CERTIFICATION

I, Mark Robbins, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 190-21 Dormans Road, Queens Site (NYC OER Site No. 16EH-A328Q). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Qualified Environmental Professional Date Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 190-21 Dormans Road in the Saint Albans section of Queens, New York and is identified as Block 10393 and Lots 58 and 60 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 7,575-square feet and is bounded by a vacant lot to the north, Dormans Road and two story residential buildings to the south, Farmers Boulevard and two story residential and commercial buildings to the east, and a three story residential building to the west. A map of the site boundary is shown in Figure 2. Currently, the Site contains a vacant two-story building with a full basement. A detached private garage is located in the southern portion. The northern portion of the Site is a vacant lot.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of four 3-story residences with front and rear yards. The building will cover approximately 50% of the footprint of the Site. The proposed building will contain a full cellar. The current cellar level will be excavated to 5 feet below grade, and will be used as accessory space for tenants. The current cellar will not be backfilled. The area outside of the building will be utilized as recreation space. It is anticipated that approximately 1,100 tons of soil will be generated and disposed of during the excavation of the Site. Dewatering is not anticipated. The layout of the proposed site development is presented in Figure 3. The current zoning designation is R5-B. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

Based upon the review of radius maps and fire insurance maps, the following Site history was established. The Subject Property was developed prior to 1926 with the existing structures at the southern portion of the Site (Lot 60). The northern portion of the Site (Lot

58) has been vacant since 1926. The current structures at the Site have been shown on all of the fire insurance maps since 1926.

Areas of Concern identified for the property include:

- The presence of an underground storage tank in the southeast portion of the Site.
- The Site as a whole due to its association with an “E” designation.

Summary of the Work Performed under the Remedial Investigation

Hydro Tech Environmental Corp. performed the following scope of work at the Site during June 2016:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Conducted a Geophysical Investigation consisting of a Ground Penetrating Radar.
3. Installed seven soil borings across the entire project Site, and collected fourteen soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed one groundwater monitoring well at the Site and collected one groundwater sample for chemical analysis to evaluate groundwater quality;
5. Installed four soil vapor probes around Site perimeter and collected four samples for chemical analysis.

Summary of Environmental Findings

1. The elevation of the property was not established.
2. Depth to groundwater was 23.95 feet at the Site.
3. Groundwater flow was not established beneath the Site.
4. Bedrock was not encountered during the investigation.
5. The stratigraphy of the site, from the surface down, consists of coarse sand from zero to 6 feet below grade.

6. Soil/fill samples results were compared to New York State Department of Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in 6NYCRR Part 375-6.8. Soil/fill samples collected during the RI show no PCBs or Pesticides at concentrations exceeding their respective monitoring detection limits (MDLs). The samples show no VOCs are present at concentrations exceeding Unrestricted Soil Cleanup Objectives (SCOs). The VOC acetone is present at concentrations less than its Unrestricted Use SCO. Eleven (11) Polycyclic Aromatic Hydrocarbon-range Semi-Volatile Organic Compounds (SVOCs) including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, bis(2-ethylhexyl)phthalate, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene are present in the soil samples at concentrations less than their respective Unrestricted Use SCOs. Two (2) metals, specifically, lead (maximum 124 mg/kg) and mercury (maximum 0.47 mg/kg), are present in three of the shallow samples at concentrations exceeding their respective Unrestricted Use SCO, but less than their Restricted Residential Use SCO. Overall, soil chemistry is similar to sites with historic fill in the City of New York.
7. The groundwater sample collected during the RI was compared to NYSDEC 6NYCRR Part 703.5 Groundwater Quality Standards (GQS). The groundwater sample collected during the RI shows no VOCs, SVOCs, or PCBs at concentrations exceeding Groundwater Quality Standards (GQS). Two (2) pesticides, specifically Chlordane (0.358 ug/L) and Dieldrin (0.00745 ug/L), were detected at concentrations exceeding than their respective GSQs. Two (2) dissolved metals, including manganese (maximum 744 ug/L) and sodium (maximum 107,000 ug/L), are present at concentrations exceeding their respective GQS.
8. The soil vapor results collected during the RI were compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion. Soil vapor samples collected during the RI show petroleum and chlorinated VOCs at generally low to moderate concentrations. The total concentration of petroleum-related VOCs (BTEX) had a maximum concentration of 1100 $\mu\text{g}/\text{m}^3$. 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene was found at a maximum

concentration of 420 $\mu\text{g}/\text{m}^3$ and 130 $\mu\text{g}/\text{m}^3$ respectively. Tetrachloroethene was not detected in any of the soil vapor samples, but was detected at a concentration of 0.76 $\mu\text{g}/\text{m}^3$ in the outdoor air sample. Carbon tetrachloride was detected in one indoor sample at a concentration of 0.56 $\mu\text{g}/\text{m}^3$.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

O&B Properties has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.18-acre site located at 190-21 Dormans Road in the Saint Albans section of Queens, New York. Residential use is proposed for the property. The RI work was performed between June 27 and July 1, 2016. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 190-21 Dormans Road in the Saint Albans section of Queens, New York and is identified as Block 10393 and Lots 58 and 60 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 7,575-square feet and is bounded by a vacant lot to the north, Dormans Road and two story residential buildings to the south, Farmers Boulevard and two story residential and commercial buildings to the east, and a three story residential building to the west. A map of the site boundary is shown in Figure 2. Currently, the Site contains a vacant two-story building with a full basement. A detached private garage is located in the southern portion. The northern portion of the Site is a vacant lot.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of four 3-story residences with front and rear yards. The building will cover approximately 50% of the footprint of the Site. The proposed building will contain a full cellar. The current cellar level will be excavated to 5 feet below grade, and will be used as accessory space for tenants. The current cellar will not be backfilled. The area outside of the building will be utilized as recreation space. It is anticipated that approximately 1,100 tons of soil will be generated and disposed of during the excavation of the Site. Dewatering is not anticipated. The layout of the proposed site development is presented in Figure 3. The current zoning designation is R5-B. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The Subject Property is located on the northwest corner of Dormans Road and Farmers Boulevard between Farmers Boulevard to the east and Mexico Street to the west, in the borough of Queens, New York. The borough of Queens is situated in the eastern portion of New York City.

The vicinity of the Subject Property consists of commercial and residential properties. The Site is bordered by Dormans Road to the south, Farmers Boulevard to the east, a vacant lot to the north, and a three story residential building to the west. There are no sensitive receptors (such as schools, hospitals or day-care facilities) present within a 0.125-mile radius of the Site. **Figure 2** shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Based upon the review of radius maps and fire insurance maps, the following Site history was established. The Subject Property was developed prior to 1926 with the existing structures at the southern portion of the Site (Lot 60). The northern portion of the Site (Lot 58) has been vacant since 1926. The current structures at the Site have been shown on all of the fire insurance maps since 1926.

2.2 Previous Investigations

There were no previous investigations performed at the Site.

2.3 Site Inspection

A site inspection was performed by Adriana Zapata of Hydro Tech on June 27, 2016. The reconnaissance included a visual inspection of the Site. At the time of the inspection, the southern portion of the site contained a vacant two story structure previously used for residential purposes, as well as a private one car detached garage. The northern portion of the Site consists of a vacant lot. A fill port indicative of an underground storage tank was encountered in the south east portion of the Site. Upon inspection of the fill port, concrete was encountered within the lines, implying the UST has been abandoned in place. There was no evidence of staining or other contamination encountered during the site inspection.

No other potential Recognized Environmental Conditions in connection with the subject site were identified. No additional information was provided with respect to the environmental integrity of the subject property that was not obtained from other sources over the course of this investigation.

2.4 Areas of Concern

Areas of Concern identified for the property include:

- The presence of an underground storage tank in the southeast portion of the Site.
- The Site as a whole due to its association with an “E” designation.

The radius maps and fire insurance maps are presented in **Appendix A**. A map showing areas of concern is presented in **Figure 4**.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Mark E. Robbins.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Hydro Tech Environmental Corp. performed the following scope of work at the Site in June of 2016:

6. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
7. Conducted a Geophysical Investigation consisting of a Ground Penetrating Radar.
8. Installed seven soil borings across the entire project Site, and collected fourteen soil samples for chemical analysis from the soil borings to evaluate soil quality;
9. Installed one groundwater monitoring well at the Site and collected one groundwater sample for chemical analysis to evaluate groundwater quality;
10. Installed four soil vapor probes around Site perimeter and collected four samples for chemical analysis.

4.1 Geophysical Investigation

A Ground Penetrating Radar (GPR) survey was performed at the Site to determine if any anomalies, including underground storage tanks (USTs), were present at the Site and to clear all sampling locations of any potential subsurface obstructions.

The GPR survey was performed utilizing a GSSI SIR-3000 Control Unit and a 400-megahertz shielded antenna. The GPR operator wheeled the antenna over the predetermined grid. The GPR takes one “scan” per set unit. The number of scans per unit is based upon the estimated sizes of targets. As each scan is performed, the antenna emits specific radar amplitude into the subsurface. The amplitude of the radar reflected back to the antenna is based upon the differences in the dielectric constants of the subsurface materials. The difference in amplitude obtained during each scan is graphically displayed on the Control Unit, which are then interpreted by the GPR operator at the time of the survey.

The GPR was performed across the entire Site. An anomaly indicative of a UST was encountered in the vicinity of the fill port in the southern portion of the Site. Upon further investigation of the fill port, the tank was observed to be full of concrete. No concrete

ceiling or concrete walls indicative of a tank encasement were identified. A copy of the geophysical survey report describing the methodologies and findings is included in **Appendix C**.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

A total of seven soil probes, designated SP-1 through SP-7, were installed at the Site to 6 feet bgs. SP-1, SP-2, SP-3, and SP-4 were installed within the proposed building's footprint, in the basement. SP-5, SP-6, and SP-7 were installed in the proposed backyard area. All of the soil probes were installed to 6 feet below grade.

All soil probes were installed utilizing a Geoprobe® fitted with Geoprobe® tooling and sampling equipment. Soil samples were collected utilizing a 4-foot long Macro Core sampler fitted with dedicated acetate liners. The soil was screened and characterized at two-foot intervals. Continuous samples were collected during soil probe installation. Each Macro Core was cut open and immediately screened with a Photo Ionization Detector (PID) for VOCs, prior to collecting the required samples for laboratory analysis. The PID did not detect VOC concentrations above background levels.

Boring logs were prepared by a geologist and are attached in **Appendix D**. A map showing the location of soil borings is shown in **Figure 5**.

In general, the soil encountered consists of light brown coarse-grained sand from zero to 6 feet below grade.

