CERTIFICATION

I, Jason Hayes, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 440 Washington Avenue site, (NYC VCP Site No. #16CVCP003M). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

JASON HAYES	9/18/2015	
Qualified Environmental Professional	Date	Signature

EXECUTIVE SUMMARY

This Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The site is located at 440 Washington Street in the Tribeca neighborhood in Manhattan, New York, and is identified as Block 223, and portions of Lots 13 and 15 on the NYC Tax Map. Figure 1 shows the site location. The site is 8,065 square feet and is bounded by Desbrosses Street followed by a newly constructed multi-story mixed use (residential and commercial) building to the north; a four-story mixed use (residential and commercial) building to the south; Washington Street followed by four multi-story mixed use (residential and commercial) buildings and a three-story industrial and manufacturing building to the east; and a construction site for the 268 West Street development project to the west. The site is currently vacant and used for temporary parking and materials and equipment staging for the adjacent 268 West Street construction project. The site is covered by a concrete slab (former building foundation) with the exception of the northern portion of Lot 13, which contains a former cellar filled in with demolition debris.

Summary of Proposed Development Plan

The proposed development project consists of an 11-story mixed-use commercial and residential building with a partial cellar, ground level parking, and restaurant space. Excavation across the northern portion of the site (approximately 50% of the site) is anticipated to extend to approximately 15 feet below grade surface (bgs) to accommodate the partial basement. The basement will be used as commercial storage space and amenity spaces (including a gymnasium). Excavation of up to five feet bgs will be required to accommodate foundation elements and utilities across the remainder of the site, which will be a slab on-grade foundation. The ground floor will contain a parking lot for eight cars, a lobby, and a restaurant. The remaining floors will be used for residential apartments, with a community room on the 10^{th} floor. The 11^{th} floor will consist of a roof bulkhead. Excavation of about 2,100 cubic yards (cy) of soil, accompanied by dewatering, is anticipated to facilitate construction.

The site's current zoning designation is C6-2A, which is a contextual commercial district with a maximum building height. A C6-2A district permits both commercial and residential use. The proposed development plans are consistent with the current zoning designation of the site.

Summary of Past Uses of Site and Areas of Concern

Past uses of the site are based on review of Sanborn Maps, Building Department records and City Directories and are documented in Langan's May 27, 2015 Remedial Investigation Work Plan (RIWP).

The following is a summary of past uses of the site:

Lot 13

- A mahogany and veneer yard, a residence, store, and office (1894-1905)
- A chemical works (1920)
- A drug company (1927)
- A dowel company (1927)
- A chemical manufacturer and a wood products warehouse (1950-1977)
- A garage and a five-story residential building (1968-2005)

Lot 15

- A mahogany and veneer yard (1894-1905)
- A garage with two gasoline tanks (1950-1968)
- A building of unidentified use (1976-2005)
- A parking company (2013)

The Areas of Concern (AOC) identified for the site include:

1. Historical Site Use: Historical uses of the site include a mahogany and veneer yard (1894-1905), a chemical works (1920), a drug company (1927), a dowel company (1927), a chemical manufacturer and a wood products warehouse (1950-1977), and garages with gasoline tanks (1950-2005). Leaks or spills of petroleum products, solvents, and/or hazardous materials resulting from these uses may have adversely impacted soil, groundwater and/or soil vapor beneath the site.

2. Suspected Underground Storage Tanks (UST): Historical land use (Sanborn) maps from 1950 to 1968 show two gasoline USTs at the eastern site boundary, on Lot 15. Historical releases of gasoline may have impacted soil, soil vapor and/or groundwater at the site.

3. Historical Fill: According to historical geologic maps, the original shoreline of the Hudson River extended further eastward, beyond the site. The shoreline moved westward in

the 1800s, by infilling with imported fill material. Historic fill typically contains contaminants, particularly metals and semivolatile organic compounds (SVOCs), at concentrations that exceed applicable state and/or federal standards and may also contain hazardous concentrations of metals.

4. Lead Hotspot: During the subsurface investigation performed by Langan in April 2015, lead was identified at a concentration of 3,100 milligrams per kilogram (mg/kg) in soil boring SB03 (advanced in the southeastern portion of the site), at a depth of four to five ft bgs.

5. Copper Hotspot: During the subsurface investigation performed by Langan in April 2015, copper was identified at a concentration of 42,000 mg/kg in soil boring SB05 (advanced in the central portion of the site), at a depth of 5 to 6 feet bgs.

Summary of the Work Performed under the Remedial Investigation

Langan performed the following scope of work, which is outlined in the May 27, 2015 RIWP:

1. Site inspection and geophysical survey to identify potential USTs, utilities, and subsurface obstructions that may impede boring advancement;

2. Advancement of 13 soil borings and the collection of 22 soil samples for laboratory analyses, including one duplicate sample;

3. Advancement of eight delineation soil borings at the lead and copper hotspot areas, and the collection of eight delineation soil samples for laboratory analyses;

4. Installation of four permanent groundwater monitoring wells and the collection of five groundwater samples for laboratory analysis, including one duplicate sample;

5. Installation of four soil vapor probes and the collection of five vapor samples for laboratory analysis, including one ambient air sample; and

6. Completion of a well survey to determine groundwater monitoring well elevations and to determine the direction of groundwater flow at the site.

Summary of Environmental Findings

1. Elevation of the property ranges from el. 8.40[1] to el. 9.05 feet.

2. Depth to groundwater ranges from 8.26 feet bgs (el. -0.52) to 9.63 feet bgs (el. -1.4) at the site.

3. Groundwater flow is generally from west to east beneath the site.

4. The stratigraphy of the site, from the surface down, consists of 5 to 13.5 feet of historic fill underlain by native sand, silt, and organic silt. The top of the bedrock surface was observed during a geotechnical investigation at the adjacent property at about 89 feet bgs (about el. -80).

5. The geophysical survey did not identify anomalies consistent with USTs.

6. Soil sample results were compared to the NYSDEC Title 6 New York Codes, Rules and Regulations (NYCRR) Part 375 Unrestricted Use (UU) Soil Cleanup Objectives (SCO) and Restricted Residential Use (RRU) SCOs. Concentrations of nine volatile organic compounds (VOC) exceeded their UU SCOs in seven soil samples collected, including benzene (max concentration 0.33 milligrams per kilogram [mg/kg]), toluene (max concentration 1.6 mg/kg), ethylbenzene (max concentration 6.9 mg/kg), total xylenes (max concentration 36 mg/kg), naphthalene (max concentration 210 mg/kg), n-propylbenzene (max concentration 9.4 mg/kg), 1,3,5-trimethylbenzene (max concentration 30 mg/kg), acetone (max concentration 0.16 mg/kg), and 1,2,4-trimethylbenzene (max concentration 86 mg/kg). Of the nine VOCs whose concentrations exceeded their respective UU SCOs, the concentration of two VOCs, naphthalene and 1,2,4-trimethylbenzene, also exceeded their Part 375 Restricted Use Restricted-Residential Use (RRU) SCOs. Concentrations of 10 SVOCs including fluoranthene (max concentration 300 mg/kg), benzo(a)anthracene (max concentration 130 mg/kg), benzo(a)pyrene (max concentration 100 mg/kg), benzo(b)fluoranthene (max concentration 120 mg/kg), benzo(k)fluoranthene (max concentration 45 mg/kg), chrysene (max concentration 120 mg/kg), phenanthrene (max concentration 350 mg/kg), dibenzo(a,h)anthracene (max concentration 14 mg/kg), indeno(1,2,3-cd)pyrene (max concentration 59 mg/kg in SB06_05-1.0), and pyrene (max concentration 260 mg/kg), exceeded their respective RRU SCOs in six soil samples collected. Metals including arsenic (max concentration 130 mg/kg), cadmium (max concentration 4.8 mg/kg),

[1] All elevations provided throughout this report are referenced to the North American Vertical Datum of 1988 (NAVD88) unless otherwise noted.

copper (max concentration of 42,000 mg/kg), lead (max concentration of 3,100 mg/kg), mercury (max concentration of 1.7 mg/kg), zinc (max concentration of 4,000 mg/kg) exceeded their respective RRU SCOs. Concentrations of three pesticides exceeded their respective UU SCOs in five soil samples collected, including 4-4'-DDE (max concentration of 0.00689 mg/kg), 4,4'-DDD (max concentration of 0.00372 mg/kg), and 4-4'-DDT (max concentration of 0.00486 mg/kg). Concentrations of polychlorinated biphenyls (PCB) and herbicides did not exceed their respective UU and RRU SCOs in any of the soil samples collected during the RI.

7. Groundwater samples were compared to the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards for Class GA groundwater (AWQS). Concentrations of six SVOCs exceeded NYSDEC TOGS AWQS GA standards including chrysene (max concentration of 0.25 micrograms per liter [µg/L]), benzo(a)anthracene (max concentration of 0.26 µg/L), benzo(a)pyrene (max concentration of 0.28 µg/L), benzo(b)fluoranthene (max concentration of 0.3 µg/L), benzo(k)fluoranthene (max concentration of 0.12 µg/L), indeno(1,2,3-cd)pyrene (max concentration of 0.15 µg/L). Dissolved concentrations of four metals exceeded their respective NYSDEC TOGS AWQS GA standards including iron (max concentration of 8,630 µg/L), magnesium (max concentration of 179,000 µg/L), manganese (max concentration of 3,861 µg/L), sodium (max concentration of 641,000 µg/L). VOCs, PCBs, and pesticides were not identified at concentrations exceeding their respective TOGS AWQS in the RI groundwater samples.

8. Soil vapor sample results were compared to the decision matrices established by the NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006. Carbon tetrachloride and trichloroethylene were not detected in any of the soil vapor samples collected during the RI. Based on the concentrations of 1,1,1-trichloroethane (max concentration of 1.64 micrograms per cubic meter [µg/m^3]), and tetrachloroethene (PCE, maximum concentration of 25.1 µg/m^3), the decision matrices recommend a range from "no further action" to "take reasonable and practical actions to identify sources and reduce exposures" to these compounds. However, a complete comparison cannot be made to the matrix considering there are no structures on the site and indoor air samples cannot be collected. Concentrations of total benzene, ethylbenzene, toluene, and xylene (BTEX) detected in soil vapor samples ranged from 20.23 to 166.44 µg/m^3. The highest reported concentrations were for isopropanol (489 µg/m^3), ethanol (431 µg/m^3), and acetone (228 µg/m^3). These compounds are common cleaning agents for laboratory equipment, and their reported concentration is likely attributed to laboratory interference.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

270 West Street, LLC has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate an 8,065 square foot site located in the Tribeca neighborhood of the Borough of Manhattan, New York. The proposed development consists of the construction of an 11-story mixed-use (commercial and residential) building.

The remedial investigation (RI) work was performed between April 28, 2015 and June 3, 2015. This remedial investigation report (RIR) summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The site is located at 440 Washington Street in the Tribeca neighborhood in Manhattan, New York, and is identified as Block 223, and portions of Lots 13 and 15 on the NYC Tax Map. Figure 1 shows the site location. The site is 8,065 square feet and is bounded by Desbrosses Street followed by a newly constructed multi-story mixed-use (residential and commercial) building to the north; a four-story mixed-use (residential and commercial) building to the south; Washington Street followed by four multi-story mixed-use (residential and commercial) buildings and a three-story industrial and manufacturing building to the east; and a construction site for the 268 West Street development project to the west. A map of the site boundary is shown in Figure 2. The site is currently vacant and used for temporary parking and materials and equipment staging for the adjacent 268 West Street construction project. The site is covered by a concrete slab (former building foundation) with the exception of the northern portion of Lot 13, which contains a former cellar filled in with demolition debris.

1.2 Proposed Redevelopment Plan

The proposed development project consists of an 11-story mixed-use commercial and residential building with a partial cellar, ground level parking, and restaurant space. Excavation across the northern portion of the site (approximately 50% of the site) is anticipated to extend to approximately 15 feet below grade surface (bgs) to accommodate the partial basement. The basement will be used as commercial storage space and amenity spaces (including a gymnasium). Excavation of up to five feet bgs will be required to accommodate foundation elements and utilities across the remainder of the site, which will be a slab on-grade foundation. The ground floor will contain a parking lot for eight cars, a lobby, and a restaurant. The remaining floors will be used for residential apartments, with a community room on the

10th floor. The 11th floor will consist of a roof bulkhead. Excavation of about 2,100 cubic yards (cy) of soil, accompanied by dewatering, is anticipated to facilitate construction. The proposed development plans are included as Appendix A.

The site's current zoning designation is C6-2A, which is a contextual commercial district with a maximum building height. A C6-2A district permits both commercial and residential use. The proposed development plans are consistent with the current zoning designation of the site.

1.3 Description of Surrounding Property

The site is located in an area characterized by multi-story, residential, and commercial buildings in a zoning district designated for mixed commercial, residential and manufacturing uses. The site is bounded by Desbrosses Street followed by a newly constructed multi-story mixed use (residential and commercial) building to the north, a four-story, mixed use (residential and commercial) building to the south, Washington Street followed by four multi-story mixed use (residential and commercial) buildings and a 3-story industrial and manufacturing building to the east, and a construction site for the 268 West Street development project to the west. Adjacent and surrounding property uses are summarized in the table below.

DIRECTION	ADJOINING PROPERTIES	SURROUNDING PROPERTIES
North	Desbrosses Street, followed by a multi-story commercial and residential building with Fika Espresso and Wine on the 1st floor	Multi-story mixed us (residential and commercial) buildings and a construction site
East	Washington Street followed by four multi-story mixed use (residential and commercial) buildings and one three-story industrial and manufacturing building	Multi-story residential buildings, a parking lot and auto-repair
South	A four-story mixed use (residential and commercial) building	Vestry Street, Multi-story mixed use (residential and commercial) buildings
West	268 West Street development construction project	West Street, Hudson River Greenway and Hudson River Park

There are no schools, day care facilities or hospitals within 500 feet of the site. A surrounding land use map is presented as Figure 3.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Past uses of the site are based on review of Sanborn Maps, Building Department records and City Directories and are documented in Langan's May 27, 2015 Remedial Investigation Work Plan (RIWP).

The following is a summary of past uses of the site:

Lot 13

- A mahogany and veneer yard, a residence, store, and office (1894-1905)
- A chemical works (1920)
- A drug company (1927)
- A dowel company (1927)
- A chemical manufacturer and a wood products warehouse (1950-1977)
- A garage and a five-story residential building (1968-2005)

Lot 15

- A mahogany and veneer yard (1894-1905)
- A garage with two gasoline tanks (1950-1968)
- A building of unidentified use (1976-2005)
- A parking company (2013)

2.2 Previous Investigations

A due diligence review and subsurface investigation were conducted on April 28, 2015. The subsurface investigation consisted of a geophysical survey, installation of nine soil borings and collection of 12 soil samples. Laboratory analysis of soil samples identified semivolatile organic compounds (SVOC) and metals at concentrations exceeding their respective Title 6 of the New York Codes, Rules and Regulations (6 NYCRR) Part 375 Restricted Residential Use (RRU) criteria. The geophysical survey did not confirm the presence of underground storage tanks (UST) at the site. Details and findings from this investigation are incorporated into this RIR. The May 7, 2015 geophysical investigation report is provided as Appendix B.

2.3 Site Inspection

A site inspection was performed by Langan on April 28, 2015. At the time of the inspection, both lots were vacant and being used for temporary parking and materials and equipment staging for the adjacent 268 West Street construction project. The site is covered by a concrete slab (former building foundation) with the exception of the northern portion of Lot 13, which contains a former cellar filled in with demolition debris. A wooden construction fence surrounds the site, which was accessible through a locked gate along Washington Street. Evidence of a material release was not observed during the site inspection.

Adjoining and surrounding properties include multi-story residential and commercial buildings, a parking garage, and two active construction sites located on the western and northeastern adjoining properties. A fill port was observed along the sidewalk, in front of the western adjoining property.

2.4 Areas of Concern (AOC)

The Areas of Concern (AOC) identified for the site include:

1. Historical Site Use: Historical uses of the site include a mahogany and veneer yard (1894-1905), a chemical works (1920), a drug company (1927), a dowel company (1927), a chemical manufacturer and a wood products warehouse (1950-1977), and garages with gasoline tanks (1950-2005). Leaks or spills of petroleum products, solvents, and/or hazardous materials resulting from these uses may have adversely impacted soil, groundwater and/or soil vapor beneath the site.

2. Suspected Underground Storage Tanks (UST): Historical land use (Sanborn) maps from 1950 to 1968 show two gasoline USTs at the eastern site boundary, on Lot 15. Historical releases of gasoline may have impacted soil, soil vapor and/or groundwater at the site.

3. Historical Fill: According to historical geologic maps, the original shoreline of the Hudson River extended further eastward, beyond the site. The shoreline moved westward in the 1800s, by infilling with imported fill material. Historic fill typically contains contaminants, particularly metals and semi-volatile organic compounds (SVOCs), at concentrations that exceed applicable state and/or federal standards and may also contain hazardous concentrations of metals.

4. Lead Hotspot: During the subsurface investigation performed by Langan in April 2015, lead was identified at a concentration of 3,100 milligrams per kilogram (mg/kg) in soil boring SB03 (advanced in the southeastern portion of the site), at a depth of four to five ft bgs.

5. Copper Hotspot: During the subsurface investigation performed by Langan in April 2015, copper was identified at a concentration of 42,000 mg/kg in soil boring SB05 (advanced in the central portion of the site), at a depth of 5 to 6 feet bgs.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Jason Hayes, P.E.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including site and Occupational Health and Safety Administration (OSHA) worker safety requirements and Hazardous Waste Operation and Emergency Response (HAZWOPER) requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations. Except in the instances when gross contamination was observed, clean soil cuttings were backfilled into soil boreholes. Excess purge water generated during the RI was containerized in two steel, Department of Transportation (DOT)-approved, 55-gallon drums. The drums were transported off-site by Aarco Environmental Services Corp. (Aarco) of Lindenhurst, New York, and disposed of at Advanced Waste & Water Technology, Inc. of Farmingdale, New York on June 10, 2015.

.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Langan performed the following scope of work, which is outlined in a Remedial Investigation Work Plan (RIWP), prepared by Langan and dated May 27, 2015:

1. Site inspection and geophysical survey to identify potential USTs, utilities, and subsurface obstructions that may impede boring advancement;

2. Advancement of 13 soil borings and collection of 22 additional soil samples for laboratory analyses, including one duplicate sample.

3. Advancement of eight delineation soil borings in the lead and copper hotspots, and the collection of 8 delineation soil samples for laboratory analyses.

4. Installation of four permanent groundwater monitoring wells and the collection of five groundwater samples for laboratory analysis, including one duplicate sample;

5. Installation of four soil vapor probes and the collection of five vapor samples for laboratory analysis, including one ambient air sample; and

6. A well survey to determine groundwater monitoring well elevations and to determine the direction of groundwater flow at the site.

The RIWP is provided as Appendix C.

4.1 Geophysical Investigation

A geophysical survey was completed by NOVA Geophysical & Environmental, Inc. (NOVA) on April 28, 2015. NOVA completed the geophysical survey using ground penetrating radar (GPR), electromagnetic detectors, and comprehensive subsurface utility locators to locate and identify current and former utility lines, anomalies, USTs, and other subsurface structures, and to clear proposed boring locations. The survey did not identify anomalies consistent with USTs. Borings were relocated as necessary to avoid subsurface utilities and minor anomalies. The geophysical survey is included as Appendix B.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

Warren George, Inc. (WGI) of Jersey City, New Jersey completed nine preliminary RI borings on April 28 and 29, 2015 using an Acker truck-mounted drilling rig with split spoon attachment and a hand auger. Borings were advanced by WGI to depths ranging from 1.5 to 16 feet bgs. AARCO Environmental Services (ARRCO) completed the remaining RI borings on June 1 and 2,

2015 using a 730 DT Geoprobe® direct-push drill rig, to depths ranging from 5 to 15 feet bgs. engineer was on-site to observe all drilling activities. Soil boring locations are shown on Figures 4 and 5.

Soil samples were collected continuously to the completion depth of each boring. Two-foot spilt spoons were used for sample collection when drilling with the Acker truck-mounted drilling rig, and four-foot macrocore® sample barrels with dedicated acetate liners were used for sample collection when drilling with the 7730 DT Geoprobe® drill rig. Soil samples were inspected for visual and olfactory evidence of contamination and screened for organic vapors with a photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp. Soil boring logs are provided as Appendix D.

Groundwater Monitoring Well Construction

Four soil borings (SB10/MW1, SB11/MW2, SB/12/MW3, and SB13/MW4) were completed as permanent groundwater monitoring wells. Based on observed soil saturation depths, well screens were installed to straddle the groundwater table, which was encountered at depths of about 8 to 13 ft bgs. All four of the permanent monitoring wells were constructed with 1.5-inch inner diameter by 2.5-inch outer diameter pre-packed well screens with attached solid riser pipe. Clean sand was used to fill the remaining void between the pre-packed well screen and the borehole, to approximately 2 feet above the top of the screened interval. A minimum three feet of hydrated bentonite clay was placed above the screen to seal the wells. Permanent wells were developed by purging a minimum of three well volumes using a down-hole pump. Monitoring well locations are shown on Figure 6 and monitoring well construction details are summarized in Table 1 and Appendix E.

Soil Vapor Sample Point Construction

Four soil vapor points (SV01 through SV01) were installed during the RI. At each sample location, a soil vapor implant attached to dedicated polyethylene tubing was inserted into each boring. The annulus around the probe and tubing was filled with clean sand to a minimum depth of approximately one foot above the probe. Bentonite was then used to seal the top of the boring. Soil vapor sampling locations are shown in Figure 7 and soil vapor sampling logs are provided as Appendix F.

Permanent Groundwater Monitoring Well Survey and Water Level Measurement

Groundwater monitoring well locations and elevations were surveyed by a NYS licensed surveyor on June 15, 2015. Together with the synoptic groundwater level measurements collected on June 3, 2015, well locations and elevations were used to determine the groundwater flow direction at the site. A groundwater elevation summary is provided in Table 2 and a contour map showing groundwater flow direction is provided as Figure 8.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all AOCs, and considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, and other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

A total of 30 soil samples, including one duplicate sample, were collected for laboratory analysis during the RI. Generally one sample was collected from each boring at the interval exhibiting the greatest visual, olfactory or instrumental (PID) indication of impacts; however, additional samples were collected from borings (SB30 and SB08) where impacts were observed at multiple intervals.

Up to two soil samples were collected from each soil boring for laboratory analysis during the second phase of the RI. For borings located within the cellar footprint of the proposed building (SB-12, SB-13), samples were collected from 1) the upper two feet of soil beneath the existing concrete cover, and 2) the interval just below the proposed development depth, which is about 10 to 12 feet bgs. For borings located within the proposed on-grade construction (SB-10, SB-11), samples were collected from 1) the upper two feet of soil, and 2) from the interval directly above the groundwater table.

During the preliminary subsurface investigation, a lead hotspot was encountered at the location of soil boring SB03, at a depth of four to five feet bgs, and a copper hotspot was encountered at the location of soil boring SB05 at a depth of five to six feet bgs. To delineate each hotspot area, a total of four soil samples were collected from each area. Hotspot areas were delineated vertically by collecting one sample at the original boring location, from a depth of about two to three feet below the original sample interval. Hotspot areas were delineated horizontally by advancing a delineation boring about five feet to the north, southeast, and southwest of the original boring locations and collecting a sample at the corresponding depth interval. Due to detectable odors and PID readings above background, an additional sample was collected from SB03N, and analyzed for the full suite of parameters.

All soil samples were collected into pre-cleaned, laboratory-supplied sampling containers, labeled, and placed into laboratory-supplied coolers with ice to preserve the samples. In

addition, a field blank and two trip blanks were collected and placed into laboratory-supplied coolers with ice to preserve the samples. Coolers were retrieved at the end of each day by a laboratory courier and transported under standard chain-of-custody protocol to Alpha Analytical, Inc. (Alpha), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory.

Soil samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOC) via US Environmental Protection Agency (USEPA) Method 8260C, TCL SVOCs via EPA Method 8270D, Target Analyte List (TAL) metals via EPA 6000/7000 Series methods, polychlorinated biphenyls (PCB) via EPA Method 8082A, pesticides via EPA Method 8081B. In addition, chlorinated herbicides were analyzed for select samples via EPA Method 8151A.

Soil samples collected from delineation borings were analyzed for the corresponding total metal (i.e., lead for the SB03 hotspot and copper for SB05 hotspot). Additionally, delineation samples associated with SBO3 were analyzed for Toxicity Characteristic Leaching Procedure (TCLP) lead. Due to detectable odors and PID readings above background in SB03N from 3 to 4 feet bgs, an additional sample was collected and analyzed for VOCs, SVOCs, PCBs, Metals and Pesticides.

A sample collection summary, including chemical analyses, dates of collection and sample depths, is reported in Table 3. Figures 4 and 5 show the locations of soil samples collected during the RI.

Groundwater Sampling

One groundwater sample was collected from each of the four monitoring wells and one duplicate sample was collected for quality assurance/quality control (QA/QC) purposes. Samples were collected from permanent wells at least 24 hours after installation. Prior to sampling, the static groundwater level was measured to the nearest 0.01 foot with a decontaminated water level meter, and a minimum of three well volumes were purged from each well using a down-hole pump. Dedicated, disposable polyethylene tubing was used for sample collection. Purging rates varied from 0.05 to 0.09 gallons per minute, and were based on the well volume and observed recharge rate. The purging rate was adjusted to minimize drawdown and sample turbidity. A Horiba U-52 water quality monitor was used to measure monitoring well effluent during purging and sampling. The purge water was monitored for hydrogen ion concentration (pH), oxidation/reduction potential (ORP), conductivity, temperature, dissolved oxygen (DO), and turbidity. Groundwater samples were collected when the groundwater quality parameters had stabilized to approximately 10 percent of their respective values, and when the turbidity was below 5 nephelometric turbidity units (NTUs).

Groundwater samples were collected directly from the discharge line into pre-cleaned, laboratory-provided containers. The sample containers were labeled, placed into laboratory-

supplied coolers, along with trip blank samples (five in total), packed with ice to preserve the samples, and transported by a laboratory courier to Alpha under standard chain-of-custody protocol. The samples were analyzed for TCL VOCs via EPA Method 8260C, SVOCs via EPA Method 8270D, TAL metals via EPA 6000/7000 Series methods for both total and dissolved metals, PCBs via EPA Method 8082A, and pesticides via EPA Method 8081B. Field filtering was performed for each sample to prepare the samples for dissolved TAL metals analysis, with the exception of MW01, which was lab filtered due to the volume of water collected as a result of its poor recharge rate. Monitoring well locations are shown on Figure 6 and groundwater sampling logs are included in Appendix G.

Soil Vapor Sampling

Soil vapor sampling was conducted in accordance with the New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion, October 2006. Following soil vapor sample point construction, each soil vapor point was purged at a rate of 0.2 liters per minute (L/min) to evacuate a minimum of three tubing volumes. After purging, soil vapor samples were collected into laboratory-supplied, batch-certified, six-liter Summa canisters that were calibrated for a sampling rate of two hours per sample. An inert tracer gas (helium) was introduced into an above-grade sampling chamber to ensure that the soil vapor sampling points were properly sealed above the targeted sampling depth, thereby preventing infiltration of ambient air. The canisters were properly labeled and transported to Alpha following standard chain-of-custody protocols. One ambient air sample was collected for QA/QC purposes. Samples were analyzed for VOCs via EPA Method TO-15. Soil vapor sample locations are shown in Figure 7 and soil vapor sampling logs are included in Appendix F.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Michael Burke
Chemical Analytical Laboratory	The chemical analytical laboratory used during the RI was NYSDOH ELAP- certified Alpha Analytical, Inc.
Chemical Analytical Methods	Soil analytical methods: • VOCs by EPA Method 8260C (rev. 2006) • SVOCs by EPA Method 8270D (rev. 2007) • TAL Metals by EPA Method 6010C (rev. 2007) and 7471B

	• Pesticides by EPA Method 8081B (rev. 2007) • Chlorinated herbicides by EPA Method 8151A (rev. 2007) • PCBs by EPA Method 8082A (rev. 2007) • TCLP Lead by EPA Method 1311 Groundwater analytical methods: • VOCs by EPA Method 8260C (rev. 2006) • SVOCs by EPA Method 8270D (rev. 2007) • TAL Metals by EPA Method 6020C (ICP-MS) and 7470A • Pesticides by EPA Method 8081B (rev. 2007) • PCBs by EPA Method 8082A (rev. 2007) Soil vapor analytical methods: • VOCs by TO-15 VOC parameters

Results of Chemical Analyses

Laboratory data for soil is summarized in Tables 4 and 5 and Laboratory data for groundwater and soil vapor is summarized in Tables 6 and 7, respectively. Laboratory analytical reports are provided in Appendix H.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

According to United States Geologic Survey (USGS) maps and historic topographic maps, New York City geology is generally characterized by layers of fill and native soil overburden underlain by metamorphic bedrock. The native overburden was deposited during the last continental glaciation. The overburden generally consists of glacial till and outwash predominantly in inland areas, and riverine deposits (peat, organic silt and clay) along the shorelines that have been filled in over time. The site is underlain by the Manhattan Schist, described as a gray, sillimanite-muscovite-tourmaline schist.

Beneath the ground surface, groundwater is contained within the unconsolidated geologic materials and fractured bedrock. The upper surface of the groundwater reservoir is marked by the water table surface, which fluctuates seasonally in response to precipitation events and tides (along shorelines). The overburden deposits typical to the project area can have low to moderate hydraulic conductivities. The bedrock is relatively impermeable except where fractures, faults, or joints are present. Preferential flow occurs through the more permeable zones of the overburden, such as within individual sand or gravel layers, and through bedrock

fractures and joints. Flow of groundwater in an urban setting can be altered and interrupted by the presence of pumping stations, building foundations, utilities, retaining walls, or other buried structures.

Stratigraphy

The stratigraphy underlying the site is composed of a surficial layer of fill overlaying natural sand, silt and clay deposits. Thicknesses of fill observed during the RI ranged from 5 to 13.5 feet. The fill layer is primarily composed of loose reddish to dark brown medium to coarse sand with varying amounts of gravel and silt. Construction and demolition debris, plant remains, wood, metal, slag, ash and coal were also observed within the fill layer.

The underlying natural deposits were primarily composed of loose brown fine to medium sand with varying amounts of gravel and silt. Organic silt was observed in borings SB10 and SB13 at a depth of 13.5 feet bgs to the termination of each boring. Bedrock was not encountered during the RI; however, the top of the bedrock surface was observed during a geotechnical investigation performed at the adjacent 268 West Street site at about 89 ft bgs (about el. -80). Soil boring logs are provided as Appendix D.

Hydrogeology

Top of the groundwater table measurements ranged from 8.26 ft bgs (el. -0.52) to 9.63 ft bgs (el. -1.4). A groundwater elevation contour map, derived from groundwater elevations recorded from site monitoring wells, is provided as Figure 8. Groundwater appears to flow generally to the west across the site.

5.2 Soil Chemistry

A total of 30 soil samples were collected and analyzed for VOCs, SVOCs, metals, pesticides, PCBs, and chlorinated herbicides (for select samples). Soil analytical results were compared to the 6 NYCRR Part 375 Unrestricted Use (UU) SCOs and Restricted Residential Use (RRU) SCOs. TCLP samples taken to delineate the elevated lead identified in the preliminary subsurface investigation were compared to 40 Code of Federal Regulations (CFR) 261 Subpart C and Table 1 of 40 CFR 261.24 - EPA Resource Conservation and recovery Act (RCRA) Maximum Concentration of Contaminants for the Toxicity Characteristic. One of the 30 soil samples was a duplicate of sample SB12_1-2, and was analyzed for QA/QC purposes. Data collected during the RI was sufficient to delineate the vertical and horizontal distribution of contaminants at the site.

VOCs – The concentrations of nine VOCs exceeded their Part 375 UU SCOs in seven soil samples collected, consisting of:

- benzene (max concentration 0.33 mg/kg in SB03N_3-4)

- toluene (max concentration 1.6 mg/kg in SB03N_3-4)
- ethylbenzene (max concentration 6.9 mg/kg in SB03N_3-4)
- total xylenes (max concentration 36 mg/kg in SB03N_3-4)
- naphthalene (max concentration 210 mg/kg in SB07_1-2)
- n-propylbenzene (max concentration 9.4 mg/kg in SB03N_3-4)
- 1,3,5-trimethylbenzene (max concentration 30 mg/kg in SB03N_3-4), acetone (max concentration 0.16 mg/kg in SB10_7-8)
- 1,2,4-trimethylbenzene (max concentration 86 mg/kg in SB03N_3-4)

Acetone is a common laboratory contaminant, which was identified in the batch blank of several samples, and its presence in soil is not representative of site conditions. Of the nine VOCs whose concentrations exceeded their respective UU SCOs, the concentration of two VOCs, naphthalene and 1,2,4-trimethylbenzene, also exceeded their Part 375 RRU SCOs, in samples SB07_1.0-2.0 and SB03N_3-4, respectively. Exceedances per sample location are summarized in the table below ("x" indicates a UU SCO exceedance, with bold applied for RRU exceedances):

Location	SB03N	SB06	SB07	SB08	SB10	SB13	SB13
Depth	3-4	0.5-1	1-2	5-5.5	7-8	1-2	14-15
1,2,4-Trimethylbenzene	**x**						
1,3,5-Trimethylbenzene	x						
Acetone				x	x	x	x
Benzene	x						
Ethylbenzene	x						
n-Propylbenzene	x						
Naphthalene		x	**x**				
Toluene	x						
Xylenes, Total	x						

With the exception of acetone, elevated concentrations of VOCs are potentially attributed to a release from historic USTs located at the site or from historic on-site operations.

SVOCs – Concentrations of 14 Semivolatile organic compounds (SVOC) exceeded their respective UU SCOs in six soil samples collected, consisting of:

- acenaphthene (max concentration 43 mg/kg in SB06_05-1.0)
- fluoranthene (max concentration 300 mg/kg in SB06_05-1.0)
- naphthalene (max concentration 67 mg/kg in SB06_05-1.0)

- benzo(a)anthracene (max concentration 130 mg/kg in SB06_05-1.0)
- benzo(a)pyrene (max concentration 100 mg/kg in SB06_05-1.0)
- benzo(b)fluoranthene (max concentration 120 mg/kg in SB06_05-1.0)
- benzo(k)fluoranthene (max concentration 45 mg/kg in SB06_05-1.0), chrysene (max concentration 120 mg/kg in SB06_05-1.0)
- fluorene (max concentration of 50 mg/kg in SB06_0.5-1.0)
- phenanthrene (max concentration 350 mg/kg in SB06_05-1.0)
- dibenzo(a,h)anthracene (max concentration 14 mg/kg in SB06_05-1.0)
- indeno(1,2,3-cd)pyrene (max concentration 59 mg/kg in SB06_05-1.0)
- pyrene (max concentration 260 mg/kg in SB06_05-1.0)
- dibenzofuran (max concentration 35 mg/kg in SB06_05-1.0)

Of the 14 SVOCs whose concentrations exceeded their respective UU SCOs, concentrations of 10 SVOCs, consisting of fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, phenanthrene, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, and pyrene also exceeded their respective RRU SCOs. Exceedances per sample location are summarized in the table below ("x" indicates a UU SCO exceedance, with bold applied for RRU SCO exceedances):

Location	SB03	SB04	SB06	SB07	SB10	SB13
Depth	4-5	2-3	0.5-1	1-2	1-2	1-2
Acenaphthene			x	x		
Fluoranthene			**x**	**x**		
Naphthalene			x	x		
Benzo(a)anthracene	**x**	**x**	**x**	**x**	**x**	**x**
Benzo(a)pyrene	**x**	**x**	**x**	**x**	**x**	**x**
Benzo(b)fluoranthene	**x**	**x**	**x**	**x**	**x**	**x**
Benzo(k)fluoranthene	**x**	**x**	**x**	**x**	x	x
Chrysene	**x**	**x**	**x**	**x**	**x**	x
Fluorene			x			
Phenanthrene			**x**	**x**		
Dibenzo(a,h)anthracene	**x**	**x**	**x**	**x**	**x**	
Indeno(1,2,3-cd)pyrene	**x**	**x**	**x**	**x**	**x**	**x**
Pyrene			**x**	**x**		
Dibenzofuran			x	x		

In general, elevated concentrations of SVOCs are attributed to historic fill material that was identified from surface grade to approximately 13.5 ft bgs; however, the anomalously high concentrations of SVOCs in SB06 and SB07, as well as the presence of napthalene, may be indicative or a release from historic USTs located at the site or from historic on-site operations.

Metals – Concentrations of eight metals exceeded their respective UU SCOs in 15 soil samples collected, consisting of:

- arsenic (max concentration 130 mg/kg in SB05_5.0-6.0)
- cadmium (max concentration 4.8 mg/kg in SB05_5.0-6.0)
- copper (max concentration of 42,000 in SB05_5.0-6.0)
- lead (max concentration of 3,100 mg/kg in SB03_4.0-5.0)
- mercury (max concentration of 1.7 mg/kg in SB05_5.0-6.0)
- nickel (max concentration of 46 mg/kg in SB05_5.0-6.0)
- silver (max concentration of 41 mg/kg in SB05_5.0-6.0)
- zinc (max concentration of 4,000 in SB05_5.0-6.0)

Of the eight metals, concentrations of six metals, consisting of arsenic, cadmium, copper, lead, mercury, and zinc exceeded their respective RRU SCOs. Exceedances per sample location are summarized in the table below ("x" indicates a UU SCO exceedance, with bold applied for RRU SCO exceedances):

Location	SB01	SB02	SB03	SB03C	SB03E	SB03N	SB03N	SB03W	SB04	SB05C
Depth	1-2	0.5-1	4-5	6-7	4-5	3-4	4-5	4-5	2-3	7-8
Arsenic	x								x	
Cadmium										
Copper	x		x						x	x
Lead	x	x	**x**	x	x	x	x	x	x	
Mercury	**x**					**x**			**x**	
Nickel										
Silver										
Zinc		x	x						x	
Arsenic		**x**								
Cadmium		**x**								
Copper	x	**x**								x
Lead		**x**	x	**x**	x		x	x	x	x
Mercury		**x**	x	x	x	x	x	x	x	x
Nickel		x								
Silver		x								

Location	SB01	SB02	SB03	SB03C	SB03E	SB03N	SB03N	SB03W	SB04	SB05C
Depth	1-2	0.5-1	4-5	6-7	4-5	3-4	4-5	4-5	2-3	7-8
Zinc		x	x	x		x	x		x	

Elevated concentrations of metals are attributed to historic fill material that was identified from surface grade to approximately 13.5 ft bgs. Delineation samples surrounding SB03 and SB05 did not identify lead or copper, respectively, at concentrations exceeding the RRU SCOs, which is the applicable cleanup level for the intended use of the site. In addition, hazardous concentrations of lead were not identified in SB05 or the corresponding delineation borings.

Pesticides – Concentrations of three pesticides exceeded their respective UU SCOs in five soil samples collected, consisting of:

- 4-4'-DDE (max concentration of 0.00689 mg/kg in SB12_1-2)
- 4,4'-DDD (max concentration of 0.00372 mg/kg in SB13_1-2)
- 4-4'-DDT (max concentration of 0.00486 in SB11_8-9)

Concentrations of these compounds did not exceed their respective RRU SCOs in any of the samples collected during the RI. The presence of pesticides in soil samples is likely attributed to the composition of the fill material at the site.

PCBs and Herbicides –PCBs and herbicides were not identified at concentrations exceeding their respective UU or RRU SCOs in any of the soil samples collected during the RI.

A summary of data for chemical analyses performed on soil samples is included in Tables 4 and 5. Figures 4 and 5 provide a map of soil sample locations and include a summary of analytical results that exceeded the Part 375 UU and RRU SCOs. Soil laboratory analytical reports are provided in Appendix H.

5.3 Groundwater Chemistry

Five groundwater samples, including once duplicate sample, were analyzed for VOCs, SVOCs, metals (total and dissolved), pesticides and PCBs. Groundwater analytical results were compared to the New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Standard (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) for Class GA groundwater. Groundwater sample results are summarized below.

VOCs, PCBs and Pesticides – VOCs, PCBs, and pesticides were not identified at concentrations exceeding their respective TOGS AWQS in any of the groundwater samples collected during the RI.

SVOCs – Concentrations of six SVOCs exceeded TOGS AWQS in MW04, consisting of:

- chrysene (max concentration of 0.25 micrograms per liter [µg/L])

- benzo(a)anthracene (max concentration of 0.26 μg/L)
- benzo(a)pyrene (max concentration of 0.28 μg/L)
- benzo(b)fluoranthene (max concentration of 0.3 μg/L)
- benzo(k)fluoranthene (max concentration of 0.12 μg/L)
- indeno(1,2,3-cd)pyrene (max concentration of 0.15 μg/L)

The presence of SVOCs in groundwater in MW04 is attributed to the presence of historic fill, which extends into the groundwater table in this location.

Metals – Total concentrations of six metals exceeded their respective TOGS AWQS, consisting of:

- chromium (max concentration of 73.8 μg/L in MW03_060315)
- iron (max concentration of 25,500 μg/L in MW03_060315)
- lead (max concentration of 451.5 μg/L in MW03_060315)
- magnesium (max concentration of 181,000 μg/L in MW02_060315)
- manganese (max concentration of 3,318 μg/L in MW03_060315)
- sodium (max concentration of 670,000 μg/L in MW01_060315)

Dissolved concentrations of four metals exceeded their respective TOGS AWQS standards, consisting of:

- iron (max concentration of 8,630 μg/L in sample MW03_060315)
- magnesium (max concentration of 179,000 μg/L in sample MW02_060315)
- manganese (max concentration of 3,861 μg/L in sample MW03_060315)
- sodium (max concentration of 641,000 μg/L in sample MW01_060315)

None of the compounds detected in the dissolved samples were detected at elevated concentrations in on-site soils and their presence is considered indicative of regional groundwater quality or potential off-site sources.

A summary of data for chemical analyses performed on groundwater samples is included in Table 6. Figure 6 provides a map of groundwater sample locations and includes a summary of analytical results that exceed the TOGS AWQS. Laboratory analytical data reports are provided as Appendix H.

5.4 Soil Vapor Chemistry

Five soil vapor samples were collected during the RI, including one ambient air sample. Sample results were compared to the ambient air sample and the decision matrices established by the NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006. Based on the concentrations

of 1,1,1-trichloroethane (max concentration of 1.64 micrograms per cubic meter [µg/m^3] in SV02-060315), and tetrachloroethene (PCE, maximum concentration of 25.1µg/m^3 in SV03-060315), the decision matrices recommends a range from "no further action" to "take reasonable and practical actions to identify sources and reduce exposures" to these compounds. However, a complete comparison cannot be made to the matrix considering there are no structures on the site and indoor air samples cannot be collected. Carbon tetrachloride and trichloroethylene were not detected in any of the soil vapor samples collected during the RI.

