# CERTIFICATION

I, Chawinie Miller, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Redevelopment Project located at 72 Box Street Brooklyn, NY, (OER Project Number [14EH-N031K](#) NYC VCP Site No. 14CVCP176K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

## **EXECUTIVE SUMMARY**

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

### **Site Location and Current Usage**

The Site is located at 72 Box Street in the Williamsburg section of Brooklyn, New York, and is identified as Block 2483 and Lot 25 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 10,000-square feet and is bounded by Box Street, to the north beyond which Block 2479 Lot 23 (a industrial building), Block 2483 Lots 44 and 45 (industrial buildings) to the south, Mc Guinness Blvd and the Pulaski Bridge to the east, and Block 2483 Lot 24 (an industrial building) to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is used for as a storage lot with trucking containers and is not developed with any buildings.

### **Summary of Proposed Redevelopment Plan**

The proposed future use of the Site will consist of a new 6-story residential building with no basement. The new building will cover 100 % of the lot and the 1<sup>st</sup> floor will be elevated 3-4 feet due to flood zone restrictions. No residential units will be located on the ground floor. The ground floor will be utilized for parking, a lobby and mechanical rooms. No landscaped areas are planned for this site. The upper floors will be equipped with terraces for outdoor space. The building will be equipped with a total of 50 residential units and 23 parking spaces. Layout of the proposed site development is presented in Figure 3. The current zoning designation is manufacturing M1-2 and residential R6. The proposed use is consistent with existing zoning for the property.

### **Summary of Past Uses of Site and Areas of Concern**

A Phase I was performed on November 11, 2012. The site was formerly developed as a gasoline station from approximately 1923 to 1978. Two USTs were identified in Sanborn maps and no other information regarding the removal and closure of these USTs was available. Based on this

information, the former occupation of the site as a gasoline station and unknown presences of the two USTs was considered a REC.

The AOCs identified for this Site include:

1. Historic fill layer is present at the Site from grade to depths as great as 5 feet below grade.
2. The site was formerly developed as a gasoline station from approximately 1923 to 1978. Two USTs were identified in Sanborn maps.

### **Summary of the Work Performed under the Remedial Investigation**

**Sterlingtown Equities** performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed five soil borings across the entire project Site, and collected ten soil samples and one duplicate soil sample for chemical analysis from the soil borings to evaluate soil quality;
3. Installed four groundwater monitoring wells throughout the Site to establish groundwater flow and collected three groundwater samples and one duplicate groundwater sample for chemical analysis to evaluate groundwater quality; and
4. Installed five soil vapor probes around Site perimeter and collected five samples for chemical analysis.

### **Summary of Environmental Findings**

1. Elevation of the property ranges from 9 to 10 feet.
2. Depth to groundwater ranges from 8.28 to 10.78 feet at the Site.
3. Groundwater flow is generally from southwest to northeast beneath the Site.
4. Depth to bedrock is at the Site is greater than 100 feet.
5. The stratigraphy of the Site, from the surface down, consists of five feet of historical fill underlain by five feet of grey sandy loam and grey silty clay.
6. Soil/fill samples collected during the RI detected two VOCs above Unrestricted Use SCOs. These VOCs included acetone at 80 µg/Kg (in one of the five deep soil samples) and

methylene chloride at 55 µg/Kg (in one of the five shallow soil samples). No other VOCs were detected in any of the other eight soil samples. Six SVOCs including benz(a)anthracene (max. of 7,000 µg/Kg), benzo(a)pyrene (maximum of 7,300 µg/Kg), benzo(b)fluoranthene (maximum of 11,000 µg/Kg), benzo(k)fluoranthene (maximum of 2,500 µg/Kg), chrysene (maximum of 7,500 µg/Kg) and indeno(1,2,3-cd)pyrene (maximum of 3,200 µg/Kg) were detected above Restricted Residential SCOs in all five shallow samples. The SVOCs detected are all PAH compounds and their concentrations and distribution indicate that they are associated with historic fill material observed during the sampling. Two pesticides were detected in one of the five shallow samples above UUSCOs and included 4,4' -DDD (7.1 µg/Kg) and 4,4' -DDE (22 µg/Kg). Chlordane was also detected at a maximum concentration of 69 µg/Kg. One PCB, PCB-1260 (maximum of 120 µg/Kg) was detected in four of the five shallow soil samples above Unrestricted Use SCOs. Metals including; arsenic, barium, chromium, copper, lead, mercury and zinc were detected above Unrestricted Use SCOs. Of these metals, barium (maximum of 845 mg/Kg), lead (maximum of 1,300 mg/Kg) and mercury (maximum of 0.99 mg/Kg) were also detected above the Restricted Residential SCOs in two of the five shallow and one of the deep soil samples and within the duplicate. Findings of the RI were consistent with observations for historical fill sites in areas throughout NYC.

7.

8. Groundwater samples collected during the RI showed no VOCs, PCBs or pesticides above New York State 6NYCRR Part 703.5 Groundwater Quality Standards (GQS). Trace concentrations of two VOCs, acetone and cis-1,2-Dichloroethene were detected in all groundwater samples. Two SVOCs, benzo(a)anthracene (max of 0.06 µg/L) and bis(2-ethylhexyl)phthalate (max of 5.9 µg/L) were detected above the GQS. Three metals including aluminum (max of 0.41 mg/L), magnesium (max of 79.3 mg/L) and manganese (maximum concentration of 4.56 mg/L) were detected sample above GQS.
9. Soil vapor samples collected during the RI showed moderate levels of petroleum related and chlorinated VOCs in all soil vapor samples. Total concentrations of petroleum-related VOCs (BTEX) ranged from 10.3 µg/m<sup>3</sup> to 434 µg/m<sup>3</sup>. Overall the highest reported concentrations were for acetone (maximum of 3,750 µg/m<sup>3</sup>), hexane (maximum of 1,310 µg/m<sup>3</sup>), heptane

(maximum of 1,810  $\mu\text{g}/\text{m}^3$ ) and propylene (maximum of 3,750  $\mu\text{g}/\text{m}^3$ ). Chlorinated VOCs including tetrachloroethene (PCE) was detected in all soil vapor samples at a maximum concentration of 6.98  $\mu\text{g}/\text{m}^3$ , carbon tetrachloride was detected in two samples at a maximum concentration of 0.377  $\mu\text{g}/\text{m}^3$ . Trichloroethene (TCE) was detected in all soil vapor samples at a maximum concentration of 27.3  $\mu\text{g}/\text{m}^3$  and 1,1,1-Trichloroethane (TCA) was detected two soil vapor samples at a maximum concentration of 6.76  $\mu\text{g}/\text{m}^3$ . The TCE concentrations are above the monitoring level ranges established within the State DOH soil vapor guidance matrix..

# REMEDIAL INVESTIGATION REPORT

## 1.0 SITE BACKGROUND

Sterlingtown Equities has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.229-acre Site located at 72 Box Street in Williamsburg section of Brooklyn, New York. Residential use is proposed for the property. The RI work was performed between August 20, 2013, and August 22, 2013. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

### 1.1 Site Location and Current Usage

The Site is located at 72 Box Street in the Williamsburg section of Brooklyn, New York, and is identified as Block 2483 and Lot 25 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 10,000-square feet and is bounded by Box Street, to the north beyond which Block 2479 Lot 23 (a industrial building), Block 2483 Lots 44 and 45 (industrial buildings) to the south, Mc Guinness Blvd and the Pulaski Bridge to the east, and Block 2483 Lot 24 (an industrial building) to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is used as a storage lot with trucking containers and is not developed with any buildings.