Groundwater Monitoring Well Construction

One (1) groundwater monitoring well was installed to determine water quality beneath the Site. The monitoring well was installed utilizing a Geoprobe® fitted with Geoprobe® tooling and sampling equipment. The monitoring wells were constructed of 1-inch diameter PVC. The total depth of the monitoring well is 61.70 feet below grade. The screened interval of the well consists of 15 feet of 0.020-inch slot screen from approximately 5 feet above the groundwater level to 10 feet below the groundwater level. The monitoring well construction details are included in **Appendix E**. Monitoring well locations are shown in **Figure 5**.

Survey

Since only one monitoring well was installed, a well survey was not performed.

Water Level Measurement

Groundwater head measurements were collected utilizing a Solinst 122 Oil/Water Interface Probe (Interface Probe). The Interface Probe can measure depths to water to 0.01 inch. The depth to water was measured in the well from the northern portion of the casing top. The monitoring well was installed in the northern portion of the Site. Groundwater was encountered at 23.95 feet below grade at the Site.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Fourteen (14) soil samples were collected from the soil-borings on-site for chemical analysis during this RI. Shallow soil samples were taken in each boring from zero to 2 feet, and deep soil samples were taken from 4 to 6 feet in all of the borings. Samples were collected utilizing a 4-foot long Macro Core sampler fitted with dedicated acetate liners.

All samples were properly handled and placed into pre-cleaned and appropriately labeled laboratory supplied containers. One field blank sample was collected and submitted to the laboratory as specified in the work plan. The samples were placed in a cooler filled with ice and maintained at a maximum 4 degrees Celsius. All samples were transmitted under proper chain of custody procedures to a New York State Department of Health ELAP-certified

laboratory for confirmatory laboratory analysis. All holding times were met. All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and Target Analyte List (TAL) metals. The laboratory did not report any irregularities with respect to their internal Quality Assurance/Quality Control.

Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in **Tables 1 to 4**. **Figure 5** shows the location of samples collected in this investigation.

Groundwater Sampling

One (1) groundwater sample was collected for chemical analysis during this RI. Groundwater sample collection data is reported in **Tables 5 to 8**. Sampling logs with information on purging and sampling of the groundwater monitor well is included in **Appendix F**. **Figure 5** shows the location of the groundwater monitoring well. Laboratories and analytical methods are shown below.

The groundwater sample was placed into 2 pre-cleaned 40 milliliter (mL) vials, 2 pre-cleaned 500 mL plastic containers and 2 pre-cleaned 1,000 mL jars and appropriately labeled. The groundwater sample from the monitoring well was analyzed for volatile organic compounds (VOCs) via EPA Method 8260, semi-volatile organic compounds (SVOCs) via EPA Method 8270, Pesticides/PCBs via EPA Method 8081/8082, TAL Metals (filtered and non-filtered), Chromium Trivalent and Chromium Hexavalent.

Soil Vapor Sampling

Four (4) soil vapor probes were installed and 4 soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in **Figure 5**. Soil vapor sampling logs are included in **Appendix G**. Methodologies used for soil vapor assessment conform to the *NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006*.

Soil vapor probes SV-1 through SV-4 were installed to 6 feet below grade. **Figure 5** provides the location of soil vapor probes.

The soil vapor sampling points were installed utilizing similar technology to the soil probes (i.e. direct push). Each soil vapor sampling point consisted of a stainless steel screen

or implant fitted with inert tubing (e.g., polyethylene) of ¼ inch diameter and of laboratory quality to the surface.

Porous inert backfill material consisting of glass beads was used to create a sampling zone 1 to 2 feet in length. Soil vapor probes were then sealed above the sampling zone with bentonite slurry for a minimum distance of 3 feet to prevent outdoor air infiltration, and the remainder of the borehole was backfilled with clean material. The soil vapor probes were finished to grade with a hydrated bentonite seal at surface.

Dedicated tubing was used for each soil vapor probe. Soil vapor samples from each soil vapor probe were collected utilizing 6 liter pre-cleaned, passivated, evacuated whole air Summa Canisters. In order to insure the integrity of the borehole seal and to verify that ambient air was not inadvertently drawn into the sample, a tracer gas (helium) was applied to enrich the atmosphere in the immediate vicinity of the sampling location. A portable monitoring device MGD-2002 Helium-Hydrogen Lead Detector; Model 83-219, was utilized to analyze a real time sample of soil vapor from each soil vapor sampling point for the tracer prior to purging and after sampling. Plastic sheeting was used to keep the tracer gas in contact with the soil vapor point during the sampling. Helium detector readings did not exceed zero ppm, indicating Helium was not detected. Following verification that the surface seal was tight and prior to soil vapor sampling, approximately 0.3 ml of air was purged out of all vapor points utilizing a syringe.

A 60-cm³ plastic syringe was used to purge approximately 1 to 3 implant volumes (i.e. the volume of the sample probe and tube) prior to collecting the soil vapor samples. Each canister was then connected to a flow control valve set to collect the 6-L sample over a period of 6 hours at a rate of less than 0.2 liter per minute.

The Summa Canisters were calibrated for 2 hours and the soil vapor sampling was run on each canister for the duration of 2 hours. The initial vacuum (inches of mercury) and start time were recorded immediately after opening each Summa Canister. After the sampling was complete, the final vacuum and stop time were recorded. After the soil vapor sampling, each Summa was labeled and sent to a laboratory certified to perform air analysis in New York State and analyzed for VOCs via EPA TO-15.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Mark E. Robbins
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was York Analytical Laboratories
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 1 through 9, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix H.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

The Site is located in the central portion of Queens, New York. The elevation of the Site is approximately 47 feet above the mean sea level.

Stratigraphy

No outcroppings or refusals indicative of bedrock were observed at the Subject Property in any of the borings. Coarse sand was encountered to a depth of 6 feet below the Site.

Hydrogeology

The groundwater flow direction and elevation was not established during the investigation, as only one monitoring well was installed. The depth to groundwater in MW-1 was

5.2 Soil Chemistry

Soil/fill samples collected during the RI were compared to NYSDEC Part 375-6 Unrestricted Use (Track 1) and Restricted Residential Use (Track 2) Soil Cleanup Objectives (SCOs). Soil/fill samples collected during the RI show no PCBs or Pesticides at concentrations exceeding their respective monitoring detection limits (MDLs). The samples show no VOCs are present at concentrations exceeding Part 375-6.8 Track 1 Unrestricted Soil Cleanup Objectives (SCOs). The VOC acetone is present at concentrations less than its Unrestricted Use SCO. Eleven (11) Polycyclic Aromatic Hydrocarbon-range Semi-Volatile Organic Compounds (SVOCs) including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, bis(2-ethylhexyl)phthalate, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene are present in the soil samples at concentrations less than their respective Unrestricted Use SCOs. Two (2) metals, specifically, lead (maximum 124 mg/kg) and mercury (maximum 0.47 mg/kg), are present in three of the shallow samples at concentrations exceeding their respective Unrestricted Use SCO, but less than their Restricted Residential Use SCO. Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site.

A summary table of data for chemical analyses performed on soil samples is included in **Tables 1** through **4**. **Figure 6** shows the location and post the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Track 1 Soil Cleanup Objectives.

5.3 Groundwater Chemistry

7. The groundwater sample collected during the RI was compared to NYSDEC 6NYCRR Part 703.5 Groundwater Quality Standards (GQS). The groundwater sample collected during the RI shows no VOCs, SVOCs, or PCBs at concentrations exceeding Groundwater Quality Standards (GQS). Two (2) pesticides, specifically Chlordane (0.358 ug/L) and Dieldrin (0.00745 ug/L), were detected at concentrations exceeding their respective GQS. Two (2) dissolved metals, including manganese (maximum 744 ug/L) and sodium (maximum 107,000 ug/L), are present at concentrations exceeding their respective GQS. Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on the groundwater sample is included in Tables 5 through 8. Exceedence of applicable groundwater standards are shown in Figures 7 and 8 show the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

5.4 Soil Vapor Chemistry

The soil vapor results collected during the RI were compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion. Soil vapor samples collected during the RI show petroleum and chlorinated VOCs at generally low to moderate concentrations. A total of eighteen (18) VOCs, specifically; 1,2,4-Trimethylbenzene (maximum of 420 ug/m³), 1,3,5-Trimethylbenzene (130 ug/m³), 1,4-Dichlorobenzene (maximum 0.81 ug/m³), Acetone (maximum 240 ug/m³), Benzene (maximum 7.5 ug/m³), Carbon tetrachloride (maximum 0.56 ug/m³), Chloroform (maximum 91.0 ug/m³), Chloromethane (maximum 1.1 ug/m³), Cyclohexane (maximum 15.0 ug/m³), Dichlorodifluoromethane (maximum 2.1 ug/m³), Ethyl benzene(maximum 110.0 ug/m³), n-Heptane (maximum 41.0 ug/m³), n-Hexane (maximum 33.0 ug/m³), o-Xylene (maximum 290.0 ug/m³), p- & m- Xylenes (maximum 500.0 ug/m³), Tetrahydrofuran (maximum 4.30 ug/m³), Toluene (maximum 210.0 ug/m³), and Trichlorofluoromethane (maximum 1.40 ug/m³) are present at concentrations exceeding their respective NYSDOH soil vapor intrusion guidelines. Tetrachloroethene was not detected in any of the soil vapor samples, but was detected at a concentration of 0.76 ug/m³ in the outdoor air sample.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 9.

Figure 9 shows the location and posts the values for soil vapor samples with detected concentrations.