Compounds detected above ambient air concentrations consisted of:

- 1,2,4-trimethylbenzene
- acetone
- ethanol
- cyclohexane
- ethyl benzene
- 4-methyl-2-pentanone
- n-hexane
- toluene
- tetrahydrofuran
- 2,2,4-trimethylpentane
- 1,3,5-trimethylbenzene
- benzene
- chloroform
- p/m Xylene
- isopropanol
- methylene chloride
- o-xylene
- tetrachloroethene
- 1,1,1-trichloroethane
- 2-hexanone
- 4-ethyltoluene
- carbon disulfide
- chloromethane
- tertiary butyl alcohol
- 2-butanone
- n-heptane
- styrene
- trichlorofluromethane
- bromodichloromethane
- 1,3-dichlorobenzene

The highest reported concentrations were for isopropanol (489 µg/m^3 in SV01-060315), ethanol (431 µg/m^3 in SV01-060315), and acetone (228 µg/m^3 in sample SV02-060315). These compounds are common cleaning agents for laboratory equipment, and their reported concentration is likely attributed to laboratory interference. Excluding isopropanol, ethanol and acetone, the highest reported concentrations were of tertiary butyl alcohol (79.7 µg/m^3 in SV02-060315 and 63.1 µg/m^3 in SV04-060315), toluene (72.0 µg/m^3 in SV02-060315), and 1,2,4-trimethylbenzene (59.0 µg/m^3 in SV04-060315).

Total VOCs detected in soil vapor samples range from about 579 µg/m^3 in SV03-060315 to 1,315 µg/m^3 in SV01-060315, compared to the ambient air sample which had a total VOC concentration of about 101 µg/m^3. Thirty VOCs were detected in soil vapor samples at concentrations greater than those detected in the ambient air.

A summary of data for chemical analyses performed on soil vapor samples is included in Table 7. Figure 7 provides a map of soil vapor sample locations and includes a summary of analytical results that exceed the ambient sample. Laboratory analytical data reports are provided as Appendix H.

5.5 Hazardous Waste Potential

Based on an evaluation of the data and information from the RIR, the presence of or need for disposal of hazardous waste may not be required at this site. However, future sampling for waste characterization may change the requirement.

5.6 Deviations from remedial investigation work plan

TCLP analyses for copper was not completed for delineation borings surrounding the copper hotspot, as proposed in the RIWP, due to lack of a corresponding regulatory standard. The deviation was discussed with, and approved by, NYCOER prior to sampling.

Poor well recovery in MW01 prohibited field filtering of the groundwater sample collected from this well. Therefore, the dissolved metals sample result was obtained from a lab filtered groundwater sample.

5.7 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

LEGEND:

- APPROXIMATE SITE BOUNDARY
- SB-10 — SOIL BORING/MONITORING WELL LOCATION
- SB05W — DELINEATION SOIL BORING LOCATION
- APPROXIMATE LOCATION OF FORMER SUSPECTED UNDERGROUND STORAGE TANKS
- APPROXIMATE EXTENT OF FORMER BASEMENT, FILLED WITH DEMOLITION DEBRIS FROM SURFACE TO ABOUT 8 FEET BGS

NOTES:

1. SURVEY BASE PLAN TAKEN FROM DRAWING CREATED BY FEHRINGER SURVEYING, P.C., TITLED "SURVEY OF PROPERTY SITUATED IN: WEST, VESTRY, WASHINGTON AND DESBROSSES STREETS", SURVEYED DECEMBER 2, 2013, REVISED APRIL 6, 2015
2. ALL SOIL SAMPLES WERE ANALYZED FOR VOLATILE ORGANIC COMPOUNDS (VOCs), SEMIVOLATILE ORGANIC COMPOUNDS (SVOCs), TOTAL METALS, ORGANOCHLORINE PESTICIDES, AND POLYCHLORINATED BIPHENYLS (PCBs). SELECT SAMPLES WERE ALSO ANALYZED FOR CHLORINATED HERBICIDES
3. SOIL SAMPLE ANALYTICAL RESULTS ARE COMPARED TO THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) TITLE 6 OF THE OFFICIAL COMPILATION OF NEW YORK CODES, RULES, AND REGULATIONS (NYCRR) PART 375 UNRESTRICTED USE AND RESTRICTED RESIDENTIAL USE SOIL CLEANUP OBJECTIVES (SCOs)
4. RESULTS ABOVE NYSDEC UNRESTRICTED USE SCOs ARE IN BOLD; RESULTS ABOVE NYSDEC RESTRICTED RESIDENTIAL USE SCOs ARE IN BOLD AND SHADED; NON-DETECTED COMPOUNDS WITH REPORTING LIMITS (RLs) ABOVE THE NYSDEC UNRESTRICTED USE SCOs ARE IN ITALICS
5. mg/kg = MILLIGRAMS PER KILOGRAM
6. NE = NO EXCEEDANCE
7. J = THE ANALYTE WAS DETECTED ABOVE THE METHOD DETECTION LIMIT (MDL), BUT BELOW THE RL; THEREFORE, THE RESULT IS AN ESTIMATED CONCENTRATION
8. P = THE RELATIVE PERCENT DIFFERENCE (RPD) BETWEEN THE RESULTS FOR THE TWO COLUMNS EXCEEDS THE METHOD-SPECIFIED CRITERIA
9. PI = THE RELATIVE PERCENT DIFFERENCE (RPD) BETWEEN THE RESULTS FOR THE TWO COLUMNS EXCEEDS THE METHOD-SPECIFIED CRITERIA; THE LOWER VALUE FOR THE TWO COLUMNS HAS BEEN REPORTED DUE TO OBVIOUS INTERFERENCE
10. U = THE ANALYTE WAS ANALYZED FOR BUT WAS NOT DETECTED AT A LEVEL GREATER THAN OR EQUAL TO THE RL; THE VALUE SHOWN IN THE TABLE IS THE RL

n-Hexane	12.9
Benzene	1.65
Cyclohexane	1.27
Bromodichloromethane	3.31
2,2,4-Trimethylpentane	6.21
Heptane	10.2
4-Methyl-2-pentanone	9.67
Toluene	20.6
2-Hexanone	3.01
Tetrachloroethene	1.75
Ethylbenzene	10.7
p/m-Xylene	46.9
Styrene	22.1
o-Xylene	25.6
4-Ethyltoluene	9.93
1,3,5-Trimethylbenzene	21.3
1,2,4-Trimethylbenzene	59

LEGEND:

- APPROXIMATE SITE BOUNDARY
- SV04 — SOIL VAPOR POINT LOCATION
- APPROXIMATE LOCATION OF FORMER SUSPECT UNDERGROUND STORAGE TANKS
- APPROXIMATE EXTENT OF FORMER BASEMENT, FILLED WITH DEMOLITION DEBRIS FROM SURFACE TO ABOUT 8 FEET BGS

NOTES:

1. SURVEY BASE PLAN TAKEN FROM DRAWING CREATED BY FEHRINGER SURVEYING, P.C., TITLED "SURVEY OF PROPERTY SITUATED IN: WEST, VESTRY, WASHINGTON AND DESBROSSES STREETS", SURVEYED DECEMBER 2, 2013, REVISED APRIL 6, 2015
2. VOC = VOLATILE ORGANIC COMPOUND
2. TABLES SHOW VOC ANALYTES DETECTED IN THE VAPOR SAMPLES
3. ug/m3 = MICROGRAMS PER CUBIC METER

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and the NYSDEC Part 375 Restricted Residential Use SCOs.
2. NYSDEC Part 375 Unrestricted Use SCO exceedances are **BOLD**.
3. NYSDEC Part 375 Restricted Residental Use SCO exceedances are **BOLD** and shaded.
4. Non detected compounds with Reporting Limits (RL) above the NYSDEC Part 375 Unrestricted Use SCO standards are in italics.
5. mg/kg = milligrams per kilogram.
6. DUP01_060215 is a duplicate of SB12_1-2.
7. bgs = below ground surface.

Qualifiers:

J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.

U = analyte not detected at or above the level indicated.

~ = this indicates that no regulatory limit has been established for this analyte.

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and the NYSDEC Part 375 Restricted Residential Use SCOs.
2. NYSDEC Part 375 Unrestricted Use SCO exceedances are **BOLD**.
3. NYSDEC Part 375 Restricted Residental Use SCO exceedances are **BOLD** and shaded.
4. Non detected compounds with Reporting Limits (RL) above the NYSDEC Part 375 Unrestricted Use SCO standards are in italics.
5. mg/kg = milligrams per kilogram.
6. DUP01_060215 is a duplicate of SB12_1-2.
7. bgs = below ground surface.

Qualifiers:

J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.

U = analyte not detected at or above the level indicated.

~ = this indicates that no regulatory limit has been established for this analyte.

2. NYSDEC Part 375 Unrestricted Use SCO exceedances are **BOLD**.
3. NYSDEC Part 375 Restricted Residental Use SCO exceedances are **BOLD** and shaded.
4. Non detected compounds with Reporting Limits (RL) above the NYSDEC Part 375 Unrestricted Use SCO standards are in italics.
5. mg/kg = milligrams per kilogram.
6. DUP01_060215 is a duplicate of SB12_1-2.
7. bgs = below ground surface.

Qualifiers:

J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.

U = analyte not detected at or above the level indicated.

~ = this indicates that no regulatory limit has been established for this analyte.

Notes:
1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs) and the NYSDEC Part 375 Restricted Residential USE SCOs.
2. NYSDEC Part 375 Unrestricted Use SCO exceedances are **BOLD**.
3. NYSDEC Part 375 Restricted Residental Use SCO exceedances are **BOLD** and shaded.
4. Non detected compounds with Reporting Limits (RL) above the NYSDEC Part 375 Unrestricted Use SCO standards are in italics.
5. mg/kg = milligrams per kilogram.
6. DUP01_060215 is a duplicate of SB12_1-2.
7. bgs = below ground surface.

Qualifiers:
J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.
U = analyte not detected at or above the level indicated.
~ = this indicates that no regulatory limit has been established for this analyte.

5. mg/kg = milligrams per kilogram.
6. DUP01_060215 is a duplicate of SB12_1-2.
7. bgs = below ground surface.

Qualifiers:
J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.
U = analyte not detected at or above the level indicated.
~ = this indicates that no regulatory limit has been established for this analyte.

5. mg/kg = milligrams per kilogram.
6. mg/L = milligram per liter.
7. NA = not applicable.

Qualifiers:
J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.
U = analyte not detected at or above the level indicated.
~ = this indicates that no regulatory limit has been established for this analyte.

Notes:
1. Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards (AWQS) Class GA Standards.
2. NYSDEC TOGS AWQS exceedances are **BOLD** and shaded.
3. Non detected compounds with Reporting Limits (RL) above the NYSDEC AWQS TOGS standards are in italics.
4. (µg/L) = micrograms per liter.
5. DUP1_060315 is a duplicate of MW01.

Qualifiers:
J = estimated value. The Target analyte concentration is below the quantitation limit, but above the Method Detection Limit or Estimated Detection Limit for Solid-Phase Microextraction-related analyses. This represents an estimated concentration for Tentatively Identified Compounds.
U = analyte not detected at or above the level indicated.
~ = this indicates that no regulatory limit has been established for this analyte.

Re: Geophysical Engineering Survey (GES) Report
Commercial Property
440 Washington Street
New York, New York 10013

Dear Mr. Carrus:

Nova Geophysical Services (NOVA) is pleased to provide findings of the geophysical engineering survey (GES) at the above referenced project site: Commercial Property, 440 Washington Street, New York, New York (the "Site"). Please see attached Site Location and Geophysical Survey maps for more details.

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a Geophysical engineering surveys (GES) consisting of a Ground Penetrating Radar (GPR) survey at the site. The purpose of this survey is to locate and identify USTs, anomalies, utilities and other substructures and to clear and mark proposed environmental boring areas on April 28, 2015.

The equipment selected for this investigation was Noggin's 250 MHz ground penetrating radar (GPR) shielded antenna.

A GPR system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulses into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

GEOPHYSICAL METHODS

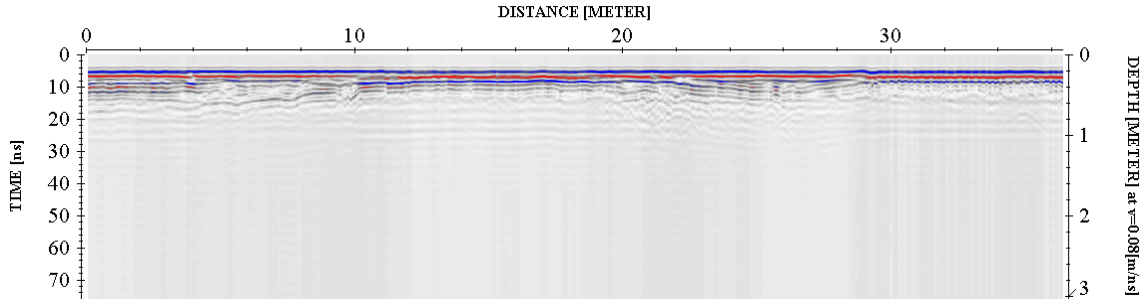
The project site was screened using the GPR to search the areas of interest and inspected for reflections, which could be indicative of major anomalies and substructures. Specific borehole locations were screened in a smaller grid prior to finalizing placement.

GPR data profiles were collected for the areas of the Site specified by the client. The surveyed areas consisted of concrete surfaces.

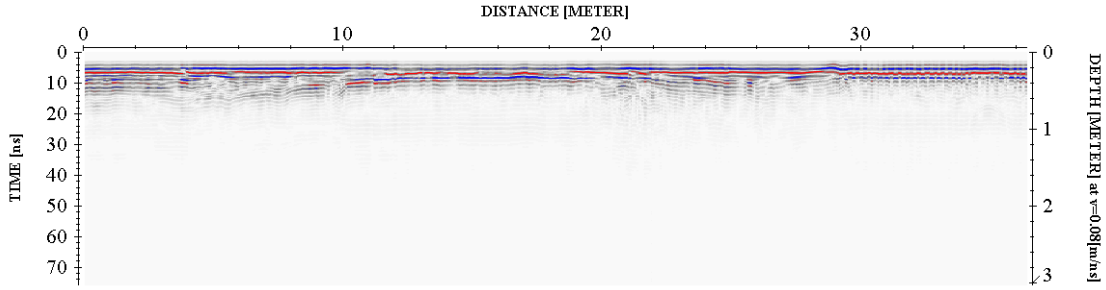
DATA PROCESSING

In order to improve the quality of the results and to better identify subsurface anomalies NOVA processed the collected data. The processes flow is briefly described at this section.

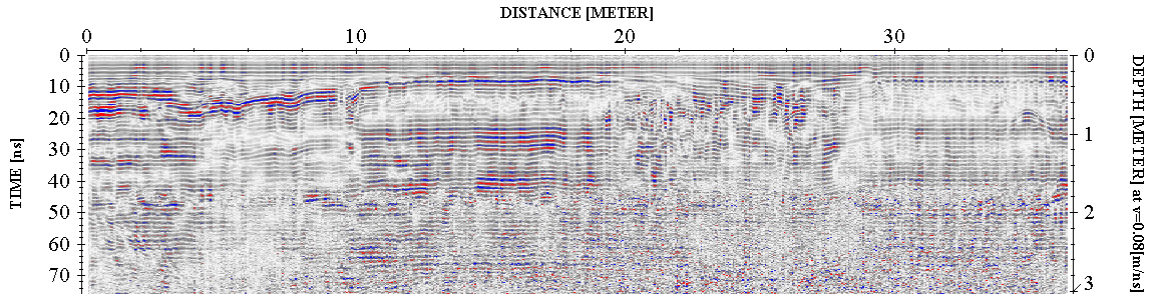
Step 1. Import raw RAMAC data to standard processing format



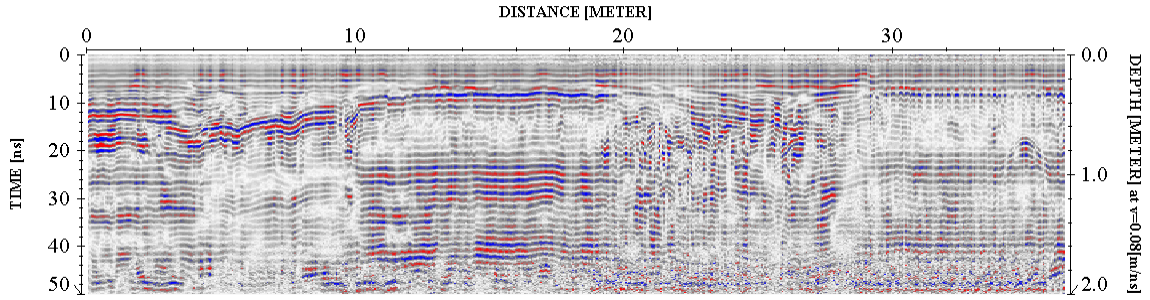
Step 2. Remove instrument noise *(dewow)*



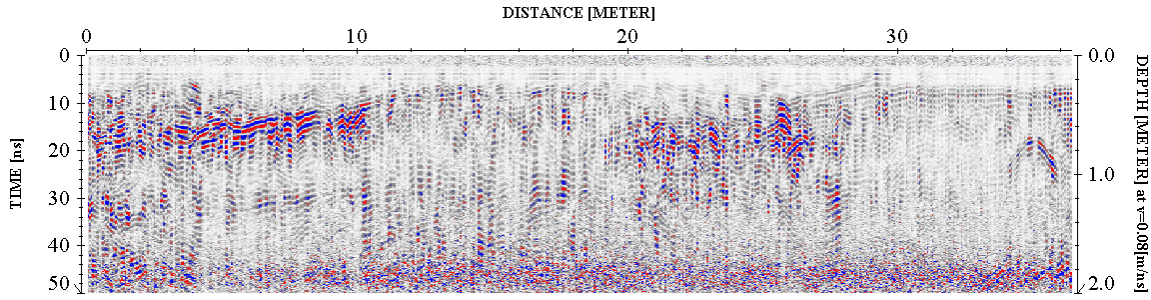
Step 3. Correct for attenuation losses *(energy decay function)*



Step 4. Remove static from bottom of profile *(time cut)*



Step 5. Mute horizontal ringing/noise *(subtracting average)*



The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and describes the subsurface anomalies more accurately.

PHYSICAL SETTINGS

Nova observed following physical conditions at the time of the survey:

The weather: Sunny

Temp: 45 Degrees (F).

Surface: Concrete surfaces

Geophysical Noise Level (GNL): Geophysical Noise Level (GNL) was medium to high at the site. The noise was a result of the site being located in an urban environment.

RESULTS

The results of the geophysical engineering survey (GES) identified following at the project Site:

- GES survey identified scattered anomalies located throughout the project site. Based on their rates and proximity, these anomalies were inconsistent with any USTs. These areas were indicated on the on-site markout.
- Several utilities (sewer, gas and electrical) were located on the site. These utilities were indicated on the survey map.
- Geophysical Survey Plan portrays the areas investigated during the geophysical survey.

If you have any questions please do not hesitate to contact the undersigned.
Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.
Project Engineer

LIST OF APPENDICES

Appendix A Proposed Development Plans
Appendix B Due Diligence Review Documents

1.0 INTRODUCTION

This Remedial Investigation Work Plan has been developed for the property located at 440 Washington Street in the Tribeca neighborhood of New York, New York (see Figure 1). The following work scope has been developed based on the findings of Langan's May 2015 preliminary due diligence review and limited subsurface investigation, the May 11, 2015 meeting with the New York City Office of Environmental Remediation (OER), and the proposed development project.

2.0 SITE LOCATION, CURRENT USE, AND PROPOSED DEVELOPMENT PLAN

The site is located in the Tribeca neighborhood of Manhattan and is identified as Block 223, and portions of Lots 13 and 15. The site structures were recently demolished, and the site is currently used to stage construction equipment and materials for the adjacent 268 West Street development. The proposed development project consists of an 11-story, mixed-used commercial and residential building with a partial cellar, ground level parking, and restaurant space. A portion of the ground-level parking will be open space, with the remainder constructed below the southeastern residential units. The proposed development plans are included in Appendix A.

Groundwater was encountered at depths ranging from 8 to 12 feet below grade surface (bgs) during the April 2015 limited subsurface investigation performed by Langan.

3.0 PRELIMINARY DUE DILIGENCE REVIEW

3.1 Review of Historical and Regulatory Documentation

Langan performed a review of the following document sources to identify current and historical activities and conditions that may have adversely impacted the subsurface at the site:

- Environmental Data Resources, Inc. (EDR) environmental database report[1];
- Historical geological maps;
- Sanborn Fire Insurance Maps (Sanborn Maps);
- City directories;

[1] A review of environmental databases maintained by federal, state, and local agencies within the approximate minimum search distance.

- New York City Department of Buildings (DOB) records;
- New York State Department of Environmental Conservation (DEC) Petroleum Bulk Storage (PBS) database; and
- NYSDEC Spills Incidents database.

Copies of the documentation reviewed are provided as Appendix B.

3.1.1 Site Use History and Database Findings

Below is a list of historical site uses obtained from the documents reviewed:

Lot 13

- A mahogany and veneer yard, a residence, store, and office (1894-1905)
- A chemical works (1920)
- A drug company (1927)
- A dowel company (1927)
- A chemical manufacturer and a wood products warehouse (1950-1977)
- A garage and a five-story residential building (1968-2005)

Lot 15

- A mahogany and veneer yard (1894-1905)
- A garage with two gasoline tanks (1950-1968)
- A building of unidentified use (1976-2005)
- A parking company (2013)

According to the DOB records review, Lot 15 has a Department of Finance classification of G1 – GARAGE / GAS STATION. The January 10, 1969 Certificate of Occupancy for Lot 15 listed the building as a two-story building with a cellar. Use of the first floor is indicated as storage of commercial motor vehicles with accessory motor fuel pumps and truck terminal, and offices on the mezzanine and second floor. The site was not listed in either the DEC PBS or the DEC Spills Incidents database; however, the site was listed in the Historical Auto Stations database as Automotive Service Systems Inc. in 2009.

3.1.2 Preliminary Due Diligence Review Findings

Based on the regulatory and historical documentation review, the following potential environmental conditions were identified:

Historical Use of the Subject Property

Historical site uses include those listed in Section 3.1.1. Leaks or spills of petroleum products, solvents, and/or other hazardous materials resulting from these uses may have adversely impacted soil, groundwater and/or soil vapor beneath the site.

Historical Fill

According to historical geologic maps, the original shoreline of the Hudson River extended further eastward, beyond the site. The shoreline moved westward in the 1800s using imported fill material. Fill imported to the site is of unknown origin and may contain hazardous materials.

Current and Historical Uses of Adjoining and Surrounding Properties

Historical uses of adjoining and surrounding properties include a copper works (1894), woodworking operations (1894 to 1905), a painting facility (1905), laboratories (1920), scrap metal facilities (1927), a motor freight station with gasoline tanks (1950 to 2005), a parking garage with gasoline tanks (1950 to 2005), and auto repair facilities with hydraulic lift systems (1968 to 2005). Leaks or spills of petroleum products, solvents, and/or hazardous materials resulting from these uses may have adversely impacted groundwater and/or soil vapor beneath the site.

3.2 Preliminary Subsurface Investigation

Langan completed a preliminary subsurface investigation on April 28, 2015, which consisted of a geophysical survey, installation of nine soil borings and collection of twelve soil samples. Boring locations are shown on Figure 2. Sample analysis found semivolatile organic compounds (SVOCs) and metals at concentrations exceeding their 6 New York Codes Rules and Regulations (NYCRR) Part 375 Restricted Use, Restricted Residential criteria. The geophysical survey did not confirm the presence of underground storage tanks (UST) at the site. Details and findings from this investigation will be incorporated into the forthcoming Remedial Investigation Report (RIR).

4.0 REMEDIAL INVESTIGATION WORK SCOPE

A remedial investigation is required to satisfy the Hazardous Materials Restrictive Declaration, and will include the collection and analysis of soil, groundwater and soil vapor samples.

4.1 Geophysical Survey

No additional geophysical work will be performed. A geophysical survey was completed by NOVA Geophysical & Environmental, Inc. (NOVA) on April 28, 2015 as part of the preliminary subsurface investigation. A copy of NOVA's geophysical survey report and findings will be included in the forthcoming RIR.

4.2 Soil, Groundwater, and Soil Vapor Sampling Summary

An investigation of soil, groundwater, and soil vapor is proposed to characterize the site for potential environmental impacts from historical on- and off-site uses. The proposed sampling event will: 1) address environmental concerns identified in Langan's May 2015 preliminary due diligence review and limited subsurface investigation; 2) characterize historical fill; and 3) provide general horizontal/vertical characterization across the site for development purposes. The sampling procedures of this investigation will be performed in accordance with the NYSDEC Technical Guidance for Site Investigation and Division of Environmental Remediation (DER-10).

A total of four soil borings and eight delineation borings will be completed, from which up to 18 soil samples will be collected. All four soil borings will be converted into permanent monitoring wells, which will be screened to straddle the groundwater table interface located at about 12 feet bgs. One groundwater sample will be collected from each well. Four delineation borings each will be advanced in the vicinity of SB03 and SB05, to delineate the horizontal and vertical extents of lead and copper hotspots, respectively, identified during the preliminary subsurface investigation. Four soil vapor samples will be collected from four separate soil vapor points.

Each sample point location will be measured to fixed benchmarks (i.e., select properly lines, adjacent structures, etc.). Proposed sample locations are presented on Figure 2. Conditions in the field may require adjustment of sampling locations.

4.2.1 Soil Sampling

Four soil borings, SB10 through SB13, will be advanced throughout the site during the remedial investigation. Typical direct-push drilling equipment will be used to advance the borings. A geologist, scientist, engineer, or qualified environmental professional (QEP) will screen the soil during borehole advancement for organic vapors with a photoionization detector (PID) and evaluate soil for visual and olfactory impacts prior to collecting environmental samples. Field observations will be recorded in a field log.

Up to two soil samples will be collected from each soil boring for laboratory analysis. For borings located within the cellar footprint of the proposed building (SB-12, SB-13), samples will be collected from 1) the upper two feet of soil beneath the existing concrete cover, and 2) the interval just below the proposed development depth, which is about 10 to 12 feet bgs. For borings located within the proposed on-grade construction (SB-10, SB-11), samples will be collected from 1) the upper two feet of soil, and 2) from the interval directly above the groundwater table. If contamination is observed in any borings, a third sample will be collected from the depth interval exhibiting the greatest degree of contamination based on visual, olfactory and instrumental (i.e. PID) evidence.

During the preliminary subsurface investigation, a lead hotspot was encountered at the location of soil boring SB03, at a depth of four to five feet bgs, and a copper hotspot was encountered at the location of soil boring SB05 at a depth of five to six feet bgs. To delineate each hotspot area, a total of four soil samples will be collected from each area. Hotspot areas will be delineated vertically by collecting one sample at the original boring location, from a depth of about two to three feet below the original sample interval. Hotspot areas will be delineated horizontally by advancing a delineation boring about five feet to the north, southeast, and southwest of the original boring locations and collecting a sample at the corresponding depth interval.

4.2.2 Groundwater Sampling

Soil borings SB10 through SB13 will be converted into 1 or 2-inch diameter permanent groundwater monitoring wells and will be screened to straddle the groundwater table. Properly sized screen and silica sand pack will be used for noted site conditions. A representative groundwater sample will be collected from each well with a peristaltic pump and dedicated tubing using low-flow sampling techniques. Sampling will be conducted in accordance with

NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010, and Sampling Guidelines and Protocols, dated March 1991. Groundwater wells will be gauged with a water level meter to record a depth to groundwater reading (1/100 foot), and an interface meter to determine the thickness of light or dense non-aqueous phase liquid (LNAPL or DNAPL), if observed. The well casings will be surveyed by a trained QEP and/or NYS licensed surveyor to facilitate preparation of a groundwater contour map and determine the direction of groundwater flow.

4.2.3 Soil Vapor Sampling

Four soil vapor sampling points will be installed using direct-push drilling. Samples of soil vapor will be collected in accordance with the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006. Samples will be collected at approximately 5 feet bgs, roughly 3 feet above the water table.

Samples will be collected in appropriate sized Summa canisters that have been batch-certified clean by the laboratory. Samples will be analyzed by using USEPA Method TO-15. One to three implant volumes shall be purged prior to the collection of any soil gas samples. Flow rate for both purging and sampling will not exceed 0.2 liters per minute (L/min). A sample log sheet will be maintained that will include: sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, and apparent moisture content of the sampling zone.

As part of the vapor intrusion evaluation, a tracer gas will be used in accordance with NYSDOH protocols to serve as a quality assurance/quality control (QA/QC) measure to check the integrity of the soil vapor probe seal. A container (box, plastic pail, etc.) will serve to keep the tracer gas in contact with the probe seal during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer gas prior to sampling. If the tracer sample results show a significant presence of the tracer (i.e. greater than 10% by volume), the probe seals will be adjusted to prevent infiltration. At the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seal was maintained during sampling.

4.3 Sample Analysis

Samples will be submitted to a NYSDOH Environmental Laboratory Accreditation Program

(ELAP)-certified laboratory for analysis. Soil samples will be analyzed of the following parameters:

- Target Compound List (TCL) VOCs by EPA Method 8260
- TCL SVOC by EPA Method 8270
- Pesticides and polychlorinated biphenyls (PCB) by EPA Method 8081/8082, including Part 375 herbicides
- Target Analyte List (TAL) metals by EPA Method 6010 and 7471, including trivalent chromium, hexavalent chromium, and cyanide

Groundwater samples will be analyzed of the following parameters:

- TCL VOCs by EPA Method 8260
- TCL SVOCs by EPA Method 8270
- Pesticides and PCBs by EPA Method 8081/8082
- Filtered (dissolved) and unfiltered (total) TAL metals by EPA Method 6010 and 7471

Soil vapor samples will be analyzed for VOCs using USEPA Method TO-15.

Soil samples collected from delineation borings will be analyzed for the corresponding total and TCLP metal (i.e., lead for the SB03 hotspot and copper for SB05 hotspot).

If either LNAPL and/or DNAPL are detected, appropriate samples will be collected for characterization and "fingerprint analysis" and required regulatory reporting (i.e. NYSDEC spills hotline) will be performed.

4.4 Quality Assurance/Quality Control Procedures

QA/QC procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used (1) to document that samples are representative of actual conditions at the site and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. QA/QC samples (field and trip blanks, duplicates, etc.) will be collected and analyzed at an ELAP-certified laboratory.

4.5 Investigation-Derived Waste

Drill cuttings may be disposed at the site within the borehole that generated them to within 24 inches of the surface unless:

- Free product, grossly contaminated, or petroleum-impacted soil are present in the cuttings
- The borehole has penetrated an aquitard, aquiclude or other confining layer; or extends significantly into bedrock
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability
- The soil cannot fit into the borehole.

Those soil cuttings needing to be managed on-site will be containerized in properly labeled DOT approved 55-gallon drums for future off-site disposal at a permitted facility. All boreholes that require drill cutting disposal would ultimately be filled with bentonite chips (hydrated) and asphalt/concrete capping. Disposable sampling equipment including, spoons, gloves, bags, paper towels, etc. that came in contact with environmental media will be double bagged and disposed as municipal trash in a facility trash dumpster as non-hazardous trash.

5.0 REPORTING

A Remedial Investigation Report will be prepared following completion of the field activities and receipt of the laboratory data. The report will provide detailed summaries of the investigative findings. Soil, groundwater and soil vapor analytical results will be compared to the NYSDEC Part 375-6.8(a) Unrestricted Used Soil Cleanup Objectives, appropriate Part 375-6.8(b) Restricted Soil Cleanup Objectives, 40 CFR 261 Maximum Concentrations of Contaminants for the Toxicity Characteristic, NYSDEC Part 703 Groundwater Quality Standards (GQS) (class GA) or Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS), and NYSDOH October 2006 Final Guidance for Evaluating Soil Vapor Intrusion Matrices. The report will include an updated sampling plan, figures depicting analytical exceedances, analytical data tables for all reported constituent compounds (including non-detectable concentrations) and remedial recommendations, as warranted.

6.0 INVESTIGATION HEALTH AND SAFETY PLAN

An Occupational Safety and Health Administration (OSHA) compliant Health and Safety Plan that meets all OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) requirements will be implemented during the site work to protect worker safety. The Site Safety Coordinator will ensure full compliance of the HASP in accordance with applicable health and safety laws and regulations. All field personnel involved in investigation activities will participate in training required under OSHA HAZWOPER 29 CFR 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. Emergency telephone numbers will be posted at the site location before any work begins.

A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; personal protective equipment (PPE) levels and other relevant safety topics including a highlighted route map to the nearest hospital/emergency room. Meetings will be documented in a log book or specific form. Potential on-site chemicals of concern include VOCs, SVOCs, pesticides/PCBs, and metals. Information fact sheets and/or summary tables for each contaminant group are included in the HASP. A copy of this HASP will be on-site during each sampling event.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/16/2014 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

HUDSON RIVER PCBS	*NO STREET APPLICABLE*	*W 0 - 1/8 (0.087 mi.)*	*0*	*10*

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 11 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 65 RCRA-CESQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 09/18/2014 has revealed that

there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

HUDSON RIVER PCBS	***NO STREET APPLICABLE***	***W 0 - 1/8 (0.087 mi.)***	***0***	***10***

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 09/18/2014 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 03/25/2015 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/06/2015 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 03/19/2015 has revealed that there are 57 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 03/30/2015 has revealed that there are 2 NY TANKS sites within approximately 0.25 miles of the target property.

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, and dated 11/18/2010 has revealed that there are 5 NY RES DECL sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 03/19/2015 has revealed that there are 33 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2014 has revealed that there are 64 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 01/23/2015 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 11/25/2013 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites

on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2015 has revealed that there are 144 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 19 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 3 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated l.l million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when thelevel of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabili e the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act CWA) that included the Hudson River PCB

HUDSON RIVER PCBS (Continued) **1000384273**

Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authori e a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action atthe remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for partiespotentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

HUDSON RIVER, NY 12801
Alias Comments: Not reported
Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA’s analysis assumes a significantly reduced PCB loading to the river from these sources once the State’s plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human

HUDSON RIVER PCBS (Continued) **1000384273**

carcinogens. They are also linked to other serious non- cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB- contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in- place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA ?121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is

HUDSON RIVER PCBS (Continued) **1000384273**

conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

LOT 7,TAXBLOCK 223 (Continued) **S108469734**

Town: New York City
Update By: JEBROWN
Site Description: Location: The 268 West Street site is located in an urban area on the west side of Manhattan with a mix of residential and commercial properties. The property was prevously owned by several property owners and identified by the addresses: 33-41 Desbrosses Street, 264-271 West Street, 62-74 Vestry Street, and portions of 440 and 432 Washington Street. It has since been purchased by one owner who now has one property identified as 268 West Street (Block 223, Lot 3 and also tentative Lots 1013 and 1015). The tentative lots are a nine foot strip of the western portion of existing Block 223, Lot 13 and Lot 15. The neighborhood is known as the Tribeca neighborhood of Manhattan. Site Features: The site consists of approximately 0.53 acres. The five vacant buildings on the site consist of a mixture single story buildings, two story buildings and a five story building. The site is in a very flat area.Current Zoning/Use: The current zone designation for the site is C6-3A commercial with a residential overlay. The area immediately surrounding the site is residential with some small commercial establishments.Past Use of the Site: Historic uses of the site include an automotive repair facility, a copper works, a wagon painting operation, a truck sales and service facility, a paper stock facility, parking garages, manufacturing (unspecified), warehouses, a packaging facility, and office and storage space. The automotive repair facility reportedly had hydraulic lift systems and underground storage tanks, and the motor freight station had gasoline tanks. The site was developed with several multi-level commercial and manufacturing buildings as early as 1894. Automotive repair facilities were identified at the site as early as 1950.Although the exact time is not available, the shoreline was moved westward in the 1800s using imported fill material. According to previous reports, the fill imported to the subject property is of unknown origin and may contain hazardous materials.Site Geology and Hydrogeology: The site is typical of an urban area. The Remedial Investigation Report found that historic fill extended across the site to a depth of approximately 6 to 12 feet below ground surface (bgs). The site is 6 feet above sea level. Beneath the fill layer, is brown and gray sand with some interbedded layers of sandy silt followed by organic silt and clay with trace shell and wood fragments. Groundwater flow has been found to be toward the northeast and may be influenced by pumping action from beneath nearby buildings or underground utilities. The depth to groundwater is approximately 7 feet below ground surface. The Hudson River is located about 300 feet west of the site.
Env Problem: Based upon investigations conducted to date, the primary contaminants of concern include metals, volatile organic compounds (VOCs) and semi-VOCs (SVOCs). No PCBs were detected on site. Historic fill was found at depths ranging from 6 to 12 feet below ground surface (bgs) throughout the site, and two underground petroleum storage tanks (USTs) were also found on-site. The SVOCs and metals noted in site soils and groundwater are likely related to historic fill.Soil PCE was found in shallow soils, typically in the top 2 feet below ground surface (bgs), primarily in the southern portion of the site. PCE was detected in several locations above the unrestricted use soil cleanup objective (UUSCO) of 1.3 parts per million (ppm) with one detection of 47 ppm above the residential and restricted residential use SCO (RSCOs/RRSCO) of 5.5 ppm and 19 ppm, respectively .On-site soil samples exceeded UUSCOs for 13 SVOCs; some also exceeded the RSCOs

LOT 7,TAXBLOCK 223 (Continued) **S108469734**

and RRSCOs. Seven of the more significant findings were: benzo(a)anthracene (up to 140 ppm vs. RSCO/RRSCO of 1 ppm), benzo(a)pyrene (up to 140 ppm vs. RSCO/RRSCO of 1 ppm), benzo(b)fluoranthene (up to 160 ppm vs. RSCO/RRSCO of 1 ppm), benzo(k)fluoranthene (up to 48 ppm vs. RSCO/RRSCO of 1 and 3.9 ppm, respectively), chrysene (up to 140 ppm vs. RSCO/RRSCO of 1 and 3.9 ppm, respectively), dibenzo(a,h)anthracene (up to 0.20 ppm vs RSCO/RRSCO of 0.33 ppm), and indeno(1,2,3-c,d)pyrene (up to 84 ppm vs. RSCO/RRSCO of 0.5 ppm). On-site soil samples exceeded UUSCOs for six metals, with four of the six exceeding the RSCO and/or RRSCO as follows: arsenic (up to 60 ppm vs. RSCO/RRSCO of 16 ppm), copper (up to 1000 ppm vs. RSCO/RRSCO of 270 ppm), lead (up to 880 ppm vs. RSCO/RRSCO of 400 ppm) and mercury (up to 5.4 ppm vs. RSCO/RRSCO of 0.81 ppm). Site-related soil contamination is not expect to extend off-site base on the available data.Groundwater - Groundwater samples were collected from seven monitoring wells. Groundwater samples showed no detectable levels of VOCs, pesticides or PCBs. Five SVOCs were detected above the groundwater standard of 0.002 parts per billion (ppb) for each compound as follows:: benzo(a)anthracene at 0.11 ppb, benzo(a)pyrene at 0.16 ppb, benzo(b)fluoranthene at 0.18 ppb, benzo(k)fluoranthene at 0.08 ppb, and chrysene (0.13 ppb standard 0.002 ppb). These compounds were detected in one well located in the vicinity of the elevated SVOCs in soils. No site-related metals were detected over groundwater standards. The marginally contaminated groundwater is not migrating off-site.Soil Vapor PCE was detected in soil vapor in shallow soils (top 2 feet bgs), with concentrations up to 2,690 micrograms per cubic meter (ug/m3).

Health Problem: Since the site is fenced and covered by asphalt or concrete, people are not expected to come into contact with site-related soil or groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant so soil vapor intrusion is not a current concern. Sampling indicates that soil vapor intrusion is not a concern for off-site properties.

