB-1, and RI-SB1; therefore, it is likely that petroleum impacts to groundwater are related to the historic petroleum-release identified in the same area. Metal contaminants in the groundwater that exceeded applicable groundwater standards included iron, lead, manganese, mercury, selenium, sodium and magnesium in unfiltered samples. This likely arises from the quality of the fill material. However, filtered groundwater samples exhibited exceedances for sodium, magnesium and selenium only. The presence of sodium and magnesium can be attributed to saltwater intrusion. SVOC contaminants that exceeded applicable groundwater standards included the cPAHs - benzo(a)pyrene, benzo(b)fluoranthene, benzo(k) fluoranthene - chrysene and naphthalene. However, this exceedance was exhibited at well MW-1 which is located in the northwest section of the Site where petroleum contamination was identified. Off-site migration is expected to be limited based on groundwater analytical data. Soil Vapor: Soil vapor sampling results indicated the presence of several VOCs, namely those associated with petroleum such as tri-methylbenzene, ethyl benzene, toluene and xylenes, above the anticipated range of background concentrations. Total VOCs in the subsurface soil vapor samples ranged from 155

WEST & WATTS DEVELOPMENT (Continued)

S111455783

micrograms per cubic meter (g/m3) in RI-SV5 to 802 g/m3 in RI-SV1. VOC concentrations in soil vapor are greatest in the eastern and western most portions of the Site. VOCs may be due to a combination of petroleum impacts in the northwestern portion of the Site and unknown off-site sources. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs and SVOCs in soil and groundwater. Remedial action has successfully achieved soil cleanup objectives for restricted residential use. Seven USTs were also removed and appropriately decommissioned. Residual contamination in the soil, and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial activities undertaken at the site have effectively reduced the potential for exposure to site-related contaminants and measures are in place to ensure that these measures remain protective in the future.

BROWNFIELDS:

Program: BCP
Site Code: 459779
Acres: .592
HW Code: C231076
SWIS: 3101
Town: New York City
Update By: BXANDERS

Site Description: Location: The Site is located at 460 Washington Street (456 Washington Street) and 281 West Street in New York, New York (Tax Block 595, Lot 1). The Site was previously identified as Block 595, Lots 1 and 22 but the two lots were combined into one lot (Lot 1) on June 1, 2012. The Site is approximately 25,800 square feet and is bordered by mixed-use commercial/residential properties to the north, Washington Street to the east, Watts Street to the south, and West Street (Route 9A Highway) to the west. Site Features: The western portion of the Site (formerly Lot 1) was initially occupied by an approximately 13,320 square-foot (0.31 acres) asphalt-paved parking lot and the eastern portion of the Site (formerly Lot 22) was occupied by two interconnected one- and two-story buildings. The two-story building, located on the northeastern portion of the Site, had a basement. This portion of the Site occupied an area of approximately 12,480 square feet (0.287 acres). The buildings and parking lot were demolished prior to remedial action at the Site. The Site has now been improved with a multi-story residential building with a partial cellar level and courtyard area that was constructed concurrently with implementation of the remedial action. Ground floor slabs at the Site now range from el 3 to el 8 and the top of the basement slab is at el -4. Surrounding sidewalk elevations range from approximately el 4 to el 7.5. The Site and regional topography slopes gently to the west towards the Hudson River. Current Zoning: In October 2010, the City Council adopted the North Tribeca Rezoning, which is intended to continue the neighborhood's transformation from industrial uses to "family-friendly" residential uses. The rezoning created the Special Tribeca Mixed Use District in which the Site is located. Currently, adjacent properties consist of residential to the north and south, mixed commercial and residential to the east; the Hudson River and West Side Highway to the west and the Holland tunnel to the northwest. Historic Uses: Former lots 1 and 22 were developed with two to five-story buildings in 1894 with unknown use. In 1905, a warehouse was built on the northern two-thirds of lot 22 and used to

DEC Memo: Sangesland spoke with Marcus Simmons with AKRF. Tank was uncovered and pulled. Contaminated soil was found. CSL letter was sent to: Marc Boddewyn Hudson River Park Trust Pier 40 @ West Houston St - 2nd Fl New York, NY 100147/26/07 Left message w. Axel requesting callback. 8/1/07- DEC Piper recieved report from AKRF. During installation of sewer, a 8k ust was discovered. The tank was removed along with 82 tons of soil. Endpoints revealed SVOC over TAGM. GW samples were collected which indicated slightly elevated levels of VOC's. The GW discharges to the hudson and is 15yds waway. Based on information and remediation to date, this spill is closed. See report on e-docs if warranted.

Remarks: HAS BEEN CONTAINED AND TANK WILL BE REMOVED ON WED.;

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

corporation that bought this site and the property next door in the hopes of constructing a large apartment building. Unknown if the owner is currently operating this garage until this construction is approved and takes place. Check Google for "71 Laight Street LLC"6/22/2012 Sangesland got a voice message from Dan McNerney VP of Taconic Investment Partners (212-704-3848) asking questions about this TTF and open spill case. Sangesland returned a message to his voicemail.6/12/13 On 6/10/13, received voice mail message from Chris McMahon of Langan Engineering. 201-398-4535. They will be removing the tank tomorrow. Today, I called Mr. McMahon back and left a voice mail to return my call. bf07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB09/16/2013 - V. BrevdoCalled Steven A. Ciambuschini of Langan (201) 794 6900 and informed him that NYSDEC never received a remedial action work plan that was submitted to NYCOER. This is E-designated project. Mr. Ciambuschini took my phone and e-mail and stated he will send me RAP and other milestone documents concerning this project.09/17/2013 - V. BrevdoE-mail from OER in response to my inquiry about the project documents.Moore, Hannah" HMoore@dep.nyc.gov 9/17/2013 8:39 AMHi Vadim,I spoke with Chris McMahon from Langan about this Site yesterday. He says that the tank has been removed and that they got clean endpoint samples. I asked him to share this information with both of us. I've also requested that he submit the daily reports that he owes me from the Site, since I have not been receiving them since the end of June.OER approved the RAP on this Site prior to their discovery of the tank test failure, which I believe explains why this wasn't coordinated on the front end.If there is anything else you need from me or if Langan doesn't get you the documents, please let me know. Best,HannahHannah MooreProject ManagerNYC Office of Environmental RemediationHMoore@dep.nyc.gov(212) 442-637209/17/2013 - V. BrevdoE-mail to NYCOER Hi, Hanna, Thank you very much for the project related information. I will continue communicating with Langan and OER regarding spill related issues of this project. When Langan recommends closure of this spill case I will inform you and coordinate spill closure decision with you. Thank you for your help on this matter. Vadim

Remarks: reccomend isolation or removal

EPA Region: 02

Classification: Non-Generator

Description: Handler: Non-Generators do not presently generate hazardous waste

Actual:
7 ft.

Handler Activities Summary:

U.S. importer of hazardous waste: No

Mixed waste (haz. and radioactive): No

Recycler of hazardous waste: No

Transporter of hazardous waste: No

Treater, storer or disposer of HW: No

Underground injection activity: No

On-site burner exemption: No

Furnace exemption: No

Used oil fuel burner: No

Used oil processor: No

User oil refiner: No

Used oil fuel marketer to burner: No

Used oil Specification marketer: No

Used oil transfer facility: No

Used oil transporter: No

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel.12/20/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Ms. Maggy Douglas (Administrator) at (646)388-9530 and left message to call me back regarding information of spill. -QA12/21/06: Recieved call from Mr. Axel (AKRF Consulting firm) (646)388-9529 he said he will find out the information of spill and he will call me back. -QA03/05/07: Called Mr. Axel at (646)388-9529 left message to call me back regarding information of spill. -QA04/03/07: Called AKRF Company at (914)949-7336 talked to Ms. Nancy (Office Manager of White Plains office) she said that someone will call me back regarding spill. Mr. Marcus Simons (AKRF) (646)388-9527 called me back and said he will dig the data and he will call me back regarding the spill. -QA04/10/07: Mr. Axel from AKRF called me and said that they don't have any data regarding spill. They notified the spill to DEC. AKRF is caller also about this spill. When they were doing the drilling on the street, they found soil contamination. Caller also reported there is Gas Station across the street. Mr. Axel said he will send a letter to me regarding that. -QA07/06/07: Mr. Axel from AKRF sent a letter on April 13, 2007. I called Mr. Axel and discussed regarding spill he said that no additional excavation or endpoint sampling have been conducted. -QA09/14/07: I called Mr. Axel to discuss regarding excavation of the soil, waste Manifest Reports and waste charaterization sample report. -QA10/24/07: Checked with Mr. Axel (AKRF Environmental) there is not any waste manifest report and no waste characterization sample. Only they dug out the soil to put the pipe line. There is gasoline stations around the area that may be the source of soil contamination. No additional excavation or end point sampling have been taken. on the basis of the letter of Mr. Axel Schwendt, AKRF Environmental due to the age of spill AKRF is unable to confirm the exact nature of the drilling activities. By the approval of Jon Kolleeny (Supervisor) I closed this spill. -QA

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo:

Sangesland spoke to consultant Muhammad Mahede at Fleming-Lee Shue (212-675-3225)He says the site was a former gas station and used the address 500 Canal St. It had an old spill number (0408431 - Closed by DeMeo)Now they found gasoline contaminated soil near the old sidewalk fill lines on Greenwich St and also along Watt St. The consultant is planning to dig this ***A CONTAMINATED SOIL LETTER WAS NOT SENT OUT, BECAUSE THE CONSULTANT IS ALREADY MOVING FORWARD WITH A SOIL EXCAVATION IN THE NEXT FEW DAYS.****A Closure report will be submitted to the DEC for review.Property owner is:Fabian FriedlandGreenwich Tiangle LLC459 Washington StNew York, NY 100134/19/05 - assign to Imdadul Islam to handle. KST5/18/05- Talked to consultant Muhammad Ahmed at 212-675-3225. He mentioned that ISRP will be sent to the Dept. soon.-11.9/2/05- Reviewed the ISRP report and mailed out a letter today to consultant (Mr. Ahmed of F.L. Shue, Inc)cc'd to Mr. Friedland (RP) and Mr. Maurice Winter (NYCDEP)asking for deatiled investigation to delineate the contamination plume and comprehensive remedial plan by the end of October 2005.9/10/05-Dr. Muhamed had a meeting with me today to discuss the detail of the required additional investigation. - 11/9/13/05- Received today the