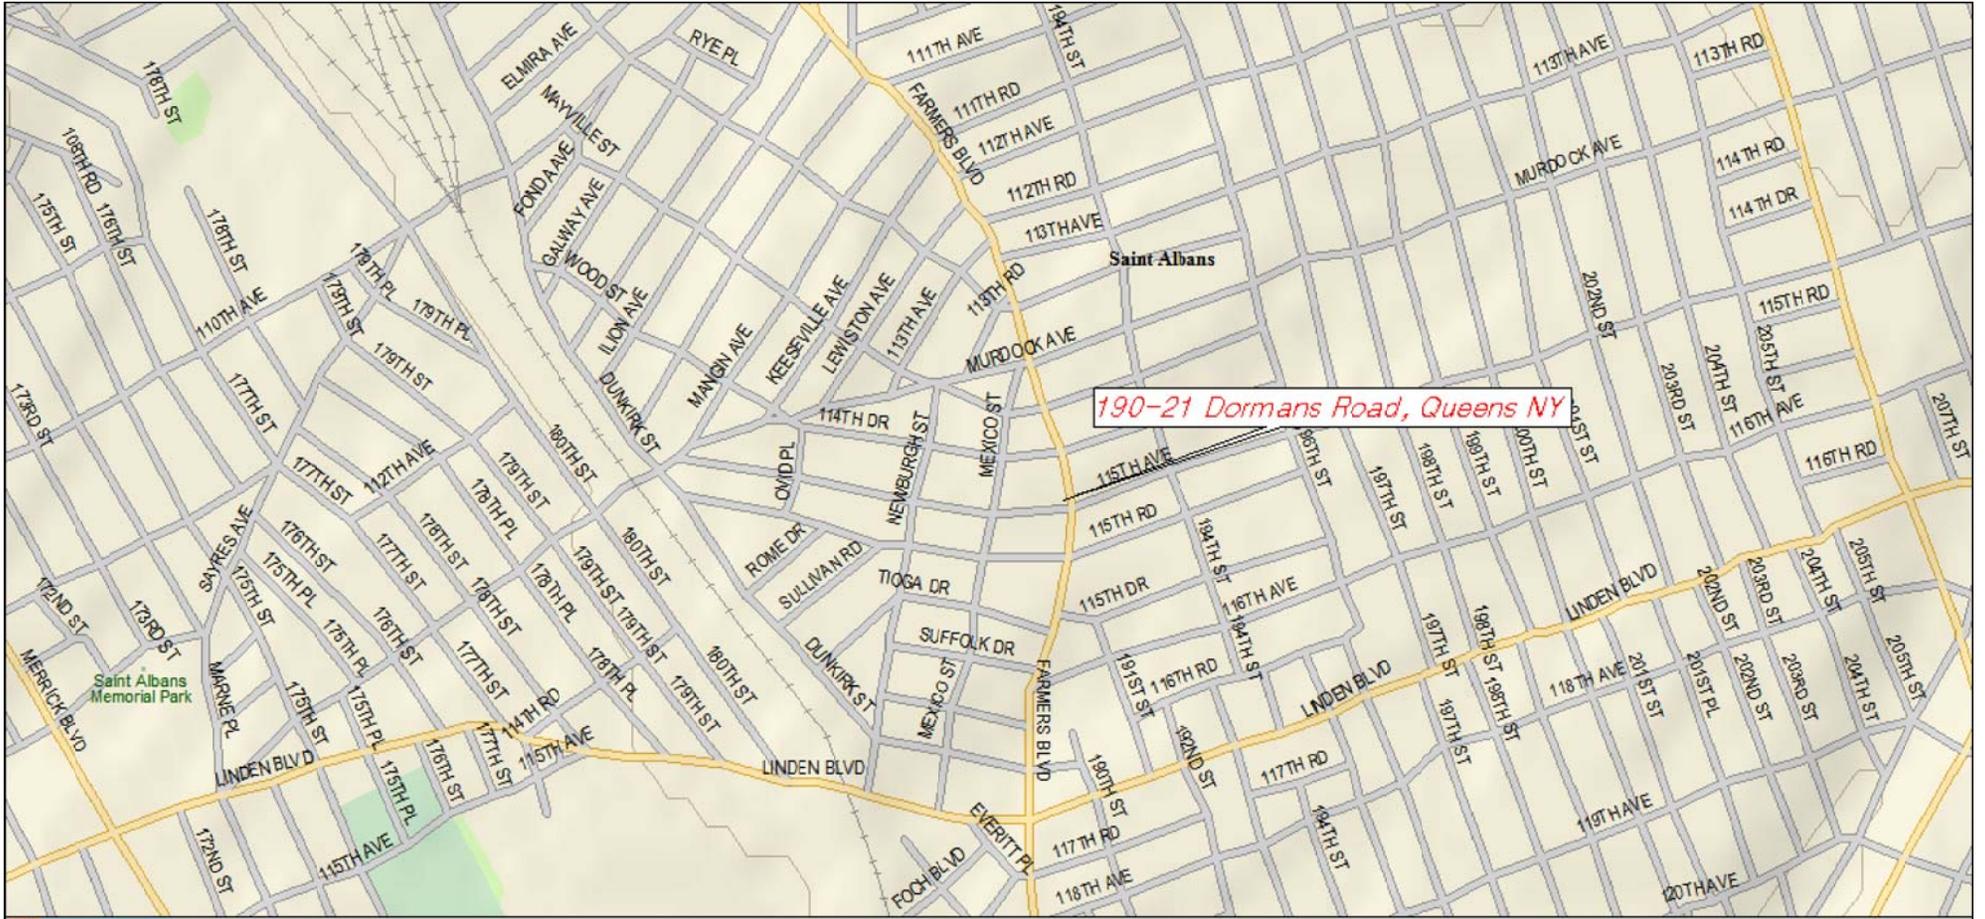

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

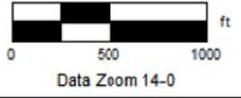

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

NOTES:

Any Regulatory Exceedences are color coded by Regulation

Q is the Qualifier Column with definitions as follows:

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U=analyte not detected at or above the level indicated

NT=this indicates the analyte was not a target for this sample

NS=this indicates that no regulatory limit has been established for this analyte

ND=analyte not detected at or above the level indicated

Contact: Barry Bank

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Barry Bank, PE were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: 7BDD-494B-BE51

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Barry Bank, PE (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites

EXECUTIVE SUMMARY

may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 02/17/2016 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
WEST SIDE CORP. Site Code: 55929 Class Code: Significant threat to the public health or environment - action required.	107-10 180TH STREET	WNW 1/2 - 1 (0.914 mi.)	E36	60

VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the VAPOR REOPENED list, as provided by EDR, and dated 08/01/2015 has revealed that there is 1 VAPOR REOPENED site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 01/05/2016 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
LIRR-DUNKIRK YARD FA	DUNKIRK STREET	W 1/4 - 1/2 (0.438 mi.)	31	55

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 02/17/2016 has revealed that there are 14

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/17/2016 has revealed that there are

