CERTIFICATION

I, Craig Werle, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 509 West 38th Street/512 West 39th Street Site, (NYC VCP Site No. 15CVCP009M). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is comprised of two parcels located at 509 West 38th Street and 512 West 39th Street in the Hudson Yards section in Manhattan, New York and is identified as Block 710 and Lots 22 and 42, respectively, on the New York City Tax Map. Figure 1 shows the Site location. The Site is 14,900-square feet and is bounded by West 39th Street to the north, West 38th Street to the south, commercial building(auto parts/body shop)/Tenth Avenue to the east, and commercial building (DHL storage facility)/Eleventh Avenue to the west. A map of the site boundary is shown in Figure 2. Currently, Lot 22 is a vacant lot and Lot 42 is a one-story commercial building used by a construction company for storage. Lot 22 is approximately 12,400 square feet and Lot 42 is approximately 2,500 square feet. Lot 22 was demolished in July 2012 and was previously a three-story building with a partial cellar that was used as a recording studio.

The topography of the Site is generally flat and the topography of the surrounding area slopes to the west. The surrounding area is comprised primarily of multi-story residential and commercial buildings with ground level retail space and restaurants. The Lincoln Tunnel, which is operated by the Port Authority of New York and New Jersey (PANYNJ), runs beneath West 38th Street along the southern portion of the Site.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of a 30-story mixed use (commercial and residential) building with a cellar. Layout of the proposed site development is presented in Figure 3. The current zoning designation is C2-8 which is a commercial district that is predominantly residential in character. The proposed use is consistent with existing zoning for the property.

The planned redevelopment consists of a residential tower rising over a five-story base comprised of retail, community facility, and residential amenity uses. The ground floor will

contain retail and two lobbies. One lobby will serve as the residential amenity and tower and a separate lobby will serve the three floor community facility and one floor commercial located on the floors two through five. The residential component will include 225 units.

The Site area is approximately 14,900 square feet with 125 square feet footage of frontage along 38th street and 25 square feet footage along 39th street. Excavation ranges from 2 feet in areas of proposed slab-on-grade to 25 feet in the proposed elevator pit area. The entire site will be excavated to a minimum of 12 feet with the exception of setbacks on the northern, eastern, and western property lines which will be setback 12 to 15 feet. The foundation design is not yet complete, but is expected to consist of spread footings bearing on rock. Based on preliminary estimates, approximately 6,850 cubic yards (CY) of soil removal is anticipated for the development cut of Lot 22. Lot 42, which is currently a one-story storage facility, has no development plans finalized at this point.

Depth to groundwater is approximately 9.5 feet below grade therefore dewatering is anticipated.

Summary of Past Uses of Site and Areas of Concern

Lot 22 has been improved with commercial developments since at least 1890 and was developed with the last building structure sometime prior to 1911. Past uses included a bakery, a dyeing facility, and other commercial uses including a dry cleaning facility from 1992 to 1997. The former building was renovated between 2000 and 2001 and has since been used as a music recording studio and equipment rental facility. Lot 22 was occupied by a three-story building with a partial cellar that was demolished in July 2012, and is currently bordered by one-and four-story brick or masonry structures. The former building included a partial basement with mechanical rooms and storage; ground floor with production studios, offices, reception area, equipment rental, and garage; second floor with storage and apartment; and third floor with a recording studio.

Based on previous Phase I and II Environmental Site Assessments (ESA) performed at Lot 22, five 275-gallon ASTs and an approximately 2,000-gallon vaulted AST were removed from the property in August 1998. Additionally, a 2,000-gallon UST was removed from the property in October 2012.

Lot 42 was previously a 5-story residence from at least 1890 until the 1930s. By 1950, the residential building had been replaced with a 1-story commercial building that was used for tire storage (1950), machine shop (1976-1993) and auto repair (1994-2005).

Building Department records indicate both Lots have an E-designation for underground storage tanks testing protocol (hazmat) and window wall attenuation and alternate ventilation (noise).

The AOCs identified for this site include:

1. Lot 22 was a former dry cleaner between 1992 and 1997.
2. Past use of lot 22 as a dyeing facility.
3. Evidence of former USTs and ASTs identified during the ESA. One historical 2,000 gallon fuel oil UST was removed from the former garage area in Lot 22 in July 2012. Five historical 275-gallon ASTs and one historical 2,000-gallon vaulted AST were removed from the southwestern portion of Lot 22 in August 1998.
4. Past use of lot 42 as a machine shop and auto repair facility.
5. Historic fill material.

Summary of the Work Performed under the Remedial Investigation

HY 38 Owner, LLC performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Performed a geophysical survey of the Site utilizing Ground Penetrating Radar (GPR) and electromagnetic locator;
3. Installed six soil borings (four during the 2012 RI and two during the 2014 RI) across the entire project Site, and collected eight soil samples for chemical analysis from the soil borings to evaluate soil quality;

4. Installed four groundwater monitoring wells throughout the Site to establish groundwater flow and collected four groundwater samples for chemical analysis to evaluate groundwater quality;
5. Installed seven soil vapor probes (four during the 2012 RI and three during the 2014 RI) around Site perimeter and collected seven samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property ranges from 24 to 29 feet.
2. Depth to groundwater ranges from 7 to 10 feet at the Site.
3. Groundwater flow is generally from east to west beneath the Site.
4. Depth to bedrock ranges from 6 to 20 feet at the Site.
5. The stratigraphy of the site, from the surface down, consists of 4 to 11 feet of historic fill containing varying amounts of gravel, boulders, brick, and concrete underlain by 5 to 10 feet of brown fine to medium sand with silt, gravel, some clay underlain by bedrock.
6. Soil investigation results were compared to NYSDEC Unrestricted Use (Track 1) and Restricted Residential Use (Track 2) Soil Cleanup Objectives (SCOs) as presented in NYSDEC Part 375.6 and CP-51. Soil/fill samples showed no VOCs, PCBs or pesticides detected above Unrestricted Use SCOs. PCE (max of 7.5 ppb) was detected below Unrestricted Use SCOs. Seven SVOCs including benzo(a)anthracene (maximum of 24,000 ppb), benzo(a)pyrene (maximum of 22,000 ppb), benzo(b)fluoranthene (maximum of 29,000 ppb), Benzo[k]fluoranthene (maximum of 9,300 ppb), chrysene (maximum of 26,000 ppb), dibenzo(a,h)anthracene (maximum of 3,100 ppb), and indeno(1,2,3-cd)pyrene (maximum of 16,000) were detected above their respective Track 2 Restricted Residential Use SCOs in three shallow samples. Highest concentrations were detected one boring, SB-1, indicating a shallow hotspot. Metals including barium (maximum of 590 ppm), chromium (71.2 ppm), copper (maximum of 130 ppm), lead (max of 630 ppm), mercury (maximum of 1.8 ppm), nickel (53.5 ppm) and zinc (maximum of 490 ppm) were detected above their respective Track 1 Unrestricted Use SCOs. Of these metals, barium, lead and mercury were also detected above their respective Track 2 Restricted Residential SCOs in three shallow samples.

7. No groundwater samples were collected during the 2012 RI. Groundwater samples collected during the 2014 RI were compared to NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS). Groundwater samples showed that PCBs and Pesticides were not detected in any samples. VOCs including 1,2,4,5-tetramethylbenzene (5.6 µg/L), 1,2,4-trimethylbenzene (120 µg/L), 1,2-dichlorobenzene (7.1 µg/L), 1,3,5-trimethylbenzene (29 µg/L), benzene (71 µg/L), ethylbenzene (91 µg/L), m+p-Xylene (360 µg/L), naphthalene (99 µg/L), n-propylbenzene (8.9 µg/L), o-xylene (240 µg/L), and toluene (99 µg/L), were detected above AWQS in MW-2. Tetrachloroethene was also detected above AWQS and ranged in concentration from 5.6 to 14 µg/L in four of the five samples. Total VOC concentrations in the wells ranged from 9.8 micrograms per liter (µg/L) to 1,240 µg/L in MW-2. Several SVOCs, including naphthalene at 70 ppb, phenol at 52 ppb, and several PAHs below 5 ppb, were detected above AWQS with the highest concentrations in MW-2. Several metals were identified but only dissolved antimony, iron, manganese, selenium and sodium were detected above AWQS.
8. Soil vapor samples collected were compared to the compounds listed in the Vapor Intrusion Matrices in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion. Soil vapor samples collected during the 2012 RI indicated chlorinated and petroleum related compounds at elevated concentrations. Concentrations of petroleum-related VOCs (BTEX) ranged from 0.43 µg/m³ to 220 µg/m³. Other compounds detected at elevated levels included acetone (1030 µg/m³) and cis-1,2-dichloroethene (1100 µg/m³). Chlorinated compounds were identified in all four soil vapor samples and included tetrachloroethylene (PCE) ranging from 30 to 94,000 µg/m³ and trichloroethene (TCE) ranging from 3 to 1,700 µg/m³. PCE was also detected in 2014 soil vapor sampling at a maximum concentration of 608 µg/m³. Carbon tetrachloride was not detected in any sample. 1,1,1-trichloroethane was detected in two samples at a maximum concentration of 74 µg/m³. The PCE and TCE concentrations fall within the mitigation ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion (October 2006).

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

HY 38 Owner, LLC has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.3-acre site located at 509 West 38th Street (Block 710, Lot 22) and 512 West 39th Street (Block 710, Lot 42) in the Hudson Yards section of Manhattan, New York. A mixed-use commercial and residential building is proposed for the property. The 2012 RI work was performed between August 27 and August 30, 2012. The 2014 RI was performed between April 7 and April 14, 2014. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is comprised of two parcels located at 509 West 38th Street and 512 West 39th Street in the Hudson Yards section in Manhattan, New York and is identified as Block 710 and Lots 22 and 42, respectively, on the New York City Tax Map. Figure 1 shows the Site location. The Site is 14,900-square feet and is bounded by West 39th Street to the north, West 38th Street to the south, commercial building(auto parts/body shop)/Tenth Avenue to the east, and commercial building (DHL storage facility)/Eleventh Avenue to the west. A map of the site boundary is shown in Figure 2. Currently, Lot 22 is a vacant lot and Lot 42 is a one-story commercial building used by a construction company for storage. Lot 22 is approximately 12,400 square feet and Lot 42 is approximately 2,500 square feet. Lot 22 was demolished in July 2012 and was previously a three-story building with a partial cellar that was used as a recording studio.

The topography of the Site is generally flat and the topography of the surrounding area slopes to the west. The surrounding is comprised primarily of multi-story residential and commercial buildings with ground level retail space and restaurants. The Lincoln Tunnel, which is operated by the Port Authority of New York and New Jersey (PANYNJ), runs beneath West 38th Street along the southern portion of the Site.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of a 30-story mixed use (commercial and residential) building with a cellar. Layout of the proposed site development is presented in Figure 3. The current zoning designation is C2-8 which is a commercial district that is predominantly residential in character. The proposed use is consistent with existing zoning for the property.

The planned redevelopment consists of a residential tower rising over a five-story base comprised of retail, community facility, and residential amenity uses. The ground floor will contain retail and two lobbies. One lobby will serve as the residential amenity and tower and a separate lobby will serve the three floor community facility and one floor commercial located on the floors two through five. The residential component will include 225 units.

The Site area is approximately 14,900 square feet with 125 square feet footage of frontage along 38th street and 25 square feet footage along 39th street. Excavation ranges from 2 feet in areas of proposed slab-on-grade to 25 feet in the proposed elevator pit area. The entire site will be excavated to a minimum of 12 feet with the exception of setbacks on the northern, eastern, and western property lines which will be setback 12 to 15 feet. The foundation design is not yet complete, but is expected to consist of spread footings bearing on rock. Based on preliminary estimates, approximately 6,850 cubic yards (CY) of soil removal is anticipated for the development cut of Lot 22. Lot 42, which is currently a one-story storage facility, has no development plans finalized at this point.

Depth to groundwater is approximately 9.5 feet below grade therefore dewatering is anticipated.

1.3 Description of Surrounding Property

The Site is bordered to the north by West 39th Street, to the south by West 38th Street and to the east and west by commercial developments (DHL storage to the west and auto parts/body shop to the east). Beyond the adjoining properties, the surrounding area is comprised primarily of multi-story, mixed-use residential, commercial and retail properties. There are no sensitive receptors (such as schools, daycare facilities, hospitals) within 500-foot radius of the Site.

Figure 4 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Lot 22 has been improved with commercial developments since at least 1890 and was developed with the last building structure sometime prior to 1911. Past uses included a bakery, a dyeing facility and other commercial uses including a dry cleaning facility from 1992 to 1997. The former building was renovated between 2000 and 2001 and has since been used as a music recording studio and equipment rental facility. Lot 22 was occupied by a three-story building with a partial cellar that was demolished in July 2012, and is currently bordered by one-and four-story brick or masonry structures. The former building included a partial basement with mechanical rooms and storage; ground floor with production studios, offices, reception area, equipment rental and garage; second floor with storage and apartment; and third floor with a recording studio.

Based on previous Phase I and II Environmental Site Assessments (ESA) performed at Lot 22, five 275-gallon ASTs and an approximately 2,000-gallon vaulted AST were removed from the property in August 1998. Additionally, a 2,000-gallon UST was removed from the property in October 2012.

Lot 42 was previously a 5-story residence from at least 1890 until the 1930s. By 1950, the residential building had been replaced with a 1-story commercial building that was used for tire storage (1950), machine shop (1976-1993) and auto repair (1994-2005).

Building Department records indicate both Lots have an E-designation for underground storage tanks testing protocol (hazmat) and window wall attenuation and alternate ventilation (noise).

2.2 Previous Investigations

In 1998, a subsurface investigation was completed following the removal of the ASTs in Lot 22. Two soil borings were advanced through the basement slab in the western portion of the Site. SVOCs were detected in samples collected at 2 feet below the slab at concentrations exceeding NYSDEC STARS Memorandum #1 Values.

Previous Phase I reports prepared in 2007 by LandAmerica Assessment Corporation and Langan identified the following environmental conditions in Lot 22:

- The site was a former dry cleaner between 1992 and 1997;
- Evidence of former USTs and ASTs was identified during the ESA;
- Historic urban fill was observed underlying Lot 22 due to elevated concentrations of SVOCs and metals in soil samples collected; and
- E-designation assigned to both Lots.

A Phase II Site Investigation performed by Langan in 2007 included collection of soil samples from nine soil borings within Lot 22. Laboratory results were compared to NYSDEC TAGM RSCOs. Only some SVOCs (mostly PAHs) and metals (chromium, copper, iron, lead, mercury, nickel, vanadium and zinc) were detected at concentrations above RSCOs in most of the samples collected.

There's no record of any Phase II investigation completed in Lot 42 in the past.

2.3 Site Inspection

A Site inspection was performed between August 27 and 30, 2012 by Joel Landes of Langan and on April 8, 2014 by Craig Werle of Roux Associates to identify features of environmental significance that defines Areas of Concern (AOC).

2.4 Areas of Concern

The AOCs identified for this site include:

1. Lot 22 was a former dry cleaner between 1992 and 1997.
2. Past use of lot 22 as a dyeing facility.
3. Evidence of former USTs and ASTs was identified during the ESA. One historical 2,000 gallon fuel oil UST was removed from the former garage area in Lot 22 in July 2012. Five historical 275-gallon ASTs and one historical 2,000-gallon vaulted AST were removed from the southwestern portion of Lot 22 in August 1998.

4. Past use of lot 42 as a machine shop and auto repair facility.
5. Historic fill material.

As part of the site development activities, if any UST or piping is encountered, it will be properly removed. Phase 1 Reports for Lots 22 and 42 are presented in Appendix A.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Craig Werle.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements. The Health and Safety Plan (HASP) is included in Appendix B.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

HY 38 Owner, LLC performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Performed a geophysical survey of the Site utilizing Ground Penetrating Radar (GPR) and electromagnetic locator;
3. Installed six soil borings (four during the 2012 RI and two during the 2014 RI) across the entire project Site, and collected eight soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed four groundwater monitoring wells throughout the Site to establish groundwater flow and collected four groundwater samples for chemical analysis to evaluate groundwater quality;
5. Installed seven soil vapor probes (four during the 2012 RI and three during the 2014 RI) around Site perimeter and collected seven samples for chemical analysis.

4.1 Geophysical Investigation

A geophysical survey was performed in Lots 22 and 42 on April 7, 2014 by NAEVA Geophysics, Inc. (NAEVA). The equipment used included a Fisher TW-6 Pipe and Cable Locator (handheld electromagnetic metal-detector), a MALA Geoscience GPR with a 250 MHz antenna, a Subsite 950 utility locator, and a Dynatel 2250 Cable Locator.

In Lot 22, a metallic anomaly was noted near PEBS#2 and in the south side of the property. An apparent fill port was observed off the southeast corner of the lot's entrance however an associated fill line could not be detected. Two small metallic anomalies were detected on opposite sides of the fence, approximately eight feet west of the fill port. These anomalies did not exhibit the parabolic reflections characteristic of USTs. Two linear GPR anomalies were detected at a former natural gas valve in the sidewalk, but these anomalies were not observed to continue into the lot.

In Lot 42, a suspected electric conduit was traced in the vicinity of PEBS#1 and PEBS#2. The main electric service was determined to enter at the northwest corner of the building. No other anomalies were detected.

The final geophysical survey report is provided as Appendix C.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

During the 2012 RI, Environmental Closures, Inc. completed thirteen test pit excavations between August 27 and 30, 2012 using a backhoe in Lot 22. During the test pits, four endpoint samples were collected at 14 feet below grade. Soil from each test pit was visually classified for soil type, color, grain size and moisture content. Each sample was screened for visual, olfactory and instrumental evidence of contamination (PID meter).

During the 2014 RI, drilling was performed in Lots 22 and 42 by Aquifer Drilling and Testing (ADT) on April 9 and 10, 2014. A total of five soil borings (four of them converted into temporary monitoring wells) were advanced using direct push drilling method to depths varying from 10 to 18 feet below grade.

A summary of the soil boring construction details is included in Table 1. Boring logs were prepared by a geologist are attached in Appendix D. A map showing the location of soil borings and monitor wells is shown in Figure 5. The boring logs include a description of the soil types and non-soil materials; soil screening results from photoionization detector (PID), depth to groundwater, presence of soil mottling, presence of odor, vapors, soil discoloration, and presence of free and/or residual product. The soil was mostly comprised of fill, bedrock and layers of sand, some silt and gravel.

Groundwater Monitoring Well Construction

No monitoring wells were installed during the 2012 RI. Four temporary monitoring wells (MW-1 through MW-4) were installed during the 2014 RI in Lots 22 (MW-1, MW-3 and MW-4) and 42 (MW-2). Construction details are presented in Table 1. Monitoring well locations are shown in Figure 5.

Survey

The temporary monitoring wells were not surveyed.

Water Level Measurement

Water level measurements were conducted with the use of a water level meter. Water level data was measured from land surface and is included in Table 2. A groundwater flow map based on measured depth to water is included as Figure 6.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Sampling equipment was decontaminated by using water and detergent solution between soil boring locations to avoid cross-contamination. All soil samples were stored on ice in a cooler and transported under chain of custody procedures to the laboratory. During the 2012 RI, the laboratory used was York Analytical Laboratories, Inc. (York) and during the 2014 RI, Alpha Analytical (Alpha) was used. Both are NYSDOH ELAP-certified laboratories.

Four soil samples were collected for chemical analysis during the 2012 RI and four soil samples were collected for chemical analysis during the 2014 RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths as well as number of QA/QC samples, are reported in Tables 3 and 4, respectively. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

Groundwater Sampling

No groundwater samples were collected during the 2012 RI. Groundwater sampling during the 2014 RI was performed using a peristaltic pump and dedicated tubing. Sampling equipment was decontaminated by using water and detergent solution to clean the pump between well locations. All groundwater samples were stored on ice in a cooler and transported under chain of custody procedures to Alpha.

Four groundwater samples were collected for chemical analysis during this 2014 RI. Groundwater sample collection data as well as QA/QC samples are reported in Tables 3 and 4, respectively. Sampling logs with information on purging and sampling of groundwater monitoring wells is included in Appendix E. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

During the 2012 RI, four soil vapor probes (SV-1 through SV-4) were installed by ADT with a geoprobe. Soil vapor samples SV-1, SV-2 and SV-3 were collected from a depth of 8 feet below grade and soil vapor SV-4 was collected from a depth of approximately 6 feet below grade. Down-hole drilling equipment was decontaminated between borings with Alconox and water. A steel soil vapor probe attached to polyethylene tubing was inserted at each soil vapor sample location and the annulus around the probe/tubing was filled with sand to a few inches above the probe. Bentonite slurry was then applied to the top of the sand pack to grade surface to isolate the sampling points from ambient air. Samples were collected in Summa canisters that were certified by the laboratory. A tracer gas was used in accordance with NYSDOH protocols to serve as QA/QC device to verify the integrity of the soil vapor probe seal. All soil vapor samples were transported under chain of custody procedures to York.

During the 2014 RI, three soil vapor probes (SV-5 through SV-7) were installed and three soil vapor samples were collected for chemical analysis during this RI. The soil vapor implants were set at 5 feet below grade and were installed using direct push drilling methods. Each temporary implant was constructed with a 6-inch stainless steel screen connected to the inner tubing. The space surrounding the screen zone was filled with clean sand. The soil vapor probes were sealed above the sampling zone with bentonite slurry. Sampling occurred for 2 hours. Samples were collected in Summa canisters that were certified by the laboratory. A tracer gas

was used in accordance with NYSDOH protocols to serve as QA/QC device to verify the integrity of the soil vapor probe seal. All soil vapor samples were transported under chain of custody procedures to Alpha.

Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 3. Soil vapor sampling logs are included in Appendix E. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

Chemical Analysis

Chemical analytical work completed during the 2012 RI has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Mike Burke
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the 2012 RI is NYS ELAP certified and was York Analytical Laboratory
Chemical Analytical Methods	Soil analytical methods: <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010B; • VOCs by EPA Method 8260B; • SVOCs by EPA Method 8270C; • PCBs by EPA Method 8082; Soil vapor analytical methods: <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Chemical analytical work completed during the 2014 RI has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Wendy Shen
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the 2014 RI is NYS ELAP certified and was Alpha Analytical
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 5 to 15. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix F, G and H, respectively.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

Historic urban fill material, predominantly consisting of brown, fine to coarse sand containing various amounts of gravel, boulders, brick, construction and demolition debris and concrete fragments were identified at the Site. The fill layer ranges from approximately 4 to 11 feet deep. Beneath the fill material was tan and brown fine to medium sand with silt, ranging from 5 to 10 feet thick underlain by bedrock. Bedrock, generally consisting of gray mica schist is located approximately 6 to 20 feet below grade.

Hydrogeology

Groundwater was encountered within bedrock. A table of water level data for all monitor wells is included in Table 2. The average depth to groundwater is 8.5 feet and the range in depth is 7 to 10 feet. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 6. Groundwater flow is from east to west toward the Hudson River.

5.2 Soil Chemistry

Soil/fill samples collected during the RI showed zones of petroleum contaminated material exhibiting staining, odor, and/or elevated total VOCs in selected test pits located in the southeastern portion of the Site (Lot 22). However, end point samples (# 1 through 4) collected at 14 ft below grade indicated that no compounds exceeded the NYSDEC Part 375 Restricted Commercial Soil Cleanup Objectives (SCOs).

Soil samples collected from two soil borings in Lot 42 of the Site exhibited concentrations of various SVOCs and metal (barium) exceeding NYSDEC Part 375 Unrestricted Use SCOs as well as Restricted Residential Use SCOs. SVOCs including benzo(a)anthracene, benzo(a)pyrene (maximum of 24,000 µg/kg), benzo(b)fluoranthene (maximum of 29,000 µg/kg), benzo(k)fluoranthene (maximum of 9,300 µg/kg), chrysene (maximum of 26,000 µg/kg), dibenzo(a,h)anthracene (maximum of 3,100 µg/kg), and indeno(1,2,3-cd)pyrene (maximum of 16,000 µg/kg) were detected exceeding Unrestricted Use SCOs in shallow soil (upper 2.5 feet) samples. Highest concentrations were detected one boring, SB-1, indicating a shallow hotspot.

Metals including barium (maximum of 590 mg/kg), lead (maximum of 630 mg/kg), mercury (maximum of 1.8 mg/kg) and zinc (maximum of 490 mg/kg) exceeded Unrestricted Use SCOs. Only barium slightly exceeded Restricted Residential Use SCOs. Pesticides and PCBs were not detected in any soil sample.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 5 through 9. Plate 1 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Track 2 Restricted Commercial SCOs. The majority of the soil in Lot 22 will be excavated to approximately 14 feet below grade, with exception in some areas of the site, where the current basement design shows a 12 to 15-foot setback from each of the adjacent building foundations, with soil below that setback left in place and structurally bridged over via a bench. Based on previous test pits and waste characterization sampling performed during the 2012 RI, soil left behind in this area does not exceed Track 2 Restricted Commercial SCOs with exception of TP4/TP6 where a composite sample was collected from 1.5-13 feet below grade and benzo(a)pyrene exceeded the criteria by 330 µg/kg. Development plans for Lot 42 have not been finalized yet.

During site redevelopment, the one story warehouse on Lot 42 will be demolished. No structures are scheduled to be built on this lot. It is expected that hot spot excavations will be conducted around SB-1 and SB-2.