"work plan" for required additional investigation as discussed and outlined in the meeting. It is found OK.- 11/9/05- Sent the above Work Plan approval by email. Also, advised to screen soil and sample from the high PID reading locations as the boring for proposed well MW-2 advances. GW sample from the well is to be taken and analyzed as well.- 11/11/05- Visited the site along with Steve today to witness the installation of three monitoring wells, advancing geoprobes (six) for soil and groundwater sampling. The proposed geoprobe in the sidewalk across the Greenwich St. is cancelled as the sidewalk is made up of granite. Dr. Mohamed told that by next four weeks they will be able to submit the report to the Dept. 12/23/05: This spill case transferred from I. Islam to J. Kolleeny. Reviewed Remedial Investigation Report/Remedial Action Work Plan submitted in December 2005 by Fleming-Lee Shue, Inc. (FLS). Report summarized an off-site investigation performed on 11/01/05, and presents a remedial action work plan. The investigation identified two areas of soil contamination near fill ports for former gasoline storage tanks, and groundwater contamination including 0.5 inches of free product in one well. The remedial action plan involves removal of fill port piping and excavation of contaminated soil where feasible, followed by collection of end-point soil samples, pumping of free product from water table, and application of ORC. As an interim remedial measure, monitoring wells with free product or high levels of dissolved-phase contamination will be pumped out during the week prior to soil excavation. Sent letter approving remedial plan, but asking for additional well to be installed near southeast corner of Watts & Greenwich Streets after soil excavation, followed by quarterly groundwater monitoring. - J. Kolleeny 3/2/2006 The spill report was transferred from Jon Kolleeny to Alex Zhitomirsky as per JK/KT e-mail on 3/2/2006. AZ4/4/2006 I contacted Mohamed Ahmed (FLS) 212-675-3225. They found gasoline contamination in gw. Also, free product was found in one old well. Soil and gw are contaminated at the sidewalk in two spots on the site. They observed sheen. They are waiting to start the construction. They will dig out the whole site during construction activities. The site is close to Holland Tunnel. If any free product is observed in the excavation they collect from the excavation. They must first get clearance from the Port Authority. AZ6/26/2006 I contacted Mohamed Ahmed. They are going to start IRM on July 5, 2006. They will pump out 2 wells on the sidewalk at intersection of Watts and Greenwich. They will pump out around 155 gal drum from each well. Then on the 10th or 11th of July they will start removing the fill material down to 7' depth, where the most contamination was found. Then they will remove all contaminated soil up to the gwt level (approximately 11'). They will leave the excavation open for 24 hours to monitor free product accumulation. If any appears it will be pumped out. If no free product is present, ORC will be sprayed on groundwater table. They are building a residential building. They will be putting in place a vapor barrier which was approved by DEP. They will collect end point samples from the sides. Water is at the bottom of the excavation. They have 3 wells on the sidewalk which will be monitored. AZ7/24/2006 Chris De Carlo (FLS). They started removing a fill layer. They encountered several USTs - 2x550 gal fuel oil, 4x550 gal gasoline and 2x275 waste oil tanks. 1 gasoline tank and one fuel tank were found at the corner of Canal and Watts. 3x550 USTs, one 550 fuel and 2x275 gal waste oil USTs were found at the corner of Greenwich and Canal. Gasoline tanks were incased in concrete but deteriorated. Some water and product we found in the

GAS STATION (Continued)

S106868163

tanks. The other tanks were not encased in concrete and contained some water and product. Seems that these tanks were causing the problem. They are removing these tanks. Excavation will be continued as planned. They will excavated below the water table. AZ10/19/2006 Left a message for Mohamed Ahmed. Soil excavation will start on October 21, 2006. AZ9-10-2007 Received Remedial Action Report dated August 14, 2007. Soil was excavated to the water table, approximately 14'-18' below grade. Approximately 2,700 cu yards of contaminated soil was removed from the site. 11 USTs were discovered and removed. ORC was applied to treat in-situ groundwater. Waterproofing membranes were installed under the basement slab. Post-excavation sampling was conducted. One additional monitoring well will be installed and sampling of three existing wells will be performed for a year. I contacted Mohamed Ahmed and requested that a figure with post-excavation sampling locations is modified. Total SVOCs and VOCs concentrations should be added and general gw flow indicated. AZ9-11-2007 An e-mail was sent to Fleming Lee Shue: "I have reviewed the remedial action report and the revised map for the above site. The proposals contained in the report are approved. Soil samples should be taken and analyzed for VOCs and SVOCs during well installation. All wells should be sampled for VOCs and SVOCs. Actual groundwater flow should be established. A report containing monitoring results should be submitted to NYSDEC." AZ11/2/2007 Spoke with Mohamed Ahmed (212-675-3225). They will install one well at the corner of Watts Street and Greenwich Street. Also, one well will be re-installed at Watts Street. All wells should installed utilities permitting. AZ 11/5/2007 An e-mail was sent to M. Ahmed: "As per DEC's e-mail dated 9/11/07, DEC approved installation of one monitoring well on a sidewalk at the corner of Watts Street and Greenwich Street. Also, one well should be re-installed on Watts Street. All wells should be installed utilities and structures permitting." AZ11/19/2007 A "sidewalk letter" was issued upon M. Ahmed and NYC DOT request to expedite wells installation. AZ5--5-2008 Reviewed First Quarter Monitoring Report dated February 20, 2008. I contacted Mohamed Ahmed and conveyed to him my comments regarding this report. The report stated that naphthalene was the only compound exceeding NYS TOGS while table 3 indicated that other compounds were also exceeded, e.g. MW-3 had 312 ppb of the Total VOCs (exceedances only). The spill number indicated on the report was incorrect. I requested that in future the total VOC and SVOC concentrations are calculated and shown on the plume map. Also, I requested that e-copies of the reports are sent to DEC. The Consultant will make necessary changes. The Consultant recommended the continuance of the groundwater monitoring program. I concurred. AZ5-23-2008 Groundwater map with sampling results was submitted. AZ9-3-2008 Reviewed Report submitted by FLS on May 9, 2008. The remedial activities conducted at the site consisted of removing UST fields, piping, fill ports and dispensers; soil excavation and disposal, post excavation soil sampling, soil and gw Bioremediation, and installation of a vapor barrier and waterproof membrane. Previously (February 2008 report) light petroleum odor was observed in wells MW-1 and MW-3R during sampling. Groundwater analytical results for MW-1 and MW-3R indicated several VOCs exceedances of the NYSDEC Guidances (TOGS). During the latest sampling round (April 2008) several VOCs were detected in MW-3R exceeding TOGS 1.1.1. Ambient Water Quality Standards and Guidance Values (391.6 ppb). It's a slight increase when compared with 1/11/2008 monitoring event (314 ppb). FLS recommended continuing

S106868163

monitoring. AZ3-18-2009 Reviewed 3rd-4th Quarters Report dated January 26, 2009. Total VOCs ranged from 3.6 ppb in MW-2 to 223 ppb in MW-3. FLS requested closure. I contacted Mohamed Ahmed and requested additional information which would support NFA status request. AZ5-5-2009 3rd and 4th Quarter Reports were revised as DEC's request. The site was historically used as a gasoline station. A seven-story residential building with a partial basement and a residential lobby was constructed at the site. Reviewed revised 3rd and 4th Quarters Report dated March 18, 2009. Sampling was performed on July 11 and November 7, 2008. In the 3rd quarter VOCs remained in groundwater sample MW-3R but at levels lower than the two previous quarters. Total VOCs detected ranged between 0.78 and 71.78 ppb in MW-3R. No VOCs were detected in MW-1 and MW-2R above Class GA Standard except benzene which was detected in sample MW-1 at 1.3 ppb. No SVOCs were detected in any of the three wells except a trace of naphthalene in MW-3R at 11.6 ppb. Exceedances of ethyl benzene (66 ppb), isopropylbenzene (48 ppb), xylene (20 ppb) and m.p-xylene (17 ppb) were detected during November 2008 sampling event. Total detected gasoline-related VOCs in the groundwater in three wells ranged between 3.6 and 223.8 ppb during the fourth quarter of 2008. According to the Consultants (FLS), quarterly monitoring indicated that most of the dissolved gasoline-related VOCs were remediated. Remediation consisted of the removing UST fields (eleven 550-gallon USTs were removed) and associated piping, fill ports and dispensers. 3,300 tons of petroleum contaminated soil was removed. According to FLS, no VOCs were detected in post excavation samples. Relatively low levels of SVOCs, which appeared to be related to the fill material, were detected in postulation samples. Groundwater bioremediation was performed by applying of 1,325 pounds of Oxygen Release Compound (ORC) to impacted groundwater. A vapor barrier and waterproof membrane were installed. H-beam steel sheeting was installed along Greenwich and Watts Street to a depth of twenty feet below sidewalk (approximately 4 feet below the soil/groundwater interface). The site is entirely surrounded by permanent steel sheeting along Greenwich and Watts Street and by the Holland Tunnel along Canal Street. Monitoring well MW-1 and MW-3R, where gasoline - related VOCs were detected, are located in the sidewalks outside the sheeting line on the side gradient direction of the former tank area. According to FLS, on-site soil is capped by the new building foundation and off-site soil is capped by cement sidewalks and asphalt roads, thus preventing any human health risk of dermal contact with soil or groundwater. Additionally, soil vapor intrusion and inhalation pose no risk due to the presence of an on-site vapors barrier and capped surroundings. It's the opinion of FLS that the trace concentrations of gasoline related VOCs still present in well MW-1 and MW-3R do not pose a human health risk and, based on the above information, FLS requested a spill closure. AZ 5-11-2009 In a telephone conversation with Mohamed Ahmed I requested additional information regarding the amount of excavated soil and details regarding bioremediation performed. This information was submitted to DEC via e-mail. AZ6-1-1009 The requested information was submitted and e-documented. Based on the information submitted by FLS this spill is closed. An e-mail was sent to FLS. AZ