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

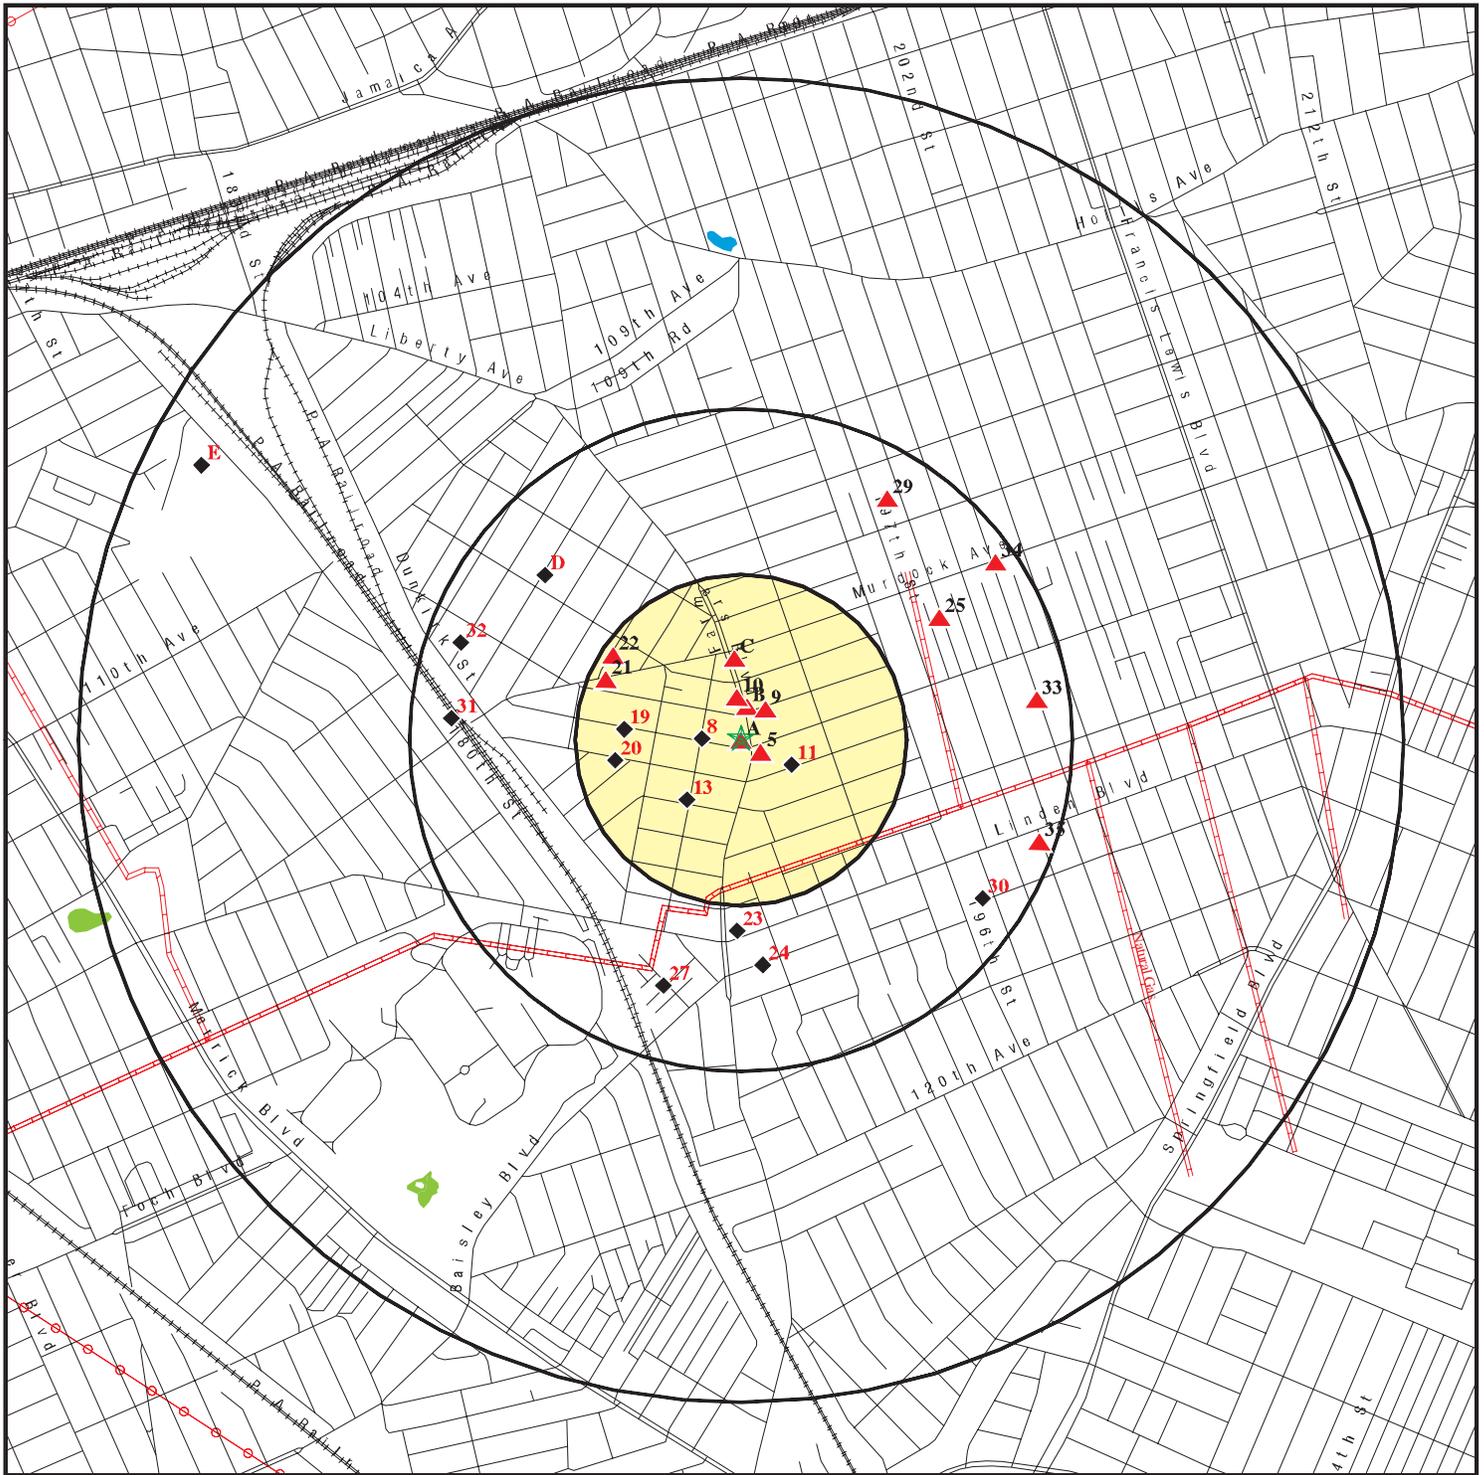

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

 DEC Memo: "6/20/11 - Raphael Ketani. I spoke to Anthony Buda at the Con Ed ERT desk (212) 580-8383. He said that a transformer at pole number 23034 leaked about 8 oz. of dielectric fluid to the asphalt below. The exact address is 115-03 Farmers Blvd. in St. Albans, Queens. A sample of the oil has been sent off for PCB analysis. The EMIS hasn't been posted yet. The spill will be cleaned up today. No sewers or water ways were affected. 6/21/11 - Raphael Ketani. The EMIS is #226278. 8/11/11 - Austin - Received final EMIS confirming cleanup of impact to pavement only - Con Ed contained and cleaned up the spill - See documents in eDocs for additional information - Spill closed - end"
 Remarks: "8 oz to asphalt - cleanup longer than 2 hours"

 DEC Memo: "9/12/15: Mahat DEC Mahat contacted Petro Mechanic Supervisor inquiring about the spill. He mentioned that the leak was from the filter. Impacted soil and few bricks has been removed from the site. DEC Mahat also contacted the Home Owner inquiring about the odor inside the living space. He confirmed that the there is no smell in the building. A clean up report will be provided to the Department for the closure of the spill case. Spill was all cleaned the same day. No resources were impacted by the Spill. No vapor/odor issue in the living spaces. The Department does not warrant any further investigation on the site. Spill case is closed in DEC Spill database. "

Remarks: "Caller advised filter leaked unknown amount of oil into soil. Clean up is pending."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "1/14/05-Vought-Received passing test results for line test for 2 premium tanks and one regular tank. Sent tank test letter to Getty (Hanley) requiring nature and description of failure, repair and investigation of soil. 08/31/2005 - Feng - Transferred from Vought to Feng. 9/27/2005 - Feng - The premium grade tank failed the tank test on 12/21/2004. On 12/23/2004, the Tyree Organization replaced the check valve on the premium grade tank and passed the re-test. And no contaminated soil encountered at the site during the tank test. Based on this, No Further Action is needed for this site."

Remarks: " LINE TEST FAILED: PREMIUM # 1 & #2 "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 11/20/2003-Vought-See closed spill #0209251 at same location. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/24/2005 - Feng - Subsurface Investigation Report, 1/15/2004. Tyree performed a soil boring on the southwest side of the sidewalk of Farmers Boulevard (off-site MWs) which are downgradient to the W-6. W-9 and W-10 (at depth of 34' bg) show low contamination in both soil and groundwater samples. Tyree recommended quarterly groundwater monitoring continue in the all 10 monitoring wells. 10/24/2005 - Feng - Quarterly Monitoring Report, 6/2005 - 8/2005. 10 monitoring wells onsite, groundwater flows to southwest at depth of 23.20' to 24.60' bg. 9/10 of the MWs below MDL or low for BTEX and MTBE. Except W-6 has found 23,420ppb BTEX (4,120ppb Ethylbenzene, and 19,300ppb Xylene). In fact, BTEX is increasing in W-6. No remediation currently. 12/14/2005 - Feng - Quarterly Monitoring Report, 9/2005 - 11/2005. The site is currently an active gasoline retail/service station. 10 monitoring wells onsite, groundwater flows to southwest at depth of 22.07' to 23.39' bg. 9/10 of the MWs below MDL or low for BTEX and MTBE. Except W-6 has found 29,750ppb BTEX (5,250ppb Ethylbenzene, and 24,500ppb Xylene). In fact, BTEX is increasing in W-6. No remediation as of yet. 4/10/2006 - Feng - database updated - 4/7/2006 emailed to Paul Lindell and Paul Hatcher for localized treatment for this site. (RJF) 5/4/2006 - Feng - Quarterly Monitoring Report, 12/2005 - 2/2006. Active gasoline retail/service station. Groundwater flows to southwest at depth of 21.69' to 23.05' bg. 10 monitoring wells on and off site. 9/10 of the MWs below MDL or low for BTEX and MTBE. Except W-6, 21,540 ppb BTEX (3,440 ppb Ethylbenzene, 18,100 ppb Xylenes). (RJF) 9/7/2006 - Feng - Quarterly

Monitoring Report, 6/2005 - 8/2006. Active gasoline retail/service station. Sampling and gauging on 8/16/2006. Groundwater flows to southwest at depth of 21.94' to 23.89' bg. 10 monitoring wells on and off site. 9/10 of the MWs below MDL or low for BTEX and MTBE. Except W-6, 4,246 ppb BTEX (819 ppb Ethylbenzene, 3,420 ppb Xylenes). EVFR was conducted on monitoring well, W-6 on 8/9/2006, a total of 224 gallons of water was recovered. (RJF) 11/27/2006 - Feng - Quarterly Monitoring Report, 9/2006 - 11/2006, 11/10/2006, by Tyree. Groundwater sampled and gauged 11/2/2006. 10 monitoring wells. DTW 22.51' to 23.91' bg. Flow southwest. MW-6, 2,653 ppb BTEX, 8.64 ppb MTBE. EVFR was conducted on MW-6 9/7/2006, 9/20/2006, 10/6/2006, 10/26/2006 and 11/6/2006. A total of 2,980 gallons water was recovered. (RJF) 6/5/2007 - Feng - Quarterly Monitoring Report, 11/2006 - 2/2007, 2/2007. Groundwater monitored 2/1/2007. 10 monitoring wells. DTW 23.35' to 24.68' bg. Flows southwesterly. MW-6, 11,686 ppb BTEX (2,500 ppb Ethylbenzene, and 9,180 ppb Xylenes), 3.2 ppb MTBE. (RJF) 7/10/2007 - Feng - Quarterly Monitoring Report, 2/2007 - 5/2007, 5/2007. Groundwater sampled 5/8/2007. 10 monitoring wells. DTW 22.68' to 23.94' bg. Flows to southwest. W-6, 7,713.8 ppb BTEX. Other wells are MDL/low. (RJF) 11/7/2007 - Feng - Quarterly Monitoring Report, 6/2007 - 8/2007, 9/2007. Groundwater sampled 8/15/2007. 10 monitoring wells. DTW 21.48' to 23.89' bg. Flows to southwest. BTEX range ND to 12,810 ppb (MW-6). MTBE range ND to 9.6 ppb (MW-6). Tyree will conduct several EFR events over the next two quarters on MW-6 to reduce the levels of BTEX found in that well. (RJF) 11/8/2007 - Feng - Portfolio meeting with Delta and Tyree. Tyree is still conducting quarterly EFR for 2008. (RJF) 3/21/2008 - Feng - Quarterly Monitoring Report, 9/2007 - 11/2007, 12/2007. Active gasoline retail/service station. Groundwater was gauged and sampled 11/13/2007. 10 monitoring wells. DTW 22.19' to 23.67' bg. Flows to southwest. NO LNAPL. BTEX range 6,613.9 ppb (MW-6). MTBE range ND to 10.4 ppb (MW-6). (RJF) 5/20/2008 - Feng - Quarterly Monitoring Report, 12/2007 - 3/2008, 3/2008. Active gasoline retail service station. Groundwater was gagued and sampled 3/7/2008. 10 monitoring wells. DTW 21.9' to 23.27' bg. Flows to southwest. No LNAPL. BTEX range ND to 11,890 ppb (W-6). MTBE range ND to 2 ppb. Tyree will conduct several EFVR's over the next two quarters on W-6 to reduce the levels of BTEX found in that well. (RJF) 9/4/2008 - Getty Properties portfolio meeting with Tyree and Delta. Monthly EFR and evaluate the effectiveness. Check W-5 history and contour, may close it. (RJF) 1/6/2009 - Getty Properties portfolio meeting with Delta and Tyree. Continue monthly EFR events. Have not checked W-5 yet, will do it next quarter. (RJF) 3/17/2009 - Quarterly Monitoring Report, 4/2008 - 7/2008, 8/2008, by Tyree. Active gasoline retail service station. Groundwater was gauged and sampled 7/23/2008. 10 monitoring wells. NO LNAPL. DTW 21.96' to 23.38' bg. Flows to southwest. BTEX range ND to 10,470 ppb (W-6). MTBE range ND to 4.6 ppb (W-4). On 4/11/2008, EFR was conducted on W-6 to reduce the levels of BTEX found in the well. A total of 450 gallons of gasoline contaminated water was removed. (RJF) 5/1/2009 - Quarterly Monitoring Report, 9/2008 - 11/2008, 12/2008, by Tyree. Active gasoline retail service station. Groundwater was gauged and sampled 11/7/2008. 10 monitoring wells. NO LNAPL. DTW 21.96' to 23.38' bg. Flows to southwest. BTEX range ND to 8,272 ppb (W-6). MTBE range ND to 7.9 ppb (W-3). On 9/27/2008, EFVR was onducted on W-6, a total of 395 gallons of gasoline contaminated water removed, manifest attached. On 10/16/2008, EFVR on W-6, a total of 328 gallons of gasoline