Brian mentioned that a Phase II investigation is being conducted prior to site redevelopment. during field work, they noted petroleum contamination via visual/olfactory/PID (300 ppm). samples have been submitted to lab. asked Brian to submit phase I for review. also asked to submit contact info for property owner/developer.Brian GochenaurLangan EngineeringPH. (212) 479-5479email: bgochenaur@langan.com01/07/14-Hiralkumar Patel.10:14 AM:- received email from Brian including Phase I and property developer's contact details.Joe WalshRelated Companies **site developer**Ph. (212) 500-0787abstract of Phase I:- site on block #: 223 / lots #: 3 (264-265 West St, 70-74 Vestry St), 5 (266-267 West St, 62-68 Vestry St), 7 (268-269 West St), 9 (270-271 West St, 37-39 Desbroses St), 11 (35 Desbrosses St) and 12 (33 Desbrosses St)- Hudson River is located approx. 300 ft west of the site- proposed development would include demolition of the existing buidings and the construction of a new twelve-story residential building- site has been assigned a restrictive "E" zoing designation for noise --------- subject property is situated at an elevation of approx. 6 ft- according to previous investigations in the area, depth to bedrock is estimated at around 85 to 100 ft bg and depth to groundwater is approx. 4 ft bg and is presumed to flow west towards the Hudson River- currently, site has four (4) 2-story commercial building and two (2) 5-story commercial buildings- subject property was listed as a historical automobile repair station. 70 Vestry St (lot # 3) for 1991, 2000 and 2001; 266 West St (lot # 5) for 1999, 2007, 2008, 2009 and 2010- Sanborn Map review revealed that the subject property was developed with several multi-level commercial and manufacturing buildings as early as 1894- recognized environmental concerns associated with the histroical use of the site include a copper works, a wagon painting facility, a truck sales and service facility, a motor freight station with a gasoline tank, an unspecified manufacturing facility, and several auto repair facilities- building on lot 3 is identified as 264-265 West St (70-74 Vestry St) is a vacant 2-story building. building has a crawl space approx. 30 ft in length- commercial building on lot # 3 was previously used as an auto repair garage- two hydrulic lifts were identified in the garage on lot 3, along the east and west walls. some staining was observed on the floor surrounding the lifts- lot 5 contains an L-shaped building that has been converted into two separate spaces by addition of a cinderblock wall placed in a north-south orientation- eastern portion of lot 5 is identified as 62-68 Vestry St and currently used as a garage/storage space- several manhole covers were identified in the garage in eastern portion of lot # 5- an underground fuel oil tank or oil/water separator may be located beneath the floor of the garage in eastern portion of lot 5- fuel oil and gasoline fill port were located on the sidewalk of the Vestry Street, directly south of the building on lot 5- western portion of the lot 5 is identified as 266-267 West St and is currently used as an auto repair shop- a 275 gal waste oil AST (PBS #: 2-612070) is located near the entrance on West street, on western portion of lot 5- three hydrulic lifts were identified in the garage along the north and west walls, in western potion of lot 5- chemical storage area, containing mostly lubricants and brake cleaners, is located on the estern wall of the repair shop near a parts cleaning basin, in western portion of lot 5 ---------- manhole was located on the floor in the entranceway of the garage on western portion of lot 5- building on lot 7 identified as 268-269

LOT 12,TAXBLOCK 223 (Continued) **S108469724**

West St is a 5-story building with full basement- building on lot 9 identified as 270-271 West St (37-39 Desbrosses St) is a vacant 5-story building with partial basement- buildings on lot 11 (35 Desbrosses St) and lot 12 (33 Desbrosses St) are vacant 2-story buildings with no basement- on 1950 Sanborn Map, lots 3, 11 and 12 are identified as motor freight stations- 1950 Sanborn Map shows a gasoline tank at 35 Debrosses St (lot # 11) ----------no other spills found for lots 3, 5, 7,9, 11 and 12 involved in this project.PBS #: 2-612070. as per PBS record, site 266 West ST (lot # 5) has one 275 gal waste oil AST, in-service. the tank was installed in June 2007.04/04/14-Hiralkumar Patel.10:40 AM:- received email from Brian including link to Phase II report. Brian also mentioned that they are currently pursuing acceptance into the NYSDEC BCP and application was submitted last week.abstract of Phase II:- proposed development includes the demolition of the existing buildings and the construction of a new 12-story residential building with a basement parking level- during GPR survey, major anomalies which appear indicative of USTs were identified in the northeastern and southeastern corners of lot 5- installed eight soil borings (EB-1 through EB-8)- soil beneath the site was observed to be historical urban fill extended from approx. 6 to 9 ft bg- the fill material predominately consisting of fine to coarse brown silty sand with varied amounts of clay, rock, gravel, brick, cement, metal, glass, wood and coal- fill material is underlain primarily by organic silt with some sand, clay and gravel- boring EB-1 was installed in the crawl sapce of lot 9, to a depth of 11 ft bg- borings EB-2 through EB-8 were completed to a depth of 15 ft bg- petroleum impacts, including odors, staining and PID readings were observed in borings EB-3, EB-6 and EB-7- total of 15 grab samples collected: one sample from EB-1 and EB-8; two samples from EB-2, EB-3, EB-4, EB-6 and EB-7; and three from EB-5 (including one duplicate)- with exception of EB-8, all borings were converted to one inch groundwater monitoring well- depth to groundwater ranged from 6.89 to 8.27 ft bg- total eight groundwate samples were collected, including one duplicate from MW05- groundwater in MW03 and MW07 exhibited a petroleum odors; but no evidence of free product was identified in these wells- no petroleum compounds found in soil or groundwater samples; except one compound n-Propylbenzene at 4.5 ppm (limit: 3.9 ppm) at 7.5-9 ft bg in boring EB-7- PCE contamination found in soil samples from 0-2 ft bg in borings EB-2, EB-5 (duplicate) and EB-8- found high metal concentrations in soil and groundwater samples04/08/14-Hiralkumar Patel. discussed with DEC DeMeo. based on findings of PCE and metals and as a NYSBCP application has been submitted, DeMeo asked to send p-site memo to DEC Jane and assign case to her.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification:	Conditionally Exempt Small Quantity Generator
Description:	Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID:	270296
DEC Memo:	5000 gal #6 fo tank ruptured, the tank room had a large hole broken through it leading into the many rooms of the basement. PTC brought a vac truck and numerous other trucks and people to begin the cleanup. Cleanup continued Saturday and Monday. What was observable on friday eve of the concrete floor appeared to be sound. Tipple also inspected the adjoining neighbors basements which are currently under construction and they had no oil impact at that time.12/23/04 tipple updating/// most of the oil removed/ powerwashed// the tank room has not been cleaned, numeros proposals from different companies, awaiting company to be awarded contract. Once the tank is removed and the room cleaned, Tipple will conduct followup inspection.2/10/04 not yet cleaned, temporary tanks still in place3/3/05 Tipple and Rahman conducted a site visit.... The majority of the spill has been successfully cleaned, there are a few edges and at the former tank grave that must be re-cleaned.3/16/05 site visit, followup electronic photos, manifests to follow, cleanup completed, no further aaction, letter sent.....MT
Remarks:	CREWS ARE ON THE WAY TO CLEAN UP.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT"E2MIS 1088817/2/97MGO construction mech Zambiasi reports while testing an abandoned 6" CI main for an ongoing Construction Management job had 6 ozs of main water leak from main onto soil in excavation. The spill was contained and did not enter any sewers, subsurface structures or water ways. The pilot hole in the main wasplugged, the leak secured with a strap straddle. The soil was double bagged and removed in 6 mil plastic bags in a 27 gal drum.All solid waste was bagged and removed. A sample was taken of the water in a jar, to be sent to the chem lab in the a.m. for testing. The drum and waste was taken to 271 ave c (e16 st yard) and placed in Hazardous waste area, pending lab results for proper disposal. CIG romero was notified.entered by 77472Logger Chris McCallion (86578) 21-MAY-2003 14:10 - Reviewed incident. Performed historical ChemLab search for lab results from this incident. Found ResultsLSN# 97-08149 analyzed for Benzene. Results came back <0.5 ppm for Benzene. Liquid was non-haz, therefore soil removed was non-haz. Soil was disposed of accordingly. Changed Opn Status to "-CLODE" for closure by NYSDEC. Removed Resolved date/time.

DEC Memo:	05/18/06-Vought-Off hours duty responder. Vought called contact on PBS (Kenneth Fishel 212-477-3164) and no answer. Vought called caller who wishes to remain anonymous and as per her, developer bought parking lot and excavation of property has begun. FDNY and NYCDOB onsite previously in repsonse to residential complaints. Vought received paperwork from caller that included Stipulation Agreement from DEC Rui Feng (see spill #0505263). Vought called Shary Laskowitz, attorney for the tenant (212-736-4500). Laskowitz does not have access as agreement current fight with owner and she is not in posession as tenant. Current owner is Atlantic Block and she has no contact information. Tenant is Jordan Parking who does not have access to site. Vought called Kenneth Fishel and he is no longer managing agent for building. DEC requires: 1)updating of PBS registration. Vought called CES Environmental Services (Francis Fonaca 732-500-7465). As per Francis Fronaca and DEP was onsite yesterday and USTs were abandoned in place, USTs discovered during excavation. PBS registration will be sent in once tanks are exposed and tank information can be found. Phone number for owner (Rocco or Jacko Basile 212-965-9300). Vought called Rocco and he agreed to access and said to call him back with any issues.05/18/06-Vought-Site

PARKING LOT (Continued) **S107788239**

visit by Vought. Parking lift evelators present on site and also observed was approximate 50'x15' excavation. Slight gasoline odor in bottom of excavation (excavation approximately 3' deep). Piping observed in excavation but undeterminable if piping was from former UST system. No vents, former pump islands or remote fills were found. Entire lot repaved with asphalt. Soil in excavation composed of urban fill (brick, coal, coal ash). No odors were detected at street level. Vought called Rocco Basile and required that excavation be covered with plastic. Vought suggested to DEC Feng that Community Air Monitoring Plan be implemented during excavation to prevent further odor complaints. Vought called DeSarm and left message with results of site visit and to contact DEC Feng with further issues. Spill closed by Vought and referred to open spill #0505263.

Remarks: PIPES ARE STICKING UP OUT OF THE GROUNDS .THIS AN OLD GAS STATION. THERE IS A GAS ODOR SEEPING OUT DUE TO RAIN. UNKOWN IF THERE IS A SPILL. CLEAN UP IS UNKNOWN.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"1/9/2003-Vought-Spoke with Jim Romeo (201-714-9858) will be starting excavtion of contaminated soil. Soil will be analyzed for VOC and SVOC. Sampling will be four sidewalls and one bottom groundwater sample. Report will be sent to NYSDEC by 2/15/2003.7/21/2003-Vought-File review by Vought:Owner of property is Asi Cymbal (212-398-2000x11). New building will consist of residential apartments with underground garage. Property address is also 416-424 Washington Street.Letter DEP-10/31/2002-Letter from John Wuthenow (DEP Site Assessment Unit-718-595-4416). 259 West street will be demolished prior to building new structure. According to letter several suspect UST's may still exist at the site. Lens of #2 fuel oil free product found in SB-10. Letter DEP-11/12/02-Letter from Daniel Cole approving of health and safety plan and remedial action workplan.Corrective Action Report-Environmental Management Services (Jim Romeo-201-714-9858). Report received 2/14/03. Report requests No Further Action. Owner of property is W Squared, LLC 700 Pacific Street Brooklyn, NY 11217. Site underlain by fill material. Groundwater flow to the west or southwest. Groundwater at a depth of 7' below grade. GPR survey performed to determine if abaondoned UST's were present. GPR survey not performed at 416-424 Washington due to presence of debris in the basement. GPR survey also encountered "excessive background noise" Seventeen Geoprobe borings performed on 9/10/2002. Only a sheen found at SB-10. Soil excavation completed on 1/21/03. 21 cubic yards (36.86 tons) of soil were removed from the site and four endpoint soil sidewall samples and one bottom groundwater sample were collected (analyticals provided). Future excavation of new building is planned for 12 below grade. Groundwater infiltration from the north displayed an oil sheen. Soil samples showed PAH exceedances (due to historical fill). Groundwater

259 WEST STREET (Continued) **S105996750**

analyticals up to 470ppb napthalene. PBS and Spill database search indicated no registered tanks at West st or Washington Ave sites. Vought will perform site visit on 7/23 to: 1)confirm northern source of contamination via sidewalll inspection and adjacent property investigation 2)inspection of soil for fill characteristics 3)examination of foundation depth and possibility of undiscovered on-site USTs at 259 West and 416-424 Washington Avenue 4)inspection for abandoned fill ports or vent pipes suggesting historical presence of USTs.7/24/2003-Vought-Site visit by Vought on 7/23. Excavation was not open and nothern source could not be confirmed. Soil exhibited fill characteristics in exposed portions of site (brick, coal, ash). 416-424 Washington Street property excavated to a depth of 5' and parking lot/259 West Street were excavated to a depth of 14' and no UST's or piping were discovered. No abandoned fill port or vents were found due to new sidewalks. Vought inspected adjacent property to the north (67 Vestry) and found no evidence of spills. Secondary containment vault of 3000-gallon #6 fuel oil showed no evidence of spills. Vought required owner of 67 Vestry to tightness test tank (letter sent 7/24). TPH Fingerprinting of groundwater sample by EAI indicated #2 fuel oil despite #6 oil storage to the north. Possible source may be former on-site AST and no definitive soil samples taken from the vadose zone other than PID screening of excavator buckets (soil source may have been missed during excavation). Vought called Jim Romeo (201-951-5198) and informed him of tank tightness test letter. Romeo will send Vought copy of DEP ESA which describes soil borings from 259 West Street. During the discussion with Remeo he indicated that a 275-gallon AST was removed from the first floor of 259 West street (slab on grade construction).1/6/04-Vought-Spill transferred from Vought to Austin.1/27/04 - Sawyer - Spill transferred from Austin to Sawyer.7/22/04 - Sawyer - Talked to Anna of EAI, Inc., who took over for departed Jim Romeo about reviewing corrective action report dated 2/13/03. 9/14/04 - Sawyer - Talked to Anna and she expressed the fact that the building owners were reluctant to do more work without a letter from the Department directing them to do so. I am drafting the letter now.1/27/04 - Sawyer - Received detailed explanation of the schedule of events that have happened with this spill from James Grond at GCI Envornmental Advisory, Inc. He explained that a subsequent water sample taken 5/8/03 indicated that there were no exceedances of groundwater criteria. There is no further action required. Closed.

Remarks: THEY WERE DIGGING DOING GEO PROBE SAMPLING AT THE SITE.THE PROPERTYWAS UP FOR SALE AND HAS BEEN BROUGHT BY A COMPANY CALLED W SQUAREDLLC 700 PACIFIC STREET BROOKLYN NY 11217.THEY DID 17 SOIL BORINGS AND CONTAMINATION WAS NOTICED ON 2 BORING SAMPLES.THE SAMPLES WERE ANALYZED AT LABRATORY CALLED SCIENTIFIC LABRATORIES 8 SCHOOL STREET WEYMOUTH MASSACHSETTS 02189

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	08.02.05 SR..Spoke with Rachel Ataman. They came across SVOC's while doing soil probes at that facilities. Will send DEC the report and propety owners info.8/12/2005 CSL sent to:Jack LefkowitzWashington HJ, LLC1524 52nd StreetBrooklyn, NY 1121910.03.05 SR// SVOC's level are pretty high and the site is a historic gas station. I suggested Rachel Ataman to go for further delineation of the ground water and soil in respect to MTBE, Specifically, instalation of one bedrock monitoring well at least is necessary since the site is a historic gas station.12/20/05-Sharif// Case was transferred from Rahman to Koon Tang for reassignment.1/3/2005 - Feng - VOCs and SVOCs found in SP-5 are extremely high. DEC Rahman has requested the groundwater samples and monitoring well through the bedrock on 10/3/2005. SIR pending. Contacted Yasemin Kacar (Hydro Tech Environmental) and she would check the status of the site and call back.4/13/2006 - Feng - Daniell Dunn from IVI Diligent Service (914-694-9600, fax 914-694-8549) called and requested FOIL because she doesn't have any information on this spill. Received FOIL application and gave to Robert Leung. (RJF)5/8/2006 - Feng - Call from Francis Fonaca, CES Environmental Services. (office: 732-257-2091, cell: 732-500-7465). CES will perform soil excavation and then collect soil samples. Groundwater samples might be collected via air rotary. Will submit the report after the job is done. (RJF)5/10/2006 - Feng - Received Site Assessment report from Gary Dent, 1st Bank of Beverly Hills (818-223-8447).5/11/2006 - Feng - Call from Francis Onega, soil excavation will start tomorrow, 5/12/2006, PID will be utilized and probably more than 10 soil samples will be taken. I told him that before any excavation, all the underground utilities must be marked out. Report will be submitted after the work is done. (RJF)5/12/2006 - Feng - Call from Ms. Robynice (RP's lawyer) explaining that during

415 WASHINGTON ST - MISC (Continued) **S106970171**

the soil removal process, polices came to stop the excavation. She requested Stipulation Agreement. 5/15/2006 - Feng - Emailed a copy of STIP to Francis Onega (CES) as per their request. His technician will come to pick up tomorrow morning and deliver to the RP. (RJF)5/16/2006 - Feng - Charles Onwudinjo came to pick up the STIP. (RJF)5/16/2006 - Feng - Shary Laskowitz, attorney for the tenant (212-736-4500) saying that the tenant of the parking lot owns the hydraulic lifts. Both of the property owner and tenant are fighting in court. I explained we won't get involve in this and we might wait for them to settle this case. (RJF)5/17/2006 - Feng - Refer to Attorney, John Urda and he spoke to Shary Laskowitz. The owner and the tenant are fighting in court right now. Remediation will be on hold until the final disposition from court (might take a couple weeks). (RJF)05/18/06-Vought-See also spill #0601769 at same location.5/18/2006 - Feng - Spoke to Francis Onega and require him to stop any further work onsite.5/19/2006 - Feng - Residential complain about petroleum odor associated with the excavation. DEC Joe Sun called Francis Onega and Rocco Basile rquired: 1) Stop further excavation, 2) Cover the excavation and the stock pile soil with plastic sheet. 3) Submit Community Air Monitoring Plan immediately. 4) Register the USTs found during excavation with DEC. (RJF)5/19/2006 - Feng - DEC Koon Tang, Joe Sun and Jun Feng Contacted Alyssa Ziegler of Assemblywoman Deborah Glick Office with updates of the site. 5/22/2006 - Feng - Meeting with Rocco Basile (property owner) and Francis Onega (his consultant). DEC required: 1) dispose the stockpiled soil ASAP. 2) submit workplan included Community Air Monitoring Plan (CAMP). 5/23/2006 - Feng - DEC Koon Tang, Joe Sun and Jun Feng Contacted Alyssa Ziegler of Assemblywoman Deborah Glick Office with updates of the site. 5/25/2006 - Feng - Workplan, dated 5/22/2006 submitted by CES. The entire property will be excavated down to 8'-10'. The USTs will be registered upon discovered. The excavation will be left opened and covered with 6 mil plastic sheet pending the soil samples analyticals. 10 soil endpoint samples will be taken for post-excavation. 4 Groundwater samples will be collected prior excavation. Community Air Monitoring Plan. The CAMP will be implemented during any work onsite in accordance with the DOH guidance. Discussed with DEC Joe Sun and Approved CAMP and workplan with some conditions. 1) DEC required complete groundwater delineation before any further excavation, submit site plan of sampling location before any drilling and a report will be submitted for review and approval. 2) After the completion of soil excavation, the excavation will be covered at all time when there is no construction. DEC also recommended drill for groundwater samples after the stockpiled disposed off site because currently the stockpiled soil occupied 1/3 of the property, the lifts occupied 1/3 of the property and the excavation the rest of 1/3. (RJF)6/8/2006 - Feng - Sent letter of notice of violation and Stipulation Agreement with modified CAP to Rocco Basile. cc to CES. STIP due 6/21/2006. (RJF)6/19/2006 - Feng - STIP executed by Lou Oliva. (RJF)6/20/2006 - Feng - Meeting with Rocco Basile and Francis Onaga. Site excavation and stockpiled soil will be removed tomorrow. A fact sheet will be sent from DEC if anyone interested or concerned. Fact sheet copy to Francis Onaga. (RJF)6/21/2006 - Feng - DEC Jun Feng and Joe Sun visited the site, 10:30am to 11:30am. A backhoe was there, and 6 trucks were loading the soil off site. DEC staff didn't smell any gasoline. Air monitoring conducted every half hour and during work. The PID didn't detect any VOCs at street level nor in the bottom of

415 WASHINGTON ST - MISC (Continued) **S106970171**

the excavation (3'-4' bg). The highest level of dust the particulates detector has been detected is 80 mcg/m3. Water is ready to suppress the dust onsite. DEC required daily written briefing about the work onsite to be submitted. 6/22/2006 - Feng - Daily Status Report from CES, dated 6/21/2006. Work hours from 7:30am to 3:30pm. Total of 480 tons (16 load) of contaminated soil was trucked off-site for disposal. The truck was properly covered before leaving the site. An abandoned UST fuel oil (275 gallon) was discovered at the north east corner of the site. The tank was cut open, cleaned and filled with sand upon excavation. The tank is staged onsite for disposal at a scrap metal yard. CAMP has impletmented. No detectable or high readings were noted on VOCs or dust. Excavation and soil removal will be continued tomorrow. (RJF)6/23/2006 - Feng - Daily Status Report from CES, dated 6/22/2006. Work hours from 7:00am to 2:30pm. Total 40 loads (1,000 tons) of contaminated soil was trucked offsite. Two 550-gallon USTs were discovered at the source area. The discovered tanks were encased in concrete. USTs will be removed on 6/23/2006. Again, CAMP implemented and no detectable VOCs, and low dust level dectected. An official of the NYCDOB was onsite and had the excavation stopped in order to install shoring at the four corner of the excavation. No further excavation will be done until DOB allow to. (RJF)10/13/2006 - Feng - Updates. Began October 2006, DEC was informed by the consultant that the NYCDOB's STOP ORDER was lifted and the construction will be resumed. On 10/4/2006, additional groundwater samples were collected from the former tanks area and the sampling result will be submitted in the next Status Report. Concrete slab is extended to the entire site, about 4" thick and it is 6' bg. No excavation will be further advanced. 10-foot interval of endpoint samples will be taken. Endpoint samples will be collected from 6" to 12" below concrete slab. Further excavation decision will be made based on the soil samples results. (RJF)Site Investigation/Closure Report, November 2006, submitted by CES Environmental Services. The site investigation including series of soil and groundwater sampling. The site was excavated down to the concrete/brick old foundation. 21 soil borings were advanced and soil samples were taken for SVOCs and VOCs analysis. Minor SVOCs exceedances observed in some borings. 4 groundwater samples taken. No VOCs, except 16 ppb MTBE in W-1. SVOCs exceedances detected in W-3 and W-4. 5/22/2007 - Feng - DEC staff J. Sun and J. Feng visited the site and met with the developer's project manager Mr. S. Cafiso and the construction superintendent Mr. Artie. The excavation was advanced down to 8'-10' bg. A structure engineer from Langang Environmental was onsite. Mr. Artie explained that a 10-mil vapor barrier was installed beneath the basement floor before 4 feet of concrete slab was poured. The concrete had mixed with Krytol Internal Membrane Waterproofing Admixture for Concrete. Mr. Artie also told us that they had resampled soil and groundwater. The foundation wall will be 14 inches thick. DEC required vapor barrier to be installed at the exterior foundation wall before pouring the foundation wall. Soil/gw sampling results, vapor barrier specification and design will be forward to DEC. (RJF)11/26/2007 - Feng - A copy of the lab report, 10/4/2007, submitted by Basile Danali, LLC. No text report included. A map indicates the boring locations attached. Soil samples were collected at depth of 14'-18' bg. Only some minor SVOCs detected in EB-1. The others are below MDL. (RJF)11/29/2007 - Feng - Discussed with Joe Sun. It is necessary to have more groundwater data in the vicinity of the former tank area due to the exceedances of SVOCs. Letter to Rocco Basile (Atlantic

415 WASHINGTON ST - MISC (Continued) **S106970171**

Walk, LLC) and requiring further delineation of the SVOCs contaminated former tank area and the documentation of vapor barrier/water proof layer installation for the new building. Work plan and the vapor barrier installation document to be submitted by 1/14/2008. (RJF)4/18/2008 - Feng - Reviewed the whole package of analysis reports, previous reports sent by A-1 Testing Laboratories, Inc. Attached with black and white pictures taken 5/22/2007 installation of the membrane. (RJF)5/5/2008 - Feng - Letter to Rocco Basile (Atlantic Walk LLC) requiring a soil boring to be installed at the sidewalk of Washington Street. Soil and groundwater samples to be taken. Report due 7/7/2008. (RJF)5/8/2008 - Feng - Rocco Basile called. The project is taken over by the developer. He will forward the DEC's letter to the developer and let the developer know what needs to be done. (RJF)6/4/2008 - Feng - Reviewed Limited Subsurface Investigation Report, dated 5/28/2008, prepared by JC Broderick & Associates, Inc. (JCB). On 5/21/2008, JCB advanced one soil boring at the sidewalk of Washington Street using GeoProbe. Soil boring depth 16 feet bg. Groundwater was encountered at 14 feet bg. 2 soil samples (at 10'-12', 12'-14') and 1 groundwater samples were collected. Analyticals did not show any exceedances, all below MDL. Discussed with Joe Sun, spill could be closed. The onsite soil sampling were done and only show minor SVOCs exceedance detected in some borings. The onsite soil was excavated down to the old foundation/concrete slab and disposed offsite because of the site development. Groundwater was detected with SVOCs exceedances in the former tank area. The recent soil and groundwater samples which were collected in downgradient of the former tank area at the sidewalk of Washington Street sidewalk did not show exceedances, that means no migration off site. A vapor barrier membrane was installed for the new building. Spill closed. 6/9/2008 - NFA issued. (RJF)

Site Description: Location:The Site is located at 460 Washington Street (456 Washington Street) and 281 West Street in New York, New York (Tax Block 595, Lot 1). The Site was previously identified as Block 595, Lots 1 and 22 but the two lots were combined into one lot (Lot 1) on June 1, 2012. The Site is approximately 25,800 square feet and is bordered by mixed-use commercial/residential properties to the north, Washington

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

Street to the east, Watts Street to the south, and West Street (Route 9A Highway) to the west.Site Features: The western portion of the Site (formerly Lot 1) was initially occupied by an approximately 13,320 square-foot (0.31 acres) asphalt-paved parking lot and the eastern portion of the Site (formerly Lot 22) was occupied by two interconnected one- and two-story buildings. The two-story building, located on the northeastern portion of the Site, had a basement. This portion of the Site occupied an area of approximately 12,480 square feet (0.287 acres). The buildings and parking lot were demolished prior to remedial action at the Site.The Site has now been improved with a multi-story residential building with a partial cellar level and courtyard area that was constructed concurrently with implementation of the remedial action. Ground floor slabs at the Site now range from el 3 to el 8 and the top of the basement slab is at el -4. Surrounding sidewalk elevations range from approximately el 4 to el 7.5. The Site and regional topography slopes gently to the west towards the Hudson River.Current Zoning:In October 2010, the City Council adopted the North Tribeca Rezoning, which is intended to continue the neighborhood’s transformation from industrial uses to "family-friendly" residential uses. The rezoning created the Special Tribeca Mixed Use District in which the Site is located. Currently, adjacent properties consist of residential to the north and south, mixed commercial and residential to the east; the Hudson River and West Side Highway to the west and the Holland tunnel to the northwest.Historic Uses:Former lots 1 and 22 were developed with two to five-story buildings in 1894 with unknown use. In 1905, a warehouse was built on the northern two-thirds of lot 22 and used to store steel through 1925. In 1922 lot 1 was developed into a building with use labeled as Tower Stores Inc. Lot 1 was then used as a gasoline filling station from 1950 through 1968. Subsequently, it has been used as a parking lot. From 1928 to 2005, lot 22 was used as a railroad freight station/freight warehouse. Site Geology:The generalized stratigraphy underlying the Site is composed of a layer of historic fill overlying natural clay and sand deposits with varying amounts of silt, clay, and gravel followed by bedrock between approximately 85 and 98 feet below grade surface (bgs). The surficial fill layer extends to a maximum depth of approximately 23 feet bgs and is comprised of gray, black, and brown, coarse to fine sand with varying amounts of silt, gravel, crushed stone, concrete, brick, wood and shell fragments. The fill layer is underlain by a layer of organic clay or clay with varying amounts of silt and shell fragments in the western portion of the Site. The clay layer was encountered immediately below the fill layer at depths ranging from 11 to 23 feet bgs. A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation.Site Hydrology:Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The groundwater elevation is highest in the southeast and appears to slope toward the west, northwest across the majority of the Site, with some redirection toward the east along the western Site border. The lowest groundwater elevation, approximately el -2.0, was documented at a monitoring well located in the center of the parking lot on former Lot 1. Regional groundwater is presumed to flow west towards the Hudson River.

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

Env Problem: Nature and Extent of ContaminationPrior to Completion of Remediation:Based on the results of the Remedial Investigation there are elevated levels of petroleum related Volatile Organic Compounds (VOCs) in soil and groundwater in the northwestern section of lot 1 and elevated levels of semi-volatile organic compounds (SVOCs) and metals in the soil at lot 22. See attached Table 1 for concentrations compared to the Part 375 Soil Cleanup Objectives (SCOs).Soil: Historic Fill Impacts - The historic fill layer contained exceedances of the Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) for VOCs, SVOCs, metals, and poly chlorinated biphenyls (PCBs). PCB exceedances were only reported in the eastern portion of former Lot 1. SVOCs and metals were detected at concentrations exceeding the RRUSCOs throughout the fill layer that were typical of historic urban fill material, except for the following:Metals exceeding RRUSCOs were identified in fill from between 1 and 10 feet bgs in the western half of the Site, and in fill from between 2 and 12 feet bgs in the southeastern portion of the Site. Fill material from intervals between 1 and 12 feet bgs on the southern portion of former Lot 22 contained the following metal concentrations: arsenic up to 58 parts per million (ppm) ; barium up to 510 ppm; cadmium up to 17 ppm; nickel up to 12,000 ppm; mercury up to 20 ppm ; lead up to 9,600 ppm; and copper up to 51,000 ppm.SVOCs, specifically carcinogenic polycyclic aromatice hydrocarbons (cPAHs), were reported at concentrations above RRUSCOs throughout the Site, but at anomalously higher concentrations in fill between 2 and 12 feet bgs in the southeastern portion of the Site. The following concentrations that exceed RRUSCOs were reported for fill from between 2 and 12 feet bgs: napthalene up to 190 ppm; benzo(a)anthracene up to 86 ppm; benzo(a)pyrene up to 59 ppm; benzo(b)flouranthene up to 78 ppm; benzo(k)flouranthene up to 24 ppm; dibenzo(a,h)anthracene up to 8.9 ppm; chrysene up to 82 ppm; indeno(1,2,3-cd)pyrene up to 31 ppm; flouranthene up to 160 ppm; phenanthrene up to 220 ppm; and pyrene up to 200 ppm.Petroleum-Impacted Fill - Petroleum-impacted soi/fill was encountered in the northwestern corner of the Site and is likely related to historic use of the lot as a gasoline filling/service station. Petroleum-impacted soil/fill(based on visual observations and analytical results) was identified at depths ranging from 5 to 15 feet bgs, straddling the groundwater table. Borings with VOC exceedances are located in the northwestern portion of the Site. The VOCs include 1,2,4-trimethylbenzene at 460 ppm; 1,3,5-trimethylbenzene at 180 ppm; ethylbenzene at 270 ppm; benzene at 1.2 ppm; toluene at 50 ppm; total xylenes at 860 ppm; n-propylbenzene at 120 ppm; sec-butylbenzene at 14 ppm; and n-butylbenzene at 13 ppm. Underground Storage Tanks (USTs) - USTs were not uncovered during the test pit investigation conducted in the northwestern portion of the Site as part of the RI; however, a fragment of an apparent former fill or vent line was observed, indicating a tank may have previously been located in this area. USTs may still be located at the Site. Groundwater:Petroleum-related VOCs and SVOCs were identified in groundwater at concentrations exceeding the applicable groundwater standards at MW-1, MW-3, RI-MW5, and/or RI-MW6 in the northwestern portion of the Site. Petroleum-related VOC exceedances in groundwater are limited to the northwest corner of the Site. Based on RI data, groundwater flow in this area of the site is to the east southeast. The two wells at the western site perimeter (RI-MW5 and RI-MW6) had total BTEX concentrations ranging from 26.9 to 126 parts per billion (ppb). Monitoring well MW-1, located west of

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

the site perimeter wells and within what is estimated to be the most-impacted petroleum area, had a total BTEX concentration of 11,956 ppb. Petroleum-related VOCs were also identified in soil samples collected from boring EB-1, and RI-SB1; therefore, it is likely that petroleum impacts to groundwater are related to the historic petroleum-release identified in the same area. Metal contaminants in the groundwater that exceeded applicable groundwater standards included iron, lead, manganese, mercury, selenium, sodium and magnesium in unfiltered samples. This likely arises from the quality of the fill material. However, filtered groundwater samples exhibited exceedances for sodium, magnesium and selenium only. The presence of sodium and magnesium can be attributed to saltwater intrusion. SVOC contaminants that exceeded applicable groundwater standards included the cPAHs - benzo(a)pyrene, benzo(b)fluoranthene, benzo(k) fluoranthene - chrysene and naphthalene. Howver, thsi exceedance was exhibited at well MW-1 which is located in the northwest section of the Site where petroleum contamination was identified. Off-site migration is expected to be limited based on groundwater analytical data. Soil Vapor:Soil vapor sampling results indicated the presence of several VOCs, namely those associated with petroleum such as tri-methylbenzene, ethyl benzene, toluene and xylenes, above the anticipated range of background concentrations. Total VOCs in the subsurface soil vapor samples ranged from 155 micrograms per cubic meter (g/m3) in RI-SV5 to 802 g/m3 in RI-SV1. VOC concentrations in soil vapor are greatest in the eastern and western most portions of the Site. VOCs may be due to a combination of petroleum impacts in the northwestern portion of the Site and unknown off-site sources.Post-Remediation:Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs and SVOCs in soil and groundwater. Remedial action has successfully achieved soil cleanup objectives for restricted residential use. Seven USTs were also removed and appropriately decommissioned. Residual contamination in the soil, and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial activities undertaken at the site have effectively reduced the potential for exposure to site-related contaminants and measures are in place to ensure that these measures remain protective in the future.

A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation.Site Hydrology:Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The groundwater elevation is highest in the southeast and appears to slope toward the west, northwest across the majority of the Site, with some redirection toward the east along the western Site border. The lowest groundwater elevation, approximately el -2.0, was documented at a monitoring well located in the center of the parking lot on former Lot 1. Regional groundwater is presumed to flow west towards the Hudson River.

Env Problem: Nature and Extent of ContaminationPrior to Completion of Remediation:Based on the results of the Remedial Investigation there

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

are elevated levels of petroleum related Volatile Organic Compounds (VOCs) in soil and groundwater in the northwestern section of lot 1 and elevated levels of semi-volatile organic compounds (SVOCs) and metals in the soil at lot 22. See attached Table 1 for concentrations compared to the Part 375 Soil Cleanup Objectives (SCOs).Soil: Historic Fill Impacts - The historic fill layer contained exceedances of the Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) for VOCs, SVOCs, metals, and poly chlorinated biphenyls (PCBs). PCB exceedances were only reported in the eastern portion of former Lot 1. SVOCs and metals were detected at concentrations exceeding the RRUSCOs throughout the fill layer that were typical of historic urban fill material, except for the following:Metals exceeding RRUSCOs were identified in fill from between 1 and 10 feet bgs in the western half of the Site, and in fill from between 2 and 12 feet bgs in the southeastern portion of the Site. Fill material from intervals between 1 and 12 feet bgs on the southern portion of former Lot 22 contained the following metal concentrations: arsenic up to 58 parts per million (ppm) ; barium up to 510 ppm; cadmium up to 17 ppm; nickel up to 12,000 ppm; mercury up to 20 ppm ; lead up to 9,600 ppm; and copper up to 51,000 ppm.SVOCs, specifically carcinogenic polycyclic aromatice hydrocarbons (cPAHs), were reported at concentrations above RRUSCOs throughout the Site, but at anomalously higher concentrations in fill between 2 and 12 feet bgs in the southeastern portion of the Site. The following concentrations that exceed RRUSCOs were reported for fill from between 2 and 12 feet bgs: napthalene up to 190 ppm; benzo(a)anthracene up to 86 ppm; benzo(a)pyrene up to 59 ppm; benzo(b)flouranthene up to 78 ppm; benzo(k)flouranthene up to 24 ppm; dibenzo(a,h)anthracene up to 8.9 ppm; chrysene up to 82 ppm; indeno(1,2,3-cd)pyrene up to 31 ppm; flouranthene up to 160 ppm; phenanthrene up to 220 ppm; and pyrene up to 200 ppm.Petroleum-Impacted Fill - Petroleum-impacted soi/fill was encountered in the northwestern corner of the Site and is likely related to historic use of the lot as a gasoline filling/service station. Petroleum-impacted soil/fill(based on visual observations and analytical results) was identified at depths ranging from 5 to 15 feet bgs, straddling the groundwater table. Borings with VOC exceedances are located in the northwestern portion of the Site. The VOCs include 1,2,4-trimethylbenzene at 460 ppm; 1,3,5-trimethylbenzene at 180 ppm; ethylbenzene at 270 ppm; benzene at 1.2 ppm; toluene at 50 ppm; total xylenes at 860 ppm; n-propylbenzene at 120 ppm; sec-butylbenzene at 14 ppm; and n-butylbenzene at 13 ppm. Underground Storage Tanks (USTs) - USTs were not uncovered during the test pit investigation conducted in the northwestern portion of the Site as part of the RI; however, a fragment of an apparent former fill or vent line was observed, indicating a tank may have previously been located in this area. USTs may still be located at the Site. Groundwater:Petroleum-related VOCs and SVOCs were identified in groundwater at concentrations exceeding the applicable groundwater standards at MW-1, MW-3, RI-MW5, and/or RI-MW6 in the northwestern portion of the Site. Petroleum-related VOC exceedances in groundwater are limited to the northwest corner of the Site. Based on RI data, groundwater flow in this area of the site is to the east southeast. The two wells at the western site perimeter (RI-MW5 and RI-MW6) had total BTEX concentrations ranging from 26.9 to 126 parts per billion (ppb). Monitoring well MW-1, located west of the site perimeter wells and within what is estimated to be the most-impacted petroleum area, had a total BTEX concentration of

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

11,956 ppb. Petroleum-related VOCs were also identified in soil samples collected from boring EB-1, and RI-SB1; therefore, it is likely that petroleum impacts to groundwater are related to the historic petroleum-release identified in the same area. Metal contaminants in the groundwater that exceeded applicable groundwater standards included iron, lead, manganese, mercury, selenium, sodium and magnesium in unfiltered samples. This likely arises from the quality of the fill material. However, filtered groundwater samples exhibited exceedances for sodium, magnesium and selenium only. The presence of sodium and magnesium can be attributed to saltwater intrusion. SVOC contaminants that exceeded applicable groundwater standards included the cPAHs - benzo(a)pyrene, benzo(b)fluoranthene, benzo(k) fluoranthene - chrysene and naphthalene. Howver, thsi exceedance was exhibited at well MW-1 which is located in the northwest section of the Site where petroleum contamination was identified. Off-site migration is expected to be limited based on groundwater analytical data. Soil Vapor:Soil vapor sampling results indicated the presence of several VOCs, namely those associated with petroleum such as tri-methylbenzene, ethyl benzene, toluene and xylenes, above the anticipated range of background concentrations. Total VOCs in the subsurface soil vapor samples ranged from 155 micrograms per cubic meter (g/m3) in RI-SV5 to 802 g/m3 in RI-SV1. VOC concentrations in soil vapor are greatest in the eastern and western most portions of the Site. VOCs may be due to a combination of petroleum impacts in the northwestern portion of the Site and unknown off-site sources.Post-Remediation:Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs and SVOCs in soil and groundwater. Remedial action has successfully achieved soil cleanup objectives for restricted residential use. Seven USTs were also removed and appropriately decommissioned. Residual contamination in the soil, and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial activities undertaken at the site have effectively reduced the potential for exposure to site-related contaminants and measures are in place to ensure that these measures remain protective in the future.

Site Code: 459779
Site Description: Location:The Site is located at 460 Washington Street (456 Washington Street) and 281 West Street in New York, New York (Tax Block 595, Lot 1). The Site was previously identified as Block 595, Lots 1 and 22 but the two lots were combined into one lot (Lot 1) on June 1, 2012. The Site is approximately 25,800 square feet and is bordered by mixed-use commercial/residential properties to the north, Washington Street to the east, Watts Street to the south, and West Street (Route 9A Highway) to the west.Site Features: The western portion of the Site (formerly Lot 1) was initially occupied by an approximately 13,320 square-foot (0.31 acres) asphalt-paved parking lot and the eastern portion of the Site (formerly Lot 22) was occupied by two

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

interconnected one- and two-story buildings. The two-story building, located on the northeastern portion of the Site, had a basement. This portion of the Site occupied an area of approximately 12,480 square feet (0.287 acres). The buildings and parking lot were demolished prior to remedial action at the Site.The Site has now been improved with a multi-story residential building with a partial cellar level and courtyard area that was constructed concurrently with implementation of the remedial action. Ground floor slabs at the Site now range from el 3 to el 8 and the top of the basement slab is at el -4. Surrounding sidewalk elevations range from approximately el 4 to el 7.5. The Site and regional topography slopes gently to the west towards the Hudson River.Current Zoning:In October 2010, the City Council adopted the North Tribeca Rezoning, which is intended to continue the neighborhood’s transformation from industrial uses to "family-friendly" residential uses. The rezoning created the Special Tribeca Mixed Use District in which the Site is located. Currently, adjacent properties consist of residential to the north and south, mixed commercial and residential to the east; the Hudson River and West Side Highway to the west and the Holland tunnel to the northwest.Historic Uses:Former lots 1 and 22 were developed with two to five-story buildings in 1894 with unknown use. In 1905, a warehouse was built on the northern two-thirds of lot 22 and used to store steel through 1925. In 1922 lot 1 was developed into a building with use labeled as Tower Stores Inc. Lot 1 was then used as a gasoline filling station from 1950 through 1968. Subsequently, it has been used as a parking lot. From 1928 to 2005, lot 22 was used as a railroad freight station/freight warehouse. Site Geology:The generalized stratigraphy underlying the Site is composed of a layer of historic fill overlying natural clay and sand deposits with varying amounts of silt, clay, and gravel followed by bedrock between approximately 85 and 98 feet below grade surface (bgs). The surficial fill layer extends to a maximum depth of approximately 23 feet bgs and is comprised of gray, black, and brown, coarse to fine sand with varying amounts of silt, gravel, crushed stone, concrete, brick, wood and shell fragments. The fill layer is underlain by a layer of organic clay or clay with varying amounts of silt and shell fragments in the western portion of the Site. The clay layer was encountered immediately below the fill layer at depths ranging from 11 to 23 feet bgs. A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation.Site Hydrology:Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The clay layer was encountered immediately below the fill layer at depths ranging from 11 to 23 feet bgs. A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation.Site Hydrology:Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The groundwater elevation is highest in the southeast and appears to slope toward the west, northwest across the majority of the Site, with some redirection toward the east along the western Site border. The lowest groundwater elevation, approximately el -2.0, was documented at a monitoring well located in the center of the parking lot on former Lot 1. Regional groundwater is presumed to flow west towards the Hudson River.

Env Problem: Nature and Extent of ContaminationPrior to Completion of Remediation:Based on the results of the Remedial Investigation there are elevated levels of petroleum related Volatile Organic Compounds (VOCs) in soil and groundwater in the northwestern section of lot 1 and elevated levels of semi-volatile organic compounds (SVOCs) and metals in the soil at lot 22. See attached Table 1 for concentrations compared to the Part 375 Soil Cleanup Objectives (SCOs).Soil: Historic Fill Impacts - The historic fill layer contained exceedances of the Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) for VOCs, SVOCs, metals, and poly chlorinated biphenyls (PCBs). PCB exceedances were only reported in the eastern portion of former Lot

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

1. SVOCs and metals were detected at concentrations exceeding the RRUSCOs throughout the fill layer that were typical of historic urban fill material, except for the following:Metals exceeding RRUSCOs were identified in fill from between 1 and 10 feet bgs in the western half of the Site, and in fill from between 2 and 12 feet bgs in the southeastern portion of the Site. Fill material from intervals between 1 and 12 feet bgs on the southern portion of former Lot 22 contained the following metal concentrations: arsenic up to 58 parts per million (ppm) ; barium up to 510 ppm; cadmium up to 17 ppm; nickel up to 12,000 ppm; mercury up to 20 ppm ; lead up to 9,600 ppm; and copper up to 51,000 ppm.SVOCs, specifically carcinogenic polycyclic aromatice hydrocarbons (cPAHs), were reported at concentrations above RRUSCOs throughout the Site, but at anomalously higher concentrations in fill between 2 and 12 feet bgs in the southeastern portion of the Site. The following concentrations that exceed RRUSCOs were reported for fill from between 2 and 12 feet bgs: napthalene up to 190 ppm; benzo(a)anthracene up to 86 ppm; benzo(a)pyrene up to 59 ppm; benzo(b)flouranthene up to 78 ppm; benzo(k)flouranthene up to 24 ppm; dibenzo(a,h)anthracene up to 8.9 ppm; chrysene up to 82 ppm; indeno(1,2,3-cd)pyrene up to 31 ppm; flouranthene up to 160 ppm; phenanthrene up to 220 ppm; and pyrene up to 200 ppm.Petroleum-Impacted Fill - Petroleum-impacted soi/fill was encountered in the northwestern corner of the Site and is likely related to historic use of the lot as a gasoline filling/service station. Petroleum-impacted soil/fill(based on visual observations and analytical results) was identified at depths ranging from 5 to 15 feet bgs, straddling the groundwater table. Borings with VOC exceedances are located in the northwestern portion of the Site. The VOCs include 1,2,4-trimethylbenzene at 460 ppm; 1,3,5-trimethylbenzene at 180 ppm; ethylbenzene at 270 ppm; benzene at 1.2 ppm; toluene at 50 ppm; total xylenes at 860 ppm; n-propylbenzene at 120 ppm; sec-butylbenzene at 14 ppm; and n-butylbenzene at 13 ppm. Underground Storage Tanks (USTs) - USTs were not uncovered during the test pit investigation conducted in the northwestern portion of the Site as part of the RI; however, a fragment of an apparent former fill or vent line was observed, indicating a tank may have previously been located in this area. USTs may still be located at the Site. Groundwater:Petroleum-related VOCs and SVOCs were identified in groundwater at concentrations exceeding the applicable groundwater standards at MW-1, MW-3, RI-MW5, and/or RI-MW6 in the northwestern portion of the Site. Petroleum-related VOC exceedances in groundwater are limited to the northwest corner of the Site. Based on RI data, groundwater flow in this area of the site is to the east southeast. The two wells at the western site perimeter (RI-MW5 and RI-MW6) had total BTEX concentrations ranging from 26.9 to 126 parts per billion (ppb). Monitoring well MW-1, located west of the site perimeter wells and within what is estimated to be the most-impacted petroleum area, had a total BTEX concentration of 11,956 ppb. Petroleum-related VOCs were also identified in soil samples collected from boring EB-1, and RI-SB1; therefore, it is likely that petroleum impacts to groundwater are related to the historic petroleum-release identified in the same area. Metal contaminants in the groundwater that exceeded applicable groundwater standards included iron, lead, manganese, mercury, selenium, sodium and magnesium in unfiltered samples. This likely arises from the quality of the fill material. However, filtered groundwater samples exhibited exceedances for sodium, magnesium and selenium only. The

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

presence of sodium and magnesium can be attributed to saltwater intrusion. SVOC contaminants that exceeded applicable groundwater standards included the cPAHs - benzo(a)pyrene, benzo(b)fluoranthene, benzo(k) fluoranthene - chrysene and naphthalene. Howver, thsi exceedance was exhibited at well MW-1 which is located in the northwest section of the Site where petroleum contamination was identified. Off-site migration is expected to be limited based on groundwater analytical data. Soil Vapor:Soil vapor sampling results indicated the presence of several VOCs, namely those associated with petroleum such as tri-methylbenzene, ethyl benzene, toluene and xylenes, above the anticipated range of background concentrations. Total VOCs in the subsurface soil vapor samples ranged from 155 micrograms per cubic meter (g/m3) in RI-SV5 to 802 g/m3 in RI-SV1. VOC concentrations in soil vapor are greatest in the eastern and western most portions of the Site. VOCs may be due to a combination of petroleum impacts in the northwestern portion of the Site and unknown off-site sources.Post-Remediation:Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs and SVOCs in soil and groundwater. Remedial action has successfully achieved soil cleanup objectives for restricted residential use. Seven USTs were also removed and appropriately decommissioned. Residual contamination in the soil, and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial activities undertaken at the site have effectively reduced the potential for exposure to site-related contaminants and measures are in place to ensure that these measures remain protective in the future.