Remarks:

SOIL SAMPLES WERE TAKEN AND TEST RESULTS CAME BACK AND THEY WERE ABOVE THE STANDARDS., THIS SITE IS AN OLD GASOLINE STATION AND MOSTLY GROUNDWATER WAS AFFECTED. HAS NOT BEEN CLEANED UP.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 11/1/04 - JZ (desk duty): Zhao spoke with Mr. Nelson Abrams, MetCalf & Eddy. The company was contracted by NYC DDC with a sewer line project along Greenwich Street. During Geoborings on side walk of 500 Canal Street, contaminated soil was discovered at the interface of soil/water about 12 feet below grade. It appears petroleum oil with strong odor. PID reading is 180 ppm. The lot is currently vacant. According to the database, 500 Canal Street had Gas Service business. Tanks were removed several years ago. No spills were ever reported before, during or after the tank removal. Unknown if site assessment had ever been conducted during tank closure. Further upgradient at 480 Canal Street has a 20,000 gallon #6 oil AG tank currently in service, this does not appear any threatening to subsurface impact. Zhao has requested Metcalf & Eddy or DDC to contact the DEC if samples are analysed. Contamination letter send to the current owner at 500 Canal Street:Greenwich Triangle Number 1, LLC459 Washington StreetNew York, NY 10013ATT: Mr. Fabian Friedland2/1/05 TJDInvestigation summary report submitted by Flemming Lee Shue. Property owner @500 Canal Street was notified of their responsibility to conduct an investigation following the discovery of contaminated soil in street IFO address. As a result of DEC's directive the owner retained Flemming Lee Shue to perform the required investigation. A site inspection was performed and a soil gas survey was completed. No readings above background were found, therefore, no samples were collected or analyzed. In addition, Flemming Lee Shue provided endpoint sample analysis from the original tank excavation in 2000. No TAGM exceedances were identified in endpoint samples. No further action required by owner of 500 Canal Street. Spill closed.Unknown source of contaminated soil in street.
Remarks: DURING SOIL BORINGS FOR A SEWER LINE FOUND CONTAMNATED SOIL:

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

Tank Info:

Tank Number: 001
Tank ID: 30321
Tank Status: Closed Prior to Micro Conversion, 03/91
Material Name: Closed Prior to Micro Conversion, 03/91
Capacity Gallons: 550
Install Date: 12/01/1931
Date Tank Closed: Not reported
Registered: True
Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Tightness Test Method: NN
Date Test: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Contact Name: LAURA GIUSTINIANI
Contact Phone: (718) 714-6898
DEC Memo: 8/2914- Zhune spoke to Laura Giustiniani 718-714-6898. She said they removed the tank and collected four soil samples. The analytical results indicated that samples are cleaned. They collected samples by the vent pipe. They are waiting for the results.10/14/14-Laura Giustiniani emailed the Site Assessment Report dated 9/5/14.The report stated that Empire Environmental was retained by Olivers Contracting Inc. for the purpose of supervising and conducting the removal of (1)2000 Gallon Tank at 297 West Street in Manhattan. When the tank was uncovered it had been previously closed in place with concrete slurry. There was no evidence of stained contaminated soil after the tank was removed from tank excavation. As per Laura the all lines were previously removed from the tank. As part of this Site Assessment Empire Environmental collected four (4)soil samples after the removal of the tank. The confirmatory samples were collected from west, East, North and south wall of the excavation. The soil analytical results indicate nO VOCs and no SVOCs components were detected exceeding the standards.Based on this information and the information on Spill # 9804683 (The site underwent remediation). The spill is closed.

Remarks: Tank removal with impacted soil. testing pending & cleanup is pending.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"7/21/2005- Reviewed Quaterly Monitoring Report received in June 2005. ORC socks were installed in wells MW-2, 10 and 13R. In February 2005 LiRo conducted additional soil excavations that were requested by DEC. LiRo recommended continued operation and monitoring. The Department concurred. AZ05/30/07: This spill case transferred to J. Kolleeny. LiRo Engineers undertook remediation of this site under DDC Consent Order. Remedial actions included excavation of contaminated soil from several areas, installation/operation of SVE system, bio-nutrient application, and ORC application. Results of LiRo's February 2006 Sensitive Receptor Survey (in eDocs for related spill 9804683) for site indicate low-level residual GW contamination in two monitoring wells is unlikely to pose a threat to environment or public health. LiRo's remedial actions and well network addressed entire site, all tanks. OK to close spill. - J. Kolleeny

Spiller Contact: KEN ROSS
Spiller Phone: (516) 249-3150
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 309192
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY" The spill is also referred to spill # 9712858. The site is currently under remediation by LiRo Engineers. - II (03/02/05).7/21/2005- Reviewed Quaterly Monitoring Report received in June 2005. ORC socks were installed in wells MW-2, 10 and 13R. In February 2005 LiRo conducted additional soil excavations that were requested by DEC. LiRo recommended continued operation and monitoring. The Department concurred. AZ11/08/09 - Reviewed Quarterly Monitoring Report received in October 2005. MW-13 exhibited total VOCs concentrations of 179 ppb. Concentrations in this well fluctuate between 34 ppb and 230 ppb - unstable plume conditions. MW-2, a downgradient well, exhibited concentrations of 68 ppb up from previous reading 4 ppb. My conclusions: plume conditions are unstable. Sentinel well is contaminated. Further monitoring is needed. AZ 7/11/2006 Reviewed Sensitive Receptor Survey Report by LiRo. The site underwent remediation: excavation of a contaminated fill port area along Canal Street, installation of a soil vapor extraction system (SVE), bio-nutrient application and the application of oxygen release compound (ORC). Fill port excavation was completed in 2001. ORC was applied in March 2003 and September 2003 in 8 eight wells in the southern portion of the site and in 12 wells in the northern portion of the site. For the soil biorestoreation, a bacteria-nutrient slurry mix was injected for 6 consecutive weeks starting on March 11, 2003. The SVE system was working from July 29, 2003 until a shutdown in October 2004. The shutdown was approved by DEC. The ORC socks were installed in October 2004 and April 2005. Additional soil excavation was performed in January/February 2005, as requested by DEC. LiRo stated that there is no known direct exposure pathways within 2,000 feet of the site. Site groundwater appears to be controlled by Holland tunnel dewatering system. LiRo recommended closure of this spill. Jon Kolleeny suggested closure of this spill.
AZ

Remarks: CALLER RESPONDED TO ABOVE LOCATION FOR TANK UPGRADE. UPON REMOVAL OF OLD TANK SOIL CONTAMINATION WAS DISCOVERED. SOIL HAS BEEN REMOVED AND FURTHER TESTING AND TANK REPLACEMENT TO FOLLOW. NO CALL BACK REQUEST.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name: MARK RAVNER
Contact Phone: (212) 941-9399
DEC Memo: 05/26/11-The site is an old gas station, currently under construction.Seven 550's filled with concrete has been found. Eastmond & Sons(Lizette Hernandez) doing tank removal. I spoke with Lizette and told her that end point samples should be taken from the tank field and dispenser island area. She told me that she is not sure if the soil is clean. She said a report will be sent to DEC Raphael Ketani. CSL was sent out toMagnum ManagementMB Development Inc594 BroadwayNew York, NY 10012Attn: Mark RavnerCSL in edocs. (sr)5/27/11 - Raphael Ketani. I received a phone message from Mike Haggerty of Albany DER (518) 402-9688. He said that he is in charge of all of the EXXON-MOBIL station spills.Mark Ravner's phone is (212) 941-9399. Ms. Hernandez's phone is (718) 378-3000.6/2/11 - Raphael Ketani. I spoke to Mr. Haggerty. He said that this is the same site that he had dealt with as a long term EXXON-MOBIL gas station spill. The site address was known at the time as 527 Canal Street. The old spill case is #0512342. It was closed on 11/16/09. An NFA letter was sent out by Mr. Chandra of Region 2 DER.I looked up the site in Property Shark and they showed the block and lot as 595 and 52. The alternate addresses were 523 to 531 Canal Street. The site was pictured as an empty lot with a tall steel billboard sign standing on the property. It is a corner lot at the intersection of Canal Street and Greenwich Street on the lower west side of Manhattan. The owner is listed as the City of New York. The property was taken over by the City in 2009.I tried to find a PBS case, but couldn't locate one no matter which address I used.Mr. Haggerty added that the old case had involved the discovery of two USTs. There was gasoline contamination of the soil and the groundwater. There was one "hot" boring. The owner had removed the tanks.I found spill case #0512342 and transferred 2 work plans and 6 reports from this old case into the current spill case E-docs. From the Kleinfelder 3/28/08 Subsurface Investigation Report, 4 borings/wells were installed. SB/MW-3 had a total xylene exceedence for soil. MW-2 and MW-3 had significant groundwater analyte exceedences up to the triple digits. These are the two westernmost wells in the southern (Canal Street) sidewalk. Groundwater flow is to the northeast. From the Kleinfelder 10/24/09 Supplemental SIR, groundwater flow was due north. All of the groundwater 8/26/09 samples from the 7 wells (3 additional wells within the property footprint) were either non-detect or had low individual VOC analyte hits in the low double digits. As a result of the low residual contamination values, the case was closed.7/22/11 - Raphael Ketani. Ms. Hernandez sent me the Eastmond 7/21/11 Closure Report (with NYFD Affidavit of tank removal and DEC CSL) and the York Analytical Labs 6/27/11 report for 4 soil samples. I reviewed the documents. The seven 550 gal. USTs were removed. The soil analyticals indicated no VOC contamination. However, there was minor SVOC contamination. Except for the benzo series of SVOCs, the results were well below the CP-51 limits.I spoke to Mr. Haggerty about the case and the analytical results. He said that I could close the case if I felt that the site had been remediated. I told him that I believed there was only minor residual contamination and so I will close the case.Based upon the information in the Eastmond Closure Report and the York 6/27/11 report, I have determined that the residual contamination is not a threat to the public or the environment.