contaminated water removed, manifest attached. 4Q2008, 12/2008, by Tyree. Active gasoline retail/service station. Groundwater was gauged and sampled 1/30/2009. 10 monitoring wells. NO LNAPL. DTW 21.30-22.70' bg. Flows to southwest. BTEX range ND to 3,963 ug/L (W-6). MTBE range ND to 1.7 ug/L (). EFVR conducted on MW-6 and a total of 317 gallons of gasoline contaminated water was removed. (RJF) 6/10/2009 - Quarterly Monitoring Report, 1Q2009, 1/2009 3/2009, 5/2009, pdf via email 5/28/2009, by Tyree. Active gasoline retail service station. Groundwater was monthly gauging and quarterly sampling. Groundwater was sampled 3/16/2009. 10 monitoring wells. DTW 21.71 to 23.21 bg. Flows to southwest. NO LNAPL. BTEX range ND to 8,272 ppb (W-6). MTBE range ND to 7.9 ppb. EFVR on W-6. 2/1/2012 Getty portfolio transferred to KGH. 9/14/2012 - KGH meets with Tyree/Antea/Getty to discuss remedial progress on various sites. Tyree makes the case for closure of #96-10910 based on lack of soil or groundwater contamination identified during recent round of investigation and sampling. KGH agrees to review files and consider closure of this case. 11/14/2013 - KGH reviews case-file including January 2011 Subsurface Investigation and Petition for Closure. 3/12/2013 - KGH reviews file in preparation for upcoming site status meeting 3/14/2013 - Tyree/Antea presents data from January 2011 Site Investigation/Petition for Closure Report. KGH agrees to evaluate further and consider NFA 11/15/2013 - Based upon a review of all available data the Department accepts the Getty Petition for No Further Action. Some residual soil contamination may persist at depth near MW-6 but groundwater data demonstrates that there is no associated off-site impact. NFA - KGH"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER Sangesland spoke with Cynthia Findlay (daughter of owner) she says there is a buried oil tank under her driveway. The house converted to natural gas back in the 1960's long before her mother bought the house. Now there is a smell of oil in the basement coming through the floor/wall on the side where the driveway/oil tank is. Sangesland suggested that Ms. Findlay contact her insurance company (Allstate). 3/2/2004 Sangesland spoke to Cynthia Findlay again. She called Allstate Insurance who hired PW Grosser to do a site inspection. Tim DeMeo was in the area, so he will make the site visit today at 1 PM. 3/17/2004 Sangesland spoke to Esther Findlay. She says she sent a copy of the insurance policy to her attorney Herb Kramer 1-800- 292-8063. Mrs. Findlay also said she has a proposal from Petroleum Tank Cleaners to clean the site. Mr. Kramer says he reviewed the insurance policy and will try to work with Allstate, however coverage is not confirmed. Sangesland sent a letter to Mrs. Findlay requiring the site to be cleaned up. Deadline of June 17, 2004 to submit a site investigation plan. Later that day, Sangesland spoke with Cynthia Findley (daughter) (410-944-4150) who was at the house for DeMeo's inspection, but lives in Baltimore, MD. She wanted

a review of the status and will work with her mother and Mr. Kramer to ensure that a soil boring investigation is done (including a check of groundwater impacts). 4/7/2004 Sangesland spoke with Suzanne Findley (410-790-2934) daughter of owner. She wanted to know more details about what type of work needs to be done and how to do it. Sangesland also told her about the NYS Income Tax credit of \$250 to pull or close a tank (1-800-462-8100- Tax form IT-254) 12/22/05: Case reassigned to Andersen. Spoke to Esther Findley. Samples were taken by Eastern Environmental. She will send the report to me. 1/23/06: Spoke with Esther Findley and she is waiting to mail soil sampling data because she want to enclose a letter describing the billing situation. She refered me to her daughter Suzanne Findley, who is more directly handling the situation. I left a message with Suzanne Findley and asked for her help in getting ahold of the soil sampling data. Suzanne Findley called back and she will send me a copy of the Eastern Environmental soil testing data and their proposal for future work. They think the leak is from the line and not the tank. They plan on abandoning the tank in place. 2/24/06: Received an RAP. The RAP was accompanied by a letter from Susan Findlay which indicated that previous sampling with a PID was conducted and no VOC's were detected. Called Susan Findlay and left a message with locations and depths of samples field screened with a PID. 3/28/06: No response for additional details about field screened samples. Approved RAP for tank abandonment which was received in February 2006. Approval on conditions of inspection emptied tank for corrosion, sampling through tank bottom, and tank abandonment report submittal. 3/31/06: Received the results of pid measurements of soil borings taken. PID nd except for minor sub-slab sample results. 5/1/06: Received phone message from Susan Findlay about how to proceed. Returned call and left message instructing her to go ahead the tank abandonment as approved in the RAP. 7/31/06: Spoke with Eastern Environmental, they haven't been given a start date. Spoke with Susan Findlay (410-790-2934), she will contact me with a start date. 8/9/06: Abandonment scheduled for 8/10/06. 8/10/06: NYSDEC Andersen witnessed tank abandonment. Ed Gallo from Eastern Environmental was on the site. Contaminated soil found on top of the tank and was properly disposed of. Bottom samples below the tank and from the sidewall samples from the excavation. Tank will be removed and additional soil excavated if laboratory analysis reveals contamination extends below the tank. 9/29/06: Reviewed spill closure request dated August 30, 2006. UST abandoned and 6.27 tons of petroleum contaminated soil removed on 8/9/06. Six soil samples collected: four from the sidewalls of the excavation and two from beneath the tank. The only exceedance were benzo-a-pyrene at 205ppb (61 TAGM) and dibenzo-a-h-anthracene at 57ppb (14.3 TAGM) in the south sidewall sample. Closure requested. 10/3/06: NFA letter issued."

Remarks:

"there was a tank from the 60's that was buried under there driveway. the tank was never removed or drained. now the tank has a leak and is leaking out the #2 oil. homeowners are complaining of headaches."

Site Description: Location: The West Side Corporation site is located 107-10 180th Street in Jamaica, Queens County, New York. Site Features: This 4.5-acre site is owned by the now defunct West Side Corporation and includes a brick structure, approximately 21,600 square feet (sf) in size, currently leased by Atlantic Express Transportation (Atlantic), a school bus company for dispatching, repairing and maintaining school buses. Bus storage (approximately 200 buses) at the site was observed to cover a majority of the open space. The site is bordered to the west and south by a DEP maintenance and storage yard (Station

WEST SIDE CORP. (Continued)

1009235339

24). The area around the site building is paved with asphalt. The site property is surrounded by chain link and corrugated metal fencing. Historical Use(s): The site was used for the manufacture and distribution of ceramic pipes and fittings until 1969. From about 1969 to 1992, the site was used as a storage and distribution center for laundromat supplies, hangers, plastic garment bags, and most notably dry cleaning chemicals including large quantities of PCE. The property was operated as the West Side Corporation. Five 10,000 gallon aboveground storage tanks were located outside the southeast portion of the site building and were used for the storage of PCE. These tanks were filled via truck tankers and via railroad tanker cars. Apparently, improper handling of the chemicals has resulted in the disposal of hazardous wastes at the site, primarily PCE, at the site, some of which were released or have migrated in groundwater from the site to surrounding areas, including the properties to the south and east. Historical data indicate that contaminated groundwater from the site was drawn toward the former Jamaica Water Supply Company wells when they were in operation. Analytical data from that time is not available but current and historical information suggests that the concentration of PCE that may have been introduced to the water distribution system was likely low due to dilution. Formerly, the Jamaica Water Supply Company occupied Station 24 and operated several production wells (Nos. 24, 24A, 24B, and 24C). Well 24 was taken out of service by DEP in 1975. Wells 24A, 24B, and 24C were taken out of service by DEP in 1982 when contaminants were detected in these wells during routine monitoring. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit No. 1 (OU1): OU1 addresses on-site soils and groundwater. A July 2000 ROD selected an on-site remedy to clean up the soil and groundwater utilizing groundwater recovery and treatment, hydraulic containment, soil vapor extraction (SVE) and treatment, chemical oxidation, and institutional controls. In September 2002, an Explanation of Significant Differences was issued revising the remedy to incorporate thermal technology in lieu of chemical oxidation. Thermal treatment, soil vapor extraction, and insitu chemical oxidation (ISCO) have since remediated on-site groundwater and soil source. Operable Unit No. 2 (OU2): OU2 addresses soil vapor and contaminated groundwater that has moved from the site to the south-southwest beneath Station 24 and a residential area. The plume is also migrating in the direction of the DEP Groundwater System Station 6 Site, a currently closed drinking water treatment facility that has been proposed for reuse. The OU2 remedy included installation of a high capacity (750 to 1,100 gpm) groundwater extraction and treatment (GWET) system with on-site treatment and discharge to the local storm sewer system. Construction of the GWET was completed by DEP in 2012, and it was operated by the Department for approximately three months until November 2012. Based on the groundwater level measurements and analytical results within the aquifer following GWET system operations, the Department issued an Amended Record of Decision (AROD) in December 2013. The modification to the remedy generally includes in-situ chemical oxidation (ISCO) which will require the installation of a network of injection wells to inject a chemical solution known as permanganate within the shallow and intermediate groundwater zones. Since permanganate

Site

Database(s)

EDR ID Number
EPA ID Number

WEST SIDE CORP. (Continued)

1009235339

injection will now occur within the GWET system capture area, operation of the GWET system is no longer necessary and has not been included in the amended remedy. Groundwater and indoor air monitoring will continue as part of the AROD. Remedial design of the amended remedy is underway. Site Geology and Hydrogeology: The soil deposits encountered at the site generally consist of fill materials, glacial outwash, and clay soil. The fill material encountered at the site ranges in thickness from approximately 0.5 feet to 10 feet below ground surface (bgs) and is comprised of brown sandy silt, brown silty sands, and gravelly sands with fragments of ceramic, glass, plastic pellets, and metal debris. An unconfined sand and gravel aquifer is present consisting of medium to coarse grained sands of Pleistocene age locally known as the Upper Glacial Aquifer. Soil samples collected showed the aquifer material to be very consistent throughout the OU2 study area. The depth to the top of the underlying Gardiners clay layer, which is an undulating surface throughout the study area, increases southward from OU1 to OU2 and ranges from 62 feet to 105 feet bgs. The regional direction of groundwater flow is south-southwest from the site toward Jamaica Bay, located approximately 3 miles south of the site. The depth to groundwater was found to be 10 to 14 feet bgs throughout the study area. Water table elevations range from 22 feet above mean sea level (amsl) at OU1 to 15 feet amsl at the south edge of OU2. Site. The site topography and surrounding area is relatively flat.