Site Code: 459779
Site Description: Location:The Site is located at 460 Washington Street (456 Washington Street) and 281 West Street in New York, New York (Tax Block 595, Lot 1). The Site was previously identified as Block 595, Lots 1 and 22 but the two lots were combined into one lot (Lot 1) on June 1, 2012. The Site is approximately 25,800 square feet and is bordered by mixed-use commercial/residential properties to the north, Washington Street to the east, Watts Street to the south, and West Street (Route 9A Highway) to the west.Site Features: The western portion of the Site (formerly Lot 1) was initially occupied by an approximately 13,320 square-foot (0.31 acres) asphalt-paved parking lot and the eastern portion of the Site (formerly Lot 22) was occupied by two interconnected one- and two-story buildings. The two-story building, located on the northeastern portion of the Site, had a basement. This portion of the Site occupied an area of approximately 12,480 square feet (0.287 acres). The buildings and parking lot were demolished prior to remedial action at the Site.The Site has now been improved with a multi-story residential building with a partial cellar level and courtyard area that was constructed concurrently with implementation of the remedial action. Ground floor slabs at the Site now range from el 3 to el 8 and the top of the basement slab is at el

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

-4. Surrounding sidewalk elevations range from approximately el 4 to el 7.5. The Site and regional topography slopes gently to the west towards the Hudson River.Current Zoning:In October 2010, the City Council adopted the North Tribeca Rezoning, which is intended to continue the neighborhood’s transformation from industrial uses to "family-friendly" residential uses. The rezoning created the Special Tribeca Mixed Use District in which the Site is located. Currently, adjacent properties consist of residential to the north and south, mixed commercial and residential to the east; the Hudson River and West Side Highway to the west and the Holland tunnel to the northwest.Historic Uses:Former lots 1 and 22 were developed with two to five-story buildings in 1894 with unknown use. In 1905, a warehouse was built on the northern two-thirds of lot 22 and used to store steel through 1925. In 1922 lot 1 was developed into a building with use labeled as Tower Stores Inc. Lot 1 was then used as a gasoline filling station from 1950 through 1968. Subsequently, it has been used as a parking lot. From 1928 to 2005, lot 22 was used as a railroad freight station/freight warehouse. Site Geology:The generalized stratigraphy underlying the Site is composed of a layer of historic fill overlying natural clay and sand deposits with varying amounts of silt, clay, and gravel followed by bedrock between approximately 85 and 98 feet below grade surface (bgs). The surficial fill layer extends to a maximum depth of approximately 23 feet bgs and is comprised of gray, black, and brown, coarse to fine sand with varying amounts of silt, gravel, crushed stone, concrete, brick, wood and shell fragments. The fill layer is underlain by a layer of organic clay or clay with varying amounts of silt and shell fragments in the western portion of the Site. The clay layer was encountered immediately below the fill layer at depths ranging from 11 to 23 feet bgs. A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation.Site Hydrology:Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The groundwater elevation is highest in the southeast and appears to slope toward the west, northwest across the majority of the Site, with some redirection toward the east along the western Site border. The clay layer was encountered immediately below the fill layer at depths ranging from 11 to 23 feet bgs. A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation.Site Hydrology:Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The groundwater elevation is highest in the southeast and appears to slope toward the west, northwest across the majority of the Site, with some redirection toward the east along the western Site border. The lowest groundwater elevation, approximately el -2.0, was documented at a monitoring well located in the center of the parking lot on former Lot 1. Regional groundwater is presumed to flow west towards the Hudson River.

Env Problem: Nature and Extent of ContaminationPrior to Completion of Remediation:Based on the results of the Remedial Investigation there are elevated levels of petroleum related Volatile Organic Compounds (VOCs) in soil and groundwater in the northwestern section of lot 1 and elevated levels of semi-volatile organic compounds (SVOCs) and metals in the soil at lot 22. See attached Table 1 for concentrations compared to the Part 375 Soil Cleanup Objectives (SCOs).Soil: Historic Fill Impacts - The historic fill layer contained exceedances of the Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) for VOCs, SVOCs, metals, and poly chlorinated biphenyls (PCBs). PCB exceedances were only reported in the eastern portion of former Lot 1. SVOCs and metals were detected at concentrations exceeding the RRUSCOs throughout the fill layer that were typical of historic urban fill material, except for the following:Metals exceeding RRUSCOs were identified in fill from between 1 and 10 feet bgs in the western half of the Site, and in fill from between 2 and 12 feet bgs in the southeastern portion of the Site. Fill material from intervals between 1 and 12 feet bgs on the southern portion of former Lot 22 contained the following metal concentrations: arsenic up to 58 parts per million (ppm) ; barium up to 510 ppm; cadmium up to 17 ppm;

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

nickel up to 12,000 ppm; mercury up to 20 ppm ; lead up to 9,600 ppm; and copper up to 51,000 ppm.SVOCs, specifically carcinogenic polycyclic aromatice hydrocarbons (cPAHs), were reported at concentrations above RRUSCOs throughout the Site, but at anomalously higher concentrations in fill between 2 and 12 feet bgs in the southeastern portion of the Site. The following concentrations that exceed RRUSCOs were reported for fill from between 2 and 12 feet bgs: napthalene up to 190 ppm; benzo(a)anthracene up to 86 ppm; benzo(a)pyrene up to 59 ppm; benzo(b)flouranthene up to 78 ppm; benzo(k)flouranthene up to 24 ppm; dibenzo(a,h)anthracene up to 8.9 ppm; chrysene up to 82 ppm; indeno(1,2,3-cd)pyrene up to 31 ppm; flouranthene up to 160 ppm; phenanthrene up to 220 ppm; and pyrene up to 200 ppm.Petroleum-Impacted Fill - Petroleum-impacted soi/fill was encountered in the northwestern corner of the Site and is likely related to historic use of the lot as a gasoline filling/service station. Petroleum-impacted soil/fill(based on visual observations and analytical results) was identified at depths ranging from 5 to 15 feet bgs, straddling the groundwater table. Borings with VOC exceedances are located in the northwestern portion of the Site. The VOCs include 1,2,4-trimethylbenzene at 460 ppm; 1,3,5-trimethylbenzene at 180 ppm; ethylbenzene at 270 ppm; benzene at 1.2 ppm; toluene at 50 ppm; total xylenes at 860 ppm; n-propylbenzene at 120 ppm; sec-butylbenzene at 14 ppm; and n-butylbenzene at 13 ppm. Underground Storage Tanks (USTs) - USTs were not uncovered during the test pit investigation conducted in the northwestern portion of the Site as part of the RI; however, a fragment of an apparent former fill or vent line was observed, indicating a tank may have previously been located in this area. USTs may still be located at the Site. Groundwater:Petroleum-related VOCs and SVOCs were identified in groundwater at concentrations exceeding the applicable groundwater standards at MW-1, MW-3, RI-MW5, and/or RI-MW6 in the northwestern portion of the Site. Petroleum-related VOC exceedances in groundwater are limited to the northwest corner of the Site. Based on RI data, groundwater flow in this area of the site is to the east southeast. The two wells at the western site perimeter (RI-MW5 and RI-MW6) had total BTEX concentrations ranging from 26.9 to 126 parts per billion (ppb). Monitoring well MW-1, located west of the site perimeter wells and within what is estimated to be the most-impacted petroleum area, had a total BTEX concentration of 11,956 ppb. Petroleum-related VOCs were also identified in soil samples collected from boring EB-1, and RI-SB1; therefore, it is likely that petroleum impacts to groundwater are related to the historic petroleum-release identified in the same area. Metal contaminants in the groundwater that exceeded applicable groundwater standards included iron, lead, manganese, mercury, selenium, sodium and magnesium in unfiltered samples. This likely arises from the quality of the fill material. However, filtered groundwater samples exhibited exceedances for sodium, magnesium and selenium only. The presence of sodium and magnesium can be attributed to saltwater intrusion. SVOC contaminants that exceeded applicable groundwater standards included the cPAHs - benzo(a)pyrene, benzo(b)fluoranthene, benzo(k) fluoranthene - chrysene and naphthalene. Howver, thsi exceedance was exhibited at well MW-1 which is located in the northwest section of the Site where petroleum contamination was identified. Off-site migration is expected to be limited based on groundwater analytical data. Soil Vapor:Soil vapor sampling results indicated the presence of several VOCs, namely those associated with

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

petroleum such as tri-methylbenzene, ethyl benzene, toluene and xylenes, above the anticipated range of background concentrations. Total VOCs in the subsurface soil vapor samples ranged from 155 micrograms per cubic meter (g/m3) in RI-SV5 to 802 g/m3 in RI-SV1. VOC concentrations in soil vapor are greatest in the eastern and western most portions of the Site. VOCs may be due to a combination of petroleum impacts in the northwestern portion of the Site and unknown off-site sources.Post-Remediation:Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs and SVOCs in soil and groundwater. Remedial action has successfully achieved soil cleanup objectives for restricted residential use. Seven USTs were also removed and appropriately decommissioned. Residual contamination in the soil, and groundwater is being managed under a Site Management Plan.

Health Problem: Remedial activities undertaken at the site have effectively reduced the potential for exposure to site-related contaminants and measures are in place to ensure that these measures remain protective in the future.

Site Code: 459779
Control Name: Soil Management Plan

Site Code: 459779

Site Description: Location:The Site is located at 460 Washington Street (456 Washington Street) and 281 West Street in New York, New York (Tax Block 595, Lot 1). The Site was previously identified as Block 595, Lots 1 and 22 but the two lots were combined into one lot (Lot 1) on June 1, 2012. The Site is approximately 25,800 square feet and is bordered by mixed-use commercial/residential properties to the north, Washington Street to the east, Watts Street to the south, and West Street (Route 9A Highway) to the west.Site Features: The western portion of the Site (formerly Lot 1) was initially occupied by an approximately 13,320 square-foot (0.31 acres) asphalt-paved parking lot and the eastern portion of the Site (formerly Lot 22) was occupied by two interconnected one- and two-story buildings. The two-story building, located on the northeastern portion of the Site, had a basement. This portion of the Site occupied an area of approximately 12,480 square feet (0.287 acres). The buildings and parking lot were demolished prior to remedial action at the Site.The Site has now been improved with a multi-story residential building with a partial cellar level and courtyard area that was constructed concurrently with implementation of the remedial action. Ground floor slabs at the Site now range from el 3 to el 8 and the top of the basement slab is at el -4. Surrounding sidewalk elevations range from approximately el 4 to el 7.5. The Site and regional topography slopes gently to the west towards the Hudson River.Current Zoning:In October 2010, the City Council adopted the North Tribeca Rezoning, which is intended to continue the neighborhood’s transformation from industrial uses to "family-friendly" residential uses. The rezoning created the Special Tribeca Mixed Use District in which the Site is located. Currently, adjacent properties consist of residential to the north and south, mixed commercial and residential to the east; the Hudson

WEST & WATTS DEVELOPMENT (Continued) **S111455783**

River and West Side Highway to the west and the Holland tunnel to the northwest.Historic Uses:Former lots 1 and 22 were developed with two to five-story buildings in 1894 with unknown use. In 1905, a warehouse was built on the northern two-thirds of lot 22 and used to store steel through 1925. In 1922 lot 1 was developed into a building with use labeled as Tower Stores Inc. Lot 1 was then used as a gasoline filling station from 1950 through 1968. Subsequently, it has been used as a parking lot. From 1928 to 2005, lot 22 was used as a railroad freight station/freight warehouse. Site Geology:The generalized stratigraphy underlying the Site is composed of a layer of historic fill overlying natural clay and sand deposits with varying amounts of silt, clay, and gravel followed by bedrock between approximately 85 and 98 feet below grade surface (bgs). The surficial fill layer extends to a maximum depth of approximately 23 feet bgs and is comprised of gray, black, and brown, coarse to fine sand with varying amounts of silt, gravel, crushed stone, concrete, brick, wood and shell fragments. The fill layer is underlain by a layer of organic clay or clay with varying amounts of silt and shell fragments in the western portion of the Site. The clay layer was encountered immediately below the fill layer at depths ranging from 11 to 23 feet bgs. A layer of sand with varying amounts of silt, clay, and gravel was encountered throughout the Site below the fill or clay layer. Underlying the soil deposits is hard sound gray schist bedrock. The depth to competent bedrock ranged from 91 to 98 feet bgs during the geotechnical subsurface investigation.Site Hydrology:Groundwater underlying the Site ranges from approximately 4.7 ft to 7.6 ft bgs (approximately el 3.5 to el -2.0) based on gauging of site wells during the investigation. The groundwater elevation is highest in the southeast and appears to slope toward the west, northwest across the majority of the Site, with some redirection toward the east along the western Site border. The lowest groundwater elevation, approximately el -2.0, was documented at a monitoring well located in the center of the parking lot on former Lot 1. Regional groundwater is presumed to flow west towards the Hudson River.

Env Problem: Nature and Extent of ContaminationPrior to Completion of Remediation:Based on the results of the Remedial Investigation there are elevated levels of petroleum related Volatile Organic Compounds (VOCs) in soil and groundwater in the northwestern section of lot 1 and elevated levels of semi-volatile organic compounds (SVOCs) and metals in the soil at lot 22. See attached Table 1 for concentrations compared to the Part 375 Soil Cleanup Objectives (SCOs).Soil: Historic Fill Impacts - The historic fill layer contained exceedances of the Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) for VOCs, SVOCs, metals, and poly chlorinated biphenyls (PCBs). DEC Memo:	Sangesland spoke with Marcus Simmons with AKRF.Tank was uncovered and pulled. Contaminated soil was found.CSL letter was sent to:Marc BoddewynHudson River Park TrustPier 40 @ West Houston St - 2nd FrlNew York, NY 100147/26/07 Left message w. Axel requesting callback.8/1/07- DEC Piper recieved report from AKRF. During installation of sewer, a 8k ust was discovered. The tank was removed along with 82 tons of soil. Endpoints revealed SVOC over TAGM. GW samples were collected which indicated slightly elevated levels of VOC's. The GW discharges to the hudson and is 15yds waway. Based on information and remediation to date, this spill is closed. See report on e-docs if warranted.
Remarks:	HAS BEEN CONTAINED AND TANK WILL BE REMOVED ON WED.;

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

corporation that bought this site and the property next door in the hopes of constructing a large apartment building. Unknown if the owner is currently operating this garage until this construction is approved and takes place. Check Google for "71 Laight Street LLC"6/22/2012 Sangesland got a voice message from Dan McInerney VP of Taconic Investment Partners (212-704-3848) asking questions about this TTF and open spill case. Sangesland returned a message to his voicemail.6/12/13 On 6/10/13, received voice mail message from Chris McMahon of Langan Engineering. 201-398-4535. They will be removing the tank tomorrow. Today, I called Mr. McMahon back and left a voice mail to return my call. bf07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB09/16/2013 - V. BrevdoCalled Steven A. Ciambruschini of Langan (201) 794 6900 and informed him that NYSDEC never received a remedial action work plan that was submitted to NYCOER. This is E-designated project. Mr. Ciambruschini took my phone and e-mail and stated he will send me RAP and other milestone documents concerning this project.09/17/2013 - V. BrevdoE-mail from OER in response to my inquiry about the project documents.Moore, Hannah" HMoore@dep.nyc.gov 9/17/2013 8:39 AMHi Vadim,I spoke with Chris McMahon from Langan about this Site yesterday. He says that the tank has been removed and that they got clean endpoint samples. I asked him to share this information with both of us. I've also requested that he submit the daily reports that he owes me from the Site, since I have not been receiving them since the end of June.OER approved the RAP on this Site prior to their discovery of the tank test failure, which I believe explains why this wasn't coordinated on the front end.If there is anything else you need from me or if Langan doesn't get you the documents, please let me know. Best,HannahHannah MooreProject ManagerNYC Office of Environmental RemediationHMoore@dep.nyc.gov(212) 442-637209/17/2013 - V. BrevdoE-mail to NYCOER Hi, Hanna, Thank you very much for the project related information. I will continue communicating with Langan and OER regarding spill related issues of this project. When Langan recommends closure of this spill case I will inform you and coordinate spill closure decision with you. Thank you for your help on this matter. Vadim

Remarks: reccomend isolation or removal

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel.12/20/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Ms. Maggy Douglas (Administrator) at (646)388-9530 and left message to call me back regarding information of spill. -QA12/21/06: Recieved call from Mr. Axel (AKRF Consulting firm) (646)388-9529 he said he will find out the information of spill and he will call me back. -QA03/05/07: Called Mr. Axel at (646)388-9529 left message to call me back regarding information of spill. -QA04/03/07: Called AKRF Company at (914)949-7336 talked to Ms. Nancy (Office Manager of White Plains office) she said that someone will call me back regarding spill. Mr. Marcus Simons (AKRF) (646)388-9527 called me back and said he will dig the data and he will call me back regarding the spill. -QA04/10/07: Mr. Axel from AKRF called me and said that they don't have any data regarding spill. They notified the spill to DEC. AKRF is caller also about this spill. When they were doing the drilling on the street, they found soil contamination. Caller also reported there is Gas Station across the street. Mr. Axel said he will send a letter to me regarding that. -QA07/06/07: Mr. Axel from AKRF sent a letter on April 13, 2007. I called Mr. Axel and discussed regarding spill he said that no additional excavation or endpoint sampling have been conducted. -QA09/14/07: I called Mr. Axel to discuss regarding excavation of the soil, waste Manifest Reports and waste charaterization sample report. -QA10/24/07: Checked with Mr. Axel (AKRF Environmental) there is not any waste manifest report and no waste characterization sample. Only they dug out the soil to put the pipe line. There is gasoline stations around the area that may be the source of soil contamination. No additional excavation or end point sampling have been taken. on the basis of the letter of Mr. Axel Schwendt, AKRF Environmental due to the age of spill AKRF is unable to confirm the exact nature of the drilling activities. By the approval of Jon Kolleeny (Supervisor) I closed this spill. -QA

DEC Memo:	Sangesland spoke to consultant Muhammad Mahede at Fleming-Lee Shue (212-675-3225)He says the site was a former gas station and used the address 500 Canal St. It had an old spill number (0408431 - Closed by DeMeo)Now they found gasoline contaminated soil near the old sidewalk fill lines on Greenwich St and also along Watt St. The consultant is planning to dig this ***A CONTAMINATED SOIL LETTER WAS NOT SENT OUT, BECAUSE THE CONSULTANT IS ALREADY MOVING FORWARD WITH A SOIL EXCAVATION IN THE NEXT FEW DAYS.****A Closure report will be submitted to the DEC for review.Property owner is:Fabian FriedlandGreenwich Tiangle LLC459 Washington StNew York, NY 100134/19/05 - assign to Imdadul Islam to handle. KST5/18/05- Talked to consultant Muhammad Ahmed at 212-675-3225. He mentioned that ISRP will be sent to the Dept. soon.-II.9/2/05- Reviewed the ISRP report and mailed out a letter today to consultant (Mr. Ahmed of F.L. Shue, Inc)cc'd to Mr. Friedland (RP) and Mr. Maurice Winter (NYCDEP)asking for deatiled investigation to delineate the contamination plume and comprehensive remedial plan by the end of October 2005.9/10/05-Dr. Muhamed had a meeting with me today to discuss the detail of the required additional investigation. - II9/13/05- Received today the

GAS STATION (Continued) **S106868163**

"work plan" for required additional investigation as discussed and outlined in the meeting. It is found OK.- II9/15/05- Sent the above Work Plan approval by email. Also, advised to screen soil and sample from the high PID reading locations as the boring for proposed well MW-2 advances. GW sample from the well is to be taken and analyzed as well.- II11/1/05- Visited the site along with Steve today to witness the installation of three monitoring wells, advancing geoprobes (six) for soil and groundwater sampling. The proposed geoprobe in the sidewalk across the Greenwitch St. is cancelled as the sidewalk is made up of granite. Dr. Mohamed told that by next four weeks they will be able to submit the report to the Dept.12/23/05: This spill case transferred from I. Islam to J. Kolleeny. Reviewed Remedial Investigation Report/Remedial Action Work Plan submitted in December 2005 by Fleming-Lee Shue, Inc. (FLS). Report summarized an off-site investigation performed on 11/01/05, and presents a remedial action work plan. The investigation identified two areas of soil contamination near fill ports for former gasoline storage tanks, and groundwater contamination including 0.5 inches of free product in one well. The remedial action plan involves removal of fill port piping and excavation of contaminated soil where feasible, followed by collection of end-point soil samples, pumping of free product from water table, and application of ORC. As an interim remedial measure, monitoring wells with free product or high levels of dissolved-phase contamination will be pumped out during the week prior to soil excavation. Sent letter approving remedial plan, but asking for additional well to be installed near southeast corner of Watts & Greenwich Streets after soil excavation, followed by quarterly groundwater monitoring. - J. Kolleeny3/2/2006 The spill report was transferred from Jon Kolleeny to Alex Zhitomirsky as per JK/KT e-mail on 3/2/2006. AZ4/4/2006 I contacted Mohamed Ahmed (FLS)212-675-3225. They found gasoline contamination in gw. Also, free product was found in one old well. Soil and gw are contaminated at the sidewalk in two spots on the site. They observed sheen. They are waiting to start the construction. They will dig out the whole site during construction activities. The site is close to Holland Tunnel. If any free product is observed in the excavation they collect from the excavation. They must first get cleareance from the Port Authority. AZ6/26/2006 I contacted Mohamed Ahmed. They are going to start IRM on July 5, 2006. They will pump out 2 wells on the sidewalk at intersection of Watts and Greenwich. They will pump out around 155 gal drum from each well. Then on the 10th or 11th of July they will start removing the fill material down to 7’ depth, where the most contamination was found. Then they will remove all contaminated soil up to the gwt level (approximately 11’). They will leave the excavation open for 24 hours to monitor free product accumulation. If any appears it will be pumped out. If no free product is present, ORC will be sprayed on groundwater table. They are building a residential building. They will be putting in place a vapor barrier which was approved by DEP. They will collect end point samples from the sides. Water is at the bottom of the excavation. They have 3 wells on the sidewalk which will be monitored. AZ7/24/2006 Chris De Carlo (FLS). They started removing a fill layer. They encountoured several USTs - 2x550 gal fuel oil, 4x550 gal gasoline and 2x275 waste oil tanks. 1 gasoline tank and one fuel tank were found at the corner of Canal and Watts. 3x550 USTs, one 550 fuel and 2x275 gal waste oil USTs were found at the corner of Greenwich and Canal. Gasoline tanks were incased in concrete but deteriorated. Some water and product we found in the

GAS STATION (Continued) **S106868163**

tanks. The other tanks were not encased in concrete and contained some water and product. Seems that these tanks were causing the problem. They are removing these tanks. Excavation will be continued as planned. They will excavated below the water table. AZ10/19/2006 Left a messsage for Mohamed Ahmed. Soil excavation will start on October 21, 2006. AZ9-10-2007 Received Remedial Action Report dated August 14, 2007. Soil was excavated to the water table, approximately 14'-18' below grade. Approximately 2,700 cu yards of contaminated soil was removed from the site. 11 USTs were discovered and removed. ORC was applied to treat in-situ groundwater.Waterproofing membranes were installed under the basement slab. Post-excavation sampling was conducted. One additional monitoring well will be installed and sampling of three existing wells will be performed for a year. I contacted Mohamed Ahmed and requested that a figure with post-excavation sampling locations is modified. Total SVOCs and VOCs concentrations should be added and general gw flow indicated. AZ9-11-2007 An e-mail was sent to Fleming Lee Shue: "I have reviewed the remedial action report and the revised map for the above site. The proposals contained in the report are approved. Soil samples should be taken and analyzed for VOCs and SVOCs during well installation. All wells should be sampled for VOCs and SVOCs. Actual groundwater flow should be established. A report containing monitoring results should be submitted to NYSDEC."AZ11/2/2007 Spoke with Mohamed Ahmed(212-675-3225). They will install one well at the corner of Watts Street and Greenwich Street. Also, one well will be re-installed at Watts Street. All wells should installed utilities permitting. AZ 11/5/2007 An e-mail was sent to M. Ahmed: "As per DEC's e-mail dated 9/11/07, DEC approved installation of one monitoring well on a sidewalk at the corner of Watts Street and Greenwich Street. Also, one well should be re-installed on Watts Street. All wells should be installed utilities and structures permitting."AZ11/19/2007 A "sidewalk letter" was issued upon M. Ahmed and NYC DOT request to expedite wells installation. AZ5--5-2008 Reviewed First Quarter Monitoring Report dated February 20, 2008. I contacted Mohamed Ahmed and conveyed to him my comments regarding this report. The report stated that naphthalene was the only compound exceeding NYS TOGS while table 3 indicated that other compounds were also exceeded, e.g. MW-3 had 312 ppb of the Total VOCs (exceedances only). The spill number indicated on the report was incorrect. I requested that in future the total VOC and SVOC concentrations are calculated and shown on the plume map. Also, I requested that e-copies of the reports are sent to DEC. The Consultant will make necessary changes. The Consultant recommended the continuance of the groundwater monitoring program. I concurred. AZ5-23-2008 Groundwater map with sampling results was submitted. AZ9-3-2008 Reviewed Report submitted by FLS on May 9, 2008. The remedial activities conducted at the site consisted of removing UST fields, piping, fill ports and dispensers;soil excavation and disposal, post excavation soil sampling, soil and gw Bioremediation, and installation of a vapor barrier and waterproof membrane. Previously (February 2008 report) light petroleum odor was observed in wells MW-1 and MW-3R during sampling. Groundwater analytical results for MW-1 and MW-3R indicated several VOCs exceedances of the NYSDEC Guidances(TOGS). During the latest sampling round(April 2008)several VOCs were detected in MW-3R exceeding TOGS 1.1.1. Ambient Water Quality Standards and Guidance Values (391.6 ppb). It's a slight increase when compared with 1/11/2008 monitoring event (314 ppb). FLS recommended continuing

GAS STATION (Continued) **S106868163**

monitoring. AZ3-18-2009 Reviewed 3rd-4th Quarters Report dated January 26, 2009. Total VOCs ranged from 3.6 ppb in MW-2 to 223 ppb in MW-3. FLS requested closure. I contacted Mohamed Ahmed and requested additional information which would support NFA status request. AZ5-5-2009 3rd and 4th Quarter Reports were revised as DEC's request. The site was historically used as a gasoline station. A seven-story residential building with a partial basement and a residential lobby was was constructed at the site. Reviewed revised 3rd and 4th Quarters Report dated March 18, 2009. Sampling was performed on July 11 and November 7, 2008. In the 3rd quarter VOCs remained in groundwater sample MW-3R but at levels lower than the two previous quarters. Total VOCs detected ranged between 0.78 and 71.78 ppb in MW-3R. No VOCs were detected in MW-1 and MW-2R above Class GA Standard except benzene which was detected in sample MW-1 at 1.3 ppb. No SVOCs were detected in any of the three wells except a trace of naphthalene in MW-3R at 11.6 ppb. Exceedances of ethyl benzene (66 ppb), isopropylbenzene (48 ppb), xylene (20 ppb) and m.p-xylene (17 ppb)were detected during November 2008 sampling event. Total detected gasoline-related VOCs in the groundwater in three wells ranged between 3.6 and 223.8 ppb during the fourth quarter of 2008. According to the Consultants (FLS), quarterly monitoring indicate that most of the dissolved gasoline-related VOCs were remediated. Remediation consisted of the removing UST fields (eleven 550-gallon USTs were removed) and associated piping, fill ports and dispensers. 3,300 tons of petroleum contaminated soil was removed. According to FLS, no VOCs were detected in post excavation samples. Relatively low levels of SVOCs, which appeared to be related to the fill material, were detected in postulation samples. Groundwater bioremediation was performed by applying of 1,325 pounds of Oxygen Release Compound (ORC) to impacted groundwater. A vapor barrier and waterproof membrane were installed. H-beam steel sheeting was installed along Greenwich and Watts Street to a depth of twenty feet below sidewalk (approximately 4 feet below the soil/groundwater interface). The site is entirely surrounded by permanent steel sheeting along Greenwich and Watts Street and by the Holland Tunnel along Canal Street. Monitoring well MW-1 and MW-3R, where gasoline - related VOCs were detected, are located in the sidewalks outside the sheeting line on the side gradient direction of the former tank area. According to FLS, on-site soil is capped by the new building foundation and off-site soil is capped by cement sidewalks and asphalt roads, thus preventing any human health risk of dermal contact with soil or groundwater. Additionally, soil vapor intrusion and inhalation pose no risk due to the presence of an on-site vapors barrier and capped surroundings. It's the opinion of FLS that the trace concentrations of gasoline related VOCs still present in well MW-1 ans MW-3R do not pose a human health risk and, based on the above information, FLS requested a spill closure. AZ 5-11-2009 In a telephone conversation with Mohamed Ahmed I requested additional information regarding the amount of excavated soil and details regarding bioremediation performed. This information was submitted to DEC via e-mail. AZ6-1-1009 The requested information was submitted and e-documented. Based of the information submitted by FLS this spill is closed. An e-mail was sent to FLS. AZ

Remarks: SOIL SAMPLES WERE TAEKEN AND TEST RESULTS CAME BACK AND THEY WERE ABOVE THE STANDARDS,. THIS SITE IS AN OLD GASOLINE STATION AND MOSTLY GROUNDWATER WAS AFFECTED. HAS NOT BEEN CLEANED UP.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	11/1/04 - JZ (desk duty): Zhao spoke with Mr. Nelson Abramas, MetCalf & Eddy. The company was contracted by NYC DDC with a sewer line project along Greenwich Street. During Geoborings on side walk of 500 Canal Street, contaminated soil was discovered at the interface of soil/water about 12 feet below grade. It appears petroleum oil with stronge odor. PID reading is 180 ppm. The lot is currently vacant. According to the database, 500 Canal Street had Gas Service business. Tanks were removed several years ago. No spills were ever reported before, during or after the tank removal. Unknown if site accessment had ever been conducted during tank closure. Futher upgradient at 480 Canal Street has a 20,000 gallon #6 oil AG tank currently in service, this does not apprear any threatening to subsurface impact. Zhao has requested Metcalf & Eddy or DDC to contact the DEC if samples are analysed. Contamination letter send to the current owner at 500 Canal Street:Greenwich Triangle Number 1, LLC459 Washington StreetNew York, NY 10013ATT: Mr. Fabian Friedland2/1/05 TJDInvestigation summary report submitted by Flemming Lee Shue. Property owner @500 Canal Street was notified of their responsibility to conduct an investigation following the discovery of contaminated soil in street IFO address. As a result of DEC's directive the owner retained Flemming Lee Shue to perform the required investigation. A site inspection was performed and a soil gas survey was completed. No readings above background were found, therefore, no samples were collected or analyzed. In addition, Flemming Lee Shue provided endpoint sample analysis from the original tank excavation in 2000. No TAGM exceedances were identified in endpoint samples. No further action required by owner of 500 Canal Street. Spill closed.Unknown source of contaminated soil in street.
Remarks:	DURING SOIL BORINGS FOR A SEWER LINE FOUND CONTAMNATED SOIL:

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

MOBIL OIL-#17-JYX (Continued) **1000254032**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number:	001
Tank ID:	30321
Tank Status:	Closed Prior to Micro Conversion, 03/91
Material Name:	Closed Prior to Micro Conversion, 03/91
Capacity Gallons:	550
Install Date:	12/01/1931
Date Tank Closed:	Not reported
Registered:	True
Tank Location:	Underground
Tank Type:	Steel/carbon steel
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Pipe Model:	Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	8/2914- Zhune spoke to Laura Giustiniani 718-714-6898. She said they removed the tank and collected four soil samples. The analytical results indicated that samples are cleaned. They collected samples by the vent pipe. They are waiting for the results.10/14/14-Laura Giustiniani emailed the Site Assessment Report dated 9/5/14.The report stated that Empire Environmental was retained by Olivers Contracitng Inc. for the purpose of supervising and conducting the removal of (1)2000 Gallon Tank at 297 West Street in Manhattan. When the tank was uncovered it had been previously closed in place with concrete slurry. There was no evidence of stained contaminated soil after the tank was removed from tank excavation. As per Laura the all lines were previously removed from the tank. As part of this Site Assessment Empire Environmental collected four (4)soil samples after the removal of the tank. The confirmatory samples were collected from west, East, North and south wall of the excavation. The soil analytical results indicate nO VOCs and no SVOCs components were detected exceeding the standards.Based on this information and the information on Spill # 9804683 (The site underwent remediation). The spill is closed.
Remarks:	Tank removal with impacted soil. testing pending & cleanup is pending.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"7/21/2005- Reviewed Quaterly Monitoring Report received in June 2005.ORC socks were installed in wells MW-2, 10 and 13R. In February 2005 LiRo conducted additional soil excavations that were requested by DEC. LiRo recommended continued operation and monitoring. The Department concurred. AZ05/30/07: This spill case transferred to J. Kolleeny. LiRo Engineers undertook remediation of this site under DDC Consent Order. Remedial actions included excavation of contaminated soil from several areas, installation/operation of SVE system, bio-nutrient application, and ORC application. Results of LiRo's February 2006 Sensitive Receptor Survey (in eDocs for related spill 9804683) for site indicate low-level residual GW contamination in two monitoring wells is unlikely to pose a threat to environment or public health. LiRo's remedial actions and well network addressed entire site, all tanks. OK to close spill. - J. Kolleeny

DER Facility ID:	309192
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"The spill is also referred to spill # 9712858. The site is currently under remediation by LiRo Engineers. - II (03/02/05).7/21/2005- Reviewed Quaterly Monitoring Report received in June 2005.ORC socks were installed in wells MW-2, 10 and 13R. In February 2005 LiRo conducted additional soil excavations that were requested by DEC. LiRo recommended continued operation and monitoring. The Department concurred. AZ11/08/09 - Reviewed Quarterly Monitoring Report received in October 2005. MW-13 exhibited total VOCs concentrations of 179 ppb. Concentrations in this well fluctuate between 34 ppb and 230 ppb - unstable plume conditions. MW-2, a downgradient well, exhibited concentrations of 68 ppb up from previous reading 4 ppb. My conclusions: plume conditions are unstable. Sentinel well is contaminated. Further monitoring is needed. AZ 7/11/2006 Reviewed Sensitive Receptor Survey Report by LiRo. The site underwent remediation: excavation of a contaminated fill port area along Canal Street, installation of a soil vapor extraction system (SVE), bio-nutrient application and the application of oxygen release compound (ORC). Fill port excavation was completed in 2001. ORC was applied in March 2003 and September 2003 in 8 eight wells in the southern portion of the site and in 12 wells in the northern portion of the site. For the soil biorestoration, a bacteria-nutrient slurry mix was injected for 6 consecutive weeks starting on March 11, 2003. The SVE system was working from July 29, 2003 until a shutdown in October 2004. The shutdown was approved by DEC. The ORC socks were installed in October 2004 and April 2005. Additional soil excavation was performed in January/February 2005, as requested by DEC. LiRo stated that there is no known direct exposure pathways within 2,000 feet of the site. Site groundwater appears to be controlled by Holland tunnel dewatering system. LiRo recommended closure of this spill. Jon Kolleeny suggested closure of this spill. AZ
Remarks:	CALLER RESPONDED TO ABOVE LOCATION FOR TANK UPGRADE. UPONREMOVAL OF OLD TANK SOIL CONTAMINATION WAS DISCOVERED. SOILHAS BEEN REMOVED AND FURTHER TESTING AND TANK REPLACEMENTTO FOLLOW. NO CALL BACK REQUEST.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 05/26/11-The site is an old gas station, currently under construction.Seven 550's filled with concrete has been found. Eastmond & Sons(Lizette Hernandez) doing tank removal. I spoke with Lizette and told her that end point samples should be taken from the tank field and dispenser island area. She told me that she is not sure if the soil is clean. She said a report will be sent to DEC Raphael Ketani. CSL was sent out toMagnum ManagementMB Development Inc594 BroadwayNew York, NY 10012Attn: Mark RavnerCSL in edocs. (sr)5/27/11 - Raphael Ketani. I received a phone message from Mike Haggerty of Albany DER (518) 402-9688. He said that he is in charge of all of the EXXON-MOBIL station spills.Mark Ravner's phone is (212) 941-9399. Ms. Hernandez's phone is (718) 378-3000.6/2/11 - Raphael Ketani. I spoke to Mr. Haggerty. He said that this is the same site that he had dealt with as a long term EXXON-MOBIL gas station spill. The site address was known at the time as 527 Canal Street. The old spill case is #0512342. It was closed on 11/16/09. An NFA letter was sent out by Mr. Chandra of Region 2 DER.I looked up the site in Property Shark and they showed the block and lot as 595 and 52. The alternate addresses were 523 to 531 Canal Street. The site was pictured as an empty lot with a tall steel billboard sign standing on the property. It is a corner lot at the intersection of Canal Street and Greenwich Street on the lower west side of Manhattan. The owner is listed as the City of New York. The property was taken over by the City in 2009.I tried to find a PBS case, but couldn't locate one no matter which address I used.Mr. Haggerty added that the old case had involved the discovery of two USTs. There was gasoline contamination of the soil and the groundwater. There was one "hot" boring. The owner had removed the tanks.I found spill case #0512342 and transfered 2 work plans and 6 reports from this old case into the current spill case E-docs. From the Kleinfelder 3/28/08 Subsurface Investigation Report, 4 borings/wells were installed. SB/MW-3 had a total xylene exceedence for soil. MW-2 and MW-3 had significant groundwater analyte exceedences up to the triple digits. These are the two westernmost wells in the southern (Canal Street) sidewalk. Groundwater flow is to the northeast. From the Kleinfelder 10/24/09 Supplemental SIR, groundwater flow was due north. All of the groundwater 8/26/09 samples from the 7 wells (3 additional wells within the property footprint) were either non-detect or had low individual VOC analyte hits in the low double digits. As a result of the low residual contamination values, the case was closed.7/22/11 - Raphael Ketani. Ms. Hernandez sent me the Eastmond 7/21/11 Closure Report (with NYFD Affidavit of tank removal and DEC CSL) and the York Analytical Labs 6/27/11 report for 4 soil samples. I reviewed the documents. The seven 550 gal. USTs were removed. The soil analyticals indicated no VOC contamination. However, there was minor SVOC contamination. Except for the benzo series of SVOCs, the results were well below the CP-51 limits.I spoke to Mr. Haggerty about the case and the analytical results. He said that I could close the case if I felt that the site had been remediated. I told him that I believed there was only minor residual contamination and so I will close the case.Based upon the information in the Eastmond Closure Report and the York 6/27/11 report, I have determined that the residual contamination is not a threat to the public or the environment.

FORMER GAS STATION (Continued) **S111064019**

	Therefore, I am closing the spill case.7/26/11 - Raphael Ketani. Ms. Hernandez requested that I send an NFA letter to the owners. The letter was sent out today.
Remarks:	Caller reporting that contractor on site states water spilled from a gasoline tank that was filled with concrete slurry to the top. Tank Filled unknown time ago. No cleanup noted as of yet and investigation is pending.