-----Left
message for Zeb asked to send site plan and sample results. Talked with Zeb and as per him we will receive the required information late today.need to send CSL1/31/06 - Raphael Ketani. I sent a CSL to Robert Gold, David Slavin, Zeb Youngman, and David Yudelson.2/1/06 - Raphael Ketani. I reviewed the analytical data package dated January 18, 2006 from American Analytical Laboratories that was originally e-mailed to Kumar Patel of the Spills Unit on 1/31/06. SB-5 and SB-6 showed a high mercury concentration and a mercury exceedence, respectively. GW-1 showed many volatile and metal analyte exceedences and GW-2 and GW-3 each had several volatile analyte exceedences. I will send a letter to Mr. Yudelson stating that the soil and water have to be removed and cleaned up, respectively. 3/17/06 - Raphael

Ketani. I tried to call Mr. Yudelson regarding the site, but could only leave a voice mail.4/6/06 - Raphael Ketani. Mr. Yudelson called me back at 2:55PM and said that he has received the work plan and will overnight it to me. 4/7/06 - Raphael Ketani. Today I received the Sub-Surface Investigation Report and the Remedial Action Plan for the site, both dated April 2006. I finished my review of the reports and will send out a letter stating that the DEC finds the reports acceptable. Additionally, the letter will state that they should do repeated rounds of groundwater vacuuming and should sample the water after each round of ORC injection or bioremediation to make sure things are being cleaned up, or at least reduced.5/24/06 - Raphael Ketani. Case transfered from Ketani to Tang as per authorization by Randall Austin, Spills Program Manager, due to analytical results showing groundwater contamination.

-----11/03/06
Re-assigned from Tang to Chanda (Chanda)11/06/06: Kartik Chanda of DEC reviewed documents and reports regarding this spill case. On 11/6/06, Chanda called to Zeb Youngman, project manager, P.W.Grosser Consulting, requiring present site status and updated information. He stated that the last six months they did not perform any work regarding this spill case. The investigation work will be started next April, 2007.12/21/06: Chanda sent an email to Zeb Youngman (P.W.Grosser), requiring that the delineation of groundwater contamination up & down gradient and groundwater flow direction be submitted to the DEC for review by 2/20/07.4/17/07: Chanda sent a reminder letter to RP (Robert Gold) and his attorney (D. Yudelson) and consultant (Zeb Youngman), requiring that the delineation of groundwater contamination up & down gradient and groundwater flow direction must be submitted to the Department by 5/31/07.6/1/07: Chanda received a phone call from Zeb Youngman. On 6/4/07, Chanda introduced with ExxonMobil personnel (1) Jerri Hanles (Claim advisor), (2) Frank Messina (Remediation Engineer)and Mr. Brendan Mooney, Kleinfelder Environmental by telephone conference regarding this spill case.6/6/07: Chanda received an e-mail from Brendan Mooney. He stated that Kleinfelder is working on behalf of ExxonMobil to prepare a work Plan for this spill case. He requested two week extensions to submit Work Plan. On 6/6/07, Chanda approved two week extensions to submit the work plan. Therefore, a work Plan is submitted to the DEC by 6/15/07 for approval.6/15/07: Chanda received an electronic copy of the off site remedial work plan prepared by Kleinfelder East, Inc. dated June 15, 2007.6/26/07: Chanda has reviewed and conditionally approved the work plan on 6/25/07. On 6/26/07, Chanda sent an approval letter to RP (Robert Gold) and attorney (David Yudelson) and consultant (Kleinfelder), requiring that a final investigation report be submitted to DEC for review by 9/25/07.9/25/07: Chanda received an extension request letter from Brendan Mooney(Kleinfelder). Kleinfelder is requesting a 60 -day extension to submit Supplemental Off-Site Remedial Investigation report. The Department (DEC) approves a 60-day extension.9/28/07: Chanda sent a 60-day extension approval letter to RP (Robert Gold), attorney (David Yudelson) and consultant (Kleinfelder), requiring that an investigation report must be submitted to DEC by 11/26/07 for review and approval.12/3/07: Chanda received an extension request letter dated 11/29/07 from Mr. Brendan Mooney, Kleinfelder. He stated that the NYCDOT would not issue the required sidewalk permits due to an NYCDOT holiday embargo period (November 16, 2007 through January 2,

2008).12/10/07: The Department (NYSDEC) approves a 90-day extension due to an NYCDOT holiday embargo (2007 Holiday Construction Embargo). The deadline extended to the February 28, 2008.1/4/08: Chanda received a call from Brendan Mooney (Kleinfelder) regarding the schedule of the monitoring well installation at the site. He will send an email notification regarding the monitoring well installation and sampling schedule for the groundwater investigation.2/25/08: Chanda received a call from PR's consultant regarding the deadline extension to March 30, 2008.4/3/08: Chanda received a Subsurface Investigation Report(SIR) from Kleinfelder East Inc. dated March 28, 2008.5/22/08: Chanda has reviewed the SIR (Off-site) and has the following comments:* Installation of four soil borings completed as monitoring wells MW-1 through MW-4.*On January 31, 2008, groundwater monitoring wells MW-1 through MW-4 were sampled and analyzed for VOCs and SVOCs.* The groundwater (GW) analytical results showed elevated levels of volatile organic compounds (VOCs). Total BTEX concentrations ranged from 11 ppb to 3,614 ppb.5/23/08: Chanda sent a letter to RP (Robert Gold) and his attorney & consultant(Kleinfelder), requiring that the Site Status Update Report should include quarterly groundwater sampling and monitoring analytical results both on-and off site wells. Upon review of the Site Status Update Report, the Department may require an update Remedial Action Plan for this site. The Department requires that the Site Status Update Report be submitted to the Department by 8/8/08 for review and approval. 6/3/08: DEC's letter dated 5/23/08 is bounce back to the sender. Chanda called Mr. Slavan (212-966-7250) to get the current property owner name and address. The current property owner name is:Ms. Corice Arman430 Washington StreetNew York, NY 100136/3/08: Chanda changed the current owner name Ms. Corice Arman instated of Robert Gold and sent DEC's letter dated 5/23/08 to the current owner (Ms. Arman) requiring that the Site Status Update Report (with including quarterly groundwater sampling and monitoring analytical results both on-and off site wells) be submitted to DEC by 8/8/08 for review and approval.6/23/08: Chanda received a Site Status Update Report dated 6/16/08, prepared by Kleinfelder East, Inc., on behalf of ExxonMobile Oil Corporation for this site.7/8/08: Chanda has reviewed the Site Status Update Report and has the following information:* On April 10, 2008, Kleinfelder gauged and sampled four groundwater monitoring wells.* Liquid-phase hydrocarbons (LPH) were not detected in the monitoring wells gauged.The Groundwater analytical data are following:Date: 01/31/08 MW-1 MW-2 MW-3 MW-4BTEX (ug/L)----- 11 -----3,614 -----816-----57.3MTBE (ug/L)-----0.87-----10.0-----5. 0-----11.1Date: 4/10/08BTEX (ug/L)-----1. 19-----370-----412-----36MTBE (ug/L)-----1.1-----2.2-----2. 0-----7.2Analytical data indicates a decrease in dissolved-phase hydrocarbon concentrations between the January and April 2008 sampling events.7/9/08: Chanda sent a letter to RP's attorney and consultant (Kleinfelder), requiring that the next quarterly report be submitted to DEC by 8/15/08 for review.7/21/08: Chanda has received a phone call from Mr. Michael Haggerty, Remedial Bureau, Section B, Central Office, Albany. He stated that all ExxonMobil projects have been managed by Central Office. He would like to assign this project. 7/22/08: Chanda consulted with Vadim and

Joe (NYSDEC, Region 2) and sent the spill related file to Michel Haggerty, Remedial Bureau, Section B, Central Office, Albany. 12/29/08 - Haggerty: approved SI work plan to install on-site wells. The existing wells are off-site. 3/24/09 - Haggerty: Sent a letter to Tom Connors, NYCDOB, in order to lift a Stop-Work Order issued by the DOB. in edocs3/31/09 - Haggerty: spoke with Tom Connors from the NYCDOB. The Stop-Work order was issued to the Demolition Crew previously working on-site. The Stop-Work order doesn't effect ExxonMobil/ Kleinfelder's right to investigate the property8/09 - Haggerty: Implementation of the approved work plan was held up due to a DOB Stop-work order at the property and due to re-negotiating access to the property. SI completed in August11/16/09 - Haggerty: issued NFA letter. Spill closed. SI report for 3 on-site MW indicate no unsaturated contamination and limited dissolved contamination (max dissolved BTEX concentration 67ppb in MW-7).

