

Public Comment Period

April 30, 2015
to
May 30, 2015

Where can I view project documents?

Online at:

<http://www.nyc.gov/html/oer/html/repository/RBrooklyn.shtml>

Internet access to view documents is available at the public library. The closest location is:

Brooklyn Public Library
Leonard Branch
81 Devoe Street
Brooklyn, NY 11211

Please call (718) 486-3365 for hours of operation

Whom can I contact for project information?

Horace Zhang
Project Manager
NYCOER
100 Gold Street, 2nd Floor
New York, NY 10038
(212) 788-8484
hzhang@dep.nyc.gov

and

Shaminder Chawla
Deputy Director
NYCOER
(212) 442-3007
Schawla@dep.nyc.gov

NYC VCP Cleanup Plan Available for Review and Comment

The New York City Office of Environmental Remediation (OER) provides this Fact Sheet pursuant to New York City's Voluntary Cleanup Program (VCP). An application has been submitted by Meekerman LLC for enrollment of the property located at 406-408 Manhattan Avenue and 402 Meeker Avenue in the Williamsburg section of Brooklyn, New York and identified as Block 2734, Lot 4, 5 and 7 into the VCP. The Remedial Investigation Report (RIR) details the results of an environmental investigation at the site including the nature and extent of contamination. The draft Remedial Action Work Plan (RAWP) proposes remedial actions to address contamination delineated in the RIR.

Public Comments on the RAWP

OER is accepting public comments on the draft RAWP for 30 days until May 30, 2015. The RIR and draft RAWP are available for review at the document repositories identified in the box on the left including a public library branch and through a link to OER's website. Comments should be sent to Mr. Shaminder Chawla via mail or e-mail (see contact information at left).

Site Description

The Site is 12,600 square feet and currently consists of a recently-vacated one-story masonry warehouse on Tax Lots 4 and 5 and a single-story recently-vacated masonry commercial building with a small outdoor parking area on Tax Lot 7. The proposed future use of the Site will consist of redeveloping the Site with a new slab-on-grade seven-story residential building.

Summary of RIR

The environmental investigation identified historical fill material up to depths of 3 feet. Several Semi-Volatile Organic Compounds (SVOCs) and metals are above cleanup guidelines in soil. Several SVOCs and metals are above Groundwater Quality Standards. Soil vapor samples showed low levels of petroleum related VOCs.

Summary of the Remedy

The specific elements of the proposed remedial action include:

- Preparation of a Community Protection Statement and performance of all required NYC VCP Citizen Participation activities according to an approved Citizen Participation Plan;
- Implementation of a Community Air Monitoring Plan for particulates and volatile organic carbon (VOCs) compounds;
- Establishment of Site-Specific (Track 4) Soil Cleanup Objectives (SCOs);
- Excavation and removal of soil/fill exceeding Track 4 Site-Specific SCOs. The footprint of the new building will be excavated to a depth of approximately 3 feet below grade, and the rear yard will be excavated to approximately 2-3 feet below grade. Approximately 2,000 tons of soil will be excavated and removed from Site;
- Transportation and off-Site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan. Sampling and analysis of excavated media as required by disposal facilities and appropriate segregation of excavated media onsite;
- Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs;
- Installation of a vapor barrier system beneath the building slab and outside foundation sidewalls below grade;
- Construction and maintenance of an engineered composite cover consisting of an engineered composite cover consisting of concrete building slab, pavers, poured rubber safety surface, and/or open space cover of two foot thick clean fill to prevent human exposure to residual soil/fill remaining under the Site.;
- Submission of a Remedial Action Report (RAR) that describes the remedial activities and certifies that the remedial requirements have been achieved and lists any changes from this RAWP;
- Submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual contamination, including plans for maintenance, inspection and certification of Engineering and Institutional Controls and reporting at a specified frequency; and
- Continued registration with E-designation for the property.

Next Steps

OER will review the draft RAWP and consider all public comments submitted during the comment period before it approves a final RAWP. The approved RAWP will be placed on OER’s website and a second fact sheet will be issued before remedial work begins.

If you have any questions or know of any neighbor that would like to be added to the site contact list, please contact the OER Project Manager listed on the front page of this Fact Sheet. We encourage you to share this Fact Sheet with neighbors and tenants and/or post it in a prominent area of your building.