5.3 Groundwater Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 10 to 14. Exceedances of applicable groundwater standards are shown. Figure 8 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

No groundwater samples were collected during the 2012 RI. Groundwater samples collected during the 2014 RI were compared to NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS). Laboratory analysis of groundwater indicated that some VOCs, SVOCs and metals exceeded the AWQS in some locations. Total VOC concentrations in the wells ranged from 9.8 micrograms per liter (µg/L) in MW-4 to 1,240 µg/L in MW-2. The highest concentrations of VOCs were

identified in MW-2 and included BTEX compounds [benzene (71 µg/L), toluene (99 µg/L), ethylbenzene (91 µg/L), m+p-xylene (360 µg/L) and o-xylene (240 µg/L)] among others. Tetrachloroethene (PCE) was detected in all wells except MW-2 ranging from 5.6 µg/L (in MW-4) to 14 µg/L (in MW-1). SVOCs concentrations did not exceed AWQS in MW-3. All other wells had exceedances slightly above AWQS, mostly from polycyclic aromatic hydrocarbons (PAHs) such as benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k) fluoranthene, chrysene and indeno[1,2,3-cd]pyrene with a maximum concentration of 3.8 µg/L of benzo(b)fluoranthene in MW-2. In addition, naphthalene (70 µg/L) and phenol (52 µg/L) were detected in MW-2 at concentrations above AWQS. Metals exceedances were identified in all wells and comprised mostly of iron, manganese, selenium and sodium. MW-2 also had exceedances of lead (879 µg/L) and mercury (2.6 µg/L). PCBs and Pesticides were not detected in any of the samples.

5.4 Soil Vapor Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 15. Figure 9 shows the location and posts the values for soil vapor samples with detected concentrations.

Soil vapor samples collected were compared to the compounds listed in Vapor Intrusion Matrices in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion. Soil vapor samples collected during the 2012 RI (SV-1 through SV-4) indicated that chlorinated VOCs were present in all samples. Specifically, tetrachloroethene (PCE) ranged from 2,900 micrograms per cubic meter (µg/m³) in SV-1 to 94,000 µg/m³ in SV-3. Other compounds such as trichloroethylene (TCE) and cis-1,2-dichloroethylene were detected in all samples except SV-1 at concentrations ranging from 87 µg/m³ to 1,700 µg/m³. Soil vapor samples collected during the 2014 RI (SV-5 through SV-7) indicated petroleum and chlorinated related VOCs were present at low concentrations. Petroleum related VOCs included BTEX compounds among others. MTBE was not detected in any of the samples. Chlorinated VOCs included PCE, TCE and methylene chloride. PCE ranged from 60 µg/m³ in SV-7 to 608 µg/m³ in SV-6. TCE was detected in SV-6 only at concentration of 4.3 µg/m³. Methylene chloride concentrations were around 17 µg/m³ in SV-6

and SV-7. The data collected during the 2012 RI indicated that chlorinated VOCs levels were significantly higher (one to two orders of magnitude) than the data collected during the 2014 RI.

The planned future use of the Site will include a vapor barrier for water proofing purposes. In addition, the soil excavation down to approximately 14 feet below grade will result in the removal of all potential source material that could generate soil vapor in this area, with exception in some areas of the site, where the current basement design shows a 12 to 15-foot setback from each of the adjacent building foundations, with soil below that setback left in place and structurally bridged over via a bench. In these locations, a sub-slab depressurization system (SSDS) will be installed to address remaining soil vapor concerns.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

Table 15. Summary of Volatile Organic Compounds in Soil Vapor, 509 West 38th Street/512 West 39th Street, New York, New York

Parameter (Concentrations in ug/m ³)	Sample Designation:	AA-1	SV-1	SV-2	SV-3	SV-4	SV-5	SV-6	SV-7
	Sample Date:	8/29/2012	8/29/2012	8/29/2012	8/29/2012	8/29/2012	4/11/2014	4/11/2014	4/11/2014
Vinyl acetate		0.036 U	1.2 U	1.1 U	1.2 U	1.1 U	NA	NA	NA
Vinyl chloride		0.042 U	1.4 U	1.2 U	1.4 U	1.3 U	13.4 U	1.71 U	0.511 U

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

D - result is from an analysis that required a dilution

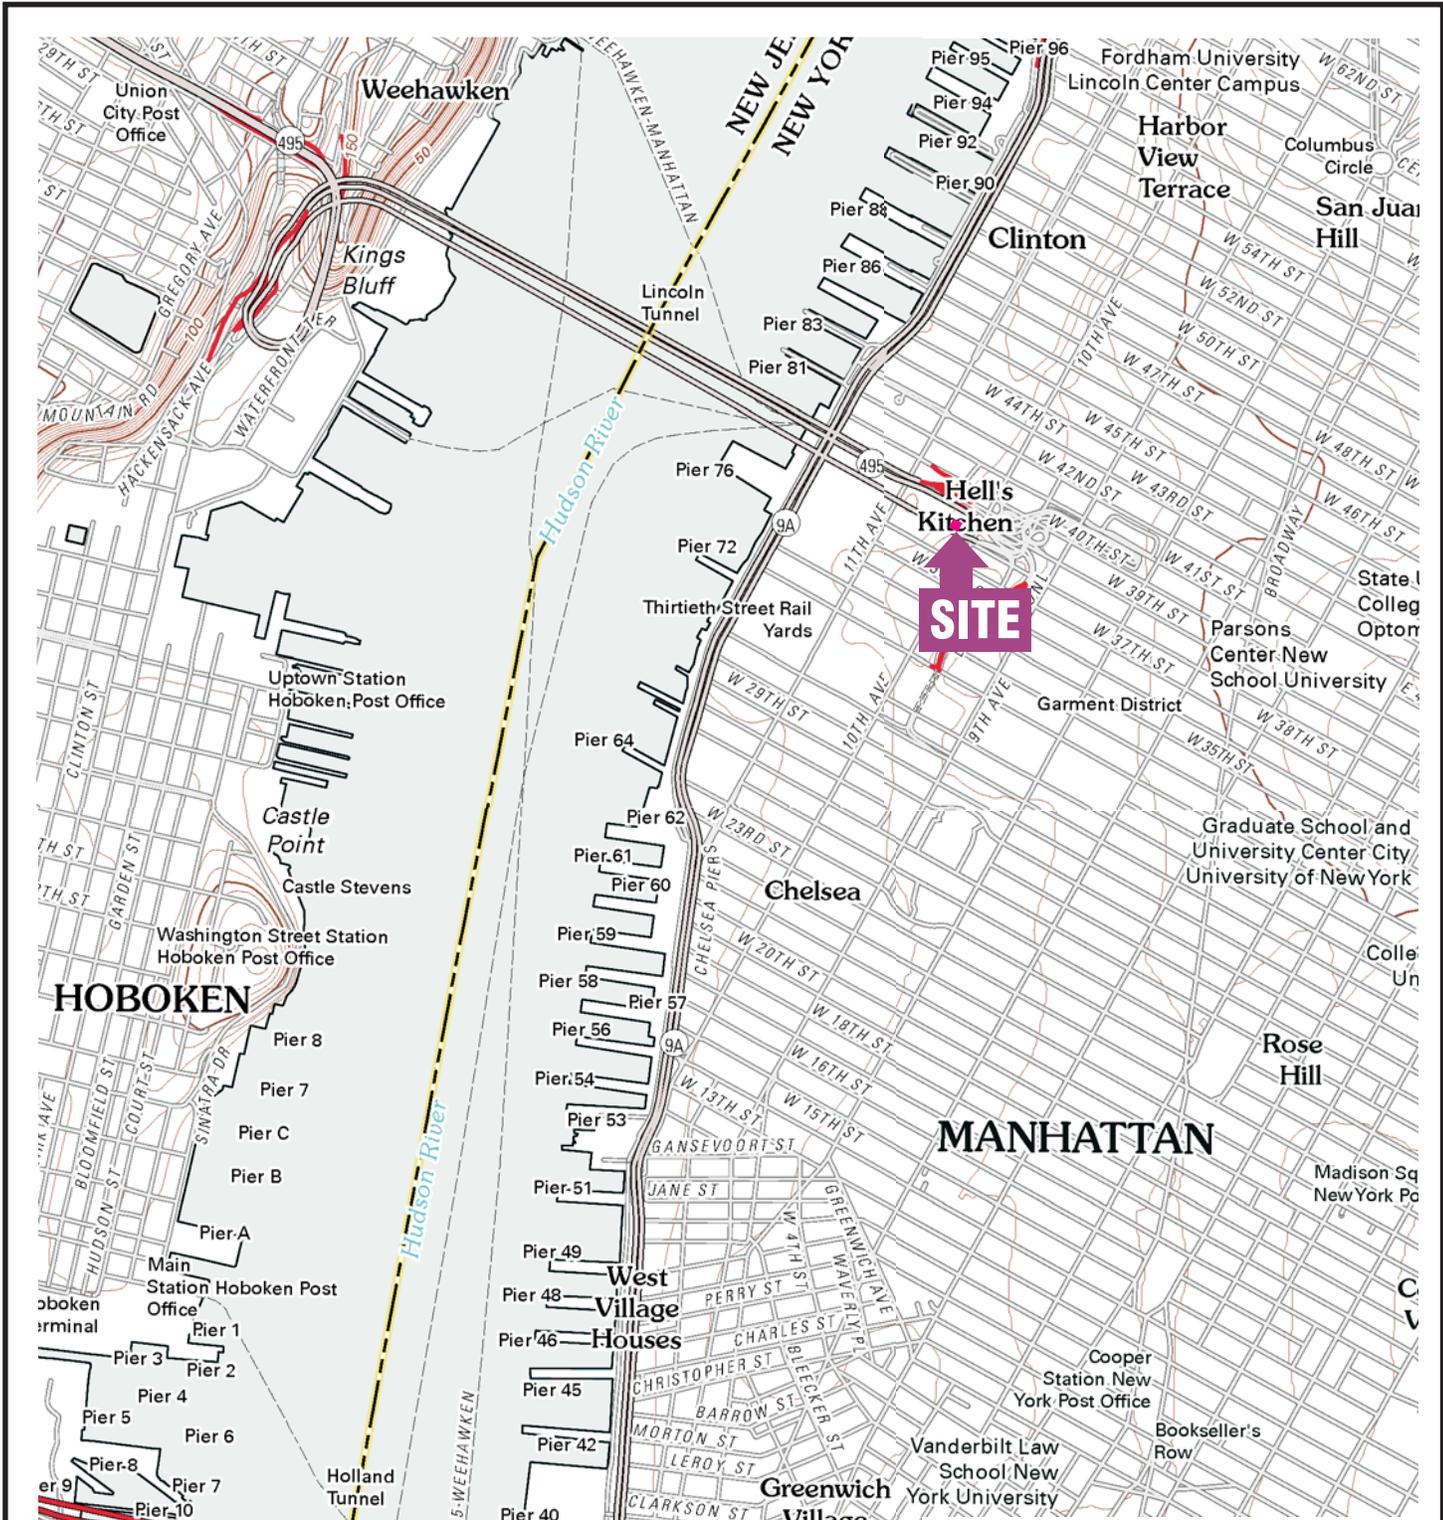

B - analyte found in the analysis batch blank

ug/m³ - Micrograms per cubic meter

Bold data indicates that parameter was detected

New York, NY 10017

**RE: Phase I Environmental Site Assessment
509 West 39th Street
New York, NY**

Dear Mr. Bank:

LandAmerica Assessment Corporation (LAC) is pleased to provide the results of our Phase I Environmental Site Assessment of the 509 West 39th Street property located in New York, NY. This assessment was authorized on June 20, 2007, and performed in general accordance with ASTM E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to Hudson Yards 38, LLC. If you have any questions concerning this report, or if we can assist you in any other matter, please contact Christopher Schmidt at 732-961-1061.

Very truly yours,

LANDAMERICA ASSESSMENT CORPORATION

EXECUTIVE SUMMARY

LandAmerica Assessment Corporation (LAC) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations set forth by Hudson Yards 38, LLC for the 509 West 39th Street located at 509 West 39th Street, New York, NY 10001 (the “Property”).

The Phase I Environmental Site Assessment is designed to provide Hudson Yards 38, LLC with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the property. This assessment was conducted utilizing generally accepted ESA industry standards in accordance with ASTM E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

The Property is currently developed for commercial use. A three-story commercial building that was constructed in 1903 and is currently utilized for commercial purposes as a recording studio. The footprint of the three story building entirely occupies the Property area with the exception of concrete sidewalk along West 38th Street. The eastern portion of the Property building consists of slab on-grade drive-in automobile garage space. A basement level located below the remaining portion of the Property consists of storage rooms and mechanical equipment rooms. The building provides two tenant spaces that are currently occupied by a recording studio and recording equipment rental operation.

The site is situated within an urban area of west side section of Manhattan, New York. The commercial building is bound to the north by commercial building associated with automobile repair and body repair; to the east by commercial building occupied by a DHL sorting facility; to the south by West 38th Street followed by a vacant parcel that is currently being developed; and to the west by a single story commercial building occupied by an automobile repair garage. Based upon topographic map interpretation and site observations, groundwater flow beneath the site is inferred to be in a westerly direction toward Hudson River.

LAC obtained and reviewed a database report from Environmental Data Resources (EDR) for the Property and the surrounding area. Review of the database indicated that the Property is listed as a LUST, AST, RCRA hazardous waste generator and a Dry Cleaner. According to the database, a LUST incident (Spill # 9505232) was reported at the Property in July 1985 due to a tank overfill that caused approximately 150 gallons of #2 heating oil to be spilled in to the sewer system. The Spill was subsequently cleaned, resolved and considered closed by the NYSDEC. Based on the closed status of the LUST incident no further investigation is currently recommended.

The database also identified the Property as a Dry Cleaner and RCRA hazardous waste generator. Manhattan Cleaners (Dry Cleaners) and NY Valet Inc (RCRA hazardous waste generator) former tenants at the Property are identified on the database. According to information obtained from the site contact and historical sources, the Property building was previously occupied by a commercial dry cleaning operation until the late 1990s. Review of the New York City Building Department online information indicated that a permit was issued at the Property for the installation of the dry cleaning equipment at the Property in 1992. The building was renovated in 2001-2002 and converted into a commercial recording studio by the current occupant of the Property. No evidence of the historic dry cleaning operations was observed within the Property at the time of the site visit. Review of the database indicated that no RCRA violations are listed at the Property. However, no other information pertaining to the historical dry cleaning operation at the Property was readily available to LAC. The historical use of hazardous chemicals associated with the dry cleaning operations at the Property and lack of information pertaining to the historic dry cleaning operation at the Property represent an environmental concern to the Property.

According to the database, the Property is listed as an Aboveground Storage Tank facility. Review of the database indicated that the facility consists of one 275 gallon aboveground storage tank that was reportedly installed at the Property in 1998 and is listed as temporarily out of service. No evidence of the AST was observed at the time of the site visit. According to information provided by the site contact, the Property building was entirely renovated in 2001-02 and all previous mechanical equipment was removed from the Property.

Based on the database report, no upgradient sites were identified as potential concerns to the Property. LAC did identify on CERCLIS-NFRAP, four RCRA hazardous waste generators, three State Landfills, ninety LUST, four UST, two VCP and fourteen Spills sites located within the prescribed search radii. All of the sites identified were either cross or downgradient of the Property and therefore not considered to be a Recognized Environmental Conditions (REC).

Conclusions

LAC has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of 509 West 39th Street, New York, NY, the Property. Any exceptions to or deletions from this practice are described in Section 1.4 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the Property, except for the following:

- According to information obtained from the site contact and historical sources, the Property building was previously occupied by a commercial dry cleaning operation until the late 1990s. The building was renovated in 2001-2002 and converted into a commercial recording studio by the current occupant of the Property. No evidence of the historic dry cleaning operations was observed within the Property at the time of the site visit. Review of the database indicated that no RCRA violations are listed at the Property. LAC was provided with a copy of a Limited Phase II Environmental Site Assessment by LAW Environmental conducted on the Property and dated June 5, 1998. Concentrations of tetrachloroethene were detected in each of the samples above the minimum detection limit, but below the NY Soil Clean-up objectives. Several of the SVOC concentrations exceed the NYSDEC Star TCLP guidance values. LAW recommended further assessment at the site to further define the extent of soil impact, and the potential impact to ground water. LAC was provided with a Subsurface Investigation Report prepared by Soil Mechanics Environmental Services dated September 10, 1998. Detected concentrations of some PAH constituents exceed current applicable regulatory guidelines in both borings. The Soil Mechanics report concluded that the detected concentrations of targeted analytical parameters do not represent a significant environmental to the underlying groundwater and under its present state (i.e., encapsulated by a concrete slab), to Human Health since potential exposure pathways are limited. However, the known presence of soil contamination at the Property represents a Recognized Environmental Condition (REC).
- At the time of the site visit, LAC identified the presence of a suspect fill cap located in front of the building on the eastern portion in front of the automobile garage area of the building. Review of historical information indicated that oil fired boiler permits were issued at the Property in 1938 and 1957. Additionally, review of the 1950 historical Sanborn Map identified the presence of a boiler room within the automobile garage space. The review of the database also indicated that a LUST incident was reported due to tank overfill in 1995 at the Property. Based on the presence of the suspect fill cap observed at the Property and other available information, the Property previously consisted of a heating oil storage tank. It is likely that the heating oil tank is buried in the vicinity of the automobile garage (location of the suspect fill cap and the historic boiler room) at the Property. However, no information was available to indicate that the previous heating oil storage tank has been properly removed from the Property. The lack of information pertaining to the proper closure of the suspect UST represents a recognized environmental condition at the Property.

- Based on the age of the building (1903), it is suspected that ACM may be present within areas of the building not accessed during the site reconnaissance including pipe chases, plenum spaces, and support columns. ACM may be present within these spaces as they are not likely to have been disturbed during the building renovations conducted in 2001-02.

Suspect ACM identified at the Property include friable ceiling tiles and non-friable drywall-joint compound, wallboard assemblies, resilient floor finishes, and roofing components that may contain asbestos. The identified suspect ACM was generally observed to be in good condition with a low potential for disturbance, and represents no hazard unless cut, sawn, or broken. Accordingly, no samples were obtained of these materials as part of this assessment.

This assessment has revealed no other evidence of recognized environmental conditions or associated issues in connection with the Property.

Recommendations

Based on the findings of this ESA, LAC recommends the following:

- Based on information collected during this assessment, it is our opinion that a reportable release has occurred at the subject site and the results of this assessment should be reported to the NYSDEC. The need for further assessment and/or remediation will be made by the NYSDEC after a review of the assessment findings.
- Additional information pertaining to the former heating oil should be obtained to confirm that the heating was properly removed from the Property in accordance to all applicable regulations.
- LAC recommends developing and implementing an asbestos Operations & Maintenance Program for the property. According to the United States Environmental Protection Agency (EPA), ACM and suspect ACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

The following table summarizes the findings of the significant elements of this investigation.

Assessment Component	Acceptable	Routine Solution	Phase II	Estimated Cost	Reference Section
Historical Review			X(a)	Unknown	4.4
On-site Operations	X				5.3 / 5.4
Hazardous Materials	X				5.5.1
Waste Generation	X				5.5.1.2
PCBs	X				5.5.3
Asbestos		X(c)		\$500	5.5.10
Lead in Drinking Water	X				5.5.8
Storage Tanks			X(b)	0-\$4,000	5.5.6
Surface Areas	X				4.2.2
Regulatory Database Review	X				4.1

Assessment Component	Acceptable	Routine Solution	Phase II	Estimated Cost	Reference Section
Adjoining Properties	X				2.5, 4.5

- (a) Based on information collected during this assessment, it is our opinion that a reportable release has occurred at the subject site and the results of this assessment should be reported to the NYSDEC. The need for further assessment and/or remediation will be made by the NYSDEC after a review of the assessment findings.
- (b) Additional information pertaining to the former heating oil should be obtained to confirm that the heating was properly removed from the Property in accordance to all applicable regulations.
- (c) LAC recommends developing and implementing an asbestos Operations & Maintenance Program for the property

1.0 INTRODUCTION

LandAmerica Assessment Corporation (LAC) was retained by Hudson Yards 38, LLC to conduct a Phase I Environmental Site Assessment (ESA) of the 509 West 39th Street located at 509 West 39th Street, New York, NY (the Property). The protocol used for this assessment is in general conformance with ASTM E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

On July 11, 2007, Ramesh Challapalli, a representative of LAC, conducted a site reconnaissance to assess the possible presence of petroleum products and hazardous materials at the Property. LAC's investigation included a review of aerial photographs, a reconnaissance of adjacent properties, background research, and a review of available local, state, and federal regulatory records regarding the presence of petroleum products and/or hazardous materials at the Property.

LAC contracted Environmental Data Resource (EDR) of Milford, Connecticut, to perform a computer database search for local, state, and Federal regulatory records pertaining to environmental concerns for the Property and properties in the vicinity of the Property (see Section 3.0).

1.1 Purpose

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-05) in connection with the Property. LAC understands that the findings of this study will be used by Hudson Yards 38, LLC to evaluate a pending financial transaction in connection with the Property.

1.2 Detailed Scope of Services

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E 1527-05. LAC warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

No other warranties are implied or expressed.

1.3 Significant Assumptions

There is a possibility that even with the proper application of these methodologies there may exist on the Property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. LAC believes that the information obtained from the record review and the interviews concerning the site is reliable. However, LAC cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all inclusive or comprehensive results, but rather to provide Hudson Yards 38, LLC with information relating to the Property.

1.4 Limitations and Exceptions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM 1527-05. Specific limitations and exceptions to this ESA are more specifically set forth below:

- Due to the extensive urban development history of the area that contains the Property and the small scale of the available photographs, aerial photographs were not reviewed for this assessment. The development history of the Property is given fully by other historic information resources such as Sanborn Fire Insurance Maps and City directories reviewed as part of this ESA as described in Sections 3.3.2 and 3.3.3.

1.5 Special Terms and Conditions

The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the client. No subsurface exploratory drilling or sampling was done under the scope of this work. Unless specifically stated otherwise in the report, no chemical analyses have been performed during the course of this ESA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

1.6 Use Reliance

This assessment was prepared in accordance with an agreement governing the nature, scope, extent and purpose of the work as well as other matters critical to the engagement. At the request of our client, LandAmerica Assessment Corporation has readdressed this report to Hudson Yards 38, LLC. LandAmerica Assessment Corporation has agreed to allow Hudson Yards 38, LLC to rely on the results of this assessment subject to the terms and conditions of the original engagement, included at Appendix F.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The address of the Property is 509 West 39th Street, New York, NY 10001 (the “Property”). The Property is located in a commercial/industrial area of Manhattan. According to the New York City Department of Finance, the assessor’s parcel number of the Property is Block 710 and Lot 22. The legal description is reproduced below:

According to information obtained from the New York City Department of Finance, the Property is identified as a Block 710 and Lot 22. A detailed legal description for the Property is provided in Reel 2956 and Page 581 with the New York City Department of Finance. A copy of the legal description is included as Appendix C-2 of this report.

According to the New York City Department of Finance, the Property is currently owned by Howard International Corporation, who has owned the Property since 1999.

2.2 Site and Vicinity General Characteristics

The Property is located in an commercial and manufacturing area that is characterized by numerous low rise building that appear to be used for commercial automobile repair and service activities or other industrial activities. There are several parcels in the vicinity of the Property that appear to be under redevelopment. The Property is zoned M1-5 Light Manufacturing District by the City of New York.

The Property consists of a rectangular shaped parcel approximately 0.283 acres in size. The Property is designed and used for commercial purposes. The Property consists of three story commercial building that almost entirely occupies the Property area with the exception of concrete sidewalk along West 38th Street. The eastern portion of the Property consists of a garage space that is built slab on grade. The remaining area of the Property building consists of below grade basement that is used for storage purposes and mechanical equipment rooms. A portion of the third floor roof/ceiling is elevated higher than rest of the building to facilitate the operations of the recording studio. A single hydraulic elevator services the Property building.

Access to the street level automobile garage within the Property is provided from West 38th Street located to the south of the Property. Storm water drains located along the street curbs collect surface runoff and discharge to the municipal storm water system. No other structures or significant surface features were noted on the Property at the time of the reconnaissance.

2.3 Current Use of the Property

At the present time, the Property is with a three story commercial building occupied by two tenants that include Legacy Studios and Dream Higher Equipment Rental.

According to New York City Department of Planning the Property is zoned M1-5 Light Manufacturing District. The occupancy at the time of the site reconnaissance was reported to be 100 percent. Based on the information reviewed during the preparation of this report and the

observations made during the reconnaissance of the Property, the tenant spaces are currently occupied by the tenants and activities identified in the table below:

SITE OCCUPANTS		
Unit	Tenant	Operation
1	Legacy Recording	A recording studio that occupies that majority of the Property building.
2	Dream Higher Equipment Rental	A audio equipment rental operation that occupies a small portion of the Property for warehouse and storage space.

2.4 Description of Site Improvements

The Subject building is constructed of masonry bearing, steel and wood framed construction with concrete, masonry and brick foundations. The building has a below grade basement level. The building exteriors are finished with unpainted masonry brick veneer. The interior walls are comprised of painted plaster and gypsum wallboard and the ceilings with a smooth plaster finish. The floors are covered with a combination of wood plank flooring, vinyl tiles and ceramic tiles in the bathrooms.

Significant renovation at the Property reportedly occurred in 2001-02 when most of the interior space was gut renovated for use as a commercial recording studio.

The New York City water system supplies drinking water to the Property from the municipal distribution system. Sanitary discharges on the subject site are discharged into the municipal sanitary sewer system. The subject site area is serviced by the New York City Wastewater Treatment facility.

The Property building is heated and air-conditioned gas-fired units located on the roof. Additional ceiling mounted electric/gas fired heaters are provided in several areas of the Property. Hot water is provided by gas and electric fired hot water heaters located in the vicinity of the restrooms located throughout the Property. Electricity and gas is provided to the Property by Con Edison.

2.5 Current Use of Adjoining Properties

During the vicinity reconnaissance, LAC observed the following land use on properties in the immediate vicinity of the Property.

North: The adjoining properties to the north consist of single story commercial buildings used for automobile repair and maintenance shops (514 West 39th Street). This facility is listed as a registered AST facility and further discussed in Section 4.1 of this report.

South: The south side of the Property is bound by West 38th Street followed by a vacant parcel that is currently under redevelopment.

East: The east side of the Property is bound by a commercial building that appears to be used as a DHL Facility (501 10th Avenue). This facility is listed as UST facility and further discussed in Section 4.1 of this report.

West: The west side of the Property is bound by a single story commercial building occupied by an automobile repair shop (519 West 38th Street).

3.0 USER PROVIDED INFORMATION

Pursuant to ASTM E 1527-05, LAC requested the following site information from Twining Properties (User of this report) and from the Key Site Manager. The Key Site Manager was assigned by Twining Properties.