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 3/24/14-Zhune spoke to Cliff from GZA (212-594-8140. He said the owner supplied him with the Phase I and Phase II including refence of residual petroleum compounds in soil and groundwater. The site is an E designated site. He spoke to OER Dan Walsh to move forward with their program and Dan asked him to call in the spill to DEC. He will send a copy of the RAWP when finalized.3/25/14-Vought-Received email from OER Hannah Moore(Ph:212-442-6372) that "Hi Randy and Jeff - OER asked Site at 219 Hudson Street to call in this spill (1312004). Can you tell us who has been assigned to this one? Thanks, and hope all is well,Hannah" Vought sent reply that "Hannah/Shaminder, The spill is assigned to Veronica Zhune and you can also reach her at 718-482-7305. As per Veronica's notes from yesterday:"3/24/14-Zhune spoke to Cliff from GZA (212-594-8140. He said the owner supplied him with the Phase I and Phase II including refence of residual petroleum compounds in soil and groundwater. The site is an E designated site. He spoke to OER Dan Walsh to move forward with their program and Dan asked him to call in the spill to DEC. He will send a copy of the RAWP when finalized." Please note that Veronica will also be out on vacation in April so you can contact me with significant questions or concerns on ANY of her sites while she is away.Thanks."3/26/14-Vought-DEC Zhune and Vought received email from DEP Morris that "Hi Veronica and Jeff,As we discussed, I just sent you both a link to the dropbox folder containing the Phase I and II for the above referenced site. We will give you a call tomorrow at 4:00 to discuss what is needed to close out the spill. Best, Samantha Morris (SMorris@dep.nyc.gov (212) 341-2082))"3/27/14-Vought-Sent email to Samantha Morris at DEP with cc to Hannah and Shaminder that "Samantha, Unfortunately we will not be available at 4pm and as Veronica only has two days left and she has many tasks prior to her departure. To save both time and effectuate review, please send me a copy of the PDF and I will make every effort to review it in a timely fashion and get back to you and OER with a call (or email if review is simple). I noted you put a copy on the Dropbox website, however, we cannot access this via DEC computers so I would much appreciate if you could place it on our file share website at <https://fts.dec.state.ny.us/fts/> Thanks for your patience." OER Morris replied that "Hi Jeff,Thanks for the update, we certainly

understand. I uploaded the files on your share website. Please let me know if you have problems accessing them."4/15/14-Vought-Received call from and spoke to NYCOER Chawla and Moore and site will be redeveloped and spill cross gradient from site that OER worked with DEC and footing installed for large sign. They requested review of report. Development includes excavation of site to 4'bg.4/18/14-Vought-Spill reassigned from DEC Zhune to Vought. Complete file review by Vought:NYCDOB Database: Alternate addresses include 489-493 Canal Street and 219-223 Hudson Street. Vought changed spill address to these from original reported address of 219 Hudson Street.PBS and Spills Database: No other spill found and no PBS listed for site.Environmental Site Assessment(Soil Mechanics Daren Murphy Ph:(516)221-7500 Fax:(516)679-1900))-January 2013. ESA prepared for:Mr. Marc Held c/o Mr. Rafi Gibly311 Church StreetApt #2New York, NY 10013Site is a irregular shaped parcel with a one story brick building, one story wood frame shed, large billboard, construction trailer and asphalt pavement. Property is currently used as a parking lot and has been so since "1990's". On-site shed is used to store vending carts. Site formerly used to have several multi story buildings used for "residential" or "store" purposes and also as a packing box factory in 1905. Property was also used as a gasoline filling station ("with automobile repairs") from the early 1930's to the 1980's. No recognized area of concern found in Phase I other than: Spill at 231-239 Hudson, historical use of property as a gasoline filling station and presence of fill material. "Geotechnical" investigation performed in 2013 concurrent to Phase I ESA. Investigation consisted of two borings and purposed was determine nature of underlying deposits and engineering characteristics. Groundwater was from 7-8'bg. Future hotel located north of site, mutli story buildings to the south, approach to Holland Tunnel to the east and a two story commercial building to the west of the site. Property is currently owned by Canal Properties, Inc. Concrete mat (possibly associated with tanks) noted at property and two fill ports in the city sidewalk "outside the northeastern portion of the property". Client provided Soil Mechanics with paperwork that noted "Receipt, dated November 30, 1990 from T.N.C.C (Jamaica, NY) which states that three (3)550-gallon gas tanks were removed." "Violation Order, dated 9/16/98 regarding the sealing of 7-550-gallon gasoline tanks." Vought spoke with DEC PBS Falvey who noted that USTs must be registered. Site is E-designated. Vought added report to D2.4/21/14-Vought-Continued file review by Vought:Phase II Report (Soil Mechanics Altan Gulum)-3/11/13. Soil Mechanics attempting to "satisfy preliminary requirements" for enrollment in NYCOER VCP. Work included: ground penetrating radar survey; six soil borings with continuous soil sampling, installation of three monitoring wells and installation of three soil vapor probes to a depth of 5'bg. Concrete bases for pumps also at southern portion of site. Documentation shows in 1987 seven USTs were pumped and "all fill lines were cemented" and three USTs removed in 1990. GPR survey was "inconclusive" as it did not identify any tanks, pistons or drainage structures. Soil samples GP1, GP2 and GP6 were at concrete mat, GP3 and GP5 were to assess fill material and GP4 was to assess service station building. Soil vapor samples SV1 and SV2 were located to asses soil vapor in vicinity of concrete tank mat, SV3 was located to assess former service station building. Groundwater sample GW3 was located in suspsted upgradient location and GW1 and GW2 were located downgradient (suspected as groundwater flow direction yet to be

VACANT LOT (FORMER GAS STATION) (Continued)

S116553805

defined site specifically). Groundwater in geotechnical borings was at approximately 7'bg. Soil samples collected at highest PID and at 4'bg. Collection at 4'bg due to "a proposed site redevelopment of approximately 4'bgs, i.e. proposed building will not employ a basement and foundations will be pile supported". Due to poor recovery only one soil sample was collected from GP4, GP and GP6. Visual and olfactory observations of soil showed no "obvious signs of petroleum contamination". Highest PID was 42ppm in surface soils 0-2'bg. Soil vapor analyses show signs of petroleum contamination in BTEX and degradation compounds. Soil analyses show: 51,500ppb ethylbenzene(GP1 4-6'bg), 6,600ppb xylene(GP1 4-6'bg), 19,400ppb isopropylbenzene(GP1 4-6'bg), 809ppb toluene(GP5 0-2'bg), 1,1110ppb ethylbenzene(GP5 0-2'bg), 6,440ppb xylene(GP5 0-2'bg). SVOC PAH minor exceedences noted attributable to fill material. Due to analyticals, Vought changed Spill Material in report from "unknown material" to gasoline. Groundwater analyses show: 89ppb benzene(MW1), 74ppb ethylbenzene(MW1), 141 isopropylbenzene(MW1), 836ppb naphthalene(MW1), 5ppb benzene(MW2) and 17ppb naphthalene(MW2). Report concludes that there was a "release of petroleum hydrocarbons into the environment at concentrations that are, in our opinion, likely to represent priority for further investigation and possibly remediation do the NYSDEC Petroleum Spills Division." Report also concludes that "environmental quality of the subject property has not been adversely impacted as a result of the hydrodynamically up gradient off site open status.." spill site. Report also notes that due to soil vapor contamination, a SSDS will be required but does not state whether it will be active or passive. Vought added report to E-docs.4/21/14-Vought-Sent email to NYCOER Morris/Moore with cc to NYCOER Chawla that "Samantha/Hannah, Thanks for your patience on the review of the above referenced reports. I have reviewed the entire file and transferred the project to myself due to Veronica's extended vacation. The Department's requirements are as follows:1)Investigation of remote fills via soil borings "outside the northeastern portion of the property" as per Phase I.2)As per Phase I "Client provided Soil Mechanics with paperwork that noted "Receipt, dated November 30, 1990 from T.N.C.C (Jamaica, NY) which states that three (3)550-gallon gas tanks were removed." "Violation Order, dated 9/16/98 regarding the sealing of 7-550-gallon gasoline tanks." Vought spoke with DEC PBS Falvey who noted that USTs must have a Petroleum Bulk Storage Registration.3)Installation of proposed vapor mitigation due to petroleum VOC's in soil vapor samples from Phase II (submission of proposal for active or passive system?) and possible NYCDOH or NYSDOH review of system as well as OM&M Plan, if SSDS is active.4)CAMP due to proposed excavation of documented soil contamination and high traffic surrounding site.5)Installation of three wells in surrounding sidewalks with determination of site specific groundwater flow to achieve delineation of documented groundwater contamination (and no plans for dewatering as development not into water table and entire source). These wells can be installed after development if needed.I included some of my reasoning above along with the requirements, however, as always, if you have any concerns or questions let me know so that we may be consistent across both agencies. If you like I can also formalize this in a letter. I am assuming the next step will be submission of Remedial Action Plan and if so, I look forward to reviewing it to ensure it meets the above.Thanks again," 6/10/14-Vought-Received call from and spoke to GZA Bell and discussed above requirements and they are finalizing

VACANT LOT (FORMER GAS STATION) (Continued)