### 1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of a new 6-story residential building with no basement. The new building will cover 100 % of the lot and the 1<sup>st</sup> floor will be elevated 3-4 feet due to flood zone restrictions. No residential units will be located on the ground floor. The ground floor will be utilized for parking, a lobby and mechanical rooms. No landscaped areas are planned for this site. The upper floors will be equipped with terraces for outdoor space. The building will be equipped with a total of 50 residential units and 23 parking spaces. Layout of the proposed site development is presented in Figure 3. The current zoning designation is manufacturing M1-2 and residential R6. The proposed use is consistent with existing zoning for the property.

### 1.3 Description of Surrounding Property

The area surrounding the Site consists of a mix of residential and industrial properties. Figure 4 shows the surrounding land usage of the adjacent properties listed below as well as additional properties located up to 500 feet away from the Site. No hospitals, daycare facilities or schools are located within a 250 ft radius of the Site.

**Surrounding Property Usage**

<b>Direction</b>	<b>Property Description</b>
<b>North</b> – Adjacent property	<u>Block 2479, Lot 23</u> (77 Box Street) – Developed with a commercial building occupied by a hotel.
<b>South</b> – Adjacent property	<u>Block 2483, Lots 44 &amp; 45</u> (109-111 Clay Street) – Developed with two (2) two-story industrial buildings.
<b>East</b> – Opposite side of Throop Avenue	<u>McGuiness Blvd and the Pulaski Bridge beyond which is Block 2484, Lot 1</u> (404 McGuiness Blvd)– developed with a commercial building.
<b>West</b> – Adjacent property	<u>Block 2483, Lot 24</u> (70 Box Street) – developed with a three-story residential building.

## **2.0 SITE HISTORY**

### **2.1 Past Uses and Ownership**

A Phase I was performed on November 11, 2012. The site was formerly developed as a gasoline station from approximately 1923 to 1978. Two USTs were identified in Sanborn maps and no other information regarding the removal and closure of these USTs was available. Based on this information, the former occupation of the site as a gasoline station and unknown presences of the two USTs was considered a REC.

### **2.2 Previous Investigations**

A Phase II investigation was performed for the Site on July 31, 2012. A GPR survey was conducted for the site and no USTs were identified. Six soil boring were advanced to a depth of 15-20 feet bgs and ground water was encountered at 10-12 feet bgs. Five monitoring wells were installed on the north and east sides of the site. Soil samples were collected and analyzed for VOCs analysis via EPA Method 8260, polynuclear aromatic hydrocarbons (PAHs) via EPA Method 8270, and RCRA 8 metals via EPA Method EPA 6010. Groundwater samples were collected and analyzed for via EPA Method 8260 polynuclear aromatic hydrocarbons (PAHs) via EPA Method 8270, and RCRA 8 metals via EPA Method EPA 6010. Several PAHs and metals were detected in soil collected from one boring at concentrations greater than NYSDEC Unrestricted Use Soil Cleanup Objectives. No significant concentrations of VOCs were detected in soil. With the exception of the PAH benzo(a)pyrene, the concentrations of the compounds detected were less than Commercial SCOs. The compounds detected are commonly associated with urban fill materials. Several petroleum-related VOCs, PAHs and Lead were detected in groundwater from temporary well MW-01 located on the southeast and apparent upgradient side of the property at concentrations greater than NY TAGM criteria. PAHs were also detected at concentrations greater than TAGM criteria in a sample from well MW-02 on the east side of the property. No significant VOC, PAH or lead concentrations were detected in samples collected from other more downgradient locations on-site. The VOCs detected were located upgradient from the suspect previous UST locations on the property, and based on the presumed northwesterly groundwater flow direction may be derived from an off-site source. In addition, although VOC concentrations were slightly above TAGM criteria, the groundwater at the

property and in the area of the property is not used as a drinking water resource. The PAHs and lead detected in groundwater are considered likely to be associated with the urban fill materials observed on site and derived from suspended sediment in the groundwater samples collected from temporary wells..

### **2.3 Site Inspection**

Mr. Dominick Mosca of EBC performed the site inspection on August 20, 2013, beginning at approximately 8:30 am. The reconnaissance included a visual inspection of the Site, the sidewalk immediately in front of the Site, and the exterior of adjacent properties. At the time of the inspection, the Site was occupied as a storage lot with truck containers. An 8 foot high chain link fence was present along Box Street and McGuiness Avenue. The groundcover consisted of asphalt.

### **2.4 Areas of Concern**

The AOCs identified for this Site include:

1. Historic fill layer is present at the Site from grade to depths as great as 5 feet below grade.
2. The site was formerly developed as a gasoline station from approximately 1923 to 1978. Two USTs were identified in Sanborn maps.

A copy of the Phase 1 Report is presented in Attachment A.

### **3.0 PROJECT MANAGEMENT**

#### **3.1 Project Organization**

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Chawinie Miller.

#### **3.2 Health and Safety**

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

#### **3.3 Materials Management**

All material encountered during the RI was managed in accordance with applicable laws and regulations.

## 4.0 REMEDIAL INVESTIGATION ACTIVITIES

Sterlingtown Equities performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed five soil borings across the entire project Site, and collected ten soil samples and one duplicate soil sample for chemical analysis from the soil borings to evaluate soil quality;
3. Installed four groundwater monitoring wells throughout the Site to establish groundwater flow and collected three groundwater samples and one duplicate groundwater sample for chemical analysis to evaluate groundwater quality; and
4. Installed five soil vapor probes around Site perimeter and collected five samples for chemical analysis.

### 4.1 Geophysical Investigation

A geophysical investigation was not performed as a part of this assessment.

### 4.2 Borings and Monitoring Wells

#### Drilling and Soil Logging

The five soil boring locations were chosen to gain representative soil and groundwater quality information across the Site. For each of the five soil borings, soil samples were collected continuously from grade to a final depth of 10 feet below existing grade using a hollow stem auger with 2' split spoon. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination. No PID readings above background concentrations were obtained from any of the soil borings.

One soil sample was retained from each soil boring representing the interval 0 to 2 feet below grade and one soil sample was retained from each soil boring representing the interval 8 to 10 feet below grade.

Boring logs were prepared by a Qualified Environmental Professional and are attached in Attachment B. A map showing the location of soil borings and monitor wells is shown in Figure 5.

### **Groundwater Monitoring Well Construction**

A 1-inch diameter PVC monitoring well with 10 feet of 0.010 slot screen was installed at boring locations MW1, MW2, MW3 and MW4 set to intersect the water table. Since groundwater was encountered at approximately 8.28 feet below grade, monitoring wells were installed to a depth of 15 feet. Monitoring well sampling details are provided in Table 1. Monitoring well locations are shown in Figure 5.

### **Survey**

Soil borings and wells were located to the nearest 0.10 foot with respect to two or more permanent site features..

### **Water Level Measurement**

Approximate groundwater level measurements were collected using a Solinst oil/water interface meter to ensure the surface of the water table was within the screened section of the monitoring well. No free product was observed within the three monitoring wells. No water was detected in MW3. Water level data is included in **Table 1**.

### **4.3 Sample Collection and Chemical Analysis**

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

## Soil Sampling

Ten soil samples and one duplicate were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 2 through 5. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

The ten soil samples and one duplicate were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted for analysis to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and target analyte list (TAL) metals.

## Groundwater Sampling

Three groundwater samples and one duplicate were collected for chemical analysis during this RI. Groundwater samples were collected by installing a one-inch diameter PVC well, 5-feet below the water table interface (set at approximately fifteen feet below grade). A groundwater sample was then collected from each temporary well utilizing dedicated polyethylene tubing and a peristaltic pump. Groundwater samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted to Phoenix for analysis of VOCs by EPA Method 8260, SVOCs by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and TAL metals. Groundwater sample collection data is reported in Tables 6 through 10. Sampling logs with information on purging and sampling of groundwater monitor wells is included in Attachment C. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

## Soil Vapor Sampling

Five soil vapor probes were installed and five soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 10. Soil vapor sampling logs are included in Attachment D.

Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

The five soil vapor implants were installed using Geoprobe™ equipment and tooling. The approximate location of each of the soil vapor implants is shown on Figure 5. The vapor implants that were installed were the Geoprobe™ Model AT86 series, which are constructed of a 6-inch length of double woven stainless steel wire. The implants were installed to a depth of five feet below grade at all locations. Each implant was attached to ¼ inch polyethylene tubing which extended approximately 18 inches beyond that needed to reach the surface. The tubing was capped with a ¼ inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the vapor implant to a height of approximately 1 foot above the bottom of the implant. The remainder of the borehole was sealed with a bentonite slurry to the surface.

Soil vapor sampling for the four implants installed on August 20, 2013, was conducted on August 22, 2013. Prior to sampling, each sampling location was tested to ensure a proper surface seal had been obtained. In accordance with NYSDOH guidance (NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2005), a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. Prior to testing and collecting samples, the surface immediately surrounding the polyethylene tubing of the vapor implant was sealed using a 1 foot ft by 1 ft square sheet of 2 mil HDPE plastic firmly adhered to a wetted layer of granular bentonite. The seal was then tested by enriching the air space above the seal with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model MGD-2002, Multi-Gas Detector) for a minimum of 15 minutes. The tracer gas test procedure was employed at all five soil vapor sampling locations. No surface seal leaks were observed at any of the locations.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the ample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 6-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the

surface tube of each of the five vapor implants. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a bound field note book. Sampling then proceeded by fully opening the flow control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approx 2 hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The soil gas Sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet (Attachment E). Samples were submitted to Phoenix for laboratory analysis of VOCs EPA Method TO-15.

### Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Phoenix Environmental Laboratories
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Phoenix Environmental Laboratories
Chemical Analytical Methods	Soil analytical methods: <ul style="list-style-type: none"> <li>• TAL Metals by EPA Method 6010C (rev. 2007);</li> <li>• VOCs by EPA Method 8260C (rev. 2006);</li> <li>• SVOCs by EPA Method 8270D (rev. 2007);</li> <li>• Pesticides by EPA Method 8081B (rev. 2000);</li> <li>• PCBs by EPA Method 8082A (rev. 2000);</li> </ul> Groundwater analytical methods: <ul style="list-style-type: none"> <li>• TAL Metals by EPA Method 6010C (rev. 2007);</li> <li>• VOCs by EPA Method 8260C (rev. 2006);</li> <li>• SVOCs by EPA Method 8270D (rev. 2007);</li> </ul>

	<ul style="list-style-type: none"><li>• Pesticides by EPA Method 8081B (rev. 2000);</li><li>• PCBs by EPA Method 8082A (rev. 2000);</li></ul> Soil vapor analytical methods: <ul style="list-style-type: none"><li>• VOCs by TO-15 VOC parameters..</li></ul>
--	---

### **Results of Chemical Analyses**

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2 through 11, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Attachment E.

## **5.0 ENVIRONMENTAL EVALUATION**

### **5.1 Geological and Hydrogeological Conditions**

#### **Stratigraphy**

Subsurface soil at the Site consisted of historic fill, which was primarily comprised of brick, concrete, wood and other debris in a brown silty-sand matrix. The layer of historic fill extended to a depth ranging from ground surface to approximately five feet below grade. Native soil consisting of a grey sandy loam and grey silty clay is present below the historic fill layer.

#### **Hydrogeology**

A table of water level data for all monitor wells is included in Table 7. The average depth to groundwater is 8.28 and the range in depth is 8.28 to 10.78. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 9. Groundwater flow is from southwest to northeast.

### **5.2 Soil Chemistry**

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 2 through 5. Results were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs) as presented in 6NYCRR Part 375-6.8 and CP51. A copy of the laboratory report is provided in Attachment E. Figure 6 shows the location and posts the values for soil/fill that exceeds UUSCOs and RRSCOs.

Soil/fill samples collected during the RI detected two VOCs above Unrestricted Use SCOs. These VOCs included acetone at 80 µg/Kg (in one of the five deep soil samples) and methylene chloride at 55 µg/Kg (in one of the five shallow soil samples). No other VOCs were detected in any of the other eight soil samples. Six SVOCs including benz(a)anthracene (maximum concentration of 7,000 µg/Kg), benzo(a)pyrene (maximum concentration of 7,300 µg/Kg), benzo(b)fluoranthene (maximum concentration of 11,000 µg/Kg), benzo(k)fluoranthene (maximum concentration of 2,500 µg/Kg), chrysene (maximum concentration of 7,500 µg/Kg) and indeno(1,2,3-cd)pyrene (maximum concentration of 3,200 µg/Kg) were detected above

Restricted Residential SCOs in all five shallow samples. The SVOCs detected are all PAH compounds and their concentrations and distribution indicate that they are associated with historic fill material observed during the sampling. Two pesticides were detected in one of the five shallow samples above UUSCOs and included 4,4' -DDD (7.1 µg/Kg) and 4,4' -DDE (22 µg/Kg). Chlordane was also detected at a maximum concentration of 69 µg/Kg. One PCB, PCB-1260 (maximum of 120 µg/Kg) was detected in four of the five shallow soil samples above Unrestricted Use SCOs. Metals including; arsenic, barium, chromium, copper, lead, mercury and zinc were detected above Unrestricted Use SCOs. Of these metals, barium (maximum of 845 mg/Kg), lead (maximum of 1,300 mg/Kg) and mercury (maximum of 0.99 mg/Kg) were also detected above the Restricted Residential SCOs in two of the five shallow and one of the deep soil samples and within the duplicate. Findings of the RI were consistent with observations for historical fill sites in areas throughout NYC.

### 5.3 Groundwater Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 6 through 10. Figure 7 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards (GQS).

Groundwater samples collected during the RI showed no VOCs, PCBs or pesticides above New York State 6NYCRR Part 703.5 Groundwater Quality Standards (GQS). Trace concentrations of two VOCs, acetone and cis-1,2-Dichloroethene were detected in all groundwater samples. Two SVOCs, benzo(a)anthracene (max of 0.06 µg/L) and bis(2-ethylhexyl)phthalate (max of 5.9 µg/L) were detected above the GQS. Three metals including aluminum (max of 0.41 mg/L), magnesium (max of 79.3 mg/L) and manganese (maximum concentration of 4.56 mg/L) were detected above GQS.

### 5.4 Soil Vapor Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 11. Figure 8 shows the location and posts the values for soil vapor samples with detected concentrations.

Soil vapor samples collected during the RI showed moderate levels of petroleum related and chlorinated VOCs in all soil vapor samples. Total concentrations of petroleum-related VOCs (BTEX) ranged from 10.3  $\mu\text{g}/\text{m}^3$  to 434  $\mu\text{g}/\text{m}^3$ . Overall the highest reported concentrations were for acetone (maximum of 3,750  $\mu\text{g}/\text{m}^3$ ), hexane (maximum of 1,310  $\mu\text{g}/\text{m}^3$ ), heptane (maximum of 1,810  $\mu\text{g}/\text{m}^3$ ) and propylene (maximum of 3,750  $\mu\text{g}/\text{m}^3$ ). Chlorinated VOCs including tetrachloroethene (PCE) was detected in all soil vapor samples at a maximum concentration of 6.98  $\mu\text{g}/\text{m}^3$ , carbon tetrachloride was detected in two samples at a maximum concentration of 0.377  $\mu\text{g}/\text{m}^3$ . Trichloroethene (TCE) was detected in all soil vapor samples at a maximum concentration of 27.3  $\mu\text{g}/\text{m}^3$  and 1,1,1-Trichloroethane (TCA) was detected two soil vapor samples at a maximum concentration of 6.76  $\mu\text{g}/\text{m}^3$ . The TCE concentrations are above the monitoring level ranges established within the State DOH soil vapor guidance matrix.