3.1 Title Records

LAC requested title records from the User and Key Site Manager; however, title records were not available at the Property and were not provided to LAC for review.

3.2 Environmental Liens or Activity and Use Limitation

LAC requested information from the User and Key Site Manager regarding knowledge of environmental liens, activity and use limitations for the Property. The site contact was not aware of any environmental liens associated with the Property. In addition, the site contact had no knowledge of any use or activity limitations.

3.3 Specialized Knowledge

LAC inquired with the User and Key Site Manager regarding any specialized knowledge of environmental conditions associated with the Property. The User and Key Site Manager were not aware of any environmental conditions associated with the Property.

3.4 Commonly Known or Reasonably Ascertainable Information

LAC inquired with the User and Key Site Manager regarding any commonly known or *reasonably ascertainable* information within the local community about the Property that is material to *recognized environmental conditions* in connection with the Property.

3.5 Valuation Reduction for Environmental Issues

LAC inquired with the User and Key Site Manager regarding any knowledge of reductions in property value due to environmental issues. The site contact was not aware of any valuation reductions associated with the Property.

3.6 Owner, Property Manager, and Occupant Information

The following information regarding the Owner, Property Manager and Occupants was provided by the User and Key Site Manager.

<i>Property Owner:</i>	Howard International Corporation
<i>Property Manager:</i>	Mr. Simon Andrews
<i>Occupants:</i>	Legacy Recording and Dream Higher Equipment Rental

3.7 Reason for Performing Phase I ESA

The purpose of this ESA was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-05) in connection with the Property. This ESA was also performed to permit the *User* to satisfy one of the requirements to qualify for the *innocent landowner*, *contiguous property owner*, or *bona fide prospective purchaser* limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the “*landowner liability protections*,” or “*LLPs*”). ASTM Standard E-1527-05 constitutes “*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice” as defined at 42 U.S.C. §9601(35)(B).

LAC understands that the findings of this study will be used by Hudson Yards 38, LLC to evaluate a pending financial transaction in connection with the Property.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

Information from standard Federal and state environmental record sources was provided through EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/-300 feet.

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the unmappables (“orphan sites”) section within the EDR report. A review of the unmappable facilities indicated that none of these facilities are within the ASTM minimum search distance from the Property.

Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the Property, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the Property from the listed facilities. Please refer to Appendix C-1 for a complete listing.

Federal NPL

The National Priorities List (NPL) is the Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program.

The Property is not listed as a NPL facility. No NPL sites are located within one mile of the Property.

Federal Delisted NPL Sites

The NPL Delisted Sites are sites previously on the NPL list which have been remediated and have been removed from the EPA’s priority list.

The Property is not listed as a Delisted NPL facility. No Delisted NPL sites are located within one half mile of the Property.

Federal CERCLIS List

The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

The Property is not listed as a CERCLIS facility. No CERCLIS sites are listed within one-half mile of the Property.

Federal CERCLIS NFRAP Sites List

The CERCLIS No Further Remedial Action Planned (NFRAP) List is a compilation of sites that the EPA has investigated, and has determined that the facility does not pose a threat to human health or the environment, under the CERCLA framework.

The Property is not listed as a CERCLIS-NFRAP facility. The following one (1) CERCLIS-NFRAP site is listed within one half mile of the Property:

- Manhattan General Mail Facility West 29th Street and 9th Avenue is located approximately 2585 feet to the south of the Property. The facility is listed as a NFRAP (No Further Action Planned) site and is located at cross hydraulic gradient location relative to the Property. Based on the distance, cross hydraulic gradient and regulatory status, this facility represents a low potential environmental concern.

Federal Resource Conservation and Recovery Act (RCRA) CORRACTS Facilities List

The EPA Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Treatment, Storage and Disposal (TSD) database is a compilation by the EPA of reporting facilities that treat, store or dispose of hazardous waste. The CORRACTS database is the EPA's list of treatment storage or disposal facilities subject to corrective action under RCRA.

The Property is not listed as a RCRA CORRACTS TSD facility. No RCRA CORRACTS TSD facilities are listed within one mile of the Property.

Federal Resource Conservation and Recovery Act (RCRA) Non-CORRACTS TSD Facilities List

The RCRA TSD database is a compilation by the EPA of reporting facilities that treat, store or dispose of hazardous waste.

The Property is not listed as a RCRA-TSD facility. No RCRA TSD sites are listed within one-half mile of the Property.

Federal RCRA Generator List

The RCRA program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste.

The Property is listed as a RCRA facility. Manhattan Cleaners (Dry Cleaners) and NY Valet Inc (RCRA hazardous waste generator) former tenants at the Property are identified on the database. According to information obtained from the site contact and historical sources, the Property building was previously occupied by a commercial dry cleaning operation until the late 1990s. Review of the New York City Building Department online information indicated that a permit was issued at the Property for the installation of the dry cleaning equipment at the Property in 1992. The building was renovated in 2001-2002 and converted into a commercial recording studio by the current occupant of the Property. No evidence of the historic dry cleaning operations was observed within the Property at the time of the site visit. Review of the database indicated that no RCRA violations are listed at the Property. However, no other information pertaining to the historical dry cleaning operation at the

Property was readily available to LAC. The historical use of hazardous chemicals associated with the dry cleaning operations at the Property and lack of information pertaining to the historic dry cleaning operation at the Property represent an environmental concern to the Property.

The following one (1) RCRA Generator facility is listed on the adjacent property:

- The Hertz Corporation 10th Avenue and West 38th Street is located to the adjoining southeast of the Property. Review of the database indicated that no reported RCRA violations are listed at this facility.

Federal Institutional Control/Engineering Control Registries

The Federal Institutional Control/Engineering Control Registries is a database used to record institutional controls, land use restrictions and engineering control requirements on contaminated properties.

No Federal Institutional Control or Engineering Controls were listed for the Property.

Federal Emergency Response Notification System (ERNS)

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported release of oil or hazardous substances.

No ERNS sites were listed on the Property or on the adjacent properties.

State and Tribal Priority List (NPL equivalent)

The New York State Department of Environmental (NYSDEC) maintains a State Priority List, State Hazardous Waste Sites (SHWS) of sites considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment.

The Property is not listed as a SHWS facility. No SHWS sites are listed within one mile of the Property.

State and Tribal CERCLIS-Equivalent List

The NYSDEC maintains a State CERCLIS-equivalent list (SCL) of sites under investigation that could be actually or potentially contaminated and presenting a possible threat to human health and the environment.

The Property is not listed as a State CERCLIS facility. No SCL sites are listed within one-half mile of the Property.

State and Tribal Solid Waste/Landfill Facilities (SWLF)

A database of SWLF is prepared by NYSDEC.

The Property is not listed as a SWLF facility. The following two (2) SWLF facilities are listed within one-half mile of the Property:

- Redball Interior Demolition 625 West 29th Street is located approximately 2583 feet to the southwest of the Property. According to the database, the facility is listed an inactive ‘Transfer Station’ of regulated waste. No reported spills or incidents are listed at this facility.
- Con Edison 12th Avenue/45th Street (Duplicate listing) is located approximately 2323 feet to the north of the Property. According to the database, the facility is listed an inactive ‘Transfer Station’ of regulated waste. No reported Spills or incidents are listed at this facility

State and Tribal Leaking Underground Storage Tank List (LUST)

The NYSDEC compiles lists of all leaks of hazardous substances from underground storage tanks.

The Property is listed as a LUST facility. According to the database, a LUST incident (Spill # 9505232) was reported at the Property in July 1985 due to a tank overflow that caused approximately 150 gallons of #2 heating oil to be spilled in to the sewer system. The Spill was subsequently cleaned, resolved and considered closed by the NYSDEC. Based on the closed status of the LUST incident no further investigation is currently recommended.

A total of ninety LUST sites are listed within one-half mile of the Property. Review of the database indicated eighty-two (82) of the listed facilities are located at least one-quarter mile at a lower or cross hydraulic gradient relative to the Property and represent a low potential environmental concern to the Property. Review of the remaining eight (8) LUST sites indicated that six of the LUST sites were resolved and considered closed by NYSDEC and represents a low potential environmental concern to the Property. The remaining two open LUST sites are identified as follows:

- Hertz Penske-Manhattan 493/7 10th Avenue is located approximately 192 feet to the south of the Property. Review of the database indicated that a tank failure was reported at this facility in December 1989. At the time of the site visit, LAC observed that no buildings or structures existed at this location and the parcel was undergoing redevelopment activities. Review of the database indicated that the operations at this facility had impacted the soil and groundwater condition. The facility is currently undergoing remedial investigation under the NYSDEC oversight. Based on the ongoing remedial investigation no further investigation is recommended.
- Gaseteria 466 10th Avenue is located approximately 549 feet to the south southwest of the Property. The facility is currently undergoing remedial investigation under the NYSDEC oversight. Based on the distance and ongoing remedial investigation no further investigation is recommended.

State and Tribal Underground Storage Tank List (UST)

The NYSDEC compile a list of UST locations.

The Property is listed as an UST facility. According to the database, the Property is listed as an Aboveground Storage Tank facility. Review of the database indicated that the facility consists of one 275 gallon aboveground storage tank that was reportedly installed at the Property in 1998 and is listed as temporarily out of service. No evidence of the AST was observed at the time of the site visit.

According to information provided by the site contact, the Property building was entirely renovated in 2001-02 and all previous mechanical equipment was removed from the Property.

The following two (2) registered UST/AST facilities are listed adjacent to the Property:

- 501 Tenth Avenue is located to the adjoining east side of the Property. According to the database, one 7,000 gallons, one 4,000 gallons and one 3,000 gallon underground gasoline tanks that are currently active. The database also lists one 8000 gallon heating oil UST and three 550 gallon gasoline USTs were removed from this facility in 1994. No reported LUST or Spill incidents are listed at this facility.
- Citywide Auto Repair 514 West 39th Street is located to the north of the Property. According to the database, the facility consists of two 200 gallon aboveground waste oil tanks. No reported LUST or Spill incidents are listed at this facility.

State and Tribal Institutional Control/Engineering Control Registries

The NYSDEC compile a list of Institutional Control and Engineering Controls.

The Property is not listed as having an Institutional Control or Engineering Control.

State and Tribal Voluntary Cleanup Sites

The NYSDEC compiles a list of Voluntary Cleanup Sites.

The Property is not listed as a Voluntary Cleanup Site. Two (2) Voluntary Cleanup Sites are listed within one-half mile of the Property. According to the database, both these facilities are located at least 1272 feet at cross hydraulic gradient relative to the Property that are currently undergoing remedial investigation under the NYSDEC oversight and represent a low potential environmental concern to the Property.

State and Tribal Brownfield Sites

The NYSDEC compile a list of Brownfield Sites.

The Property is not listed as a Brownfield Site. No Brownfield Sites are listed within a half mile of the Property.

4.2 Additional Environmental Record Sources

4.2.1 County Recorder/ Assessor

According to information obtained from the New York City Department of Finance, the Property is identified as a Block 710 and Lot 22. A detailed legal description for the Property is provided in Reel 2956 and Page 581 with the New York City Department of Finance. A copy of the legal description is included as Appendix C-2 of this report. According to the New York City Department of Finance, the Property is currently owned by Howard International Corporation, who has owned the Property since 1999.

4.2.2 Fire/Police Officials

The NYCFD maintains information pertaining to petroleum bulk storage tanks. A formal request has been forwarded to the NYCFD to obtain information concerning the Site. No information was received by LAC at the time of the completion of this report. Any information received from the department will be forwarded to the client under a separate cover.

The Police Department does not keep records of hazardous materials.

4.2.3 Building Department

Records from the New York City Department of Buildings were reviewed via the BIS website for evidence indicating the developmental history of the Property, and for the presence of documentation relative to USTs or other environmental conditions at the Property. According to information obtained from the review, New Building Permit was issued at the Property in 1903. Oil burner permit applications were identified for the Property dating from 1938 and 1957 indicating the historic use of fuel oil on the Property for heating purposes. In addition, a permit application was identified dating from 1992 that indicated that dry cleaning equipment was installed at the Property. The file review also indicated that two open ECB violations currently exist at the Property. Review of the documents indicate that the two violations were issued (in December 2006 and April 2007) for ‘Failure to maintain the building exterior’.

4.2.4 Other Agencies

The NYCDOH, Bureau of Environmental Investigations (BEI) maintains files of health related environmental incidents in the City of New York. These incidents may include spills of hazardous chemicals, citizen's complaints regarding asbestos issues, or reports of chemical odors or fumes. NYCDOH information concerning the Site was requested in a formal letter. No information was received at the time this report was issued. Upon receipt of this information, LAC will review the response and, if conclusions and recommendations contained within this report are affected, will submit revised recommendations to the client.

4.3 Physical Setting Sources

4.3.1 Topography

The United States Geological Survey (USGS), Central Park, NY-NJ Quadrangle 7.5 minute series topographic map was reviewed for this ESA. This map was published by the USGS in 1995. According to the contour lines on the topographic map, the Property is located at approximately 30 feet above mean sea level (MSL). The contour lines indicate that the area immediately surrounding the Property is generally flat; however, overall topography of the area slopes to the southwest. The Hudson River is located approximately 1500 feet to the west of the Property.

4.3.2 Soils/Geology

The United States Department of Agriculture (USDA) Soil Conservation Service classifies the surficial soils (upper 5 feet) in the vicinity of the property as Urban Land.

Urban Land refers to soils that have been altered by urban development such as buildings and streets, where at least eighty-five (85) percent of the surface is covered with asphalt, concrete, or other impervious building material. Typically, these soils have been mixed with other materials, such as brick and concrete, and characteristics can only be determined by on-site investigation. The property is underlain by approximately 20 to 40 feet of unconsolidated clays, silts, sands, and gravels, based on a report published by the USGS. These materials were deposited directly by glacial activity as glacial till or as glaciofluvial deposits. Bedrock underlies the unconsolidated material and consists of a coarsely crystalline material, which has been subjected to a high degree of metamorphism and Precambrian deformation.

4.3.3 Hydrology

No site-specific data is available regarding groundwater flow direction, depth to water or hydraulic connectivity at the property. Glacial till and outwash deposit sediments overlie the Manhattan Schist, the uppermost bedrock unit within the region. The surface elevation of bedrock decreases to the southwest of the region. It is generally inferred that the depth to the uppermost aquifer is greater than 30 feet at the surface of the bedrock/sediment interface. However, estimated groundwater levels and/or flow direction(s) may vary due to seasonal fluctuations in precipitation, local usage demands, soil and bedrock geology, production wells, underground structures, dewatering operations, and other factors beyond the scope of this study.

The nearest surface water in the vicinity of the Property is the Hudson River located approximately ½ mile to the west of the Property. No settling ponds, lagoons, surface impoundments, wetlands or natural catchbasins were observed at the Property during this investigation.

4.3.4 Flood Zone Information

During municipal research, please review FEMA FIRM maps and report the following:

A review of the Flood Insurance Rate Maps, published by the Federal Emergency Management Agency, was performed. According to Panel Number 36049 70039B, dated July 5th 1994, the Property is located in Flood Zone X. Flood Zone X regions consist of areas of minimal flooding. The distance to the nearest 100-year flood plain is approximately 1500 feet to the west of the Property.

4.3.5 Oil and Gas Exploration

There were no oil or gas wells observed at the Property and wells were not depicted on the USGS Topographic Map.

4.4 Historical Use Information On The Property

Due to the extensive urban development history of the area that contains the Property and the small scale of the available photographs, aerial photographs were not reviewed for this assessment. The development history of the Property is given fully by other historic information resources such as Sanborn Fire Insurance Maps and City directories reviewed as part of this ESA as described in Sections 3.3.2 and 3.3.3.

The historical development information for the Property was obtained from the review of readily available historical Sanborn Maps, historical city directories and local regulatory agency records. According to information obtained from the local regulatory agency records (and correlated to the historical Sanborn Maps) the Property building was initially constructed in 1903. Prior to the construction of the current three story commercial structure, the Property was occupied by multiple three story buildings that were constructed at the Property prior to 1890. The historical city directories review indicated that the Property was used historically used for various commercial purposes that included baking (in the 1920s), dyeing (1940s) and other commercial services. A commercial dry cleaner operated at the Property from at least the early 1992 to late 1990s. The Property was reportedly entirely renovated for use as a recording studio by the current tenant in 2001-02. No evidence of the historic dry cleaning operations was observed within the Property at the time of the site visit. Review of the database indicated that no RCRA violations are listed at the Property. However, no other information pertaining to the historical dry cleaning operation at the Property was readily available to LAC. The historical use of hazardous chemicals associated with the dry cleaning operations at the Property and lack of information pertaining to the historic dry cleaning operation at the Property represent an environmental concern to the Property.

4.4.1 Aerial Photographs

Due to the extensive urban development history of the area that contains the Property and the small scale of the available photographs, aerial photographs were not reviewed for this assessment. The development history of the Property is given fully by other historic information resources such as Sanborn Fire Insurance Maps and City directories reviewed as part of this ESA as described in Sections 3.3.2 and 3.3.3.

4.4.2 Fire Insurance Maps

Sanborn Fire Insurance maps dated 1890, 1899, 1911, 1930, 1950 1969, 1976, 1979, 1980, 1983, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995 and 1996 were available for review, and were provided by EDR/Sanborn. Copies of the maps are included in Appendix B-3.

Date: 1890

Description: This map depicts the Property occupied by multiple three story structure with garages/stable or storage sheds located to the rear of the Property. The surrounding properties are also occupied by similar structures with several of them used as stables.

Date: 1899

Description: The Property and majority of the surrounding area appears similar to that observed in the previous map.

Date: 1911

Description: The Property is developed with a three story commercial building that appears similar to the structure currently located at the Property. The structure at the Property is reportedly occupied by 'Franco-American Baking Co.,' and appears to consists of several ovens located along the northern and western side of the Property. The surrounding area appears to be developed with three to five story structures that appear to be used for residential as well as commercial purposes. The adjoining property to the

west is occupied by a commercial facility that appears to be used for ‘Storage of Theatrical and Scenery Repairing’.

Date: 1930
Description: The Property and majority of the surrounding area appears similar to that observed in the previous map. A large vacant parcel is located to the adjoining south side of West 38th Street. The remaining area of the surrounding area appears similar to that observed in the previous map.

Date: 1950
Description: The Property appears similar to that observed in the previous map. A boiler room is depicted on the eastern portion of the Property. The adjoining parcel to the west of the Property is depicted as a vacant parcel. A large automobile repair garage is depicted to the adjoining east side of the Property. The facility reportedly consisted of 15 550 gallon gasoline USTs and was also used as a service station. The adjoining parcels to the south are developed with commercial buildings that appear to be mostly used as “Motor Freight Stations”.

Date: 1976 and 1979
Description: The Property is identified as a “warehouse” in this map. The surrounding area is developed with commercial buildings that appear to be mostly used for automobile repair and service activities.

Date: 1980, 1983, 1985, 1987 and 1988
Description: The Property and its surrounding area appear similar to that observed in the previous map.

Date: 1991, 1992, 1993, 1994, 1995 and 1996
Description: The Property and its surrounding area appear similar to that observed in the previous map.

4.4.3 City Directories

Historical City directories were provided by EDR/City Directories for past names and business that were listed for the Property and adjoining properties. The findings are presented in the following table:

YEAR	ON-SITE	ADJOINING PROPERTIES
1923	Franco-American Baking Co., Anthony Hamilton Pres,	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial
1927	Franco-American Baking Co., Kick Baking	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial
1931, 1934,	Address not listed	West – Multiple commercial

YEAR	ON-SITE	ADJOINING PROPERTIES
1938		North-Multiple commercial East- Multiple commercial South-Multiple commercial
1942	Metro Dyeing and Finishing Co., Miseo John R Co Real Estate & Insurance	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial
1947, 1950, 1956	Metro Dyeing and Finishing Co., Miseo John R	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial
1958	Bernie Paper Co., Biderman Paper Co., Collin Paper Co., multiple commercial listings.	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial
1963	Glucker Emil Co., Paper & Twine, Golf Paper & Twine, King Box Company	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial
1968 and 1973	Glucker Emil Co., Paper & Twine, Hamilton Paper & Twine, King Box Company; SK Paper Co.,	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial
1978, 1983 and 1988,	Basic Leasing Cop., Contract Ice;	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial
1993	Manhattan Cleaners, Stewart Residential Maintenance Service	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial
1998 and 2000	Address not listed	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial

YEAR	ON-SITE	ADJOINING PROPERTIES
1978	Grossfield Vicki, Gyro Surplus Corp., Lerner Dan, Linton James; Multiple listings	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial
2000	Broadway Productions, McNeill Lloyd G., Noho Lock and Alarm Gallery, Phillips Timothy, Flash Jack, Yenta Gram; Multiple residential listings	West – Multiple commercial North-Multiple commercial East- Multiple commercial South-Multiple commercial

The Property and its surrounding properties appear to have been used for commercial and manufacturing purposes since the early 1920s. The historical city directories review indicated that the Property was used historically used for various commercial purposes that included baking (in the 1920s), dyeing (1940s) and other commercial services. A commercial dry cleaner operated at the Property from at least the early 1992 to late 1990s. The Property was reportedly entirely renovated for use as a recording studio by the current tenant in 2001-02. No evidence of the historic dry cleaning operations was observed within the Property at the time of the site visit. Review of the database indicated that no RCRA violations are listed at the Property. However, no other information pertaining to the historical dry cleaning operation at the Property was readily available to LAC. The historical use of hazardous chemicals associated with the dry cleaning operations at the Property and lack of information pertaining to the historic dry cleaning operation at the Property represent an environmental concern to the Property.

4.4.4 Historical Topographic Maps

LAC obtained historical topographic maps from readily accessible website sources (historical.maptech.com). Copies of the historical topographic maps are included in Appendix B-4.

Date: 1891

Description: The topographic map depicts the Property and its surrounding area as a highly developed urban area. The map provides limited detail for the Property.

Date: 1898

Description: The topographic map depicts the Property and its surrounding area as a highly developed urban area. The map provides limited detail for the Property.

Date: 1900

Description: The topographic map depicts the Property and its surrounding area as a highly developed urban area. The map provides limited detail for the Property

Date: 1967
Description: The topographic map depicts the Property and its surrounding area as a highly developed urban area. The street appears similar to that observed at the current time.

Date: 1995
Description: The Property and its surrounding area appears similar to that observed in the previous map.

4.4.5 Additional Historical Record Sources

Property Tax Files: According to the New York City Department of Finance, the Property is currently owned by Howard International Corporation, who has owned the Property since 1999.

4.4.6 Prior Assessment Reports

LAC was provided with a copy of a Limited Phase II Environmental Site Assessment by LAW Environmental conducted on the Property and dated June 5, 1998. According to this report, a subsurface investigation was conducted to address the potential for releases of fuel oil and/or dry cleaning solvents at the Property. LAW's field activities consisted of the advancement of two hand auger borings beneath the floor slab of the building and the collection of three soil samples. Concentrations of tetrachloroethene was detected in each of the samples above the minimum detection limit, but below the NY Soil Clean-up objectives. Several of the SVOC concentrations exceed the NYSDEC Star TCLP guidance values. LAW's Phase II investigation indicated impact to soil beneath the basement floor from apparent releases of fuel oil and dry cleaning solvents on the site. Based on this initial information, LAW recommended further assessment at the site to further define the extent of soil impact, and the potential impact to ground water. LAC was provided with a Subsurface Investigation Report prepared by Soil Mechanics Environmental Services dated September 10, 1998. The scope of work included advancing two soil borings in the general vicinity of the previous soil borings advanced during LAW's investigation. Detected concentrations of some PAH constituents exceed current applicable regulatory guidelines in both borings. The Soil Mechanics report concluded that the detected concentrations of targeted analytical parameters do not represent a significant environmental to the underlying groundwater and under its present state (i.e., encapsulated by a concrete slab), to Human Health since potential exposure pathways are limited. However, the known presence of soil contamination at the Property represents a Recognized Environmental Condition (REC).

4.5 Historical Use Information on Adjoining Properties

By review of the standard historical sources referenced above, the historical uses of the adjoining properties are summarized below:

North: The adjoining north side of the Property has been historically used for commercial purposes and appears to have been used for automobile repair activities since at the 1950s.

South: The adjoining south side of the Property has been historically used for commercial purposes and appears to have been used for automobile repair activities since at the 1930s. The adjoining south

side of the Property is currently vacant and is being redeveloped.

East: The adjoining east side of the Property has been historically used for commercial purposes and appears to have been used for automobile repair activities since at the 1950s.

West: The adjoining west side of the Property has been historically used for commercial purposes and appears to have been used for automobile repair activities since at the 1930. Review of the historical Sanborn Maps and regulatory database indicated that the facility consists of multiple buried gasoline tanks. Additional information pertaining to the database listing of this facility is provided in Section 4.2 of this report.

5.0 SITE RECONNAISSANCE

5.1 Methodology And Limiting Conditions

The Property was inspected by Ramesh Challapalli on July 11, 2007. The weather at the time of the site visit was sunny and temperature was 85. Mr. Simon Andrew provided site access and escorted LAC during the site visit.

5.2 General Site Setting

The Property consists of a rectangular shaped parcel approximately 0.283 acres in size. The Property is designed and used for commercial purposes. The Property consists of three story commercial building that almost entirely occupies the Property area with the exception of concrete sidewalk along West 38th Street. The eastern portion of the Property consists of a garage space that is built slab on grade. The remaining area of the Property building consists of below grade basement that is used for storage purposes and mechanical equipment rooms. A portion of the third floor roof/ceiling is elevated higher than rest of the building to facilitate the operations of the recording studio. A single hydraulic elevator services the Property building. Access to the street level automobile garage within the Property is provided from West 38th Street located to the south of the Property. Storm water drains located along the street curbs collect surface runoff and discharge to the municipal storm water system. No other structures or significant surface features were noted on the Property at the time of the reconnaissance.

5.3 Exterior Observations

The footprint of the building almost entirely occupies the Property area with the exception of a concrete sidewalk along West 38th Street to the south.