S116553805

Remedial Investigation Report and a copy will be sent to Vought. Vought should receive RIR by end of month. Depth to water is 7'bg and foundation depth is just above that and they will have to dewater for installation of elevator pit. GZA Bell discussed pumping of groundwater from one portion of the site to another portion of the site and Vought suggested to send email. 6/13/14-Vought-Received email from GZA Bell that "Jeff: Thank you for taking my call yesterday. Here is my question: The depth to groundwater at the site is approximately 7 feet below grade. Based on analytical data from monitoring wells at the site, there are residual petroleum impacts in one portion of the 60' by 90' site, but there are no impacts in other portions of the site. The proposed construction includes a cellar level to approximately 6 feet below grade. As a result, dewatering will be necessary for foundation features such as the elevator shaft and grade beams thereby requiring localized dewatering for limited periods. Is there a scenario acceptable to the NYSDEC whereby we may conduct intermittent pumping a portion of the site where the groundwater is less impacted to a recharge infiltration pit on another portion of the site that is more impacted? Thank you." 6/18/14-Vought-Spoke with DEC Permits (Watts) and DEC Water Unit (Southwell) with regards to above inquiry on 6/13. As per Southwell, a SPDES permit is not needed, however, a Stipulation Agreement would be needed as well as the associated benzene sampling requirements for discharge as per the Stipulation Guidance. Southwell and Watts noted that the most effective solution was to obtain a DEP discharge permit with associated discharge sampling, however, Southwell noted that in some areas of NYC this is not possible due to a lack of a combined sewer. Vought sent email to GZA Bell noting above as well as with attached Guidance for Stipulation Agreement with cc to OER Moore and Chawla. Vought sent email to GZA Bell that "Cliff, I spoke with DEC Permits and DEC Water Unit with regards to you below inquiry on 6/13. As per the Water Unit, a SPDES permit is not needed, however, a Stipulation Agreement would be needed as well as the associated benzene sampling requirements for discharge as per the Stipulation Guidance (attached below). Both Units noted that usually the most effective solution was to obtain a DEP discharge permit with associated DEP discharge sampling, however, the Water Unit noted that in some areas of NYC this is not possible due to a lack of a combined sewer. Note that I have copied NYCOER above as they may have additional concerns or questions with issuance of a Stipulation Agreement for the site. Thanks and keep me posted." 9/22/14-Vought-Email from OER Chawla that "Jeff and Veronica: Spill on this property was opened on March 24th during remedial investigations. We have draft RIR and RAWP for the above Spill. We will be issuing an application factsheet requesting comments in next 30 days. Remediation for OER purposes at this Site includes: 1. Track 4 remedy that requires excavation and removal of soil/fill exceeding Track 4 Site Specific SCOs. Excavation for construction of the new building's cellar level would take place to a depth of approximately 9 to 12 feet bgs across the Site. A small portion (elevator shaft area) will be further excavated to depths of 15 feet bgs. Approximately 1,500 cubic yards or 2,300 tons of soil will be excavated and removed from this Site. 2. Vapor barrier/waterproofing 3. Concrete Cap. We also have following two bullets for Spill: 1. Performance of a remedial action for the petroleum spill #13-12004 under New York State Department of Environmental Conservation (NYSDEC) Spill program. This remedial action will consist of

Map ID
Direction
Distance
Elevation

Site

Database(s)

EDR ID Number
EPA ID Number

VACANT LOT (FORMER GAS STATION) (Continued)

S116553805

installation and monitoring of groundwater monitoring wells as required and approved by NYSDEC. A separate RAWP addendum will be prepared and submitted to DEC. This RAWP does not alter or interfere with the remedial action for the petroleum spill. 2. Request for closure of onsite petroleum spill number 13-12004 under the authority of NYSDEC pending the results of the investigation and remediation and in accordance with CP-51 soil cleanup objectives. This RAWP does not alter or interfere with the remedial action for the petroleum spill. A separate Spill closure report will be prepared and submitted to NYSDEC. I will send you factsheet later today. Here is link to reports:
<https://www.dropbox.com/sh/f1buqgaauikxhy/AABko6CnPypjJ7Jk92csiJ-ta?dl=0>. Please let me know if you have any concerns. Thanks, Shaminder." Vought added RIR and RAWP to D2 and reviewed: Remedial Investigation Report (GZA Geoenvironmental)-June 2014. Construction site to the north of the site which will be a future hotel. Report prepared for: HSH Construction, LLC. 405 Broadway New York, NY 10013 Site currently used for "storage" and also has a portable construction trailer and a base of former billboard sign and site covered with asphalt and a concrete pad in southern part of site. Future use will be a 11-story mixed use hotel and restaurant space planned for the lower two floors and site plans included in RIR. Basement will be "estimated 6 feet below street grade" with mechanical rooms and storage space and estimated depth of excavation to 7'bg. Report that remote fill ports present in sidewalk for formerly up to seven (550-gallon) gasoline USTs. "...potentially four (4) USTs remain in-place at the Site." RIR refers to same data from 2013 Soil Mechanics Phase II noted in above Remarks. Two additional groundwater samples collected from MW1 and MW2 in May 2014 and showed up to: 170ppb benzene (MW1), 39ppb toluene (MW1), 590ppb ethylbenzene (MW1) and 170ppb xylene (MW1). Groundwater flow direction not determined to date but suspected to the southwest. Soil vapor samples collected showed no detections above the NYSDOH Air Guideline Values. Sensitive receptor survey and no sensitive receptors within 500 feet of site. Site plan also shows "Approximate Holland Tunnel Structure (Below Canal Street) that runs immediately adjacent to and along the site and (PERSONAL THOUGHT) is most likely the dominant influence for groundwater flow direction due to suspected groundwater flow direction. Total square footage will be occupied by future hotel. Proposed site layout included in RIR as well as summary of findings in Phase II in remarks above. "...depth to water measurements as presented in Appendix at MW-1 and MW-2 are not considered reliable by GZA." RIR also included soil, groundwater and soil vapor sampling results in above remarks. Soil vapor sample analyses showed no NYSDOH Guideline Value exceedences. Remedial Action Work Plan (GZA Geoenvironmental)-August 2014. Remedy includes: Preparation of a Community Protection Statement; CAMP; Remedial action for spill number to include installation and monitoring of groundwater monitoring wells as required and approved by NYSDEC and submission of a separate RAWP Addendum; Request for closure for spill number; Track 4 SCOs for VCP; Site mobilization; Excavation of soil fill exceeding Track 4 SCOs; Screening of soil for visual/odor/PID; Removal of closed in place USTs and "associated feed lines (if encountered)"; Collection and analysis of endpoint samples; Installation of vapor barrier and water proofing membrane (Grace PrePrufe) (PERSONAL NOTE: Grace is petroleum compatible as per Voughts work on other spill numbers with same manufacturer and

VACANT LOT (FORMER GAS STATION) (Continued)

S116553805

material). Basement slab to be 2.5 feet thick; Submission of a RAWP and SMP; Continuation of property being registered as NYCDEP E-designated. RAWP has a feasibility study of remedial alternatives. RAWP hot-spots will be "fully removed" and will have separate endpoint samples using DER requirements.10/3/14-Vought-Sent email to OER Chawla that "Shaminder, I am now the Project Manager for the above Spill and have some concerns (minor and major) after review of the RIR and RAWP. They are as follows: 1) Investigation of remote fills via soil borings "outside the northeastern portion of the property" as per Phase I and RIR and not just piping ("as encountered") in RAWP. This is the most important missing part as the RAWP notes that all piping will be removed ("as encountered") so if piping run to remote fill boxes in sidewalk is no longer present, the soil at the remote fills STILL must be investigated and possibly removed if impacted. The majority of petroleum spills is from piping and not the USTs as commonly thought. 2) RAWP comparison to Track 4 (Restricted Commercial) and Spills comparison to Track 1 Unrestricted for possible closure of Spill. This needs no addressing but just an FYI as GZA noted separate RAWP to be submitted to DEC. 3) RAWP notes that the remedial action for Spill to consist of "installation of monitoring wells" where is it primarily composed of excavation of source and impacted materials as well. Needs no formal addressing but just a thought.4) As per Phase I "Client provided Soil Mechanics with paperwork that noted "Receipt, dated November 30, 1990 from T.N.C.C (Jamaica, NY) which states that three (3)550-gallon gas tanks were removed." "Violation Order, dated 9/16/98 regarding the sealing of 7-550-gallon gasoline tanks." Vought spoke with DEC PBS Falvey who noted that USTs must have a Petroleum Bulk Storage Registration. Feel free to send the above directly to GZA if you feel it the best way to open a dialogue. Thanks as always."DEC Possibly Requires:1)cc to NYCOER Chawla, NYCOER Moore, NYCOER Samantha Morris, GZA Bell.2)RAWP comparison to Track 4 (Restricted Commercial) and Spills comparison to Track 1 Unrestricted.3)RAWP notes that remedial action to consist of "installation of monitoring wells" where is is composed of excavation as well.4)Investigation of remote fills via soil borings "outside the northeastern portion of the property" as per Phase I and RIR and not just piping ("as encountered") in RAWP.5)As per Phase I "Client provided Soil Mechanics with paperwork that noted "Receipt, dated November 30, 1990 from T.N.C.C (Jamaica, NY) which states that three (3)550-gallon gas tanks were removed." "Violation Order, dated 9/16/98 regarding the sealing of 7-550-gallon gasoline tanks." Vought spoke with DEC PBS Falvey who noted that USTs must have a Petroleum Bulk Storage Registration.6)Installation of three wells in surrounding sidewalks with determination of site specific groundwater flow, to achieve delineation of documented groundwater contamination (and no plans for dewatering as development not into water table and entire source).7)No determination of groundwater flow due to shallow groundwater at 6-7'g and adjacent Holland Tunnel which most likely dewater and controls flow direction.