Env Problem: Operable Unit No. 1 (On-site Soils): Remediation of on-site soils is complete and under site management. Prior to remediation, the primary contaminant of concern was tetrachloroethene (PCE) in soil and groundwater. Operable Unit No. 2 (off-site groundwater and soil vapor): Based upon investigations conducted to date, the main categories of contaminants that exceed their SCGs are VOCs, specifically PCE and its breakdown products. November 2012 groundwater data demonstrated that influent, untreated groundwater PCE concentrations were substantially lower than originally estimated during GWET system remedial design. In the intervening years since the GWET remedy was selected and designed, the plume near the source has attenuated due to the removal of the on-site source (i.e., the OU1 remedy). The recent data also indicated that the dissolved PCE plume is currently present across a greater areal extent and farther south from the site, with the most significant remaining contamination now beyond the identified capture zone of the GWET system. The direction of plume movement remains consistent with the southwesterly regional flow direction. Groundwater samples collected from the monitoring well network in 2012 were consistent in showing that PCE contamination extends deeper into the aquifer with increasing distance from OU1, with the most widespread contamination in the intermediate zone. Water quality data obtained from existing monitoring wells continue to indicate that shallow and intermediate PCE contamination predominates to the north of 174th Street, while deeper contamination predominates southward to 166th Street. Soil Vapor: Since May 2005, the Department and the NYSDOH have tested the air and soil vapor in over 170 homes near the Site. The State has also installed, and maintains, 30 vapor mitigation systems to reduce existing or potential exposures. The SVI investigation has been completed. Ongoing monitoring of the area will continue. The site presents a significant environmental threat due to the presence of soil vapor and contaminated groundwater above SCGs.

Health Problem: People are not drinking the contaminated groundwater because the area

is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both the on-site building and off-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. A monitoring program is in place to further evaluate the potential for exposure via soil vapor intrusion in off-site buildings.

Patel. Spoke to Allen and he will send me tank closure report probably by May 26, 2006. 06/05/06-Hiralkumar Patel. Left message for Allen. 06/06/06-Hiralkumar Patel. Received call from Allen. he will email me final report and will mail also. Received tank closure report from Jean Wood in email.

----- Mr.

Patel, The attached UST Closure report is being forwarded to you at the request of Allen Attenborough. Jean Wood Environmental, Health, and Safety Clayton Group Services, Inc. A Bureau Veritas Company 160 Fieldcrest Avenue Edison, New Jersey 08837 732.225.6040 732.225.4577 Jean.Wood@us.bureauveritas.com

abstract of tank closure report: - site is currently used as bus depot - UST was located adjacent to basement of bus garage approx. 10 ft west of northwestern corner of building - no odors, oil staining, petroleum product or elevated PID readings were noted in the excavation - UST was found to have a hole in the bottom, but no indication of spill were noted in the field - total five post-excitation soil samples were collected - S-1 was collected from floor of UST excavation and S-2 through S-5 were collected from sidewalls of excavation. little exceedence of SVOCs in S-4. other samples are clean. based on available information, case closed."

Remarks:

"FOUND A HOLE IN TANK WHILE REMOVING:"

Site Description: Location: The West Side Corporation site is located 107-10 180th Street in Jamaica, Queens County, New York. Site Features: This 4.5-acre site is owned by the now defunct West Side Corporation and includes a brick structure, approximately 21,600 square feet (sf) in size, currently leased by Atlantic Express Transportation (Atlantic), a school bus company for dispatching, repairing and maintaining school buses. Bus storage (approximately 200 buses) at the site was observed to cover a majority of the open space. The site is bordered to the west and south by a DEP maintenance and storage yard (Station 24). The area around the site building is paved with asphalt. The site property is surrounded by chain link and corrugated metal fencing. Historical Use(s): The site was used for the manufacture and distribution of ceramic pipes and fittings until 1969. From about 1969 to 1992, the site was used as a storage and distribution center for laundromat supplies, hangers, plastic garment bags, and most notably dry cleaning chemicals including large quantities of PCE. The property was operated as the West Side Corporation. Five 10,000 gallon aboveground storage tanks were located outside the southeast portion of the site building and were used for the storage of PCE. These tanks were filled via truck tankers and via railroad tanker cars. Apparently, improper handling of the chemicals has resulted in the disposal of hazardous wastes at the site, primarily PCE, at the site, some of which were released or have migrated in groundwater from the site to surrounding areas, including the properties to the south and

WEST SIDE CORP (Continued)

U003644458

east. Historical data indicate that contaminated groundwater from the site was drawn toward the former Jamaica Water Supply Company wells when they were in operation. Analytical data from that time is not available but current and historical information suggests that the concentration of PCE that may have been introduced to the water distribution system was likely low due to dilution. Formerly, the Jamaica Water Supply Company occupied Station 24 and operated several production wells (Nos. 24, 24A, 24B, and 24C). Well 24 was taken out of service by DEP in 1975. Wells 24A, 24B, and 24C were taken out of service by DEP in 1982 when contaminants were detected in these wells during routine monitoring. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit No. 1 (OU1): OU1 addresses on-site soils and groundwater. A July 2000 ROD selected an on-site remedy to clean up the soil and groundwater utilizing groundwater recovery and treatment, hydraulic containment, soil vapor extraction (SVE) and treatment, chemical oxidation, and institutional controls. In September 2002, an Explanation of Significant Differences was issued revising the remedy to incorporate thermal technology in lieu of chemical oxidation. Thermal treatment, soil vapor extraction, and insitu chemical oxidation (ISCO) have since remediated on-site groundwater and soil source. Operable Unit No. 2 (OU2): OU2 addresses soil vapor and contaminated groundwater that has moved from the site to the south-southwest beneath Station 24 and a residential area. The plume is also migrating in the direction of the DEP Groundwater System Station 6 Site, a currently closed drinking water treatment facility that has been proposed for reuse. The OU2 remedy included installation of a high capacity (750 to 1,100 gpm) groundwater extraction and treatment (GWET) system with on-site treatment and discharge to the local storm sewer system. Construction of the GWET was completed by DEP in 2012, and it was operated by the Department for approximately three months until November 2012. Based on the groundwater level measurements and analytical results within the aquifer following GWET system operations, the Department issued an Amended Record of Decision (AROD) in December 2013. The modification to the remedy generally includes in-situ chemical oxidation (ISCO) which will require the installation of a network of injection wells to inject a chemical solution known as permanganate within the shallow and intermediate groundwater zones. Since permanganate injection will now occur within the GWET system capture area, operation of the GWET system is no longer necessary and has not been included in the amended remedy. Groundwater and indoor air monitoring will continue as part of the AROD. Remedial design of the amended remedy is underway. Site Geology and Hydrogeology: The soil deposits encountered at the site generally consist of fill materials, glacial outwash, and clay soil. The fill material encountered at the site ranges in thickness from approximately 0.5 feet to 10 feet below ground surface (bgs) and is comprised of brown sandy silt, brown silty sands, and gravelly sands with fragments of ceramic, glass, plastic pellets, and metal debris. An unconfined sand and gravel aquifer is present consisting of medium to coarse grained sands of Pleistocene age locally known as the Upper Glacial Aquifer. Soil samples collected showed the aquifer material to be very consistent throughout the OU2 study area. The depth to the top of the underlying

MAP FINDINGS

WEST SIDE CORP (Continued)

U003644458

Gardiners clay layer, which is an undulating surface throughout the study area, increases southward from OU1 to OU2 and ranges from 62 feet to 105 feet bgs. The regional direction of groundwater flow is south-southwest from the site toward Jamaica Bay, located approximately 3 miles south of the site. The depth to groundwater was found to be 10 to 14 feet bgs throughout the study area. Water table elevations range from 22 feet above mean sea level (amsl) at OU1 to 15 feet amsl at the south edge of OU2. Site topography and surrounding area is relatively flat.

Env Problem: Operable Unit No. 1 (On-site Soils): Remediation of on-site soils is complete and under site management. Prior to remediation, the primary contaminant of concern was tetrachloroethene (PCE) in soil and groundwater. Operable Unit No. 2 (off-site groundwater and soil vapor): Based upon investigations conducted to date, the main categories of contaminants that exceed their SCGs are VOCs, specifically PCE and its breakdown products. November 2012 groundwater data demonstrated that influent, untreated groundwater PCE concentrations were substantially lower than originally estimated during GWET system remedial design. In the intervening years since the GWET remedy was selected and designed, the plume near the source has attenuated due to the removal of the on-site source (i.e., the OU1 remedy). The recent data also indicated that the dissolved PCE plume is currently present across a greater areal extent and farther south from the site, with the most significant remaining contamination now beyond the identified capture zone of the GWET system. The direction of plume movement remains consistent with the southwesterly regional flow direction. Groundwater samples collected from the monitoring well network in 2012 were consistent in showing that PCE contamination extends deeper into the aquifer with increasing distance from OU1, with the most widespread contamination in the intermediate zone. Water quality data obtained from existing monitoring wells continue to indicate that shallow and intermediate PCE contamination predominates to the north of 174th Street, while deeper contamination predominates southward to 166th Street. Soil Vapor: Since May 2005, the Department and the NYSDOH have tested the air and soil vapor in over 170 homes near the Site. The State has also installed, and maintains, 30 vapor mitigation systems to reduce existing or potential exposures. The SVI investigation has been completed. Ongoing monitoring of the area will continue. The site presents a significant environmental threat due to the presence of soil vapor and contaminated groundwater above SCGs.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both the on-site building and off-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. A monitoring program is in place to further evaluate the potential for exposure via soil vapor intrusion in off-site buildings.

soil vapor and contaminated groundwater that has moved from the site to the south-southwest beneath Station 24 and a residential area. The plume is also migrating in the direction of the DEP Groundwater System Station 6 Site, a currently closed drinking water treatment facility that has been proposed for reuse. The OU2 remedy included installation of a high capacity (750 to 1,100 gpm) groundwater extraction and treatment (GWET) system with on-site treatment and discharge to the local storm sewer system. Construction of the GWET was completed by DEP in 2012, and it was operated by the Department for approximately three months until November 2012. Based on the groundwater level measurements and analytical results within the aquifer following GWET system operations, the Department issued an Amended Record of Decision (AROD) in December 2013. The modification to the remedy generally includes in-situ chemical oxidation (ISCO) which will require the installation of a network of injection wells to inject a chemical solution known as permanganate within the shallow and intermediate groundwater zones. Since permanganate injection will now occur within the GWET system capture area, operation of the GWET system is no longer necessary and has not been included in the amended remedy. Groundwater and indoor air monitoring will continue as part of the AROD. Remedial design of the amended remedy is underway. Site Geology and Hydrogeology: The soil deposits encountered at the site generally consist of fill materials, glacial outwash, and clay soil. The fill material encountered at the site ranges in thickness from approximately 0.5 feet to 10 feet below ground surface (bgs) and is comprised of brown sandy silt, brown silty sands, and gravelly sands with fragments of ceramic, glass, plastic pellets, and metal debris. An unconfined sand and gravel aquifer is present consisting of medium to coarse grained sands of Pleistocene age locally known as the Upper Glacial Aquifer. Soil samples collected showed the aquifer material to be very consistent throughout the OU2 study area. The depth to the top of the underlying Gardiners clay layer, which is an undulating surface throughout the study area, increases southward from OU1 to OU2 and ranges from 62 feet to 105 feet bgs. The regional direction of groundwater flow is south-southwest from the site toward Jamaica Bay, located approximately 3 miles south of the site. The depth to groundwater was found to be 10 to 14 feet bgs throughout the study area. Water table elevations range from 22 feet above mean sea level (amsl) at OU1 to 15 feet amsl at the south edge of OU2. Site topography and surrounding area is relatively flat.