Talked with Zeb and as per him we will receive the required information late today.need to send CSL1/31/06 - Raphael Ketani. I sent a CSL to Robert Gold, David Slavin, Zeb Youngman, and David Yudelson.2/1/06 - Raphael Ketani. I reviewed the analytical data package dated January 18, 2006 from American Analytical Laboratories that was originally e-mailed to Kumar Patel of the Spills Unit on 1/31/06. SB-5 and SB-6 showed a high mercury concentration and a mercury exceedence, respectively. GW-1 showed many volatile and metal analyte exceedences and GW-2 and GW-3 each had several volatile analyte exceedences. I will send a letter to Mr. Yudelson stating that the soil and water have to be removed and cleaned up, respectively. 3/17/06 - Raphael

FORMER MOBIL STATION 15-517 (Continued) **S107522355**

Ketani. I tried to call Mr. Yudelson regarding the site, but could only leave a voice mail.4/6/06 - Raphael Ketani. Mr. Yudelson called me back at 2:55PM and said that he has received the work plan and will overnight it to me. 4/7/06 - Raphael Ketani. Today I received the Sub-Surface Investigation Report and the Remedial Action Plan for the site, both dated April 2006. I finished my review of the reports and will send out a letter stating that the DEC finds the reports acceptable. Additionally, the letter will state that they should do repeated rounds of groundwater vacuuming and should sample the water after each round of ORC injection or bioremediation to make sure things are being cleaned up, or at least reduced.5/24/06 - Raphael Ketani. Case transfered from Ketani to Tang as per authorization by Randall Austin, Spills Program Manager, due to analytical results showing groundwater
contamination.
----------11/03/06
Re-assigned from Tang to Chanda (Chanda)11/06/06: Kartik Chanda of DEC reviewed documents and reports regarding this spill case. On 11/6/06, Chanda called to Zeb Youngman, project manager, P.W.Grosser Consulting, requiring present site status and updated information. He stated that the last six months they did not perform any work regarding this spill case. The investigation work will be started next April, 2007.12/21/06: Chanda sent an email to Zeb Youngman (P.W Grosser), requiring that the delineation of groundwater contamination up & down gradient and groundwater flow direction be submitted to the DEC for review by 2/20/07.4/17/07: Chanda sent a reminder letter to RP (Robert Gold) and his attorney (D. Yudelson) and consultant (Zeb Youngman), requiring that the delineation of groundwater contamination up & down gradient and groundwater flow direction must be submitted to the Department by 5/31/07.6/1/07: Chanda received a phone call from Zeb Youngman. On 6/4/07, Chanda introduced with ExxonMobil personnel (1) Jerri Hanles (Claim advisor), (2) Frank Messina (Remediation Engineer)and Mr. Brendan Mooney, Kleinfelder Environmental by telephone conference regarding this spill case.6/6/07: Chanda received an e-mail from Brendan Mooney. He stated that Kleinfelder is working on behalf of ExxonMobil to prepare a work Plan for this spill case. He requested two week extensions to submit Work Plan. On 6/6/07, Chanda approved two week extensions to submit the work plan. Therefore, a work Plan is submitted to the DEC by 6/15/07 for approval.6/15/07: Chanda received an electronic copy of the off site remedial work plan prepared by Kleinfender East, Inc. dated June 15, 2007.6/26/07: Chanda has reviewed and conditionally approved the work plan on 6/25/07. On 6/26/07, Chanda sent an approval letter to RP (Robert Gold) and attorney (David Yudelson) and consultant (Kleinfelder), requiring that a final investigation report be submitted to DEC for review by 9/25/07.9/25/07: Chanda received an extension request letter from Brendan Mooney(Kleinfelder). Kleinfelder is requesting a 60 -day extension to submit Supplemental Off-Site Remedial Investigation report. The Department (DEC) approves a 60-day extension.9/28/07: Chanda sent a 60-day extension approval letter to RP (Robert Gold), attorney (David Yudelson) and consultant (Kleinfelder), requiring that an investigation report must be submitted to DEC by 11/26/07 for review and approval.12/3/07: Chanda received an extension request letter dated 11/29/07 from Mr. Brendan Mooney, Kleinfelder. He stated that the NYCDOT would not issue the required sidewalk permits due to an NYCDOT holiday embargo period (November 16, 2007 through January 2,

FORMER MOBIL STATION 15-517 (Continued) **S107522355**

2008).12/10/07: The Department (NYSDEC) approves a 90-day extension due to an NYCDOT holiday embargo (2007 Holiday Construction Embargo). The deadline extended to the February 28, 2008.1/4/08: Chanda received a call from Brendan Mooney (Kleinfelder) regarding the schedule of the monitoring well installation at the site. He will send an email notification regarding the monitoring well installation and sampling schedule for the groundwater investigation.2/25/08: Chanda received a call from PR's consultant regarding the deadline extension to March 30, 2008.4/3/08: Chanda received a Subsurface Investigation Report(SIR) from Kleinfelder East Inc. dated March 28, 2008.5/22/08: Chanda has reviewed the SIR (Off-site) and has the following comments:* Installation of four soil borimgs complected as monitoring wells MW-1 through MW-4.*On January 31, 2008, groundwater monitoring wells MW-1 through MW-4 were sampled and analyzed for VOCs and SVOCs.* The groundwater (GW) analytical results showed elevated levels of volatile organic compounds (VOCs). Total BTEX concentrations ranged from 11 ppb to 3,614 ppb.5/23/08: Chanda sent a letter to RP (Robert Gold) and his attorney & consultant(Kleinfelder), requiring that the Site Status Update Report should include quarterly groundwater sampling and monitoring analytical results both on-and off site wells. Upon review of the Site Status Update Report, the Department may require an update Remedial Action Plan for this site. The Department requires that the Site Status Update Report be submitted to the Department by 8/8/08 for review and approval. 6/3/08: DEC's letter dated 5/23/08 is bounce back to the sender. Chanda called Mr. Slavan (212-966-7250) to get the current property owner name and address. The current property owner name is:Ms. Corice Arman430 Washington StreetNew York, NY 100136/3/08: Chanda changed the current owner name Ms. Corice Arman instated of Robert Gold and sent DEC's letter dated 5/23/08 to the current owner (Ms. Arman) requiring that the Site Status Update Report (with including quarterly groundwater sampling and monitoring analytical results both on-and off site wells) be submitted to DEC by 8/8/08 for review and approval.6/23/08: Chanda received a Site Status Update Report dated 6/16/08, prepared by Kleinfelder East, Inc., on behalf of ExxonMobile Oil Corporation for this site.7/8/08: Chanda has reviewed the Site Status Update Report and has the following information:* On April 10, 2008, Kleinfelder gauged and sampled four groundwater monitoring wells.* Liquid-phase hydrocarbons (LPH) were not detected in the monitoring wells gauged.The Groundwater analytical data are following:Date: 01/31/08 MW-1 MW-2 MW-3 MW-4BTEX (ug/L)---------- 11 ----------3,614 ----------816----------57.3MTBE (ug/L)----------0.87----------10.0----------5. 0----------11.1Date: 4/10/08BTEX (ug/L)----------1. 19----------370----------412----------36MTBE (ug/L)----------1.1----------2.2----------2. 0----------7.2Analytical data indicates a decrease in dissolved-phase hydrocarbon concentrations between the January and April 2008 sampling events.7/9/08: Chanda sent a letter to RP's attorney and consultant (Kleinfelder), requiring that the next quarterly report be submitted to DEC by 8/15/08 for review.7/21/08: Chanda has received a phone call from Mr. Michael Haggerty, Remedial Bureau, Section B, Central Office, Albany. He stated that all ExxonMobil projects have been managed by Central Office. He would like to assign this project. 7/22/08: Chanda consulted with Vadim and

FORMER MOBIL STATION 15-517 (Continued) **S107522355**

Joe (NYSDEC, Region 2) and sent the spill related file to Michel Haggerty, Remedial Bureau, Section B, Central Office, Albany. 12/29/08 - Haggerty: approved SI work plan to install on-site wells. The existing wells are off-site. 3/24/09 - Haggerty: Sent a letter to Tom Connors, NYCDOB, in order to lift a Stop-Work Order issued by the DOB. in edocs3/31/09 - Haggerty: spoke with Tom Connors from the NYCDOB. The Stop-Work order was issued to the Demolition Crew previously working on-site. The Stop-Work order doesn't effect ExxonMobil/ Kleinfelder's right to investigate the property8/09 - Haggerty: Implementation of the approved work plan was held up due to a DOB Stop-work order at the property and due to re-negotiating access to the property. SI completed in August11/16/09 - Haggerty: issued NFA letter. Spill closed. SI report for 3 on-site MW indicate no unsaturated contamination and limited dissolved contamination (max dissolved BTEX concentration 67ppb in MW-7).

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	3/24/14-Zhune spoke to Cliff from GZA (212-594-8140. He said the owner supplied him with the Phase I and Phase II including refence of residual petroleum compounds in soil and groundwater. The site is an E designated site. He spoke to OER Dan Walsh to move forward with their program and Dan asked him to call in the spill to DEC. He will send a copy of the RAWP when finalized.3/25/14-Vought-Received email from OER Hannah Moore(Ph:212-442-6372) that "Hi Randy and Jeff - OER asked Site at 219 Hudson Street to call in this spill (1312004). Can you tell us who has been assigned to this one? Thanks, and hope all is well,Hannah" Vought sent reply that "Hannah/Shaminder, The spill is assigned to Veronica Zhune and you can also reach her at 718-482-7305. As per Veronica's notes from yesterday:"3/24/14-Zhune spoke to Cliff from GZA (212-594-8140. He said the owner supplied him with the Phase I and Phase II including refence of residual petroleum compounds in soil and groundwater. The site is an E designated site. He spoke to OER Dan Walsh to move forward with their program and Dan asked him to call in the spill to DEC. He will send a copy of the RAWP when finalized." Please note that Veronica will also be out on vacation in April so you can contact me with significant questions or concerns on ANY of her sites while she is away.Thanks."3/26/14-Vought-DEC Zhune and Vought received email from DEP Morris that "Hi Veronica and Jeff,As we discussed, I just sent you both a link to the dropbox folder containing the Phase I and II for the above referenced site. We will give you a call tomorrow at 4:00 to discuss what is needed to close out the spill. Best, Samantha Morris (SMorris@dep.nyc.gov (212) 341-2082))"3/27/14-Vought-Sent email to Samanatha Morris at DEP with cc to Hannah and Shaminder that "Samantha, Unfortunately we will not be available at 4pm and as Veronica only has two days left and she has many tasks prior to her departure. To save both time and effectuate review, please send me a copy of the PDF and I will make every effort to review it in a timely fashion and get back to you and OER with a call (or email if review is simple). I noted you put a copy on the Dropbox website, however, we cannot access this via DEC computers so I would much appreciate if you could place it on our file share website at https://fts.dec.state.ny.us/fts/ Thanks for your patience." OER Morris replied that "Hi Jeff,Thanks for the update, we certainly

VACANT LOT (FORMER GAS STATION) (Continued) **S116553805**

understand. I uploaded the files on your share website. Please let me know if you have problems accessing them."4/15/14-Vought-Received call from and spoke to NYCOER Chawla and Moore and site will be redeveloped and spill cross gradient from site that OER worked with DEC and footing installed for large sign. They requested review of report. Development includes excavation of site to 4'bg.4/18/14-Vought-Spill reassigned from DEC Zhune to Vought. Complete file review by Vought:NYCDOB Database: Alternate addresses include 489-493 Canal Street and 219-223 Hudson Street. Vought changed spill address to these from original reported address of 219 Hudson Street.PBS and Spills Database: No other spill found and no PBS listed for site.Environmental Site Assessment(Soil Mechanics Daren Murphy Ph:(516)221-7500 Fax:(516)679-1900))-January 2013. ESA prepared for:Mr. Marc Held c/o Mr. Rafi Gibly311 Church StreetApt #2New York, NY 10013Site is a irregular shaped parcel with a one story brick building, one story wood frame shed, large billboard, construction trailer and asphalt pavement. Property is currently used as a parking lot and has been so since "1990's". On-site shed is used to store vending carts. Site formerly used to have several multi story buildings used for "residential" or "store" purposes and also as a packing box factory in 1905. Property was also used as a gasoline filling station ("with automobile repairs") from the early 1930's to the 1980's. No recognized area of concern found in Phase I other than: Spill at 231-239 Hudson, historical use of property as a gasoline filling station and presence of fill material. "Geotechnical" investigation performed in 2013 concurrent to Phase I ESA. Investigation consisted of two borings and purposed was determine nature of underlying deposits and engineering characteristics. Groundwater was from 7-8'bg. Future hotel located north of site, mutli story buildings to the south, approach to Holland Tunnel to the east and a two story commercial building to the west of the site. Property is currently owned by Canal Properties, Inc. Concrete mat (possibly associated with tanks) noted at property and two fill ports in the city sidewalk "outside the northeastern portion of the property". Client provided Soil Mechanics with paperwork that noted "Receipt, dated November 30, 1990 from T.N.C.C (Jamaica, NY) which states that three (3)550-gallon gas tanks were removed." "Violation Order, dated 9/16/98 regarding the sealing of 7-550-gallon gasoline tanks." Vought spoke with DEC PBS Falvey who noted that USTs must be registered. Site is E-designated. Vought added report to D2.4/21/14-Vought-Continued file review by Vought:Phase II Report (Soil Mechanics Altan Gulum)-3/11/13. Soil Mechanics attempting to "satisfy preliminary requirements" for enrollment in NYCOER VCP. Work included: ground penetrating radar survey; six soil borings with continuous soil sampling, installation of three monitoring wells and installation of three soil vapor probes to a depth of 5'bg. Concrete bases for pumps also at southern portion of site. Doucumentation shows in 1987 seven USTs were pumped and "all fill lines were cemented" and three USTs removed in 1990. GPR survey was "inconclusive" as it did not identify any tanks, pistons or drainage structures. Soil samples GP1, GP2 and GP6 were at concrete mat, GP3 and GP5 were to assess fill material and GP4 was to assess service station building. Soil vapor samples SV1 and SV2 were located to asses soil vapor in vicinity of concrete tank mat, SV3 was located to assess former service station building. Groundwater sample GW3 was located in suspsted upgradient location and GW1 and GW2 were located downgradient (suspected as groundwater flow direction yet to be

VACANT LOT (FORMER GAS STATION) (Continued) **S116553805**

defined site specifically). Groundwater in geotechnical borings was at approximately 7'bg. Soil samples collected at highest PID and at 4'bg. Collection at 4'bg due to "a proposed site redevelopment of approximately 4'bgs, i.e. proposed building will not employ a basement and foundations will be pile supported". Due to poor recovery only one soil sample was collected from GP4, GP and GP6. Visual and olfactory observations of soil showed no "obvious signs of petroleum contamination". Highest PID was 42ppm in surface soils 0-2'bg. Soil vapor analyses show signs of petroleum contamination in BTEX and degradation compounds. Soil analyses show: 51,500ppb ethylbenzene(GP1 4-6'bg), 6,600ppb xylene(GP1 4-6'bg), 19,400ppb isopropylbenzene(GP1 4-6'bg), 809ppb toluene(GP5 0-2'bg), 1,1110ppb ethylbenzene(GP5 0-2'bg), 6,440ppb xylene(GP5 0-2'bg). SVOC PAH minor exceedences noted attributable to fill material. Due to analyticals, Vought changed Spill Material in report from "unknown material" to gasoline. Groundwater analyses show: 89ppb benzene(MW1), 74ppb ethylbenzene(MW1), 141 ispopropylbenzene(MW1), 836ppb napthalene(MW1), 5ppb benzene(MW2) and 17ppb napthalene(MW2). Report concludes that there was a "release of petroleum hydrocarbons into the environment at concentrations that are, in our opinion, likely to represent priority for further investigation and possibly remediation do the NYSDEC Petroleum Spills Division." Report also concludes that "environmental quality of the subject property has not been adversely impacted as a result of the hydrodynamically up gradient off sie open status.." spill site. Report also notes that due to soil vapor contamination, a SSDS will be required but does not state whether it will be active or passive. Vought added report to E-docs.4/21/14-Vought-Sent email to NYCOER Morris/Moore with cc to NYCOER Chawla that "Samantha/Hannah, Thanks for your patience on the review of the above referenced reports. I have reviewed the entire file and transferred the project to myself due to Veronica's extended vacation. The Department's requirements are as follows:1)Investigation of remote fills via soil borings "outside the northeastern portion of the property" as per Phase I.2)As per Phase I "Client provided Soil Mechanics with paperwork that noted "Receipt, dated November 30, 1990 from T.N.C.C (Jamaica, NY) which states that three (3)550-gallon gas tanks were removed." "Violation Order, dated 9/16/98 regarding the sealing of 7-550-gallon gasoline tanks." Vought spoke with DEC PBS Falvey who noted that USTs must have a Petroleum Bulk Storage Registration.3)Installation of proposed vapor mitigation due to petroleum VOC's in soil vapor samples from Phase II (submission of proposal for active or passive system?) and possible NYCDOH or NYSDOH review of system as well as OM&M Plan, if SSDS is active.4)CAMP due to proposed excavation of documented soil contamination and high traffic surrounding site.5)Installation of three wells in surrounding sidewalks with determination of site specific groundwater flow to achieve delineation of documented groundwater contamination (and no plans for dewatering as development not into water table and entire source). These wells can be installed after development if needed.I included some of my reasoning above along with the requirements, however, as always, if you have any concerns or questions let me know so that we may be consistent across both agencies. If you like I can also formalize this in a letter. I am assuming the next step will be submission of Remedial Action Plan and if so, I look forward to reviewing it to ensure it meets the above.Thanks again," 6/10/14-Vought-Received call from and spoke to GZA Bell and discussed above requirements and they are finalizing

VACANT LOT (FORMER GAS STATION) (Continued) **S116553805**

Remedial Investgation Report and a copy will be sent to Vought. Vought should receive RIR by end of month. Depth to water is 7'bg and foundation depth is just above that and they will have to dewater for installation of elevator pit. GZA Bell discussed pumping of groundwater from one portion of the site to another portion of the site and Vought suggested to send email.6/13/14-Vought-Received email from GZA Bell that "Jeff: Thank you for taking my call yesterday. Here is my question: The depth to groundwater at the site is approximately 7 feet below grade. Based on analytical data from monitoring wells at the site, there are residual petroleum impacts in one portion of the 60' by 90' site, but there are no impacts in other portions of the site. The proposed construction includes a cellar level to approximately 6 feet below grade. As a result, dewatering will be necessary for foundation features such as the elevator shaft and grade beams thereby requiring localized dewatering for limited periods. Is there a scenario acceptable to the NYSDEC whereby we may conduct intermittent pumping a portion of the site where the groundwater is less impacted to a recharge infiltration pit on another portion of the site that is more impacted? Thank you." 6/18/14-Vought-Spoke with DEC Permits (Watts) and DEC Water Unit (Southwell) with regards to above inquiry on 6/13. As per Southwell, a SPDES permit is not needed, however, a Stipulation Agreement would be needed as well as the associated benzene sampling requirements for discharge as per the Stipulation Guidance. Southwell and Watts noted that the most effective solution was to obtain a DEP discharge permit with associated discharge sampling, however, Southwell noted that in some areas of NYC this is not possible due to a lack of a combined sewer. Vought semt email to GZA Bell noting above as well as with attached Guidance for Stipulation Agreement with cc to OER Moore and Chawla. Vought sent email to GZA Bell that "Cliff, I spoke with DEC Permits and DEC Water Unit with regards to you below inquiry on 6/13. As per the Water Unit, a SPDES permit is not needed, however, a Stipulation Agreement would be needed as well as the associated benzene sampling requirements for discharge as per the Stipulation Guidance (attached below). Both Units noted that usually the most effective solution was to obtain a DEP discharge permit with associated DEP discharge sampling, however, the Water Unit noted that in some areas of NYC this is not possible due to a lack of a combined sewer. Note that I have copied NYCOER above as they may have additional concerns or questions with issuance of a Stipulation Agreement for the site.Thanks and keep me posted." 9/22/14-Vought-Email from OER Chawla that "Jeff and Veronica: Spill on this property was opened on March 24th during remedial investigations. We have draft RIR and RAWP for the above Spill. We will be issuing an application factsheet requesting comments in next 30 days. Remediation for OER purposes at this Site includes: 1.Track 4 remedy that requires excavation and removal of soil/fill exceeding Track 4 Site Specific SCOs. Excavation for construction of the new building's cellar level would take place to a depth of approximately 9 to 12 feet bgs across the Site. A small portion (elevator shaft area) will be further excavated to depths of 15 feet bgs. Approximately 1,500 cubic yards or 2,300 tons of soil will be excavated and removed from this Site. 2. Vapor barrier/waterproofing 3. Concrete Cap. We also have following two bullets for Spill: 1. Performance of a remedial action for the petroleum spill #13-12004 under New York State Department of Environmental Conservation (NYSDEC) Spill program. This remedial action will consist of

VACANT LOT (FORMER GAS STATION) (Continued) **S116553805**

installation and monitoring of groundwater monitoring wells as required and approved by NYSDEC. A separate RAWP addendum will be prepared and submitted to DEC. This RAWP does not alter or interfere with the remedial action for the petroleum spill. 2. Request for closure of onsite petroleum spill number 13-12004 under the authority of NYSDEC pending the results of the investigation and remediation and in accordance with CP-51 soil cleanup objectives. This RAWP does not alter or interfere with the remedial action for the petroleum spill. A separate Spill closure report will be prepared and submitted to NYSDEC. I will send you factsheet later today. Here is link to reports:
https://www.dropbox.com/sh/f1buqgaauuikxhy/AABko6CnPypiJ7Jk92csiJ-ta?dl=0. Please let me know if you have any concerns. Thanks, Shaminder." Vought added RIR and RAWP to D2 and reviewed:Remedial Investigation Report (GZA Geonenvironmental)-June 2014. Construction site to the north of the site which will be a future hotel. Report prepared for:HSH Construction, LLC.405 BroadwayNew York, NY 10013Site currently used for "storage" and also has a portable constructin trailer and a base of former billboard sign and site covered with asphalt and a concrete pad in southern part of site. Future use will be a 11-story mixed use hotel and restaurant space planned for the lower two floors and site plans included in RIR. Basement will be "estimated 6 feet below street grade" with mechanical rooms and storage space and estimated depth of excavation to 7’bg. Report that remote fill ports presenet in sidewalk for formerly up to seven (550-gallon) gasoline USTs. "..potentially four (4)USTs remain in-place at the Site." RIR refers to same data from 2013 Soil Mechanics Phase II noted in above Remarks. Two additional groundwater samples collected from MW1 and MW2 in May 2014 and showed up to: 170ppb benzene(MW1), 39ppb toluene(MW1), 590ppb ethylbenzene(MW1) and 170ppb xylene(MW1). Groundwater flow direction not determined to date but suspected to the southwest. Soil vapor samples collected showed no detections above the NYSDOH Air Guideline Values. Sensitive receptor survey and no sensitive receptors within 500 feet of site. Site plan also shows "Approximate Holland Tunnel Structure (Below Canal Street) that runs immediately adjacent to and along the site and (PERSONAL THOUGHT) is most likely the dominant influence for groundwater flow direction due to suspected groundwater flow direction. Total square footage will be occupied by future hotel. Proposed site layout included in RIR as well as summary of findings in Phase II in remarks above. "...depth to water measurements as presented in Appendix at MW-1 and MW-2 are not considered reliable by GZA." RIR also included soil, groundwater and soil vapor sampling results in above remarks. Soil vapor sample analyses showed no NYSDOH Guideline Value exceedences.Remedial Action Work Plan (GZA Geoenvironmental)-August 2014. Remedy includes: Preparation of a Community Protection Statement; CAMP; Remedial action for spill number to include installation and monitoring of groundwater monitoring wells as required and approved by NYSDEC and submission of a separate RAWP Addendum; Request for closure for spill number; Track 4 SCOs for VCP; Site mobilization; Excavtion of soil fill exceeding Track 4 SCOs; Screening of soil for visual/odor/PID; Removal of closed in place USTs and "associated feed lines (if encountered)"; Collection and analysis of endpoint samples; Installation of vapor barrier and water proofing membrane (Grace PrePrufe) (PERSONAL NOTE: Grace is petroleum compatible as per Voughts work on other spill numbers with same manufacturer and

VACANT LOT (FORMER GAS STATION) (Continued) **S116553805**

material). Basement slab to be 2.5 feet thick; Submission of a RAWP and SMP; Continuation of property being registered as NYCDEP E-designated. RAWP has a feasibility study of remedial alternatives. RAWP hot-spots will be "fully removed" and will have separate endpoint samples using DER requirements.10/3/14-Vought-Sent email to OER Chawla that "Shaminder, I am now the Project Manager for the above Spill and have some concerns (minor and major) after review of the RIR and RAWP. They are as follows: 1) Investigation of remote fills via soil borings "outside the northeastern portion of the property" as per Phase I and RIR and not just piping ("as encountered") in RAWP. This is the most important missing part as the RAWP notes that all piping will be removed ("as encountered") so if piping run to remote fill boxes in sidewalk is no longer present, the soil at the remote fills STILL must be investigated and possibly removed if impacted. The majority of petroleum spills is from piping and not the USTs as commonly thought. 2) RAWP comparison to Track 4 (Restricted Commercial) and Spills comparison to Track 1 Unrestricted for possible closure of Spill. This needs no addressing but just an FYI as GZA noted separate RAWP to be submitted to DEC. 3) RAWP notes that the remedial action for Spill to consist of "installation of monitoring wells" where is it primarily composed of excavation of source and impacted materials as well. Needs no formal addressing but just a thought.4) As per Phase I "Client provided Soil Mechanics with paperwork that noted "Receipt, dated November 30, 1990 from T.N.C.C (Jamaica, NY) which states that three (3)550-gallon gas tanks were removed." "Violation Order, dated 9/16/98 regarding the sealing of 7-550-gallon gasoline tanks." Vought spoke with DEC PBS Falvey who noted that USTs must have a Petroleum Bulk Storage Registration. Feel free to send the above directly to GZA if you feel it the best way to open a dialogue. Thanks as always."DEC Possibly Requires:1)cc to NYCOER Chawla, NYCOER Moore, NYCOER Samantha Morris, GZA Bell.2)RAWP comparison to Track 4 (Restricted Commercial) and Spills comparision to Track 1 Unrestricted.3)RAWP notes that remedial action to consist of "installation of monitoring wells" where is is composed of excavation as well.4)Investigation of remote fills via soil borings "outside the northeastern portion of the property" as per Phase I and RIR and not just piping ("as encountered") in RAWP.5)As per Phase I "Client provided Soil Mechanics with paperwork that noted "Receipt, dated November 30, 1990 from T.N.C.C (Jamaica, NY) which states that three (3)550-gallon gas tanks were removed." "Violation Order, dated 9/16/98 regarding the sealing of 7-550-gallon gasoline tanks." Vought spoke with DEC PBS Falvey who noted that USTs must have a Petroleum Bulk Storage Registration.6)Installation of three wells in surrounding sidewalks with determination of site specific groundwater flow, to achieve delineation of documented groundwater contamination (and no plans for dewatering as development not into water table and entire source).7)No determination of groundwater flow due to shallow groundwater at 6-7'g and adjacent Holland Tunnel which most likely dewaters and controls flow direction.

Remarks: Visuable inspection discovered residual petroleum from the ground from potentially UST. Reports available to submit to R2 Spills.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"10/16/02 ARAKHAN/odINVES DONE PURSUANT TO PROPERTY TRANSFER. 8 USTs UNKNOWN SIZES, NOT REGISTERED; 2 75-GAL ASTs IN VAULT NOT REGISTERED. ELEVATED LEVELS OF VOCS AROUND USTs; XYLENES AROUND ASTs.10/16/02 Tipple Mtg set for Oct 29 to discuss Remedial Action Plan, tank registration will be sent in prior to Mtg.7/24/2003// removing ast's today//ust's to be addressed soon//will PROPERLY REGISTER UST'S FOR REMOVAL AND INFORM DEC PRIOR TO REMOVAL.9/9/2003 Sangesland spoke with contractor. Tanks are being removed today, a

48 LAIGHT STREET (Continued) **S106008427**

new spill number was called in by a citizen who saw the tanks being pulled (0306088-closed). Sangesland reviewed the PBS status with Jie Zhao who noted that the tanks should be listed at "out of service-removed". The contractor said they would update the PBS records.2/12/04 Tipple updating/// PBS registration update form arrives//given to NL for review/processing.5/5/04 transferred from Tipple to Rommel///product is gasoline06/02/04 transferred to Vought6/10/04-Vought-Spoke to John Bukoski (FPM 631-737-6200) who sent in proposal for installation of four monitoring wells.6/15/04-Vought-Received proposal via fax.6/29/04-Vought-Reviewed proposal from FPM. Property was a gasoline station from 1945 to 1980 and more recently as an auto repair facility. "The building and USTs were recently removed and the site was excavated to approximately 15 feet below grade". Construction of a multi-story residential building is presently underway. Depth to groundwater is approximately 18-20 feet below grade. Proposal for three monitoring wells located adjoining the site and one downgradient well located on the west side of Hudson Street". "An oxygen release material (ORC) was applied to the area of impacted groundwater to promote biodegradation of the remaining petroleum".7/2/04-Vought-Called Stephanie Davis (FPM) and left message to return call with owners contact info to send out STIPULATION AGREEMENT. Vought sent letter to DOB, NYCDOH, DEP, DOP requesting permit cancellation. Vought spoke to Davis (631-737-6200x228). RAP already approved by DEC Tipple including the installation of a sub foundation venting system and vapor barrier. Davis will send copy of UST Closure Report, RAP and previous groundwater analyticals. Foundation has already been poured along with installation of sub foundation venting system. Owner of site is:David T. EnnisDayton Group, Inc.515 Madison AvenueSuite 1201New York, NY 10022Ph: 212-421-3366Fax: 212-421-35357/6/04-Vought-Awaiting UST Closure Report, RAP and groundwater analyticals receipt to ensure correct Corrective Action Plan to be included in Stipulation.7/7/04-Vought-Received copies of RAP dated 10/16/02, PBS registration letter dated 12/19/02, DEC RAP approval letter dated 12/20/02, UST Closure Report dated 3/29/04 and Sub-foundation venting system description dated 7/6/04. Report review:Remedial Action Plan (FPM)-10/16/02. "Soil and groundwater sampling were performed onsite in June 2002". "Two groundwater samples were obtained in the UST area". "It is planned to redevelop this site with a new building, including a sub-grade area extending to approximately 10 to 11 feet below grade". "Based on this scenario it is proposed to removal all of the tanks and excavate and dispose of all petroleum impacted soil at the site to an approximate depth of at least 10 to 11 feet below grade during site redevelopment." "Following the completion of excavation in each area of the site, end point samples will be collected and analyzed to document the completeness of remediation". "It is anticipated that the limited area of moderately impacted groundwater encountered in the vicinity for the UST area will naturally attenuate". "Therefore no groundwater remediation is proposed at this time". Soil analyticals show 230000ppb ethylbenzene(SB1 16-18'), 700000ppb toluene(SB1 16-18'), 12000000ppb xylene(SB 16-18') and 3600ppb xylene(SB8 7-8'). Groundwater analyticals show 7ppb benzene(SB1), 370ppb ethylbenzene(SB1), 3100ppb toluene(SB1), 590ppb MTBE(SB1), 10ppb benzene(SB6), 110ppb MTBE(SB6) and 47ppb toluene(SB6).Letter from FPM Davis to DEC Tipple-12/19/02. "Enclosed please find a copy of the completed Petroleum Bulk Storage

48 LAIGHT STREET (Continued) **S106008427**

Application...". "As per our meeting on 12/29/02, we understand that the procedures discussed in the RAP were acceptable with some additions (additional downgradient groundwater sampling, pumping of impacted groundwater from excavation and/or addition of ORC to the completed excavation before backfilling if necessary and installation of a vapor barrier and a passive venting system for the proposed building)." "We are requesting that you issue a short letter approving the RAP with the agreed-upon changes".Letter from DEC Tipple to FPM Davis-12/20/02. "the DEC hereby approves FPM's recommendations for the remedial activities proposed for this site. The specific work to be peformed will include: 1)the removal and proper disposal and documentation of petroleum contaminated soils 2)Downgradient groundwater sampling and remedial activities if NYSDEC deems it necessary 3)endpoint soil samples will be taken proximal to the tank removals as determined by NYSDEC Spots Memo 14 4)engineering controls will be implemented as per the December 2002 correspondence."Underground Storage Tank Removal, Remedial Activities and Site Assessment (FPM)-3/10/04. "Only nine storage tanks were found to be present a the site during redevelopment". Tanks found were three (275-gallon) waste oil USTs, four (550-gallon) gasoline USTs and two (2000-gallon) gasoline USTs. "Excavation was performed to a depth of approximately 14 feet below sigrade over the entire site". "...petroleum impacted soils were present in the vicinity of the former AST vault and the gasoline UST area. " "...impacted soils were not observed in the 275-gallon waste oil UST area". A total of 2306.08 tons of soil were excavated and removed from site. Nine endpoint soil samples were collected including (EP1 through EP7 collected from the floor of the excavation at a depth of 14.5' below grade),(SW1 and SW2 were collected from the approximate depth of the former gasoline USTs (7' below grade) throgh acessible areas of the excavation shoring). Two groundwater samples were obtained downgradient of the former gasoline USTs. Groundwater at depth of 20' below grade. "An ORC was applied to the area of impacted groundwater to promote biodegradation of the remaining petroleum". Engineering controls will include "a high denty polyethylene vapor barrier to be installed beneath the basement floor above a passive venting system such that potential vapors that might otherwise infiltrate the newly constructed building can be captured and directed to roof top stack for discharge. Periodic monitoring of this stack will be conducted once the building is completed. The monitoring results will be reported to the NYSDEC and spill closure will be requested if the monitoring results indicate that the remaining impact is negligible or non existent". "FPM does not recommend further groundwater investigation..." Soil analyticals show 1270ppb xylene(EP1), 1337ppb xylene(EP7) and minor PAH exceedences in EP7 and SW2. Groundwater analyticals show 380ppb benzene(GW1), 12000ppb ethylbenzene(GW1), 70000ppb toluene(GW1), 67000ppb xylene(GW1), 4700ppb ethylbenzene(GW2), 68000ppb toluene(GW2), 28400ppb xylene(GW2). Letter from FPM Davis to DEC Vought-6/6/04. "Please find copies of the following..." including RAP, 12/19/02 letter, 12/20/02 letter and 3/10/04 report.7/8/04-Vought-Sent out STIPULATION Agreement to Ennis with due date of 8/9/04 including requirement of surrounding area property usage. Vought called Ennis (212-421-3535) and left message.7/9/04-Vought-Site visit by Vought. John Bukoski on site. Three wells adjacent to site installed. Delineation well across Hudson not possible due to basement under sidewalk. Highest PID reading found in three wells was 67ppm. No free product or sheen on

48 LAIGHT STREET (Continued) **S106008427**

water. Sub-foundation venting pipe in place. Soil sampled will be deepest dry sample and/or sample with highest PID. Additional delineation will be pending upon analysis of groundwater samples from new wells and determination of flow direction.7/23/04-Vought-Spoke to Ennis and he referred the Stipulation to his attorney. Ennis requested Stipulation extension until groundwater analyticals are received so determination can be made between STIP or BCP. 9/20/04-Vought-Called FPM Davis for update on further action and left message to return call to DEC. 10/8/04-Vought-Reveiwed letter from FPM (Stephanie Davis 631-737-6200)dated 8/2/04 and received on 8/5/04. "...the owner of the above referenced property does not plan to sign the Stipulation ..." The reasons are as follows: 1)"work is proceeding at the property in accordance with the October 16, 2002 Remedial Action Plan". Work has included tank removal, impacted soil removal, ORC application, soil and groundwater sampling, installation of a vapor protection system in new building and well installation 2)reduction in groundwater concentrations. Groundwater results and recommendations for additional delineation "will be transmitted to you shortly" (within "approximately two weeks").12/16/04-Vought-Reviewed well installation report received on 10/27/04 from FPM and dated 10/25/04. Installation of three monitoring wells. Exit for Holland Tunnel and a New York City Park are located to the south of the site. Multi-story commercial/residential buildings are located to the west north and east of the site. Site was excavated to a depth of 15' below grade. "A vapor barrier was installed beneath the entire concrete pad and a perforated PVC piping system was installed beneath the sourthern portion of concrete pad to allow any built up vapors to vent to the exterior of the building". With regards to contaminated soil under sidewalk "Although this soil is located on the edge of the property, it was not within the excavation area and was not readily accessible for removal during the excavation process". The site specific groundwater flow direction appeares to be west-southwest". "Based on a comparison between the November 2003 and July 2004 groundwater analytical data, total VOC concentrations in the groundwater at the site have significantly decreased". A qualitative exposure assessment has been performed for the facility. FPM recommends the following: instllation of one well north of MW1, south of MW2, groundwater flow direction confirmation, and injection of ORC with semi annual groundwater monitoring. Soil analyticals show: 2800ppb xylene (MW1 15'bg), 91000ppb toluene(MW2 16'bg), 41000ppb ethylbenzene(MW2 16'bg), 226000ppb xylene(MW2 16'bg), 140ppb benzene(MW3 15'bg), 35000ppb (MW3 15'bg), 20000ppb ethylbenzene(MW3 15'bg), 96000ppb xylene(MW3 15'bg). Groundwater analyticals show:160ppb benzene(MW1), 31000ppb toluene(MW1), 3100ppb ethylbenzene(MW1), 21100ppb xylene(MW1), 7700ppb toluene(MW2), 960ppb ethylbenzene(MW2), 5300ppb xylene(MW2), 32ppb toluene(MW3) and 24ppb xylene(MW3). DEC approves installation of additional wells and requires: 1)signing of Stipulation Agreement 2)remediation plan to address both soil and groundwater contamination 3)complete delineation prior to submittal of remedial action plan 4)quarterly groundwater monitoring 5)MTBE to be included in analysis.11/8/05 - Obligado - Review letter from FPM Group. Offsite well not possible due to subsurface obstructions beneath sidewalk on Hudson and Laight street. ORC injection Design and GW monitoirng plan submitted. 6200 lbs of ORC to be injected into mw1, mw2, and mw4. Planned to inject wells on several occasions. Groundwater monitoring will be semianual in injection wells,

48 LAIGHT STREET (Continued) **S106008427**

quarterly in noninjection wells and will consist of low flow samplng for NA parameters BTEX and MTBE. DEC Requires: 1) Quarterly monitoring of all wells 2)Expanded surrounding area land use map showing utilities 3) STIP is overdue.2/3/06 - Obligado -Email from Bukowski (FPM) "I will be sending out the groundwater monitoring/ receptor survey report for 48 Laight Street (spill 0207349) early next week. In the report will be revised calculations for injection of ORC into the wells, that is anticipated to be performed in late February or early March."3/27/06 - Obligado - Received well installion and quarterly sampling report. total VOC concentrations have decreased in monitoring wells MW1 (16700 down to 2202 ppb) and MW2 (61930 ppb down to 11830 ppb). Newly installed wells MW4 and MW5. MW4 had 1861 VOCs and MW5 below guidance values. Based on results adjusted pln to inject 150 lbs of ORC into MW1,MW2,and MW4.6/30/06 - Obligado - Email from Bukowski, will inject ORC on July 13, 2006. 7/12/06 - Obligado - Email from Bukowski, ORC injection will occur tomorrow.5/10/07 - Obligado - Email to Bukowki, request monitoring reports.10/29/07 - Obligado - Called John Bukowski inquiring about monitoring report and site status. He said there is a dewatering construction project across the street. All of their wells are dry due to the lowering of the watertable. They have only have one quarter of post injection monitoring data - 1Q07. I asked him to send a letter report with monitoring results and documenting site activities. 1/11/08 - Obligado - Received update report from FPM Group, dated December 11, 2007. ORC was injected on July 13, 2006 in MW1, MW2, and MW4. 33 lbs of ORC mixed with water and injected into formation. Ground water monitoring on a semiannual basis. Total VOCs in MW1 decreased from 16770 in July 04 to 8180 ug/L in June 07. MW2 VOCs have decreased from 61,930 ug/L in July 04 to 3,489 ug/L in June 07. MW4 VOCs decreased from 1861 ug/L in November 05 to 211 ug/L in June 07. In July 2007, FPM monitored gw elevations and found wells MW1 thorugh MW4 to be dry. There is a construction project accros the streeet to the south. This work may be related to the Hollan Tunnel. Dewatering associated with this project may have lowered water tables to below well screens in the FPM site. The sub-slab system was monitored for vapors on March 14, 2007 and a sample was collected from the effluent stack. BTEX and MTBE ND <0.5 ppb in effluent. FPM will continue to monitor sub-slab system effluent. 4/1/09 - Obligado - I have not received any monitoring reports for this site. I called John Bukowski to find out the status of the monitoring. According to Mr. Bukowski, they presented a proposal to the client but the client declined the offer so no work was performed. 4/2/09 - Obligado - I sent David T. Ennis (Daten Group) a Stipulation Agreement requiring continued investigation and remediation. Required Stipulation to be signed within 15 days of the case would be referred to Legal.4/6/09 - Obligado - Delivery confirmation. STIP due 4/21/09.5/4/09 - Obligado - No STIP received. I called Mr. Ennis to inquire about the Stipulation Agreement. I left a message to call back the DEC.7/2/09 - FPM submits monitoring report. Report confirms GW returned to normal levels in wells. GW contamination is still present. Some of wells have been silted up with several feet of material, possibly a build-up of ORC in wells. 9/14/09 - Obligado - Reviewed Monitoring report, dated 7/2/09. Report documents ground water sampling results. VOCs still present in excess of ground water quality standards. Sent a letter to David Ennis requiring quartelry monitoring, vapor intrusion mitigation details, additional soil and ground water investigation. CC john bukowski and david ennis via email. An

48 LAIGHT STREET (Continued) **S106008427**

Investigation Work Plan is due 30 days from receipt. A quartelry Monitoring Report is due within 90 days. 10/14/09 - Obligado - I received the letter "returned undelivered". Emailed David Ennis requiring updated contact information.11/30/09 - Obligado - REsent letter to 515 Madison Avenue Address. 12/3/09 - Obligado - Received a phone call from Stephanie Davis at FPM. She said Mr. Ennis is willing and able to perform annual ground water monitoring, redevelop the wells, and provide the documentation of the SSDS and vapor barrier. Mr. Ennis will not install additional soil borings and monitoring wells and will not perform quarterly monitoring. I told Stephanie I would discuss the Legal division.12/18/09 - Obligado - I sent an email to Stephanie Davis re-iterating Deparmtent requirements from the 11/30/09 letter.1/19/10 - I reviewed a workplan submitted 1/15/10 which did not meet Department requirements. They propose doing annual ground water monitoring and application of ORC socks in contaminated wells. They also propose to do well re-development and provide hydrographs, contour maps, and SSDS/Vapor Barrier. However, they refuse to do quarterly monitoring and any additional soil borings and monitoring wells. I emailed Stephanie Davis to notify her that this case would be referred to legal.

Remarks: soil samples came back after testing was done

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Registry ID: 110019792946

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Registry ID: 110019428029

BROWNFIELDS:
Program: BCP
Site Code: 483976
Acres: .602
HW Code: C231084
SWIS: 3101
Town: New York City
Update By: MJKOMORO
Site Description: Location: The 261 Hudson Street Development site is located on the west side of Manhattan in the Hudson Square section of the city. The site is bounded by commercial properties and Spring Street to the north, Hudson Street to the east, commercial/residential properties and Canal Street to the south, and Renwick Street to the west. Site Features: The site is formally identified as 261 Hudson Street, Block 594, Lot 87. Lot 87 encompasses approximately 0.61 acres of property. On April 18, 2013, the NYC Department of Finance approved an application for a lot merger to consolidate lots 61, 69 and 94 into lot 87. Thus, the site (lot 87) includes parcels that which had been until recently, four separate properties. The current status of the site and former parcels is as follows: Lot 87 (80% of site) includes a one story vacant building; lot 61 (1%) is vacant property; lot 69 (11%) includes a vacant three story building and lot 94 (9%) is a parking lot.The Manhattan bound tube of the Holland Tunnel, running northwest-southeast in the area is just north of the site. The tunnel exit is one block east of the site. The Hudson River is located approximately 0.2 miles west of the site.Current Zoning and Land Use: The site is zoned C6-2A for commercial use, which has a residential equivalent of R8A. The block was included as part of the recent Hudson Square District rezoning. The intended use of the site is for commercial and restricted residential Use. Past Use of the Site: Lot 69 (northwestern portion of the property) was used for unspecified manufacturing in 1950 and commercial/office space from 1968-2011. Lot 87 (central portion of the property) was occupied from 1950 through 1968 by a motor freight station which reportedly had two underground storage tanks for gasoline. From 1976 to 2005 the building was used as a NYC Waterfront Community Hiring Hall and was most recently used as event space up until 2012. Lot 94 (southern portion of the property) has been vacant since 1950 and is currently a parking lot. Prior to 1950, this lot was occupied by a multi-story residential building with ground-level stores. Lot 61 has always been vacant. Site Geology and Hydrogeology: The ground level elevation on the property ranges from approximately 13 to 15 feet above mean sea level.The topography of the site and the surrounding area slopes gently to the west towards the Hudson River. The site is underlain by a layer of historic fill that is approximately 7 to 19 feet thick starting just below the ground and pavement surface. The historic fill generally consists of fine to coarse brown sand with some silt,

LOT 87,TAXBLOCK 594 (Continued) **S108075457**

gravel, brick, wood, asphalt, and concrete. The native soils below the historic fill consist of reddish brown sand with some silt and clay. The average depth to groundwater is 13.7 feet below ground surface (bgs), with the range in depth from 11.8 feet to 16.4 feet. Groundwater flow is from the southeast to northwest towards the Hudson River.Milestones:10/3/13 - DEC signed the Brownfield Cleanup Program Acceptance Letter for this site.11/6/13 - Brownfield Cleanup Agreement executed. 11/25/13 - The Remedial Action Work Plan was approved and the Decision Document was signed. 01/06/14 - Cleanup action anticipated to begin.