5.3.1 Solid Waste Disposal

Solid waste on the Property is collected in one 3 cubic yard dumpster situated within the garage on the eastern portion of the Property. The solid waste is collected once a week by Classic Waste. The dumpsters were noted to contain miscellaneous cardboard at the time of the Property reconnaissance and no indication of potentially hazardous material disposal was noted during LAC's reconnaissance.

5.3.2 Surface Water Drainage

Storm water runoff at the Property flows across paved areas into storm drains located on the streets in the surrounding area. Storm drains discharge into the municipal sewer system.

5.3.3 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

5.3.4 Wastewater

No indications of industrial wastewater disposal or treatment facilities were observed during the onsite reconnaissance.

5.3.5 Additional Site Observations

No additional relevant general Site characteristics were observed.

5.4 Interior Observations

The interior space of the Property is improved for used as commercial recording studio and attached office space and comprises of painted plaster and gypsum wallboard and the ceilings with a smooth plaster finish. The floors are covered with a combination of wood plank flooring, vinyl tiles and ceramic tiles in the bathrooms.

5.5 Potential Environmental Conditions

5.5.1 Hazardous Materials and Petroleum Products Used or Stored at the Site

No evidence of the use of hazardous materials or wastes was observed on the Property.

5.5.1.1 Unlabeled Containers and Drums

No Unlabeled containers or drums were observed during the site reconnaissance.

5.5.1.2 Disposal Locations of Regulated/ Hazardous Waste

No obvious indications of hazardous waste generation, storage or disposal were observed on the Property or were indicated during interviews.

5.5.2 Evidence of Releases

No obvious indications of hazardous material or petroleum product releases, such as stained areas or stressed vegetation, was observed during the site reconnaissance or reported during interviews.

5.5.3 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain polychlorinated biphenyls (PCBs) at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified:

- Less than 50 parts per million (PPM) of PCBs – *“Non-PCB” transformer*
- 50 ppm-500 ppm – *“PCB-Contaminated” electrical equipment*
- Greater than 500 ppm – *“PCB” transformer*

LAC observed the presence of a hydraulic elevator within the Property. No evidence of leaks, spill or discoloration was observed within the elevator mechanical room located within the basement of the Property. According to information provided by the site contact, the new elevator equipment was installed at the Property in 2001-02 during the interior renovation activities at the Property. Based on the date of the installation of the elevator equipment, it is unlikely to contain any PCB fluids.

5.5.4 Landfills

No evidence of on-site landfilling was observed or reported during the site reconnaissance.

5.5.5 Pits, Ponds, Lagoons, Sumps, and Catch Basins

No evidence of on-site pits, ponds, or lagoons was observed or reported during the site reconnaissance. No evidence of sumps or catch basins, other than used for stormwater removal, was observed or reported during the site reconnaissance.

5.5.6 On-Site ASTs and USTs

At the time of the site visit, LAC identified the presence of a suspect fill cap located in front of the building on the eastern portion in front of the automobile garage area of the building. Review of historical information indicated that oil fired boiler permits were issued at the Property in 1938 and 1957. Additionally, review of the 1950 historical Sanborn Map identified the presence of a boiler room within the automobile garage space. The review of the database also indicated that a LUST incident was reported due to tank overflow in 1995 at the Property. Based on the presence of the suspect fill cap observed at the Property and other available information, the Property previously consisted of a heating oil storage tank. It is likely that the heating oil tank is buried in the vicinity of the automobile garage (location of the suspect fill cap and the historic boiler room) at the Property. However, no information was available to indicate that the previous heating oil storage tank has been properly removed from the Property. The lack of information pertaining to the proper closure of the suspect UST represents a recognized environmental condition at the Property.

Additionally review of the database indicated that the Property is listed as an Aboveground Storage Tank facility. Review of the database indicated that the facility consists of one 275 gallon aboveground storage tank that was reportedly installed at the Property in 1998 and is listed as temporarily out of service. No evidence of the AST was observed at the time of the site visit. According to information provided by the site contact, the Property building was entirely renovated in 2001-02 and all previous mechanical equipment was removed from the Property.

5.5.7 Radiological Hazards

No radiological substances or equipment was observed or reported stored on the subject site.

5.5.8 Drinking Water

The Property area is connected to the city water supply provided by New York City Water Supply System. According to information provided the New York City Department of

Environmental Protection, the drinking water supplied to the site is within state and federal standards, including lead. Water sampling was not conducted at the site to verify water quality.

5.5.9 Additional Hazard Observations

No additional hazards were observed on the site.

5.5.10 Asbestos-Containing Materials (ACM)

In accordance with the Scope of Services, LAC has conducted a limited, visual evaluation of interior, accessible areas for the presence of suspect asbestos containing materials (ACM) at the Property. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Based on the date of construction (1903) there is a potential that ACM was used in construction materials. In addition, the Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101, requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are presumed asbestos containing material (PACM).

The survey consisted of noting observable materials (materials which were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the lender an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or PACM are present at the Site. Additional sampling, inspection, and evaluation will be warranted for any other use.

No building plans or specifications, which may be useful in determining areas likely to have used ACM, were made available for review.

The following table represents a summary suspect ACM observed in this facility.

SUSPECT ACM				
Suspect ACM	Estimated Quantity of ACM (SF/LF)	Friable Yes/No	PACM?	Physical Condition
Floor tiles	Various areas of the Property	No	Yes	Good
Ceiling tiles	Various areas of the Property	Yes	Yes	Good
Gypsum wall board and joint compound	Throughout the Property	No	Yes	Good
Roof material	Roof	No	Yes	Good

According to the EPA, ACM and PACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) program until removal is dictated by renovation, demolition, or deteriorating material

condition. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

5.5.11 Radon

The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures. Review of the EPA Map of Radon Zones places the Property in Zone 3, where average predicted radon levels are less than 2.0 pCi/L. Based on the radon zone classification, or non-residential use of the Property radon is not considered to be a concern.

5.5.12 Lead-Based Paint

In accordance with the Scope of Services, LAC has conducted a limited, visual evaluation to note the condition of painted surfaces at the property. Due to the date of construction (1903), lead-based paint may be present. The objective of this visual survey was to note the presence and condition various painted surfaces. In general, the painted surfaces appeared in good condition, as no chalking, peeling or flaking paint was observed.

5.5.13 Mold Evaluation

As part of this assessment, LAC performed a limited visual inspection for the conspicuous presence of mold. A class of fungi, molds have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials, and thrive in humid environments, and produce spores to reproduce, just as plants produce seeds. When mold spores land on a damp spot indoors, they may begin growing and digesting whatever they are growing on in order to survive. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation and carpeting often play host to such growth. Moisture control is the key to mold control. Molds need both food and water to survive; since molds can digest most things, water is the factor that limits mold growth.

The EPA recommends the following action to prevent the amplification of mold growth in buildings:

- Fix leaky plumbing and leaks in the building envelope as soon as possible;
- Watch for condensation and wet spots. Fix source(s) of moisture problem(s) as soon as possible;
- Prevent moisture due to condensation by increasing surface temperature or reducing the moisture level in air (humidity). To increase surface temperature, insulate or

increase air circulation. To reduce the moisture level in air, repair leaks, increase ventilation (if outside air is cold and dry), or dehumidify (if outdoor air is warm and humid);

- Keep heating, ventilation, and air conditioning (HVAC) drip pans clean, flowing properly, and unobstructed;
- Vent moisture-generating appliances, such as dryers, to the outside where possible;
- Maintain low indoor humidity, below 60% relative humidity (RH), ideally 30-50%, if possible;
- Perform regular building/HVAC inspections and maintenance as scheduled;
- Clean and dry wet or damp spots within 48 hours;
- Don't let foundations stay wet. Provide drainage and slope the ground away from the foundation.

LAC observed the accessible interior areas of the Property structure(s), including interior walls and ceilings (in the units observed), in-unit and common mechanical closets, areas under sinks, and flat roofs (for evidence of water ponding) for the presence of conspicuous mold or observed water intrusion or accumulation. LAC did not note conspicuous visual or olfactory indications of the presence of mold, nor did LAC observe obvious indications of significant water damage. No sampling was conducted as part of this assessment.

This activity was not designed to discover all areas, which may be affected by mold growth on the Property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the Property. This evaluation did not include a review of pipe chases, HVAC systems or areas behind enclosed walls and ceilings.

6.0 INTERVIEWS

6.1 Interview with Owner

Howard International Corporation the Property owner was not available for interview at the time of the site visit.

6.2 Interview with Site Manager

Mr. Simon Andrew provided LAC site access and was available for interview at the time of the site visit.

6.3 Interview with Occupants

Mr. Simon Andrew of Legacy Recording was available for interviewed at the time of the site visit.

6.4 Interview with Local Government Officials

Information obtained from the New York City Department of Finance, Buildings, and Planning is provided in appropriate sections of the report. No information was received from the New York City Fire Department and Department of Health at the time of the completion of the report.

6.5 Interview with Others

No other interviews were conducted as a course of this study.

7.0 FINDINGS AND CONCLUSIONS

7.1 Findings

7.1.1 On-Site Environmental Conditions

Review of the database identified the Property as a Dry Cleaner and RCRA hazardous waste generator. Manhattan Cleaners (Dry Cleaners) and NY Valet Inc (RCRA hazardous waste generator) former tenants at the Property are identified on the database. According to information obtained from the site contact and historical sources, the Property building was previously occupied by a commercial dry cleaning operation until the late 1990s. The building was renovated in 2001-2002 and converted into a commercial recording studio by the current occupant of the Property. No evidence of the historic dry cleaning operations was observed within the Property at the time of the site visit. Review of the database indicated that no RCRA violations are listed at the Property. LAC was provided with a copy of a Limited Phase II Environmental Site Assessment by LAW Environmental conducted on the Property and dated June 5, 1998. Concentrations of tetrachloroethene were detected in each of the samples above the minimum detection limit, but below the NY Soil Clean-up objectives. Several of the SVOC concentrations exceed the NYSDEC Star TCLP guidance values. LAW recommended further assessment at the site to further define the extent of soil impact, and the potential impact to ground water. LAC was provided with a Subsurface Investigation Report prepared by Soil Mechanics Environmental Services dated September 10, 1998. Detected concentrations of some PAH constituents exceed current applicable regulatory guidelines in both borings. The Soil Mechanics report concluded that the detected concentrations of targeted analytical parameters do not represent a significant environmental to the underlying groundwater and under its present state (i.e., encapsulated by a concrete slab), to Human Health since potential exposure pathways are limited. However, the known presence of soil contamination at the Property represents a Recognized Environmental Condition (REC).

At the time of the site visit, LAC identified the presence of a suspect fill cap located in front of the building on the eastern portion in front of the automobile garage area of the building. Review of historical information indicated that oil fired boiler permits were issued at the Property in 1938 and 1957. Additionally, review of the 1950 historical Sanborn Map identified the presence of a boiler room within the automobile garage space. The review of the database also indicated that a LUST incident was reported due to tank overflow in 1995 at the Property. Based on the presence of the suspect fill cap observed at the Property and other available information, the Property previously consisted of a heating oil storage tank. It is likely that the heating oil tank is buried in the vicinity of the automobile garage (location of the suspect fill cap and the historic boiler room) at the Property. However, no information was available to indicate that the previous heating oil storage tank has been properly removed from the Property. The lack of information pertaining to the proper closure of the suspect UST represents a recognized environmental condition at the Property.

Based on the age of the building (1903), it is suspected that ACM may be present within areas of the building not accessed during the site reconnaissance including pipe chases, plenum spaces, and support columns. ACM may be present within these spaces as they

are not likely to have been disturbed during the building renovations conducted in 2001-02.

Suspect ACM identified at the Property include friable ceiling tiles and non-friable drywall-joint compound, wallboard assemblies, resilient floor finishes, and roofing components that may contain asbestos. The identified suspect ACM was generally observed to be in good condition with a low potential for disturbance, and represents no hazard unless cut, sawn, or broken. Accordingly, no samples were obtained of these materials as part of this assessment

7.1.2 Off-Site Environmental Conditions

No off-site environmental conditions were identified that were considered likely to impact the Property.

7.1.3 Previously Resolved Environmental Conditions

No historical recognized environmental conditions were identified in connection with the Property during the course of this assessment.

7.1.4 De Minimis Environmental Conditions

No *de minimis* environmental conditions were identified in connection with the Property during the course of this assessment.

7.2 Opinion

LAC has identified recognized environmental conditions associated with the Property as indicated below.

7.3 Conclusions

LAC has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of 509 West 39th Street, New York, NY 10001, the Property. Any exceptions to or deletions from this practice are described in Section 1.4 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the Property, except for the following:

- According to information obtained from the site contact and historical sources, the Property building was previously occupied by a commercial dry cleaning operation until the late 1990s. The building was renovated in 2001-2002 and converted into a commercial recording studio by the current occupant of the Property. No evidence of the historic dry cleaning operations was observed within the Property at the time of the site visit. Review of the database indicated that no RCRA violations are listed at the Property. LAC was provided with a copy of a Limited Phase II Environmental Site Assessment by LAW Environmental conducted on the Property and dated June 5, 1998. Concentrations of tetrachloroethene were detected in each of the samples above the minimum detection limit, but below the NY Soil Clean-up objectives. Several of the SVOC concentrations exceed the NYSDEC Star TCLP guidance values. LAW recommended further assessment at the site to further define the extent of soil impact, and the potential impact to ground water. LAC was provided with a Subsurface Investigation Report prepared by Soil Mechanics Environmental Services dated September 10, 1998. Detected concentrations of some

PAH constituents exceed current applicable regulatory guidelines in both borings. The Soil Mechanics report concluded that the detected concentrations of targeted analytical parameters do not represent a significant environmental to the underlying groundwater and under its present state (i.e., encapsulated by a concrete slab), to Human Health since potential exposure pathways are limited. However, the known presence of soil contamination at the Property represents a Recognized Environmental Condition (REC).

- At the time of the site visit, LAC identified the presence of a suspect fill cap located in front of the building on the eastern portion in front of the automobile garage area of the building. Review of historical information indicated that oil fired boiler permits were issued at the Property in 1938 and 1957. Additionally, review of the 1950 historical Sanborn Map identified the presence of a boiler room within the automobile garage space. The review of the database also indicated that a LUST incident was reported due to tank overfill in 1995 at the Property. Based on the presence of the suspect fill cap observed at the Property and other available information, the Property previously consisted of a heating oil storage tank. It is likely that the heating oil tank is buried in the vicinity of the automobile garage (location of the suspect fill cap and the historic boiler room) at the Property. However, no information was available to indicate that the previous heating oil storage tank has been properly removed from the Property. The lack of information pertaining to the proper closure of the suspect UST represents a recognized environmental condition at the Property.
- Based on the age of the building (1903), it is suspected that ACM may be present within areas of the building not accessed during the site reconnaissance including pipe chases, plenum spaces, and support columns. ACM may be present within these spaces as they are not likely to have been disturbed during the building renovations conducted in 2001-02.

Suspect ACM identified at the Property include friable ceiling tiles and non-friable drywall-joint compound, wallboard assemblies, resilient floor finishes, and roofing components that may contain asbestos. The identified suspect ACM was generally observed to be in good condition with a low potential for disturbance, and represents no hazard unless cut, sawn, or broken. Accordingly, no samples were obtained of these materials as part of this assessment

7.4 Recommendations

Based on the findings of this ESA, LAC recommends the following:

- Based on information collected during this assessment, it is our opinion that a reportable release has occurred at the subject site and the results of this assessment should be reported to the NYSDEC. The need for further assessment and/or remediation will be made by the NYSDEC after a review of the assessment findings.
- Additional information pertaining to the former heating oil should be obtained to confirm that the heating was properly removed from the Property in accordance to all applicable regulations.
- LAC recommends developing and implementing an asbestos Operations & Maintenance Program for the property. According to the United States Environmental Protection Agency (EPA), ACM and suspect ACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to

any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

7.5 Deviations

This Phase I ESA substantially complies with the scope of services and ASTM 1527-05, as amended, except for exceptions and/or limiting conditions as discussed in Section 1.4.

9.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental professional* as defined in §312.10 of 40 CFR 312” and We have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Ramesh Challapalli
Professional Associate

Eugene Belli
National Client Manager

10.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

10.1 Definition of an Environmental Professional

An Environmental Professional means: (1) a person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases (see §312.1(c)) on, at, in, or to a property, sufficient to meet the objectives and performance factors in §312.20(e) and (f). (2) Such a person must: (i) hold a current Professional Engineer's or Professional Geologist's license or registration from a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) and have the equivalent of three (3) years of full-time relevant experience; or (ii) be licensed or certified by the federal government, a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) to perform environmental inquiries as defined in §312.21 and have the equivalent of three (3) years of full-time relevant experience; or (iii) have a Baccalaureate or higher degree from an accredited institution of higher education in a discipline of engineering or science and the equivalent of five (5) years of full-time relevant experience; or (iv) have the equivalent of ten (10) years of full-time relevant experience. (3) An environmental professional should remain current in his or her field through participation in continuing education or other activities. (4) The definition of environmental professional provided above does not preempt state professional licensing or registration requirements such as those for a professional geologist, engineer, or site remediation professional. Before commencing work, a person should determine the applicability of state professional licensing or registration laws to the activities to be undertaken as part of the inquiry identified in §312.21(b). (5) A person who does not qualify as an environmental professional under the foregoing definition may assist in the conduct of all appropriate inquiries in accordance with this part if such person is under the supervision or responsible charge of a person meeting the definition of an environmental professional provided above when conducting such activities.

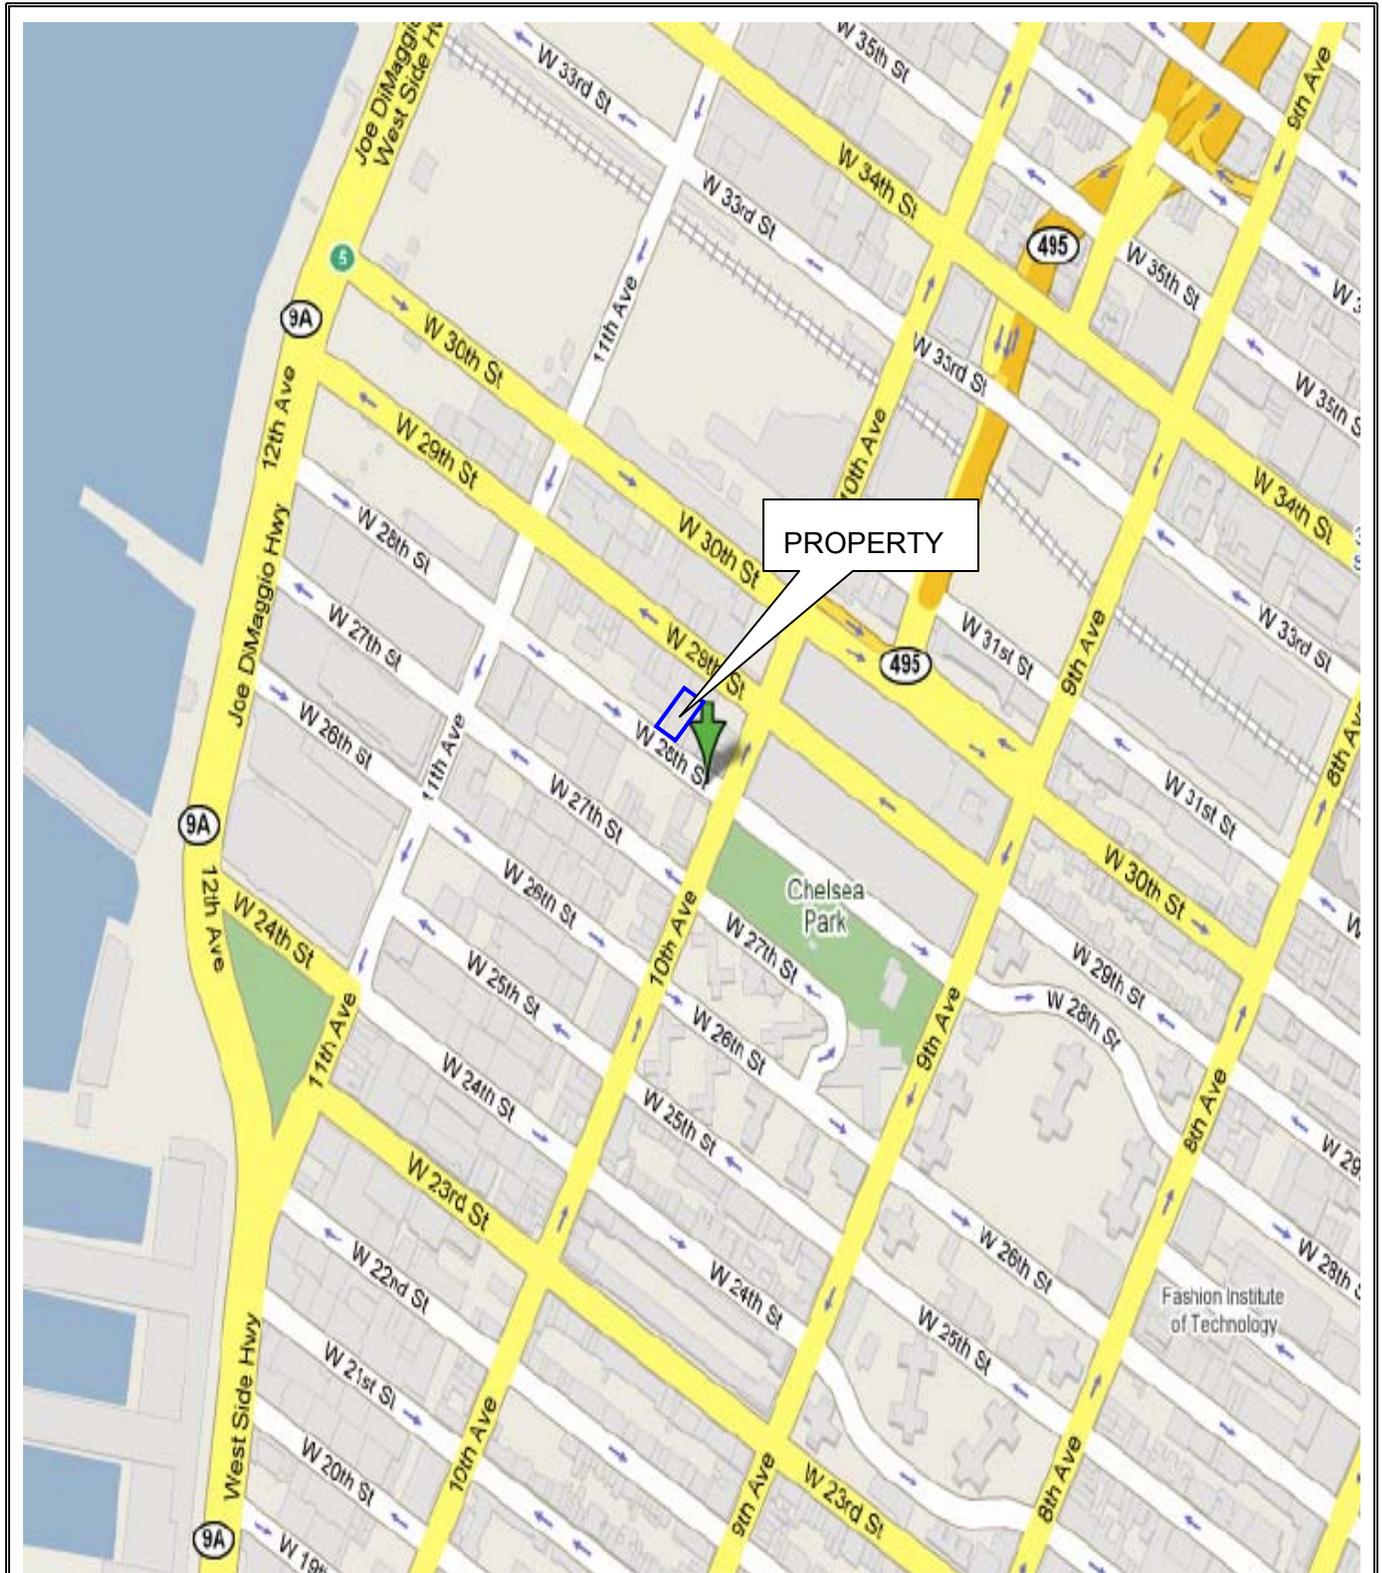

10.2 Relevant Experience

Relevant experience, as used in the definition of environmental professional in this section, means: participation in the performance of all appropriate inquiries investigations, environmental site assessments, or other site investigations that may include environmental analyses, investigations, and remediation which involve the understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions and for which professional judgment was used to develop opinions regarding conditions indicative of releases or threatened releases (see §312.1(c)) to the subject property.

Resumes for the Environmental Professionals involved in this project are included in Appendix G.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EDR Historical Cleaners	EDR Proprietary Historic Dry Cleaners

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 03/21/2007 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/13/2006 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 05/01/2007 has revealed that there are 3 NY SWF/LF sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 04/02/2007 has revealed that there are 90 NY LTANKS sites within approximately 0.5 miles of the target property.

NY HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the NY HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 74 NY HIST LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

NY SPILLS: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 04/02/2007 has revealed that there are 14 NY Spills sites within approximately 0.125 miles of the target property.