## **5.5 Prior Activity**

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

## **5.6 Impediments to Remedial Action**

There are no known impediments to remedial action at this property.

Mr. David Kessler  
Waterbridge Capital  
590 Madison Avenue  
New York, NY 10022

Subject: Limited Subsurface Investigation Report  
72 Box Street  
72 Box Street, Brooklyn, New York  
EBI Project No. 12120196

Dear Mr. Kessler:

In accordance with the Proposal and Standard Conditions for Engagement approved by yourself on July 12, 2012, EBI Consulting (dba EBI Consulting, hereinafter "EBI") is pleased to submit this Limited Subsurface Investigation Report (Report) for the above-referenced property (herein referred to as the Subject Property).

This Report is addressed to *Waterbridge Capital* and such other persons as may be designated by *Waterbridge Capital* and respective successors and assigns. This Report is for the use and benefit of, and may be relied upon by, *Waterbridge Capital* or any affiliates; initial and subsequent holders from time to time of any debt and/or debt securities secured, directly or indirectly, any participation interest in such debt; any indenture trustee, servicer, or other agent acting on behalf of such holders of such debt and/or debt securities; rating agencies; and the institutional provider(s) from time to time of any liquidity facility or credit support for such financings, and their respective successors and assigns.

The information contained in this report has received appropriate technical review and approval. The conclusions represent professional judgments and are founded upon the findings of the investigations identified in the report and the interpretation of such data based on our experience and expertise according to the existing standard of care. No other warranty or limitation exists, either express or implied.

The conclusions of this Report are based on soil/groundwater analytical data prepared by Accutest Laboratories, soil screening results obtained utilizing a field screening instrument, and field observations recorded by EBI personnel.

There are no intended or unintended third party beneficiaries to this Report, except as expressly stated herein.

EBI is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the Report or on the closing of any business transaction.

Thank you for the opportunity to prepare this Report, and assist you with this project. Please call us if you have any questions or if we may be of further assistance.

Respectfully submitted,  
**EBI CONSULTING**

## **I.0 INTRODUCTION**

---

In accordance with our Proposal and Standard Conditions for Engagement, EBI Consulting (EBI) is pleased to submit our *Limited Subsurface Investigation Report (Report)* on the property located at 72 Box Street in Brooklyn, New York (the Subject Property). Mr. Sean Dunn of EBI Consulting conducted the investigation at the Subject Property on July 24, 2012.

### **Background**

EBI was requested to conduct a limited subsurface investigation to evaluate the potential impact to the Subject Property from two former on-site gasoline underground storage tanks (USTs) and a former on-site truck repair facility. EBI reviewed an Environmental Site Assessment (ESA) completed by IVI Assessment Services Inc. and dated November 11, 2011. The following item of environmental concern was noted in the ESA:

- Based on review of historical Sanborn maps and NYC Building Department records, the Subject was historically improved with a gasoline storage facility as of 1923. In addition, a gasoline tank was previously identified on the east central portion of the Subject from at least 1942 up until sometime during or prior to 1951, which was associated with the Subject's historical on-site truck repair facility. Another tank was identified on the northwestern portion of the Subject from at least 1965 up until sometime during or prior to 1978. We have no knowledge as to the regulatory and physical status of these two USTs as well as any additional USTs which may exist on-site that were associated with the historical gasoline storage facility. IVI recommends that the disposition of these two tanks be determined and that a subsurface investigation in the vicinity of the tanks' graves be conducted to determine if they have impacted the Subject. Furthermore, IVI recommends conducting a subsurface investigation at remaining portions of the Subject to determine if any additional USTs exist and if they have had a negative environmental impact on the Subject.

## 2.0 PURPOSE AND SCOPE OF WORK

---

This Limited Subsurface Investigations was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1903-11. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1903-11 are noted below or in the corresponding sections of this report.

The primary purpose of this investigation was to evaluate the potential impact to the Subject Property from two former on-site gasoline underground storage tanks (USTs) and a former on-site truck repair facility. The investigation focused on: 1) a gasoline tank identified on the east central portion of the property from at least 1942 up until sometime during or prior to 1951; 2) a second gasoline tank identified on the northwestern portion of the property from at least 1965 up until sometime during or prior to 1978 and 3) historical on-site truck repair facility.

In order to achieve the objectives of this investigation, EBI performed the following tasks:

- Retained an independent, qualified geophysical survey company to conduct a geophysical survey at the Subject Property.
- Advanced six (6) borings by direct-push (Geoprobe) to depths of fifteen (15) to twenty (20) feet below ground surface (bgs).
- Collected soil samples every four (4) feet, field screened the vapor headspace of the soil samples for total ionizable volatile organic compounds (VOCs) using a photoionization detector (PID), and described the physical characteristics of the soil samples on boring logs. See Section 4.3 for additional details.
- Selected six (6) soil samples per boring, prepared, and submitted the samples under chain-of-custody documentation to a New York State certified independent laboratory for analysis of for volatile organic compounds (VOCs) analysis via EPA Method 8260, polynuclear aromatic hydrocarbons (PAHs) via EPA Method 8270, and RCRA 8 metals via EPA Method EPA 6010. See Section 4.4 for additional details.
- Collected groundwater samples from each new well using a peristaltic pump equipped with disposable polyethylene tubing. Prepared and submitted the samples to a New York certified independent laboratory for analysis of volatile organic compounds (VOCs) via EPA Method 8260, polynuclear aromatic hydrocarbons (PAHs) via EPA Method 8270, and RCRA 8 metals via EPA Method EPA 6010. See Section 4.7 for additional details.
- Prepared this summary of pertinent information obtained during this investigation including accompanying illustrations and appendices, along with EBI's findings and preliminary conclusions regarding the presence or absence of contamination in soils and groundwater beneath the Subject Property in the areas investigated.

A detailed description of investigation methods is provided in Section 4.0 of this report.

## **3.0 SUBJECT PROPERTY DESCRIPTION/PHYSICAL SETTING**

---

### **3.1 SUBJECT PROPERTY DESCRIPTION**

The Subject Property is known as the 72 Box Street in Brooklyn, New York. The Subject Property is located in the southwest quadrant of the intersection of Box Street and McGuinness Boulevard. The property is improved with an asphalt parking lot and includes a small shed structure, located on the northwestern portion of the property.

According to the New York City Department of Finance, the Subject Property is owned by 72 Box Street Realty Corp.

Figure 1 is a Subject Property Locus Map showing the location of the Subject Property on a street map of Brooklyn, New York. Figure 2 is a Subject Property Location map showing the location of the Subject Property on a section of the United States Geological Survey Brooklyn, New York topographic quadrangle.

### **3.2 PHYSICAL SETTING**

#### Regional Geology/Bedrock

No bedrock outcroppings were observed at the Subject Property. Information concerning the geology of the Subject Property was obtained from the USGS Map of the Physical Divisions of the United States (1946). The Subject Property is located within the Seaboard Lowland section of the New England physiographic province. The New England physiographic province consists of low rolling hills and consists of a sequence of inter-bedded sedimentary and igneous rocks, which are extensively faulted. The Seaboard Lowland section consists of peneplains less than 500 feet above sea level, which have been post-maturely eroded and glaciated.