Remarks:

Visuable inspection discovered residual petroleum from the ground from potentially UST. Reports available to submit to R2 Spills.

new spill number was called in by a citizen who saw the tanks being pulled (0306088-closed). Sangesland reviewed the PBS status with Jie Zhao who noted that the tanks should be listed at "out of service-removed". The contractor said they would update the PBS records.2/12/04 Tipple updating/// PBS registration update form arrives//given to NL for review/processing.5/5/04 transferred from Tipple to Rommel///product is gasoline06/02/04 transferred to Vought6/10/04-Vought-Spoke to John Bukoski (FPM 631-737-6200) who sent in proposal for installation of four monitoring wells.6/15/04-Vought-Received proposal via fax.6/29/04-Vought-Reviewed proposal from FPM. Property was a gasoline station from 1945 to 1980 and more recently as an auto repair facility. "The building and USTs were recently removed and the site was excavated to approximately 15 feet below grade". Construction of a multi-story residential building is presently underway. Depth to groundwater is approximately 18-20 feet below grade. Proposal for three monitoring wells located adjoining the site and one downgradient well located on the west side of Hudson Street". "An oxygen release material (ORC) was applied to the area of impacted groundwater to promote biodegradation of the remaining petroleum".7/2/04-Vought-Called Stephanie Davis (FPM) and left message to return call with owners contact info to send out STIPULATION AGREEMENT. Vought sent letter to DOB, NYCDOH, DEP, DOP requesting permit cancellation. Vought spoke to Davis (631-737-6200x228). RAP already approved by DEC Tipple including the installation of a sub foundation venting system and vapor barrier. Davis will send copy of UST Closure Report, RAP and previous groundwater analyticals. Foundation has already been poured along with installation of sub foundation venting system. Owner of site is:David T. EnnisDayton Group, Inc.515 Madison AvenueSuite 1201New York, NY 10022Ph: 212-421-3366Fax: 212-421-35357/6/04-Vought-Awaiting UST Closure Report, RAP and groundwater analyticals receipt to ensure correct Corrective Action Plan to be included in Stipulation.7/7/04-Vought-Received copies of RAP dated 10/16/02, PBS registration letter dated 12/19/02, DEC RAP approval letter dated 12/20/02, UST Closure Report dated 3/29/04 and Sub-foundation venting system description dated 7/6/04. Report review:Remedial Action Plan (FPM)-10/16/02. "Soil and groundwater sampling were performed onsite in June 2002". "Two groundwater samples were obtained in the UST area". "It is planned to redevelop this site with a new building, including a sub-grade area extending to approximately 10 to 11 feet below grade". "Based on this scenario it is proposed to removal all of the tanks and excavate and dispose of all petroleum impacted soil at the site to an approximate depth of at least 10 to 11 feet below grade during site redevelopment." "Following the completion of excavation in each area of the site, end point samples will be collected and analyzed to document the completeness of remediation". "It is anticipated that the limited area of moderately impacted groundwater encountered in the vicinity for the UST area will naturally attenuate". "Therefore no groundwater remediation is proposed at this time". Soil analyticals show 230000ppb ethylbenzene(SB1 16-18'), 700000ppb toluene(SB1 16-18'), 12000000ppb xylene(SB 16-18') and 3600ppb xylene(SB8 7-8'). Groundwater analyticals show 7ppb benzene(SB1), 370ppb ethylbenzene(SB1), 3100ppb toluene(SB1), 590ppb MTBE(SB1), 10ppb benzene(SB6), 110ppb MTBE(SB6) and 47ppb toluene(SB6).Letter from FPM Davis to DEC Tipple-12/19/02. "Enclosed please find a copy of the completed Petroleum Bulk Storage

Application...". "As per our meeting on 12/29/02, we understand that the procedures discussed in the RAP were acceptable with some additions (additional downgradient groundwater sampling, pumping of impacted groundwater from excavation and/or addition of ORC to the completed excavation before backfilling if necessary and installation of a vapor barrier and a passive venting system for the proposed building)." "We are requesting that you issue a short letter approving the RAP with the agreed-upon changes". Letter from DEC Tipple to FPM Davis-12/20/02. "the DEC hereby approves FPM's recommendations for the remedial activities proposed for this site. The specific work to be performed will include: 1)the removal and proper disposal and documentation of petroleum contaminated soils 2)Downgradient groundwater sampling and remedial activities if NYSDEC deems it necessary 3)endpoint soil samples will be taken proximal to the tank removals as determined by NYSDEC Spots Memo 14 4)engineering controls will be implemented as per the December 2002 correspondence."Underground Storage Tank Removal, Remedial Activities and Site Assessment (FPM)-3/10/04. "Only nine storage tanks were found to be present at the site during redevelopment". Tanks found were three (275-gallon) waste oil USTs, four (550-gallon) gasoline USTs and two (2000-gallon) gasoline USTs. "Excavation was performed to a depth of approximately 14 feet below sigrade over the entire site". "...petroleum impacted soils were present in the vicinity of the former AST vault and the gasoline UST area. "...impacted soils were not observed in the 275-gallon waste oil UST area". A total of 2306.08 tons of soil were excavated and removed from site. Nine endpoint soil samples were collected including (EP1 through EP7 collected from the floor of the excavation at a depth of 14.5' below grade),(SW1 and SW2 were collected from the approximate depth of the former gasoline USTs (7' below grade) through accessible areas of the excavation shoring). Two groundwater samples were obtained downgradient of the former gasoline USTs. Groundwater at depth of 20' below grade. "An ORC was applied to the area of impacted groundwater to promote biodegradation of the remaining petroleum". Engineering controls will include "a high density polyethylene vapor barrier to be installed beneath the basement floor above a passive venting system such that potential vapors that might otherwise infiltrate the newly constructed building can be captured and directed to roof top stack for discharge. Periodic monitoring of this stack will be conducted once the building is completed. The monitoring results will be reported to the NYSDEC and spill closure will be requested if the monitoring results indicate that the remaining impact is negligible or non existent". "FPM does not recommend further groundwater investigation..." Soil analyticals show 1270ppb xylene(EP1), 1337ppb xylene(EP7) and minor PAH exceedences in EP7 and SW2. Groundwater analyticals show 380ppb benzene(GW1), 12000ppb ethylbenzene(GW1), 70000ppb toluene(GW1), 67000ppb xylene(GW1), 4700ppb ethylbenzene(GW2), 68000ppb toluene(GW2), 28400ppb xylene(GW2). Letter from FPM Davis to DEC Vought-6/6/04. "Please find copies of the following..." including RAP, 12/19/02 letter, 12/20/02 letter and 3/10/04 report.7/8/04-Vought-Sent out STIPULATION Agreement to Ennis with due date of 8/9/04 including requirement of surrounding area property usage. Vought called Ennis (212-421-3535) and left message.7/9/04-Vought-Site visit by Vought. John Bukoski on site. Three wells adjacent to site installed. Delineation well across Hudson not possible due to basement under sidewalk. Highest PID reading found in three wells was 67ppm. No free product or sheen on

MAP FINDINGS

48 LAIGHT STREET (Continued)

water. Sub-foundation venting pipe in place. Soil sampled will be deepest dry sample and/or sample with highest PID. Additional delineation will be pending upon analysis of groundwater samples from new wells and determination of flow direction. 7/23/04-Vought-Spoke to Ennis and he referred the Stipulation to his attorney. Ennis requested Stipulation extension until groundwater analyticals are received so determination can be made between STIP or BCP. 9/20/04-Vought-Called FPM Davis for update on further action and left message to return call to DEC. 10/8/04-Vought-Reveiwed letter from FPM (Stephanie Davis 631-737-6200)dated 8/2/04 and received on 8/5/04. "...the owner of the above referenced property does not plan to sign the Stipulation ..." The reasons are as follows: 1)"work is proceeding at the property in accordance with the October 16, 2002 Remedial Action Plan". Work has included tank removal, impacted soil removal, ORC application, soil and groundwater sampling, installation of a vapor protection system in new building and well installation 2)reduction in groundwater concentrations. Groundwater results and recommendations for additional delineation "will be transmitted to you shortly" (within "approximately two weeks"). 12/16/04-Vought-Reviewed well installation report received on 10/27/04 from FPM and dated 10/25/04. Installation of three monitoring wells. Exit for Holland Tunnel and a New York City Park are located to the south of the site. Multi-story commercial/residential buildings are located to the west north and east of the site. Site was excavated to a depth of 15' below grade. "A vapor barrier was installed beneath the entire concrete pad and a perforated PVC piping system was installed beneath the southern portion of concrete pad to allow any built up vapors to vent to the exterior of the building". With regards to contaminated soil under sidewalk "Although this soil is located on the edge of the property, it was not within the excavation area and was not readily accessible for removal during the excavation process". The site specific groundwater flow direction appears to be west-southwest". "Based on a comparison between the November 2003 and July 2004 groundwater analytical data, total VOC concentrations in the groundwater at the site have significantly decreased". A qualitative exposure assessment has been performed for the facility. FPM recommends the following: instillation of one well north of MW1, south of MW2, groundwater flow direction confirmation, and injection of ORC with semi annual groundwater monitoring. Soil analyticals show: 2800ppb xylene (MW1 15'bg), 91000ppb toluene(MW2 16'bg), 41000ppb ethylbenzene(MW2 16'bg), 226000ppb xylene(MW2 16'bg), 140ppb benzene(MW3 15'bg), 35000ppb (MW3 15'bg), 20000ppb ethylbenzene(MW3 15'bg), 96000ppb xylene(MW3 15'bg). Groundwater analyticals show:160ppb benzene(MW1), 31000ppb toluene(MW1), 3100ppb ethylbenzene(MW1), 21100ppb xylene(MW1), 7700ppb toluene(MW2), 960ppb ethylbenzene(MW2), 5300ppb xylene(MW2), 32ppb toluene(MW3) and 24ppb xylene(MW3). DEC approves installation of additional wells and requires: 1)signing of Stipulation Agreement 2)remediation plan to address both soil and groundwater contamination 3)complete delineation prior to submittal of remedial action plan 4)quarterly groundwater monitoring 5)MTBE to be included in analysis. 11/8/05 - Obligado - Review letter from FPM Group. Offsite well not possible due to subsurface obstructions beneath sidewalk on Hudson and Laight street. ORC injection Design and GW monitoirng plan submitted. 6200 lbs of ORC to be injected into mw1, mw2, and mw4. Planned to inject wells on several occasions. Groundwater monitoring will be semianual in injection wells,