Env Problem: Nature and Extent of Contamination:Soil - A total of 20 subsurface soil samples were collected at the site. Fourteen of these samples were of the historic fill materials at various depths and six were of the native soils beneath. The fill materials are impacted above both the Part 375 unrestricted and restricted residential use SCOs for PAHs and selected metals. PAHs in the historic fill were found at concentrations up to approximately 400 times the cleanup standards (benzo[a]pyrene at 390 ppm) and lead was found above the cleanup standards (400 ppm) at 2,650 ppm. The native soils below the fill are generally not impacted. Groundwater - PCE is found in groundwater at one monitoring well location in the north central end of the property. The 9.7 ppb concentration of PCE in this well is only marginally above the groundwater standard of 5.0 ppb. Filtered samples of groundwater exceeded SCGs for the common salts, sodium, manganese and magnesium as well as for iron and selenium.Soil Vapor - Soil vapor on the property was found to be impacted by chlorinated solvents at all five locations sampled. PCE was detected at all locations in the range of 20 to 120 ug/cubic meter. TCE was detected at four of the five locations in the range of 28 to 63 ug/cubic meter. Not reported

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. The site is fenced and mostly covered by asphalt or concrete, therefore it is unlikely that people will come into contact with contaminated soil. However, persons who enter the site could contact contaminants in the soil by walking on or otherwise disturbing exposed soil, or by digging beneath the surface. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur on and off-site needs to be evaluated.

E DESIGNATION:

Tax Lot(s):	87
Tax Block:	594

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Land type: Facility is not located on Indian land. Additional information is not known.
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:
Owner/operator name: AKDEMIR AYDIN
Owner/operator address: NOT REQUIRED
NOT REQUIRED, WY 99999
Owner/operator country: US
Owner/operator telephone: (212) 555-1212
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006
Site name: OLEF CREATIONS INC
Classification: Not a generator, verified

Date form received by agency: 08/14/1989
Site name: OLEF CREATIONS INC
Classification: Small Quantity Generator

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D003
. Waste name: REACTIVE WASTE

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	07/13/11-Hiralkumar Patel. while investigating spill on 5th floor (spill #: 1104069), found following:alternate addresses: 119-123 Varick Street, 22-30 Dominick Streetno other spills reported at the site.PBS #: 2-480959. as per PBS record, the site has one 5,500 gal #6 oil UST. the registration expired on 07/09/2010.2:45 PM:- spoke with Mr. Moyal regarding PBS violation. Mr. Moyal mentioned that about two months ago, they found water in boiler. as there could be a leak in system somewhere, they hired Riteway Tank to abandon the 5,500 gal UST and to install a new #2 oil AST inside the building. asked Mr. Moyal to renew the registration immediately.3:17 PM:- spoke with Anthony at Riteway. he mentioned that there was sidewalk work done about couple of months ago and he suspect a fill line got damaged during work. tank is located under the south sidewalk of Dominick Street, on left side of the loading dock entrance. currently, they have left a sidewalk flag open to get access to tank manhole. Anthony mentioned that the tank is about 2 ft bg and it is 8 ft in diameter. the sidewalk is about 10 ft wide. Anthony mentioned that fill line is about 2 ft long before entering into the tank and supply/return lines runs aboveground inside the building. as there is

SAGE PLATE SERVICE CORP (Continued) **1000197993**

less than 2 ft long underground piping associated with tank, instead of doing isolation test, Anthony will collect soil samples through the tank bottom. based on available information, approved his plan. asked him to collect at least four soil samples via drilling through tank bottom, along centerline. asked to collect soil samples at least three ft below the tank bottom.3:52 PM:- sent email to Mr. Moyal. informed him that based on available information regarding tank location, the department agrees with the collection of soil samples through the tank bottom. asked him to collect soil samples at least three ft below the tank bottom, along the centerline. also asked him to renew PBS registration immediately.07/14/11-Hiralkumar Patel.11:07 AM:- spoke with Peter at Riteway. Peter mentioned that the tank was cleaned out on 06/14/11. today when they opened the manhole, they found oil and water inside the tank. as free product found with water and tank will be not be used again, they will drill some holes in tank at different locations to use tank as recovery pit.121 Varick Street Corp. **building owner**121 Varick Street, 7th FloorNew York, NY 10013Attn.: David MoyalCo-op PresidentPh. (212) 741-1070 Ext. 611 (917) 653-3196 (C)email: davidmoyal@mac.com3:39 PM:- sent letter to Mr. Moyal requiring weekly monitoring and product removal from tank, PBS registration renewal and soil/gw delineation including site-specific groundwater flow direction. letter emailed to Mr. Moyal and Anthony.07/22/11-Hiralkumar Patel.10:47 AM:- received call from Anthony. he is going to meet Mr. Moyal today to discuss about delineation. he mentioned that they had made some holes in tank to recover oil from surroundings. he is planning to drill some more holes in tank, which will happen on 07/25/11, for faster recovery.08/12/11-Hiralkumar Patel.9:45 AM:- spoke with Anthony and requested to schedule a tank inspection.4:25 PM:- spoke with David at Riteway and scheduled a site visit at 9:30 AM on 08/15/11.08/16/11-Hiralkumar Patel. yesterday's site visit was cancelled.08/29/11-Hiralkumar Patel.3:45 PM:- left message for Mr. Moyal.3:48 PM:- spoke with Pete at Riteway and scheduled a site visit at 9 AM on 09/07/11.09/06/11-Hiralkumar Patel. spoke with Pete and rescheduled a site visit at 9 AM on 09/09/11.09/09/11-Hiralkumar Patel.8:45 AM:- visited site. met riteway crew. found 3 inch water/oil mix in the tank. there is about 2-3 ft distance between the tank side and the building's northern foundation wall.9:00 AM:- left message for Pete.9:28 AM:- received call from Pete. asked him to send recovery data including dates of recovery, amount of liquid in tank (in inches) and amount recovered (in gal). also asked him to inspect northern foundation wall inside the basement for any seepage into building.10:03 AM:- received call from Anthony. he mentioned that he has inspected basement at begining. he inspected northern basement wall in area close to UST location. he observed minor oil stain at the junction of wall and floor. no product seepage found in basement. asked Anthony to send pics of impacted wall in basement. also informed him to talk to Mr. Moyal regarding complete delineation of groundwater contamination via installation of monitoring wells (at least 4 inch in diameter). Anthony mentioned that the new tank will be installed in area along the northern foundation wall, area where oil stain found.10:47 AM:- received email from David from Riteway including recovery data.date---------amount of liquid removed (gal)08/02/11----------40008/09/11----------80008/11/11----------10008/18/11----------80008/22/11----------10008/29/11----------4002:04 PM:- spoke with Mr. Moyal. informed him that the department requires groundwater

SAGE PLATE SERVICE CORP (Continued) **1000197993**

delineation via installation of monitoring well as per letter dated 07/14/11. asked him to submit work schedule by end of 09/16/11. suggest him not to install new tank as may need some borings in area inside the basement. he will talk to Anthony regarding groundwater delineation.10/20/11-Hiralkumar Patel.11:56 AM:- spoke with Mr. Moyal and asked him regarding investigation work plan. he will talk to Anthony. informed him that the investigation work plan (for groundwater delineation) must be submitted by the end of 10/28/11.11:59 AM:- sent email to Mr. Moyal requiring to submit investigation work plan by 10/28/11. email copied to Anthony.10/31/11-Hiralkumar Patel. received email from David Chan (at 11:06 AM on 10/27/11) from Riteway including a work plan. Riteway proposed to install soil borings to delineate in horizontal direction and proposed to collect soil samples from clean zone at the edge of plume. there is no information about vertical delineation or collection of soil/groundwater samples from within the plume to see level of contamination. it also proposes to install six 4 inch wells. the work plan is missing scaled map with proposed boring/well locations.11/02/11-Hiralkumar Patel.2:47 PM:- left message for David at Riteway.2:54 PM:- sent email to David and asked him to submit revised work plan including following:- collection of soil and groundwater samples from borings where contamination found. This will provide horizontal profile of the contamination.- vertical delineation of contamination via installation of borings to a clean soil zone- scaled site map including tank location and proposed boring/well locationsasked David to submit revised work plan by 11/09/11. email copied to Anthony and Mr. Moyal.11/08/11-Hiralkumar Patel.12:31 PM:- received email from David including revised work plan including a site map. he proposes to install six 4 inch wells around the tank. as part of horizontal delineation, he proposes to collect clean samples to show limit of contamination, but does not include collection of soil/GW samples from boring showing contamination to know level of contamination vs distance from tank.11/09/11-Hiralkumar Patel.9:04 AM:- received email from David including a copy of violation issued by FDNY regarding improper closure of the tank. David asked for letter stating that the tank is not abandoned yet and owner is working on remediation.11/14/11-Hiralkumar Patel.10:25 AM:- spoke with David at Riteway. informed him that the department requires collection of soil and groundwater samples from boring, which shows contamination, to define horizontal area of contamination. suggest him to install monitoring wells at borings which shows free product, except borings too close to the tank as currently the tank is being used as recovery pit. informed him that if the owner wants to abandone the tank to comply with FDNY violation, then monitoring wells must be installed in borings near the tank which shows product/contamination. also asked him to contact FDNY regarding their violation order and regulation. asked him to submit revised work plan.11:06 AM:- sent email to David and asked him contact FDNY for their violation and regulation. informed him that the tank is not-in-service and asked him to submit required documents to update PBS record. also asked him to submit revised work plan.01/31/12-Hiralkumar Patel.4:07 PM:- left message for David.4:11 PM:- received call from David. asked him to submit an investigation work plan. he will talk to Anthony and will call back.02/01/12-Hiralkumar Patel.1:26 PM:- received email from David including a work plan that was submitted on 11/08/11, which was disapproved.02/02/12-Hiralkumar Patel.1:55 AM:- spoke with David.

SAGE PLATE SERVICE CORP (Continued) **1000197993**

informed him that the department requires collection of two soil samples from each boring: one with highest PID and one deepest clean. he will submit revised work plan.02/03/12-Hiralkumar Patel.3:33 PM:- received email from David with revised work plan.02/07/12-Hiralkumar Patel.10:20 AM:- received email from David. they hired drilling contractor and will start work on 02/15/12.03/28/12-Hiralkumar Patel.10:35 AM:- received email from David with analyticals. he mentioned that contamination spreads approx. 25-30 ft to both the left and right side of tank. they haven't investigate under the street. abstract:- total of 10 soil borings (# 1 through 10) were installed: five on east and five on west side of the tank- boring #1 was installed to 10 ft bg where refusal encountered. found contamination at 5-10 ft depth- boring #2 was installed to 22 ft bg where refusal encountered. minor VOC contamination found in sample from 15-20 ft bg (max. 91 ppb of Isopropylbenzene) and 20-22 ft bg (max. 52 ppb of n-Butylbenzene)- boring #3 was installed to 27 ft bg where groundwater found. VOC contamination found at 20-25 ft bg, but less contamination found in sample at 25-27 ft bg (max 1,010 ppb Naphthalene). minor VOC contamination found in water sample (max 40 ppb Naphthalene)- boring #4 was installed to 25 ft bg where groundwater found. no contamination found in any soil sample. minor VOC contamination found in groundwater sample (max 40 ppb Naphthalene)- boring #5 was installed to 9 ft bg where refusal encountered. no contamination found- boring #6 was installed to 30 ft bg. found high contamination in soil from 5 to 25 ft depth. no contamination found in sample from 25-30 ft bg.- borings #7, #8 and #9 were installed to 3 ft bg where refusal encountered. no contaminatio found in samples from 0-3 ft depth in all three borings- boring #10 was installed to 30 ft bg. some VOC contamination found at 15-25 ft depth, but less contamination found below 25 ft depth (max 274 ppb Naphthalene). found minor contamination in groundwater sample (max 48 ppb Naphthalene)soil analyticals:----------hole 1-------hole 3-------hole 6-------hole 6-------hole 6 5-10 ft 20-25 ft 5-10 ft 10-15 ft 15-20 ftBenzene----------950----------113---------- 542*Toluene----------12, 400----------676--------1, 070Ethylbenzene----------8,220----------404--------1, 340--------4,580----------307Xylene----------48, 000--------1,195-------16,100-------25,600--------1,1611,2, 4-Trimethylbenzene----54,100--------4,260--------3,690-------65, 800--------4,5501,3,5-Trimethylbenzene----16, 400----------478--------1,280-------14,200--------1, 440Naphthalene----------202,000-------12,000------124, 000------197,000-------16,100----------hole 6-------hole 10 20-25 ft 15-20 ftBenzeneToluene----------427Ethylbenzene----------2, 000----------236Xylene----------6,340---------2,8921,2, 4-Trimethylbenzene----19,600---------8,5101,3, 5-Trimethylbenzene-----3,770---------2, 570Naphthalene----------49,300---------5,410* - higher MRLboring logs are missing.04/25/12-Hiralkumar Patel.10:45 AM:- spoke with Rob at Riteway regarding work plan for complete delineation of soil (under the street on north side of tank) and groundwater (installation of minimum of three wells and site-specific groundwater flow direction) contamination. he will talk to David and will call back.11:21 AM:- sent email to David and asked to submit boring logs

SAGE PLATE SERVICE CORP (Continued) **1000197993**

and width of the sidewalk. asked him to call back.2:05 PM:- spoke with Mr. Moyal. asked him to complete delineation of contamination and to submit a remedial action plan. he will talk to Anthony.04/26/12-Hiralkumar Patel.1:31 PM:- received call from David. he mentioned that sidewalk is 12 ft wide. he also mentioned that detailed boring logs were not prepared (but soil samples were collected from every 5 ft interval from each boring). informed David that the department requires complete delineation of soil and groundwater contamination. as part of the complete delineation, borings must be installed on north and south side of the tank and minimum of three monitoring wells must be installed to define site-specific groundwater flow diretion. he will talk to Anthony.1:53 PM:- left message for Mr. Moyal. informed him that investigation report, as per the letter dated 07/14/11, is considered overdue. asked him to complete delineation and submit report.1:56 PM:- spoke with Anthony and discussed about complete delineation and remediation. he will talk to Mr. Moyal.05/02/12-Hiralkumar Patel. received email from David (at 5:06 PM on 05/01/12) inquiring for a letter for remediation requirements.1:06 PM:- sent email to David and asked him to refer to letter dated 07/14/11 which requires complete delineation of contamination.05/18/12-Hiralkumar Patel.9:28 AM:- received message from Richard Stumbo from Environmental Maintenance.2:55 PM:- spoke with Richard. he has been hired for required investigation/cleanup. he is planning to install three larger diameter wells for soil/groundwater sampling, site-specific groundwater flow direction and removal of any product observed in wells. he will send a letter, including project review and a work proposal, by next week.Richard StumboEnvironmental Maintenance Contractors, Inc.Ph. (914) 232-7355 (O) (914) 906-4155 (C)Fax (914) 232-7357email: rstumbo@enviromain.com06/20/12-Hiralkumar Patel.9:32 AM:- received email from Richard including an investigation work plan. he proposed to install three monitoring wells. will collect three soil samples from each boring: deepest dry, deepest clean and from highest PID area. will collect water samples from wells. the work plan missing following information:- tank location on the site map- proposed well size06/26/12-Hiralkumar Patel.12:44 PM:- sent email to Richard. asked him to submit a site map with tank and proposed well locations. also asked about proposed well size. informed him that the department requires complete delineation of contamination, which may require more than three borings/wells. email copied to Mr. Moyal.12:55 PM:- spoke with Allen at EMC. informed him about missing info in the work plan. he mentioned that they are planning to install 4 inch diameter wells. also, they finished GPR survey today to clear the well locations. he will submit revised work plan including missing info.06/27/12-Hiralkumar Patel. received email from Francis Ciriaco (fciriaco@enviromain.com) from EMC including a revised work plan. proposed to install three 4 inch wells to a minimum depth of approx. 25-35 ft bg.12:50 PM:- left message for Mr. Moyal.12:57 PM:- sent work plan approval letter to Mr. Moyal. asked him to submit investigation report by the end of 08/03/12. letter emailed to Mr. Moyal and Richard.06/29/12-Hiralkumar Patel.9:30 AM:- visited site. at site, noticed a scaffolding on sidewalk along Dominick Street, where the #6 oil UST is located. found mark-outs on north and south sidewalks of Dominick Street, where EMC proposed to install wells. met John Fayolle in Mr. Moyal's office. he mentioned that part of scaffolding will be removed to facilitate well installation. inspected basement. there is new 17,000 gal #2 oil

SAGE PLATE SERVICE CORP (Continued) **1000197993**

square tank has been installed in vault with access. the tank is currently empty. the fill box and vent line for new tank are located along the northeast corner of the building, along Varick Street. asked Mr. Fayolle to secure the fill box of the new tank to prevent any mis-delivery. currently, the site is using gas heating system. after finding leak in the #6 oil UST, they installed two 275 gal ASTs in basement storage area, which is right across the wall from where the UST is located under the sidewalk. asked Mr. Fayolle to either register the tanks or removed it. found #6 oil seepage into the storage room. informed Mr. Fayolle that the Department requires soil/gw delineation inside the basement (south side of the tank, where no investigation done till now), as oil seepage found.Mr. Fayolle mentioned that there are total of 12 floors in building. first floor is the main entrance lobby. six floors are owned by Mr. Moyal and remaining five floors owned by different entities. asked Mr. Fayolle to provide contact info for all members of co-op.John Fayolleemail: john.landzone@gmail.com10:12 AM:- spoke with Allen at EMC and informed him about required soil/gw investigation within the basement.4:00 PM:- received message from Richard.07/03/12-Hiralkumar Patel.1:16 PM:- spoke with Richard. he inspected basement storage room today. he asked copy of soil boring results from Riteway. sent him copy of email that received on 03/28/12 from David Chan of Riteway. asked Richard to review sample results and boring logs and to submit a site map with proposed boring locations inside the basement. he mentioned that for well installation, they are waiting for DOT permit.07/26/12-Hiralkumar Patel. received email from Richard. he requested 30 day extension to submit report, as needed more time to get DOT permit. they got permit now.07/27/12-Hiralkumar Patel.2:24 PM:- left message for Richard. asked him to submit work schedule and site map with proposed boring locations inside the basement.07/30/12-Hiralkumar Patel.11:27 AM:- received message from Richard. they received DOT permit on 07/26/12. they will install wells on 08/02/12 and borings inside the basement on 08/06/12.2:56 PM:- received email from Francis Ciriaco from EMC including site map with proposed boring locations inside the basement.3:35 PM:- sent email to Richard approving 30 days extension to submit report. email copied to Mr. Moyal.08/15/12-Hiralkumar Patel.9:09 AM:- received call from Francis from EMC. they installed three wells outside and two borings inside the basement. Francis mentioned that product found around 10 ft below basement floor in interior soil borings. product also found in one of the outside monitoring well. they can not measure product thickness. asked Francis to collect water samples from remaining two wells where product was not observed. also asked to remove product from the well and tank (if any) on weekly basis until further notice. asked Francis to send site map with well and boring locations.08/21/12-Hiralkumar Patel.4:47 PM:- received email from Francis with site map. found product in well GW-1 located on west of former UST and boring B-2 located in basement, south of former UST. as per the site map, groundwater found at 19.75 ft in GW-1, 19.5 ft in GW-2 and 20 ft in GW-3 (across the street).08/29/12-Hiralkumar Patel.1:39 PM:- spoke with Francis. he mentioned that groundwater samples were collected and report has sent to his supervisor for review. Francis mentioned that they haven't removed product from the well yet as his supervisor is out of office till 09/03/12. asked Francis to call back next week with update.08/30/12-Hiralkumar Patel.4:44 PM:- received email from Francis including subsurface investigation report. abstract:-

SAGE PLATE SERVICE CORP (Continued) **1000197993**

advanced three borings (SB-1 through SB-3) outside on sidewalk and converted to 4 inch monitoring wells (GW-1 through GW-3)- SB-1/GW-1 was installed on south sidewalk of Dominick St, west of the 5,000 gal UST- SB-2/GW-2 was installed on south sidewalk of Dominick St, east of the 5,000 gal UST- SB-3/GW-3 was installed on north sidewalk of Dominick St- SB-1/GW-1 and SB-2/GW-2 were advanced to a depth of approx. 30 ft bg and SB-3/GW-3 was advanced to a depth of approx. 28 ft bg- three soil samples collected from each sidewalk borings: one with highest PID, one from deepest dry zone and one from deepest clean zone- found petroleum product in well GW-1- two additional borings (B-1 and B-2) installed within basement, along the northern foundation wall of the building near the UST- boring B-1 was advanced to a depth of approx. 11 ft 8 inches below basement floor- boring B-2 was advanced to a depth of approx. 10 ft below basement floor- groundwater found at approx. 10 ft in B-1 and at 7 ft in B-2- two soil samples collected from basement borings: one at highest PID and one from clean zone- during installation of B-2, product found at a depth of approx. 10 ft below basementsoil

--67---------13009/07/12-Hiralkumar Patel.3:36 PM:- sent email to Francis and asked to submit revised report including follwing:- boring logs- well installation logs- sample depths in sample summary table- depth of basement floor from the street level- thickness of product in GW-1 and B-2- as per the report, product found in well GW-1. what method was used to create a contour maps using just two wells?- as per the report, groundwater was found at 7 ft in boring B-2, but product found at 10 ft below basement floor. how?email copied to Richard and Mr. Moyal.09/12/12-Hiralkumar Patel.12:54 PM:- received email from Rich including revised report. in email, Rich mentioned that product found in GW-1 appeared to be just sitting on top of the water (maybe an inch or two in thickness). he also mentioned that two borings in basement are in different rooms and there may be footing betweeen the two which may affect the flow of water. he also suspects difference in floor depth in two rooms, in reference to the street level. he has requested building drawing to find out exact depth of basement floor in each boring location in basement.in revised report, Rich mentioned that in basement boring B-2, petroleum product was present at depth of approx. 6 to 10 ft below basement flooring. as per onwer's representative, the basement flooring is approx. 12.5 ft below the street grade.boring logs submitted in the reviesed report are not acceptable as missing PID values and field observation data is not clear (used short form like drn, brn, VF, M-C, A, P, T etc. instead of full description). also, based on well logs, wells GW-1 and GW-2 (two wells installed along the building's wall) have screen below the water table (screen starts at 20 ft in both well, but water table found above 20 ft depth).Rich

SAGE PLATE SERVICE CORP (Continued) **1000197993**

proposed for tank and associated contaminated soil removal and installation of oil recovery well in the basement.09/13/12-Hiralkumar Patel.5:24 PM:- spoke with Rich. asked him to submit revised boring logs including PID values. discussed about well screens below the soil/water interface in well GW-1 and GW-2. informed Rich that these wells need to be replaced with proper screen depth (at least 5 ft above and 5 ft below water table). Rich mentioned that now owner is planning to remove the tank. asked him to submit work schedule for tank removal. as tank will be removed and any spilled product can be recovered from tank excavation pit, asked Rich not to replace existing wells or install any new wells at this time.09/18/12-Hiralkumar Patel.2:34 PM:- spoke with Francis at EMC. he doesn't know about tank removal schedule. he will ask Rich to call back.2:45 PM:- received call from Allen. he inquired about regulation for well installation. asked him to refer to DER-10.10/03/12-Hiralkumar Patel.4:03 PM:- spoke with Rich. he mentioned that property owner is looking for price quotes for tank removal. also, they are working for NYC DOT permit for sidewalk work. Rich mentioned that property owner is planning to start tank removal work by 11/01/12, alongwith other construction project(s) in building. asked Rich to submit update in week. also asked to submit revised boring log as requested on 09/13/12.10/12/12-Hiralkumar Patel. received email from Francis (at 5:55 PM on 10/11/12) including a remedial action plan.10/16/12-Hiralkumar Patel. received email from Francis (at 11:12 AM on 10/15/12) including a health and safety plan.10/24/12-Hiralkumar Patel. the Health & Safety Plan includes a letter from Michael Gadaleta from M G Architects. after reviewing original construction drawings, Mr. Gadaleta recommends excavation to maximum depth of 12 ft below the elevation of the first floor. he mentioned that any excavation below grade will require shoring and bracing of the excavation.reviewed remedial action plan, submitted on 10/11/12. abstract:- proposed to remove the 5,000 gal UST and all accessible oil contaminated subsurface soil/fill material from within the UST pit- excavate to maximum depth of 12 ft bg- collect endpoint samples for SVOC analysis- proposed to apply bio-remedial product, only after approval by the Department less than ---------- proposed to install depressurization system and vapor barrier- proposed to install four (4) 6"-diameter recovery wells within building basement11:50 AM:- sent email to Francis and asked to submit revised logs for borings installed as part of investigation work done in Sep. 2012. email copied to Rich and Mr. Moyal.10/25/12-Hiralkumar Patel.12:21 PM:- received email form Francis including revised boring log for investigation done in Sep. 2012. reviewed boring logs:- found more than 50 ppm on PID from surface to 25 ft bg in S-1/GW-1, from surface to 25 ft bg in S-2/GW-2, from 4 ft to 21 ft bg in S-3/GW-3 (well across the street) and from 4 ft to 10 ft below basement floor in basement borings B-1 and B-2- found 148 ppm at 0-1 ft (in surface concrete) in S-1/GW-2 and 165 ppm at 0-1 ft (in surface concrete) in S-2/GW-2. how?- found PID readings in soil during installation of well S-3/GW-3, which is located across the street. why?10/26/12-Hiralkumar Patel.1:08 PM:- sent letter to Mr. Moyal, with partial approval for the remedial work plan dated 10/10/12. asked Mr. Moyal to submit tank removal report by the end of 02/28/13. letter emailed to Mr. Moyal, Mr. Fayolle, Rich and Francis.01/30/13-Hiralkumar Patel.11:23 AM:- received call from Rich. due to financial issues, the project hasn't begun yet. he mentioned that property owners have came to agreement last week and tank

SAGE PLATE SERVICE CORP (Continued) **1000197993**

removal work will begin soon. he will call by next week with update. informed him that the tank removal report is still due on 02/28/13.11:29 AM:- spoke with Mr. Moyal. informed him that the tank removal report is due on 02/28/13. he will talk to Rich.02/13/13-Hiralkumar Patel.3:54 PM:- received call from Rich. he mentioned that property owners have hired tank removal contractor. the contractor has filed for permit and hoping to start work next week. Rich will call back with update.02/28/13-Hiralkumar Patel.4:36 PM:- received call from Rich. he mentioned that a contractor has filed for city permit today. Rich will send letter tomorrow with details regarding cause of delay and future schedule.05/28/13-Hiralkumar Patel.11:21 AM:- received call from Mr. Bayne, property owner's representative. he mentioned that they are waiting for excavation permit from NYC DOT/DOB. Mr. Bayne requested copy of DEC letter approving tank removal work plan, as such letter required by NYC DOT.Kay BaynePh. (718) 757-6546email: kbayne@integrated-companies.com11:31 AM:- sent email to Mr. Bayne including copy of letter dated 10/26/12.06/07/13-Hiralkumar Patel.10:54 AM:- received email from Mr. Bayne including copy of DOT/DOB permits. he mentioned that tank removal will begin soon.06/18/13-Hiralkumar Patel.10:41 AM:- received email from Allan requesting call back.2:22 PM:- spoke with Allan. he mentioned that crew started installing shoring around the proposed excavation area. he inquired about endpoint sidewall sample requirement. informed him that the department requires remediation of contamination which includes any soil contamination outside the shoring area also. asked him to call for site visit, once tank is out of ground and based on observations during the site visit, endpoint sample requirements can be discussed.06/20/13-Hiralkumar Patel.11:10 AM:- visited site. met Mr. Moyal and crew from EMC. crew started removing soil from around the tank. tank bottom found wrapped in concrete. due to large boulders in ground, shoring plates can not be installed to the proposed depth (approx. 12 ft bg) of excavation bottom. due to fiberoptic lines running right above the west end of the tank (towards loading dock), shoring was not possible in that area. crew mentioned that eastern half of the tank will be removed first and area will be backfilled before removing western half of the tank. as shoring does not go to proposed bottom of excavation, asked to collect endpoint sidewall soil samples for analysis. also asked to remove any product in the excavation prior to backfilling. due to presence of oil in tank today, informed Mr. Moyal that recovery wells are needed in tank location. strong petroleum odors noted in excavation. excavated soil was directly loaded on truck. PID monitoring station near loading dock entrance.1:18 PM:- spoke with Allen. informed him that as shoring plates does not go to bottom of excavation, asked him to collect endpoint sidewall samples for analysis. also asked him to remove any product from excavation, prior to backfilling. also informed him that the department requires at least two recovery wells in tank excavation area, one at each end, for groundwater monitoring and product removal (if present).1:48 PM:- sent email to Allen requiring collection of endpoint sidewall soil samples, removal of any product from excavation and installatin of minimum of two recovery wells in tank excavation area. email copied to Mr. Moyal and Richard.06/25/13-Hiralkumar Patel.10:35 AM:- visited site. met Francis from EMC. observed tank excavation pit. tank has been removed and crew installed two 4 inch monitoring wells through concrete pad located under former tank. crew mentioned that they cut

SAGE PLATE SERVICE CORP (Continued) **1000197993**

hole in concrete pad and observed petroleum product on water. they installed well screen five ft below concrete pad. area around well screen is filled with #4 stone. EMC collected six endpoint samples: one sidewall soil sample from eastern sidewall, two sidewall soil samples from northern sidewall, one sidewall soil sample from western sidewall and two soil samples from area beneath the concrete pad. there was no samples taken from southern sidewall as it is building's foundation wall and no soil to sample. checked monitoring well () located in front of loading dock entrance. found approx. 3 inches of product in well.during inspection, crew mentioned that there will a ConEd vault installed in area between the two wells installed in tank excavation pit.also inspected storage room in basement. found new paint on walls. found signs of oil seepage from northern foundation wall, in area where tank was located on other side.based on available information, informed Mr. Moyal and Francis that the department strongly suggests installation of larger diameter (6 or 8 inch) wells in tank excavation pit for following reasons:- due to higher viscosity of #6 oil, product recovery may be difficult from 4 inch well- ConEd vault in tank excavation area will prevent any drilling needed in future to expedite remediation- an active remediation system (e.g. skimmer) can be installed within larger diameter wellsMr. Moyal agreed with such suggestion. he will discuss with Richard at EMC.11:21 AM:- spoke with Allen at EMC and informed him about discussion with Mr. Moyal and Francis regarding installation of larger diameter recovery wells in tank excavation pit. informed him that excavation must be backfilled, if needed for safety reason, even before recovery wells installed. Allen inquired about application of ORC in tank excavation prior to backfilling. informed him that groundwater delineation is not completed yet as such the Department does not approve such application.2:37 PM:- sent email to Mr. Moyal. suggested him to install larger diameter wells in excavation pit. also informed him that the department does not require to keep excavation open and it must be backfilled immediately, if needed for any safety reasons. email copied to Allen.06/26/13-Hiralkumar Patel. discussed with DEC Austin, DEC Vought and DEC Kann. due to free-phase product on groundwater, case transferred to remediation.1:29 PM:- sent email to Mr. Moyal informing case transfer to DEC Kann. email copied to Allen and Ms. Kann.**refer to spill #s 1104069 and 1104073 also.**6/27/13- J.kann - visited site met with MR. Moyal and Allen. Observed the tank excavation. Stained soils noted in south east corner of excavation (see photo). A proposal for remediation will be submitted to the Department in about a week.7/29/13: J.Kann - sent and email to Richard Stumbo requesting a status update.10/29/13: J.Kann - visited the site. wells have been installed along the sidewalk, the tank excavation has been filled with clean fill. Two large diameter wells were installed in the basement of the building (through use of a soil vac truck). Product has been vacced out of the recovery wells (basement and sidewalk). Tuesday October 22nd product removal began. Consultant will evaluate how often the wells should be vacced. A report from them including tank removal information and well installation data must be submitted by November 22.1/28/14: J.Kann - Letter report on UST removal and product removal submitted on December 9, 2013. Additional delineation needed. Product removal should continue. Email sent today and edoced.3/26/14: J.Kann - recvd a call from Alan of EMC. They are waiting on info from the property owner before moving forward.1/5/15: J.Kann - email sent today to richard stumbo requiring the comments from 1/28/14 be addressed and

SAGE PLATE SERVICE CORP (Continued) **1000197993**

submitted to the Department by 1/23/15, in addition to a description of any remedial or investigative work performed in 2014.
Remarks: while attempting to abandon tank loss was discovered. clean up pending

DEC Memo:	07/12/11-Hiralkumar Patel. DEC Sangesland received complaint on 07/11/11 from Ben Lim from Tony Chi Designer. Ben mentioned that they occuply 5th floor of the building and an unknown chemical is dripping from ceiling in the western end.4:00 PM:- visited site. met with Tony Chi at Tony Chi Designer. inspected area where unknown liquid dripping from ceiling. Mr. Chi mentioned that right above the dripping location is a printing machine which is owned by 1-800-Postcards. Mr. Chi mentioned that liquid started dripping in July 2010 and since then it drips from more and more locations. found multiple spots where liquid drips. found black liquid (which could be mixture of ink and other chemical) in front area and reddish liquid (looks like hydraulic oil) in back along the westernmost partition wall.also inspected area on 6th floor where a printing machine is located. met with David Moayl, owner of the printing business. Mr. Moyal is also the president of the co-op board. Mr. Moyal mentioned that the building is an industrial building for more than 80 years and printing business on 6th floor is in operation since 1982. printing machine, which might be the source of leak, was turned off about three weeks ago. Mr. Moyal is waiting for technician to arrive from out of country due to machine's complexity. meanwhile Mr. Moyal has hired Centex Builders Inc. for remediation. met Dennis Mihalatos from Centex Builders. Mr. Mihalatos mentioned that they have purchased some drip pans and are installing under the machine to capture any more leak from the machine.visited impacted area again with Mr. Moyal and Mr. Mihalatos. based on observations during the site visit, asked Mr. Moyal for following:- immediate containment of product dripping in 5th floor- ventilation setup in 5th floor- collection and fingerprint analysis of product samples (samples must be collected from both areas: black liquid dripping in front and reddish liquid dripping in back)Mr. Mihalatos mentioned that they will drill some holes in ceiling to release product captured inside the concrete and will put plastic tarp on impacted areas in ceiling to collect product in one location instead of dripping at multiple locations.informed Mr. Moyal that the leaking machine must not be turned on until the leak is fixed.as no spill reported yet, asked Mr. Moyal and Mr. Chi to report a spill.Tonychi and Associate **impacted party**121 Varick Street, 5th FloorNew York, NY 10013Attn. spills reported. one by Mr. Moyal (subject spill) and another by Mr. Chi (spill #: 1104073).alternate addresses: 119-123 Varick Street, 22-30 Dominick Streetno other spills reported at the site.PBS #: 2-480959. as per PBS record, the site has one 5,500 gal #6 oil UST. the registration expired on 07/09/2010.11:50 AM:- received email from Mr. Moyal stating that work has started to contain the product on 5th floor.2:44 PM:- received email from Mr. Moyal including a pic of collection system installed underneath the ceiling of 5th floor.2:45 PM:- spoke with Mr. Moyal regarding PBS violation. Mr. Moyal mentioned that about two months ago, they found water in boiler. as there could be a leak in system somewhere, they hired Riteway Tank to abandon the 5,000 gal UST and to install a new #2 oil AST inside the building. asked Mr. Moyal to renew the registration immediately.3:17 PM:- spoke with Anthony at Riteway. he mentioned that there was sidewalk work done about couple of months ago and he suspect a fill line got damaged during work. tank is located under the sidewalk along Dominick Street. Anthony mentioned that the tank is about 2 ft bg and it is 8 ft in diameter. the sidewalk is about 10 ft wide. Anthony mentioned that fill line is about 2 ft long before entering into the tank and supply/return lines runs aboveground inside the building. as there is less than 2 ft long underground piping associated with tank, instead of doing isolation test, Anthony will collect soil samples through the tank bottom. based on available information, approved his plan. asked him to collect at least four soil samples via drilling through tank bottom, along centerline. asked to collect soil samples at least three ft below the tank bottom.3:52 PM:- sent email to Mr. Moyal. informed him that based on available information regarding tank location, the department agrees with the collection of soil samples through the tank bottom. asked him to collect soil samples at least three ft below the tank bottom, along the centerline. asked him to submit MSDS for chemicals (including ink) used in printing machine at the site. also asked him to renew PBS registration immediately.07/14/11-Hiralkumar Patel. received email from Mr. Moyal (at 10:56 PM on 07/13/11) including MSDS for Blanket and Roller Wash.another spill (# 1104109) reported at the site due to findings of contamination around the #6 oil tank.10:23 AM:- received email from Mr. Moyal including copy of letter (dated 07/13/11) sent by Mr. Chi's attorney to co-op attorney and a copy of email (dated 07/12/10) sent by Tammy Chou (of Tony Chi) to Mr. Moyal. Mr. Moyal mentioned that Mr. Chi's attorney noted that the Department determined that oil leaking into 5th floor due to improper maintenance of the cement slab.as per the email dated 07/12/10, leak was observed on 07/12/10 and Mr. Moyal was informed about the leak.10:46 AM:- spoke with Mr. Chi. informed him that the Department has only determined that liquid is coming from 6th floor and the Department has no authority regarding slab's structural condition.10:50 AM:- spoke with Mr. Moyal and informed him about discussion with Mr. Chi. Mr. Moyal mentioned that two sets of the recovery pans have been installed under the 5th floor ceiling and a third set will be installed today. also discussed about monitoring recovery system. he mentioned that as Anthony from Riteway will be on-site working for new oil tank and addressing contamination found around #6 oil UST, Anthony will monitor the recovery system on 5th floor. informed Mr. Moyal to record daily recovery to determine when to remove recovery system and seal the ceiling.11:07 AM:- spoke with Peter at Riteway who reported new spill (1104109). Peter mentioned that the tank was cleaned out couple of days ago and when they opened

SAGE PLATE SERVICE CORP (Continued) **1000197993**

the manhole today, they found oil and water inside the tank. as free product found with water and tank will be abandoned in future, they will drill some holes in tank at different locations to use tank as recovery pit.12:37 PM:- sent email to Mr. Moyal requiring daily monitoring of recovery system installed on 5th floor. asked him to submit monitoring report (including date of monitoring, amount recovered during monitoring and amount recovered to date) by 08/01/11. informed him that after reviewing the recovery record, the department may reduce frequency for site visit. email copied to Anthony, Mr. Chi and Brooks Bander (Mr. Chi's attorney).Brooks Banker **attorney of impacted party**Ph. (212) 972-0534Fax (212) 972-0620email: b.banker@tonychi.com12:54 PM:- sent email to Mr. Moyal inquiring about status of fingerpint analysis of product collected on 5th floor. also informed him that a disposal manifest must be submitted to confirm proper disposal of liquid collected on 5th floor. email copied to Dennis at Centex.07/15/11-Hiralkumar Patel.1:34 PM:- received more pics of recovery system installed on 5th floor.08/03/11-Hiralkumar Patel.2:34 PM:- left message for Anthony.2:43 PM:- received call from Anthony. he mentioned that machine on 6th floor is being fixed. as per Mr. Moyal, no more oil drips into 5th floor. Anthony will visit site soon to confirm that and if no more oil dripping observed, then he will propose for sealing of 5th floor ceiling. he also mentioned that they are visiting site every week to pump out oily water from the UST under the sidewalk.08/29/11-Hiralkumar Patel. another spill reported for ink spill incident (spill #: 1106266).3:45 PM:- left message for Mr. Moyal.3:48 PM:- spoke with Pete at Riteway and scheduled a site visit at 9 AM on 09/07/11. Pete doesn't know anything about more ink spill on 5th floor.3:57 PM:- spoke with Ivy at Mr. Chi's office. she mentioned that ink is dripping from area out of the recovery pan. informed her about scheduled site visit on 09/07/11.4:02 PM:- spoke with Anthony. he mentioned that they were on-site this morning to remove oil from underground oil tank. during this, tenant on 5th floor braught a 5 gal bucket full of chemical that dripped from 6th floor. Anthony gave empty bucket to tenant to install. Anthony did not inspect the area himself. he mentioned that there was rain water on every floor after hurricane Irene over the weekend. asked Anthony to inspect the site as tenant complained about more spill from ceiling. asked Anthony to submit sample for fingerprint analysis.08/30/11-Hiralkumar Patel.9:45 AM:- visited site. inspected 5th floor ceiling. found few drops of liquid dripping in recovery pan. met Mr. Chi. Mr. Chi mentioned that Riteway changed the recovery bucket and put new bucket. found clear liquid dripping into bucket and bucket was 1/3rd full with green liquid. Mr. Chi mentioned that there was overflow from the bucket after storm over the weekend (harricane Irene). Mr. Chi mentioned that 2-3 buckets were removed from the site.left message for Mr. Moyal as he was not in office.10:43 AM:- received call from Mr. Moyal. asked him to submit copy of machine repair work to confirm no more leak from the machine. he mentioned that rain water entered onto 6th floor (through windows) which end up in 5th floor through crack in floor. asked him to monitor recovery system daily and change bucket, if needed. also asked him to discuss with Anthony about flushing remaining liquid from the concrete slab.11:46 AM:- received call from Anthony. he will visit site today. he mentioned that they have removed only one bucket from the site since spill was reported.1:59 PM:- spoke with Mr. Moyal about number of buckets removed from the 5th floor. he mentioned that

SAGE PLATE SERVICE CORP (Continued) **1000197993**

Riteway removed one bucket yesterday and that is all they removed since recovery pans were installed. he also mentioned that rain water flooded 7th floor and water dripped onto 6th floor (on printing machines) and that water got into 5th floor.09/01/11-Hiralkumar Patel.2:25 PM:- received email from Mr. Moyal including record for leak repair.09/09/11-Hiralkumar Patel.8:45 AM:- visited site. inspected 5th floor ceiling. found small amount of liquid dripping into bucket.2:04 PM:- spoke with Mr. Moyal. he mentioned that Mr. Chi refused access to Riteway multiple times.2:18 PM:- spoke with Mr. Chi regarding access to recover buckets. he mentioned that he allowed contractor to remove two buckets earlier, but he hasn't seen disposal manifests for those two buckets. Mr. Chi is affraid that liquid in those buckets are being dumped in drain so on his attorney's request, he is storing buckets in his office. asked Mr. Chi to check with FDNY and any other agency to make sure that they have proper permit to store such unknown chemical/liquid. Mr. Chi requested name of the contractor hired by Mr. Moyal. gave Riteway's information to Mr. Chi and asked him to contact Anthony once the bucket is full.2:29 PM:- spoke with Anthony. he mentioned that up until now he has collected only liquid samples for analysis. he hasn't removed any buckets from the site yet. informed him that Mr. Chi will call his office, once the bucket is full and they have to replace it no later than next day. also informed him that two buckets are almost full at this time. Anthony will send person today to collect buckets.2:37 PM:- spoke with Mr. Chi and informed him that person from Riteway will come to collect buckets today. he mentioned that two buckets were removed previously by Mr. Moyal's contractor (doesn't know who). Mr. Chi has record for previously removed buckets. as different person comes everytime, he was advised by his attorney to store buckets on-site. but now he will talk to Anthony and after confirming that person is from Riteway, he will release those buckets.2:45 PM:- left message for Mr. Moyal.4:25 PM:- spoke with Mr. Moyal and asked him about two buckets removed by his crew. he mentioned that they gave buckets to Riteway crew. he will talk to Anthony. informed him that Mr. Chi agreed to provide full access to only Riteway crew.4:38 PM:- received email from Mr. Chi. he mentioned that two buckets, full of leaking fluid, were removed. one bucket was removed on 07/13/11 and another was removed on 08/29/11.09/13/11-Hiralkumar Patel. received email from Mr. Moyal (at 12:23 PM on 09/12/11). he mentioned that two buckets were removed from site by Riteway.12:07 PM:- received email from James. he mentioned that Riteway was informed on 09/09/11 that two buckets were full of liquid, but they have not responded yet to replace collection buckets.12:42 PM:- spoke with Pete at Riteway. he has spoke with James at Riteway. Pete mentioned that they have put 55 gal drum in the basement and will empty buckets into drum.12:56 PM:- spoke with James. he confirm speaking with Pete. he was told that Riteway will empty buckets into drum in basement.09/14/11-Hiralkumar Patel. received email from James stating that the bucket on 5th floor was emptied into larger drum by Riteway.1:29 PM:- received email from David from Riteway including result of liquid sample collected from 5th floor. no VOCs or SVOCs found in sample. found corrosivity (5.07 pH) and reactivity (cyanide reactivity: 7 ppm, sulfide reactivity: 12 ppm).09/20/11-Hiralkumar Patel.4:27 PM:- received copy of email that Mr. Moyal sent to his attorney. Mr. Moyal's attorney received email from Mr. Chi's attorney complaining about disapparence of 58 gal drum from basement which was stored by Riteway to empty out small buckets from 5th floor. Mr. Moyal mentioned that he had no knowledge about

SAGE PLATE SERVICE CORP (Continued) **1000197993**

having drum stored in basement. Mr. Chi's attorney claimed that the drums stored in basement was in control of DEC.Marcia E. Fokas, Esq.Ph. (212) 732-9867Fax (212) 732-2953email: mefokas@att.net4:35 PM:- spoke with Mr. Moyal and informed him that the Department has not hired any contractor and cleanup is being done by his contractor. informed him that on 09/13/11, Pete from Riteway mentioned that a 55 gal drum was stored in basement so small buckets from 5th floor can be emptied into drum so they don't have to transfer small buckets to their facility every time. Mr. Moyal will informed his attorney.during conversation, Mr. Moyal proposed to expedite the cleanup by opening larger area and then sealing the entire impacted ceiling. asked him to submit a work plan for review.09/21/11-Hiralkumar Patel.2:25 PM:- received copy of email that was sent from Mr. Moyal to his attorney, Ms. Fokas. Mr. Moyal met Anthony at the site. Mr. Moyal mentioned that the drum was relocated to 5th floor by Riteway as they were afraid to leave it in the basement due to heavy construction in basement. Anthony verified that drum was on 5th floor.09/23/11-Hiralkumar Patel. received letter from Mr. Chi summarizing activity regarding drum installed by Riteway.10/12/11-Hiralkumar Patel. received email from Mr. Moyal (at 11:19 AM on 10/03/11) including letter from CEC, Inc. CEC inspected site and recommeded method to seal the leak on 5th floor.10/20/11-Hiralkumar Patel.11:47 AM:- sent email to Mr. Moyal. informed him that the letter from CEC, Inc. only contains recommendations based on their observations and it does not include contractor's info who will going to perform recommended work, if accepted. asked him to submit formal work plan from contractor, including work method.10/31/11-Hiralkumar Patel. received email from David Chan (at 10:27 AM on 10/28/11) from Riteway including work proposal from Gotham Waterproofing (John- Cell 201-825 8540). it is a work proposal to building management and does not indicate whether its been approved or not.11/03/11-Hiralkumar Patel.2:32 PM:- spoke with receptionist at Gotham Waterproofing (201-436-7900) who mentioned that they are waiting for approval from client.2:35 PM:- spoke with Mr. Moyal. he mentioned that they already approved proposal from Gotham, but Mr. Chi wanted some changes. Mr. Moyal is waiting for changes and will start work. asked Mr. Moyal to send complete signed copy of the proposal.01/30/12-Hiralkumar Patel.3:02 PM:- received message from David inquiring about how to dispose drum full of liquid, seeped from sixth floor.01/31/12-Hiralkumar Patel.4:07 PM:- left message for David.4:11 PM:- received call from David. asked him to contact disposal facility for proper disposal of liquid contents in drum. also asked him to submit update regarding sealing of fifth floor ceiling.04/25/12-Hiralkumar Patel.2:05 PM:- spoke with Mr. Moyal and asked to submit documents confirming cleanup of chemical spill and sealing of the fifth floor ceiling.06/27/12-Hiralkumar Patel.12:44 PM:- spoke with Tammy at Toni Chi's office. she mentioned that there is still some seepage from 6th floor.12:50 PM:- left message for Mr. Moyal.06/29/12-Hiralkumar Patel.9:30 AM:- visited site. met James in Mr. Chi's office. he mentioned that liquid is still dripping from the ceiling. inspected 5th floor ceiling. found liquid drop on duct along the ceiling. they have put a cardboard box on the duct to capture any drops. took some pics using camera from Mr. Chi's office and asked James to email those pics.went to Mr. Moyal's office. met John Fayolle. informed him about leak in 5th floor. also informed him that the department has not received a report detailing work done to prevent any leaks.