NY HIST SPILLS: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there

EXECUTIVE SUMMARY

are 10 NY Hist Spills sites within approximately 0.125 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 5 Manufactured Gas Plants sites within approximately 1 mile of the target property.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: Start DECRemark - 0208736 Prior to Sept, 2004 data translation this spill Lead DEC Field was "TIPPLE" 11/22/02 Rommel - duty officer Contaminated soil letter mailed requiring submittal of summary report before 1/15/02. 3:59 Spoke to Henry GoldStrategic Environmental Solutions, Suite 1500, 118-35 Queens Blvd, Forest Hills, NY 11375 fax: 718-520-8306- who is working for the owner of the property, Fred Howard, Howard International, 500 W37th Street, NY, NY 10018 in association with a pending property transaction. They encountered contaminated soil and what appears to be two 550 gallon (possibly diesel) USTs at the property. Mr. Gold believes that there was a Phase I Assessment completed (by another company) that indicated that either a garage or a car rental facility was previously located at this property. Henry will register the tanks prior to removal on Monday and will submit the results of the subsurface investigation to Michelle Tipple. 4/25/2003 Site Investigation and Tank Closure report submitted April 2003 by Strategic Environmental Solutions reviewed, NFA letter sent with caveat that health and safety plan necessary for future excavations on this property. 4/30/2003 SAME AS SPILL # 0203762---BOTH#'S CLOSED END DECRemark - 0208736
 Remarks: Start CallerRemark - 0208736 while doing a sub surface investigation contaminated soil was found & as they investigated they found 2 improperly abandoned tanks on the property that were not known about END CallerRemark - 0208736

DEC Memo: Start DECRemark - 8906443 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "ROMMEL" 03/29/04 Transferred from James to Rommel
10/29/04 Reassigned from Rommel to Sun. 11/1/04 Sun sent a letter to Richard
Saut, Environmental Manager of Penske, requiring by January 14, 2004 the
following:1)Delineation of soil and groundwater contamination. A subsurface
investigation to adequately characterize site hydrogeology and to completely
delineate the full extent of petroleum contamination to soil and groundwater
both on-site and off-site must be performed. 2)A Ssurrounding property sketch

including layout and usage must be submitted to the Department, 3)The locations of former remote fills and dispenser island must be submitted to the Department, and 4)A PBS registration must be submitted immediately reflecting the former tanks and their subsequent decommissioning. 1/5/06: Called Richard Saut and left a message (610-775-6298) to ask for an update on what was required in 11/1/04 letter. 1/10/06: Spoke with Richard Saut and he said he would speak to his consultants and get back to me. 1/30/06: Left a message with Richard Saut to follow up. 3/15/06: Spoke with Matt of Groundwater Environmental Services (631-582-4187 x15, mschieferstein@gesonline.com). I sent him a copy of the additional delineation letter that was sent to Hertz. 5/19/06: Left voice message with Matt Schieferstein about overdue workplan. 6/21/06: Spoke to Matt Schieferstein of GES. Penske is doing research on this site and has not authorized GES to do any work. Spoke to Richard Saut of Penske. Richard Saut said that Hertz is responsible for this spill and forwarded DEC's letter to Virginia Carlson of Hertz. He forwarded me the correspondence between him and Virginia Carlson. 7/19/06: Sent Virginia Carlson an email to followup. 8/10/06: Owner according to propertyshark.com: 500 West 38 L.L.C. 290 Park Ave S New York NY 10010-5313 Sent delineation required letter to above address. Assessment required by 11/10/06. 8/16/06: Received phone call from Mindy Horowitz (212-675-3225) of Fleming Lee Shew, consultant for property owner. She will submit a workplan for remediation after a FOIL request is reviewed. 8/17/06: Received email from Mindy Horowitz: We will begin our remedial investigation upon reviewing the previous investigations conducted at this site. We are simultaneously performing an investigation for the New York City Department of Environmental Protection, as this site has an "e" designation. Mindy Chassin Horowitz Project Manager Fleming-Lee Shue, Inc. 6 E32nd Street, 4th Floor New York, NY 10016 (212) 675-3225 (telephone) (212) 675-3224 (fax) mindy@flemingleeshue.com 11/6/06: Received and approved investigation workplan. Four soil borings will be performed surrounding the former UST location. A soil sample from directly below the floor and from the interval with the highest PID reading will be collected from each boring. The report noted the possible presence of a transformer and hydraulic lifts on the property. 11/14/06: Received call from Fleming Lee Shue. Soil borings installation is not possible because clearance in basement is too low. Borings will be installed following building demolition in early 2007. 12/4/06: Received letter indicating that delineation is not possible, will occur in early 2007 after building demolition. Assessment report submission due 3/30/07. END DECRemark - 8906443

DEC Memo: Start DECRemark - 9806131 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "ROMMEL" Called Afected Party (Kathy) and got history regarding
the vapor problem. She said that this is an ongoing poblem w/ gasateria. They
have been asked to do something about the problem by the DEC. According to
Kathy, they dug a hole to help the problem and left it open. She said that the
rain washed away the excavated material. Kathy had opened the doors to the
basement to vent the vapors before they built up. She felt that the venting
was working fine and she didn't need any further response. She wanted to
follow J. Rommel's instnuctions to call in these incidents. SS Tansfered to J.
Rommel 10/17/2003-Vought-see spill #8909614at same location. This spill
closed by Vought. END DECRemark - 9806131
Remarks: Start CallerRemark - 9806131 they have gas fumes at the residential apartment
building at 480 tenth ave.they opened up the ground at the gas station and the
dirt was was washed away by rain today.the fumes went into the basement of the
apartment complex.no fd is on the scene. 212-279-4079-clinton housing
development is where the complaint is END CallerRemark - 9806131

 Resource Affected: Groundwater
 Oxygenate: False
 DEC Memo: Start DECRemark - 0506881 9/6/05-Vought-Desk Duty Officer-Sent out groundwater contamination letter to owner on spill report. Upon reception of report determination will be made whether gasoline or fuel oil contamination so project manager can be assigned. 4/26/06 - Austin - AKRF submitted a supplemental Phase 2 (dated 1/18/06), a RAP, and a HASP (both dated 3/1/06) for this site. Documents and project transferred to Ketani for review and follow up - end 4/26/06 - Raphael Ketani. Today I received the 11/9/05 Phase II Environmental SIR, the 1/18/06 Supplemental Phase II Environmental SIR, the 3/1/06 Remedial Action Plan and Construction HASP for the site. 4/27/06 - Raphael Ketani. Today, I sent out a letter approving both SIRs and the RAP. In addition, the letter stated that 2 additional groundwater monitoring wells should be installed and monitored for 2 rounds of sampling. Then a report must be issued with the results. 7/5/06 - Raphael Ketani. I tried to reach Mark Godick of AKRF (914) 949-7336 regarding progress at the site, but could only leave a message. 7/10/06 - Raphael Ketani. Mr. Godick called to say that they are still doing source removal, but the wells will probably not be installed until September when excavation will take place and be completed. I told Mr. Godick that would be fine. 8/17/06 - Raphael Ketani. I spoke to Mr. Godick at his NYC number (646) 388-9534. He said that they are not scheduled to remove the soil and excavate down to bedrock until some time in September. He said he will keep me posted. 9/7/06 - Raphael Ketani. I contacted Mr. Godick at his White Plains office. He said construction is delayed due to the need to get some NYC permits. However, he will let me know when they are ready to start. 11/13/06 - Raphael Ketani. I left a voice mail for Mr. Godick requesting information on progress made. Mr. Godick returned my call and said that everything is being held up by the lack of a construction contractor to do the digging and the rest of the work. There is a shortage of contractors. The new start date is now January or February 2007. 2/6/07 - Raphael Ketani. Mr. Godick called to say that construction will start sometime in the next 2 weeks at the site. The owners finally have a contractor for the work. END DECRemark - 0506881
 Remarks: Start CallerRemark - 0506881 Contam. found during a phase 2 investigation. Suspected UST in that area. Groundwater was affected. Any kind of clean up will be pending the investigation. END CallerRemark - 0506881

DEC Memo: Start DECRemark - 0011844 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 5/14/01 TJD Reviewed summary report detailing tank removal and associated contaminated soils. Spoke w/Paul Ciminello of Ecosystems Strategies,Inc. to discuss report including: insufficient sampling & missing analytical data. Mr. Ciminello stated a new building is being constructed at the site and additional work may not be possible. Awaiting revised report. 12/9/03 TJD Spill reassigned Demeo >>> Rommel 3/14/05 - Mr. Charles G. Merritt sent a letter w/ a 2001 tank closure report and request for a spill closure, as per Randy Austin. I called Mr. Merritt back and told him that Tim DeMeo in DEC has reviewed the report and DECrequires additional data to make a determination for closure. (KST) 3/14/05- Spill reassigned to I. Islam by KST. 4/18/05- Mailed a letter to Mr. Merritt asking for a revised Investigation Summary Report after thorough investigation by June 30/05.It's noted here that Ecosystems Strategies, Inc.(ESI) was the previous consultant who prepared the Summary (Tank Closure)Report and was retained by The Producing Co., 145W 45th St.,NY, NY and the current consultant is Merritt Consulting Engineers,Inc., retained by a Bank who financed to Dev. the property. - II. 6/8/05- Attorney John Curran(at 212-508-6717) called to extend the June 30/05 deadline for submission of the required ISR by one more month. Advised him to send us a formal request for time extension.- II 6/22/05- Received letter (dt.

6/14/05) from the Attorney requesting formal time extension for required submittal until Aug.19/05. He also mentioned in the letter that the entire site is now developed with a new 15-story building for which foundation excavation removed residual contaminated soil, if any. However, time extension has been approved and asked to submit a site-specific technical report prepared by a NYS P.E along with drawings, plans, etc. in support of their claim by the extended deadline.- II 8/29/05- Reviewed the Technical Analysis Report dt. August 12, 2005 prepared by Galdun Frankel (G. F.)Envtl. on the previously prepared UST Removal report by ESI in Feb.2001 and re-submitted by Merritt Engineering dt. March 9, 2005. Based on the information provided and analyses made by G.F. Env'tl., it is believed that the petroleum contamination did not extend beyond the underlying bedrock and the foundation excavation of the building-in-place approx. 20' deep has removed any staining or residual surface contamination of the bedrock, and GW was not encountered. As such, the spill case is hereby closed. - II END DECRemark - 0011844

Remarks: Start CallerRemark - 0011844 2 550 GALLON TANKS WERE REMOVED ON TUESDAY & CONTAMINATION WAS NOTICED UNDER THE CONTAINMENT UNIT TODAY - SOIL HAS BEEN REMOVED & STOCK PILED ON SITE TO BE REMOVED EARLY NEXT WEEK END CallerRemark - 0011844

DEC Memo: Start DECRemark - 0409846 ttf ltr sent 1/14/2005 2/14/2005 Received a letter from Morton Usdan (212-564-2006) saying that he hired a company to work on the tank. If it can be fixed, it will be. If not, it will be abandoned.
5/2/2005 Sangesland spoke to Mr. Usdan. He said PTC found a dry leak in the vent line and replaced the line. Tank was retested and passed, no contamination was visible. Sangesland asked Mr. Usdan to submit all of this in writing to DEC. 5/5/2005 Sangesland received a letter from Mark Salamack at Petroleum Tank Cleaners. Tank was originally tested and failed by another

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit

1001482964

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start DECRemark - 8909614 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "VOUGHT" 01/05/90: (6) MONITORING WELLS INSTALLED,OIL TANKS
BEING TESTED BY CONTRACTORS(TRINITY & FENLEY & NICOL), ALL TANKS PUMPED &
CLEANED, REPAIRING WATER MAIN. 10/10/2003-Vought-Spoke with LaJuana Smith
(works for Clinton Housing-212-967-1644) and she is looking to resolve spill).
In Nov 1996 DEC required further work from DEC. Ms Smith will call back on Wed
for current site status and will possibly submit FOIL request upon her
discussion with bank. 10/17/2003-Vought-File review by Vought: Community
Board 4 Meeting Notice-2/21/90-Meeting held with DEC, NYFD, NYPD, DCA and
NYCDEP to discuss current status and plans of site. Faxto DEC from
Gaseteria-2/22/90-Pedneault Associates (516-467-8477)-Groundwater analyticals
from six monitoring wells and two soil disposal piles (no site plan in file).
Groundwater analyticals show 275ppb benzene(W1), 341ppb benzene(W2), 327ppb
benzene(W3), 448ppb benzene(W4), 158ppb benzene(W5) and 128ppb benzene(w6).
Disposal samples show 1433ppb benzene(east pile) and 188ppb benzene(west pile).
Groundwater analyticals-5/21/90-Pedneault Associates-Groundwater analyticals
from six monitoring wells (no site plan in file). Groundwater analyticals show
2308ppb benzene(W1), 1091ppb benzene(W2), 680ppb benzene(W3), 385ppb
benzene(W4), 736ppb benzene(W5) and 810ppb benzene(w6). Subsurface
Investigation-7/90-Environmental Management Services. "In Jan 1990 a
subsurface water line broke beneath 10th avenue near the northwest side of the

Map ID

Database(s) EDR ID Number
EPA ID Number

GASETERIA (Continued)

1001482964

site. Water entered the basement of the adjoining building along with some gasoline." DEC required installation of six monitoring wells on Gaseteria property. Gasoline vapors detected in sewers in building across 10th Avenue. This subsurface investigation consisted of eight soil borings and installation of two additional monitoring wells. Three pump islands serviced by 12 (550-gallon) gasoline USTs and one (2000-gallon) diesel UST. Local topography slopes to the north. Groundwater at depth of 7-9' below grade. Bedrock is 7-11' below grade and slopes downward toward the northwest and southwest corners of site. Groundwater "suspected to flow northward". All wells onsite were set "firmly on bedrock" and "there is not sufficient information available to determine specific groundwater flow". No free product detected in wells. Groundwater appears to flow from 10th Ave towards the USTs. Report recommends groundwater monitoring with possible additional delineation. No soil samples submitted for analysis nor were screened via PID. Letter from DEC to Gaseteria-7/12/90. Letter from DEC (Sigona) to Gaseteria (Oscar Porcelli) requesting subsurface investigation work plan to be approved by the DEC to investigate the presence of gasoline vapors. Plan must be received by the DEC by 7/17/90. Odor complaints in January 1990 and again in July 1990. Sigona performed site visit on 7/13/90. Fax to DEC-7/17/90. Letter from Environmental Management Services to DEC (Sigona) proposing: 1) investigation of subsurface utilities as potential pathways 2) determination of groundwater flow direction 3) groundwater monitoring 4) installation of six soil borings along western margin of station and installation of two additional monitoring wells. Letter from DEC to Gaseteria-1/5/95. Letter from DEC (Sigona) to Gaseteria (Angel Chang) requiring "cleanup and removal of discharge". Letter also required immediate steps to abate seepage into basement of 403 W 40th Street. Response from Gaseteria required to DEC by 1/15/95. Letter from Gaseteria to DEC-1/20/95. Letter from Gaseteria (Chang) to DEC (Sigona) stating that Gaseteria will: 1) "divert the flow of surface water away from the south wall of the building" 2) install a SVE system in the basement alongside of the south wall between the concrete floor and the building foundation. Gaseteria does not believe "there is a need to install new groundwater monitoring wells or to further develop existing wells.....since the problem appears to be surface related". Sample analyticals from basement of 480 10th Ave-8/96. Soil analyticals show 20664ppb ethylbenzene (sample 48334), 59164ppb xylene (sample 48334), 11000ppb naphthalene (sample 48334). Letter from DEC to Gaseteria-9/10/96. Letter from DEC (Rommel) to Gaseteria (George Esayan). "DEC in possession of analyticals from Clinton Housing (403 W. 40th Street)". Gaseteria required to sample two of the onsite monitoring wells for 8021/8270/lead. Letter from Clinton Housing Development Company-9/11/96. Letter from Clinton (Joseph Tuana) to DEC (Rommel) with copies of analyticals discussed above. Letter from Carl Sulfaro (attorney for Gaseteria) to DEC (Rommel)-9/20/96. Letter stating that Sulfaro "authorized EMS Environmental Services to take two samples of the onsite monitoring wells". Samples will be taken 9/27/96. Groundwater analyticals-10/10/96. Analyticals from MW5 by EMS showing 42.56ppb methylene chloride, 5549ppb benzene, 107.33ppb toluene, 1024.75ppb ethylbenzene, 393.15ppb xylene and 0ppb MTBE. Letter from Clinton (Kathy Prioleau) to DEC (Rommel)-11/11/96. On 10/27/96 "strong fumes entered basement of 480 10th Ave". NYFD onsite. Letter requests that DEC relay information on "testing done at Gaseteria and UST inspection of Gaseteria". Letter from DEC (Rommel) to Gaseteria (Sulfaro)-11/25/96. Letter stating that requirements of fax dated 9/10/96 were not met because only one well was sampled and 8270/Lead analyses were not performed. Letter requires: 1) submittal of an investigation plan to delineate soil and groundwater contamination 2) source determination 3) installation of three additional monitoring wells 4) installation of an air sampling port on the exhaust line of the venting system and monthly sampling for benzene and THC. Letter states

Map ID

Distance
Distance (ft.)
Elevation Site

MAP FINDINGS

Database(s) EDR ID Number
EPA ID Number

GASETERIA (Continued)

1001482964

that "action must be taken within 45 days". Letter from DEC(Rommel) to Prioleau(Clinton)-11/26/96. Letter stated that "DEC was never notified" of odor complaints as 11/11/96 letter stated. Also attached to letter was copy of 11/25/96 letter from DEC to Gaseteria. Letter from Gaseteria(Sulfaro) toDEC(Rommel)-1/15/97. Letter stating that Gaseteria "would prefer to perform site investigation, soil removal and/or remediation as needed concurrent with excavation anticipated as part of Federal EPA UST upgrade mandate" and the work is expected totake place in "Spring 1997". Letter from DEC(Rommel) to Gaseteria(Roberto Porcelli)-7/29/98. Letter "serving as final notification of obligations regarding petroleum contamination and vapor incidents". On 6/28/03 petroleum contaminated groundwater infiltrated basement of 480 10th Ave due to heavy rains. This is the "seventh vapor complaint associated with Gaseteria since Jan 1990". Letter states that the "Department is allotting 30 days for Gaseteria to satisfy all requirements in DEC letter dated 11/25/96". Deadline of 8/31/98 given by DEC. Letter from Gaseteria(Seth Friedland) to DEC(Rommel)-8/13/98. Letter stating that "the June 1998 episode was caused by heavy rains and appears to be an isolated event" and that Gaseteria does not agree with Departments conclusions". Letter stated that the station will be taken out of service on 9/15/98,permanently close the USTs and reinstall upgraded USTs on the northern boundary of the site. Letter from DEC(Rommel) to Gaseteria(Roberto Porcelli)-8/28/98. Letter serving as a "reminder of 8/31/98 deadline". Letter from Gaseteria(Oscar Porcelli) to DEC(Rommel)-8/28/98. Letter stating that new USTs were ordered and that work will start the second week of September. Gaseteria intends to install four monitoring wells to replace those destroyed by station upgrade and will retain Environmental Management services to develop remedial plan. Letter from DEC(Rommel) to Gaseteria(Oscar Porcelli)-8/31/98. Letter confirming phone conversation where an agreement was reached that Gaseteria will comply with following requirements and complete the tank upgrade prior to 9/30/98. Letter also required that a workplan be submitted prior to 9/4/03 which included 1)completedelineation 2)soil and groundwater sampling plan for use during excavation activities 3)sampling of SVE emmissions 4)installation of three monitoring wells into bedrock and 5)cleaning and proper disposal of oil in the building floor drains and all associated discharge points. Letter from Camin Cargo Control(Gaseteria's Enviro consultant) to Gaseteria-10/5/98. Letter from Camin(Patricia Badding) stating that a site investigation and report shall be prepared. Investigation with Geoprobe andsubsequent insallation of monitoring wells scheduled for 10/16/98. Soil samples will also be collected during excavation for new USTs. Venting system emissions will also be sampled. "Cleaning and proper disposal of any oil in the building floor drains and all associated discharge points is the responsibility of Gaseteria". Letter from DEC(Rommel) to Gaseteria(Oscar Porcelli)-10/8/03. Letter acknowledging receipt of Camin 10/5/98 proposal and requiring the following by 10/13/98: 1)Site plan with proposed boring locations 2)discussion of locations 3)discussion of endpoint sampling locations from UST excavation 4)discussion of delineation procedure 5)include MTBE with analyticals 6)collect groundwater samples from Geoprobe locations. Letter from Camin(Badding) to DEC(Rommel)-10/13/03. Submission of 1)site plan with ten boring locations 2)Collection of six endpoint soil samples from UST excavation 3)excavation and disposal of contaminated soil encountered during tank installation 4)Inclusion of MTBE analyticals 5)collection of groundwater samples(if encountered). Investigation Results from Camin(Badding) to DEC(Rommel)-11/6/98. Results of eight soil borings peformed. Soil analyticals show 2149ppb MTBE(SB1), 526ppb benzene(SB2), 188ppb benzene(SB4), 212ppb benzene(SB5), 4576ppb MTBE(SB6), 1458ppb benzene(SB7), 29114ppb naphthalene(SB7), 187ppb benzene(SB8). Groundwater analyticals show 1239ppb benzene(SB4), 1975ppb benzene(SB5), 5360ppb benzene(SB6). Subsurface Investigation Report Camin Badding

GASETERIA (Continued)

1001482964

908-523-0616 10/16/98). Investigation report including results above of eight soil borings performed. "There is approximately 2-4 inches of contaminated soil at the soil/bedrock interface in soil boring locations SB2, SB4, SB5, SB7 and SB8. Bedrock at depths of 6-11.5' below grade". "A sheen was detected on all samples"(groundwater). Venting system was samples on 12/11/98 via a vacuum canister attachment to vent. Removed dispenser island is the proposed location of new USTs. See analyticals above. Venting analyticals show 264ppm TPH and no other volatiles. Baseline Acquisition Assessment Report-10/10/02 Delta Environmental (Brad Fisher). Purpose was to establish baseline conditions prior to proposed lease and raze and rebuild of site by BP. One soil borings performed in 4/02 to depth of 11.5'. Two borings drilled to 24.5" via air rotary and converted to temporary monitoring wells (MW1 and MW2). Delta recommends 1)gaseteria install permanent monitoring wells to delineate contamination. "It is Delta's understanding that Gaseteria will retain the environmental liability of the subject site until spill closure has been obtained". At time of assessment three USTs on site (two 6000-gallon gasoline USTs and one 6000-gallon diesel UST) and four pump islands with six dispensers. Surrounding area is multiple story apartment buildings. "Groundwater is located within bedrock fractures at depths between approximately 12.5 and 13.5 ft bgs". Former USTs onsite which were CLOSED IN PLACE include two (6000-gallon) gasoline USTs in 1998, one 6000-gallon diesel in 1999, ten 550-gallon gasoline USTs in 1998, one 550-gallon waste oil in 1998 and one 550-gallon fuel oil in 1996. Soil analyticals show 4570ppb xylenes(SB1) and 3970ppb isopropylbenzene(SB1) from depths of 10-11.5'. Groundwater analyticals show 148ppb benzene(MW1), 24800ppb MTBE(MW1) and 30.7ppb benzene(MW2). 10/21/2003-Vought-Reviewed site with DEC(Rommel). Sent Stipulation Agreement with the following requirements: 1)Groundwater delineation via installation of bedrock monitoring wells at former boring locations SB1, SB4, SB5, SB6, SB7 2)Monitoring of vapors and groundwater intrusion 480 10th Ave 3)current status of SVE system and submittal of historic and current SVE effluent samples for benzene analysis or collection of indoor air samples from 480 10th Ave. 10/24/2003-Vought-Called LuJuana Smith (212-967-1644) and left message and explained requirements of 10/21/03 letter. 10/27/2003-Vought-Received message from Steve Muller will be taking indoor air samples from 480 10th Avenue. Vought returned call to Muller (516-395-5957). 10/28/2003-Vought-returned call to Steve Muller to discuss indoor air samples. Left message to return call to DEC. Left message for LuJuana Smith to call DEC. Vought spoke with Muller and okayed PID and stated that SUMA sample as per NYSDOH guidance was not necessary until 1)closure of SVE system or 2)PID indications of petroleum vapors followed by subsequent remediation. Vought also instructed Muller to check sumps. Vought spoke to LuJuana Smith who will be sending in FOIL Request for continuous updates on site. Vought also called Muller and gave him LuJuana's phone (212-967-1644) for access arrangements. 11/6/2003-Vought-Spoke with Steve Muller who was onsite. No PID readings and no olfactory evidence of petroleum and no groundwater infiltration into basement and no product in sump. Muller will produce summary letter and send to DEC. 11/7/2003-Vought-Received Summary Letter from Applied Geosolutions(Muller). Site visit performed on 11/6/03 and inspection of basement at 480 10th Ave. "AGS observed no olfactory detection of odors or vapors consistent with hydrocarbons related to gasoline". PID readings of 4.8ppm were attributed to moisture in basement. Small amount of standing water present near leaking hose. No signs of product in sump. Vapor abatement system nonoperational during site visit. Photos of basement submitted with report show no free product or petroleum impact. 11/24/2003-Vought-Received signed STIP from Adam Good(Gaseteria) with revised Corrective Action Plan. 11/26/2003-Vought-Spill transferred from Rommel to Vought. Vought received call from LuJuana Smith and she requested update. Vought faxed her copy of 11/7/03 report and letter sent

to Gaseteria on 10/21/03. Vought submitted STIP for implementation to DEC Kunkel. 12/2/03-Vought-STIP implemented by Kunkel. Copy sent and faxed to Good and Muller. 12/17/2003-Vought-See closed spill 0301220 at same location. 9/14/04-Vought-New file review by Vought: Letter from Applied Geosolutions (Steven Muller 516-395-5957). "On November 6, 2003 Applied Geosolutions inspected the basement of 480 10th Avenue to perform vapor monitoring and to identify the presence of groundwater". "During the inspection AGS observed no olfactory detection of odors or vapors consistent with hydrocarbons related to gasoline. The air space was monitored with a portable PID indicating a measurement of 4.8 ppm... This detection is likely the result of low atmospheric pressure followed from periods of rain causing the basement to be damp." The basement floor did not indicate the presence of groundwater...". Line and Dispenser Upgrade Report (Delta Environmental Brad Fisher 914-765-8180). "This Line and Dispenser Report summarizes the results of pump island and product piping upgrade assessment activities conducted by Delta Environmental and Gasoline Installations on behalf of BP Products North America". Work performed included the removing and installing new spill containment boxes beneath each dispenser, removal and replacement of product piping and installation of electronic line leak detection systems. Soil analyticals only show minor TAGM 4046 SVOC exceedences attributable to fill. Subsurface Investigation Workplan (Applied Geosolutions)-July 2004. Bedrock at depth of 10' below grade and groundwater at depth of 12.5-13.5' below grade. Report proposes installation of four wells via air rotary followed by groundwater sampling. Groundwater flow direction not determined as of yet. 9/14/04-Vought-Sent letter to Gaseteria approving of Subsurface Investigation Workplan. Vought received message from Lujanna Smith (212-967-1644) and returned call. Vought spoke to Smith and no indication of vapors was noted. Ms. Smith requested info on the applicability of the BCP program for 480 10th Avenue and Vought replied that was only available if HPD was willing to take responsibility of the spill and that she should call Albany for further information. Vought also suggested that she return the call to DEC on 11/14/04 which is when the workplan results are due to DEC. 9/17/04-Vought-Received fax from Applied Geosolutions (Muller). "466 10th Avenue-AGS is currently getting drilling quotes and will complete the Workplan within the 60day time frame". 1/6/05-Vought-Reviewed Subsurface Investigation Summary Report (Applied Geosolutions) dated December 2004 and received on 1/3/05. Location north of USTs not possible due to concrete with rebar. Installation of three monitoring wells. Groundwater from 7-11' bgs and flow to the west. Groundwater analyticals show 48ppb xylene(MW1), 13ppb 1,2,4-trimethylbenzene(MW1), 17ppb 1,3,5-trimethylbenzene(MW1), 26ppb naphthalene(MW1), 1400ppb MTBE(MW1), 23ppb MTBE(MW2), and 20ppb MTBE(MW3). "The existing groundwater monitoring wells should be monitored on a monthly schedule and sampled on a quarterly schedule to document changes in groundwater elevation and contaminate concentration trends in order to develop and appropriate remedial strategy". DEC requires: 1) installation of monitoring wells on West 37th Street north northeast of site and downgradient from abandoned tankfield along 10th Avenue. 1/19/05-Vought-Meeting at DEC with ASR Tomasello. Will examine possibility of borings across 10th Avenue (may not be possible due to utilities) and also onsite adjacent to 480 10th Avenue. If onsite boring adjacent to 480 10th Avenue is not possible then boring will be installed on 37th Street. 2/17/05-Vought-Spoke to Muller and site visit scheduled for 2/24 at 10am to discuss possible well installation locations. 2/24/05-Vought-Site meeting with ASR Tomasello and no borings possible across 10th Avenue. Well will be installed onsite under canopy downgradient of abandoned tankfield. Well will also be installed on West 37th Street north northeast of site. Obligado- SITE TRANSFERRED FROM VOUGHT TO OBLIGADO 10/12/05 - Spoke with Tomasello ASR, requests to talk about closure for sp0206783. 10/17/05- Obligado - File