Env Problem: Operable Unit No. 1 (On-site Soils): Remediation of on-site soils is complete and under site management. Prior to remediation, the primary contaminant of concern was tetrachloroethene (PCE) in soil and groundwater. Operable Unit No. 2 (off-site groundwater and soil vapor): Based upon investigations conducted to date, the main categories of contaminants that exceed their SCGs are VOCs, specifically PCE and its breakdown products. November 2012 groundwater data demonstrated that influent, untreated groundwater PCE concentrations were substantially lower than originally estimated during GWET system remedial design. In the intervening years since the GWET remedy was selected and designed, the plume near the source has attenuated due to the removal of the on-site source (i.e., the OU1 remedy). The recent data also indicated that the dissolved PCE plume is currently present across a greater areal extent and farther south from the site, with the most significant remaining contamination now beyond the identified capture zone of the GWET

system. The direction of plume movement remains consistent with the southwesterly regional flow direction. Groundwater samples collected from the monitoring well network in 2012 were consistent in showing that PCE contamination extends deeper into the aquifer with increasing distance from OU1, with the most widespread contamination in the intermediate zone. Water quality data obtained from existing monitoring wells continue to indicate that shallow and intermediate PCE contamination predominates to the north of 174th Street, while deeper contamination predominates southward to 166th Street. Soil Vapor: Since May 2005, the Department and the NYSDOH have tested the air and soil vapor in over 170 homes near the Site. The State has also installed, and maintains, 30 vapor mitigation systems to reduce existing or potential exposures. The SVI investigation has been completed. Ongoing monitoring of the area will continue. The site presents a significant environmental threat due to the presence of soil vapor and contaminated groundwater above SCGs.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both the on-site building and off-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. A monitoring program is in place to further evaluate the potential for exposure via soil vapor intrusion in off-site buildings.

Site Description: Location: The West Side Corporation site is located 107-10 180th Street in Jamaica, Queens County, New York. Site Features: This 4.5-acre site is owned by the now defunct West Side Corporation and includes a brick structure, approximately 21,600 square feet (sf) in size, currently leased by Atlantic Express Transportation (Atlantic), a school bus company for dispatching, repairing and maintaining school buses. Bus storage (approximately 200 buses) at the site was observed to cover a majority of the open space. The site is bordered to the west and south by a DEP maintenance and storage yard (Station 24). The area around the site building is paved with asphalt. The site property is surrounded by chain link and corrugated metal fencing. Historical Use(s): The site was used for the manufacture and distribution of ceramic pipes and fittings until 1969. From about 1969 to 1992, the site was used as a storage and distribution center for laundromat supplies, hangers, plastic garment bags, and most notably dry cleaning chemicals including large quantities of PCE. The property was operated as the West Side Corporation. Five 10,000 gallon

WEST SIDE CORP (Continued)

U003644458

aboveground storage tanks were located outside the southeast portion of the site building and were used for the storage of PCE. These tanks were filled via truck tankers and via railroad tanker cars. Apparently, improper handling of the chemicals has resulted in the disposal of hazardous wastes at the site, primarily PCE, at the site, some of which were released or have migrated in groundwater from the site to surrounding areas, including the properties to the south and east. Historical data indicate that contaminated groundwater from the site was drawn toward the former Jamaica Water Supply Company wells when they were in operation. Analytical data from that time is not available but current and historical information suggests that the concentration of PCE that may have been introduced to the water distribution system was likely low due to dilution. Formerly, the Jamaica Water Supply Company occupied Station 24 and operated several production wells (Nos. 24, 24A, 24B, and 24C). Well 24 was taken out of service by DEP in 1975. Wells 24A, 24B, and 24C were taken out of service by DEP in 1982 when contaminants were detected in these wells during routine monitoring. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit No. 1 (OU1): OU1 addresses on-site soils and groundwater. A July 2000 ROD selected an on-site remedy to clean up the soil and groundwater utilizing groundwater recovery and treatment, hydraulic containment, soil vapor extraction (SVE) and treatment, chemical oxidation, and institutional controls. In September 2002, an Explanation of Significant Differences was issued revising the remedy to incorporate thermal technology in lieu of chemical oxidation. Thermal treatment, soil vapor extraction, and insitu chemical oxidation (ISCO) have since remediated on-site groundwater and soil source. Operable Unit No. 2 (OU2): OU2 addresses soil vapor and contaminated groundwater that has moved from the site to the south-southwest beneath Station 24 and a residential area. The plume is also migrating in the direction of the DEP Groundwater System Station 6 Site, a currently closed drinking water treatment facility that has been proposed for reuse. The OU2 remedy included installation of a high capacity (750 to 1,100 gpm) groundwater extraction and treatment (GWET) system with on-site treatment and discharge to the local storm sewer system. Construction of the GWET was completed by DEP in 2012, and it was operated by the Department for approximately three months until November 2012. Based on the groundwater level measurements and analytical results within the aquifer following GWET system operations, the Department issued an Amended Record of Decision (AROD) in December 2013. These tanks were filled via truck tankers and via railroad tanker cars. Apparently, improper handling of the chemicals has resulted in the disposal of hazardous wastes at the site, primarily PCE, at the site, some of which were released or have migrated in groundwater from the site to surrounding areas, including the properties to the south and east. Historical data indicate that contaminated groundwater from the site was drawn toward the former Jamaica Water Supply Company wells when they were in operation. Analytical data from that time is not available but current and historical information suggests that the concentration of PCE that may have been introduced to the water distribution system was likely low due to dilution. Formerly, the Jamaica Water Supply Company occupied Station 24 and operated several production wells (Nos. 24, 24A, 24B, and 24C). Well 24 was taken out of service by DEP in 1975. Wells 24A, 24B, and 24C were taken out of service by DEP in 1982 when contaminants were detected in these wells during routine monitoring. Operable Units: The site was divided into

two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit No. 1 (OU1): OU1 addresses on-site soils and groundwater. A July 2000 ROD selected an on-site remedy to clean up the soil and groundwater utilizing groundwater recovery and treatment, hydraulic containment, soil vapor extraction (SVE) and treatment, chemical oxidation, and institutional controls. In September 2002, an Explanation of Significant Differences was issued revising the remedy to incorporate thermal technology in lieu of chemical oxidation. Thermal treatment, soil vapor extraction, and insitu chemical oxidation (ISCO) have since remediated on-site groundwater and soil source. Operable Unit No. 2 (OU2): OU2 addresses soil vapor and contaminated groundwater that has moved from the site to the south-southwest beneath Station 24 and a residential area. The plume is also migrating in the direction of the DEP Groundwater System Station 6 Site, a currently closed drinking water treatment facility that has been proposed for reuse. The OU2 remedy included installation of a high capacity (750 to 1,100 gpm) groundwater extraction and treatment (GWET) system with on-site treatment and discharge to the local storm sewer system. Construction of the GWET was completed by DEP in 2012, and it was operated by the Department for approximately three months until November 2012. Based on the groundwater level measurements and analytical results within the aquifer following GWET system operations, the Department issued an Amended Record of Decision (AROD) in December 2013. The modification to the remedy generally includes in-situ chemical oxidation (ISCO) which will require the installation of a network of injection wells to inject a chemical solution known as permanganate within the shallow and intermediate groundwater zones. Since permanganate injection will now occur within the GWET system capture area, operation of the GWET system is no longer necessary and has not been included in the amended remedy. Groundwater and indoor air monitoring will continue as part of the AROD. Remedial design of the amended remedy is underway. Site Geology and Hydrogeology: The soil deposits encountered at the site generally consist of fill materials, glacial outwash, and clay soil. The fill material encountered at the site ranges in thickness from approximately 0.5 feet to 10 feet below ground surface (bgs) and is comprised of brown sandy silt, brown silty sands, and gravelly sands with fragments of ceramic, glass, plastic pellets, and metal debris. An unconfined sand and gravel aquifer is present consisting of medium to coarse grained sands of Pleistocene age locally known as the Upper Glacial Aquifer. Soil samples collected showed the aquifer material to be very consistent throughout the OU2 study area. The depth to the top of the underlying Gardiners clay layer, which is an undulating surface throughout the study area, increases southward from OU1 to OU2 and ranges from 62 feet to 105 feet bgs. The regional direction of groundwater flow is south-southwest from the site toward Jamaica Bay, located approximately 3 miles south of the site. The depth to groundwater was found to be 10 to 14 feet bgs throughout the study area. Water table elevations range from 22 feet above mean sea level (amsl) at OU1 to 15 feet amsl at the south edge of OU2. Site. The site topography and surrounding area is relatively flat.