SAGE PLATE SERVICE CORP (Continued) **1000197993**

informed Mr. Fayolle that the report, for work done till now, must be submitted immediately. also asked him to send contractor to 5th floor, by the end of today, to inspect and contain any liquid that is dripping on 5th floor. spoke with Vincent Repaci from Mr. Fayolle's office and informed him about the observation.Vincent RepaciJRM Construction ManagementPh. (646) 761-7155informed Mr. Fayolle that the case may be referred to NYC DOB and NYC DOH for review.07/02/12-Hiralkumar Patel. received email from James (at 5:58 PM on 06/29/12) including pics collected during site visit on 06/29/12.12:57 PM:- received email from Mr. Fayolle including document for 5th floor ceiling repair.07/09/12-Hiralkumar Patel. discussed with DEC Austin. as liquid dripping on 5th floor is not petroleum and it is not impacting soil or groundwater, he asked to refer case to OSHA.10:42 AM:- spoke with Mr. Cross at OSHA. informed him about the case. he asked to forward him available information and he will discuss with his supervisor.Rey CrossOSHAPh. (212) 337-2913email: cross.rey@dol.gov10:48 AM:- sent email to Mr. Cross including spill note, MSDS sheets, liquid sample results and pics.07/11/12-Hiralkumar Patel. received email from Mr. Cross (at 8:03 AM on 07/10/12). he received documents and currently reviewing it.07/31/12-Hiralkumar Patel.9:46 AM:- sent email to (and left message for) Mr. Cross inquiring updates.08/02/12-Hiralkumar Patel.7:29 AM:- received email from Mr. Cross. he has forwarded documents to his supervisor and waiting for response.08/17/12-Hiralkumar Patel.3:35 PM:- sent email to Mr. Cross inquiring updates.09/07/12-Hiralkumar Patel.7:59 AM:- received email from Mr. Cross. OSHA opened an inspection at the site yesterday and will sent report copy in few days.09/28/12-Hiralkumar Patel. received letter from Kay Gee from OSHA, including copy of Citation and Notification of Penalty. OSHA inspected the site on 09/06/12. OSHA issued citation as Circle Press Inc. did not develop a written hazard communication program for workers operating presses who are exposed to chemicals found in press ink and oil. it also mentioned that: "because abatement of this violation is already documented in the casefile, the employer need not submit certification nor documentation of abatement of this violation as normally required by 29 CFR 190.19." no penalties were issued.12/11/12-Hiralkumar Patel. after discussing with DEC Austin, case closed.

Remarks: Reporting an on going spill was discovered.dec Kumar Patel has been advised.

Tank Info:

Tank Number:	002
Tank Id:	250245

Equipment Records:

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G02 - Tank Secondary Containment - Vault (w/access)
I05 - Overfill - Vent Whistle
L09 - Piping Leak Detection - Exempt Suction Piping
B01 - Tank External Protection - Painted/Asphalt Coating
F00 - Pipe External Protection - None

121 VARICK STREET CORP (Continued) **U000411298**

K01 - Spill Prevention - Catch Basin
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
J04 - Dispenser - On Site Heating System (Suction)

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

PARISH OF TRINITY CHURCH (Continued) **1000224078**

corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Program:	BCP
Site Code:	57850
Acres:	.230
HW Code:	C231037
SWIS:	3101
Town:	New York City
Update By:	dcwalsh
Site Description:	This Site consists of approximately 10,080 square feet of vacant land previously occupied by a two-story parking garage. Garage was demolished in 1991 and the Site has been utilized as a parking lot since then. The site is surrounded by residential buildings.Phase I was conducted in July 2003, and a Phase II Investigation was conducted in July 2004. Results indicate low levels of metal contamination.Applicant has demolished the parking lot and is conducting soil removal for construction of a hotel. The Site will be occupied by the hotel/restaurant building. Building includes construction of 80-room hotel and 100-seat restaurant consisting of approximately 60,000 sf.After careful review, the Department determined that this site was not eligible for the BCP.
Env Problem:	Site soils exihibit low levels of metal contamination. Test pits indicate presence of two 500-gallon tanks. Site groundwater is being investigated.
Health Problem:	Not reported

DEC Memo:	No TTF letter was sent (work was finished-owner will submit results)3/26/2009 Sangesland spoke to building owner. He said the tank failed because the gasket on the manhole was corroded. Owner already had the gasket replaced and the vent line fixed. System was retested and passed. Owner will put a package of info together including:Retest, work order showing repairs, photos, statement that there was NO spill.Submittal should come in by March 31 -4/15/09. J.Krimgold reviewed the report submitted by Varick Associates, LLC. NFA.
Remarks:	Caller states they had a test failure with no spill or resources affected.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"6/20/02 TJDSoil contamination discovered during tank removal. 300 gallons #2 pumped out of tank prior to its removal. Impacted soils will be excavated and disposed of in accordance with regulations. Closure report to be sent in about one month.Contact: Mike Piccirillo (Liro Engineering) 201 522 92181/12/04 TJDClosure report submitted. Tyree excavated approximately 25 yds of contaminated soils for disposal. Elevated SVOC concentrations noted in sidewall samples. VOC and SVOC contamination noted in grounwater samples. DEC required additional remedial measures. Liro proposed and subsequently performed bio remediation on site using Waste Stream Technology's Bioblend M-5. Bioproduct was injected into sub-surface on 2/28/03. Subsequent sampling revealed soils and groundwater had been remediated to within established regualtory limits. No further action required. Spill closed.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SARNOWICZ"This spill site has been transferred from DEC Sigona to Remedial Bureau B, on August 4, 2003.Reassigned from sullivan to sigona on 11/1/00On August 10, 2000, DEC (Sigona) and NYSDOH (McDonald) performed a site investigation with MTA (Transit Authority) and ExxonMobil (Meola) and Handex represenatives to address gasoline seepage and gasoline vapors into subsurface MTA offices at Canal Street and Sixth Avenue Subway Station.According to Handex June 5, 2000 report, air samples were compared with vapor analysis from Monitoring well No. 3. There has been a presence of free product in MW No. 3 in recent months 1999-2000.ExxonMobil agreed to install a vapor treatment system and perform remediation of seepage from groundwater into subway tunnel. This spill site has been transferred from DEC Sigona to Remedial Bureau B, Sarnowicz, on August 4, 2003The RegenOx and ORC injection are being monitored for continued effectiveness.3/3/10 - A feasibility study was conducted to evaluate the structural integrity and efficacy of utilizing lateral screened pipes beneath the slab of the on-site building. PID screening values and labratory analytical data of air samples collected indicate the potential for vapor phase hydrocarbon recovery is minimal.5/21/10 - Exxon Mobil request approval to perform another RegenOx and ORC injection.3/29/10 - The SSUR was submitted for review.5/26/10 - The Department approved another round of RegenOx and ORC injections.6/20/10 - The RegenOx and ORC injections were implemented at the site. 9/8/10 - The SSUR was submitted for review.5/26/11 - The Department approved Kleinfelder to shut down the indoor air treatment system to collect samples without the system running to gather data to determine its effectiveness.6/10/11 - SSUR submitted requesting another round of RegenOx and ORC injections. Kleinfelder scheduled the injection for 6/25/11. DOT scheduled a review of the permit for 3:45 PM on 6/28/11. The injection will be rescheduled after the meeting. The indoor air treatment system is proposed to be shut down beginning 6/30 to gather data without it running.6/24/11 - nine monitoring wells were gauged and six monitoring wells were sampled. Liquid-phase hydrocarbons (LPH) were not detected in the monitoring wells gauged. Laboratory analytical data indicates that dissolved-phase hydrocarbon concentrations are generally consistent with last quarter's data collected from the Site.groundwater samples collected from monitoring wells MW-1, MW-6 and MW-11 were analyzed for general petroleum degraders. The results

MOBIL OIL CORP SS #509 (Continued) **1000553806**

indicate that fluorescent pseudomonas are present in monitoring wells MW-1 and MW-11. The presence of petroleum degrading microbial organisms, as well as dissolved oxygen, indicates that conditions remain favorable for natural degradation to continue.June 28, 2011 - The VAS was temporarily shut down in accordance with a May 26, 2011 New York State Department of Environmental Conservation (NYSDEC) letter approving temporary shutdown contingent upon a series of air sampling events. Six indoor air sampling events are currently being conducted in accordance with the May 26, 2011 NYSDEC letter. An Indoor Air Evaluation Report will be submitted within 60days after receipt of analytical data from the last indoor air sampling event.July 9 and 10, 2011, remedial injections of RegenOx and ORC Advanced were performed in accordance with the work plan outlined in the April 21, 2008 Remedial Action Plan Amendment.The RegenOx and ORC injections are being monitored for continued effectiveness.November 7, 2011 - DER reviewed the SSUR submitted on 9/7/11. The Department found the report unacceptable. On 10/11/11 The Department requested the conclusions and recommendation section be revised to explain the rise in BTEX concentrations at monitoring well MW-11. The Department also request a monitoring well be installed down gradient of MW-11 to demonstrate that the remedial plan is working and plume has not simply migrated down gradient. On 10/19/11 the Department agreed to allow Kleinfelder to address the comments in the SSUR that is scheduled to be submitted on 11/18/11.December 19, 2011 - Kleinfelder submitted the SSUR dated 11/15/11 that included a response to the Department's comments. Kleinfelder has assessed potential locations for the installation of a monitoring well down gradient (northeast) of monitoring well MW-11, and the value installation of this monitoring well would provide. Based on this evaluation, Kleinfelder does not propose installation of a down-gradient well since it would have to be installed downgradient beyond the underground structures in the flow path. On November 23. 2011 Kleinfelder submitted an indoor air investigation report that included a request to permenantly shut down the VAS system. DEC forward the report to NYSDOH for review. DOH agreed to shut the system down and collect another round of samples in March 2012 to evaluate the indoor air with the VAS system not running during the heating season.2/28/12 - The Department was notified on 2/8/12 that another ORC injection event was planned for February. The SSUR was submitted on 2/13/12. 4/11/12 - The SSUR was submitted on 4/5/12. On 3/8 and 9/12, an Indoor Air Quality (IAQ) assessment was conducted adjacent to the site within the New York City Metropolitan Transit Authority (MTA) subway office located beneath Sixth Avenue. On 3/9/12 a total of nine monitoring wells were gauged and eight monitoring wells were sampled. Liquid-phase hydrocarbons were not detected in the monitoring wells gauged. On 3/14 and 15/12 a chemical oxidation injection event was completed. A total of 225 pounds of RegenOx-Part B (activator complex) and 245 pounds of RegenOx-Part A (oxidizer complex) were mixed with approximately 995 gallons of water and injected under pressure into monitoring wells MW-5, MW-10and MW-11. Dissolved phase concentrations of benzene, toluene, ethylbenzene, total xylenes (BTEX), and methyl tertiary butyl ether (MTBE) in monitoring wells MW-1, MW-2, MW-7, and MW-9 were below laboratory detection limits. Concentrations of BTEX and MTBE in monitoring wells MW-5, MW-6, MW-10 and MW-11 are generally consistent with the last reporting period. 5/22/12 - The Department and NYSDOH approved the shutdown of the VAS system at the site on 5/18/12. Future indoor monitoring and sampling

MOBIL OIL CORP SS #509 (Continued) **1000553806**

is no longer required.Novmeber 29, 2012 - Department has recieved and is reviewing a SSUR dated October 23, 2012. During September 10, 2012 - Nine monitoring wells were gauged and eight monitoring wells were sampled. Liquid-phase hydrocarbons were not detected in the monitoring wells gauged. Dissolved phase concentrations of benzene, toluene, ethylbenzene, total xylenes (BTEX), and methyl tertiary butyl ether (MTBE) in monitoring wells MW-2, MW-6, MW-7 and MW-9 were below laboratory detection limits. Concentrations of BTEX and MTBE in monitoring wells MW-5 and MW-10 are generally consistent with the last reporting period. Concentrations of BTEX and MTBE in monitoring well MW-1 is higher than the last reporting period. The next groundwater gauging and sampling event will occur in the fourth quarter of 2012. The SSUR does not conclude if another round of RegneOx and ORC injections would be beneficial. The Department will draft comments regarding this SSUR and send them to ExxonMobil.December 20, 2012 - Revised SSUR was submitted for review on 12/18/12. Based on the most recent quarterly groundwater sampling data from September 10, 2012, all monitoring wells exhibit concentrations that are below 1,000 ppb BTEX and 500 ppb MTBE. Total BTEX and MTBE in monitoring wells MW-2, MW-6, MW-7 and MW-9 were below laboratory detection limits.The Hydro/Concentration graphs prepared by GES show a decreasing trend in concentrations formonitoring wells MW-5, MW-10 and MW-11 when compared to the previous groundwater samples events. Following this trend, GES believes that BTEX and MTBE concentrations will continue to decrease throughout the first quarter of 2013. GES will continue to monitor ground water analytical data throughout the first quarter of 2013, and depending on the results, proposes up to two RegenOx injection events for 2013 followed by continued monitoring of groundwater concentration trends. Should these additional groundwater sampling events show stable and/or decreasing trends in groundwater quality, GES will request no further action.March 21, 2013 - GES met with the Department on 2/28/13 to discuss this spill. GES believes that no further action is warranted and will complete an Exposure Assessment in support of a NFA request.May 1, 2013 - Site Status Update Report prepared was submitted for review. GES is finalizing an Exposure Assessment and additional Site Status Update Report in support of Departmental evaluation of site conditions for no further action.May 16, 2013 - An Exposure Assessment with request for spill closure was submitted for review.December 13, 2013 - The Department closed the spill on May 28, 2013 and sent an inactivation letter requesting the monitroing wells be abandoned.Exxon Mobil abandoned the wells and sent documentation to the Department dated September 5, 2013

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"PBS #21098513/6/2006 Sangesland spoke to building super "Mr. White" at 212-255-4870He said both the 10,000 gal and 5,000 gal tank were in operation and they now run on #2 fuel oil. He didn't know about any tank failures.Mr. White suggested I call the building manager: Susan Seckel 212-924-1023Sangesland left a voice message with Ms. Seckel.3/6/2006 In 2004 boiler was replaced and the fuel changed from #6 to #2.At that time the 2 tanks were tested and the 5,000 gal tank failed the test. The tank was isolated and retested and passed. The line from the tank to the boiler was found to leak. This line was repaired and retested and passed.Spill closed.

DEC Memo:	2/10/2004: This spill case was reassigned from Sigona to Rommel for management. (Sigona)7/2/2004: Site transferred to D. Harrington (Central Office) for management. (Rommel)12/2/2004: Sent letter to Exxon Mobil approving RI work plan. Monitoring well installation to occur on the west side of Sullivan Street. Monthly EFR events to begin in mid-January 2005. (Harrington)10/18/2005: Sent letter to Exxon Mobil approving the supplemental SI report. Closed spill nos. 04-01621, 04-11106, and 04-12443. (Harrington)6/2/2006: Sent e-mail to Exxon Mobil requesting clarification on the proposed remedial work plan. Specifically requested more info on the chem-ox and ORC

MOBIL S/S#17-AML (Continued) **S104513535**

injection program. (Harrington)6/13/2006: Product no longer observed in on-site monitoring wells. EFR events have been discontinued. (Harrington)8/15/2006: Sent e-mail to Exxon Mobil approving the remedial work plan. Plan calls for chem-ox and ORC injections in source areas throughout the southern portion of the site. (Harrington)10/26/07 - Tom Gibbons is PM for site. An approved CAP was provided to the DEE attorney and a draft CO was sent to EM on February 13, 2007. DEC received a draft RAP on March 2, 2007 and comments were issued on March 13, 2007. A revised RAP was received on March 14, 2007 and a final approval letter was issued. Implementation of the RAP began on March 28, 2007. The onsite borings and two rounds of ISCO injections were largely completed by mid April. Demolition of the onsite building is complete. Following demo, additional injection wells (both onsite and offsite) and onsite monitoring wells were installed and ISCO injections completed May18, 2007. The post-injection soil data was presented in a Supplemental Remedial Work Plan and recommended a third injection. This work plan was approved August 7 and the work was conducted the week of August 20, 2007. A second round of post-injection soil sampling was completed on September 24, 2007. Waiting on data to determine if a fourth injection is warranted.May 2010 - Implementation of the RAP began on March 28, 2007. Three rounds of ISCO injections have been completed since this work plan was approved. A Remedial Action Report was received on September 11, 2007 and comments were issued on September 27, 2007. A RAR Addendum was received on November 7, 2007 and was approved on November 28, 2007. The Site Status Update Report was received on April 24, 2008 and a Supplemental Remedial Action Plan (SRAP) was received on May 21, 2008. Comments have been issued on the Supplemental Remedial Action Report (June 16, 2008) and SRAP on June 17, 2008. Received request on April 16, 2009 to change the groundwater sampling schedule and this request was approved on May 26, 2009.Another ISCO injection was conducted on July 22-23, 2009. The last SSUR was issued on February 23, 2010. The latest rounds of groundwater samples were collected on December 7, 2009 and March 29, 2010. The results will determine the need for further remedial action in the form of additional ISCO injections.July 2010 - Another ISCO injection was conducted July 27-28, 2010.Oct. 2010 - A SSUR was received.Feb.2011 - An SSUR was received.July 2011 - Another ISCO injection was conducted on July 11-12, 2011. A telephone conference was held with EM and the owner and new developer to discuss the RAWP. They wanted to change the RAWP to minimize the excavation since it wasn't necessary for the new proposed building. Staff said no, follow the RAWP as per the consent order.Sept.2011 - a consultant for the developer submitted a report regarding excavation at the site, again, trying to minimize the excavation. This is being reviewed by staff. SSUR was submitted on 9/9/11.Oct.2011 - the report and data were reviewed by staff. It contained a vague proposal for limited excavation at the site. The proposal was rejected by staff.11/22/2011 - Site transferred to R. Keating for management.12/13/2011 - Site visit made with representatives from ExxonMobil, Kleinfelder, Langan, Mueser Rutledge, and Madison Equities, LLC. The purpose was to do a site walkover and become familiar with the site.12/20/2011 - Response letter sent to Kleinfelder to the letter they sent on November 1, 2011 regarding modifications to the Supplemental Revised Remedial Action Plan (SRRAP). A conference call was held to discuss the comments presented in the letter. 1/25/2012 - Kleinfelder submitted a revised SRRAP. Comments were sent via email to add specific

MOBIL S/S#17-AML (Continued) **S104513535**

groundwater goals to the SRRAP so that the remediation can be monitored more closely to determine if remedial goals are being achieved. The consultant is revising the report. 2/28/2012 - The SRRAP was approved.4/26/2012 - The start of the Remedial Action is planned for the spring of 2012. The site owner is in the process of obtaining permits to do the work.5/24/2012 - The SSUR was submitted. 7/24/2012 - Klienfelder indicated that the site owner still has not received permits to discharge water into the sewer system. They indicated that the site owner is still in the process of obtaining permits to do the work.8/20/2012 - The developer having some difficulty obtaining the dewatering discharge permits. They anticipate starting the work under the SRRAP in fourth quarter of 2012.11/26/2012 - Klienfelder asked for an interpretation of the limits of the excavation as detailed in the SRRAP. The developer seemed satified with the explaination and believes that field work will be done in the spring of 2013. 1/10/2013 - A groundwater sampling event was completed on November 8, 2012 and a SSUR will be submitted to the on January 15, 2013. Development activities have not yet started at the site, but is anticipated to start in the near future since the remedial agreement between ExxonMobil and the site developer is close to approval.2/25/2013 - There are still some permit issued holding up the start of this project. It might be April that the developer starts work.6/24/2013 - The developer's construction plans have changed and the consultant is in the process of reviewing the developer's changes. They will evaluate the possible effects to the Revised Supplemental Remedial Action Plan (RSRAP) that was approved on February 28, 2012.8/16/2013 - A new development plan may be proposed for this site. It might impact the approved SRRAP.12/24/2013 - The consulant indicated that all the off site wells were being destroyed in the process of shoring the side walls of the excavation for the construction of the new building. These wells will be replaced after the constuction work is done.12/24/2013 - The consulant indicated that all the off site wells were being destroyed in the process of shoring the side walls of the excavation for the construction of the new building.01/28/2014 - The consulant submitted a plan which was approved to destroy all site wells and conduct temporary groundwater sampling. This was necessary in order to do shoring for the construction of the new building. New permanent wells will be installed after the shoring is complete.04/28/2014 - The consulant indicated that excavation activities will begin in early May 2014.6/26/2014 - Field work began in May 2014 with the excavation shoring being installed. There were two site visits done with the DEC where the contractor and consultant conducted test pits down to 23 feet below surface. It was clear that a significant contaminated layer was evident from about 18 ft down. More test pits will be done after additional fill material above the contaminated zone is remove.9/11/2014 - Field work continues at this site with the excavation down to the bottom depth across about half the site. Additional site visits were done by the DEC when the contractor did end point sampling and applied ORC to the groundwater. Addition end point sampling is planned as the excavation continues.

DER Facility ID:	250361
DEC Memo:	10/25/05spoke with Renee at Empire fuel. Faxed her spill report. waiting for reply. Scott ReichingerPrior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD"01/26/04Transferred from Rommel to Austin02/17/04: Reassigned from AUSTIN to KRIMGOLD.07/16/13 - Spill Case is transferred from Leszek Zielinski (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB07/24/13 - Called David Stern of Hess. Mr. Stern followed up with the following e-mail:Vadim, Empire State Fuel was sold in 2008. We no longer have their records. There is a notation on the account that Andrews Building Corp hired AL Eastmond in June of 2000. I have no other information. AL Eastmond is 718-378-3000. Sorry I can't be of more help. David Stern Manager, Burner ServiceHess CorporationDirect 718.665.5700 Mobile 718.644.9746Fax 718.621.8119DStern@hess.com www.hessenergy.com07/24/13 - Called Neal of Al Eastmond at 718-378-3000. Neal stated he does not have records prior to 2006 but will double check. I stated that if he has records of tank tests after 2000 in the folloiwng years, it still would be helpful. I gave Nean my phone number and e-mail address. Neal said will get back to me in a few days. V. Brevdo11/14/2013 - V. BrevdoThis tank test failure can not be confirmed. Department's file does not contain documents or information indicating tank actually failed. The Department does not appear to have sent Tank Test Failure letter to RP or site owner. Attempts to locate any documents/information concerning alleged tank test failure did not yield any information which would enable the Department to persue this alleged tank test failure. The structure at the indicated address is a six story residential building. In the absence of major site redevelopment, removal of concrete floor slab, soil excavation or soil disturbance on the site human exposure would be highly unlikely. Given lack of documents/informaton which would verify tank test failure, date of the spill case - 13 years ago from today, fact that the Department does not appear to have sent TTF/Violation letter to site owner, little to none risk of human exposure under the current site conditions, the Department does not see environmental or human health benefits in keeping this spill case open. Therefore, spill case is closed effective 11/14/2013. V.B.
Remarks:	TANK TEST FAILURE AT ABOVE LOCATION. PROPERTY IS RESIDENTAL/COMM.CALLER HIRED BY EMPIRE FUELS. FURTHER TESTING TO BE PERFORMED.NO CALL BACK REQEUSTED.

DEC Memo: See PBS # 2-336785 (and 2-481947 unregulated)former gas station at this location, corner of Leonard Street and West Broadway is synonymous with 180 West Broadway. Groundwater well installed, GW at 9' , well screaned from 5'-15'. Petroleum found appeared to be gasoline as per discussion with Mr. Bullock. Sample will be analyzed within the next week.11/9/04 Reassigned from Rommel to Foley.(KMF)12/8/04 Issued contaminated soil/gw letter. Report to be submitted 2/8/05.1/14/05 Spoke to Sue Bianchetti, Parsons Brinkerhoff (212-465-5419, Home 631-673-4653). Will send copies of Phase I and Phase II reports next week. Will also prepare a workplan to be submitted the week of 1/24/05. Site is currently occupied by a car dealership, a bar (Buster's Garage) with a parking lot. An apartment building is proposed. Construction is to include dewatering (GW at 9-10'bgs).1/26/05 Received Phase I and Phase II reports from Parsons Brinkerhoff. Pending submittal of a workplan.The site was operated as a gas station from approx 1950 to at least 1985. The site is currently occupied by two commerical establishments in the first floor of the building. A car dealership occupies the northern portion of the building and a restaurant/bar occupies the southern portion. Business offices are located in the second and third floors.Six gas tanks are shown on the Sanborn maps. The PBS database lists six 550gal gas USTs which were closed before 1/1/91 and are registered to L. Provenzano, the current property owner. An oil water separator with a 1275gal UST is apparently located beneath the floor of the restaurant. A site investigation was performed 10/20/04-10/22/04. GW was encountered at approx 10'bgs. Bedrock at approx 93'bgs. There is a subway structure located beneath W Broadway at about 23-24' deep.Six soil borings were drilled by Geoprobe to depths between 10 and 16'bgs. One inch of free product was detected in GH-4 during sample collection. The only soil sample that exhibited VOC impacts is GH-3, which is located at the area of suspected gasoline USTs, but no BTEX. Fingerprint analysis for GH-3 identified gasoline. The other samples returned as an unknown diesel range organic.Semivolatiles were identified above soil cleanup guidance in GH-1 and GH-6 and, to a lesser extent, GH-2.Barium, lead and mercury were detected above cleanup guidance in GH-1, GH-2(lead,mercury) and GH-3(mercury).The presence of fill material and lack of GW infiltration prevented GW samples from being collected.PB recommends that all the identified USTs on site be removed with impacted soils. if contaminated soils remain due to constraints from the building, PB is recommending another remedial measure such as bioremediation or soil venting.3/1/05 Spoke to Sue Bianchetti, PB. Will submit workplan by the end of this week or beginning of next week.4/18/05 Received draft RAP dated April 2005. The buyer plans to demolish the existing building and construct a 13-story mixed-use (retail & residential) building comprised of 89,722 sq ft. Potential sources include the former gas USTs which were abandoned in place, the oil/water separator UST(there is no documentation indicating these were properly closed), and possibly fill materials.6/13/05 Conditionally approved Draft RAP. Will be removing tanks and source materials followed by post-ex sampling. Hot spots exist along

L. PROVENZANO INC (Continued) **U001841050**

northeast(gasoline) and along the east(fuel oil or waste oil). No groundwater data to date. Will be dewatering for approx 3 months. Samples will be taken every week prior to discharge by NYC permit. Requested two additional well points(adjacent to GH-1 and GH-4) in addition to the three that they had proposed. Samples at highest PID and directly above watertable. Analysis by 8021+MTBE and 8270. Also specified that the Dept may require a supplemental RAP depending upon groundwater conditions which would address GW and possibly vapor mitigation/investigation.6/20/05 Conference call with Rory Levy and John Lousinger, NYC Board of Standards and Appeals(BSA), Susan Shaw and Ross Markowitz of Strook, Sue Bianchetti of Parsons Brinkerhoff(PB).7/26/05 Letter from PB received which confirms they will be doing work as per 6/13/05 letter.8/18/05 Stipulation mailed out, due back 9/8/05.1/5/06 Update from Sue Bianchetti, Parsons Brinkerhoff. Still going through NYC Board of Standards and Appeals hearings. Redesigning building and renegotiating lease. Possibly do more phase I on other portion/parking lot.6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM7/27/06 Received call from Susan Bianchetti from Parsons Brinkerhoff (PB). PB plans to start work on the site in August and needs to obtain a sidewalk permit. The remediation plan includes excavating the entire site for the basement of an apartment building and disposing of soil. Groundwater is around 10 feet and the excavation will go down to 14 feet. The area will be continuously dewatered during excavation and for three months after. - JAM8/1/06 I composed a letter requesting all NYC agencies cooperation in expediting the remediation of this site. PB will use this to obtain a DOT sidewalk permit. - JAM10/10/06 Received a call from S. Bianchetti, PB. She requests changing the locatation of the upgradient monitoring well from the southeast corner of W. Broadway and Leonard to the northeast corner of W. Broadway and Leonard and if I can revise the Sidewalk Permit accodingly. I agreed and sent the new sidewalk permit via email and regular mail. Revised sidewalk permit in edocs. - JAM6/13/07 Call from Sue Bianchetti from PB. Ms. Bianchetti said the building has been demolished and all tanks are removed. They have begun excavating the site. Analytical showed that downgradient wells have hits for petroleum related VOCs. I asked her to send me an email with some more details. - JAM2/21/08 Visited the site today to meet with Sue Bianchetti from PB. Site has been excavated below the water table and the dewatering system has been running. Water is being treated and discharged on-site. The two downgradient wells could not be located. One must have been paved over in the parking garage and the other covered in the showroom for the coming apartments/condos. I asked Ms. Bianchetti for more frequent site updates as well as quarterly groundwater sampling. If the wells cannot be located then they would have to be replaced. I also would like samples taken from the dewatering system before the treatment system to see if the residual dissolved phase contaminants are present. - JAM9/26/08 Reviewed the Groundwater Monitoring Report submitted by PB Americas, Inc. dated June 2008. The report was submitted to the DEC on September 3, 2008. The report summarizes remedial and construction activities performed at the site and the January 2007 and March/April 2008 sampling events. To date Six USTs and one oil/water separator was removed along with all contaminated soil on the property. The site was continuously dewartered for a period of nearly 6 months beginning in February 2008.The January 2007 sampling event (prior to dewartering) showed VOCs in wells MW-3 and MW-4. On March 31 and April 1, 2008,

L. PROVENZANO INC (Continued) **U001841050**

groundwater samples were collected from MW-2, MW-3, Temp. well (located near MW-1 and used to monitor groundwater levels beneath the site) and at the pre-treatment tank of the dewatering system. The only VOC detected was Benzene at 6.6ug/L at the pre-treatment tank. MW-1 and MW-4 were not sampled because they were destroyed. Report uploaded to eDocs.I met with representatives from PB America and the property owner at the site today to discuss future work. I requested that a monitoring well be installed near former well MW-4 and at least one additional round of groundwater sampling be conducted. When the new well is installed and groundwater samples are collected, a comprehensive summary report will be submitted with recommendations. - JAM2/23/09 Reviewed the Remedial Closure Report submitted by Parsons Brinkerhoff (PB) dated January 30, 2009. The report summarizes all investigation and remediation performed at the site and includes all analytical data in the appendices. In April and October 2008, groundwater was monitored from all accessible monitoring wells. Upgradient well MW-2 and downgradient well MW-3 were ND both rounds. Another downgradient well MW-4 was only sampled in October 2008 and benzene, ethyl benzene and N-propylbenzene were detected above TOGs.PB states that "The contamination in MW-4 appears to be from a localized source in the vacinity or some other off-site source not associated with the Site." I called Kevin Heaphy at (212) 465-5092 and stated that there are no obvious sources for the contamination in well MW-4 and requested that wells MW-3 and MW-4 be sampled once more for VOCs. Spill closure will be reevaluated when those samples are returned. The report is uploaded to eDocs without appendicces. - JAM3/26/09 Reviewed Groundwater Monitoring Report for March 2009 submitted by Parsons Brinkerhoff (PB) dated March 19, 2009. Wells MW-3 and MW-4 were sampled on March 2, 2009 and the results showed an increase since the last monitoring event in October, 2008.I had a conference call with R Squared and PB and requested another round of GW sampling. I also suggested that either an ORC sock be installed or using ChemOx to try and bring the VOCs down in well MW-4. The report is uploaded to eDocs. - JAM4/1/09 RSquared requested that I send a letter to DEP stating that "based on the available information, the on-site contamination has been adequately remediated and will pose no threat to future occupants of the on-site building." The letter was sent to:Calissta NazaireNYCDEP59-17 Junction Blvd.Elmhurst, NY 11372The letter is uploaded to eDocs. - JAM4/30/10 Received the Groundwater Monitoring Report From Offsite Wells dated March 10, 2010 and submitted April 2, 2010. Monitoring wells MW-3 and MW-4 were sampled on February 25, 2010. Total VOCs in well MW-3 decreased to nearly ND levels since the last monitoring event on March 2, 2009. The only VOC detected above TOGS was Benzene at an estimated value of 0.92ug/L. Total VOCs in well MW-4 increased from 366ug/L to 635ug/L.I spoke to Kevin Heaphy at PB who said that ownership of the property has transfered to R Squared to iStar Financial. After our discussion I received the following follow-up email from Mr. Heaphy:"Based on our discussion today, the DEC’s position and potential directives are as follows:1. Attributing the offsite contamination to the spill at the site.2. It is the responsibility of the owner to show/document any other sources of contamination.3. Conduct quarterly ground water sampling. The next sample round should be done in May 2010.4. [Conduct] Quarterly water level measurements in all available wells. Provide a groundwater flow direction and hydraulic gradient map.5. Look into the laboratory QA/QC related to the sample dilutions. You were concerned that the

L. PROVENZANO INC (Continued) **U001841050**

diluted samples in the last round since they were about half the value of the undiluted samples for some constituents.I explained that the delay in the sampling you asked for last year was due to property transfer issues and that we were not authorized to perform this work until this year.We also know you requested installation of ORC socks. However, the client (IStar) wanted to first determine the groundwater conditions at this time.The DEC is willing to meet with PB when possible. However, you recommend we do so after the next round of sampling is complete.I will discuss these items with our client and get back to you asap." - JAM9/27/10 Received the Groundwater Monitoring Report dated and submitted on July 29, 2010 by Parsons Brinkerhoff (PB). Monitoring wells MW-3 and MW-4 were sampled on June 23, 2010. Total VOCs in well MW-3 decreased to nearly ND levels since the last monitoring event on February 25, 2010. Two VOCs were detected below TOGS. Total VOCs in well MW-4 decreased from 635ug/L to 250ug/L with five individual VOCs slightly above TOGS. PB recommends closure of this spill case. Report uploaded to eDocs.The source material has been removed during remediation performed in 2008. Relatively minor residual, dissolved-phase contamination remains in one downgradient monitoring well, which has exhibited a decreasing trend. It is believed that the residual contamination will continue to attenuate. This spill case is closed and a copy of the closed spill report was emailed to the responsible party. - JAM

contaminated soil. case closed based on work done under spill #: 9411507.spill #: 9411507 was reported on 11/29/1994 as found contaminated soil. case closed on 06/20/2000 based on report submitted by F&N, dated 05/05/2000. NFA sent on 06/20/2000. F&N installed one boring in the area where the tank was removed in the basement parking garage. boring was installed to depth of 7 ft; groundwater was found at 5 ft depth; collected two soil samples (0-2 ft and 2-4 ft) and found no PID readings. no soil samples collected for analysis. one groundwater sample collected for analysis. no contamination found in groundwater sample.spill #: 0007768 was reported on 10/02/2000 as found soil contamination. this case reported after DEC Chris closed previous case in June 2000.found old hand written notes in old file for the case. this notes were written on 01/25/1985 regarding gasoline odor complaint from next door apartment building. could not find spill number related to this notes. notes from DEC case manager in 1985: "went to the Gulf Garage located at 360 West Broadway, NY regarding a reported complaintof a tenant who lives in a apartment building at 362 West Broadway concerning a strong gasoline odors in his basement. I was unable to locate the complainant at 362 West Broadway but I was informed by an unidentified male tenant that a Mr. Daphnis made the complaint to the NYCFD. He further states that the fire department flushed gasoline out of the two sidewalk sewers that are located in the front of 360 and 362 W. Broadway. I accompained the tenant in the basement at 362 West Broadway and notice a distinct gasoline odor and further that a exhaust fan was put into operating in the basement to help remove the odor. I later ascertained that the fan was installed by employees from Petroleum Construction of Brooklyn, Inc., 1038 Rockaway Ave, Brooklyn, NY telephone (718) 385-8800 who were at this time doing a pressure test on the Gulf tanks at 360 West Broadway. I spoke to the assistant manager of the Gulf Garage who is David Hulse and he states that he lost approximately 62 gal of gasoline in the past two weeks. He states there are three 550 gal tanks and one 2000 gal tank and that all the tanks are filled with water. I checked the two sewer that are located in front of 360 and 362 W Broadway and found product in each sewer. I spoke with Mr. John Sinkiewaicz who is employed as a licensed plumber by Petroleum Construction of Brooklyn, Inc. and he states he was doing a preliminary pressure test on the Gulf tanks and that he did install the exhaust fan in the basement at 362 Weest Broadway. The name of the Gulf garage is 'To West Broadway Garage' operated by W&J Garage Inc., 356-360 W. Broadway and 34-38 Thompson Street, NY, NY telephone CA68742. The garage is managed by Walter and Joseph Fennell. I went to the Cyclone auto service gasoline station at 372 West Broadway, telephone 925- and it appears that this station is permanantly closed. The above mentioned unidentified tenant at 362 West Broadway states that there was an explosion on this station approximately two months ago and the station had been closed since then."also found well gauging report in old file. three wells were gauged on 07/05/1985 on 360 West Broadway and found no product in it. groundwater was found at 9.5 ft bg.also found sewer system map in file.abstract of phase II report, submitted by IVI, dated 09/13/00 (revised 10/05/00):- advanced six borings to a depths ranging between 3 ft to 8 ft bg- no groundwater encountered- elevated PID readings were detected in borings B4 (75 ppm) and B6 (250 ppm)- during the advancement of the boring, the reinforced concrete slab was found to be 2-3 ft thick in the immediate vicinity of the 1,100 gal UST- due to the thickness of the concrete slab and the presence of underground

W & J GARAGE (Continued) **U000409045**

utilities and fill debris, IVI was unable to advance borings in the immediate vicinity of the UST to a sufficient depth to collect soil samples (so no soil samples collected from B1 to B3 and B5)- borings B4 and B6 were advanced, approx. 15 ft away from tank location, to a depth of 8 ft bg where refusal encountered- two soil samples collected: one from B4 and one from B6 with highest PID- found VOC compounds in both samples, but well below TAGM limitbased on all availabe information, case closed.