Review: Final Subsurface Investigation Report, dated June 2005. 4 monitoring wells installed at the site. Wells were installed into Bedrock down to 25 ft bgs. 3 wells installed in December 2004, one additional well installed in March 2005. Groundwater encountered at approximately 7 to 11 feet. No product encountered. Initial gw samples in Dec. 2004 show ND for Benzene in all wells, 1400 ppb MTBE (MW-1), 23 ppb MTBE (MW@), 20 ppb MTBE (MW-3), 48 ppb Xylene (MW-1). March 2005gw results show 140 ppb benzene (MW1), 2100 ppb MTBE (MW-1), 26 ppb benzene (MW-3), 16 ppb MTBE (MW-3). June 2005 results show 45 ppb benzene (MW-1), 11 ppb Ethylbenene (MW-1), 750 ppb MTBE (MW-1), 52 ppb benzene (MW4), 10 ppb toluene (MW-4), 170 ppb Napthalene (MW4), 55 ppb MTBE (MW4), 193 ppb xylenes (MW-4). 4Q05 Monitoring Report, dated 10/15/05. Ground water analyticals at show 20 ppb benzene (MW-1), 580 ppb MTBE (MW1), 23 ppb MTBE (MW-2), 21 ppb benzene (MW-3), 15 ppb MTBE (MW-3), 16ppb benzene (MW-4), 52 ppb ethylbenzene (MW-4), 140 ppb MTBE (MW-4). 11/14/05 - Obligado - Site visit with ASR Tomasello. Request to see at least 2 more quarters of monitoring at a minimum. 12/8/05 - Obligado - Will do a sensitive receptor survey. Continue monitoring. Only 2 quarters of data at MW4. 3/1/06 - Obligado - PPhone call with Chris/STeve, ask that site be monitored quarterly not monthly. 4/12/06 - Obligado - review 1Q06 monitoring report. BTEX ND to 33 ppb, MTBE ND to 800 ppb. 11/21/06 - Obligado - Reviewed Closure Petition/Sensitive Receptor Survey. Sent email to ASR denying NFA stating the following: "Due to historical vapor issues in the adjacent apartment, and the presence of benzene above guidance levels in ground water, the Department requires laboratory analyzed vapor samples from either the slub slab system (if operational) or indoor air samples to confirm no vapor intrusion. The Department also requires an additional round of ground water monitoring to confirm benzene and MTBE levels are still decreasing. NYSDOH Vapor Intrusion Guidance should be followed when collecting air samples available at http://www.health.state.ny.us/environmental/investigations/soil_gas/svi_guidance/index.html. Please submit the results of the additional investigation by January 21, 2007." 12/1/06 - Obligado - Steve Muller will be onsite today to collect additional data.

DEC Memo: Start DECRemark - 0010648 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. On December 22, 2000, DEC (Sigona) observed the excavation and removal of 4 x 550 gallon USTs. The contents of 3 x 550 gallon USTs was found to contain a mixture of gasoline and water. 1 x 550 gallon UST contained water only. The excavation was being performed by Fenely & Nicol for Public Parking, Inc. The project was also supervised by DEC contractor EAR under PIN project for New York Auto Service which was impacting the Jacob Javits Center. Does not appear to be related to New York Auto Service spill or have an impact on the Javits Center. 2/24/05-Vought-Spoke with Phillip Rizzuto (973-470-25510) who is agent for property owners. Rizutto asked for status of Tank Closure Report review and Vought required that a copy be sent to DEC for review. Spill transferred from Rommel to Vought.

S106702998

3/16/05-Vought-Reviewed Tank Closure Report(Fenley & Nicol - Angel Ramirez) dated 1/18/01 and received on 3/2/05. Project was prepared for: Mr. Phil Rizzuto Classic Sanitation Corporation 99 Route 3 Clifton, NJ 07014 Removal and closure of one (275-gallon) fuel oil AST and four (550-gallon) gasoline USTs. Subject site is used as a public parking garage. Three (550-gallon) gasoline USTs were removed from the north-east front of the interior of the building(Tank Area 1) and one (550-gallon)gasoline UST was removed from southwest of Tank Area 1. Depth to groundwater at site estimated to be 20 feet below grade and flow to the west. "Inspector Anthony Sigona of the NYSDEC was present at the time of the excavation to inspect the tanksand excavated area". "The bottom and sidewalls of the excavation consisted of Manhattan Schist and bedrock". "...it was discovered that soil above the tanks exhibited evidence of gasoline contamination". All product lines were removed and disposed. Soil were analyzed for 8260/8270 TCLP as per Sigona. Soil analyticals only showed on minor exceedence of naphthalene at 11ug/L (Guidance value is 10ug/L). No PID readings were detected. Report recommends No Further Action. Spill closed by Vought due to one minor TAGM 4046 Soil Cleanup Objective exceedence. END DECRemark - 0010648

Remarks:

Start CallerRemark - 0010648 DURING TANK REMOVAL SOIL CONTAMINATION HAS BEEN DISCOVERED. CONTAMINATION IS ON TOP OF TANKS. AREA TO BE EXCAVATED AND FURTHER SAMPLING/TESTING TO BE DONE. NO CALL BACK REQUESTED. CALLER HAS BEEN IN CONTACT WITH REGION 2 OFFICE. END CallerRemark - 0010648

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start DECRemark - 9610133 Prior to Sept, 2004 data translation this spill Lead DEC Field was "VOUGHT" 10/25/00 - REASSIGNED FROM O'DOWD TO SANGESLAND. 12/2/2003 Transferred from Sangesland to Rommel. 1/8/04-Vought-Spill transferred from Rommel to Vought. 4/8/04-Vought-Spoke with Mathew Schieferstein (Anson Environmental 631-351-3555). Recently contracted by owners. Tradewinds were former contractor. Three monitoring wells onsite were abandoned. No groundwater analyticalson file. Vought approved Geoprobe samples at former well locations. Groundwater will be sampled for 8260/8270 and will take deepest dry soil samples or the highest PID. DEC will see report by 6/15/04. 9/23/05-FILE TRANSFERRED FROM VOUGHT TO OBLIGADO 2/2/06 - Obligado - called Anson Environemntal, Mathew Schieferstein no longer works there. Company was bought in 7/04. No recollection of this project. Will call back with any information they can dig up. 2/3/06 - Obligado - Receivedcall from Fritz Gros-Daillon at Anson Environmental. She said Anson in 2004 recommended geoprobing to owners however the Owners never approved work. No work was ever done. 10/16/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Steven Rosen Baum (212)687-3440 and left message to call me back. -QA END DECRemark - 9610133

Remarks: Start CallerRemark - 9610133 underground storage tanks each 550 gal have caused soil contamination over a period of 10 yrs-tanks were tested for tightness and do not appear to be leaking-contamination likely to have been caused by overfill at different periods based upon delineation by engineer contamination localized around fill pipe based on geo-probe boring and results of lab sample END CallerRemark - 9610133

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start DECRemark - 9912551 Prior to Sept, 2004 data translation this spill Lead DEC Field was "KRIMGOLD" 01/26/04 Reassigned from Rommel to Austin 02/17/04: Reassigned from AUSTIN to KRIMGOLD. 3/15/05. J.Krimgold reviewed a letter dated December 2, 2004 from AKRF. The letter stated that three tanks along with contaminated soil were removed from this site. However, post-excavation samples were not obtained and a new building was constructed at this site. AKRF was requesting a spill caseclosure. 3/15/05. J.Krimgold called AKRF and spoke to Andrew Rudko. Requested any supporting documentation showing that tanks and contaminated soil were indeed removed and disposed properly. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start DECRemark - 0103274 Prior to Sept, 2004 data translation this spill Lead DEC Field was "VOUGHT" 8/2001-Tank closure report prepared by Franklin Company Contractors. 6/29/2001-Franklin implemented bioremediation by mixing 240lbs of ORC with surrounding soils and filling in excavation. 500 gallons of Waste stream technologies W-4 bio-blend mixture also injected.. Site was bakcfilled with 3 to 6 feet of clean fill, 6 inches of crushed stone and an 8-mil polyethylene vapor barrier. Areawas then covered with 6 inch reinforced concrete slab. Soil VOC pass TAGM, soil SVOC exceed TAGM but are due to fill composition. Site visit by Jacob Krimgold showed no visual evidence of contamination. Groundwater VOC and SVOC also pass TAGM. 12/13/2001 Spill closed as per Mark Tibbe, Jacob Krimgold and myself (all NYSDEC personnel).
END DECRemark - 0103274

 DEC Remarks: Dec Sigona met with Dormitory Authority staffon July 17, 1995. Meeting included David Recino (Dormitory Authority), E. Dowd (Hunter College), Roy Fein (Rose, Beaton Rose), R. Dib (Aqua-X). Investigation found oil leak in tank. product leaked to soil and surrounding water table. Inspection of Con Ed vault outside of the building revealed 6 fuel was seeping into vault. Notified Con Ed who sent personnel to respond and document. Telephone call on 1/3/96 found that Woodward-Clyde was awarded bid to provide investigation of the spill. They will start advancing borings on the week of January 8, 1996. I requested that I could be present to observe the installation of monitoring wells. Roy Fein will be overseeing the work and I asked David Recino to have him call me ASAP to set up the drilling apointment.
 Spill Cause: TANK WAS EMPTIED AND CLEANED DURING A TEST TODAY - THEY FOUND AN UNKNOWN AMOUNT OF OIL UNDER TANK. CALLED DAVID KATZEN, PREPARING TO ABANDON TANK - CLEANED OUT THE TANK - DRILLED INSIDE THE TANK.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Remarks: 8/27/99 - Saccacio - on 7/31/99 I called the caller and he said that speedy-dry had been applied and that a cleanup crew was enroute. Called the spiller Tmore) and he said that he contracted tyree to do the cleanup. I asked him to send me a letter certifying the spill had been cleaned up. I called him and left him a messsage on 8/27/99 reminding him I need that letter to close out the spill
 Spill Cause: tank was overfilled at location - speedy dry applied - cleanup crew enroute - some material may have flowed into storm drain and street update 0400 hrs - spill only 5-7 gal all cleaned up - none entered waterway

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

No letter has been sent yet. 06/21/05-SR// Spoke with jeff Bohlen(516-807-8983). He will forward all necessary documents to DEC. 10.07.05 Sharif is currently reviewing the subsurface investigation report submitted by Envirotrac. 3/20/06- DEC Piper reviewed tank closure report. As per report and database, there are two historic spills at the property, 9007995 and 9314833. In 1994, two 4K gasoline UST's were removed, and two 3K gasoline UST were installed. Samples collected from the limits of the excavation detected petroleum impacted soils in the vicinity of these USTs. Additionally, 8- 550 gal USTs are located in the basement of the property. These tanks were allegedly closed along w/ the two 4K gal USTs. SVOC's were detected exceeding NYSDEC TCLP guidance values. Spills 9007995 and 9314833 were closed on 8/6/96 after receipt of tank closure reports for the 2 4K USTs and 8- 550 USTs. In June- August 2005, seven (7) MWs were installed on site. Lab analytical revealed VOC's, SVOC's, and metals above TAGM 4046. Note: the groundwater was determined to be slightly to moderately saline. From Jan 6- 11, 2006, Envirotrac removed the two 3K gasoline USTs that were installed in 1994 and constructed of double wall fiberglass. A total of six (6) endpoint samples were collected from the excavation. With the exception of the West sidewall in which 226 ppb of benzene was detected, no other VOC's were detected above TAGM 4046. Additional excavation was performed in the area of the two- 4K UST remote fills and the two- 3K UST remote fills. Analytical results suggest that

VOC's were not present above TAGM 4046, however SVOC's were. In addition to the sampling performed in reference to the UST's, soil samples were collected at the base of the Truck Elevator Shaft where it was determined that VOC's and SVOC's were detected above TAGM 4046, due to a bad seal. To minimize any future impact, the seals were replaced and vegetable oil was used in place of pet. based hydraulic oil. As per the report, the property is currently in negotiations to be sold. This party reportedly plans on razing the building and excavating to bedrock. 45 feet bgs. In the meantime Envirotrac recommends quarterly sampling of the MW network. Referred to K. Tang 3/21/06 - reviewed the tank closure report. Soil and GW contamination is minimal, max GW VOCs is 200 ppb and only one side wall sample is slight above TAGM 4046. Spill closed.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start DECRemark - 9905507 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "HARRINGTON" This spill site has been transferred from DEC Sigona
to Remedial Bureau B, on August 4, 2003. This spill site has been
consolidated under Spill No. 8806783. Reassigned from O'Dowd on March 1,
2000 DEC's comments regarding a proposed Work Plan for On-Site and Off-Site
Investigation by Roux Associates, dated April 30, 2003. Based on the results
of our site visit on March 7, 2003, and evaluation of the proposal by Roux
Associates, the DEC accepts ExxonMobil's Work Plan and Schedule to evaluate the
on-site and off-site contamination at this location. Exxon-Mobil must now

DEC Memo: Start DECRemark - 0002289 Spoke to Dr. Sandoval who represents Whitehouse - the tenant/builder/runner of future club. Swingtime is the owner of the property. According to a report written by Swingtime's consultant, American Envmtl Assessment(AEA),there was no contamination. DEC Saccacio required more work. PDM performed own investigation for Whitehouse and found contamination. Whitehouse's attorney(Michael Perle) will send DEC letter. Reassigned from Saccacio. 5/9/03 Reassigned from Rommel to Harrington. 1/5/05 Reassigned from Harrington to Foley. Changed address back to 609-611 11th Avenue. Address was 561 11th Ave and listed ExxonMobil as RP. Two PBS registrations, one at each location. Appeared to have been consolidated under spill #8806783 in error. Cross-reference open #9501693 for 609-611 11th Ave. (KMF) From closed spill file: (KMF, 3/24/05) 10/24/00 Letter from PDM Environmental Services addressed to Mr. Oscar Sandoval of The White House.PDM reviewed the American Environmental Assessment Corp Summary Report for Soil Removal. They noted that in some samples the reported values were greater than the guidance values. Also noted that some samples were contaminated and above STARS guidance values. Sample results indicate that soils beneath the 11th Avenue property line show the greatest levels in exceedance of criteria and will probably require further remediation. PDM noted complications with obtaining a certificate of occupancy until contaminants have been removed to below acceptable levels. A letter was issued by S. Saccacio on 11/22/00 which states that the spill number will not be considered for closure until additional investigation is conducted and the Dept reviews the results. See spill #s 0001837, 0001719, 9501693. END DECRemark - 0002289

 DEC Remarks: 01/08/00 Reassigned from Saccacio. Spoke to Dr. Sandoval who represents
 Whitehouse - the tenant/builder/runner of future club. Swingtime is the owner
 of the property. According to a report written by Swingtime s consultant,
 American Envmtl Assessment, there was no contamtion DEC Saccacio required
 more work. PDM performed own investigation for Whitehouse and found
 contamination. Whitehouse s attorney will send DEC letter.

Assessment: Currently direct contact exposure are prevented since the site is covered with a building, pavement and landscaped areas. The proposed remedy calls for the removal of waste from landscaped areas and the continued maintenance of the building and paved areas. Soil gas and indoor air sampling showed no evidence of soil vapor intrusion. Public water is provided to the area, thereby preventing exposures to groundwater.

Env Problems: Con Edison completed a Site Characterization (SC) under the Voluntary Cleanup Program (VCP) in 2003. The SC identified residual MGP contamination at depth across the site, including heavily stained soils with some sheens and liquid coal tar. Based on the SC results, the NYSDEC has determined that the site poses a significant threat to the environment. Additional investigation of the former MGP is being conducted by Con Edison under the VCP as site number V00531.

Site Desc: Formerly Site #V00531 The site is a portion of the former 42nd Street Manufactured Gas Plant (MGP), which operated from 1860 to the early 1920s. The site is currently occupied by the River Place I apartment building and a small park, bounded by 12th avenue, 41st Street, 42nd Street, and a parking lot to the east. The site use is proposed to be continued use as a high-rise residential apartment building. The project is being jointly managed by Con Edison, the former operator of the MGP, and Silverstein Properties, the developer. Con Edison completed a Site Characterization (SC) under the Voluntary Cleanup Program (VCP) in 2003. The SC identified residual MGP contamination at depth across the site, including heavily stained soils with some sheens and liquid coal tar. Based on the SC results, the NYSDEC has determined that the site poses a significant threat to the environment. Additional investigation of the former MGP is being conducted by Con Edison under the VCP as site number V00531. A Remedial Work Plan (RWP) was submitted to the NYSDEC in October 2004. The RWP proposes excavating approximately 12,000 cubic yards of contaminated soil for off-site disposal from accessible areas in the adjacent park. A public meeting was held January 19, 2005 to discuss the RWP and the RWP was approved on 3/31/05

Env Problem: Con Edison completed a Site Characterization (SC)under the Voluntary Cleanup Program (VCP)in 2003. The SC identified residual MGP contamination at depth across the site, including heavily stained soils with some sheens and liquid coal tar. Based on the SC results, the NYSDEC has determined that the site poses a significant threat to the environment. Additional investigation of the former MGP is being conducted by Con Edison under the VCP as site number V00531.

Site Description: Formerly Site #V00531 The site is a portion of the former 42nd Street Manufactured Gas Plant (MGP), which operated from 1860 to the early 1920s. The site is currently occupied by the River Place I apartment building and a small park, bounded by 12th avenue, 41st Street, 42nd Street, and a parking lot to the east. The site use is proposed to be continued use as a high-rise residential apartment building. The project is being jointly managed by Con Edison, the former operator of the MGP, and Silverstein Properties, the developer. Con Edison completed a Site Characterization (SC)under the Voluntary Cleanup Program (VCP)in 2003. The SC identified residual MGP contamination at depth across the site, including heavily stained soilswith some sheens and liquid coal tar. Based on the SC results, the NYSDEC has determined that the site poses a significant threat to the environment. Additional investigation of the former MGP is being conducted by Con Edison under the VCP as sitenumber V00531. A Remedial Work Plan (RWP)was submitted to the NYSDEC in October 2004. The RWP proposes excavating approximately 12,000 cubic yards of contaminated soil for off-site disposal from accessible areas in the adjacent park. A public meeting was held January 19, 2005 to

DEC Memo: Start DECRemark - 8807538 Prior to Sept, 2004 data translation this spill Lead DEC Field was "SUN" 11/06/01: MF-R9 OTHER SPILLS AT SITE 9314775, 8807198,CLOSED 9516313,CLOSED, 9604842, CLOSED, 9415731, CLOSED. 02/18/2004-AUSTIN - REASSIGNED TOSUN 10/15/04-On 10/15/04 Sun sent a letter to Michael Matri of Hess requiring by 11/30/04 to submit the following information: 1)Tank Closure Report, 2)Locations of tank and/or line test failure, 3)Subsurface investigation report, including current and historical soil and groundwater analysis, and 4)A surrounding property sketch including property layout and usage. 10/18/04-On 10/15/04 Sun received from Micael Matri of Hess a Revised Spill Closure Report, prepared by EnviroTrac, dated December 2002. The report indicated that Hess removed 2,150 tons of soil from the site. Out of 20 soil samples collected following the UST removal, VOCs were detected in excess of their respective TAGM guidelines in only 3 (SP-2, SP-3 ans SP-10). Semi-VOCs were detected above their respective TAGM guidelines in only 2 of the samples (SP-14 and SP-20). Since there are no potable water supply well within a 1/4-mile radius of the site and this spill occurred prior to the removal of the 2,150 tonsof soil that Hess removed during the UST removal, and only few VOC and SVOC concentrations higher than the NYSDEC standards,this spill is closed. END DECRemark - 8807538
Remarks: Start CallerRemark - 8807538 2 4K TANKS SYPHONED TOGETHER FAILED PETRO. L R = -0.554 GPH. ORIG. INVESTIGATED BY GRATHWOL END CallerRemark - 8807538

DEC Memo: Start DECRemark - 9401276 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "TIPPLE" 01/20/95: DEC HIRED FENLY AND NICOL TO INSTALL A
GROUNDWATER REMEDIATION SYSTEM TO RECOVERY OIL IN GROUNDWATER ADJACENT TO
LEAKING USTS. 2-10,000GALLON #6 FO TANKS FAILED TANK TEST. NEW ABOVEGROUND
INST. Reassigned from Sigona to Tipple on June 21, 2004.
8/19/05-Vought-Received call from Lin Jian (Chinese consulate) regarding
reception of fax from Tipple. Vought called back and left message to refax.
Vought received fax from Jian " I would like to remind you that the metal
covers of the manholes on 43rd Street have got uneven after years of
service...." "So we request your department to take immediate action to
replace them with new covers...". Vought called Bruce and left message to
return call to DEC. Vought spoke to Bruce, Bruce will send someone out and
repair. Bruce will send email after site visit. Vought called Lin and informed
him of upcoming National sitevisit and manhole repair. 8/23/05 - Raphael
Ketani. Case transferred to Jeff Vought. 9/20/05-Vought-Contract Payment
Package (National)-Biweekly well monitoring and gauging. 10/3/05-Vought-File
review by Vought: Letter from DEC Tomaselloto Milro (Milici)-4/21/94. Milro
contacted by DEC to perform emergency oil recovery. "In doing so approximately
400 gallons of oil was collected". "This yard specifically in respect to this
400 gallons of oil shall be exempt from part 360 and 373storage
requirements...". Note from DEC Sigona-4/24/94. "3rd week in May determined
consulate as source.." Note from DEC Sigona-4/28/94. Consulate tank #2
(10000-gallon #6 fuel oil) failed tightness test. DEC took over cleanup of
sewer withFenley and Nicol (F&N). Three monitoring wells installed in 5/2/94.
Meeting held with consulate on 5/8/94 and consulate agreed to installation of

recovery system in sidewalk. Analyticals from H2M Labs-Analytical of oil sample from sewer shows 10800ppm fuel oil. Letter from H2M Labs (Hopkins)-6/23/94. "Enclosed please find copies of the chromatograms you requested.." from sewer manhole and tank excavation. "The petroleum fingerprints obtained from the above samples most closely resemble that of a #4 fuel oil." "Samples "sewer manhole" and well FN-2 appear to be most closely related, as each sample contains just the #4 fuel oil". Haz Waste Disposal Manifests from Milro-6/30/94. Monitoring Report (F&N)-June thru July 1994. Weekly monitoring, bailing of free product. Recovery system is total fluid ejectors, oil water separator and 275-gallon holding tank. Total recovered to date is 1460 gallons of product. Letter from Clean Venture-8/26/94. "Please be advised that United Parcel Service Inc of 643 West 43rd Street, New York, New York has paid us in full for labor, equipment, materials and other costs incurred during the 4/26, 4/27 and 4/28/94 spill cleanup". Monitoring Report (F&N)-August 1994 thru September 1994. Same recovery system as above. Total recovery to date is 765 gallons. Subsurface Investigation Report (F&N)-9/1/94. "This investigation is being conducted as a result of the detection of petroleum hydrocarbons in the basement of United Parcel Service building across 43rd Street from the site". "The recovery system currently consists of three total fluid ejectors installed in monitoring wells FN2, FN3 and FN4, an air compressor to power the ejectors and a 250-gallon oil water separator and a 150-gallon holding tank." Groundwater at 8-10' below grade. Pressure test was performed and leaking stick and suction lines were found. Tops and sides of tank were heavily rusted. On 6/23/94 the cleaning of the USTs was completed and they were ready for abandonment by filling with concrete slurry. A total of five monitoring wells were installed. Floating product was also recovered from sewer on 43rd Street. Groundwater flow to the north. Report recommends continuation of OM&M. Revised Subsurface Investigation Report (F&N)-9/1/94. "The report of #6 fuel oil by the NYDEP prompted an emergency response by the NYSDEC. The NYSDEC requested that UPS provide a contractor to investigate the condition of the sewer in an attempt to determine the source of oil. The investigation by UPS determined that the oil was entering the sewer between 11th and 12th Avenues. F&N then performed an extensive investigation of the fuel oil tanks in the basement of the Consulate General in the Peoples Republic of China". Letter from F&N (Porsche)-9/22/94. "As you requested F&N has attempted to make a determination of the point at which oil is entering the 43rd Street sewer at the above referenced site". Field crews have determined that the point of entry is approximately 40' feet east of the sewer manhole located at the intersection of 43rd Street and 12th Avenue" "...F&N believes that the installation of two additional ejectors are warranted". Letter from F&N(Porsche)-9/30/94. "...F&N is prepared to begin the following work: 1) Two additional wells will be installed at the Chinese Consulate site". One well will be upgradient and the other downgradient of the ejectors. Letter from OSC to Chinese Consulate-10/25/94. "An application for damage compensation has been filed by United Parcel Service.." Instructions attached to letter. Monitoring Report (F&N)-October 1994 thru December 1994. Same recovery system as above with a total recovery of 958 gallons of free product. Letter from F&N (Sehamy)-1/5/99. The following is a summary of the discussions during the meeting: "Install 4 2" monitoring wells in the vicinity of the wells containing ejectors. Install heater to expedite the removal of #6 fuel oil. Discontinue use of adsorbent pads in sewer area.." Letter from OSC to Chen Yong Kang (Consulate)-2/10/95. "...we requested that NYSDEC determine the nature and location of the work performed by the United Parcel Services' contractor." The purpose of the investigation was to verify the costs incurred by UPS for the cleanup. "If all we have clearly verified that UPS's costs relate only to the offsite investigation and cleanup of the fuel oil spill originating at the