#### Surficial

According to the Natural Resources Conservation Service (NRCS) Web Soil Survey (WSS) website (<http://websoilsurvey.nrcs.usda.gov/app/>), the dominant soil composition in the vicinity of the Project Site is classified as Urban Land (Ur). Urban Land consists of areas where 75 percent or more of the land is covered with impervious surfaces, such as buildings, pavement, industrial parks, and railroad yards. These areas are mapped throughout the survey area, typically in central business districts and along major roads and highways. They are in almost every landscape position. Areas are irregular in shape and have angular boundaries. They range from 6 to 1,000 acres. Most of this map unit is covered with impervious surfaces; consequently, nearly all rainfall runs off. A storm drainage system is needed to control this excessive runoff. Included with this unit in mapping are areas of Udorthents, loamy, and Udorthents, wet substratum. These inclusions commonly vary with the underlying soil material of the adjoining Urban land. Some units have areas of rock outcrops. Included areas make up about 15 percent of the map unit. It was impractical to identify in all areas the underlying soil because of the extent of impervious surfaces. Onsite investigation is needed to determine the suitability for specific land uses.

Surface drainage on the Subject Property occurs over land to the surrounding streets primarily to the north. No prior soil studies or borings were presented to EBI for review. No indication of cross-lot runoff, swales, drainage flows, or active rills or gullies were observed on the Subject Property.

Soil stratigraphy encountered during the completion of soil borings consisted of approximately five (5) feet of sandy urban fill, underlain by ten (10) feet of wet medium to fine sand and silt, underlain by five (5) feet of medium to fine sand. Bedrock was not encountered in any of the borings.

### Hydrogeology

Shallow groundwater was encountered in five soil borings advanced at the Subject Property.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Subject Property is expected to flow to the northwest. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater-monitoring wells, survey of well elevations, and precise measurements of hydraulic head. Calculation of groundwater flow directions based on relative differences of hydraulic head on the Subject Property was not included in this scope of work.

## **4.0 FIELD ACTIVITIES**

---

### **4.1 GROUND PENETRATING RADAR SURVEY**

EBI contracted Enviroprobe Service Incorporated of Moorestown, NJ to conduct a ground penetrating radar (GPR) survey of the accessible exterior areas of the Subject Property in an attempt to confirm the presence or absence of potential remaining USTs. The GPR survey was conducted at the Subject Property on July 20, 2012. GPR equipment was used in an attempt to locate potential USTs as well as to define the presence, size, and depth of any potential USTs and/or former UST locations. GPR is a geophysical technique, which uses electromagnetic waves for shallow subsurface reconnaissance and exploration. An electromagnetic impulse in the form of ultra high-frequency radio waves is emitted into the ground by the transmitting antenna, and the resulting reflection of transfer of waves from contamination plumes, boundary layers, or buried objects is detected by a receiving antenna. The presence of buried objects or significant changes in conductivity of the layers will cause the electromagnetic wave to be reflected. These images provide direct information concerning subsurface conditions.

The results of the GPR survey did not identify anomalies indicative of USTs located beneath the surveyed areas of the Subject Property. A copy of the GPR report is presented in Appendix E.

### **4.2 RATIONALE FOR SOIL BORING PLACEMENT**

On July 24, 2012, EBI conducted a limited subsurface investigation to assess subsurface conditions at the Subject Property. The areas investigated and the associated boring numbers are described below:

- Boring EB-01, southeastern portion of the Subject Property
- Boring EB-02, east central portion of the Subject Property, former UST area
- Boring EB-03, northeastern portion of the Subject Property
- Boring EB-04, central portion of the Subject Property, former truck repair facility
- Boring EB-05, north central portion of the Subject Property, former truck repair facility
- Boring EB-06, northwestern portion of the Subject Property, former UST area

### **4.3 PRE-DRILLING ACTIVITIES**

PAL Environmental Services requested Dig Safely New York to mark-out the location of Subject Property utilities on July 19, 2012. Clearance for drilling at the Subject Property was granted for after 9 am on July 24, 2012. No additional pre-drilling activities were performed as part of this investigation.

### **4.4 ADVANCEMENT OF SOIL BORINGS**

A total of six (6) borings were advanced at the Subject Property. All of the soil borings were advanced using a Geoprobe direct-push sampling rig operated by PAL Environmental Services of Long Island City, NY. Five-foot soil samples were collected continuously during the advancement of the borings. EBI recorded soil sampling information and the physical characteristics of each soil sample onto boring logs presented in Appendix C.

**TABLE 4.4**  
**SUMMARY OF SOIL BORING DETAILS**

Soil Boring #	Sample IDs	Analytical Analysis	Refusal (reason)	Depth To GW
EB-01	EB-01, MW-01	VOC, PAH, metals	NA	10'
EB-02	EB-02, MW-02	VOC, PAH, metals	NA	10'
EB-03	EB-03, MW-03	VOC, PAH, metals	NA	12'
EB-04	EB-04	VOC, PAH, metals	Equipment	NA
EB-05	EB-05, MW-05	VOC, PAH, metals	NA	12'
EB-06	EB-06, MW-06	VOC, PAH, metals	NA	12'
Notes: VOCs - Volatile organic compounds (VOCs) via EPA Method 8260 PAH - Polynuclear aromatic hydrocarbons (PAHs) via EPA Method 8270. Metals - RCRA 8 metals via EPA Method EPA 6010				

#### 4.5 FIELD SCREENING

The vapor headspace of each soil sample was field-screened using a photoionization detector (PID). The PID provides a reading of total ionizable VOCs. The PID was calibrated with an isobutylene standard, to measure total VOCs as benzene equivalents. The PID has a practical sensitivity of approximately one part per million by volume (ppmV). PID readings should not be considered as exact measurements, but as relative readings of VOCs between locations. The soil samples were placed in a ziplock bag approximately three-quarters full with the soil to be analyzed, which was sealed for approximately 10 minutes in a warm (>60° F) location for equilibration. The headspace analysis was conducted by inserting the probe of the PID through an opening in the zip-lock bag and into the space above the soil sample.

No visual or olfactory evidence of contamination or elevated PID readings above background was observed in any of the soil samples collected. The PID results are noted in the Boring Logs provided in Appendix C.

#### 4.6 SOIL SAMPLING AND ANALYSIS

Selected soil samples were collected in laboratory-provided sample containers. Each sample was labeled/logged onto a chain-of-custody form, and placed in a cooler with ice for preservation in accordance with current Federal EPA SW-846 (3rd ed.). The samples were submitted to an independent qualified laboratory (Accutest Laboratories) for analyses. The samples were analyzed for volatile organic compounds (VOCs) via EPA Method 8260, polynuclear aromatic hydrocarbons (PAHs) via EPA Method 8270, and RCRA 8 metals via EPA Method EPA 6010. Samples submitted for VOC analysis were also preserved with sodium bisulfate or methanol.

#### 4.7 MONITORING WELL INSTALLATION

Temporary groundwater monitoring well were installed at each boring. Groundwater was encountered beginning at approximately ten (10) and twelve (12) feet bgs in borings EB-01, EB-02, EB-03, EB-05 and EB-06. Groundwater was not encountered prior to refusal in boring EB-04. Well construction details are summarized on the following Table:

**TABLE 4.7**  
**SUMMARY OF WELL CONSTRUCTION DETAILS**

<b>WELL ID #</b>	<b>DEPTH TO WATER (FEET)</b>	<b>WELL DEPTH (FEET)</b>	<b>WELL DIAMETER (INCHES)</b>	<b>SCREENED INTERVAL (FT BGS)</b>
MW-01	13.65	20	1	10-20
MW-02	17.25	20	1	10-20
MW-03	16.20	20	1	10-20
MW-04	NA	15	1	5-15
MW-05	10.50	20	1	10-20
MW-06	9.10	20	1	10-20

Note: bgs = below ground surface

#### **4.8 GROUNDWATER SAMPLING AND ANALYSIS**

Groundwater samples were collected from new monitoring wells using a peristaltic pump equipped with disposable polyethylene tubing.