Remarks: UST has been removed for quite a while...they were done soil sampling and found soil contamination-caller states there was another spill number assigned to this address was hoping to have the same case mngr. assigned to this number.

DEC Region:	2
DER Facility ID:	259469
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"5/1/2003-Vought-Spoke with William Conroy (631-423-1240) who is consultant for property. NFA request has been prepared for 0209395 and 0209396 and reports will be sent to NYSDEC. Conroy requesting NFA letter sent to him.7/24/2003-Vought-Received report from Conroy Environmental Consultants. Tank is a 1500-gallon AST in basement encased in concrete vault. Tightness test indicated leak was in a dry portion of the tank. Petroleum Tank Cleaners was hired and pumped fuel from tank, cleaned tank interior, removed and resealed manhole cover, repaired broken vent line and petrometer connection. Tank passed tightness test once repairs were completed (tightness test results sent to NYSDEC). Spill closed by Vought.
Remarks:	TANK IS AN ABOVE GROUND TANK. TO BE EVALUATED AND RETESTED.

DEC Memo:	1/19/2012 - Sangesland reviewed a letter/report from Pro Test dated Dec 9, 2011Tank was isolated and passed a pressure test. Both fill line and vent line failed. Both lines were aboveground and visible. Repairs were made to the fittings on the fill box connections and vent alarm. After repairs were made the whole system passed. There was no evidence of visible contamination.
Remarks:	tank test failure w/ dry leak, retest unk

DEC Memo: Sangesland spoke with Rene at EastmondThey responded to the site 550gal that had an epoxy patch on the side that come off. Tank was previously lined with epoxy. Tank is in very bad shape.Eastmond drained the tank and set up a temporary 275 gal tank.Tank is resting directly on the soil in the basement.Eastmond did the immediate cleanup in the tank area, but this tank needs to be replaced and there may be contamination under the tank.03/02/06 Feroze, CSL is sent to:Property Owner58 White StreetNew York, NY 03/15/06. Spill is transferred from Feroze to Kumer Patel.04/06/06-Hiralkumar Patel. Spoke with another person at Joseph's office. he told me that site is cleaned. Eastmond has installed temporary tanks on site. old tank was on concrete pad. he doesn't have more information. left message for Joseph.04/07/06-Hiralkumar Patel. Received call from Joseph. he doesn't know concrete condition in tank room. he will going onsite next week. asked him to take color photographs of old tank location and tank room floor from different angles. as per him, they are not going to put new tank on same tank location. instead they are installing two 275 gal tank outside of the tank room. 04/21/06-Hiralkumar Patel. Spoke with Mr. Mungra at Eastmond. they have removed old tank. they found this tank was on solid concrete pad. no cracks in concrete. no soil/groundwater contamination. only contamination was surface contamination and they powered wash it. Eastmond has installed two new 275 gal tanks on same location. all work done. they are switching lines back to this new tanks. Mr. Mungra will send report by end of next week.05/05/06-Hiralkumar Patel. Spoke to Isaac. he will send final report soon once he get all the documents.05/22/06-Hiralkumar Patel. Received call from Mr. Mungra. he will fax final report. Received fax from Mr. Mungra. abstract of work performed:- install one 275 gal temp tank- pump out, squeegee clean, gas free and remove 550 gal #2 fuel oil tank- clean up area under tank and surrounding areas- removed 2 drums of contaminated oil soaked absorbent- install two 275 gal tanks- pump out and removed temp tank- tank room floor is solid concrete with no indication of cracks and/or cervices.based on available information case is closed.

Remarks: CLEAN UP ENROUTE, THERE IS A SUMP PUMP IN AREA, FIRE DEPT ON SCENE

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID:	135045
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"2/23/2000 DEC received a "Closure Report" from GZA - Stephen Kline 212-594-8140 (fax212-279-8180)Report outlined removal of 3 - 4,000 gal tanks, soil samples taken, contamination left on site. Discussion of other tanks on site (some in use, some abandoned). DEC letter to GZA 2/23/2000 requires:1) 3 wells in area of tanks and pumping island - Water samples tested to 8021 & 82702) summary of tanks on site, including if they were closed out with water or sand.3) report with findings and either recommendations for site remediation or justification for "No Action" status due April 14, 2000.4/4/2000 Stephen Travis P.E. (Yellow Freight) & Frances Schultz (GSA - 973-256-7800) met with Sangesland to discuss this site.4 wells were installed as requested. Some slight trace levels of VOC's found, one MTBE reading of 12 ug/l found in one well. Whole area was built on landfill (probably coal ash) back in 1800's thru 1900. Background levels of other contaminants may be caused by this fill and not from recent contamination.Yellow Freight is going to submitt soil boring results from other spots on the site. If these results show similar contamination, DEC may close it out.5/2/2000 SANGESLAND SPOKE WITH KATIE BORDENARO (212-675-3004) FROM A LOCAL CITIZENS ORGANIZATION. SHE ASKED ABOUT WHAT WAS HAPPENING ON THE SITE. SHE HAS RECORDS ABOUT MANY TANKS ON THE SITE. SHE IS MAILING A COPY OF HER REPORT TO THE DEC.5/12/2000 Advanced Cleanup Technologies, Inc (631-293-4992) was hired by a potential purchaser to conduct a Phase I / II review of the site. Several soil borings and wells were installed in Feb, 2000. The resulting report was issued by ACT on April 7, 2000. NYSDEC received a copy of this report directly from ACT on May 5, 2000. Based on the results of this report, a new spill number was called on the site to cover the entire block. Cross Ref to Spill #00018385/12/2000 Sangesland spoke to Steve Travis at Yellow Freight to discuss the results of the ACT Site Assessment. Mr. Travis requested that the two spill numbers be kept seperate. Right now, 9909631 relates to an area midblock along Washington St. in the area of the former 3 - 4,000 gal diesel tanks.

YELLOW FREIGHT SYSTEM INC (Continued) **1001119618**

Spill #0001838 basically covers the remainder of the city block.Issues include petroleum contamination and various metals.

Remarks: THEY WERE UNCOVERING OLD UNDERGROUND TANK (4 TANKS ALL 4000 GALLONS) - WHEN THEY REMOVED THEY ENCOUNTERED SOIL THAT SMELLED OF SOIL - THEY USED A METER THAT MEASURED JUST ABOVE THE REPORTABLE LIMIT - THE SOIL WILL BE REMOVED THIS WEEK

Contact Phone: (913) 344-3409
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"1/12/2001 This spill number is associated with spill #9909631.The two spill numbers together cover the full city block associated with this site.This site was a former Yellow Freight trucking facility. It also has a history as: gas station, industrial manufacturing, smelting, overhead rail line, post office and several other uses. In the 1800's the area was low marsh area which was built up (typical of much of the west side of Manhattan) with fill material (coal ash) and other non native fill material.Owner of the site is:Washington Street Associates, LLC (Mr. Gary Koehnken) address: 352 Park Ave - Suite 702, New York, NY 10010Attorney for the owner is:Gail Port with Proskauer Rose LLP (212-969-3243) address: 1585 Broadway, New York,NY 10036Environmental Consultant:Advanced Cleanup Technologies, Inc. (631-293-4992) address: 117 Verdi Street, Farmingdale, NY 11735During the course of 2000, a total of 17 buried tanks were found in 5 general locations around the site. Advanced Cleanup Technologies removed the tanks and excavated out any contamination found to the satisfaction of the DEC. In addition, a total of 3 groundwater monitoring wells were installed on the site and found to be clean.On January 11, 2001 ACT submitted an "Underground Storage Tank and Spill Closure Report" which documents the excavation of the 17 tanks and associated petroleum contamination in the area.Based on this report, the spill number associated with this site is closed.Closure letter specifically says:"the NYSDEC is in receipt of the spill closure report, prepared by Advanced Cleanup Technologies Inc. and dated January 11, 2001, for the referenced site. This information, when combined with the documentation already provided to the NYSDEC to close out spill number 9909631, provide a complete summary of the environmental conditions for the full city block under investigation. The historical petroleum contamination which was on the site has been satisfactorily remediated. Based on this information, no further investigation or response will be required concerning the petroleum contamination at this specific site."NYSDEC rep - Tom Lang (Hazardous Wastes Department) added this: "Based on the environmental investigatory information provided to the NYSDEC, there is no evidence of the presence of a consequential amount of hazardous waste on the site."
Remarks: ACT INC. SUBMITTED A PHASE I AND PHASE II REPORT WHICH IDENTIFIES PETROLEUM AND METAL CONTAMINATION THRU OUT THE SITE. SEVERAL SOIL BORINGS AND WELLS WERE INSTALLED. SEVERAL SHOWING HIGH CONTAMINATION LEVELS.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"3/25/2004 Sangesland spoke to Bill Johnson (516-315-8165). He's a contractor working on a building renovation in Manhattan.The basement floor of this building was being "dug down" to create more headroom in the basement. During this digging, a buried tank was found and a joint on the top was broken. This caused a small amount of oil to flow into the soil around the tank.Sangesland told the contractor to do the following:1) Take photos of the tank/spill now before the cleanup2) Take photos of the area after the cleanup is done.3) Either pull the tank and get 1 end point sample -OR-4) Abandon the tank in place with cement AFTER 1 clean soil boring is taken through the center of the tank.5) Manifest any contaminated soil from the site.6) Send in test results, manifests and a summary

APARTMENT BUILDING (Continued) **S106385684**

of events to Cris Sawyer for review and closure.3/30/04 Mr. Johnson called back to say that groundwater is 1 ft below the basement floor. There is a water proof seal over the whole floor (except for the manway to the buried tank). He says they are NOT able to take a soil sample or a water sample through or near the tank.3/31/04 - Sawyer - Talked to Mark Sonnino the owner of site, but he says there is no spill. He is required to pressure test the tank and upon passing the tank tighness test the spill will be closed.4/06/04 - Sawyer - Received a passed tank tighness test from Mark Sonnino done by AL Eastmond. Closed.

Remarks: they are removing an underground tank that has holes in it

DEC Memo:	10/03/13-Zhune spoke to Donna from ABC tank. She indicated they performed a tightness test to the tank and failed the test with a dry leak. They can not say if there is oil spill because the tank is vaulted and they can not see the bottom of the tank. She sent the proposal to the owner to do the isolation test.A tightness test was performed on (1) 2,000 gallon tank located at the above referenced address. The tank did not pass the test. Spill # 1306972 was assigned.ABC Tank pumped out all product from the interior of the tank. The interior of the tank was cleaned. All lines were disconnected from the top of the tank to isolate the tank from the system. A pressure test was performed on the isolated tank. The tank did not hold the pressure. A visual inspection was performed on the interior of the tank. The top of the tank had numerous holes and the steel on top of the tank was in poor condition.ABC Tank obtained (3) soil samples along the bottom of the tank. Resluts indicated low level VOCs below CP-51 standards. SVOCs were observed slightly above. Possible due to fill material. 4//11/14- DEC Piper reviewed documentaiton of tank removal done by Don Carlo Env. Based on samples and removal of 2K AST, this spill is closed. Will notify ABC Tank to u[pdate status in PBS program.

BROWNFIELDS:
Program: BCP
Site Code: 503954
Acres: .205
HW Code: C231091
SWIS: 3101
Town: New York City
Update By: JEBROWN
Site Description: Location: The 601 Washington Street site is located in an urban area in Manhattan. The site is bounded by Greenwich Street to the east, Leroy Street to the south, Washington Street to the west and multi-story residential buildings to the north.Site Features: The site encompasses approximately 8,930 square feet and is entirely covered by a one- to two-story building with a concrete slab.Current Zoning/Use: The site is located in the Special Mixed Use District (MX) within Manhattan with zoning designation M1-5/R7X and is currently occupied by the Gavin Brown Art Gallery.Historical Use: Historic use of the site includes truck and auto repair, engine works, brass foundry, welding supply, trucking garage, shipping and meat packing companies.Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill typically comprising brown sand with trace gravel and brick fragments. The depth of fill is variable with a maximum recorded depth of 17 feet below ground surface(bgs) in the southern portion of the site. Underlying the fillmaterial is a typically brown fine to coarse sand with occasional discontinuous thin layers of sandy silt. Depth to top of bedrock at a nearby site varied from about 73 to 79feet bgs. The bedrock was identified as gray mica schist, and about three feet of light-graydecomposed rock overlaid the bedrock. Groundwater occurs approximately 13 to 14 feet below ground surface. Localized groundwater appears to flow towards the southeast, though regional flow should be to the west, towards the Hudson River.
Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	spill was caused by ConEd and is being cleaned up by them.204253. see eDocs. 4/13/07: Spill submitted for closure by Con Ed. Request denied, with comment: "Was repair made to damaged fill line? Was contractor that installed vault working for Con Ed?" (JHO)5/15/07: spill submitted for closure by Con Ed. Response to above comment was: "Safeway Construction Enterprises was working directly for Con Edison. Safeway repaired the oil fill line. Safeway also conducted the clean up and disposed of the non-haz oily debris." Request for closure denied, with comment: "Following completion of repairs to fill line, a NYSDEC-approved precision test is required to confirm repair was successful. Was testing performed? What test method was used?" (JHO)12/19/07: e-mail from Con Ed (Brian Bellows) regarding testing of the line:"As mentioned, there is no access to the tank system for line testing. In addition, approval from the property owner will be needed for work on their tank as mentioned below. Any guidance in resolving this issue would be appreciated." Attached to Con Ed (Bellows) e-mail was an e-mail from Con Ed's contractor (Robert M. Laga of The Franklin Company Contractors, Inc.), which states:"Based upon my inspection, there is a buried tank located under the building. The tank has a fill line, vent line, suction and return. The only access to the tank is through a 24"x24" manhole to a round man-way cover, I noticed a few bolts missing in the cover. The cover has noopenings on it to access the tank. The size of the tank is questionable."Testing the tank through approved methods by the DEC/EPA is not possible because there is no access to the tank. In the event you are required to test the tank, the DEC has allowed in the past, to test the tank through the vent line. This test would only be an indication ofweather the tank was tight or non-tight. To perform a complete test, the water intrusion portion of the test must be performed. Water intrusion testing does not have to be completed if it can be demonstrated to the DEC that groundwater is well below the bottom of the tank. This could be determined suing a Geo-probe rig for an additional cost."Another option is to have us remove the man-way lid and weld on a 2" or 4" bung. This would allow us to test the tank the conventional method, but would require a few days to prepare and get the tank ready for testing." (JHO)12/20/07: e-mail to Con Ed (Bellows):"Please clarify the sequence of events for me. As I understand it, your contractor disconnected the fill line in order to install the vault. The fill line was re-connected but leaked (?) or did the leak happen during the disconnection period? At what point was the fill line re-connected?" (JHO)12/21/07: e-mail response from Con Ed (Bellows):"On January 26, 2007, a spill was cleaned up in the area where the contractor had removed an oil fill line when constructing a vault. When the oil company came to make a delivery, the oil leaked into the backfilled excavation. The contractor came back and excavated soil thenmade the repairs to the oil fill line

111 LEROY ST (Continued) **S105998775**

they removed." (JHO)12/21/07: E-mail to Con Ed (Bellows):"Was the initial spill they cleaned up (on Jan 26) a result of the line being disconnected?" (JHO)12/21/07: e-mail response from Con Ed (Bellows):"According to the inspector, the final clean up was completed on 1-26-07 at 1500 hrs. Clean up was completed by Safeway construction. The affected 2 yards soil was dug up and replaced with clean soil."1/16/08: E-mail from Con Ed (Bellows):"Just a quick follow-up on this spill event, I believe you were checking to see if we would be required to have the entire tank system tested since the tank line could not be isolated. As mentioned previously the tank system would need to be modified for testing. Let me know if anything else is needed at this time or if a tank testing determination is made." E-mail reply to Con Ed (Bellows): "I spoke with our PBS staff [Jacob Krimgold], and they said the line has to be tested. I checked the records for this building, and saw that the tank system was tested in 2003 using the Horner EZ3 testing method, and is due for another test in June 2008. Perhaps thatmethod can be used again." (JHO)10/16/2013 - spill re-assigned to O'Connell; received closure request from Con Edison via email which includes:At this point in time, the building located at 111 Leroy Street must beconsidered abandoned. All utilities (gas, electric, water) has beenshut off. ConEdison has conducted all reasonable Due diligence to gainlegal access to 111 Leroy Street in order to conduct a pressure test onthe fuel oil tank fill-line. ConEdison believes that because of theforeclosure situation, 111 Leroy Street will not be occupied in theforeseeable future. The original one quart spill that was discoveredon 26Jan2007@12:05 was cleaned up within 3 hours of discovery...cleanupcomplete on 26Jan2007@15:00 by Safeway Construction; a ConEdisonapproved contractor; all documented within the attached spill report(see PDF). We recommend that the DEC tag the fuel oil fill port at 111Leroy Street as 'DO NOT FILL' and place the onus of pressure-testing thefuel oil tank fill-line onto the future owner(s) thus allowing thisspill incident to be closed via the DEC Spill Data Base.The following Chrono delineates ConEdison's Due diligence associatedwith this one quart spill of #2 fuel oil from a leaking elbow at thesidewalk:26Jan2007, 12:05A ConEdison Construction Manager (M.Chionchio (18737)) reported thatStuyvesant Fuel Company was at this location delivering home heatingfuel and leaked 1 quart of #2 fuel oil to soil. The spill was causedwhen a loose elbow on the fuel oil line (leading to the basement fueloil tank) was removed and improperly reinstalled by a ConEdisoncontractor during the installation of a new sidewalk electrical vault. 26Jan2007, 15:00The 1 quart spill that was cleaned up within 3 hours...cleanup completeby Safeway Construction; a ConEdison approved contractor. Two cubicyards of oily debris was disposed of as non-haz industrial waste.10Jun2007A ConEdison EH&S Project Specialist (Brian Bellows) scheduled theFranklin Company (a subcontractor of Safeway Construction) to pressuretest the fuel oil tank in the basement of 111 Leroy Street as per NYSDECrecommendations. A field visit at that time found the building vacant.Additionally, the building had a Disconnect Notice posted to the frontdoor for termination of Power and Light service. According to the ownerof the parking lot next door, 111 Leroy Street is scheduled fordemolition per a Notice he received.05Nov2008Brian Bellows, Project Specialist with Construction EH&S tried tocontact the owner of the building; without success. Mr. Bellowsproceeded to call everyone identified as the owner on the Department ofBuildings (DOB) website. There has been no activity and no permitsissued for

111 LEROY ST (Continued) **S105998775**

the address.8Apr2010ConEdison is unable to locate the owner for information since buildingwas vacated. DOB website checked for issuance of new permits. 03Sep2013David Duke of ConEdison's EH&S Response Team searched the Internet andfound that the building is in foreclosure via the Royal Bank ofScotland-RBS Securities.A newspaper article described the situation as fallout from the 2008real-estate crash.Con Edison's request is under review. Reviewed PBS registration for 111 Leroy Street, 2-608656. 1,500 gallon UST, #2 fuel oil, no installation date; no filing for temporarily out of service or closure; registration expired 3/26/2008; overdue for tank tightness report (6/17/2008). Based on information included in separate, prior spill report, the tank was re-lined in 2003. Based on-line NYC ACRIS database, the property changed ownership from that included with the PBS registration (per ACRIS, KMG PMA LEROY, LLC). Referred PBS case to PBS unit for follow-up on PBS compliance issues and tagging as recommended above by Con Edison. No information found for any foreclosure process as indicated above by Con Edison for this property. (JOC)10/23/13 - based on information provided, the spill was promptly remediated, and the fill line was repaired. However, Con Edison did not conduct testing of the fill line as was previously requested by the Department, due to an inability to get access to the tank. In that the entire tank system, rather than just the fill line, now needs testing by the tank owner per PBS regulations, there is no reason at this point to continue to require Con Edison to test just the fill line. As noted above, regional PBS staff are working on resolving the PBS compliance issues. The facility PBS number has been cross referenced into this spill record. (JOC)

Site Description: Location: The 25,000 square foot (0.57 acre) site is located at 462 Hudson Street in the Borough of Manhattan in an urban area. The site is bordered by Hudson Street to the west, Barrow Street to the north, on and two-family brownstones to the east, and by Morton Street to the south. Site Features: The site is occupied by a two 6-story apartment buildings with commercial uses on the first floor along Hudson St. The dry cleaner occupies the northwest corner of the first floor of the northern building.Current Zoning/Use(s):The site is zoned as C1-6/R6 for commercial and residential uses. Historical Use(s):The on-site building was constructed in 1925. A dry cleaner has operated at the site since at least 1986. The site is a RCRA large quantity generator (EPA ID # NYD981141948) of spent solvent, waste code F002. Site Topography, Geology and Hydrogeology:The Site is generally level and is at an elevation of approximately 36 feet above mean sea level. The geology of New York County consists of unconsolidated glacial deposits overlying crystalline bedrock. Soil cores collected during investigation on a nearby site generally consisted of historic fill material containing brown sand and silt with fine gravel and brick fragments to a depth of 8 to 15 feet bgs. The Site is located 1300 feet east of the Hudson River. Groundwater in the vicinity of the site was encountered at approximately 27 feet bgs and is expected to flow to the west towards the Hudson River.
Env Problem: Nature and Extent of Contamination: Information is based on the results of a site characterization investigation performed at the nearby property at 75 Morton Street by the NYC School Construction

HUDSON DRY CLEANERS (Continued) **S110246833**

	Authority. That investigation was triggered by the discovery of elevated levels of cVOCs in groundwater on that site. The subsequent Supplemental Site Investigation (SSI) indicated that elevated concentrations of cVOCs (namely PCE) existed along the adjacent sidewalk on the eastern side of Hudson Street. The SSI ascertained that the 75 Morton Street site was not a source of the contamination. Eleven temporary groundwater wells were installed on and upgradient from the Morton Street property and samples were collected for lab analysis. One well was installed immediately in front of and downgradient from the Hudson Cleaners site.Groundwater: Tetrachloroethylene (PCE) was detected at elevated concentrations in groundwater samples taken immediately in front of the Hudson Cleaners site. PCE was detected at a concentration of 2900 ppb at that location, with concentrations decreasing in the downgradient direction consistent with the inferred contaminant plume. The groundwater flow direction was confirmed to be from east to west based on surveyed groundwater elevation measurements collected during the 75 Morton St. SSI. Significant Threat:Evaluation of significant threat will be made following completion of the Site Characterization.
	Not reported
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/25/2015

NJ LIENS: Environmental LIENS

A listing of properties with environmental liens. The listing includes sites from the Site Remediation & Waste Management Program Sites where the Department has placed either a 1st Priority or Regular Spill Fund Lien against. 1st Priority Type Lien - a lien placed against the property where the discharged occurred providing that the owners of the property have some responsibility towards the discharge. First Priority Lien is superior to other types of liens. Non-Priority (Regular) Type Lien - a lien placed against the Responsible Party & their revenues and all real and personal property, other than the real property comprising the location of the discharge.

NY HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NY E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

East Map:	40073-F8 BROOKLYN, NY
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

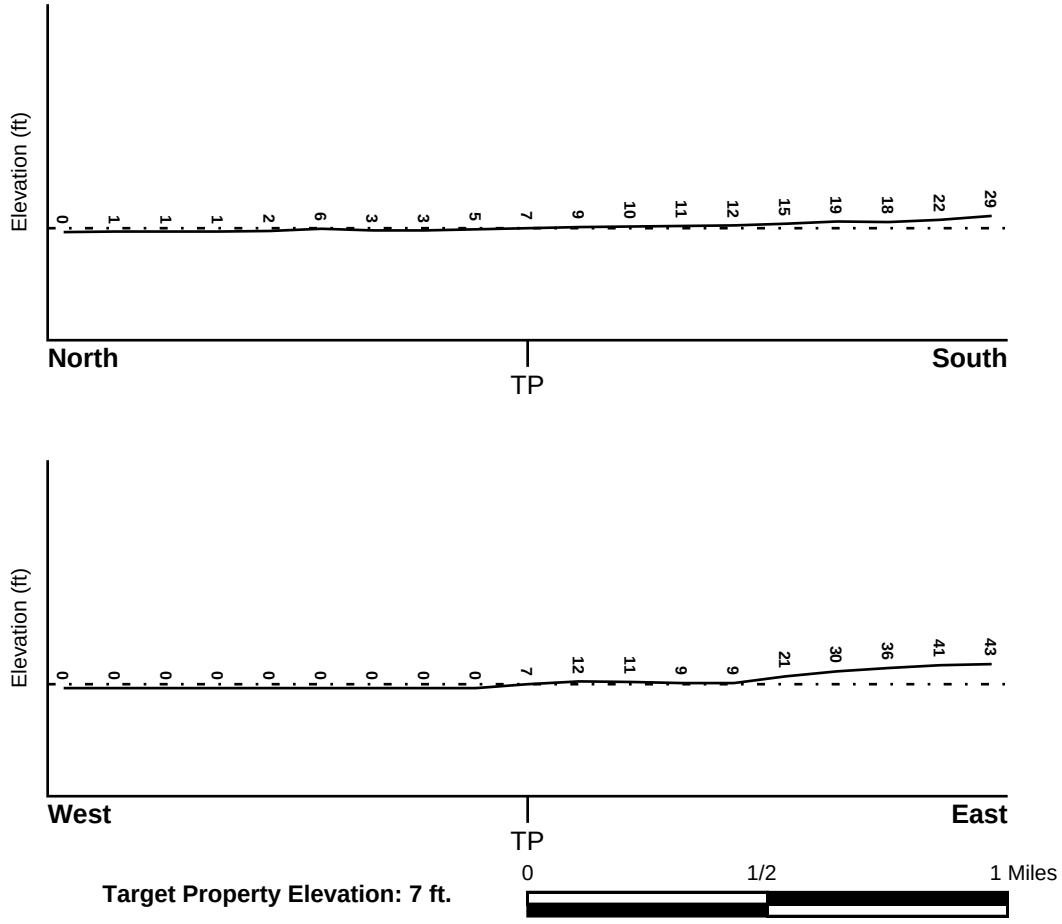
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 7 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
NEW YORK, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 3604970046B - FEMA Q3 Flood data

Additional Panels in search area:
3604970047B - FEMA Q3 Flood data
3604970054B - FEMA Q3 Flood data
3604970055B - FEMA Q3 Flood data
34017C - FEMA DFIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
JERSEY CITY	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Contact: Renate Crollini

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

Appendix D
Soil Boring Logs

LANGAN

Log of Boring **SB01** Sheet 1 of 1

Project: 440 Washington Street	Project No.: 170361501
Location: 440 Washington Street	Elevation and Datum: Approx.
Drilling Company: Warren George, Inc	Date Started: 4/28/15 — Date Finished: 4/28/15
Drilling Equipment: Acker Truck-Mounted	Completion Depth: 15 ft — Rock Depth: not
Size and Type of Bit: 3 7/8" Tricone Roller Bit	Number of Samples: Disturbed — Undisturbed: 0 — Core: 0
Casing Diameter (in): n/a — Casing Depth (ft): n/a	Water Level (ft.): First ▽ 12 — Completion ▼ - — 24 HR. ▼ -
Casing Hammer: n/a — Weight (lbs): n/a — Drop (in): n/a	Drilling Foreman: J. Harris
Sampler: 2-foot Split Spoon	Inspecting Engineer: K. Cullen
Sampler Hammer: n/a — Weight (lbs): n/a — Drop (in): n/a	

Material Symbol	Elev. (ft)	Sample Description	Depth Scale	Sample Data: Number	Type	Recov. (in)	Penetr. resist BL/6in	PID Reading (ppm)	Remarks (Drilling Fluid, Depth of Casing, Fluid Loss, Drilling Resistance, etc.)
		Concrete	0						8:05 Begin drilling; advance Tricone roller bit through concrete to 1 ft bgs
		0-10" Loose dark brown silty fine to coarse SAND, some gravel with brick (moist) [FILL]	1	R1	SPLIT SPOON	10/24		0.0	Sample SB01_1-2 collected at 8:30
			2					0.0	
		0-6" Mottled dark brown and reddish brown gravelly SAND, some silt with brick and crushed concrete (moist) [FILL]	3	R2	SPLIT SPOON	6/24		0.0	
			4					0.0	
		0-12" Loose reddish brown sandy GRAVEL, trace silt (moist) [FILL]	5	R3	SPLIT SPOON	12/24		0.0	
			6					0.0	
		0-5" Loose reddish brown sandy GRAVEL, trace silt (moist) [FILL]	7	R4	SPLIT SPOON	5/24		0.0	
			8					0.0	
		0-14" Loose brown fine to coarse SAND, some silt, some gravel (moist)	9	R5	SPLIT SPOON	14/24		0.0	
			10					0.0	
		0-8" Loose brown fine to coarse SAND, some gravel, trace silt	11	R6	SPLIT SPOON	8/24		0.0	
			12 ▽					0.0	
		0-10" Loose brown fine to coarse SAND, some silt, trace gravel (wet)	13	R7	SPLIT SPOON	10/24		0.0	
			14					0.0	
			15					0.0	End of boring at 15 ft; boring filled with cuttings and capped with concrete.

Log of Boring **SB02** Sheet 1 of 1

Project: 440 Washington Street	Project No.: 170361501
Location: 440 Washington Street	Elevation and Datum: Approx.
Drilling Company: Warren George, Inc	Date Started: 4/28/15 — Date Finished: 4/28/15
Drilling Equipment: Acker Truck-Mounted	Completion Depth: 2 ft — Rock Depth: not
Size and Type of Bit: 3 7/8" Tricone Roller Bit	Number of Samples: Disturbed — Undisturbed: 0 — Core: 0
Casing Diameter (in): n/a — Casing Depth (ft): n/a	Water Level (ft.): First ▽ not — Completion ▼ - — 24 HR. ▼ -
Casing Hammer: n/a — Weight (lbs): n/a — Drop (in): n/a	Drilling Foreman: J. Harris
Sampler: 2-foot Split Spoon	Inspecting Engineer: K. Cullen
Sampler Hammer: n/a — Weight (lbs): n/a — Drop (in): n/a	

Material Symbol	Elev. (ft)	Sample Description	Depth Scale	Sample Data: Number	Type	Recov. (in)	Penetr. resist BL/6in	PID Reading (ppm)	Remarks (Drilling Fluid, Depth of Casing, Fluid Loss, Drilling Resistance, etc.)
		Concrete	0					30	Begin drilling at 9:05; advance Tricone roller bit through concrete to ~6 in bgs
		Loose fine-medium SAND, trace silt, trace rounded gravel (moist) [FILL]	1	R1	SPLIT SPOON	0/24			Sample SB02_0.5-1 collected at 9:30 by hand from wall of boring
			2						Petroleum-like odors and staining 0.5-1 ft bgs Refusal at 1 ft Refusal; end of boring at 2 ft; boring filled with cuttings and capped with concrete.

Monitoring Well Construction Logs

WELL CONSTRUCTION SUMMARY

Well No. MW01

PROJECT 440 Washington Street	**PROJECT NO.** 170361501
LOCATION New York, NY	**ELEVATION AND DATUM** TBD
DRILLING AGENCY AARCO	**DATE STARTED** 2015-06-01 **DATE FINISHED** 2015-06-01
DRILLING EQUIPMENT Geoprobe 7730DT	**DRILLER** Ryan Rea
SIZE AND TYPE OF BIT Macro-Core®	**INSPECTOR** David Hannam

METHOD OF INSTALLATION

Geoprobe 77300DT was advanced to 15 feet with 2-inch diameter Macro-Core®. A 2-inch diameter prepack temporary well was installed. The well was sealed with 3.

METHOD OF WELL DEVELOPMENT

Whale pump ro approximately 1 hour until visibly clear

TYPE OF CASING PVC	**DIAMETER** 2 inch	**TYPE OF BACKFILL MATERIAL**	No. 2 Sand and clean drill cuttings
TYPE OF SCREEN Prepacked 0.02-inch slotted	**DIAMETER** 2 inch	**TYPE OF SEAL MATERIAL**	Bentonite
BOREHOLE DIAMETER 2 inch		**TYPE OF FILTER MATERIAL**	No. 2 Sand and prepacked screen

TOP OF CASING ELEVATION	**DEPTH (ft)**	
TOP OF SEAL ELEVATION	**DEPTH (ft)** 0	
TOP OF FILTER ELEVATION	**DEPTH (ft)** 3	
TOP OF SCREEN ELEVATION	**DEPTH (ft)** 5	
BOTTOM OF BORINC ELEVATION	**DEPTH (ft)** 15	
SCREEN LENGTH	10	
SLOT SIZE	0.02 inch	

WELL DETAILS

DRILLING EQUIPMENT Geoprobe 7730DT	**DRILLER** Ryan Rea
SIZE AND TYPE OF BIT Macro-Core®	**INSPECTOR** David Hannam

METHOD OF INSTALLATION

Geoprobe 77300DT was advanced to 15 feet with 2-inch diameter Macro-Core®. A 2-inch diameter prepack temporary well was installed. The well was sealed with 3.

METHOD OF WELL DEVELOPMENT

Whale pump ro approximately 1 hour until visibly clear

TYPE OF CASING PVC	**DIAMETER** 2 inch	**TYPE OF BACKFILL MATERIAL**	No. 2 Sand and clean drill cuttings
TYPE OF SCREEN Prepacked 0.02-inch slotted	**DIAMETER** 2 inch	**TYPE OF SEAL MATERIAL**	Bentonite

Project Name: 440 WASHINGTON STREET
Project Number: 170361501

Lab Number: L1508860
Report Date: 06/05/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 440 WASHINGTON STREET **Lab Number:** L1508860
Project Number: 170361501 **Report Date:** 06/05/15

Case Narrative (continued)

Report Submission

This report replaces the report issued April 30, 2015. The project name was changed.

A previously-issued final report replaced the partial report issued April 29, 2015, and included the results of all requested analyses.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L1508860-04: The internal standard (IS) response(s) for 1,4-dichlorobenzene-d4 (44%) was below the acceptance criteria; however, re-analysis achieved similar results: 1,4-dichlorobenzene-d4 (32%). The results of both analyses are reported.

L1508860-08: The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of non-target compounds in the sample.

L1508860-10 and -11 have elevated detection limits due to the dilutions required by the elevated concentrations of non-target compounds in the samples.

Semivolatile Organics

L1508860-06 and -07: The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%), and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

PCBs

L1508860-04 and -07RE have elevated detection limits due to the dilutions required by matrix interferences encountered during the concentration of the samples.

The surrogate recoveries for L1508860-07 were outside the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (10%,12%) and decachlorobiphenyl (12%,13%); however, re-extraction achieved similar results:

Project Name: 440 WASHINGTON STREET **Lab Number:** L1508860
Project Number: 170361501 **Report Date:** 06/05/15

Case Narrative (continued)

2,4,5,6-tetrachloro-m-xylene (22%,18%) and decachlorobiphenyl (29%,29%). The results of both extractions are reported.

Pesticides

The surrogate recoveries for L1508860-06 are above the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (516%) and decachlorobiphenyl (3730%,3420%). Since the sample was non-detect for all target analytes, re-analysis was not required.

The surrogate recoveries for L1508860-07 are above the acceptance criteria for decachlorobiphenyl (546%,2790%). Since the sample was non-detect for all target analytes, re-analysis was not required.

Metals

L1508860-01 through -11 have elevated detection limits for all elements, with the exception of mercury, due to the dilutions required by matrix interferences encountered during analysis.

The WG780138-3 Laboratory Duplicate RPD, performed on L1508860-01, is outside the acceptance criteria for mercury (37%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Kelly Stenstrom

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

Report Format: DU Report with 'J' Qualifiers

Project Name:	440 WASHINGTON STREET	**Lab Number:**	L1508860
Project Number:	170361501	**Report Date:**	06/05/15

Data Qualifiers

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

Report Date: 06/05/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name:	440 WASHINGTON STREET	**Lab Number:**	L1508897
Project Number:	170361501	**Report Date:**	06/05/15

Case Narrative (continued)

Report Submission

This report replaces the report issued April 30, 2015. The project name was changed.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L1508897-01 has elevated detection limits due to the dilution required by the sample matrix.

Metals

L1508897-01 has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG780463-4 MS recoveries for aluminum (648%), calcium (1060%), and iron (0%), performed on L1508897-01, do not apply because the sample concentrations are greater than four times the spike amount added.

The WG780463-4 MS recoveries, performed on L1508897-01, are outside the acceptance criteria for lead (53%), magnesium (189%), manganese (142%), sodium (136%), thallium (69%), and zinc (24%). A post digestion spike was performed and yielded unacceptable recoveries for magnesium (70%), manganese (70%), and zinc (70%); all other compounds were within acceptance criteria. This has been attributed to sample matrix.

The WG780463-3 Laboratory Duplicate RPDs, performed on L1508897-01, are outside the acceptance criteria for aluminum (24%), calcium (63%), copper (26%), lead (35%), magnesium (76%), manganese (48%), and vanadium (47%). The elevated RPDs have been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Kelly Stenstrom

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

Report Format: DU Report with 'J' Qualifiers

Project Name:	440 WASHINGTON STREET	**Lab Number:**	L1508897
Project Number:	170361501	**Report Date:**	06/05/15

Data Qualifiers

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Lab Number: L1510263
Report Date: 06/05/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

This report replaces the report issued May 27, 2015. The project name was changed.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

At the client's request, only the TCLP lead analysis on sample "SB03_4.0-5.0" was performed at this time.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Kelly Stenstrom

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

Report Format: DU Report with 'J' Qualifiers

Project Name:	440 WASHINGTON STREET	**Lab Number:**	L1510263
Project Number:	170361501	**Report Date:**	06/05/15

Data Qualifiers

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Project Name: 440 WASHINGTON ST. **Lab Number:** L1512012
Project Number: 170361501 **Report Date:** 06/08/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name:	440 WASHINGTON ST.	**Lab Number:**	L1512012
Project Number:	170361501	**Report Date:**	06/08/15

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Metals

L1512012-01 through -04 have elevated detection limits for all elements, with the exception of mercury, due to the dilutions required by matrix interferences encountered during analysis.

The WG790058-1 Method Blank, associated with L1512012-01 through -04, has a concentration above the reporting limit for Calcium. Since the associated sample concentrations are greater than 10x the blank concentration for this analyte, no corrective action is required.

Cyanide, Total

The WG789885-3 LCSD recovery (126%), associated with L1512012-01 through -04, is above our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

Report Format: DU Report with 'J' Qualifiers

Project Name:	440 WASHINGTON ST.	**Lab Number:**	L1512012
Project Number:	170361501	**Report Date:**	06/08/15

Data Qualifiers

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Project Name: 440 WASHINGTON ST. **Lab Number:** L1512158
Project Number: 170361501 **Report Date:** 06/12/15

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 440 WASHINGTON ST. **Lab Number:** L1512158
Project Number: 170361501 **Report Date:** 06/12/15

Case Narrative (continued)

Report Submission

This final report replaces the partial report issued June 10, 2015, and includes the results of all requested analyses.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The project number was specified by the client.

Sample "SB03N_3-4" was taken off of hold at the client's request.

Semivolatile Organics

L1512158-09 has elevated detection limits due to the dilution required by matrix interferences encountered during the concentration of the sample.

PCBs

L1512158-12 has elevated detection limits due to limited sample volume available for analysis.

Total Metals

L1512158-03 and -11 have elevated detection limits for all elements, with the exception of antimony and mercury, due to the dilutions required by matrix interferences encountered during analysis.

The WG790285-1 Method Blank, associated with L1512158-01, -02, -04, -05, -06, -08, -09, and -10, has concentrations above the reporting limits for antimony and iron. Since the samples were non-detect for antimony, no further actions were taken. And since the associated sample concentrations are greater than 10x the blank concentration for iron, no corrective action is required. The results of the original analysis are reported.

The WG790285-4 MS recovery, performed on L1512158-01, is outside the acceptance criteria for lead (135%). A post digestion spike was performed and yielded an unacceptable recovery of 71%. This has been

Project Name:	440 WASHINGTON ST.	**Lab Number:**	L1512158
Project Number:	170361501	**Report Date:**	06/12/15

Case Narrative (continued)

attributed to sample matrix.

The WG790285-3 Laboratory Duplicate RPD, performed on L1512158-01, is outside the acceptance criteria for lead (32%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

Cyanide, Total

The WG790626-2 LCS recovery (121%), associated with L1512158-03, is above our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

Report Format: DU Report with 'J' Qualifiers

Project Name:	440 WASHINGTON ST.	**Lab Number:**	L1512158
Project Number:	170361501	**Report Date:**	06/12/15

Data Qualifiers

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 440 WASHINGTON ST. **Lab Number:** L1512315
Project Number: 170361501 **Report Date:** 06/10/15

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

Sample L1512315-07 and -08 were received without the containers for the Dissolved and Total Metals, respectively. An aliquot was split out and preserved appropriately.

The collection dates for samples L1512315-05 and -06 were obtained from the sample containers.

Total Metals

The WG791918-4 MS recoveries for calcium (0%), magnesium (30%), potassium (52%), and sodium (0%), performed on L1512315-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG791918-3 Laboratory Duplicate RPDs, performed on L1512315-01, are above the acceptance criteria for aluminum (21%) and iron (35%); however, the sample and duplicate results are less than five times the reporting limit. Therefore, the RPD is valid.

Dissolved Metals

The WG791560-4 MS recoveries for sodium (150%) calcium (0%), and potassium (68%), performed on L1512315-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG791560-4 MS recovery, performed on L1512315-01, is outside the acceptance criteria for selenium (142%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Lisa Westerlind

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

Report Format: DU Report with 'J' Qualifiers

Project Name:	440 WASHINGTON ST.	**Lab Number:**	L1512315
Project Number:	170361501	**Report Date:**	06/10/15

Data Qualifiers

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 440 WASHINGTON ST. **Lab Number:** L1512324

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on June 3, 2015. The canister certification results are provided as an addendum.

Sample L1512324-01 has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

Sample L1512324-02 results for Isopropyl Alcohol and Tetrahydrofuran should be considered estimated due to co-elution with a non-target peak.

Sample L1512324-04 The presence of Tetrahydrofuran could not be determined in this sample due to a non-target compound interfering with the identification and quantification of this compound.

Sample Receipt

The sample designated SV01-060315 (L1512324-01) had a RPD for the pre- and post-flow controller calibration check (23% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 38.2 mL/minute; the final flow rate was 48 mL/minute. The final pressure recorded by the laboratory of the associated canister was -7.8 inches of mercury.

The sample designated SV02-060315 (L1512324-02) had a RPD for the pre- and post-flow controller calibration check (69% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 39.9 mL/minute; the final flow rate was 82 mL/minute. The final pressure recorded by the laboratory of the associated canister was -7.1 inches of mercury.

The sample designated AA01-060315 (L1512324-05) had a RPD for the pre- and post-flow controller calibration check (42% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 39.1 mL/minute; the final flow rate was 60 mL/minute. The final pressure recorded by the laboratory of the associated canister was -5.4 inches of mercury.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

Report Format: Data Usability Report

Project Name:	440 WASHINGTON ST.	**Lab Number:**	L1512324
Project Number:	170361501	**Report Date:**	06/10/15

Data Qualifiers

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 16, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.