S106008427

quarterly in noninjection wells and will consist of low flow sampling for NA parameters BTEX and MTBE. DEC Requires: 1) Quarterly monitoring of all wells 2) Expanded surrounding area land use map showing utilities 3) STIP is overdue. 2/3/06 - Obligado - Email from Bukowski (FPM) "I will be sending out the groundwater monitoring/receptor survey report for 48 Laight Street (spill 0207349) early next week. In the report will be revised calculations for injection of ORC into the wells, that is anticipated to be performed in late February or early March." 3/27/06 - Obligado - Received well installation and quarterly sampling report. total VOC concentrations have decreased in monitoring wells MW1 (16700 down to 2202 ppb) and MW2 (61930 ppb down to 11830 ppb). Newly installed wells MW4 and MW5. MW4 had 1861 VOCs and MW5 below guidance values. Based on results adjusted pln to inject 150 lbs of ORC into MW1, MW2, and MW4. 6/30/06 - Obligado - Email from Bukowski, will inject ORC on July 13, 2006. 7/12/06 - Obligado - Email from Bukowski, ORC injection will occur tomorrow. 5/10/07 - Obligado - Email to Bukowski, request monitoring reports. 10/29/07 - Obligado - Called John Bukowski inquiring about monitoring report and site status. He said there is a dewatering construction project across the street. All of their wells are dry due to the lowering of the watertable. They have only have one quarter of post injection monitoring data - 1Q07. I asked him to send a letter report with monitoring results and documenting site activities. 1/11/08 - Obligado - Received update report from FPM Group, dated December 11, 2007. ORC was injected on July 13, 2006 in MW1, MW2, and MW4. 33 lbs of ORC mixed with water and injected into formation. Ground water monitoring on a semiannual basis. Total VOCs in MW1 decreased from 16770 in July 04 to 8180 ug/L in June 07. MW2 VOCs have decreased from 61,930 ug/L in July 04 to 3,489 ug/L in June 07. MW4 VOCs decreased from 1861 ug/L in November 05 to 211 ug/L in June 07. In July 2007, FPM monitored gw elevations and found wells MW1 through MW4 to be dry. There is a construction project across the street to the south. This work may be related to the Hollan Tunnel. Dewatering associated with this project may have lowered water tables to below well screens in the FPM site. The sub-slab system was monitored for vapors on March 14, 2007 and a sample was collected from the effluent stack. BTEX and MTBE ND <0.5 ppb in effluent. FPM will continue to monitor sub-slab system effluent. 4/1/09 - Obligado - I have not received any monitoring reports for this site. I called John Bukowski to find out the status of the monitoring. According to Mr. Bukowski, they presented a proposal to the client but the client declined the offer so no work was performed. 4/2/09 - Obligado - I sent David T. Ennis (Daten Group) a Stipulation Agreement requiring continued investigation and remediation. Required Stipulation to be signed within 15 days of the case would be referred to Legal. 4/6/09 - Obligado - Delivery confirmation. STIP due 4/21/09. 5/4/09 - Obligado - No STIP received. I called Mr. Ennis to inquire about the Stipulation Agreement. I left a message to call back the DEC. 7/2/09 - FPM submits monitoring report. Report confirms GW returned to normal levels in wells. GW contamination is still present. Some of wells have been silted up with several feet of material, possibly a build-up of ORC in wells. 9/14/09 - Obligado - Reviewed Monitoring report, dated 7/2/09. Report documents ground water sampling results. VOCs still present in excess of ground water quality standards. Sent a letter to David Ennis requiring quarterly monitoring, vapor intrusion mitigation details, additional soil and ground water investigation. CC John Bukowski and David Ennis via email. An

Investigation Work Plan is due 30 days from receipt. A quarterly Monitoring Report is due within 90 days. 10/14/09 - Obligado - I received the letter "returned undelivered". Emailed David Ennis requiring updated contact information. 11/30/09 - Obligado - REsent letter to 515 Madison Avenue Address. 12/3/09 - Obligado - Received a phone call from Stephanie Davis at FPM. She said Mr. Ennis is willing and able to perform annual ground water monitoring, redevelop the wells, and provide the documentation of the SSDS and vapor barrier. Mr. Ennis will not install additional soil borings and monitoring wells and will not perform quarterly monitoring. I told Stephanie I would discuss the Legal division. 12/18/09 - Obligado - I sent an email to Stephanie Davis re-iterating Department requirements from the 11/30/09 letter. 1/19/10 - I reviewed a workplan submitted 1/15/10 which did not meet Department requirements. They propose doing annual ground water monitoring and application of ORC socks in contaminated wells. They also propose to do well re-development and provide hydrographs, contour maps, and SSDS/Vapor Barrier. However, they refuse to do quarterly monitoring and any additional soil borings and monitoring wells. I emailed Stephanie Davis to notify her that this case would be referred to legal.

Remarks: soil samples came back after testing was done

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Registry ID: 110019792946

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Site Description: Location: The 261 Hudson Street Development site is located on the west side of Manhattan in the Hudson Square section of the city. The site is bounded by commercial properties and Spring Street to the north, Hudson Street to the east, commercial/residential properties and Canal Street to the south, and Renwick Street to the west. Site Features: The site is formally identified as 261 Hudson Street, Block 594, Lot 87. Lot 87 encompasses approximately 0.61 acres of property. On April 18, 2013, the NYC Department of Finance approved an application for a lot merger to consolidate lots 61, 69 and 94 into lot 87. Thus, the site (lot 87) includes parcels that which had been until recently, four separate properties. The current status of the site and former parcels is as follows: Lot 87 (80% of site) includes a one story vacant building; lot 61 (1%) is vacant property; lot 69 (11%) includes a vacant three story building and lot 94 (9%) is a parking lot. The Manhattan bound tube of the Holland Tunnel, running northwest-southeast in the area is just north of the site. The tunnel exit is one block east of the site. The Hudson River is located approximately 0.2 miles west of the site. Current Zoning and Land Use: The site is zoned C6-2A for commercial use, which has a residential equivalent of R8A. The block was included as part of the recent Hudson Square District rezoning. The intended use of the site is for commercial and restricted residential Use. Past Use of the Site: Lot 69 (northwestern portion of the property) was used for unspecified manufacturing in 1950 and commercial/office space from 1968-2011. Lot 87 (central portion of the property) was occupied from 1950 through 1968 by a motor freight station which reportedly had two underground storage tanks for gasoline. From 1976 to 2005 the building was used as a NYC Waterfront Community Hiring Hall and was most recently used as event space up until 2012. Lot 94 (southern portion of the property) has been vacant since 1950 and is currently a parking lot. Prior to 1950, this lot was occupied by a multi-story residential building with ground-level stores. Lot 61 has always been vacant. Site Geology and Hydrogeology: The ground level elevation on the property ranges from approximately 13 to 15 feet above mean sea level. The topography of the site and the surrounding area slopes gently to the west towards the Hudson River. The site is underlain by a layer of historic fill that is approximately 7 to 19 feet thick starting just below the ground and pavement surface. The historic fill generally consists of fine to coarse brown sand with some silt,

LOT 87,TAXBLOCK 594 (Continued)

S108075457

gravel, brick, wood, asphalt, and concrete. The native soils below the historic fill consist of reddish brown sand with some silt and clay. The average depth to groundwater is 13.7 feet below ground surface (bgs), with the range in depth from 11.8 feet to 16.4 feet. Groundwater flow is from the southeast to northwest towards the Hudson River. Milestones: 10/3/13 - DEC signed the Brownfield Cleanup Program Acceptance Letter for this site. 11/6/13 - Brownfield Cleanup Agreement executed. 11/25/13 - The Remedial Action Work Plan was approved and the Decision Document was signed. 01/06/14 - Cleanup action anticipated to begin.

Env Problem: Nature and Extent of Contamination: Soil - A total of 20 subsurface soil samples were collected at the site. Fourteen of these samples were of the historic fill materials at various depths and six were of the native soils beneath. The fill materials are impacted above both the Part 375 unrestricted and restricted residential use SCOs for PAHs and selected metals. PAHs in the historic fill were found at concentrations up to approximately 400 times the cleanup standards (benzo[a]pyrene at 390 ppm) and lead was found above the cleanup standards (400 ppm) at 2,650 ppm. The native soils below the fill are generally not impacted. Groundwater - PCE is found in groundwater at one monitoring well location in the north central end of the property. The 9.7 ppb concentration of PCE in this well is only marginally above the groundwater standard of 5.0 ppb. Filtered samples of groundwater exceeded SCGs for the common salts, sodium, manganese and magnesium as well as for iron and selenium. Soil Vapor - Soil vapor on the property was found to be impacted by chlorinated solvents at all five locations sampled. PCE was detected at all locations in the range of 20 to 120 ug/cubic meter. TCE was detected at four of the five locations in the range of 28 to 63 ug/cubic meter. Not reported

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. The site is fenced and mostly covered by asphalt or concrete, therefore it is unlikely that people will come into contact with contaminated soil. However, persons who enter the site could contact contaminants in the soil by walking on or otherwise disturbing exposed soil, or by digging beneath the surface. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur on and off-site needs to be evaluated.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

- . Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

- . Waste code: U226
- . Waste name: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Facility Has Received Notices of Violations:

- Regulation violated: Not reported
- Area of violation: Generators - General
- Date violation determined: 11/15/1993
- Date achieved compliance: 12/28/1993
- Violation lead agency: EPA
- Enforcement action: WRITTEN INFORMAL
- Enforcement action date: 11/29/1993
- Enf. disposition status: Not reported
- Enf. disp. status date: Not reported
- Enforcement lead agency: EPA
- Proposed penalty amount: Not reported
- Final penalty amount: Not reported
- Paid penalty amount: Not reported

Evaluation Action Summary:

- Evaluation date: 06/24/1996
- Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
- Area of violation: Not reported
- Date achieved compliance: Not reported
- Evaluation lead agency: State

- Evaluation date: 07/01/1993
- Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
- Area of violation: Generators - General
- Date achieved compliance: 12/28/1993
- Evaluation lead agency: EPA Contractor/Grantee

FINDS:

Registry ID: 110009476664

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110055267385

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