The groundwater samples were collected in clean laboratory-provided containers. The samples were labeled/logged onto a chain-of-custody form, and placed in a cooler with ice for preservation in accordance with current Federal EPA SW-846 (3rd ed.). The samples were submitted to an independent qualified laboratory (Accutest Laboratories) for analyses. The samples were analyzed for volatile organic compounds (VOCs) via EPA Method 8260, polynuclear aromatic hydrocarbons (PAHs) via EPA Method 8270, and RCRA 8 metals via EPA Method EPA 6010. Samples collected for VOC analysis were preserved with hydrochloric acid to a pH less than 2. Samples collected for soluble metals analysis were field filtered using a 0.45-micron filter and preserved with nitric acid.

#### **4.9 ABANDONMENT OF BORINGS**

Upon completion of the soil sampling activities, each soil boring was filled with the soil cuttings generated during the sampling activities. The remaining void in each borehole was filled with bentonite chips. The top two to four inches were backfilled with asphalt and compacted.

## 5.0 RESULTS

---

Boring locations and sampling locations are illustrated on Figure 3, Boring Location Map.

### 5.1 SOIL ANALYSIS RESULTS

The soil samples were analyzed for selected parameters including volatile organic compounds (VOCs) via EPA Method 8260, polynuclear aromatic hydrocarbons (PAHs) via EPA Method 8270, and RCRA 8 metals via EPA Method EPA 6010. Contaminants identified above the laboratory method detection limits are summarized in Table I. A copy of Table I is provided in Appendix B.

Analytical results indicate that a number of VOCs were detected at or above laboratory detection limits in soil samples collected from the Subject Property. However, no VOCs were detected at a concentration greater than the most stringent Unrestricted Use New York Soil Cleanup Objectives (NY SCO) standards.

Analytical results indicate that a number of PAHs were detected at or above laboratory detection limits in soil samples collected from the Subject Property, and that six of the PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene) were detected at a concentration greater than the most stringent Unrestricted Use NY SCO standards. Of the six PAHs detected above Unrestricted Use NY SCO standards, one PAH (benzo(a)pyrene) was also detected above the Commercial NY SCO standard.

Analytical results indicate that a number of metals were detected at or above laboratory detection limits in soil samples collected from the Subject Property, and that two of the metals (lead and mercury) were detected at a concentration greater than the most stringent Unrestricted Use NY SCO standards. However, no metals were detected at a concentration above the Commercial NY SCO standard.

Laboratory soil analytical results and complete laboratory data sheets and chain-of-custody documentation are presented in Appendix D.

### 5.2 GROUNDWATER ANALYSIS RESULTS

The groundwater samples were analyzed for VOCs via EPA Method 8260, PAHs via EPA Method 8270, and RCRA 8 metals via EPA Method EPA 6010. Contaminants identified above the laboratory method detection limits are summarized in Table 2. A copy of Table 2 is provided in Appendix B.

Analytical results indicate that a number of VOCs were detected at or above laboratory detection limits in groundwater samples collected from the Subject Property, and that four VOCs (ethylbenzene, naphthalene, o-xylene, and total xylene) were detected in groundwater from one well (MW-01) at a concentration greater than the most stringent New York Technical and Operational Guidance Series (NY TOGS) Class GA GW Standards and/or New York Technical Administrative Guidance Memorandum (NY TAGM) Groundwater Standards/Criteria.

Analytical results indicate that a number of PAHs were detected at or above laboratory detection limits in groundwater samples collected from the Subject Property, and that six PAHs (benzo(a)anthracene,

benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene) were detected at a concentration greater than the most stringent NY TAGM Groundwater Standards/Criteria in the groundwater sample from well MW-02.

Analytical results indicate that a number of metals were detected at or above laboratory detection limits in groundwater samples collected from the Subject Property, and that one metal (lead) was detected at a concentration greater than the most stringent NY TOGS Class GA GW Standard in one sample (collected from well MW-01).

Laboratory groundwater analytical results and complete laboratory data sheets and chain-of-custody documentation are presented in Appendix D.

## 6.0 FINDINGS & CONCLUSIONS

---

The results of EBI's Limited Subsurface Investigation indicated the following:

- Several PAHs and metals were detected in soil collected from one boring at concentrations greater than NYSDEC Unrestricted Use Soil Cleanup Objectives. No significant concentrations of VOCs were detected in soil. With the exception of the PAH benzo(a)pyrene, the concentrations of the compounds detected were less than Commercial SCOs. The compounds detected are commonly associated with urban fill materials.
- Several petroleum-related VOCs, PAHs and Lead were detected in groundwater from temporary well MW-01 located on the southeast and apparent upgradient side of the property at concentrations greater than NY TAGM criteria. PAHs were also detected at concentrations greater than TAGM criteria in a sample from well MW-02 on the east side of the property. No significant VOC, PAH or lead concentrations were detected in samples collected from other more downgradient locations on-site.
  - The VOCs detected were located upgradient from the suspect previous UST locations on the property, and based on the presumed northwesterly groundwater flow direction, may be derived from an off-site source. In addition, although VOC concentrations were slightly above TAGM criteria, the groundwater at the property and in the area of the property is not used as a drinking water resource.
  - The PAHs and lead detected in groundwater are considered likely to be associated with the urban fill materials observed on site and derived from suspended sediment in the groundwater samples collected from temporary wells.

## **7.0 RECOMMENDATIONS**

---

Based on the findings and conclusions of this limited subsurface investigation, EBI has no recommendations for further investigations at this time. However, EBI recommends that in the event any future excavation/construction activities are proposed at the property, any soils and groundwater to be disturbed should be further characterized and managed in accordance with applicable local, state and federal requirements.

## 8.0 LIMITATIONS

---

This *Report* was prepared for the use of *Waterbridge Capital*. It was performed in accordance with generally accepted practices of other consultants undertaking similar studies at the same time and in the same locale under like circumstances. The conclusions provided by EBI are based solely on the information obtained during the subsurface investigation. EBI renders no opinion as to the presence of potential contamination in the areas not investigated. The observations in this *Report* are valid on the date of the investigation. Any additional information that becomes available concerning the Subject Property should be provided to EBI so that our conclusions may be revised and modified, if necessary. This *Report* has been prepared in accordance with the proposal approved by *Waterbridge Capital* and with the limitations described in *Attachment A*, all of which are integral parts of this *Report*. No other warranty, expressed or implied, is made.

## ATTACHMENT A LIMITATIONS

1. The observations described in this *Report* were made under the conditions stated herein. The conclusions presented are based solely upon the services described, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by Client. The work described in this *Report* was carried out in accordance with terms and conditions in our *Authorization Letter and Agreement for Environmental Services* regarding the Site, which are incorporated herein by references.
2. In preparing this *Report*, EBI has relied on certain information provided by state and other referenced parties, and on information contained in the files of federal, state and/or local agencies available to EBI at the time of the assessment. Although there may have been some degree of overlap in the information provided by these various sources, EBI did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of these *Environmental Services*.
3. Observations were made of the Site and of structures on the Site as indicated within the *Report*. Where access to portions of the Site or to structures on the Site was unavailable or limited, EBI renders no opinion as to the presence of oil or hazardous materials (OHM) in that portion of the Site or structure. In addition, EBI renders no opinion as to the presence of OHM or the presence of indirect evidence relating to OHM where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces. No representations concerning insulating material is expressed or implied.
4. EBI did not perform testing or analyses to determine the presence or concentration of asbestos, radon, or lead at the Site unless specifically stated otherwise in the *Report*. Similarly, no investigation of dust or air quality was conducted unless specifically stated otherwise in the *Report*.
5. The purpose of this *Report* is to assess the physical characteristics of the Site with respect to the presence of OHM in the environment. No specific attempt was made to determine the compliance of present or past owners or operators of the Site with federal, state, or local laws or regulations (environmental or otherwise).
6. Except as noted in the *Report*, no quantitative laboratory testing was performed as part of the assessment. Where such analyses have been conducted by an outside laboratory, EBI has relied upon the data provided, and has not conducted an independent evaluation of the reliability of this data.
7. Any qualitative or quantitative information regarding the Site, which was not available to EBI at the time of this assessment may result in a modification of the representations made herein.
8. It is acknowledged that EBI judgments shall not be based on scientific or technical test or procedures beyond the scope of the Services or beyond the time and budgetary constraints imposed by Client. It is acknowledged further that EBI conclusions shall not rest on pure science but on such considerations as economic feasibility and available alternatives. Client also acknowledges that, because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement with respect to such Services, are not guaranteed to be a representation of actual conditions on the Site, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, EBI shall use that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality. The standard of care shall be determined solely at the time the Services are rendered and not according to standards utilized at a later date. The Services shall be rendered without any other warranty, expressed or implied, including, without limitation, the warranty of merchant ability and the warranty of fitness for a particular purpose.
9. Client and EBI agree that to the fullest extent permitted by law, EBI shall not be liable to Client for any special, indirect or consequential damages whatsoever, whether caused by EBI's negligence, errors, omissions, strict liability, breach of contract, breach of warranty or other cause of causes whatsoever.