S101103245

Chinese Consulate". If oil spill compensation fund reimburses UPS for expensed, OSC will go after Consulate as responsible party. Monthly Monitoring Reports (F&N)-February 1995 thru December 1995. Total product recovered to date is 1791.25 gallons. Status Report (F&N)-July 1995 thru December 1995. Remediation system consists of five total fluid ejectors installed in monitoring wells FN2, FN3, FN4, FN6 and FN7, air compressor to power the ejectors, twelve monitoring wells, a 250-gallon oil water separator and a 275-gallon holding tank. OM&M consists of biweekly well monitoring and bailing of free product, monthly collection of wastewater effluent samples. Report recommends continuation of OM&M. Monthly Monitoring Reports (F&N) Jan 1996 thru June 1996. Total product recovered to date is 2616.75 gallons. Status Report (F&N)-Dec 1995 thru June 1996. Five fluid ejectors, twelve monitoring wells onsite. Report recommends: Site visit with vacuum truck to recover free product found well FN-9a and any other well detected with free product a the time of monitoring. Status Report (F&N)-December 1996. Same recovery system as above. "At the end of the period covered by this report, a total of 2890.75 gallons of free product was recovered". Groundwater at depth of 8' below grade and flow to the northwest. Report recommends: 1) continuation of free product removal via vacuum truck 2) steam injection in wells with product. Letter from F&N (Lorthior) to DEC Tomasello-3/18/97. On 3/17/98, F&N "implemented the second phase of the bioremediation program at the Chinese Consulate". "Twenty five gallons of MicroBac M1000H* bacteria was evenly distributed to wells" containing free product. 35 gallons of nutrients were then also injected into each of the six wells. "Monitoring of bacterial activity at the site will begin in April of 1998." Status Report (F&N)-June 1997. Five fluid ejector onsite. Groundwater 8-10' below grade and flow to the northwest. OM&M consists of bimonthly well monitoring and free product recovery, monthly collection of effluent samples, recovery of free product from wells via vacuum truck. As of June 1997, 3617 gallons of free product was recovered from site. Report contains bioremediation proposal. "Concentrations for all the available months exceeded the wastewater effluent limits". Report recommends: 1) continuation of vacuum truck visits to recover free product 2) application of MicroBac and 3) treatment of effluent by activated carbon prior to discharge. Letter from F&N Abbasi to DEC Tomasello-8/6/97. Proposal for Micro Bac application. First bacterial application will be to reduce viscosity of easier recovery. Second bacterial application will be regular bacteria for hydrocarbon degradation. Letter from OSC to US Coast Guard-10/14/97. "Your review is necessary for the Fund to document that cleanup and removal activities are consistent with the National Contingency Plan" Letter from F&N Lorthior to DEC Tomasello-11/5/97. First bacterial application to take place on 11/11/97. Pump and treat system will be shut off one month after first and second application. Letter from F&N Lorthior to DEC Tomasello-11/18/97. First application performed on 11/11/97. Recovery system will be inactive until 12/15/97. Status Report (F&N)-December 1997. Five fluid ejector onsite. Groundwater 8-10' below grade and flow to the northwest. OM&M consists of bimonthly well monitoring and free product recovery, monthly collection of effluent samples, recovery of free product from wells via vacuum truck. As of June 1997, 3880 gallons of free product was recovered from site. Bioremediation program has been implemented. Injectors were shut down for one month after application. Site will be monitored for bacterial activity, nutrient and DO on a monthly basis beginning in October. Report recommends continuation of OM&M and sampling of waste water for TPH. Status Report (F&N)-Jan thru June 1998. Bioremediation program currently underway onsite. Five fluid ejector onsite. Groundwater 8-10' below grade and flow to the west. OM&M consists of bimonthly well monitoring and free product recovery, monthly collection of effluent samples, recovery of free product from wells via vacuum truck. As of June 1997, 4450 gallons of free product was recovered from site. Second phase of

S101103245

bioremediation program was implemented in March 1997. Site also being monitored for bacterial activity, nutrients and DO on a monthly basis. Wastewater influent is no longer sampled for TPH. Report recommends continuation of OM&M parameters and Biorem sampling. Letter from F&N(Lorthior) to DEC Tomasello-10/19/98. F&N "recently performed a viscosity test on the petroleum present..." "The results of the viscosity test indicate that the viscosity of the product has been reduced by the MicroBac treatment". Injectors will be reinstalled and a bioactivity test will be performed at the site. Status Report (F&N)-July thru Dec 1998. Bioremediation program currently underway onsite. Five fluid ejector onsite. Groundwater 8-10' below grade and flow to the west. OM&M consists of bimonthly well monitoring and free product recovery, monthly collection of effluent samples, recovery of free product from wells via vacuum truck. As of December 1998, 4450 gallons of free product was recovered from site. Viscosity went from that of a #6 fuel oil to that of a #4 fuel oil. Groundwater sampling show bacterial activity as "excellent". Report recommends: 1)Continuation of OM&M efforts 2)installation of monitoring wells in the basement or boiler room of the building 3)use of Biosolve. Status Report (F&N) Jan 1999 thru June 1999. Bioremediation program currently underway onsite. Five fluid ejector onsite. Groundwater 8-10' below grade and flow to the west. OM&M consists of bimonthly well monitoring and free product recovery, monthly collection of effluent samples, recovery of free product from wells via vacuum truck. As of December 1998, 4452 gallons of free product was recovered from site. Groundwater sampling show bacterial activity as "excellent". "However, F&N has analyzed the monitoring data on a monthly basis and has determined that the Bioremediation Program has had little, if any effect, on the amount of free product at the site." "This data leads F&N to conclude that the Bio-remediation program at the site is not performing to expectations". Report recommends: 1)continuation of OM&M 2)use of Biosolve and the application in a limited area to study its effectiveness 3)resurveying of wells 4)installation of monitoring wells in basement or boiler room. Letter from F&N Lorthior to DEC Tomasello-8/23/99. "This letter is intended to propose a work plan to utilize Oxygen Release Compounds at the above referenced property". Plan for ORC to be injected into proposed piezometers in basement. Letter from OSC to National Pollution Funds Center-10/13/99. "The responsible party has been contacted and has refused to accept responsibility for this release". Email from DEC Rommel to DEC Tipple-8/4/00. Consulate would like to construct a pump room in September in the location of the existing recovery system. Decision was made to move the system to the second floor of the continuous circular ramp parking garage immediately above its current location. Letter from Miller (Silberger) to DEC Rommel-8/4/00. Recovery system not in operation during 8/3/00. Miller proposes: 1)VEFR of wells containing free product 2)VEFR recovery system 3) relocation of recovery system. On 8/7/00, approximately 700 gallons of free product was recovered. Hazardous Waste Manifests (Miller)-9/18/00. Letter from Attorney General to Consulate-7/25/03. "I have been asked to provide you with additional information regarding a fuel oil spill discovered at the Chinese Consulate in 1994". "The oil recovery system is no longer in place in the consulate and the DEC is not able to determine the extent of contamination at this time..." "In order for the State of New York to refrain from filing suit in this matter, it will be necessary for you to execute the enclosed tolling agreement..." Letter from Attorney General to Consulate-10/8/03. "Enclosed is a complete set of vouchers to date for the cleanup activities at the Consulate". Hazardous Waste Manifests (Miller)-5/18/04. Site Status Monitoring Report (Miller)-Dec 1999 thru Oct 2004. "In December 1999, the NYSDEC contracted MEG to take over the maintenance of the recovery system and the groundwater monitoring program". Recovery system was relocated in August 2004. "The Consulate General of the People's Republic of China removed the compressor. The system has not

S101103245

operated since that time and access within the building has been very difficult to obtain. It is believed that the recovery system has been removed". MEG currently performing biweekly VEFR events and well gauging. Groundwater flow to the west-southwest. From Dec 1999 thru Oct 2004 approximately 10714 gallons of free product has been recovered. Report recommends establishing status of recovery system and continuation of biweekly OM&M. Fax from Consulate (Lin Jian) to DEC Tipple-10/25/04. Letter sent requesting the following info: 1)frequency of contractor site visits 2)information on consulting companies 3)Efficacy of addressing source area 4)current inspection procedures. Letter from DEC Tipple to Jin Lan-10/25/04. Answer to above questions: 1)bi-monthly VEFR events, biweekly well monitoring 2)contractor list is attached 3)investigating under consulate would effectuate remediation 4)use of sonic interface probe for product levels. 10/04/05-Vought-Continued File Review by Vought: Addendum to Site Status Monitoring Report (Miller)-12/14/04. "Plesa note that all plume maps are produced using Surfer 7.0 software". "As such these plume maps should be viewed as general indicators not as a definitive resource". Fax from Lin Jian to DEC Tipple-1/10/05. "I found that Miller Environmental Group provided DEC a report that covered all their activities performed from Dec 1999 to Oct 2004 and the work is still going on. Question is when all this work could be stopped? What is the criteria that the pollution had been controlled and the case could be cleared?" "I question the value of the report". Letter from DEC Tipple to Lin-1/20/05. Answers to above questions: 1)work can be stopped when soil and groundwater meet TAGM standards. "The DEC highly recommended the Consulate retain their own consultants to complete the remedial work" 2)The report value is used to track movement of the plume since the product composition is already known and the amount recovered is not an indicator of successful remediation. Site Investigation Report (GZA Geoenvironmental)-August 2005. "The site is comprised of a multi-story building, which is surrounded by commercial properties. The building does not contain a basement." Facility currently heated by natural gas. Groundwater from 6-11'. "The system continued to operate until at 1999 when it was shut off during a relocation of the system components. The system was never put back on line." "In 1999 Miller Environmental Group began VEFR events utilizing a vacuum truck on a twice monthly basis". "Over the course of the remediation program, the remediation system reportedly recovered 4452 gallons of product. 10,714 gallons of an oil/water mixture were recovered using VER methods". Historical records show and MGP facility was once present on-site. Investigation involved seven borings drilled off site and three borings performed inside building. One well was installed inside the building. Groundwater samples collected from inside well and five outside wells. Three wells contained free product. "In general the upper 4 to 5 feet of the site contains fill material consisting of cinders and ash". Report recommends that: 1)remedial efforts at the site be suspended for one year to determine if free product in the wells increases 2)installation of one monitoring well west of FN6 3)monitoring of adjacent catchbasin. Fax from Consulate (Jian) to DEC Tipple-8/10/05. "I would like to remind you that the metal covers of the manholes on 43rd Street have got uneven after years of service, which no doubt have become a hazard to the people walking by". "So we request your Department to take immediate action to replace them with new covers in case anything more serious occurs". Fax from National Environmental-8/25/05. Wells 7A and 10A contain free product. Well monitoring performed biweekly. 10/04/05-Vought-After review DEC approves GZA report recommendations pending inclusion of: 1)biweekly product monitoring and submission of quarterly monitoring reports 2)letter also addressed former sidewalk conditions. Vought spoke with DEC Austin who confirmed that the manhole conditions are now the responsibility of the consulate. Vought also called and spoke with David Winslow to confirm that the proposed well will be located between the recovery

DEC Memo: Start DECRemark - 0206999 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "DEMEO" PBS #2-605827 10/7/2002 DeMeo responded to the
site and witnessed the tank test failure. 5/8/03 TJD Demeo contacted
by Paul Stewart (ACT) who has been retained by Dime Savings Bank to perform an
investigation at 525 W45th Street due to tank test failure. Mr. Stewart stated
(4)borings were installed soil/groundwater samples taken from each location.
He reports no contamination found. Mr. Stewart was not aware the Department is
pursuing an enforcemnt case against registered tank owner for non-compliance.
Mr. Stewart will be submitting a work plan to further investigate this

property including either removing tank or sampling soils beneath tank and investigating buried fill line. See also spill 0206549 5/22/03 TJD Site visit. Demeo on site to witness uncovering of 2,000 UST. When manway was accessed tank contained approximately 60 gallons of #2 Fuel Oil. Tank had previously been pumped dry and cleaned by PTC. Unknown how oil reemerged into tank. A small hole was cut into tank bottom and a soil sample was collected. No visual or olfactory indicators or contamination were present in sample. Laboratory analysis subsequently revealed all petroleum constituents are below TAGM. Fill and vent lines were removed from tank and properly disposed. 5/29/03 TJD Site visit. Demeo on site to witness excavation, removal and inspection of feed and return product lines. Action Environmental performing work under supervision of ACT. Product lines were excavated from tank to perimeter of tenant space. A small excavation was opened inside tenant space where product lines penetrate foundation wall (beneath slab) from boiler room. No visible or olfactory indicators of petroleum contamination was identified in area of piping runs. 6/3/03 TJD Closure report submitted by ACT. NFA letter issued. Additional notes: 9/24/02 Amtrack spill reported (0206549) 9/28/02 Letter sent to Tokay Realty requiring tightness test 10/7/02 Tightness test conducted (tank failed) 10/22/02 Letter requiring retest and/or tank closure sent 10/22/02 Tightness test performed (tank failed) 10/28/02 Follow-up letter sent requiring subsurface investigation 10/29/02 Tank taken out of service. Temporary tank installed. 2/21/03 New 1500 gal AST installed (not registered) 6/3/03 NFA issued. Old 2000 gal UST still active in PBS. New 1500 gal AST not registered. DEC Memo: Start DECRemark - 0209637 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ZHAO/DO" 12/19/02 - AUSTIN, DDO - TTF LETTER SENT 1/11/06- DEC Piper spoke w/ Eugene Degan, (PRev. Owner Rep 845.294.7509) regarding tank test. He couldnot be sure though he thinks the tanks are still empty. He will look into this. Piper then contacted new owner Dov Hertz, Extell Group. 212.712.0633. He knows nothing and will have previous owner get info. Galden Frankel performed Phase I and II onproperty. Left message at GF requesting call back. 1/18/06- DEC Piper spoke w/ property manager, Rob Scharf 212.712.6111. Stewart Dean Co. -212.695.3180. He will fax info. DEC Piper to review and inform Rob of additional work if warranted. 2/6/06-DEC Piper spoke w/ Rob S. I explained to him that he was still in violation of PBS code. I have received analytical suggesting that there was no release at the site. The tank test results indicated a dry ullage leak. The tank is empty and still needs to be removed or closed iin place. As per Rob, he will be sending in the new application this week. I instructed him to include a line item that that due to the razing of the building, that they will remove the tank when the activities have beencompleted. Afterwards, he will need to update the PBS records to insicate that the tank has been removed. Upon review of a limited phase II investigation of the site performed by Galden Frankel, of the six soil samples taken from various locationsthroughout the site, no elevated

Remarks: constituents were detected. However, three GW samples were collected. The results indicate 1,040 ppb of MtBE and slightly elevated levels of PERC and its byproducts. 5/15/06- DEC Piper. Referred to Remediation. 5/31/06 - reviewed file: MTBE was detected without other VOCs usually present in a petroleum release. The MTBE is likely the leading edge of an off-site impact. Low level of CVOCs are also detected. These CVOCs are only detected in GW with no soil contamination or other sources on site. Spill is closed, no NFA issued since no remediation was ever conducted at site. - KST END DEC

DEC Memo: Start DECRemark - 0305833 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "SANGESLAND" Sent TTF letter to consultant: Maria Ramirez,
GZA, 65 Willowbrook Blvd, Wayne, NJ 07470 11/5/2003 Sangesland spoke
with Maria Ramirez at GZA. She says the building is converting to natural gas
and the 10,000 gal tank will be abandoned in place. Tank is below the basement
floor under an electrical utility room. They cleaned out the tank and found
holes in the top 1/3 of the tank. They will take borings through the bottom of
the tank to determine if the area is contaminated. 12/4/2003 e-mail
message from Maria Ramirez said the soil borings through the bottom of the tank
would take place around 12/12/03. 12/11/2003 Sangesland reviewed a submittal
from Maria Ramirez of GZA dated Nov 19, 2003. This outlined the the work
discussed above and stated that 4 holes will be drilled through the bottom of
the tank and samples will be collected for testing (if possible-it may be in
cement). If the samples are clean, the tank will be abandoned in place with
foam. 12/22/2003 Sangesland spoke with Fran Schultz of GZA about this
site. They made 4 holes in the bottom and sides of this tank and hit cement.
Water is entering the tank. To date approx 700 gal of water has entered the
tank. They believe the water is from a broken water main. Sangesland asked
GZA to test the water for VOC and SVOC. GZA said they would also test for
Floride and Clorine to determine if this water is city tap water or
groundwater. If the water samples come back clean, then GZA will prepare
an argument that the tank is in a subbasement vault. All records of the
building (blueprints) are gone (they were in 7 World Trade Center). There are

BASEMENT OF (Continued)

S105999768

lots of utilities nearby. The tank is being abandoned in place. GZA will request closure of the spill number. 3/15/2004 Sangesland reviewed a report from Maria Ramirez of GZA. Based on the description of the tank location (below ConEd electrical equipment), the drilling of holes through the bottom and sides of the tank (all into cement), results of water tests on the water that came into the tank after drilling (no petroleum but did have Floride& Chlorine). Based on all of this information, the DEC will allow GZA to go ahead with abandonment of the tank. After proper abandonment is complete, GZA will submit a final report with a request for spill closure. 11/14/05 - Larry Alden - Reviewed file and concur with assessment of Sangesland (3/15/04). Reviewed PBS# 2-606121, which showed that 10,000-gallon tank was closed in-place on 7/8/04. With absence of any contamination, and tank subsequently closed, this spill can be closed. END DECRemark - 0305833

Remarks: Start CallerRemark - 0305833 failed a tightness test but could not isolate a specific pipe - test was performed as part of a closure. END CallerRemark - 0305833

DEC Memo: Start DECRemark - 0207335 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "VOUGHT" 10/16/02 SA/OD TTF LETTER SENT. FILE TRANSFERRED
FROM VOUGHT TO OBLIGADO 1/19/06- Obligado - File review. From spill report,
apparently a tank test failure for diesel tank, soil affected. From PBS,
number is 2-602720. There are 2 underground storage tanks at the site. The
site was inspected on 11/4/04 by DEC Rossan. A NOV letter was subsequently
sent. Among violations for USTswas a failure to test tanks and unreconciled
inventory records. Check tank tightness records and there is no file for this
site. Call number on PBS report, spoke to the President, George Greeve at
(201)529-3666 (ext 1306), said they spend \$600,000to fix the problem and to
call Rich Vihonski at (201) 225-7557 who can give all needed information.
Called Nich and left message. 2/1/06 - Obligado - received email from
Austin. Apparently this site has already been referred to legal for
enforcement by Tipple. The text of email read as follows: 231032 Coach USA

as per Rommel. 12/7/04 Reassigned from Rommel to Foley. Issued certified letter (Robert Gans, Swing Time LLC Corp., 1270 Saw Mill River Rd, Yonkers NY 10710) requiring site assessment for ten gas USTs removed 7/99. Report to be submitted by 3/7/05. 12/21/04 Certified letter returned as attempted, unknown. 12/22/04 Resent certified letter to Robert Gans (617 11th Avenue, NY NY 10036). 12/27/04 Spoke to Perry Burkett(same address as R. Gans-617 11th Ave, NY NY 10036 (212-582-1951, 212-246-0856(fax)), general counsel for Robert Gans, Swingtime LLC. Will send correspondence and reports that were previously submitted to Steven Saccaccio. Stated that Saccaccio had approved remediation and subsequent construction of building currently on property. 1/4/05 Received reports from P. Burkett. 1) Letter workplan dated 5/22/00. 2) Letter and fax from B. Pachmohr dated 6/5/00 including field notes and proposal for an additional monitoring well. 3) Fax from S. Saccaccio to former tenant, Dr. Oscar Sandoval and his atty M. Perle, indicating the planned building will not interfere with the remaining spill investigation and potential remedial obligations. 4) Soil Removal Summary Report from American Environmental Assessment Corp. dated 7/5/00. 10 gasoline USTs had been located in the SE corner of the property. They were removed prior to the construction work and the site assessment that was performed at the time did not reveal any contamination around the tank field. American Environmental Assessment Corp.(AEAC) was contracted to further investigate. On 5/24/00, AEAC installed three test pits. Soil around the former tank field had been impacted by gasoline. Between 5/31 and 6/14/00, 860 tons of contaminated soil were removed. GW was encountered at 13' bgs. Two samples at 10' bgs showed elevated concentrations of VOCs (total BTEX at 4133ppb(E-5), and 2525ppb(E-4)). Rock was encountered at a depth of approx 6' bgs which dropped off towards the SE corner to 10-12' bgs. 1/6/05 Received copy of tank removal affidavit from Petroleum Technology stating ten 550gal gas tanks were removed on 7/20/99. 1/10/05 Issued letter requiring installation of three monitoring wells. Two along 11th Ave (adjacent to soil sample locations E-4 and E-5) and one along 45th St (btwn S-2 and S-3). Report due 4/15/05. See spill #s 0001837, 0001719. 3/24/05 Met with M. Roux, Roux Associates. If bedrock is encountered, they will core through bedrock (only at location closest to E-5, highest soil cont.). Will take soil samples at all locations (highest PID and at gw interface). GW samples will be taken if encountered before bedrock. 4/20/05 Met Roux (Marty) and ADT Drilling on-site. Refusal at 9' bgs in first boring on northside of W45th St. Second boring (northernmost) on 11th Ave had some hits on the PID up to 700ppm. Sample from 15-17' bgs was wet. ADT installed monitoring well. Third boring to be drilled later. 4/28/05 Spoke to M. Roux. Report expected to be submitted by 5/20/05. 6/15/05 Reveived Ltd. Subsurface Investigation Report dated 6/14/05. Attempted to install three wells. Two were successful (MW-2 and MW-3). Soil had some detections of BTEX below TAGM RSCOs. Groundwater showed lower levels of BTEX in MW-2 (68ppb benzene, 4ppb toluene, 300ppb ethylbenzene, 232ppb xylenes). GW in MW-3 showed one hit for MTBE at 10ppb, with no other VOCs detected. 6/16/05 Letter sent to R. Gans requesting confirmatory GW sample be collected at end of July 2005. 8/19/05 Letter from Roux Assoc. with results of gw analysis from 7/27/05. Concentrations of BTEX above GWQS in MW-2 (30ppb benzene, 240ppb ethylbenzene, 182ppb xylenes). Concentrations in MW-3 were below GWQS. This appears to be due to residual soil contamination as indicated by boring logs. Potential for exposure from soil vapor is not expected, however, according to thereport, a vapor barrier had been installed beneath the building. END DEC Remark - 9501693

DEC Memo: Start DECRemark - 9805607 According to the NYSDEC records, on August 5, 1998, the on-site 2,000 gallon UST failed a tank tightness test and was issued Spill #98-05607. After review of information received from the client, it has been determined that after the UST failed tank tightness testing, the UST was cleaned, sandblasted, and relined with an epoxy lining, and the associated

S104619635

pipng was replaced in September 1998. On July 10, 2003, the 2,000 gallon UST failed a tank tightness test was issued Spill #03-03799. It appears that soil borings were performed to determine the extent of the UST leak/spill. Upon reviewing data received from the NYSDEC Spills Database, the NYSDEC notes section determined the soils were "slightly above" TAGM guidelines due to levels consistent with "old coal ash fill materials" and was granted "closure" status on September 2, 2003. The UST was emptied and taken out of service, and an 1,080 gallon steel registered AST was installed in a small cellar area near the north bay door area. On September 28, 2005, EnviroTrac contacted the NYSDEC regarding Spill #98-05607 to determine what is needed to "close" the Spill. It was determined that since Spill #98-05607 was prior to Spill #03-03799 which is "closed", and was the same tank and area, it should be "closed" as well. END DEC Remark - 9805607

 DEC Memo: Start DECRemark - 0409059 Tipple responded, oil impacted sidewalk, roadway along curb and Con-Ed transformer vault. Con-Ed advised of impact, surfaces cleaned, awaiting documentation. PBS# 2-152277 07/31/06: This spill is transferred from Mr. Koon Tang to Q. Abidi. Called to Mr. Angelo Solimine (718)499-2900 and talk to Ms. Mili (Secretary) she will find information regarding spill and she will call me back. -QA 08/15/06: Called Angelo solomine (T&S Trucking Co.)and talked to Mr. John Bari he said he will find out the report and he will fax me. -QA 08/18/06: Recieved a closing confirmation letter from Mr. Eston Clare, Sr. Manager (T & S) Trucking Company in which he mentioned that approximate 10 to 15 gals of #6 oil due to defective gauge caused oil to spill while Delivery was being made. T & S Trucking Company sent their Spill Crew at that private residence same day. The Crew cleaned everything that had been stained. Based on the information DEC staff closed the spill. -QA END DECRemark - 0409059