Env Problem:

Operable Unit No. 1 (On-site Soils): Remediation of on-site soils is complete and under site management. Prior to remediation, the primary

U003644458

contaminant of concern was tetrachloroethene (PCE) in soil and groundwater. Operable Unit No.2 (off-site groundwater and soil vapor): Based upon investigations conducted to date, the main categories of contaminants that exceed their SCGs are VOCs, specifically PCE and its breakdown products. November 2012 groundwater data demonstrated that influent, untreated groundwater PCE concentrations were substantially lower than originally estimated during GWET system remedial design. In the intervening years since the GWET remedy was selected and designed, the plume near the source has attenuated due to the removal of the on-site source (i.e., the OU1 remedy). The recent data also indicated that the dissolved PCE plume is currently present across a greater areal extent and farther south from the site, with the most significant remaining contamination now beyond the identified capture zone of the GWET system. The direction of plume movement remains consistent with the southwesterly regional flow direction. Groundwater samples collected from the monitoring well network in 2012 were consistent in showing that PCE contamination extends deeper into the aquifer with increasing distance from OU1, with the most widespread contamination in the intermediate zone. Water quality data obtained from existing monitoring wells continue to indicate that shallow and intermediate PCE contamination predominates to the north of 174th Street, while deeper contamination predominates southward to 166th Street. Soil Vapor: Since May 2005, the Department and the NYSDOH have tested the air and soil vapor in over 170 homes near the Site. The State has also installed, and maintains, 30 vapor mitigation systems to reduce existing or potential exposures. The SVI investigation has been completed. Ongoing monitoring of the area will continue. The site presents a significant environmental threat due to the presence of soil vapor and contaminated groundwater above SCGs.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both the on-site building and off-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. A monitoring program is in place to further evaluate the potential for exposure via soil vapor intrusion in off-site buildings.

includes a brick structure, approximately 21,600 square feet (sf) in size, currently leased by Atlantic Express Transportation (Atlantic), a school bus company for dispatching, repairing and maintaining school buses. Bus storage (approximately 200 buses) at the site was observed to cover a majority of the open space. The site is bordered to the west and south by a DEP maintenance and storage yard (Station 24). The area around the site building is paved with asphalt. The site property is surrounded by chain link and corrugated metal fencing. Historical Use(s): The site was used for the manufacture and distribution of ceramic pipes and fittings until 1969. From about 1969 to 1992, the site was used as a storage and distribution center for laundromat supplies, hangers, plastic garment bags, and most notably dry cleaning chemicals including large quantities of PCE. The property was operated as the West Side Corporation. Five 10,000 gallon aboveground storage tanks were located outside the southeast portion of the site building and were used for the storage of PCE. These tanks were filled via truck tankers and via railroad tanker cars. Apparently, improper handling of the chemicals has resulted in the disposal of hazardous wastes at the site, primarily PCE, at the site, some of which were released or have migrated in groundwater from the site to surrounding areas, including the properties to the south and east. Historical data indicate that contaminated groundwater from the site was drawn toward the former Jamaica Water Supply Company wells when they were in operation. Analytical data from that time is not available but current and historical information suggests that the concentration of PCE that may have been introduced to the water distribution system was likely low due to dilution. Formerly, the Jamaica Water Supply Company occupied Station 24 and operated several production wells (Nos. 24, 24A, 24B, and 24C). Well 24 was taken out of service by DEP in 1975. Wells 24A, 24B, and 24C were taken out of service by DEP in 1982 when contaminants were detected in these wells during routine monitoring. Operable Units: The site was divided into two operable units. SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

USGS TOPOGRAPHIC MAP

Target Property Map:	5940539 JAMAICA, NY
Version Date:	2013

East Map:	5940543 LYNBROOK, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

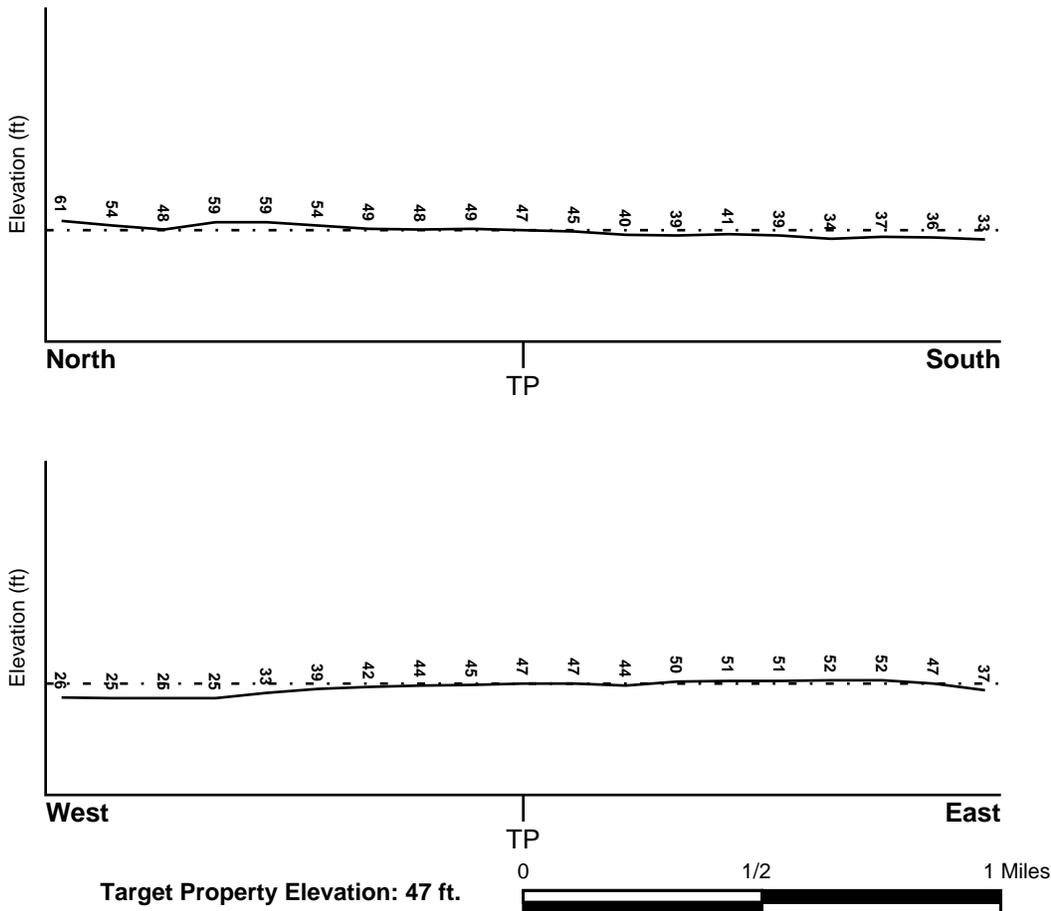

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> QUEENS, NY	<u>FEMA Flood Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	360497 - FEMA DFIRM Flood data
Additional Panels in search area:	Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> JAMAICA	<u>NWI Electronic Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Pleistocene
Code: Qp (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

**Re: GPR Survey-190-21 Dormans Road, QueensNY
Hydro Tech Job No. 160181**

Dear Sir:

Hydro Tech Environmental, Corp. has performed a Ground Penetrating Radar (GPR) survey at the above referenced Site. The GPR survey was conducted to investigate all accessible areas of the property which included all accessible areas of the site to identify any anomalies representing the presence of an underground storage tank (UST). No vent pipes or fill pipes were noted on the property.

SITE DETAILS

The Site is approximately 8,070 square feet in area and consists of a 2-story residential building and a 1-story garage in the southern portion of the Site, and is a vacant lot in the northern portion of the Site. The building is currently vacant.

DESCRIPTION OF FIELDWORK

The GPR survey was performed on June 27, 2016 utilizing a GSSI SIR-3000 Control Unit and a 400-megahertz shielded antenna. Prior to the commencement of the survey a visual inspection of the property was performed to identify specific areas where USTs could be present.

The GPR takes one "scan" per set unit. The number of scans per unit is based upon the estimated sizes of targets. Based upon the typical size of a UST, the GPR was set to run at 50 scans per foot. As each scan is performed, the antenna emits specific radar amplitude into the subsurface. The amplitude of the radar reflected back to the antenna is based upon the differences in the dielectric constants of the subsurface materials. The difference in amplitude obtained during each scan is then graphically displayed on the Control Unit, which are then interpreted by the GPR operator the time of the survey. Additional interpretations are then conducted in the office utilizing specialized computer software.

GPR RESULTS

An anomaly indicative of a UST was encountered in the vicinity of the fill port in the southern portion of the Site. Upon further investigation of the fill port, the tank was observed to be full of concrete. No concrete ceiling or concrete walls indicative of a tank encasement were identified.

I hope that this information has proven valuable to this phase of your assessment. Should you have any questions, please feel free to contact our office at your convenience.

Very Truly Yours,
Hydro Tech Environmental, Corp.

Erica Johnston
Project Manager

EXCLUSIONS & DISCLAIMER

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

Observations were made of the subject property and/or of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non hazardous or hazardous materials, in that portion of the subject property or structure. In addition, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Any GPR survey described above was performed in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry. **Hydro Tech Environmental, Corp.** does not accept responsibility for survey limitations due to inherent technological limitations or site specific conditions, however, made appropriate effort to identify and notify the client of such limitations and conditions. In particular, please note that the survey described above does not represent a full utility clearance survey, and does not relieve any party of applicable legal obligations to notify a utility one-call service prior to excavating or drilling.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 05, 2016 and listed below. The project was identified as your project: **#160181 190181 Dormans Rd. Queens, NY.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 16G0077

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

S-10	Surrogates recoveries were below laboratory control limits. Insufficient sample was available for re-extraction/reanalysis.
QR-04	The RPD exceeded control limits for the LCS/LCSD QC.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-RPD	Sample conc. <5 X reporting limit.
M-LSRD	Original sample conc <50 X reporting limit.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
HT-02	NON-COMPLIANT-This sample was received outside the EPA recommended holding time.
GC-Surr	Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the alternate surrogate.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
<hr/>	
*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Field Chain-of-Custody Record

NOTE: York & Sid. Terms & Conditions are listed on the back side of this document. This document serves as your written authorization to York to proceed with the analyses requested and your signature binds you to York's Std. Terms & Conditions.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 05, 2016 and listed below. The project was identified as your project: **190-21 Dormans Road Queens, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 16G0047

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-03 This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Revision Description: This report has been revised to modify the client project ID, per client request.

Technical Report

prepared for:

Hydro Tech Environmental (Hauppauge)

77 Arkay Drive, Suite G

Hauppauge NY, 11788

Attention: Erica Johnston

Report Date: 07/07/2016

Client Project ID: #160181 190-21 Dormans Road Queens, NY

York Project (SDG) No.: 16F1139

Revision No. 1.0

CT Cert. No. PH-0723

New Jersey Cert. No. CT-005

New York Cert. No. 10854

PA Cert. No. 68-04440

Hydro Tech Environmental (Hauppauge)

77 Arkay Drive, Suite G
Hauppauge NY, 11788
Attention: Erica Johnston

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 29, 2016 and listed below. The project was identified as your project: **#160181 190-21 Dormans Road Queens, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 16F1139

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
HT-01	This result was reported from an analysis conducted outside of the EPA recommended holding time.
GC-Surr	Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the alternate surrogate.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
<hr/>	
*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Confirmed collection date with client as 6/28/16 per bottle labels.

Revision Description: This report has been revised to modify the client project ID, per client request.