Includes the following where applicable:

- Chain of Custody

# Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC12526

Client: EBI

Immediate Client Services Action Required: No

Date / Time Received: 7/25/2012

Delivery Method:

Client Service Action Required at Login: No

Project: 12120196

No. Coolers: 1

Airbill #'s:

<u>Cooler Security</u>	<u>Y or N</u>			<u>Y or N</u>	
1. Custody Seals Present:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	3. COC Present:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Custody Seals Intact:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	4. SmpI Dates/Time OK	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<u>Cooler Temperature</u>	<u>Y or N</u>	
1. Temp criteria achieved:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Cooler temp verification:	Infrared gun	
3. Cooler media:	Ice (bag)	

<u>Quality Control Preservatio</u>	<u>Y or N</u>		<u>N/A</u>
1. Trip Blank present / cooler:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2. Trip Blank listed on COC:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
3. Samples preserved properly:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
4. VOCs headspace free:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

<u>Sample Integrity - Documentation</u>	<u>Y or N</u>	
1. Sample labels present on bottles:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Container labeling complete:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. Sample container label / COC agree:	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<u>Sample Integrity - Condition</u>	<u>Y or N</u>	
1. Sample recvd within HT:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. All containers accounted for:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. Condition of sample:	Intact	

<u>Sample Integrity - Instructions</u>	<u>Y</u>	<u>or</u>	<u>N</u>	<u>N/A</u>
1. Analysis requested is clear:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	
2. Bottles received for unspecified tests	<input type="checkbox"/>		<input checked="" type="checkbox"/>	
3. Sufficient volume recvd for analysis:	<input checked="" type="checkbox"/>		<input type="checkbox"/>	
4. Compositing instructions clear:	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>
5. Filtering instructions clear:	<input type="checkbox"/>		<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Blank Spike Summary

**Job Number:** MC12526  
**Account:** EBIMAB EBI Consulting  
**Project:** 72 Box Street, Brooklyn, NY

Sample	File ID	DF	Analyzed	By	Prep Date	Prep Batch	Analytical Batch
MSV423-BS	V10116.D	1	07/28/12	AMY	n/a	n/a	MSV423

The QC reported here applies to the following samples:

Method: SW846 8260B

MC12526-6

CAS No.	Surrogate Recoveries	BSP	Limits
1868-53-7	Dibromofluoromethane	101%	70-130%
2037-26-5	Toluene-D8	109%	70-130%
460-00-4	4-Bromofluorobenzene	88%	70-130%

(a) Outside control limits. Blank Spike meets program technical requirements.

\* = Outside of Control Limits.

## Blank Spike/Blank Spike Duplicate Summary

**Job Number:** MC12526  
**Account:** EBIMAB EBI Consulting  
**Project:** 72 Box Street, Brooklyn, NY

Sample	File ID	DF	Analyzed	By	Prep Date	Prep Batch	Analytical Batch
MSV424-BS	V10143.D	1	07/30/12	AMY	n/a	n/a	MSV424
MSV424-BSD	V10144.D	1	07/30/12	AMY	n/a	n/a	MSV424

The QC reported here applies to the following samples:

Method: SW846 8260B

MC12526-3

CAS No.	Surrogate Recoveries	BSP	BSD	Limits
1868-53-7	Dibromofluoromethane	90%	93%	70-130%
2037-26-5	Toluene-D8	100%	102%	70-130%
460-00-4	4-Bromofluorobenzene	89%	83%	70-130%

(a) Outside control limits. Blank Spike meets program technical requirements.

\* = Outside of Control Limits.

## 1.0 INTRODUCTION

Enviroprobe Service, Inc. (Enviroprobe) is an environmental investigation services firm which provides monitoring well installation (HSA), Geoprobe (DPT) drilling services and Environmental & Engineering Geophysics (EEG) services to the environmental consulting and engineering community.

Enviroprobe conducted a subsurface geophysical investigation at the subject property within client-specified areas of concern. Due to conditions and objectives, the investigation utilized a Radiodetection RD1000 cart-mounted Ground Penetrating Radar (GPR) unit with a 250 MHz antenna, a Radiodetection 8000T3 multi-frequency transmitter, a Radiodetection 8000 receiver, and a Fisher TW-6 metallic locator.

Ground penetrating radar (commonly called GPR) is a geophysical method that has been developed over the past thirty years for shallow, high-resolution, subsurface investigations of the earth. GPR uses high frequency pulsed electromagnetic waves (generally 10 MHz to 2,000 MHz) to acquire subsurface information. An EM wave is propagated downward into the ground by a transmitting antenna. Where abrupt changes in electrical properties occur in the subsurface, a portion of the energy is reflected back to the surface. This reflected wave is detected by a receiver antenna and transmitted to a control unit for real time processing and display. The penetration depth of the RD1000 unit varies from several inches to tens of feet according to site-specific conditions. The penetration depth decreases with increased soil conductivity. The penetration depth is the greatest in ice, dry sands, and fine gravels. Clayey, highly saline or saturated soils, areas covered by concrete, foundry slag, or other highly conductive materials greatly reduce GPR penetration. GPR is a method that is commonly used for environmental, engineering, archaeological, and other shallow investigations.

The Radiodetection (RD) transmitter and receiver are commonly used for pipe and cable locating. The multi-frequency transmitter can be directly connected, clamped, or used to induce a signal in a target line while the multi-frequency receiver is used to measure the signal from energized lines.

The Fisher TW-6 metallic locator is designed to find pipes, cables and other metallic objects such as underground storage tanks (USTs). The TW-6 transmitter generates an electromagnetic field that induces electrical currents in the subsurface. These currents produce a secondary electromagnetic field that is measured by the TW-6 receiver. One surveyor can carry both the transmitter and receiver together to search for underground metallic objects, although the TW-6 response can also be affected by the electrical properties of non-metallic materials in the subsurface.

## **2.0 SCOPE OF WORK**

On July 20, 2012, a geophysical technician from Enviroprobe Service Inc. was mobilized to the subject property to perform a geophysical investigation. The purpose of this investigation was to detect possible USTs, designate underground conduits/utilities, and investigate proposed boring locations within client-specified portions of the subject property. The survey area included the entire open parking lot surrounded by metal fencing. The ground surface of the survey area consisted of paved and concrete surfaces.