Remarks: Start CallerRemark - 0409059 faulty gauge oil came out of vent: oil went into coned vault and coned was notified: michele tipple was advised from dec: END CallerRemark - 0409059

DEC on 2/15/05. Peroxide injections performed in 2002-2003 and report recommended NFA. An additional copy will be sent for review. Sensitive receptor survey performed in 1999. A copy of sensitive receptor report, tank closure report and NFA request will be sent for review. 8/1/05-Vought-See also closed spill #0308028. New file review by Vought: Final Results of Soil Investigation at 252 W. 40th Street-October 1995. Installation of sixteen soil borings. Bedrock encountered at 4' below grade in basement. Free phase product was observed in soil sample SB12-2[2-4'] and also in SB15-2[2-4']. Soil analyticals show: 310ppb MTBE(SB7-1 0-2'bg), 3000ppb MTBE(SB9-1 0-2'bg), 460ppb benzene(SB11-1 0-2'bg), 12400ppb xylene(SB11-1 0-2'bg), 7700ppb MTBE(SB12-1 0-2'bg), 980ppb benzene(SB12-2 2-4'bg), 4800ppb toluene(SB12-2 2-4'bg), 21400ppb xylene(SB12-2 2-4'bg), 25000ppb MTBE(SB12-2 2-4'bg), 1520ppb xylene(SB15-1 0-2'bg), 550ppb benzene(SB15-2 2-4'bg), 14000ppb ethylbenzene(SB15-2 2-4'bg), 4600ppb toluene(SB15-2 2-4'bg), 72000ppb xylene(SB15-2 2-4'bg). Subsurface Investigation for Underground Storage Tanks (EnecoTech 303-861-2200)-1/10/00. Installation of three soil borings around two (550-gallon) gasoline USTs. Three monitoring wells were advanced into bedrock. "Soil impacts appeared greatest adjacent to and downgradient of the dispenser. "EnecoTech is requesting that the site be closed under risk based corrective action criteria since no complete exposure pathways have been identified". Site is located within a parking garage and two USTs are in basement of garage. USTs were in bedrock. "The results of the survey indicated that none of the thirteen adjoining property occupants had complaints of vapors". Soil analyticals show no TAGM 4046 Required Soil Cleanup Objective exceedences. Groundwater analyticals show: 37ppb benzene(GW1), 18ppb toluene(GW1), 1270ppb ethylbenzene(GW1), 4095ppb xylene(GW1), 8.5ppb toluene(GW2), 91ppb ethylbenzene(GW2), 181ppb xylene(GW2), 109ppb benzene(GW3), 27600ppb MTBE(GW3). Phase I Additional Subsurface Investigation (EnecoTech)-January 2002. Installation of thirteen soil borings. "USTs are filled through street level fill pipes on the west side of the garage". "In its letter of June 11, 2001 the NYSDEC requested further soil and groundwater investigation at the site with emphasis being placed on the two areas where ENSR encountered free product..." Groundwater flow to the west/southwest. "EnecoTech recommends 1) installation of two monitoring wells for downgradient delineation 2) the injection of dilute hydrogen peroxide into the monitoring wells to enhance natural biodegradation". Soil analyticals show: 1655ppb MTBE(GP4), 8800ppb MTBE(GP12), 1540ppb xylene(GP13), 3560ppb xylene(GP13). Groundwater analyticals show: 120ppb benzene(GW1), 735ppb ethylbenzene(GW1), 1360ppb xylene(GW1), 73ppb MTBE(GW1), 1510ppb MTBE(GW3). Underground Storage Tank Closure Report (American Environmental)-November 2003. Removal of two (1000-gallon) gasoline USTs. Two dispenser islands were present (one on basement level and one on the first floor level of the garage). The fill box to the tanks was on West 40th Street. A total of 22 (55-gallon) drums of impacted soil was removed from the site. Soil excavation was limited due to the presence of a sewer line on the east side of the excavation and "the spatial constraints of maintaining an active facility on the north side of the excavation". Five endpoint soil samples were collected. 8/3/05-Continued file review by Vought: Underground Storage Tank Closure Report (American Environmental)-November 2003. Endpoints from UST excavation show: 6600ppb toluene(west wall 5'bg), 13000ppb xylene(West wall 5'bg), 3100ppb benzene(bottom 8'bg), 65000ppb toluene(bottom 8'bg), 38000ppb ethylbenzene(bottom 8'bg), 140000ppb xylene(bottom 8'bg), 10000ppb MTBE(bottom 8'bg). Phase II Investigation and Initial Corrective Action Report(Eneco Tech)-5/2/03. "Eneco Tech is proposing injection of dilute hydrogen peroxide solution at the facility in order to increase dissolved oxygen concentrations...". Installation of six monitoring wells and one injection well. Free product in GW-7. Groundwater flow to the southeast. Soil

analyticals show: 1540ppb xylene(GP13), 3560ppb xylene(GP15), 1655ppb MTBE(GP4), 8800ppb MTBE(GP4). Groundwater analyticals show: 237ppb benzene(GW1), 974ppb ethylbenzene(GW1), 935ppb xylene(GW1), 4440ppb MTBE(GW1), 820ppb MTBE(GW3), 4360ppb MTBE(GW4), 9ppb benzene(GW5), 5ppb toluene(GW5), 19ppb ethylbenzene(GW5), 416ppb MTBE(GW5), 325ppb benzene(GW7), 1860ppb toluene(GW7), 1700ppb ethylbenzene(GW7), 13300ppb xylene(GW7), 2890ppb MTBE(GW7), 7ppb benzene(GW8), 12ppb ethylbenzene(GW8), 67ppb xylene(GW8), 510ppb MTBE(GW8), 12ppb xylene(GW9). Letter from DEC Sawyer to Roberta Barkman (Paul, Hastings, Janfosky and Walker LLP)-10/30/03. "The NYSDEC has received notification that petroleum contaminated soil was discovered at the above referenced site". Letter from Paul Hastings to DEC Sawyer-11/11/03. "This letter is to confirm our understanding that the Department of Environmental Conservation is flexible on the two week deadline contained in your October 30, 2003 letter to me". Letter from DEC Rommel to ANC Rental Corporation (Paula Rickborn)-12/8/03. Department reviewed UST Closure Report and requires additional investigation both onsite and offsite. Letter also required the installation of two monitoring wells inthe "vicinity of the west wall soil sample and in the southwest corner, northwest of the floor drain". Report due to the DEC by 1/31/04. Letter from Leggette, Brashears and Graham(Destefanis) to ANC(Rickborn)-12/11/03. Proposal for installation of ten soil borings in vicinity of former UST location and preparation of a RAP. Letter from Paul Hastings to DEC Rommel-12/23/03. "...this letter is a request for an extension of the January 31, 2004 deadline for investigation and reporting..." Request to extend deadline to 3/31/04. Request due to coordination with General Motors (previous owner of site). General Motor's consultant is EnecoTech. Corrective Action Progress and Groundwater Sampling Report (Eneco Tech)-3/11/04. Application of hydrogen peroxide during six monthly site visits. Eleven monitoring wells onsite. "The dissolved oxygen measurements indicate that a general increase has been effected across the site , in particular in the vicinity of the former USTpit (GW-1) and along the south wall of the garage(W-7) where free product has been detected". "The application of hydrogen peroxide solution at a 10 concentration is scheduled for March and April". Depth to groundwater is 1-3' below grade and flow to the south. Groundwater analyticals show: 59ppb benzene(GW1), 72ppb ethylbenzene(GW1), 27ppb xylene(GW1), 2960ppb MTBE(GW1), 12ppb MTBE(GW3), dry well(GW4), 9ppb ethylbenzene(GW5), 11ppb MTBE(GW5), 13ppb benzene(GW7), 12ppb ethylbenzene(GW7), 726ppb xylene(GW7), 2360ppb MTBE(GW7), 76ppb benzene(GW8), 47ppb ethylbenzene(GW8), 1750ppb MTBE(GW8). Remedial Investigation Report (Leggette, Brashears and Graham)-March 2004. Consultant hired by National Environmental. Installation of two additional monitoring wells. Two samples were collected "for forensic analysis in order to determine approximate aging...". Groundwater flow to the east-southeast. Soil analyticals show:140ppb MTBE(GW10 4-8'). Groundwater analyticals show: 59ppb benzene(GW1), 72ppb ethylbenzene(GW1), 27ppb xylene(GW1), 2960ppb MTBE(GW1), 12ppb MTBE(GW3), 9ppb ethylbenzene(GW5), 11ppb MTBE(GW5), 13ppb benzene(GW7), 12ppb ethylbenzene(GW7), 726ppb xylene(GW7), 2360ppb MTBE(GW7), 76ppb benzene(GW8), 47ppb ethylbenzene(GW8), 1750ppb MTBE(GW8), 19ppb benzene(GW10), 16ppb ethylbenzene(GW10), 76ppb toluene(GW10), 97ppb xylene(GW10), 1700ppb MTBE(GW10), 35ppb benzene(GW11), 23ppb ethylbenzene(GW11), 91ppb toluene(GW11), 198ppb xylene(GW11), 390ppb MTBE(GW11).Corrective Action Progress and Groundwater Sampling Report (EnecoTech)-2/15/05. Application of dilute hydrogen peroxide during monthly site visits. Eleven monitoring wells onsite. Groundwater flow to the south-southeast. "The data show that oxygen levels have generally returned to those observed prior to the hydrogen peroxide treatments". "it would be expected that concentrations of STARS VOCs will continue to show a decline toward the applicable New York Standards. Therefore regulatory closure of this site is requested". Groundwater analyticals show:

1.4ppb benzene(GW1), 15ppb ethylbenzene(GW1), 7ppb xylene(GW1), 55ppb MTBE(GW1), 10ppb benzene(GW7), 6ppb toluene(GW7), 49ppb ethylbenzene(GW7), 121ppb xylene(GW7), 470ppb MTBE(GW7), 36ppb benzene(GW8), 6ppb ethylbenzene(GW8), 908ppb MTBE(GW8), 10ppb benzene(GW10), 96ppb toluene(GW10), 25ppb ethylbenzene(GW10), 192ppb xylene(GW10), 291ppb MTBE(GW8), 40ppb benzene(GW11), 100ppb toluene(GW11), 37ppb ethylbenzene(GW11), 139ppb xylene(GW11), 333ppb MTBE(GW11). Letter from GES Jed Smith to DEC Vought-6/29/05. Sent copies of 2/15/05 sampling report, 5/04 remedial investigation report, 11/03 UST Closure Report and 1/00 request for closure. 8/5/05-Vought-After file review DEC requires: 1)continued monitoring to ensure conditions exist (DO concentrations) Vought called Smith (303-861-2200x196) and application of peroxide was performed in May 2004 and DO levels still capable of supporting MNA. If groundwater concentrations show continued decrease spill be closed. Letter should be sent to: David Favero Favero Geosciences 1210 South 5th Street Suite 2 Springfield, Ill. 62703 Fax; 217-522-6727 8/9/05-Vought-Sent letter with above requirement. 9/12/05-Obligado -FILE TRANSFERRED FROM VOUGHT TO OBLIGADO 9/14/05- Obligado- Review letter from Paul Hastings Attorneys, dated 9/8/05, which requested that Spill #0308028 be combined with Spill #9502512. Called Roberta Barkman and informed her thatthe 03 spill number was already closed by DEC Vought on 8/1/05 and consolidated with previous 95 spill number. 3/29/06 - Obligado - Called Smith (303-861-2200x196). He no longer works for company. Directed call to Joel Young (ext 144), left message to call DEC. 9/1/06 - Obligado - Review Corrective Action Progress and Ground Water Monitoring Report, dated May 18, 2006. Requests closure based on decreasing trends in most wells, source removal (USTs and dispensers) and sensitive receptor survey which found no complete exposure pathways. Max total VOCs is 3708 ppb in GW5 with 1106 BTEX and 1590 MTBE. 8 of the 11 wells show an overall decreasing trend. 2 of the 11 wells (MW5 and MW2) show increasing trend. 1 well (MW10) showsfluctuating trend. Will discuss closure with Joe Sun. 9/5/06 - Obligado - After discussion with DEC Sun, issue NFA. Call Eric Harvey at GES (845) 878-8067, ext 20. Asked him if there were any plans to redevelop the site as residential. He said he was unaware of any redevelopment plans. The site is still a rental facility with a carwash. I Asked thim where to send the NFA letter. He said he will email the information. END DECRemark - 9502512

American Environmental Assessmen, EricMeyn 631-586-2000 copied Letter
required that a subsurface investigation be performed to delineate the extent
of petroleum contamination in the soil and groundwater, both on and off site.
Assuming you will gain access to the existing monitoring well network
(associated with Spill 9502512), two additional wells must be installed in the
vicinity of the west wall soil sample and in the southwest corner, northwest of
the floor drain. If you cannot access the existing wells, your investigation
must include the installation of a minimum of three monitoring wells.

Remarks: A report summarizing the findings of the subsurface investigation including boring logs, well installation logs, soil and groundwater sample analyses, site plan, a surrounding property sketch including property layout and usage, and conclusions and recommendations must be submitted to the Department before January 31, 2003. Additional borings/monitoring wells may be required by the Department upon review of the investigation report. Rommel 4/7/05-Vought-Spill transferred from Rommel to Vought as per Tang. 8/1/05-Vought-This spill closed and referred to open spill #9502512 at same location. 9/12/05 - File transferred from Vought to Obligado. 9/13/05 - Obligado - Receive fax from Paul Hastings Attorneys requesting spill #0308028 be consolidated with open spill #95020512. Call Roberta Barkman at Paul Hastings to inform her that the #0308028 spill was already closed by Vought on 8/1/05 and consolidated with the #95020512 spill number. Roberta asks for documentation and Obligado will send letter. END DECRemark - 0308028

DEC Memo: Start DECRemark - 0307633 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "VOUGHT "10/20/03. Contaminated soil letter
sent to Walter Seelig (High Ridge Enterpr.). Also see spill # 9008960. YK.
11/21/03 Rommel Met Brian McCabe, senior geologist, on site. Soil samples
collected from 8 to 16 feet below grade were contaminated. Groundwater (15 to
18 feet) was also sampled during the investigation and were impacted by BTEX
and MTBE. They will excavate what soil they can and install a minimum of three
monitoring wells (one outside by remote fills). Spill 9008960 reported TTF of
4000 gallon gas UST 11/14/1990 STIPULATION SIGNED RD 2/18/04.
3/18/04-Vought-Spoke with Rob Ferguson (631-586-4900). Subsurface
Investigation report sent to DEC on 2/3/2004. Ferguson will send small CAP
upon receiving subsurface investigation report review. Ferguson requires
review of subsurface investigation as per STIP. Vought requested that another
copy of the Subsurface investigation be sent to DEC. 4/1/04-Vought-Spoke
with Tom Melia (F&N) and he requested that he be point of contact. Spill
transferred from Rommel to Vought. 4/6/04-Vought-File review by Vought:
Contaminated soil letter sent form DEC Krimgold to High Ridge Enterprises.
Site meeting minutes (Fenley & Nicol Brian McCabe)-11/25/03. Site meetin on
11/24/03. In attendance were DEC Rommel, F&N McCabe, F&N Melia and F&N Hole.
"The results of the sampling indicated that the contamination is located in the
northern portion of the building. The effected area extended from the north
end od the 4000 gallon tank excavation to the front of the building,
approximately thirty five feet and from the center for the 550-gallon tank
excavation west to the side of the building, approximately twenty feet." DEC
recommended additional soil excavation without comprising structural
integrity and required 1) installation of one well inside the building after
backfilling completed 2) installation of two wells on sidewalk at the location
of the former remote fills and twenty feet west of the bay door. Letter
from Fenley & Nicol(Thomas Melia) to DEC(Rommel)-12/18/03. "The new owner of
the building indicated that his intended use for the building is as an art
gallery". During building remodeling excavation was performed and tanks were
discovered under floor. Two gasoline USTs (one 4000-gallon and one 550-gallon)
were removed and were in separate lcoations fifteen to twenty feet apart.
"Upon removal of the bottom slab the soil encountered was saturated with liquid
phase hydrocarbon". Depth to water expected to be 18' below grade. F&N
proposes delineation of soil and groundwater contamination, installation of
wells and additional soil excavation. See also Spill #9008960 reported in
1990 for tank test failure and administratively closed on 3/4/03. Letter

S106124184

from DEC Rommel-12/4/03. Letter approving installation of wells on the sidewalk on the south side of West 29th Street between 10th and 11th Avenues and requesting expediting of sidewalk permits. Letter from F&N(Melia) to DEC Rommel-12/18/03. "At this time we are continuing our efforts to delineate the extent of the contamination...". Three monitoring wells installed (one inside and two outside building). "At this time the owner of their property feels that it would be too far costly to excavate the contaminated soil without jeopardizing the structural integrity of the building, and would prefer that we install an air sparge/soil vapor extraction (AS/SVE) system to remediate the hydrocarbon impact". Please indicate your approval below. No approval indicated by DEC Rommel. Stipulation Agreement-1/15/04. Stip with deadline of 2/13/04 sent to: Walter Seeling High Ridge Enterprises, Inc. P.O. Box 2542 York, Pa. 17405. Subsurface Investigation Report (F&N-Melia 631-586-4900x190) -3/19/04. Investigation consisted of six soil borings, six temporary groundwater monitoring points and three monitoring wells. "The central and eastern units are currently vacant and undergoing renovations for use as an art gallery". Depth to groundwater is 8-9' and flows northwest. Soil analyticals show 35ppb benzene(SP-1 at 12'), 882ppb benzene(SP-2 at 12'), 14ppb (SP-3 at 12'), 4900ppb benzene(SP-4 at 12'), 817ppb benzene(SP-5 at 12'). Groundwater analyticals show 2.5 ppb benzene(TW-1), 1459ppb benzene(TW-2), 45ppb benzene(YW-3), 2109ppb benzene(TW-4), 254ppb benzene(TW-5), 11ppb benzene(TW-6), 1200ppb benzene(FN-1), 206ppb benzene(FN-2), 4.2ppb benzene(FN-3). Report recommends Air Sparge/Soil Vapor extraction system. NYSDEC requires: 1) signing of Stipulation before any further correspondence 2) presence or absence of free product and interim remedial recovery if present 3) surrounding area site plan including property usage 4) additional wells east of FN-2 and well north of FN-2 to calculate required radius of influence for system design. 4/6/04-Vought called F&N(Melia) to repeat Stipulation requirement and left message to return call to DEC. 4/7/04-Vought-Received faxed copy of STIP already implemented by DEC Kunkel on 2/18/04 (Copy of original not in file). 4/8/04-Vought-Sent letter to High Ridge requiring well installation north of FN2 and east of FN2, submission of monitoring well data and surrounding property sketch. 4/16/04-Vought-Wells will be installed next week (tentatively). Wells for pilot test will also installed. Mailing address is: High Ridge Enterprises P.O. Box 2542 York, Pa. 17405 4/18/04-Vought-Received message from David Oloke (F&N-631-586-4900x144) that he is new project manager for site. Vought called David and two additional well installed (one north of FN2 and one east of FN2). All onsite wells were sampled. No free product in new wells. Four vapor wells installed and air sparge well will be installed. DEC will receive pilot test report by 7/15/04. 6/23/04-Vought-Spoke with David and initial results faxed on 6/9/04. .5" of free product in well in 1" vapor well sent for fingerprinting. EFR not effective. DEC requires recovery of free product and submission of pilot test. 9/2/04-Vought-File review by Vought: Groundwater results (F&N)-6/23/04. Groundwater analyticals show 1.2ppb benzene(FN5), 1.8ppb benzene(FN4), 14ppb benzene(FN3), 26ppb xylene(FN3), 474ppb benzene(FN2), 621ppb MTBE(FN2), 8ppb toluene(FN2), 2065ppb benzene(FN1), 47170ppb MTBE(FN1), 4106ppb toluene(FN1) and 2761ppb xylene(FN1). Addendum to the direction beneath the site was found to be toward the north." Property uSubsurface Investigation Report (F&N)-7/14/04. On 5/7/04 two additional monitoring wells were installed. "On June 4, 2004 the AS/SVE pilot tests were conducted". One inch of floating product was detected in P2. "The results of the AS pilot test indicated that the introduction of air pressure into the formation below the contaminant zone is a viable remediation technique". Report recommends commencement of an interim remedial measure to recover product from P-2 via weekly EFR. Report also recommends installation of another well to replace P2. Vought called David from F&N to approve of workplan. Well installation will be included with

HIGH RIDGE ENTERPRISES (Continued)

S106124184

final remedial action plan. Vought sent letter approving of proposed workplan (installation of well at P2 and IRM) and included requirement of determination of groundwater flow direction and surrounding property sketch.

9/3/04-Vought-Received fax from Oloke (F&N). "The groundwater flow sage of downgradient sites to the north are a parking garage and an art studio. Vought called Oloke and approved workplan as per 9/2/04 letter. Vought called Oloke and he will begin drafting RAP for submission to DEC. 9/29/04-Vought-Spoke to David F&N and he will be sending RAP in overnight.

10/1/04-Vought-Reviewed RAP received by DEC on 10/30/04. "Site is currently occupied by a masonry block structure which is subdivided into three sections. An art gallery occupies the western unit. The central and eastern units are currently vacant and are undergoing renovations for use as an art gallery. RAP proposes weekly recovery of free product from FN2 via a peristaltic pump until well is converted to a 2" product recovery well designated at FN6. Two additional wells will be installed in the interior of the building. Monthly groundwater monitoring and quarterly sampling. Five air sparge and four SVE wells will be installed in the interior of the building. Remedial system will be installed on the roof of the building. Daily monitoring for the first week, weekly monitoring for the first month, monthly maintenance visits and effluent sampling, quarterly effluent sampling and groundwater sampling. Vought sent letter approving of RAP. 10/28/04-Vought-Spoke to David (F&N) and FN1 must be reinstalled due to it was a bent well. Wells will be installed during the next few days. 9/27/05 - SPILL TRANSFERRED FROM VOUGHT TO OBLIGADO

11/9/05 - Obligado - Review System Startup Report. AS/SVE system consists of 5 HP compressor and 3.5 hp blower and 5 air sparge wells and four soil vapor extraction wells. Effluent air stack results show 31.4 ug/m3 for benzene. Operation and maintenance schedule proposes monthly SVE effluent monitoring and Quarterly Status Reports. System started in May 2005. Due to noise generation, the system only runs from 9pm to 6am. Quarterly Status Report - Groundwater analyticals show 4.7 ppb benzene (FN3), 50.1 ppb MTBE (FN2), 78.3 ppb MTBE SVE5, 1.7 ppb MTBE SVE3. Benzene effluent show 46.74 ug/m3.

5/15/06 - Obligado - Called David Oloke. Asked that he send recent Quarterly Status Reports. 5/22/06 - Obligado - 2Q06 Quarterly Status Report, submitted by Fenley Nicol, Inc. Ground water analyticals show 9 ppb benzene 35 ppb MTBE in FN3 and and 3.7 ppb benzene in FN4. Benzene effluent below STIP limits. There is duplicated data on Table 2 Air Sampling Results, probably a cut and paste error, call Dave Oloke, he said he will look into it at send a new table with the electronic copy. Report recommends continuing system operation.

6/23/06 - Obligado - Called David Oloke. Asked for the corrected Table. He said he will email it to me. 10/23/06 - Obligado - Called David Oloke. Left message requesting most recent quarterly status report. David Oloke call me back and said he would send the report shortly and he would correct the typo on Table 2. 1/30/07 - Obligado - Review 3Q06 monitoring report. Typo in 2Q06 table has been fixed in cumulative table. AS/SVE system online and working at 100 maximum capacity. Air samples collected monthly. Benzene in gw exceeds standard at 4 ppb. in 2 wells. All effluent below STIP guidance. Benzene detected in VES/AS effluent at 4.86 ug/m3 in 6/06. Recommends continued operation of the system. Review 4Q06 monitoring report - AS/SVE system operating at 100 capacity 9 hours per day. All effluent samples below STIP guidance. BTEX effluent at 361.71 ug/m3 during 10/27/06 Report recommends continued operation of system. GW results show minor exceedences of Benzene - max concentration at 8 ppb in FN3. However gw monitoring does not include FN1 where highest contamination was found. END DEC Remark - 0307633

Start Caller Remark - 0307633 caller was hired to remove a few tanks from the site - x-ref spill # 9008960 - they encountered contaminated soil - they are stockpiling soil now END Caller Remark - 0307633

DEC Memo: Start DECRemark - 0400961 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "KRIMGOLD" Contaminated soil letter sent to: Raber
Enterprises LLC Attn: Marc Levine 175 Canal St. New York,NY 10013
Mr. Levine saysa phase II investigation was done as part of a property sale.
The new owner has hired Langan Engineering to remove the tank and any
contaminated soil. Contact at Lang an Engineering is: Tarek Khouri
212-479-5400 5/6/2004 Sangesland spoke to Mr. Khouri from Langen
Engineering. He confirmed that the area will be excavated and the tank
removed. They will take photographs of the hole and will take endpoint samples
to be tested for VOC's & Sock's. A final report will be prepared andforwarded
to Jake Krimgold. 5/11/04. J.Krimgold @ site. Contractor unable to
remove the tank due to a structural constraints. Will excavate contaminated
soil around tank and close tank in-place. Agreed that at least three
post-excavation samples will be taken. J.Krimgold observed excavation and
found two more UST partially filled with gasoline and water. Preliminary
observation suggests that the size of tanks 1080 and 550 gal. The current
owner has no knowledge of these tanks. Alsono records was found in PBS DB.
J.Krimgold requested immediatly register all tanks at this site with PBS unit
before continuation of tank closure. 11/17/04. J.Krimgold has reviewed the
report dated June 28, 2004 submitted to the Department by Langan Engineering
regarding the above mentioned site. Based on the information provided, the