## **3.0 SURVEY RESULTS**

The survey was conducted using a cart-mounted GPR unit, a Fisher TW-6 metallic locator, and a RD unit. The RD unit was used to trace common utilities from sources in and around the survey area. The RD receiver was also used in the passive mode to search for live underground electrical power cables and other utilities emitting 60Hz electromagnetic signals. When possible, the locations of utilities were confirmed with the GPR. Whenever possible and necessary, the manhole covers in and around the survey area were opened and the manholes were visually inspected for underground utilities. A GPR survey was also performed in a grid pattern in at least two orthogonal directions to search for underground utilities. Designated utilities were marked on-site with spray paint using the following colors; red – electric.

The GPR and TW-6 were used in a grid pattern over all client-specified areas of the property. Based on the results of the GPR and TW-6 surveys, no anomalies consistent with an UST were identified.

## **4.0 LIMITATIONS**

The client-selected areas of the property had obstructions including fence lines, wooden debris, standing water, and uneven ground surfaces. These objects prevented a thorough investigation of the spaces beneath and immediately adjacent to them.

Due to surface conditions and subsurface content, the GPR signal penetration was estimated at three feet in the majority of the survey area. This penetration was reduced in areas of concrete cover.

The TW-6 survey was kept up to 6 feet away from above ground objects containing metals depending on the sizes, shapes and positions of the metal objects. The TW-6 survey was not effective in areas with reinforced concrete.

Due to the dielectric properties of the subsurface, plastic polymer and fiberglass utilities may not have been detected.

All field services were conducted in compliance with the industry standard of care guidelines found in ASCE 38-02 (Level B).

## **5.0 WARRANTIES**

The field observations and measurements reported herein are considered sufficient in detail and scope for this project. Enviroprobe Service, Inc. warrants that the findings and conclusions contained herein have been promulgated in accordance with generally accepted environmental engineering methods. There is a possibility that conditions may exist which could not be identified within the scope of this project and were not apparent during the site activities performed for this project.

Enviroprobe represents that the services were performed in a manner consistent with that level of care and skill ordinarily exercised by environmental consultants under similar circumstances. No other representations to Client, express or implied, and no warranty or guarantee is included or intended in this agreement, or in any report, document, or otherwise.

Enviroprobe Service, Inc. believes that the information provided in this report is reliable. However, Enviroprobe cannot warrant or guarantee that the information provided by others is complete or accurate. No other warranties or guarantees are implied or expressed.

GPR data is subject to signal anomalies and operator interpretation. The GPR data is intended to provide the locations of areas of concern requiring additional investigation or the approximate location of underground structures and utilities. Great care must be utilized when excavating and/or drilling around underground structures and utilities since GPR data can only be used for estimation purposes and GPR data is subject to misinterpretation. Enviroprobe can not guarantee that utilities, post-tension cables, and/or rebar will not be incurred during drilling, cutting, coring, or excavating activities.

This report was prepared pursuant to the contract Enviroprobe has with the Client. That contractual relationship included an exchange of information about the property that was unique and between Enviroprobe and its client and serves as the basis upon which this report was prepared. Because of the importance of the communication between Enviroprobe and its client, reliance or any use of this report by anyone other than the Client, for whom it was prepared, is prohibited and therefore not foreseeable to Enviroprobe.

Reliance or use by any such third party without explicit authorization in the report does not make said third party a third party beneficiary to Enviroprobe contract with the Client. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller".

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

### **Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

\* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

#### 8260 Analysis:

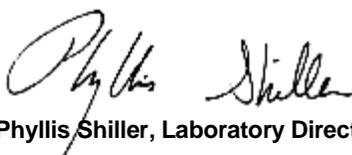

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

\* For Pesticides, The continuing calibration standards for Endrin, 4,4-DDT, Endosulfan II and Methoxychlor were below acceptable criteria. A negative sample bias is suspected.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

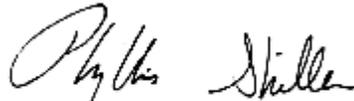

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

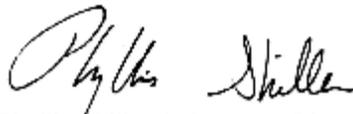

**8260 Analysis:**

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

\* For Pesticides, The continuing calibration standards for Endrin, 4,4-DDT, Endosulfan II and Methoxychlor were below acceptable criteria. A negative sample bias is suspected.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

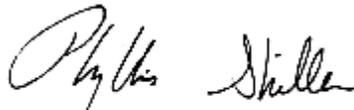

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

**8260 Analysis:**

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
 BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

\* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

\* For Pesticides, The continuing calibration standards for Endrin, 4,4-DDT, Endosulfan II and Methoxychlor were below acceptable criteria. A negative sample bias is suspected.

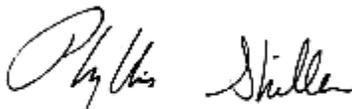

\*\* For Pesticides, due to matrix interference from non target compounds in the sample an elevated RL was reported.

**8260 Analysis:**

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

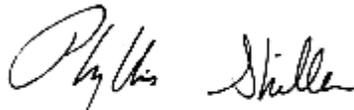

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

**8260 Analysis:**

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

### **Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

\* For Pesticides, The continuing calibration standards for Endrin, 4,4-DDT, Endosulfan II and Methoxychlor were below acceptable criteria. A negative sample bias is suspected.

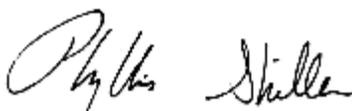

#### 8260 Analysis:

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

# Analysis Report

August 30, 2013

FOR: Attn: Mr. Charles B. Sosik, P.G.  
 Environmental Business Consultants  
 1808 Middle Country Rd  
 Ridge NY 11961-2406

Sample Information

Matrix: SOIL  
 Location Code: EBC  
 Rush Request: 72 Hour  
 P.O.#:

Custody Information

Collected by:  
 Received by: LB  
 Analyzed by: see "By" below

Date                      Time  
 08/20/13                      0:00  
 08/21/13                      17:00

Laboratory Data

SDG ID: GBF27794  
 Phoenix ID: BF27801

Project ID: 72 BOX ST.  
 Client ID: B4 8-10

Parameter	Result	RL/ PQL	Units	Date/Time	By	Reference

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

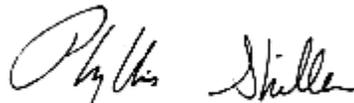

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
 BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

\* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

**8260 Analysis:**

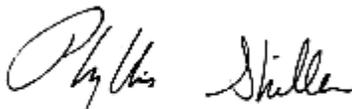

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

\* For Pesticides, The continuing calibration standards for Endrin, 4,4-DDT, Endosulfan II and Methoxychlor were below acceptable criteria. A negative sample bias is suspected.

\*\* For Pesticides, due to matrix interference from non target compounds in the sample an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
 This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

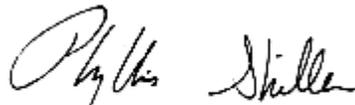

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

\* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

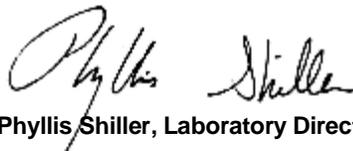

**8260 Analysis:**

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

\* For Pesticides, The continuing calibration standards for Endrin, 4,4-DDT, Endosulfan II and Methoxychlor were below acceptable criteria. A negative sample bias is suspected.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
This report must not be reproduced except in full as defined by the attached chain of custody.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

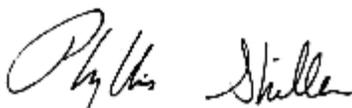

BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

-----------	--------	------------	-------------	-------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
B = Present in blank, no bias suspected.

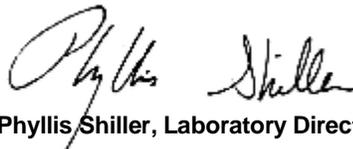

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

\* For Pesticides, due to matrix interference from non target compounds in the sample an elevated RL was reported.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.
